An aerial photograph of a large industrial or warehouse complex during a heavy snowfall. The scene is dominated by white snow covering the ground, rooftops, and vehicles. Several semi-trucks are parked or moving within the yard. In the foreground, a red snowplow is clearing a path through the snow. The background shows more industrial buildings and a fence line. The overall atmosphere is hazy and wintry.

Connected Vehicles and Rural Road Weather Management

Weather and Roadways

- Safety
 - ~22% of US crashes are weather related
 - 6,000 fatalities and 445, injuries
- Mobility
 - Capacity Reductions
 - ~23% of non-recurrent delay on highways estimated to be due to snow, ice, and fog
- Economic
 - \$2.3 billion spent annually on snow and ice removal
 - Weather related delay costs trucking companies \$2.2-\$3.5 billion annually

What is “normal” weather?

- Changing Climate
 - Increased temperatures and rising sea levels
- Extreme Events
 - Flooding, wildfire, blowing dust, unusual snow
- Transportation System Resiliency
 - How will our current transportation system adapt to new climate conditions?

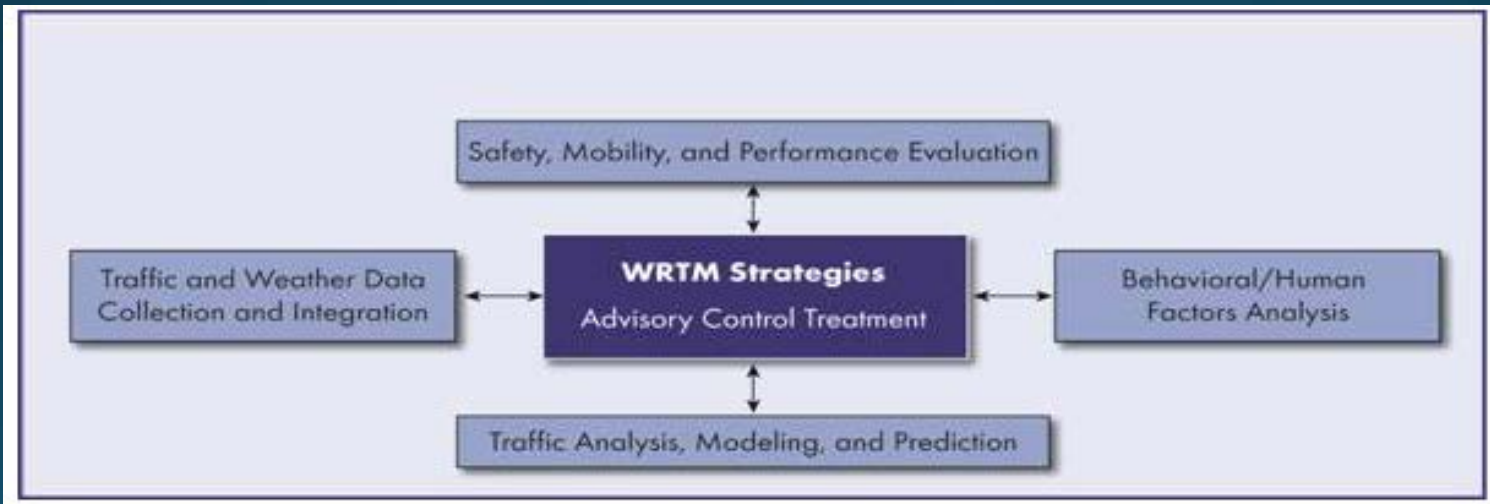

What is “normal” weather?

Weather Responsive Traffic Management

- WRTM aims to manage the impacts of weather on travelers

Weather Responsive Traffic Management

- WRTM Strategies

1. Motorist Advisories, Alert and Warning

- Passive or Active Warnings, Pretrip or En-route Alerts and Conditions

2. Speed Management

- Speed Advisories, Variable Speed Limits

3. Vehicle Restrictions

- Size/height/weight/profile restrictions, chain laws

4. Road Restrictions

- Lane-Use Restrictions, Parking Restrictions, Access Control and Facility Closures, Reversible Lane/Contra Flow [Evacuations]

5. Traffic Signal Control

- Weather-responsive signal timing plans, ramp metering control

6. Incident Management

- Service Patrols, quick clearance policies

7. Asset Management

8. Agency Coordination and Integration

Weather Responsive Traffic Management

- Types of Weather
 - Road weather
 - Atmospheric weather
- Weather Information
 - Forecasting
 - Nowcasting
 - Current Conditions

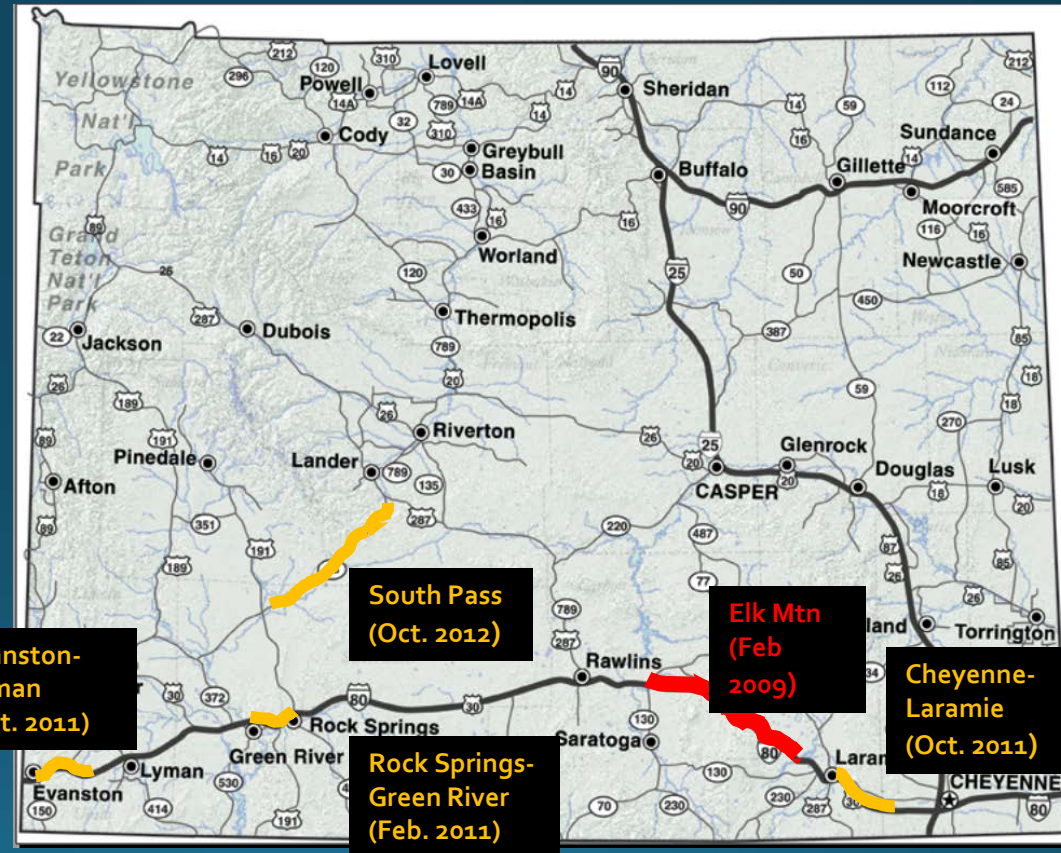

Weather Responsive Traffic Management

- Technology needed for WRTM
 - Road Weather Information System (RWIS)
 - Depending on sensor configurations can provide air temperature, pavement temp, visibility, wind speed, surface condition, RH and dewpoint, camera for visual verification of conditions
 - Pros – real-time localized weather data
 - Cons – expense (capital and maintenance), point data only, locating correctly can be challenging
 - Mobile Weather Data
 - Vehicle mounted, weather sensors
 - Pros – real-time localized weather for continuous roadway stretches
 - Cons - require vehicles to be traveling, expensive

Weather Responsive Traffic Management

- Wyoming WRTM Strategies
 - 143 miles of weather-responsive VSLs along 400-mile I-80 corridor
 - High wind alerts and light-weight vehicle closures

Weather Responsive Traffic Management

- VSL Effectiveness
 - Annual VSL Safety Benefits
 - 27.7 annual crash reduction
 - \$2.8 million per year in crash reduction benefits
 - Annual VSL Road Closure Benefits
 - 10.14 fewer closures per winter season (Oct-April)
 - \$54.7 million per year in closure reduction benefits

CV Road Weather Condition System

- Can Connected Vehicle Data be used to support WRTM?
 - Harness USDOT's Connected Vehicle Initiative to provide more and better weather data
 - Supplement or replace RWIS?

The screenshot shows the NHTSA website header with a yellow background. The NHTSA logo is on the left, and a search bar is on the right. The navigation menu includes: Driving Safety, Vehicle Safety, Research, Data, Laws & Regulations, and About NHTSA. Below the navigation menu, there are social media icons for Twitter, Facebook, YouTube, and Email, along with a 'CHAT HELP' button. A news article is displayed with the title: 'U.S. Department of Transportation Issues Advance Notice of Proposed Rulemaking to Begin Implementation of Vehicle-to-Vehicle Communications Technology'. The article is dated 'Monday, August 18, 2014'.

Proprietary Vehicle Data Collection

ABS Brake and Traction
Stability Control Activation

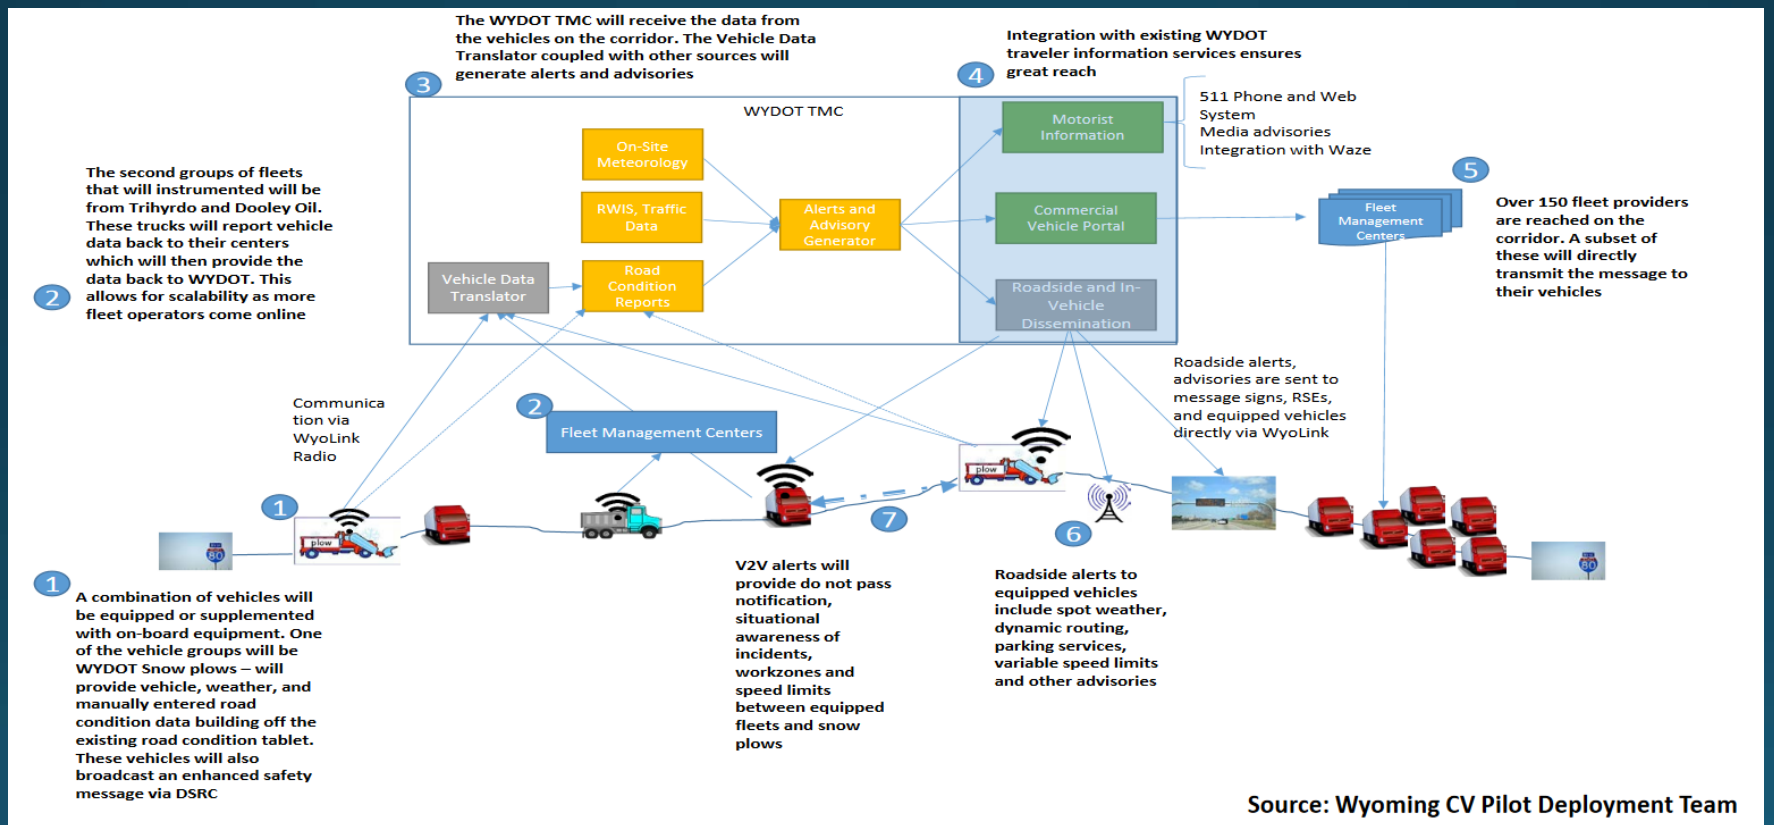

CV Pilot Deployment Program

Connected Vehicles
CV Pilot Deployment Program

- Three Wave 1 Sites
 - Wyoming's I-80 Corridor
 - Rural, freight and weather focus
 - New York City
 - 10,000 city and other fleet vehicles
 - Safety focus
 - Tampa-Hillsborough Expressway Authority
 - Lee Roy Selmon Expressway
 - Congestion and safety focus

Wyoming CV Pilot Deployment Program

Wyoming CV Pilot Deployment Program

- Proposed Applications
 - Road Weather Advisories for Trucks
 - Automatic Alerts for Emergency Responders
 - CV-enabled Weather-Responsive Variable Speed Limits
 - Spot Weather Impact Warning
 - WorkZone Warnings
 - Situational Awareness
 - Freight-Specific Dynamic Travel Planning

Wyoming CV Pilot Deployment Program

- Basic Safety Message (BSM)
 - SAE J2735
 - BSM Part 1:
 - Core data elements such as vehicle size, position, speed, heading acceleration, brake system status
 - Transmitted at 10 HZ
 - BSM Part 2:
 - Added to part 1 depending on events (e.g. ABS brakes activated)
 - Contains variable set of data elements
 - Transmitted less frequently
- Transmitted over DSRC (~1000 meters)

Wyoming CV Pilot Deployment Program

Weather Priority Vehicular Data

BSM Part 1

- Brake system status
 - Brake applied status
 - Traction control status
 - Anti-lock brake status
 - Stability control status

BSM Part 2

- Vehicle status
 - Exterior lights
 - Wipers
 - Brake system status
 - Roadway friction
 - Rain sensor
 - Ambient air temperature
 - Ambient pressure
 - Yaw rate

Wyoming CV Pilot Deployment Program

- Wyoming Pilot will likely have:
 - CV instrumented vehicles, mainly WYDOT fleet and freight partners
 - Subset of vehicles will be instrumented with external weather sensors
 - Pikalert system embedded in WYDOT TMC
 - Wide area weather alert dissemination

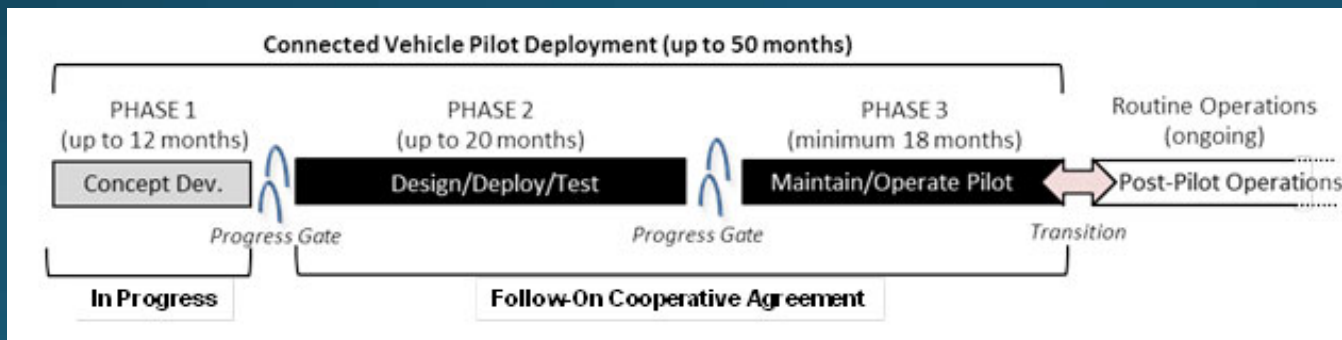

Wyoming CV Pilot Deployment Program

- Phase 1 Timeline

Timeline												
Task	Sep-15	Oct-15	Nov-15	Dec-15	Jan-16	Feb-16	Mar-16	Apr-16	May-16	Jun-16	Jul-16	Aug-16
Task 1 - Program Mgt.												
Task 2 - ConOps				◆								
Task 3 - Security Concept												
Task 4 - Safety Plan												
Task 5 - Perf. Measurement									◆			
Task 6 - SyRs												
Task 7 - App Planning

Task 10 - Partnership												
Task 11 - Outreach Plan												
Task 12 - Deployment Plan												◆
Task 13 - Readiness Summary												

◆ webinar

- Phase 2 and 3

The future?

- Considerable interest in the area of road weather management will lead to a better understanding of driver behavior and vehicle performance in non-ideal conditions
- New knowledge will enable operation of roadways that are more adaptive to current conditions, increasing system resiliency
