## Population Growth in Oregon: 2000-2006

Oregon State's population is estimated to have been 3,690,505 on July 1, 2006, which represents an increase of 269,106 from the April 1, 2000 Census count, and 59,065 from the 2005 estimate.

The average annual population growth rate from 2000 to 2006 was 1.2 percent. Although Oregon's average annual growth rate is lower than it was during the 1990s (1.9 percent), the annual rate of increase from 2005 to 2006 is higher than it had been for at least the past 7 years. The downward trend of population growth rates during the late 1990s and early 2000s reversed itself, and the yearly rates have continually been increasing for the past 3 years. This recent upward trend corresponds to Oregon's recovering economy. When the economy improves, Oregon's net migration (people moving into Oregon minus people leaving) increases.

Between April 1, 2000 and July 1, 2006, net migration is estimated to be 174,310 and accounts for 65 percent of the total population growth. Between 1990 and 2000 that percentage was 73 percent, but in the early 2000s, it dropped to 56 percent. Migration is primarily driven by the state of the economy. When Oregon's economy is strong, net migration increases as people move here to take advantage of employment opportunities. When the economy goes into recession, in-migration flows slow down, as does population growth. During recent times, however, when Oregon experienced high unemployment rates, there still were positive inflows of migration. People whose primary motivations are not so economically oriented continue to move to Oregon; among them are college-educated outdoor minded young adults, retirees, and immigrants.

Thirty-five percent of Oregon's population growth from 2000 to 2006 was due to natural increase (births minus deaths). During the past year, natural increase accounted for about one-quarter of the State's population increase. As a comparison, natural increase attributed to twenty-seven percent of Oregon's added population from 1990 to 2000.

Population change in Oregon's six metropolitan areas and 36 counties varies considerably. The newest metropolitan area, Bend, is the fastest growing MSA. Since 2000, it has grown by 13 percent. The Portland-Vancouver-Beaverton Metropolitan Statistical Area (MSA) grew by 10.1 percent from 2000 to 2006, followed by the Medford MSA (9.6 percent). Population in two of the remaining MSAs saw rates close to the State's rate during the same time period. The Corvallis MSA increased by 7.6 percent, and the Salem MSA by 7.5 percent. The number of persons

residing in the Eugene-Springfield MSA increased by 5.2 percent, a rate which is slower than that for the State.

Seven counties experienced 2000-2006 population growth at rates higher than Oregon. Three of these counties are not designated as or a part of an MSA. The three non-metropolitan counties that experienced higher growth than the State are: Crook (27.9 percent), Jefferson (12.6 percent), and Morrow (10.3 percent) Counties.

Although Multnomah County captures the largest county share of the State's population (19.0 percent in 2006), Washington County added the highest number of persons during 2000-2006. Since 2000, 55,245 persons have been added to Washington County's population. During the same period, Multnomah County increased by 41,060 persons and Deschutes County added 37,250 to its population. Four other counties in Oregon experienced an increase of over 16,500. Clackamas County increased by 28,650 persons, and Lane County added 16,780. Marion and Jackson Counties added 21,831 and 17,345 persons, respectively. The population in the other 29 counties each increased by 6,690, or fewer, persons during the 6-year period.

Five Oregon counties experienced a loss of population from 2000 to 2006. The rates at which population is declining in these counties range from -3.8 percent (in Grant County) to -1.2 percent (in Wallowa County). In 2006, there were 305 fewer persons residing in Grant County than in 2000. Baker County lost 270 persons during the same period. Population losses in each of the other 3 counties were by fewer than 100 persons.

The population of Oregon's incorporated cities and towns is estimated to have reached 2,557,130 on July 1, 2006, accounting for 69 percent of Oregon's total population. There is a slight upward trend for Oregon's population to reside in incorporated cities and towns rather than in rural areas. In addition, the rate of population growth is higher in areas that are metropolitan in Oregon rather than in non-metropolitan areas.

## **Population Estimates for Oregon, July 1, 2006**

This report contains the annual population estimates for Oregon, and its counties, incorporated cities, and unincorporated areas for July 1, 2006. Included are estimates that are summarized by unincorporated and incorporated areas at the State level, as well as metropolitan areas and non-metropolitan areas. There are ten tables that show the current population estimates. Some tables include historical estimates and Census populations. Other tables display the components (natural increase and net migration) of population change, and some show population estimates for age groups and gender by county. The population estimates for cities are presented in three tables; one is alphabetized, another shows population in rank order, and the other holds city estimates grouped by the county in which the city is located. For cities that are located in more than one county, population estimates for city parts are shown in a separate table. Also, populations added to cities due to annexations from April 1, 2000 to July 1, 2006 are included in a table.

At the end of this report there are 6 maps depicting county-level population estimates for 2006 and/or population change from 2000 to 2006. There also is a county reference map that shows locations of cities throughout Oregon.

Please note that when determining change in city population over time, the annexation table in this report should be consulted to help explain possible reasons for the magnitude of change. In addition, please check the Population Research Center's quarterly Population Supplement Report, available online, to find revised populations due to annexations or enumerations that were conducted since the publication of this report.

### **State Requirements for Population Estimates and the History of the Population Research Center**

Oregon law (Oregon Revised Statutes 190.510 to 190.610) mandates the Population Research Center, Portland State University, acting on behalf of the State Board of Higher Education, to prepare annual population estimates for each county and incorporated city in the state of Oregon. The principal purpose of the population estimates is for the allocation of selected State funds to Oregon's cities and counties.

The State government organized a State Census Office in Portland in 1956. The purpose of the State Census Office was to oversee and certify special censuses that rapidly growing towns conducted in order to document their

population figures. The State Census Office eventually expanded its role to include the certification of the population added by annexations and the preparation of annual population estimates for counties and cities.

Administrative responsibilities for the population estimates were transferred to Portland State University's Center for Population Research and Census in 1965, when Portland State College became a university. The Center for Population Research and Census, now known as the Population Research Center (PRC), is located in the Toulon School of Urban Studies and Planning within the College of Urban and Public Affairs.

### **Duties of the Population Center**

In addition to preparing the annual population estimates, PRC houses the Oregon State Data Center, the lead agency in Oregon for contact and collaboration with the U.S. Census Bureau and for dissemination of census data and documents. This information includes current and past census data for Oregon as well as results from Census Bureau surveys.

PRC conducts research with a focus on the investigation of the causes and consequences of demographic change in today's society. Typical research areas include social and economic factors affecting demographic change, population distribution and migration, population geography, survey investigation on population issues, enrollment forecasts for school districts, community assessment for special needs programs, and demographic methods. PRC staff regularly assist and provide demographic data and analysis to city, county, and state government agencies and other community partners. The primary geographic areas of study for PRC staff are in Oregon and Washington.

Population Research Center staff teach in the Toulon School of Urban Studies and Planning, College of Urban and Public Affairs. The School of Urban Studies and Planning offers a graduate certificate program in applied demography, an applied demography curriculum in the Master of Urban Studies degree program, and a graduate concentration in applied demography in the Ph.D. program.

## Methods for Population Estimates

All residents of Oregon's cities, counties, and unincorporated areas are included in the population estimates. Residents include people living in housing units (single-family and multi-family units, mobile homes, special housing units (such as boats, tents, motel rooms), and group quarter facilities (such as college dormitories, nursing homes, jails and prisons). We count residents as persons living at the place that they consider to be their usual residence, or where they are residing at least 6 months of the year.

We have developed methods for Oregon's population estimates to be as accurate as possible. Toward this goal, we work closely with state, county, and city officials, requesting annual information from them and inviting their review of our methods and estimates.

To estimate the State population, we use the following equation that defines population in 2006 as the population in 2000 plus the sum of two basic components: natural increase and net migration during 2000 to 2006\*.

$$\text{Pop.}_{(06)} = \text{Pop.}_{(00)} + \text{Nat. Incr.}_{(00-06)} + \text{Net Mig.}_{(00-06)}$$

We rely on the registration of births and deaths to estimate Oregon's natural increase (the number of births minus deaths). To estimate the net migration (in-migrants minus out-migrants), we use school enrollment, employment, labor force, state income tax exemption, voter registration, and Medicare data. We utilize a method, called ratio correlation, that relates the changes in these data since the last census to changes in net migration during the same time period.

We use two methods to estimate county population: 1) a ratio correlation method, and 2) a modified component method. In the ratio correlation method, we track changes in state income tax exemptions, school enrollment, the number of births, and Medicare enrollment data to make an estimate of the current county populations. In the component method, we determine the natural increase for each county, and estimate net migration based on recent historical trends. In addition, we examine changes in the housing stock to verify the accuracy of the county estimates.

We develop population estimates for Oregon's cities according to the changes in their housing stock and group quarters population. City officials report each year on the changes in their city's housing stock (for single-family units, multi-family units, and mobile homes) and the number of persons residing in group quarters. We also take into account any population changes that have been

due to annexations. In addition, we make any appropriate adjustments to the average number of people per housing unit for individual cities and use this information to prepare the city's final population estimate.

The number of persons residing in the county unincorporated areas are estimated by calculating the residual of the estimate of the county population and the sum of the city population total in the same county. Adjustments may be made according to recent data on housing growth and changes in group quarter population that county officials provide us.

We monitor city annexations throughout the year. We are notified about annexations by the office of the Secretary of State. When an annexation occurs, we contact city officials to request the number of residential housing units and population, if any, that were involved in the annexation. If the annexation added people to the city's population, then we certify an updated city population, which is done on a quarterly basis. The Secretary of State's office is informed of any revised populations in a special notification that we send. In addition, each quarter we publish online the revised populations in a supplement to our annual population estimates report.

We prepare preliminary July 1 population estimates for Oregon and its cities and counties in mid-November each year. At that time the preliminary estimates are made available to the public. Based on reviews that we receive from state, city and county officials and other community partners, we may adjust the annual population estimates, and then release the final figures in December. We publish the state, city and county estimates on our website ([www.pdx.edu/prc](http://www.pdx.edu/prc)) shortly after. This annual population report, which includes the complete set of population estimates, is usually available online by March the following year.

## Acknowledgements

This report was prepared under the general direction of Risa Proehl, manager of the Population Research Center's Population Estimates Program. Professional consultation was provided by Dr. George Hough, Jr., Director of the Population Research Center, and review of the estimates was performed by Population Research Center staff, and community partners around the State. Lisa Yarbrough provided help on report compilation and distribution.

\*Natural increase and net migration are estimated for the fiscal year, beginning July 1 in one year and ending June 30 in the following year.

Portland-Vancouver-Beaverton, OR-WA MSA consists of Clackamas, Columbia, Multnomah, Washington, and Yamhill Counties in Oregon; and Clark and Skamania Counties in Washington. The population estimates for the Washington counties were obtained from Washington's Office of Financial Management.

Eugene-Springfield MSA consists of Lane County.

Medford MSA consists of Jackson County.

Salem MSA consists of Marion and Polk Counties.

Corvallis MSA consists of Benton County.

Bend MSA consists of Deschutes County.
