Explores biological and cultural aspects of past and present human food systems. Topics include nutrition, the cultural significance of food, domestication of plants and animals, archaeological records of competitive feasting, global movement of foods during the colonial period, new revolutions in food technology, the politics and economics of contemporary food systems, and eating disorders such as obesity, anorexia, and bulimia.

Anth 335 - Anthropology of Space and Place (4)

Space and place are foundational to human cognition, emotion, and experience, and yet we often take them for granted. This course examines the origins, development and contemporary variation of human senses of space, place, and environment in a variety of cultural settings around the world.

Anth 340 - Design, Politics and Society (4)

Anthropological approaches to design aesthetics, politics, expertise and innovation. Focuses on how design is located in forms of power, inequality and exclusion. Addresses how “anthropological ways of knowing” and ethnographic research methods can benefit design practice. Critically explores the fields of design thinking and humanitarian design as well as efforts to use design for social justice.

Anth 345 - Practicing Anthropology (4)

Introduction to applied anthropology as a tool to address real world problems related to development, environment, human health, cultural resource management, conflict, and more. Includes creation of a personalized career plan which will assist in the transition from education to profession following the completion of an undergraduate degree in anthropology.

Anth 350 - Archaeological Method and Theory (4)

A survey of current techniques, and theories applied in the discovery and analysis of archaeological materials. Learn and practice archaeological research design, interdisciplinary skills, field survey, excavation, dating, and other analytical techniques. Four hours of lecture and 1 hour lab (co-requisite Anth 350L) each week. Expected preparation: Anth 102.

Corequisite: Anth 350.

Anth 350L - Archaeological Method and Theory Laboratory (1)

Lab for Anth 350.

Corequisite: Anth 350.

Anth 355U - Colonial and Postcolonial Historical Archaeology (4)

Survey of the materials, methods, and theories of historical archaeology in the western United States focusing on colonialism and postcolonialism. Includes laboratories in artifact analysis and interpretation. Topics include the archaeology of forts and the fur trade, American immigration, heritage, and public interpretation.

Anth 357U - Archaeology in Popular Culture (4)

Build knowledge of science in archaeology through analysis of archaeological representations in popular culture (e.g. films, television, video games, fiction).
Study relationships between archaeology, archaeology in popular culture, and modern society.

**Anth 361U - The Archaeology of Europe (4)**

An investigation of the archaeology of Europe, and major events in European prehistory including pre-modern and modern human interactions in Europe, the Upper Paleolithic technological revolution, the advent of farming, and the development of state-level societies.

**Anth 362U - African Prehistory (4)**

Methods, sources of evidence, and the results of the study of prehistoric cultures of Africa from the earliest traces until the first written records; it includes human origins (physical and cultural evolution), the earliest civilization, peopling of Africa, migrations, earliest settlements, origins of agriculture and metallurgy. This is the same course as BST 362U and may be taken only once for credit.

Cross-Listed as: BST 362U.

**Anth 363U - Egyptian Archaeology: From Earliest Peoples to the Pyramid Age (4)**

A survey of the archaeological record of Egypt beginning with the earliest evidence of human occupation to the Pyramid era, with an emphasis on the period from 6000 BCE to the end of the Old Kingdom period (ca 2000 BCE). Lectures and readings will focus on how archaeological materials are used to reconstruct events in Egypt’s past.

**Anth 364U - The Archaeology of the Pacific Northwest (4)**

A thematic exploration of Indigenous societies in the Pacific Northwest of North America through time, starting from the earliest archaeologist evidence over 16,000 years ago to the 19th and 20th centuries. Students are introduced to scientific approaches to reconstructing the past. Major topics include: the shift to sedentism; the formation of structural inequalities; and the development of complex and varied approaches to organizing labor, political, and economic systems.

**Anth 365U - The Archaeology of North America (4)**

An investigation of major events and cultural transitions in the ancient cultures and societies of North America north of Mexico, including major migrations, hunter-gatherer lifeways, the development of sedentism, and of farming, and the development of social complexity and inequality.

**Anth 366U - The Archaeology of Mesoamerica (4)**

A survey of the ancient cultures of Mesoamerica emphasizing evidence of the earliest people, subsistence practices including plant domestication, and the development of social complexity. Phenomena such as pyramids and temples, mathematics, calendars and writing systems, combine to paint a rich picture of cultures in the Americas before European contact. Course material focuses on the Olmec, Maya and Highland Mexico.

**Anth 368U - The Archaeology of Oceania (4)**

An investigation of the archaeology of Oceania, from the earliest peopling of New Guinea over 60,000 years ago to subsequent voyaging and human settlement throughout the blue continent of the Pacific Islands. Explores cultural developments and human ecosystem engineering in island groups such as Guam and the Mariana Islands, Hawai’i, Rapa Nui/Easter Island, and Aotearoa New Zealand.

**Anth 370 - Paleoanthropology (5)**

Ape and human (i.e., hominoid) evolution from the Miocene through the Pleistocene with focus on the fossil record. Emphasis on methods used to reconstruct the past, including integration of knowledge from geology and paleoecology; functional and comparative anatomy; phylogenetics; and prehistoric archaeology. Lectures and one biweekly laboratory. Expected preparation: Anth 101.

Corequisite: Anth 370L.

**Anth 370L - Paleoanthropology Laboratory (0)**

Lab for Anth 370 Paleoanthropology.

Corequisite: Anth 370.

**Anth 372 - Human Variation (4)**

**Anth 370 - Paleoanthropology (5)**

Ape and human (i.e., hominoid) evolution from the Miocene through the Pleistocene with focus on the fossil record. Emphasis on methods used to reconstruct the past, including integration of knowledge from geology and paleoecology; functional and comparative anatomy; phylogenetics; and prehistoric archaeology. Lectures and one biweekly laboratory. Expected preparation: Anth 101.

Corequisite: Anth 370L.

**Anth 370L - Paleoanthropology Laboratory (0)**

Lab for Anth 370 Paleoanthropology.

Corequisite: Anth 370.

**Anth 372 - Human Variation (4)**

Anth 373 - Primate Ecology and Behavior (4)

Anth 376U - The Neandertals (4)
Neandertal biology and behavior; who they were, how they lived, and the nature of interactions between Neandertals and modern humans. Critical debates over the place of the Neandertals in human evolution. Exploration draws from paleontological, archaeological, and genetic data, with views into the history of scientific and popular thought about Neandertals.

Anth 379U - Practicing Forensic Science (4)

Anth 399 - Special Studies (1-12)
See department for course description. (Credit to be arranged.)

Anth 399U - Special Studies (4)
Special Studies (Credit to be arranged.)

Anth 401 - Research (1-6)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 404 - Cooperative Education/internship (1-12)
See department for course description. (Credit to be arranged.)

Anth 405 - Reading and Conference (1-6)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 407 - Seminar (1-6)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 409 - Practicum (1-9)
(Credit to be arranged.)

Anth 410 - Selected Topics (1-6)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 412 - Ethnographic Methods (4)
Practical coursework and community-based experience in research design and qualitative methodology. Students conceptualize and implement research projects, gather and analyze data, and write a proposal for hypothetical future research. Essential training for basic ethnographic research and applied projects. Also offered for graduate-level credit as Anth 512 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 414 - Culture and Ecology (4)
A critical analysis of the interrelations of culture, social structure, and human ecology. Social organization as influenced by characteristic patterns of resource exploitation. The uses of natural environment from the viewpoint of the members of societies. Also offered for graduate-level credit as Anth 514 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 415 - Applied Anthropology (4)
Examines theories, methods, and ethical considerations required to conduct applied anthropology in a variety of contexts. Students will carry out independent research on a real world problem linked with his/her career goal. Also offered for graduate-level credit as Anth 515 and may be taken only once for credit. Prerequisite: Anth 304 or Anth 305.
Anth 416 - Urban Anthropology (4)
Global examination of urban phenomena including: spatial design of urban built environments, the production of locality, urban political activism, ideas of cosmopolitanism, racial segregation, violence, migration, informal economies, subcultures, and new technologies that impact social relations in cities across the world.
Also offered for graduate-level credit as Anth 516 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 417 - Advanced Topics in Native American Studies (4)
In-depth examination of a current scholarly topic in the anthropology of Native North America, especially in relation to colonialism and Native resistance. Course will cover appropriate theory, as well as ethnographic and ethnohistorical materials.
Also offered for graduate-level credit as Anth 517. Prerequisite: Upper division standing.

Anth 418 - Environmental Anthropology (4)
What can anthropology teach us about contemporary environmental problems? Emphasizing key issues of environmental change, adaptation, conservation and sustainability, biocultural diversity, resilience, political ecology, and environmental justice, this course examines how the cross-cultural study of human-environmental relations can improve our understanding of contemporary environmental problems and their solutions.
Also offered for graduate-level credit as Anth 518 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 422 - Tribal Sovereignty and Policy (4)
An examination of current federal, state, and tribal law and policy pertaining to Indian affairs, including tribal government organization, government-to-government relations, economic development, natural and cultural resource management, health care, welfare, and education. Both reservation communities and the Portland metropolitan Indian community are considered. Student research is based on reading, field trips, and interviews with tribal officials and other policy professionals.
Also offered for graduate-level credit as Anth 522 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 425 - Topics in Medical Anthropology (4)
In-depth exploration of contemporary US and global health issues through critical, interpretive, biocultural, and ecological perspectives. Rotating topics may include but are not limited to pandemics and epidemics, emerging illnesses, food systems, new medical technologies, social meanings of the body and illness identities, patient activism, public health interventions, health-care policy, bioethics, and the medicalization of social problems. This course may be repeated once for credit.
Also offered for graduate-level credit as Anth 525 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 426 - Transnationalism and Migration (4)
In-depth exploration of globalization, transnationalism, and migration. Topics include colonialism and the history of world connections, the global economic system, cultural imperialism, nationalism and identity, migration, refugees, tourism, and the commodification of local cultures.
Also offered for graduate-level credit as Anth 526 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 428 - Political Anthropology (4)
Survey of major anthropological approaches to politics, power, activism and social change, examined in light of historical and contemporary social tensions around the world. Emphasis on decolonization, political economy, and critical race and feminist theories.
Also offered for graduate-level credit as Anth 528 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 430 - Myth, Ritual, and Symbol (4)
A critical examination of classic and recent anthropological theories in the cross-cultural study of symbolic forms.
Also offered for graduate-level credit as Anth 530 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 431 - Topics in Latin American in Ethnography (4)
In-depth exploration of a current topic in Latin American and Caribbean anthropology, especially in relation to power, structural inequality and violence, cultural identities, social movements, the State, and postcolonial histories. Course materials will cover both theory and ethnography.
Also offered for graduate-level credit as Anth 531. Prerequisite: Upper Division Standing.
Anth 432 - Gender, Sex, and Sexuality in Anthropological Perspective (4)
A theoretical introduction to gender, sex, and sexuality, including ethnographic examples from around the world. Explores biological and social aspects of sex and gender as they intersect with race, class, and nationality. Examines how gender relates to care work, kinship, and social reproduction. Considers transnational migration, surveillance, biopower, and political battles over reproductive technologies, gender-affirmative surgery, and sex work.
Also offered for graduate-level credit as Anth 532 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 435 - Visual Anthropology (4)
Examination of visual representation and visual research in Sociocultural Anthropology with a focus on photographic images, ethnographic films, and mass media.
Also offered for graduate-level credit as Anth 535 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 440 - Design Anthropology (4)
Explores the relationship between anthropology and design. Addresses how anthropologists collaborate with designers in industry to develop new products. Students apply ethnographic methods to do rapid design research and develop prototypes of products and services. The course is useful for students interested in human centered approaches to problem solving and for students pursuing a career in designing innovative products or doing user experience research.
Also offered for graduate-level credit as Anth 540 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 447 - Advanced Topics in Asian Anthropology (4)
In-depth exploration of a current topic in Asian anthropology, especially in relation to social change, nationalism and conflict, colonialism, or modernization. Course materials will cover both theory and ethnography.
Also offered for graduate-level credit as Anth 547. Prerequisite: Upper division standing.

Anth 451 - History of Archaeology (4)
A chronological survey of developments in the field of archaeological inquiry: major schools of thought, innovations in method and theory, key personalities and their contributions.
Also offered for graduate-level credit as Anth 551 and may be taken only once for credit. Prerequisite: Anth 350.

Anth 452 - Archaeological Lab Methods (4)
Learn and practice archaeological lab methods and techniques through analysis of common materials (e.g., lithics, ceramics) recovered from archaeological sites.
Also offered for graduate-level credit as Anth 552 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 453 - Archaeological Field Methods (4)
Learn the theory, methods, and practice of archaeological field work. Topics include research design, survey and reconnaissance, site excavation, sampling and recording techniques, mapping, and cultural resource management.
Also offered for graduate-level credit as Anth 553 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 454 - Archaeological Field School (6)
Engage in the scientific survey, mapping, and excavation of archaeological sites during a summer field project. Students will also gain training and experience in public engagement. Approximately 40 hours of field work per week, with a week of laboratory work.
Also offered for graduate-level credit as Anth 554 and may be taken only once for credit. Prerequisite: Admission to course is by permission of instructor via an application process.

Anth 455 - Analysis of Faunal Remains (5)
Reviews issues of recovery, identification, quantification, and interpretation of archaeological faunal remains. Seminar component involves discussion and critical review of recent faunal studies. Laboratory component introduces student to skeletal anatomy of vertebrates (with focus on fishes and mammals) and basic procedures used in faunal analysis.
Also offered for graduate-level credit as Anth 555 and may be taken only once for credit. Prerequisite: Anth 350.

Anth 456 - Cultural and Heritage Resources Management (4)
Introduction to the preservation, conservation, and management of cultural and heritage resources in North America, including the legal and regulatory frameworks. Topics include agency and private-sector archaeology, laws affecting antiquities trafficking, consultation with American Indian tribes
and other stakeholders, traditional cultural properties, and landscape.

Also offered for graduate-level credit as Anth 556 and may be taken only once for credit. Prerequisite: Upper division standing.

**Anth 457 - The Archaeology of Hunter-Gatherers (4)**
An investigation of the economic and social diversity among modern and ancient hunter-gatherers and the theories and methods used by archaeologists to investigate and explain that diversity. Examines topics such as the evolution of hunting and gathering, hunter-gatherer settlement and mobility strategies, social complexity among hunter-gatherers and hunter-gatherers in the modern world.

Also offered for graduate-level credit as Anth 557 and may be taken only once for credit. Prerequisite: Upper division standing.

**Anth 458 - The Archaeology of Disaster (4)**
Examine archaeological approaches to studying human responses to past disasters, both natural and human-made, and the application of archaeology to contemporary disaster preparedness and related issues. Topics include past human-environment interactions, climate change, vulnerability, risk, and resilience.

Also offered for graduate-level credit as Anth 558 and may be taken only once for credit. Prerequisite: Upper division standing.

**Anth 460 - Public and Community Archaeology (4)**
Reviews ways archaeology contributes to the modern world as a science and a humanity through addressing issues such as community heritage, social justice, and conservation biology. Students will develop a project that shares the benefits of archaeology with the public.

Also offered for graduate-level credit as Anth 560 and may be taken only once for credit. Prerequisite: Upper division standing.

**Anth 461 - Advanced Topics in Archaeology (4)**
In-depth exploration and analysis of a major current problem in archaeology. Problems may be substantive or theoretical.

Also offered for graduate-level credit as Anth 561.. Prerequisite: Upper division standing.

**Anth 464 - Topics in Northwest Archaeology (4)**
In-depth exploration of current problems in the study of Northwest Prehistory, particularly as it articulates with general theories of hunter-gatherer adaptations and cultural evolution. Expected preparation: Anth 364.

Also offered for graduate-level credit as Anth 564. Prerequisite: Anth 350.

**Anth 471 - Advanced Topics in Paleoanthropology (4)**
In-depth exploration and analysis of current issues and debates in Paleoanthropology. Rotating focus on different human and primate lineages within different geological time frames. Emphasis on articulation of evolutionary theory with paleontology, prehistoric archaeology, genetics, and other relevant fields of inquiry.

Also offered for graduate-level credit as Anth 571. Prerequisite: Upper division standing.

**Anth 472 - The Roots of Human Biology (4)**

Also offered for graduate-level credit as Anth 572 and may be taken only once for credit. Prerequisite: Upper division standing.

**Anth 477 - Primatology Field Methods (4)**
Methods for collecting behavioral and ecological data on free-ranging primates through a combination of field exercises and lectures. Curriculum includes development of ethograms, sampling methods and recording rules, mapping, and estimating resource availability. Methods learned within a natural reserve setting populated by living primates.

Also offered for graduate-level credit as Anth 577 and may be taken only once for credit. Prerequisite: Upper division standing.

**Anth 478 - Human Osteology (4)**
The identification and interpretation of human skeletal material from paleontological, archaeological, and modern contexts. Focus on mastery of human skeletal and dental anatomy; estimation of age and sex; introduction to paleopathology, pre- and peri-mortem modification, and taphonomy. Ethics in the study of human skeletal remains.

Also offered for graduate-level credit as Anth 578 and may be taken only once for credit. Prerequisite: Upper division standing.
Anth 479 - Forensic Anthropology (2)
Methods of forensic anthropology including advanced techniques of human skeletal identification and their application to the solution of medico-legal problems.
Also offered for graduate-level credit as Anth 579 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 490 - The Anthropology of Violence (4)
Theoretical and ethnographic exploration of the nature of violence. Topics include identity politics and nationalism; the biology of aggression and the cultural meanings of pain; state violence; symbolic and structural violence; and human rights.
Also offered for graduate-level credit as Anth 590 and may be taken only once for credit. Prerequisite: Upper division standing.

Anth 491 - Culture, Vulnerability and Disaster Resilience (4)
This class discusses the distinctions between natural hazards and disasters, human-made and natural events, and sudden and slow-moving catastrophes. It considers the effects of preexisting social inequalities (e.g., race) and vulnerabilities (e.g., poverty) and examines individual, household, and community resilience as a function of social networks and social capital. The class also explores the roles of perceived risk, connectivity, and social memory. It concludes with an analysis on the successes and failures of humanitarian aid.
Also offered for graduate-level credit as Anth 591. Prerequisite: Upper-division standing.

Anth 501 - Research (1-9)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 502 - Independent Study (1-12)
(Credit to be arranged.)

Anth 503 - Thesis (1-9)
See department for course description. (Credit to be arranged.)

Anth 504 - Cooperative Education/internship (1-9)
See department for course description. (Credit to be arranged.)

Anth 505 - Reading and Conference (1-6)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 506 - Special Projects (1-9)
Credit to be arranged.

Anth 507 - Seminar (1-6)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 509 - Practicum (1-9)
(Credit to be arranged.)

Anth 510 - Selected Topics (1-4)
See department for course description. Consent of instructor. (Credit to be arranged.)

Anth 511 - Core Seminar in Social and Cultural Anthropology (4)
A seminar that provides a methodological, theoretical, and substantive review and integration of anthropological materials in social and cultural anthropology.
Prerequisite: graduate standing in anthropology and consent of instructor.

Anth 512 - Ethnographic Methods (4)
Practical coursework and community-based experience in research design and qualitative methodology. Students conceptualize and implement research projects, gather and analyze data, and write a proposal for hypothetical future research. Essential training for basic ethnographic research and applied projects.
Also offered for undergraduate-level credit as Anth 412 and may be taken only once for credit.

Anth 514 - Culture and Ecology (4)
A critical analysis of the interrelations of culture, social structure, and human ecology. Social organization as influenced by characteristic patterns of resource exploitation. The uses of natural environment from the viewpoint of the members of societies.
Also offered for undergraduate-level credit as Anth 414 and may be taken only once for credit.
Anth 515 - Applied Anthropology (4)
Examines theories, methods, and ethical considerations required to conduct applied anthropology in a variety of contexts. Students will carry out independent research on a real world problem linked with his/her career goal.
Also offered for undergraduate-level credit as Anth 415 and may be taken only once for credit.
Prerequisite: Anth 304 or Anth 305.

Anth 516 - Urban Anthropology (4)
Global examination of urban phenomena including: spatial design of urban built environments, the production of locality, urban political activism, ideas of cosmopolitanism, racial segregation, violence, migration, informal economies, subcultures, and new technologies that impact social relations in cities across the world.
Also offered for undergraduate-level credit as Anth 416 and may be taken only once for credit.

Anth 517 - Advanced Topics in Native American Studies (4)
In-depth examination of a current scholarly topic in the anthropology of Native North America, especially in relation to colonialism and Native resistance. Course will cover appropriate theory, as well as ethnographic and ethnohistorical materials.
Also offered for undergraduate-level credit as Anth 417.

Anth 518 - Environmental Anthropology (4)
What can anthropology teach us about contemporary environmental problems? Emphasizing key issues of environmental change, adaptation, conservation and sustainability, biocultural diversity, resilience, political ecology, and environmental justice, this course examines how the cross-cultural study of human-environmental relations can improve our understanding of contemporary environmental problems and their solutions.
Also offered for undergraduate-level credit as Anth 418 and may be taken only once for credit.

Anth 522 - Tribal Sovereignty and Policy (4)
An examination of current federal, state, and tribal law and policy pertaining to Indian affairs, including tribal government organization, government-to-government relations, economic development, natural and cultural resource management, health care, welfare, and education. Both reservation communities and the Portland metropolitan Indian community are considered. Student research is based on reading, field trips, and interviews with tribal officials and other policy professionals.
Also offered for undergraduate-level credit as Anth 422 and may be taken only once for credit.

Anth 525 - Topics in Medical Anthropology (4)
In-depth exploration of contemporary US and global health issues through critical, interpretive, biocultural, and ecological perspectives. Rotating topics may include but are not limited to pandemics and epidemics, emerging illnesses, food systems, new medical technologies, social meanings of the body and illness identities, patient activism, public health interventions, health-care policy, bioethics, and the medicalization of social problems. This course may be repeated once for credit.
Also offered for undergraduate-level credit as Anth 425 and may be taken only once for credit.

Anth 526 - Transnationalism and Migration (4)
In-depth exploration of globalization, transnationalism, and migration. Topics include colonialism and the history of world connections, the global economic system, cultural imperialism, nationalism and identity, migration, refugees, tourism, and the commodification of local cultures.
Also offered for undergraduate-level credit as Anth 426 and may be taken only once for credit.

Anth 528 - Political Anthropology (4)
Survey of major anthropological approaches to politics, power, activism and social change, examined in light of historical and contemporary social tensions around the world. Emphasis on decolonization, political economy, feminist, and critical race theories.
Also offered for undergraduate-level credit as Anth 428 and may be taken only once for credit.

Anth 530 - Myth, Ritual, and Symbol (4)
A critical examination of both classic and recent anthropological theories in the cross-cultural study of symbolic forms.
Also offered for undergraduate-level credit as Anth 430 and may be taken only once for credit.

Anth 531 - Topics in Latin American in Ethnography (4)
In-depth exploration of a current topic in Latin American and Caribbean anthropology, especially in relation to power, structural inequality and violence, cultural identities, social movements, the State, and postcolonial histories. Course materials will cover both theory and ethnography.
Also offered for undergraduate-level credit as Anth 431.
Anth 532 - Gender, Sex, and Sexuality in Anthropological Perspectives (4)
A theoretical introduction to gender, sex, and sexuality, including ethnographic examples from around the world. Explores biological and social aspects of sex and gender as they intersect with race, class, and nationality. Examines how gender relates to care work, kinship, and social reproduction. Considers transnational migration, surveillance, biopower, and political battles over reproductive technologies, gender-affirmative surgery, and sex work.
Also offered for undergraduate-level credit as Anth 432 and may be taken only once for credit.

Anth 535 - Visual Anthropology (4)
Examination of visual representation and visual research in Sociocultural Anthropology with a focus on photographic images, ethnographic films, and mass media.
Also offered for undergraduate-level credit as Anth 435 and may be taken only once for credit.

Anth 540 - Design Anthropology (4)
Explores the relationship between anthropology and design. Addresses how anthropologists collaborate with designers in industry to develop new products. Students apply ethnographic methods to do rapid design research and develop prototypes of products and services. The course is useful for students interested in human centered approaches to problem solving and for students pursuing a career in designing innovative products or doing user experience research.
Also offered for undergraduate-level credit as Anth 440 and may be taken only once for credit.

Anth 547 - Advanced Topics in Asian Anthropology (4)
In-depth exploration of a current topic in Asian anthropology, especially in relation to social change, nationalism and conflict, colonialism, or modernization. Course materials will cover both theory and ethnography.
Also offered for undergraduate-level credit as Anth 447.

Anth 550 - Core Seminar in Archaeology (4)
A seminar that provides a methodological, theoretical, and substantive review and integration of anthropological materials in archaeology.
Prerequisite: graduate standing in anthropology and consent of instructor.

Anth 551 - History of Archaeology (4)
A chronological survey of developments in the field of archaeological inquiry: major schools of thought, innovations in method and theory, key personalities and their contributions.
Also offered for undergraduate-level credit as Anth 451 and may be taken only once for credit.
Prerequisite: Graduate standing or instructor permission.

Anth 552 - Archaeological Lab Methods (4)
Learn and practice archaeological lab methods and techniques through analysis of common materials (e.g. lithics, ceramics) recovered from archaeological sites.
Also offered for undergraduate-level credit as Anth 452 and may be taken only once for credit.
Prerequisite: Graduate standing or instructor permission.

Anth 553 - Archaeological Field Methods (4)
Learn the theory, methods, and practice of archaeological field work. Topics include research design, survey and reconnaissance, site excavation, sampling and recording techniques, mapping, and cultural resource management.
Also offered for undergraduate-level credit as Anth 453 and may be taken only once for credit.
Prerequisite: Graduate standing or instructor permission.

Anth 554 - Archaeological Field School (6)
Engage in the scientific survey, mapping, and excavation of archaeological sites during a summer field project. Students will also gain training and experience in public engagement. Approximately 40 hours of field work per week, with a week of laboratory work.
Also offered for undergraduate-level credit as Anth 454 and may be taken only once for credit.
Prerequisite: Admission to course is by permission of instructor via an application process.

Anth 555 - Analysis of Faunal Remains (5)
Reviews issues of recovery, identification, quantification, and interpretation of archaeological faunal remains. Seminar component involves discussion and critical review of recent faunal studies. Laboratory component introduces student to skeletal anatomy of vertebrates (with focus on fishes and mammals) and basic procedures used in faunal analysis.
Also offered for undergraduate-level credit as Anth 455 and may be taken only once for credit.
Prerequisite: Graduate standing or instructor permission.

**Anth 556 - Cultural and Heritage Resource Management (4)**

Introduction to the preservation, conservation, and management of cultural and heritage resources in North America, including the legal and regulatory frameworks. Topics include agency and private-sector archaeology, laws affecting antiquities trafficking, consultation with American Indian tribes and other stakeholders, traditional cultural properties, and landscape.

Also offered for undergraduate-level credit as Anth 456. Prerequisite: Graduate standing or instructor permission.

**Anth 557 - The Archaeology of Hunter-Gatherers (4)**

An investigation of the economic and social diversity among modern and ancient hunter-gatherers and the theories and methods used by archaeologists to investigate and explain that diversity. Examines topics such as the evolution of hunting and gathering, hunter-gatherer settlement and mobility strategies, social complexity among hunter-gatherers and hunter-gatherers in the modern world.

Also offered for undergraduate-level credit as Anth 457 and may be taken only once for credit. Prerequisite: Graduate standing or instructor permission.

**Anth 558 - The Archaeology of Disaster (4)**

Examines archaeological approaches to studying human responses to past disasters, both natural and human-made, and the application of archaeology to contemporary disaster preparedness and related issues. Topics include past human-environment interactions, climate change, vulnerability, risk, and resilience.

Also offered for undergraduate-level credit as Anth 458 and may be taken only once for credit. Prerequisite: Graduate standing or instructor permission.

**Anth 560 - Public and Community Archaeology (4)**

Reviews ways archaeology contributes to the modern world as a science and a humanity through addressing issues such as community heritage, social justice, and conservation biology. Students will develop a project that shares the benefits of archaeology with the public.

Also offered for undergraduate-level credit as Anth 460 and may be taken only once for credit.

**Anth 561 - Advanced Topics in Archaeology (4)**

In-depth exploration and analysis of a major current problem in archaeology. Problems may be substantive or theoretical.

Also offered for undergraduate-level credit as Anth 461. Prerequisite: Graduate standing or instructor permission.

**Anth 564 - Topics in Northwest Archaeology (4)**

In-depth exploration of current problems in the study of Northwest Prehistory, particularly as it articulates with general theories of hunter-gatherer adaptations and cultural evolution. Expected preparation: Anth 364.

Also offered for undergraduate-level credit as Anth 464. Prerequisite: Graduate standing or instructor permission.

**Anth 567 - Core Seminar in Physical Anthropology (4)**

A seminar that provides a methodological, theoretical, and substantive review and integration of anthropological materials in physical anthropology.

**Anth 568 - Advanced Topics in Paleoanthropology (4)**

In-depth exploration and analysis of current issues and debates in Paleoanthropology. Rotating focus on different human and primate lineages within different geological time frames. Emphasis on articulation of evolutionary theory with paleontology, prehistoric archaeology, genetics, and other relevant fields of inquiry.

Also offered for undergraduate-level credit as Anth 471.

**Anth 571 - The Roots of Human Biology (4)**

Also offered for undergraduate-level credit as Anth 472 and may be taken only once for credit.

**Anth 577 - Primatology Field Methods (4)**

Methods for collecting behavioral and ecological data on free-ranging primates through a combination of
field exercises and lectures. Curriculum includes development of ethograms, sampling methods and recording rules, mapping, and estimating resource availability. Methods learned within a natural reserve setting populated by living primates.

Also offered for undergraduate-level credit as Anth 477 and may be taken only once for credit. Prerequisite: Graduate level standing or permission of instructor.

**Anth 578 - Human Osteology (4)**
The identification and interpretation of human skeletal material from paleontological, archaeological, and modern contexts. Focus on mastery of human skeletal and dental anatomy; estimation of age and sex; introduction to paleopathology, pre- and peri-mortem modification, and taphonomy. Ethics in the study of human skeletal remains.

Also offered for undergraduate-level credit as Anth 478 and may be taken only once for credit.

**Anth 579 - Forensic Anthropology (2)**
Methods of forensic anthropology including advanced techniques of human skeletal identification and their application to the solution of medico-legal problems.

Also offered for undergraduate-level credit as Anth 479 and may be taken only once for credit.

**Anth 590 - The Anthropology of Violence (4)**
Theoretical and ethnographic exploration of the nature of violence. Topics include identity politics and nationalism; the biology of aggression and the cultural meanings of pain; state violence; symbolic and structural violence; and human rights.

Also offered for undergraduate-level credit as Anth 490 and may be taken only once for credit.

**Anth 591 - Culture, Vulnerability and Disaster Resilience (4)**
This class discusses the distinctions between natural hazards and disasters, human-made and natural events, and sudden and slow-moving catastrophes. It considers the effects of preexisting social inequalities (e.g., race) and vulnerabilities (e.g., poverty) and examines individual, household, and community resilience as a function of social networks and social capital. The class also explores the roles of perceived risk, connectivity, and social memory. It concludes with an analysis on the successes and failures of humanitarian aid.

Also offered for undergraduate-level credit as Anth 491. Cross-Listed as: This is the same course as EMCR 591.

**Ar - Arabic**

**Ar 101 - First-Year Standard Arabic Term 1 (4)**
Introduction to modern literary (fus-ha) Arabic: Emphasis on reading and writing the cursive Arabic script, accurate pronunciation, comprehension of basic texts, translation, vocabulary, dictation, basic grammar and syntax, writing Arabic compositions, and media to facilitate the learning of simple communications in standard spoken Arabic. This is the first course in a sequence of three: Ar 101, Ar 102, and Ar 103. For non-native speakers of Arabic only.

**Ar 102 - First-Year Standard Arabic Term 2 (4)**
Introduction to modern literary (fus-ha) Arabic: Emphasis on reading and writing the cursive Arabic script, accurate pronunciation, comprehension of basic texts, translation, vocabulary, dictation, basic grammar and syntax, writing Arabic compositions, and media to facilitate the learning of simple communications in standard spoken Arabic. This is the second course in a sequence of three: Ar 101, Ar 102, and Ar 103. For non-native speakers of Arabic only.

**Ar 103 - First-Year Standard Arabic Term 3 (4)**
Introduction to modern literary (fus-ha) Arabic: Emphasis on reading and writing the cursive Arabic script, accurate pronunciation, comprehension of basic texts, translation, vocabulary, dictation, basic grammar and syntax, writing Arabic compositions, and media to facilitate the learning of simple communications in standard spoken Arabic. This is the third course in a sequence of three: Ar 101, Ar 102, and Ar 103. For non-native speakers of Arabic only.

**Ar 199 - Special Studies (1-4)**
(Credit to be arranged.)

**Ar 201 - Second-Year Standard Arabic Term 1 (4)**
Continued work in modern literary Arabic: Emphasis on reading proses dealing with the popular standard language, expanded grammar and syntax, writing Arabic compositions, translation, enhanced vocabulary, dictation, and media for better listening comprehension of standard spoken Arabic, for expanded conversations dealing with daily life. This is the first course in a sequence of three: Ar 201, Ar 202, and Ar 203.
Prerequisite: Ar 103. For non-native speakers of Arabic only.

**Ar 202 - First-Year Standard Arabic Term 2 (4)**
Continued work in modern literary Arabic: Emphasis on reading prosetexts dealing with the popular standard language, expanded grammar and syntax, writing Arabic compositions, translation, enhanced vocabulary, dictation, and media for better listening comprehension of standard spoken Arabic, for expanded conversations dealing with daily life. This is the second course in a sequence of three: Ar 201, Ar 202, and Ar 203.

Prerequisite: Ar 103. For non-native speakers of Arabic only.

**Ar 203 - First-Year Standard Arabic Term 3 (4)**
Continued work in modern literary Arabic: Emphasis on reading prosetexts dealing with the popular standard language, expanded grammar and syntax, writing Arabic compositions, translation, enhanced vocabulary, dictation, and media for better listening comprehension of standard spoken Arabic, for expanded conversations dealing with daily life. This is the third course in a sequence of three: Ar 201, Ar 202, and Ar 203.

Prerequisite: Ar 103. For non-native speakers of Arabic only.

**Ar 299 - Special Studies (1-12)**
(Credit to be arranged.)

**Ar 301 - Third-Year Standard Arabic Term 1 (4)**
Intermediate modern literary Arabic prose: Emphasis on reading prosetexts dealing with a wide spectrum of daily-life topics in their social-cultural context; advanced grammar and syntax (weak verbs, weak nouns, doubled verbs, verb moods, and the conditional); translation of complex texts, writing expanded Arabic compositions; media and Arabic websites to enhance conversational skills. This is the first course in a sequence of three: Ar 301, Ar 302, and Ar 303.

Prerequisite: Ar 301, Ar 302, Ar 303.

**Ar 302 - Third-Year Standard Arabic Term 2 (4)**
Intermediate modern literary Arabic prose: Emphasis on reading prosetexts dealing with a wide spectrum of daily-life topics in their social-cultural context; advanced grammar and syntax (weak verbs, weak nouns, doubled verbs, verb moods, and the conditional); translation of complex texts, writing expanded Arabic compositions; media and Arabic websites to enhance conversational skills. This is the second course in a sequence of three: Ar 301, Ar 302, and Ar 303.

**Ar 303 - Third-Year Standard Arabic Term 3 (4)**
Intermediate modern literary Arabic prose: Emphasis on reading prosetexts dealing with a wide spectrum of daily-life topics in their social-cultural context; advanced grammar and syntax (weak verbs, weak nouns, doubled verbs, verb moods, and the conditional); translation of complex texts, writing expanded Arabic compositions; media and Arabic websites to enhance conversational skills. This is the third course in a sequence of three: Ar 301, Ar 302, and Ar 303.

**Ar 304 - Common Spoken Arabic Term 1 (4)**
Practical pan-Arab spoken Arabic used in social, intellectual gatherings and business in lieu of limited local spoken "dialects," or the fus-ha (literary Arabic), understandable and usable anywhere in the Arab world. For non-native speakers of Arabic only. This is the first course in a sequence of three: Ar 304, Ar 305, and Ar 306.

Prerequisite: Ar 203 or consent of Instructor.

**Ar 305 - Common Spoken Arabic Term 2 (4)**
Practical pan-Arab spoken Arabic used in social, intellectual gatherings and business in lieu of limited local spoken "dialects," or the fus-ha (literary Arabic), understandable and usable anywhere in the Arab world. For non-native speakers of Arabic only. This is the second course in a sequence of three: Ar 304, Ar 305, and Ar 306.

Prerequisite: Ar 203 and Ar 304.

**Ar 306 - Common Spoken Arabic Term 3 (4)**
Practical pan-Arab spoken Arabic used in social, intellectual gatherings and business in lieu of limited local spoken "dialects," or the fus-ha (literary Arabic), understandable and usable anywhere in the Arab world. For non-native speakers of Arabic only. This is the third course in a sequence of three: Ar 304, Ar 305, and Ar 306.

Prerequisite: Ar 203 and Ar 305.

**Ar 311 - Intermediate Media Arabic (4)**
Reading and translating intermediate-level Arabic newspaper and journal materials; viewing selected media and news websites. For non-native speakers of Arabic only. Does not replace Ar 301, Ar 302, Ar 303.

Prerequisite: Ar 301, Ar 302, Ar 303.
Ar 330 - Topics in Arab Culture and Civilization (4)
Survey of the development of culture, thought, and the arts in the Arab world, from pre-Islamic times to the present with focus on particular themes or periods. Does not replace 301, 302, 303. Taught in English.

Ar 331 - Arabic Calligraphy: Reading and Writing (4)
Introduction to Arabic script since the fifth century A.D.; presentation of early prominent pens and styles; reading various exhibits covering all major styles; mastering the writing of the ruq'ah style. Does not replace Ar 301, Ar 302, Ar 303.
Prerequisite: Ar 203 or consent of instructor.

Ar 399 - Special Studies (1-6)
(Credit to be arranged.)

Ar 401 - Research (1-6)
(Credit to be arranged.)

Ar 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Ar 405 - Reading and Conference (1-12)
(Credit to be arranged.)

Ar 409 - Practicum (1-6)
(Credit to be arranged.)

Ar 410 - Selected Topics (1-6)
(Credit to be arranged.)

Ar 411 - Advanced Arabic (4)
Reading, discussing and translating advanced Arabic texts by prominent Arab authors in various genres presenting cultural, literary, and political topics.
Also offered for graduate-level credit as Ar 511 and may be taken only once for credit. Prerequisite: Ar 303 or consent of instructor.

Ar 413 - Advanced Modern Standard Arabic: Short Story and Novel (4)
Reading modern Arabic short stories, condensed novels, or short biographies of prominent Arab authors; viewing related films; writing critiques in Arabic. This course is not taught every year.
Also offered for graduate-level credit as Ar 513 and may be taken only once for credit. Prerequisite: Ar 303 or consent of instructor.

Ar 414 - Advanced Arabic Grammar (4)
The use of the critical connectors of the standard Arabic grammar and the major rules of the Arabic syntax.
Also offered for graduate-level credit as Ar 514 and may be taken only once for credit. Prerequisite: Ar 411 or Ar 511 or consent of instructor.

Ar 419 - Folk Proverbs of the Arabs (4)
Reading and analyzing Arabic folk proverbs representing a wide range of critical social-cultural issues and moral values; writing critiques.
Also offered for graduate-level credit as Ar 519 and may be taken only once for credit. Prerequisite: Ar 301 and Ar 304 or consent of instructor.

Ar 420 - Folk Tales of the Arabs (4)
Introduction to the oral tradition of the Arabs since early times; analysis of selected folk tales; viewing cultural videos; writing short critiques.
Also offered for graduate-level credit as Ar 520 and may be taken only once for credit. Prerequisite: Ar 303 and Ar 304 or consent of instructor.

Ar 421 - Extemporized-sung Poetry and Folk Songs of the Arabs (4)
Reading, translating, and analyzing texts of extemporized-sung folk poetry (zajal) covering major genres and lyrics of folk songs composed in vernacular Arabic; viewing videos of social occasions where these genres are performed. Conducted in English.
Also offered for graduate-level credit as Ar 521 and may be taken only once for credit. Prerequisite: Ar 303 & Ar 306 or consent of instructor.

Ar 423 - Modern Arabic Poetry (4)
Reading, translating, and analyzing selected modern Arabic poems from prominent Arab poets covering a wide range of issues and genres; writing critical analysis of poems.
Also offered for graduate-level credit as Ar 523 and may be taken only once for credit. Prerequisite: Ar 303 or consent of instructor.
Ar 424 - Classical Arabic Poetry (4)
Reading, translating, and analyzing selected texts of classical Arabic poems from prominent Arab poets of early Arabia and al-Andalus covering a wide range of major issues; writing critical analysis of poems.
Also offered for graduate-level credit as Ar 524 and may be taken only once for credit. Prerequisite: Ar 303 or consent of instructor.

Ar 427 - Classical Arabic Prose (4)
Introduction to the history of Arabic prose (7th – 18th century AD); reading selected texts from classic literary works of major authors such as Ibn al-Muqaffa’, al-Jahiz, al-Isfahani, Ibn ‘Adiy, and Ibn ‘Abd Rabbuh; translating texts and writing literary reviews in Arabic.
Also offered for graduate-level credit as Ar 527 and may be taken only once for credit. Prerequisite: Ar 303 or consent of instructor.

Ar 441U - Major Arabic Works in Translation (4)

Ar 490 - History of the Arabic Language (4)
Study of the development of classical Arabic language from early times, with emphasis on two major schools of Arabic grammar: al-Kufah and al-Basrah; contribution of major grammarians, evolution of morphology and syntax; development of current Modern Standard Arabic vs colloquial Spoken Arabic.
Also offered for graduate-level credit as Ar 590 and may be taken only once for credit. Prerequisite: Ar 303 or consent of instructor.

Ar 510 - Selected Topics (1-6)
(Credit to be arranged.)

Ar 511 - Advanced Arabic (4)
Reading, discussing and translating advanced Arabic texts by prominent Arab authors in various genres presenting cultural, literary, and political topics.
Also offered for undergraduate-level credit as Ar 411 and may be taken only once for credit.

Ar 513 - Advanced Modern Standard Arabic: Short Story and Novel (4)
Reading modern Arabic short stories, condensed novels, or short biographies of prominent Arab authors; viewing related films; writing critiques in Arabic. This course is not taught every year.
Also offered for undergraduate-level credit as Ar 413 and may be taken only once for credit.

Ar 514 - Advanced Arabic Grammar (4)
The use of the critical connectors of the standard Arabic grammar and the major rules of the Arabic syntax.
Also offered for undergraduate-level credit as Ar 414 and may be taken only once for credit. Prerequisite: Ar 411 or Ar 511 or consent of instructor.

Ar 519 - Folk Proverbs of the Arabs (4)
Reading and analyzing Arabic folk proverbs representing a wide range of critical social-cultural issues and moral values; writing critiques.
Also offered for undergraduate-level credit as Ar 419 and may be taken only once for credit. Prerequisite: Ar 301 and Ar 304 or consent of instructor.

Ar 520 - Folk Tales of the Arabs (4)
Introduction to the oral tradition of the Arabs since early times; analysis of selected folk tales; viewing cultural videos; writing short critiques.
Also offered for undergraduate-level credit as Ar 420 and may be taken only once for credit. Prerequisite: Ar 303 and Ar 304 or consent of instructor.

Ar 521 - Extemporized-sung Poetry and Folk Songs of the Arabs (4)
Reading, translating, and analyzing texts of extemporized-sung folk poetry (zajal) covering major genres and lyrics of folk songs composed in vernacular Arabic; viewing videos of social occasions where these genres are performed. Conducted in English.
Also offered for undergraduate-level credit as Ar 421 and may be taken only once for credit.

Ar 523 - Modern Arabic Poetry (4)
Reading, translating, and analyzing selected modern Arabic poems from prominent Arab poets covering a wide range of issues and genres; writing critical analysis of poems.
Also offered for undergraduate-level credit as Ar 423 and may be taken only once for credit.
Ar 524 - Classical Arabic Poetry (4)
Reading, translating, and analyzing selected texts of classical Arabic poems from prominent Arab poets of early Arabia and al-Andalus covering a wide range of major issues; writing critical analysis of poems. Also offered for undergraduate-level credit as Ar 424 and may be taken only once for credit.

Ar 527 - Classical Arabic Prose (4)
Introduction to the history of Arabic prose (7th – 18th century AD); reading selected texts from classic literary works of major authors such as Ibn al-Muqaffa‘, al-Jahiz, al-Isfahani, Ibn ‘Adiy, and Ibn ‘Abd Rabbuh; translating texts and writing literary reviews in Arabic. Also offered for undergraduate-level credit as Ar 427 and may be taken only once for credit.

Ar 590 - History of the Arabic Language (4)
Study of the development of classical Arabic language from early times, with emphasis on two major schools of Arabic grammar: al-Kufah and al-Basrah; contribution of major grammarians, evolution of morphology and syntax; development of current Modern Standard Arabic vs colloquial Spoken Arabic. Also offered for undergraduate-level credit as Ar 490 and may be taken only once for credit.

Arch - Architecture

Arch 100 - Introduction to Architecture (4)
Introductory course designed to introduce concepts, theories, and practices of the discipline of architecture. Includes a study of perceptual, environmental, technical and organizational concepts through lectures and individual projects in observing landscapes and forms.

Arch 101 - Introduction to Environmental Design (4)
Concepts and theories of the fields of environmental and sustainable design. Includes a study of perceptual, technical, and philosophical concepts of natural and built resources through lectures, design projects, and individual projects. Open to non-majors.

Arch 102 - Introduction to Landscape Architecture (4)
Introductory course designed to introduce concepts, theories and practices of the discipline of landscape architecture. Includes a study of the perceptual, environmental, technical and organizational concepts through lectures and individual projects in observing landscapes and forms.

Arch 120 - Visual Communication 1 (4)
An introduction to freehand drawing focused on the delineation of both interior and exteriors space, starting with direct observation through to conceptual drawings of imagination. Use of different media and color including the study of light and light qualities. Open to non-majors.

Arch 121 - Visual Communication 2 (4)
Develops skills in graphic visualization, representation, and communication as used in architecture and related design fields. Concepts and conventions, from freehand to digital media and production, used as a means to imagine, develop and represent design ideas. Prerequisite: Arch 120.

Arch 198 - Metal Shop Skills Workshop (1)
Basic metal working skills, including cutting, welding, blacksmithing and safety protocols. Prerequisite: Arch 281.

Arch 199 - Special Studies (0-12)
See department for course description. (Credit to be arranged.)

Arch 202 - Project Management II (6)
Series of courses designed to develop in students construction project management techniques for profitable construction administration. Students will demonstrate knowledge of course material by completing projects in light construction administration. Coursework includes utilization of estimating, critical path, and presentation computer software relevant to current practices. Arch 202: developing standards of performance, bidding, contracts and liability, production scheduling, and techniques for controlling a profitable construction project. This is the second course in a sequence of two: Arch 201 and Arch 202 which must be taken in sequence. Prerequisite: Building construction certificate program, instructor's consent, or equivalent.

Arch 225 - Digital Graphics (4)
A beginning computer graphics course that develops skills in digital design, visualization, representation...
and communication. Concepts and conventions are introduced as tools for rigorous design investigations.

Prerequisite: Arch 121.

Arch 230 - Architecture and Cultural History I (4)
A series of courses tracing the history of architecture understood as a cultural product from the early Paleolithic Age up to the 20th century. The first course covers from the early Stone Age up to the Iron Age, the second course begins in the 1st century C.E. to cover up to the 19th century, and the third course addresses the 20th century. The courses will focus on a select number of architectural works that are representative of specific cultural beliefs, values, and ideologies in a global context as embodied in architectonic forms and experiences. This is the first course in a sequence of three: Arch 230, Arch 231, and Arch 232 which must be taken in sequence.

Arch 231 - Architecture and Cultural History II (4)
A series of courses tracing the history of architecture understood as a cultural product from the early Paleolithic Age up to the 20th century. The first course covers from the early Stone Age up to the Iron Age, the second course begins in the 1st century C.E. to cover up to the 19th century, and the third course addresses the 20th century. The courses will focus on a select number of architectural works that are representative of specific cultural beliefs, values, and ideologies in a global context as embodied in architectonic forms and experiences. This is the second course in a sequence of three: Arch 230, Arch 231, and Arch 232 which must be taken in sequence.

Arch 232 - Architecture and Cultural History III (4)
A series of courses tracing the history of architecture understood as a cultural product from the early Paleolithic Age up to the 20th century. The first course covers from the early Stone Age up to the Iron Age, the second course begins in the 1st century C.E. to cover up to the 19th century, and the third course addresses the 20th century. The courses will focus on a select number of architectural works that are representative of specific cultural beliefs, values, and ideologies in a global context as embodied in architectonic forms and experiences. This is the third course in a sequence of three: Arch 230, Arch 231, and Arch 232 which must be taken in sequence.

Arch 280 - Design Fundamentals Studio 1 (6)
Foundational design studio sequence initiating awareness of the creative language of architecture through practical assignments in drawing, modeling, and artful making. The communication of perceptions and imaginative propositions through the use of diverse media is encouraged. Includes individual criticism, lectures, and seminar discussions. This is the first course in a sequence of two: Arch 280 and Arch 281 which must be taken in sequence.

Prerequisite: Arch 121.

Arch 281 - Design Fundamentals Studio 2 (6)
Foundational design studio sequence initiating awareness of the creative language of architecture through practical assignments in drawing, modeling, and artful making. The communication of perceptions and imaginative propositions through the use of diverse media is encouraged. Includes individual criticism, lectures, and seminar discussions. This is the second course in a sequence of two: Arch 280 and Arch 281 which must be taken in sequence.

Prerequisite: Arch 280.

Arch 299 - Special Studies (1-6)
(Credit to be arranged.)

Arch 360 - Building Tectonics 1 (4)
A three-quarter sequence introducing technologies involved in the design and construction of buildings. Topics include construction materials and methods, envelope design, mechanical systems, thermal, and other environmental building systems. This is the first course in a sequence of three: Arch 360, Arch 361, and Arch 362 which must be taken in sequence.

Prerequisite: Arch 281.

Arch 361 - Building Tectonics 2 (4)
A three-quarter sequence introducing technologies involved in the design and construction of buildings. Topics include construction materials and methods, envelope design, mechanical systems, thermal, and other environmental building systems. This is the second course in a sequence of three: Arch 360, Arch 361, and Arch 362 which must be taken in sequence.

Prerequisite: Arch 360.

Arch 362 - Building Tectonics 3 (4)
A three-quarter sequence introducing technologies involved in the design and construction of buildings. Topics include construction materials and methods, envelope design, mechanical systems, thermal, and other environmental building systems. This is the
third course in a sequence of three: Arch 360, Arch 361, and Arch 362 which must be taken in sequence.

Prerequisite: Arch 361.

Arch 367U - Fundamentals of Environmental Design (4)
Basic concepts of climate and impacts on personal comfort. Thermal, lighting, and acoustical topics covered. Design approaches and concepts discussed from large urban site projects to individual buildings in order to minimize mechanical systems and reduce energy use. Alternative energy sources and building materials introduced.

Prerequisite: junior year standing.

Arch 380 - Architectural Design Studio 1 (6)
Studio investigations of fundamental design concepts, issues, and process. Projects and exercises focusing on the concepts of making three-dimensional forms --organization, proportion, scale, human activities, and introductory site and building design relationships. The release of the student's potential creative capabilities is a primary concern for the course. Includes individual criticism, lectures, and seminars. This is the first course in a sequence of three: Arch 380, Arch 381, and Arch 382 and must be taken in sequence.

Prerequisite: Arch 281.

Arch 381 - Architectural Design Studio 2 (6)
Studio investigations of fundamental design concepts, issues, and process. Projects and exercises focusing on the concepts of making three-dimensional forms --organization, proportion, scale, human activities, and introductory site and building design relationships. The release of the student's potential creative capabilities is a primary concern for the course. Includes individual criticism, lectures, and seminars. This is the second course in a sequence of three: Arch 380, Arch 381, and Arch 382 and must be taken in sequence.

Prerequisite: Arch 380.

Arch 382 - Architectural Design Studio 3 (6)
Studio investigations of fundamental design concepts, issues, and process. Projects and exercises focusing on the concepts of making three-dimensional forms --organization, proportion, scale, human activities, and introductory site and building design relationships. The release of the student's potential creative capabilities is a primary concern for the course. Includes individual criticism, lectures, and seminars. This is the third course in a sequence of three: Arch 380, Arch 381, and Arch 382 and must be taken in sequence.

Prerequisite: Arch 381.

Arch 384 - Architectural Design Focus Studio I (3)
Studio investigations of architectural designs based on supporting human activities, structure and theory. Includes individual criticism, lectures and seminars.

Prerequisite: Arch 380.

Arch 385 - Architectural Design Focus Studio II (3)
Studio investigations of architectural designs based on supporting human activities, structure and theory. Includes individual criticism, lectures and seminars.

Prerequisite: Arch 380.

Arch 399 - Special Studies (0-12)
See department for course description. (Credit to be arranged.)

Arch 401 - Research (0-12)
See department for course description. (Credit to be arranged.)

Arch 404 - Cooperative Education/Internship (0-12)
See department for course description. (Credit to be arranged.)

Arch 405 - Reading or Studio and Conference (0-12)
See department for course description. (Credit to be arranged.)

Arch 406 - Special Projects (1-12)
(Credit to be arranged.)

Arch 407 - Seminar (0-12)
See department for course description. (Credit to be arranged.)

Arch 408 - Workshop (0-12)
See department for course description. (Credit to be arranged.)
Arch 410 - Selected Topics (0-12)
See department for course description. (Credit to be arranged.)

Arch 410U - Selected Topics (1-4)
(Credit to be arranged.)

Arch 421 - Urban Design Methods (4)
Introduction to analytical and synthetic research methodologies inherent in the design of natural, architectural and urban contexts essential to contemporary urban design practice.
Also offered as graduate-level credit as Arch 521 and may be taken only once for credit.

Arch 423 - Advanced Architectural Graphics and Media (4)
Studio assignments exploring a full range of graphic representational techniques and media. Exploratory drawing and modeling work addressing the visualization of ideas in architecture, including: speculative thought and concept formation; studies of light and shadow; exploration of color and texture.
Also offered for graduate-level credit as Arch 523 and may be taken only once for credit.

Arch 425 - Computational Design & Digital Making I (4)
Focuses on computational design softwares & production workflows used in the architecture field. Arch 425 explores three dimensional methods for constructing, editing, visualizing and fabricating architectural ideas. This is the first course in a sequence of two: Arch 425 and Arch 426 which must be taken in sequence.
Also offered as graduate-level credit as Arch 525 and may be taken only once for credit. Prerequisite: Arch 281.

Arch 426 - Computational Design & Digital Making II (4)
Focuses on advanced topics in the computational design and digital production of architecture. Arch 426 continues study of digital methods of architectural design generation and development. Instructor sets software and topics of investigation (eg. parametric design, digital fabrication, physical computing). This is the second course in a sequence of two: Arch 425 and Arch 426 which must be taken in sequence.

Arch 430 - Architectural Theory (4)
Introduction to the content of theoretical propositions in architecture and their influence upon the directions, emphases and outcomes of creative making within an historical context.
Prerequisite: Arch 232.

Arch 431 - Studies in Contemporary Urban Design (4)
Seminar course examining the contemporary relationships between the making of architecture and the making of cities. The course critically explores emerging urban characteristics, comparative design strategies, and the integration of design approaches with the processes of economic and social change.
Also offered for graduate-level credit as Arch 531 and may be taken only once for credit. Prerequisite: Upper-division standing.

Arch 432 - History and Theory of Urban Design (4)
Introduction to the development of historical and contemporary urban design with parallel developments in architecture and urban planning. Theoretical models are related to current practices in the design of various sociopolitical, environmental and aesthetic urban contexts.
Also offered for graduate-level credit as Arch 532 and may be taken only once for credit.

Arch 433 - Contemporary Issues Seminar (4)
In-depth exploration of selected topics that explore contemporary issues informing the discipline of architecture. Whether cultural, social, political, economic, aesthetic, environmental or other, contemporary issues and voices contribute to the dynamic and evolving production, construction and inhabitation of architecture. Topics may include: visual art, literature, aesthetics, ethics, philosophy, politics, culture(s), and technology. Course may be repeated for credit with different topics.
Also offered for graduate-level credit as Arch 533. Prerequisite: Upper-division standing.

Arch 434 - Topics in Architectural History and Theory (4)
Seminar on selected topics focusing on the history and theory of architecture. Consists of discussions, presentations, lectures, and readings on relevant topics as they have historically emerged within the discipline of architecture. May focus on specific
historical periods and/or may include philosophy of architecture, architectural representation, architecture and the city. Course may be repeated for credit with different topics.

Also offered for graduate-level credit as Arch 534. Prerequisite: Upper-division standing.

Arch 435 - Topics in Modernism (4)
Seminar investigating the influences and products of industrialized cultures as they relate to the discipline of architecture. Depending on the instructor, emphasis may be on the critical study of cities, buildings, or landscapes, but each will be explored within the comprehensive understanding of the cultural and social conditions of Modernism. Course may be repeated for credit with different topics.

Prerequisite: Upper-division standing.

Arch 440 - Professional Practice (4)
A lecture course focusing on the context, responsibilities, licensure, principles and processes of the practice of architecture, including project and client acquisition, risk analysis, project and practice management, project delivery methods, services and scope definition, roles and responsibilities of all parties, contract forms, general conditions of the contract, compensation methods, fee budget management, contract administration, and standard of care.

Also offered for graduate-level credit as Arch 540 and may be taken only once for credit. Prerequisite: Upper-division standing.

Arch 441 - Practicum and Internship (4)
Offers students an opportunity to gain industry experience and to integrate the skills and concepts learned in the academic curriculum. Weekly seminars review and establish internship objectives, which closely parallel the architectural internship development program required for licensure. Students are expected to secure employment or positions that meet the objectives of the course.

Also offered for graduate-level credit as Arch 541 and may be taken only once for credit. Prerequisite: Upper-division standing.

Arch 442 - Building Economics (4)
Focuses on the economic and life cycle context of building design and management decisions. Topics include project life cycle, decision milestones, value analysis of design and project proforma, discounted cash flow and equivalency calculation methods, and conceptual estimating techniques for building projects. Strategic leveraging of project value is emphasized, and sustainability objectives are examined.

Also offered for graduate-level credit as Arch 542 and may be taken only once for credit. Prerequisite: Arch 440 or Arch 540.

Arch 460 - Concepts in Building Technology (4)
Exploration of current advanced building technology and form generative responses to current sustainability issues. Includes extensive investigation of current technologies for envelope, mechanical and thermal comfort systems, and lighting and daylighting strategies. Strategies of formal integration with architectural design area emphasized.

Prerequisite: Arch 362.

Arch 462 - Advanced Architectural Materials (4)
Seminar building on basic properties of architectural materials learned in Arch 360. A research-based course looking at creative use and reuse of materials for construction emphasizing sustainable solutions. Includes case study investigations of contemporary innovative material usage and student-designed building component.

Also offered for graduate-level credit as Arch 562 and may be taken only once for credit. Prerequisite: Arch 362.

Arch 467 - Building Structures (4)
A lecture course that develops a basic understanding of structural elements and their implications for architectural form. Major topics include assembly, statics, properties of common structural materials, vertical and lateral load resisting systems. Precedent studies investigate structure in historical and contemporary buildings.

Prerequisite: Arch 362.

Arch 480 - Architectural Design Studio 4 (6)
Studio investigations of architectural designs based on supporting human activities, structure, and theory. Continued study of design process and methods encompassing concepts of architecture, landscape architecture, and interior design. Includes individual criticism, lectures, and seminars. This is the first course in a sequence of three: Arch 480, Arch 481, and Arch 482 which must be taken in sequence.

Prerequisite: Arch 381 or Arch 382 and Arch 362.

Arch 481 - Architectural Design Studio 5 (6)
Studio investigations of architectural designs based on supporting human activities, structure, and theory. Continued study of design process and methods encompassing concepts of architecture, landscape architecture, and interior design. Includes individual criticism, lectures, and seminars. This is the second course in a sequence of three: Arch 480, Arch 481, and Arch 482 and must be taken in sequence.
Prerequisite: Arch 480.

Arch 482 - Architectural Design Studio 6 (6)
Studio investigations of architectural designs based on supporting human activities, structure, and theory. Continued study of design process and methods encompassing concepts of architecture, landscape architecture, and interior design. Includes individual criticism, lectures, and seminars. This is the third course in a sequence of three: Arch 480, Arch 481, and Arch 482 and must be taken in sequence.

Prerequisite: Arch 481.

Arch 501 - Research (0-12)
See department for course description. (Credit to be arranged.)

Arch 504 - Cooperative Education/Internship (0-12)
See department for course description. (Credit to be arranged.)

Arch 505 - Reading or Studio and Conference (0-12)
See department for course description. (Credit to be arranged.)

Arch 507 - Seminar (0-12)
See department for course description. (Credit to be arranged.)

Arch 508 - Workshop (0-12)
See department for course description. (Credit to be arranged.)

Arch 509 - Practicum (1-9)
(Credit to be arranged.)

Arch 510 - Selected Topics (0-12)
See department for course description. (Credit to be arranged.)

Arch 511 - Pro-Thesis Seminar (4)
A research and discussion based course to identify, define and articulate specific cultural issues and concerns that will become the inspiration for individual design thesis proposals. Students will generate the conceptual parameters and theoretical agenda of their proposed thesis, explore precedents and develop the program for a significant urban intervention.

Prerequisite: Arch 582.

Arch 521 - Urban Design Methods (4)
Introduction to analytical and synthetic research methodologies inherent in the design of natural, architectural and urban contexts essential to contemporary urban design practice.

Also offered as undergraduate-level credit as Arch 421 and may be taken only once for credit.

Arch 522 - Architectural Graphics and Media (4)
Studio introduction to a broad range of graphic representational techniques and media. Coursework develops skills in graphic visualization, representation and communication as used in architecture and related design fields. Concepts and conventions, from freehand to digital media, are used as a means to imagine, develop and represent design ideas.

Arch 523 - Advanced Architectural Graphics and Media (4)
Studio assignments exploring a full range of graphic representational techniques and media. Exploratory drawing and modeling work addressing the visualization of ideas in architecture, including: speculative thought and concept formation; studies of light and shadow; exploration of color and texture.

Also offered for undergraduate-level credit as Arch 423 and may be taken only once for credit.

Arch 525 - Computational Design & Digital Making I (4)
Focuses on computational design softwares & production workflows used in the architecture field. Arch 525 explores three dimensional methods for constructing, editing, visualizing and fabricating architectural ideas. This is the first course in a sequence of two: Arch 525 and Arch 526 which must be taken in sequence. Also offered at undergraduate-levels as Arch 425 and may be taken only once for credit.

Also offered as undergraduate-level credit as Arch 425 and may be taken only once for credit.

Arch 526 - Computational Design & Digital Making II (4)
Focuses on advanced topics in the computational design and digital production of architecture. Arch
526 continues study of digital methods of architectural design generation and development. Instructor sets software and topics of investigation (eg. parametric design, digital fabrication, physical computing). This is the second course in a sequence of two: Arch 525 and Arch 526 which must be taken in sequence. Also offered at undergraduate-level as Arch 426 and may be taken only once for credit.

Arch 530 - Contemporary Architectural Theory (4)
Seminar course investigating architectural theory and critical thought by examination of key texts and contemporary architectural works.
Prerequisite: Arch 580..

Arch 531 - Studies in Contemporary Urban Design (4)
Seminar course examining the contemporary relationships between the making of architecture and the making of cities. The course critically explores emerging urban characteristics, comparative design strategies, and the integration of design approaches with the processes of economic and social change.

Also offered for undergraduate-level credit as Arch 431 and may be taken only once for credit..

Arch 532 - History and Theory of Urban Design (4)
Introduction to the development of historical and contemporary urban design with parallel developments in architecture and urban planning. Theoretical models are related to current practices in the design of various sociopolitical, environmental and aesthetic urban contexts.

Also offered for undergraduate-level credit as Arch 432 and may be taken only once for credit..

Arch 533 - Contemporary Issues Seminar (4)
In-depth exploration of selected topics that explore contemporary issues informing the discipline of architecture. Whether cultural, social, political, economic, aesthetic, environmental or other, contemporary issues and voices contribute to the dynamic and evolving production, construction and inhabitation of architecture. Topics may include: visual art, literature, aesthetics, ethics, philosophy, politics, culture(s), and technology. Course may be repeated for credit with different topics.

Also offered for undergraduate-level credit as Arch 433..

Arch 534 - Topics in Architectural History and Theory (4)
Seminar on selected topics focusing on the history and theory of architecture. Consists of discussions, presentations, lectures, and readings on relevant topics as they have historically emerged within the discipline of architecture. May focus on specific historical periods and/or may include philosophy of architecture, architectural representation, architecture and the city. Course may be repeated for credit with different topics.

Also offered for undergraduate-level credit as Arch 434..

Arch 536 - Architectural History and Theory I (4)
An introduction to the history and theory of architecture. A discipline in its own right and a cultural manifestation among others, architecture is seen in the horizon of human action and history. The course consists of discussions, presentations, lectures, and readings on key topics. This is the first course in a sequence of four: Arch 536, Arch 537, Arch 538, Arch 539 and must be taken in sequence.

Prerequisite: Arch 536..

Arch 537 - Architectural History and Theory II (4)
Seminar investigating the problem of modernity as it relates to the discipline of architecture stretching from the colonial to the industrial worlds. Emphasis placed on the critical study of cities, buildings, and landscapes, understood within the cultural and social conditions of modernity. This is the second course in a sequence of four: Arch 536, Arch 537, Arch 538, Arch 539 and must be taken in sequence.

Prerequisite: Arch 536..

Arch 538 - Architectural History and Theory III (4)
Seminar investigating the history and theory of the practice of architecture around the globe and across time periods. The course critically explores the professions and practices that make and shape the built environment and highlights a discussion of buildings, contexts, clients and users. This is the third course in a sequence of four: Arch 536, Arch 537, Arch 538, Arch 539 and must be taken in sequence.

Prerequisite: Arch 537..

Arch 539 - Architectural History and Theory IV (4)
Seminar investigating the problem of post-modernity as it relates to the discipline of architecture. The course understands post-modernity in a historical horizon stretching across the globe. Emphasis placed
on cities, buildings, and landscapes, each explored within the cultural and social conditions of post-modernity. This is the fourth course in a sequence of four: Arch 536, Arch 537, Arch 538, Arch 539 and must be taken in sequence.

Prerequisite: Arch 538.

**Arch 540 - Professional Practice (4)**

A lecture course focusing on the context, responsibilities, licensure, principles and processes of the practice of architecture, including project and client acquisition, risk analysis, project and practice management, project delivery methods, services and scope definition, roles and responsibilities of all parties, contract forms, general conditions of the contract, compensation methods, fee budget management, contract administration, and standard of care.

Also offered for undergraduate-level credit Arch 440 and may be taken only once for credit. Prerequisite: Arch 581.

**Arch 541 - Practicum and Internship (4)**

Offers students an opportunity to gain industry experience and to integrate the skills and concepts learned in the academic curriculum. Weekly seminars review and establish internship objectives, which closely parallel the architectural internship development program required for licensure. Students are expected to secure employment or positions that meet the objectives of the course.

Also offered for undergraduate-level credit as Arch 441 and may be taken only once for credit. Prerequisite: Arch 511.

**Arch 542 - Building Economics (4)**

Focuses on the economic and life cycle context of building design and management decisions. Topics include project life cycle, decision milestones, value analysis of design and project proforma, discounted cash flow and equivalency calculation methods, and conceptual estimating techniques for building projects. Strategic leveraging of project value is emphasized, and sustainability objectives are examined.

Also offered for undergraduate-level credit as Arch 442 and may be taken only once for credit. Prerequisite: Arch 440 or Arch 540.

**Arch 543 - Topics in Professional Practice (4)**

Focused investigation of key aspects of professional architectural practice through direct case study analysis, reflection and critical appraisal. Emphasis on understanding the application of professionally inspired principles and processes in contemporary architectural practice.

Prerequisite: Arch 540.

**Arch 560 - Advanced Architectural Technology (4)**

A lecture and seminar course providing exploration of current advanced building technology and form generative responses to current sustainability issues. Includes extensive classroom, as well as fieldwork, and laboratory investigation of current technologies for envelope, mechanical and thermal comfort systems, and lighting and day-lighting strategies. Strategies of formal integration with architectural design are emphasized.

**Arch 561 - Detail Design (4)**

A companion course to the Design Thesis, developing the technological implications of the thesis proposition. Addresses the detailed application of technological know-how in terms of materials, envelope, environmental control, tectonics and structural logic, with respect to a predetermined portion of the architectural project.

Prerequisite: Arch 511.

**Arch 562 - Advanced Architectural Materials (4)**

Seminar building on basic properties of architectural materials learned in Arch 360. A research-based course looking at creative use and reuse of materials for construction emphasizing sustainable solutions. Includes case study investigations of contemporary innovative material usage and student-designed building component.

Also offered for undergraduate-level credit as Arch 462 and may be taken only once for credit. Prerequisite: Arch 362 or graduate standing.

**Arch 563 - Building Science Research Topics (4)**

A workshop and seminar addressing the detailed application of passive strategies and building technology engaging key topics such as: building materials, envelope, environmental control, and structural systems. Utilizing contemporary building science research methods and practice. Course may be repeated for credit with different topics.

**Arch 564 - Architectural Technology III (4)**

The third in a 3-part sequence introducing design and construction technologies. Exploration of the physical properties of materials, building assemblies, and methods of construction, leading to the integration of building envelope, mechanical, thermal, and other environmental building systems. The sequence Arch 568, Arch 569, Arch 564 must be taken in that order.
WELCOME TO PORTLAND STATE UNIVERSITY

Arch 567 - Architectural Structures (4)
A workshop and seminar based course addressing the design and construction of large-scale structural systems. Investigates the innovative use of traditional and non-traditional building materials and structural detailing, exploring the potential of visually expressive structural systems through a series of working models.
Prerequisite: Arch 569.

Arch 568 - Architectural Technology I (4)
The first in a 3-part sequence introducing design and construction technologies. Exploration of the physical properties of materials, building assemblies, and methods of construction, leading to the integration of building envelope, mechanical, thermal, and other environmental building systems. The sequence Arch 568, Arch 569, Arch 564 must be taken in that order.
Prerequisite: Arch 362.

Arch 569 - Architectural Technology II (4)
The second in a 3-part sequence introducing design and construction technologies. Exploration of the physical properties of materials, building assemblies, and methods of construction, leading to the integration of building envelope, mechanical, thermal, and other environmental building systems. The sequence Arch 568, Arch 569, Arch 564 must be taken in that order.
Prerequisite: graduate standing.

Arch 570 - Architectural Design Transition Studio I (6)
Transition studios developing architectural ideas, alongside media and technical skills necessary for advanced graduate study. Creative investigations of architectural design inspired by human activities, site, landscape, structure, tectonics, communal space and urbanism. Includes individual criticism, lectures and seminars. This is the first course in a sequence of three: Arch 570, Arch 571, and Arch 572 which must be taken in sequence.
Prerequisite: Arch 560.

Arch 571 - Architectural Design Transition Studio II (6)
Transition studios developing architectural ideas, alongside media and technical skills necessary for advanced graduate study. Creative investigations of architectural design inspired by human activities, site, landscape, structure, tectonics, communal space and urbanism. Includes individual criticism, lectures and seminars. This is the second course in a sequence of three: Arch 570, Arch 571, and Arch 572 which must be taken in sequence.
Prerequisite: Arch 570.

Arch 572 - Architectural Design Transition Studio III (6)
Transition studios developing architectural ideas, alongside media and technical skills necessary for advanced graduate study. Creative investigations of architectural design inspired by human activities, site, landscape, structure, tectonics, communal space and urbanism. Includes individual criticism, lectures and seminars. This is the third course in a sequence of three: Arch 570, Arch 571, and Arch 572 which must be taken in sequence.
Prerequisite: Arch 571.

Arch 573 - Architectural Design Transition Studio IV (6)
Studio projects and critical discussions addressing themes and issues pertinent to the imaginative design of architectural intervention in urban environments. Encouraging experimental engagement with relations of material, form, human habitation, and cultural meaning.
Prerequisite: Arch 572.

Arch 580 - Architectural Design Studio 7 (6)
Advanced investigations of architectural and urban design issues in concluding series of studios. Projects include the design of private and public buildings which require comprehensive, integrative design development. Includes individual criticism, lectures, and seminars. This is the first course in a sequence of three: Arch 580, Arch 581, and Arch 582 which must be taken in sequence.
Prerequisite: Graduate standing.

Arch 581 - Architectural Design Studio 8 (6)
Advanced investigations of architectural and urban design issues in concluding series of studios. Projects include the design of private and public buildings which require comprehensive, integrative design development. Includes individual criticism, lectures, and seminars. This is the second course in a sequence of three: Arch 580, Arch 581, and Arch 582 which must be taken in sequence.
Prerequisite: Arch 580.

Arch 582 - Architectural Design Studio 9 (6)
Advanced investigations of architectural and urban design issues in concluding series of studios. Projects include the design of private and public buildings which require comprehensive, integrative design
development. Includes individual criticism, lectures, and seminars. This is the third course in a sequence of three: Arch 580, Arch 581, and Arch 582 which must be taken in sequence.

Prerequisite: Arch 581.

**Arch 584 - Design Development Studio (6)**

A studio course offering intensive creative study in laying the foundation for, and developing, an architectural design strategy and approach in preparation for the student generated thesis proposition (Arch 585). The class incorporates research, preliminary graphic and modeling work in idea generation, and critique.

Prerequisite: Arch 511.

**Arch 585 - Design Thesis (6)**

A studio course offering a focused culmination of architectural design studies by means of a student generated thesis proposition incorporating research, development, and creative transformation of a specific urban situation.

Prerequisite: Arch 511, Arch 584.

**Arch 586 - Integrated Systems (6)**

A companion course to Architectural Design Studio 9, this studio addresses the integration of building systems through detailed development of the design proposition begun in Arch 582 leading to a comprehensive design. Addresses application and technical documentation of building systems including materials, envelope, environmental controls, building services, and structure.

Prerequisite: Arch 582.

**ArH - Art History**

**ArH 106 - Introduction to Visual Literacy (2)**

This course is intended to teach students to critically view and interpret global visual culture, from ancient to contemporary. Through critical analysis, reading, discussion, and writing, it seeks to develop the skills to engage with visual culture in ways that will empower them to participate fully in our visually-oriented contemporary society and provide them with a strong foundation for future courses in art history, art, and design.

**ArH 110 - Visual Literacy (4)**

Course is intended to equip students with the necessary skills to critically view and interpret global visual culture, and to provide them with a strong foundation for future art courses in art history, art, and design, through critical analysis, reading, discussion, and writing.

**ArH 199 - Special Studies (0-12)**

See department for course description. (Credit to be arranged.)

**ArH 204 - Art History: The Ancient World (4)**

Survey of the major works of art and architecture from around the world, and an introduction to the analytical tools used by art historians. This course investigates art and architecture from the prehistoric era, ancient Mediterranean cultures, Byzantium, the Islamic world, and early works from South and Southeast Asia, China and Korea. This is the first course in a sequence of three: ArH 204, ArH 205, and ArH 206. Open to non-majors.

**ArH 205 - Art History: The Medieval World (4)**

Survey of the major works of art and architecture from around the world, and an introduction to the analytical tools used by art historians. This course investigates art and architecture from China, Korea, Japan, Europe from the Medieval Through Baroque Periods, Native American Cultures before 1500, and Africa before 1800. This is the second course in a sequence of three: ArH 204, ArH 205, and ArH 206. Open to non-majors.

**ArH 206 - Art History: The Modern World (4)**

Survey of the major works of art and architecture from around the world, and an introduction to the analytical tools used by art historians. This course investigates Oceanic Art, later Asian art; African, European and North American Art from 1800 to the present, and later Native American Art. This is the third course in a sequence of three: ArH 204, ArH 205, and ArH 206. Open to non-majors.

**ArH 291 - History of Animation (4)**

Exploration of the history of animation, its sources in drawing, painting, photography, film, video, and digital media, its various innovators, styles, and techniques, its relationship with cinema, and its reliance on the development of creative and presentation technologies. Emphasis is placed on the theory and critical study of animation. Readings and discussion are combined with extensive screenings of animations and animated films, including the history of computer animation. Open to non-majors.
ArH 311U - Survey of South and Southeast Asian Art (4)
A survey of art and architecture of South and Southeast Asian art from prehistoric times to the 19th century. The art and architecture (including ceramics, sculpture, painting) of Asia will be presented in context of chronology, source (indigenous or foreign influence), site and in relation to the forces of each society's culture, religion, politics, geography, and history. Buddhism, Hinduism, Islamic architecture, painting, symbolism, and mythology are basic to the arts of Asia.

ArH 312U - Survey of Chinese Art (4)
A survey of art and architecture of China from prehistoric times to the 21st Century. The art and architecture, including ceramics, sculpture, painting, textiles, and other utilitarian implements (e.g., Chinese ritual bronze vessels) of China will be presented in context of chronology, source (indigenous or foreign influence), site and in relation to the forces of each society's culture, religion, politics, geography, and history. Shamanism, Confucianism, Taoism, Buddhism, Hinduism, symbolism, yin and yang philosophy, and mythology that are basic to the arts of China, the influence of central Asian art on Chinese art and Chinese influence on Korean art.

ArH 313U - Survey of Japanese Art (4)
A survey of art and architecture of Japan from prehistoric times to the 21st century. The art and architecture (including archaeology, ceramics, sculpture, painting, textiles, and other utilitarian implements -- e.g., Samurai armors) of Japan will be presented in context of chronology, source (indigenous or foreign influence), site and in relation to the forces of each period's culture, religion, politics, geography, and history. Shintoism, Confucianism, Buddhism, Confucianism, Taoism, are Taoism, are basic to the arts of Japan.

ArH 315U - Chinese Buddhist Art (4)
A concentrated study of the Buddhist art of China and Central Asia. Buddhist art of caves of the Six-dynasties period (220-589 C.E.) to the Qing period will be covered in-depth. Basic concepts of Buddhism, such as Hinayana, Mahayana, and Tantric Buddhism; the Central Asian sources for Chinese Buddhist art and archaeology, arts related to specific sects; and the iconography and stylistic changes will be covered.

ArH 316U - Japanese Buddhist Art (4)
A survey of the Japanese Buddhist art and architecture, including: archaeology, sculpture, painting, Shingon Buddhist art, Zen garden and architecture, and ink paintings and Korean and Chinese sources through selected examples from the 6th century to the 18th century.

ArH 317U - Chinese Painting (4)
A concentrated study of the Chinese painting from the 3rd century B.C.E. to the 21st century.

ArH 318U - Japanese Painting (4)
A survey of Japanese painting from the 4th century to the 20th century. Buddhist paintings, ink paintings, and decorative paintings and modern paintings.

ArH 319U - Modern Japanese Painting (4)
Recent scholarship in the history of modern Japanese paintings and prints, from the Meiji, Taisho, and Showa periods covers major themes of Japan's westernization in a new light. The issues revolve around westernization: conflict and nationalism, New art forms, the revival of traditional styles, the reclining woman theme, and the gaze of subjects will be explored. Contemporary Japanese Art will be covered with critical thinking.

ArH 321U - Survey of Korean Art (4)
A chronological survey of art and architecture of Korea, and its uniqueness, in the context of East Asian art history. Prehistoric arts, as well as tomb paintings, and artifacts recognizing Buddhism's effect on Korea's sculptural, painting, and architectural heritage. Also treats Confucianism shaping Korean ink painting, folk painting, and porcelains.

ArH 329 - Islamic Art: Major Themes and Periods: (4)
Major themes in Islamic Art and/or Architectural History. May be taught as a broad chronological survey or it may focus on a major period or topic (such as Ottoman art and/or architecture), considered in the global context. Expected preparation: ArH 204
(expected of art and art history majors). Open to non-majors.

**ArH 333U - Latin American Women Artists (4)**
Focuses on modern women artists in the Latin American region, as well as the contributions of Latinx/Chicanx artists in the United States. Students will learn how Latin American women artists challenged traditional understandings of artistic practice, exploring and critiquing women’s social roles in the process. Issues of race, class, gender, national/cultural/indigenous identity will be emphasized, linking these concepts to the visual and artistic projects of Latin American artists.

**ArH 337U - Nature into Art (4)**
Focuses on a specific theme concerning the relationship of the nature and the environment with the visual arts. Specific themes may include topics such as environmental art, landscape painting and/or photography, landscape architecture, cartography and art, and the representation of animals. Recommended preparation: ArH 205 or ArH 206 (expected of art & art history majors).

**ArH 351U - Ancient Near Eastern and Egyptian Art (4)**
Near Eastern art and architecture from the Neolithic Revolution to the conquest of Alexander the Great. Explores the beginnings of urbanization, the art and building of the pharaohs, and major empires such as the Assyrians and Sumerians. Recommended preparation: ArH 204 (expected of art & art history majors).

**ArH 352U - Ancient Greek Art and Architecture (4)**
Art in Greece from the Bronze age but focusing on developments from 1000-100 BCE. Topics include Minoan palaces, the development of the nude in sculpture, and the building programs and ideology of classical Athens. Recommended preparation: ArH 204 (expected of art & art history majors).

**ArH 353U - Ancient Roman and Etruscan Art and Architecture (4)**
Art of Italy and the Roman World from 900 BCE-400 CE. Topics include Etruscan funerary traditions, portraiture of the Roman Republic, and how the Roman Empire constructed identity through building and other public arts. Recommended preparation: ArH 204 (expected of art & art history majors).

**ArH 355U - Medieval Monsters (4)**
Explores visual and literary medieval representations of monsters such as griffins, gargoyles, and unicorns to better understand key concepts about the "natural" world, definitions of monster now and in the past, the relationship between monsters in medieval texts and those in art, and "monsters" as constitutive of the medieval in the popular imagination.

**ArH 356U - Early Medieval Art and Architecture (4)**
Explores the art and architecture of Early Christian, Insular, Viking, Carolingian, and early Islamic world. Works covered include early Christian catacombs, the Book of Kells, and the so-called desert palaces of Umayyad caliphs in order to explore the themes of monasticism, pilgrimage, and the transmission of ideas around the Mediterranean. Recommended preparation: ArH 204 (expected of art & art history majors).

**ArH 357U - Byzantine Art and Architecture (4)**
Art and architecture of the Byzantine world from the founding to the fall of Constantinople (330-1453 A.D.) Topics include art and politics under Justinian, Iconoclasm and Icons, and cultural interchange with neighboring Islamic societies. Recommended preparation: ArH 204 (expected of art & art history majors).

**ArH 358U - Medicine and Magic in Romanesque Art (4)**
Focuses on the ways medicine and magic can be viewed in the art and material cultures of the Romanesque era as well as other medieval periods. We look critically at concepts such as magic and science in their historical context to better understand how medieval practices such as alchemy and astrology are represented in art including manuscripts, sculpture, amulets, and early printed books. Expected preparation: ArH 204 (expected of art & art history majors).

**ArH 359U - Gothic Art and Architecture (4)**
Gothic art and architecture across Europe from the 13th to the 16th centuries. Topics include the development of the cathedral, and the rise of the city,
manuscript illumination, and artists such as Giotto and Duccio. Recommended preparation: ArH 205 (expected of art & art history majors).

ArH 360U - The Art of War: Representing the Crusades (4)
This class investigates the representation of the Crusades in light of the primary sources from the period as well as later depictions. Students will analyze both historical texts and more recent representations of the idea of the Crusades, and study how visual culture plays a role in these polemics.

ArH 361U - Northern Renaissance Art (4)
Manuscript illumination, painting, and sculpture in the Netherlands, Germany, and France from the late 14th to the 16th century. Recommended preparation: ArH 205 (expected of art & art history majors).

ArH 371U - Italian Renaissance Art (4)
Painting, sculpture, and architecture from the 13th to the 16th century in Italy. This is the first course in a sequence of three: ArH 371U, ArH 372U, and ArH 373U. Recommended preparation: ArH 205 (expected of art & art history majors).

ArH 372U - Italian Renaissance Art (4)
Painting, sculpture, and architecture from the 13th to the 16th century in Italy. This is the second course in a sequence of three: ArH 371U, ArH 372U, and ArH 373U. Recommended preparation: ArH 205 (expected of art & art history majors).

ArH 373U - Italian Renaissance Art (4)
Painting, sculpture, and architecture from the 13th to the 16th century in Italy. This is the third course in a sequence of three: ArH 371U, ArH 372U, and ArH 373U. Recommended preparation: ArH 205 (expected of art & art history majors).

ArH 376U - Italian Baroque Art (4)
A survey of major trends in Italian art and architecture from the late 16th to the mid-18th century. Open to non-majors.

ArH 377U - Dutch and Flemish Baroque Art (4)
A survey of major trends in Dutch and Flemish art from the late 16th to the late 17th century. Open to non-majors.

ArH 378U - Spanish Baroque Art (4)
A survey of major trends in Spanish painting, sculpture, and architecture from the late 16th to the early 18th century. Open to non-majors.

ArH 379U - Latin American Baroque Art (4)
Examination of the rich artistic tradition that developed in several Latin American countries during the Spanish colonial period (1492-1821). Emphasis on Mexico and Peru, where the Aztec and Inca empires were located. Survey of the major trends in Spanish colonial painting, sculpture, and architecture.

ArH 381U - 19th Century Art (4)
A survey of painting and sculpture in 19th-century Europe and the U.S. This is the first course in a sequence of two: ArH 381: Neoclassicism, Romanticism, and Realism; ArH 382: Impressionism and Post-Impressionism. Expected preparation: ArH 206 (expected of art and art history majors).

ArH 382U - 19th Century Art (4)
A survey of painting and sculpture in 19th-century Europe and the U.S. This is the second course in a sequence of two: ArH 381: Neoclassicism, Romanticism, and Realism; ArH 382: Impressionism and Post-Impressionism. Expected preparation: ArH 206 (expected of art and art history majors).

ArH 383 - Western Art in the 20th Century (4)
A chronological survey of modern and postmodern art in Europe and the U.S. in the 20th century. This is the first course in a sequence of three: ArH 383: from Art Nouveau to Surrealism; ArH 384: from American Scene Painting through the rebellious sixties; ArH 385: from Conceptual art through the end of the century. Open to non-majors.

ArH 384 - Western Art in the 20th Century (4)
A chronological survey of modern and postmodern art in Europe and the U.S. in the 20th century. This is the second course in a sequence of three: ArH 383: from Art Nouveau to Surrealism; ArH 384: from
American Scene Painting through the rebellious sixties; ArH 385: from Conceptual art through the end of the century. Open to non-majors.

**ArH 385 - Western Art in the 20th Century (4)**
A chronological survey of modern and postmodern art in Europe and the U.S. in the 20th century. This is the third course in a sequence of three: ArH 383: from Art Nouveau to Surrealism; ArH 384: from American Scene Painting through the rebellious sixties; ArH 385: from Conceptual art through the end of the century. Open to non-majors.

**ArH 392 - History and Contemporary Issues in Photography (4)**
The history of photography focusing on its exemplary masters, the impact of photographic technologies and techniques, contemporary issues of aesthetics and ethics in photography, the role of photography in the fine arts and design, and emerging photographic media.

**ArH 398 - Contemporary Art (4)**
Examines developments in world art in the 21st century. Historical roots of contemporary art will also be considered, e.g. the rise of identity politics, postcolonialism, and globalization. Class considers themes such as feminism, postmodernism, activism, and relational aesthetics, exemplified in artworks across all mediums. Open to non-majors.

**ArH 399 - Special Studies (0-12)**
Terms, section, instructor and hours to be arranged. Consent of instructor and Director of the School of Art and Design required.

**ArH 401 - Research (0-12)**
Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required. (Credit to be arranged.)

**ArH 402 - Independent Study (1-12)**
Terms, section, instructor and hours to be arranged. Consent of instructor and Chair of the Department of Art required.

**ArH 403 - Thesis (1-12)**
(Credit to be arranged.)

**ArH 404 - Cooperative Education/Internship (0-12)**
Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required. (Credit to be arranged.)

**ArH 405 - Reading and Conference (0-12)**
Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required. (Credit to be arranged.)

**ArH 406 - Projects (1-12)**
(Credit to be arranged.)

**ArH 407 - Seminar (0-12)**
A small discussion-based class focused on developing research, critical thinking, and communication skills. Topic varies by term, see School for current seminar information.

**ArH 410 - Selected Topics (0-12)**
See department for course description. (Credit to be arranged.)

**ArH 410U - Selected Topics (1-4)**
(Credit to be arranged.)

**ArH 415U - Issues in Asian Art (4)**
Issues in Asian art may be keyed to museum exhibitions or deal with thematic topics or specific media. Examples include Buddhist or other religious art, tomb art, ceramics, special topics in Korean art, or the work of Asian-American artists. Open to non-majors.

**ArH 426U - African Art (4)**
Examination of selected African art forms, styles, and traditions. Emphasis on the context of the art and artist and their relationship to politics and society in African history. This is the same course as BSt 470U.
ArH 431U - Women in the Visual Arts (4)
This course studies both the representation of women and gender and the art and patronage by women in various media (painting, sculpture, architecture, printmaking, photography, textiles and mixed media). Explores 19th century and 20th century America and Europe. This is the same course as WS 431U and may be taken only once for credit. Open to non-majors. Recommended preparation: ArH 206 (expected of art & art history majors).
Prerequisite: Upper-division standing. Cross-Listed as: WS 431U.

ArH 432U - Issues in Gender and Art (4)
Research, reading, and discussion on sexual subjectivity and the construction of gender in visual images and various cultural contexts. May be keyed to regional exhibitions, collections, or symposia. Topics include: masculinity in ancient Rome, pornography and representation, surrealism, and sexuality. Open to non-majors. Recommended preparation: ArH 206 and either ArH 204 or ArH 205 (expected of art & art history majors).
Prerequisite: Upper-division standing. Cross-Listed as: WS 431U.

ArH 449 - Art History Methods (4)
Seminar for juniors and seniors. Explores major approaches to the study of art history through readings, discussion, and essays. Includes the development of art history as a field and common methodologies such as iconography, gender theory, social art history, and post-modernism and post-structuralism. Open to non-majors.
Also offered for graduate-level credit as ArH 549 and may be taken only once for credit. Prerequisite: At least three upper-division art history courses.

ArH 450 - Great Periods and Themes in Art and Architecture (4)
A concentrated study of the art and/or architecture of a major historical period or theme, for example, Pre-Columbian art and architecture or Medieval Venetian Architecture. May be repeated for credit with different topics. Open to non-majors. Recommended preparation: ArH 204, ArH 205, or ArH 206 (expected of art & art history majors).
Also offered for graduate-level credit as ArH 550. Prerequisite: Upper-division standing.

ArH 474 - Art and the Early Modern City (4)
Each iteration of this course explores the art, architecture, and urban development of a different renaissance or baroque city. Contact instructor for details.
Prerequisite: ArH 205.

ArH 486 - American Art and Architecture 17th through 19th Centuries (4)
ArH 486: Colonial through the Early Republic. ArH 487: Jacksonian to the 20th century. Open to non-majors. This is the first course in a sequence of two: ArH 486 and ArH 487. Expected preparation: ArH 206 (expected of art & art history majors).
Prerequisite: Upper-division standing.

ArH 487 - American Art and Architecture 17th through 19th Centuries (4)
ArH 486: Colonial through the Early Republic. ArH 487: Jacksonian to the 20th century. Open to non-majors. This is the second course in a sequence of two: ArH 486 and ArH 487. Recommended preparation: ArH 206 (expected of art & art history majors).
Prerequisite: Upper-division standing.

ArH 499 - Contemporary Art II (4)
A thematic examination of historical dimensions of contemporary art practices in the 21st century. Explores themes, movements and trends as much as individual artists or works of art. Places art into a broad historical and social context, and looks at cross-cultural and interdisciplinary connections. Suggested preparation: ArH 491, ArH 492, ArH 493, and ArH 498.
Prerequisite: ArH 206 and upper-division standing.

ArH 501 - Research (0-12)
Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required. (Credit to be arranged.)

ArH 503 - Thesis (1-9)
(Credit to be arranged)

ArH 504 - Cooperative Education/Internship (0-12)
Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required. (Credit to be arranged.)
ArH 505 - Reading and Conference (0-12)
Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required. (Credit to be arranged.)

ArH 506 - Projects (1-9)
(Credit to be arranged.)

ArH 507 - Seminar (0-12)
See department for course description. (Credit to be arranged.)

ArH 510 - Selected Topics (0-12)
See department for course description. (Credit to be arranged.)

ArH 549 - Art History Methods (4)
Seminar for juniors and seniors. Explores major approaches to the study of art history through readings, discussion, and essays. Includes the development of art history as a field and common methodologies such as iconography, gender theory, social art history, and post-modernism and post-structuralism. Open to non-majors.
Also offered for undergraduate-level credit as ArH 449 and may be taken only once for credit. Prerequisite: at least three prior upper division art history courses.

ArH 550 - Great Periods and Themes in Art and Architecture (4)
A concentrated study of the art and/or architecture of a major historical period or theme, for example, Pre-Columbian art and architecture or Medieval Venetian Architecture. May be repeated for credit with different topics. Open to non-majors.
Also offered for undergraduate-level credit as ArH 450. Prerequisite: graduate-level standing and permission of instructor.

ArH 599 - Contemporary Art II (4)
A thematic examination of historical dimensions of contemporary art practices in the 21st century. Explores themes, movements and trends as much as individual artists or works of art. Places art into a broad historical and social context, and looking at cross-cultural and interdisciplinary connections. Recommended preparation: ArH 591, ArH 592, ArH 593, ArH 598.
Prerequisite: admission into the MFA in Contemporary Art Practice program.

Art - Art

Art 101 - CORE: Surface (5)
Introduction to working with surface as a medium, concept, and process. The principles and elements of design will be explored in relation to the practices of two-dimensional design and color theory. No prerequisites. Open to majors in the School of Art + Design

Art 102 - CORE: Space (5)
Introduction to space as a medium, concept, and process. Lectures, readings, demonstrations and hands-on projects help students identify and understand space-based principles in art and design. No prerequisites. Open to majors in the School of Art + Design.

Art 103 - CORE: Time (5)
Introduction to working with Time as a medium, concept, and process. Within this, the principles of duration, intensity, and rhythm are particularly significant and frame narrative and storytelling development. This course involves lectures, readings, demonstrations and hands-on exercises that help students identify time-based principles in art and design. Individual and group projects support these concepts in practice. No prerequisites. Open to majors in the School of Art + Design.

Art 104 - CORE: Digital Tools (2)
Introduces students to various digital tools, applications, and creative modes to share, distribute and produce art works. Students will expand their practice and understanding of how smartphone technologies, social media and online platforms can be used for creative outcomes. Students will learn to produce, assemble, manipulate and edit digital materials and to share those materials online and through print. This course includes lectures, readings,
and activities. Students will build a learning community through discussions, collaborations, and field trips. Open to major or minors in School of Art + Design.

Art 105 - CORE: Ideation (2)
One of the biggest challenges for creative people is taking an idea envisioned in the mind and turning it into reality. Ideation introduces students to techniques for bringing ideas to life. In this course, students will be introduced to a variety of techniques and concepts that focus on the generation, development and communication of new ideas. Open to major or minors in School of Art + Design or with faculty permission.

Art 131 - Introduction to Drawing I (4)
Introduction to observational, expressive, and formal modes of drawing. Critical approaches drawn from art history, aesthetics, and art criticism are examined relative to these modes of drawing to establish methods of evaluating art and placing one's own work and that of others in a historical context. Emphasis on strategies, methods, and techniques for translating three-dimensional form and space onto a two-dimensional surface using the language of line and value, and the illusion of depth and texture. Mark-making and its expressive and descriptive qualities is examined. Open to non-majors.

Art 199 - Special Studies (0-5)
(Credit to be arranged.)

Art 216 - Sewn Construction (4)
This is an introductory sewing course that covers the fundamentals of hand and machine sewing for garments and sewn products. Students gain a working knowledge of sewn construction for applications in costume, fashion, textiles, and contemporary art.

Prerequisite: Major or minor or in the School of Art + Design, or instructor approval.

Art 227 - Introduction to Art and Social Practices (4)
Introduces an interdisciplinary approach to understanding and producing social practice art projects. Students will be encouraged to use a wide range of media and approaches in responding to various class assignments. Exploration of the PSU and Portland community will be an essential part of the class. The students will create work that responds to the dynamics of social spaces and public environments. Open to Non-majors. Recommended preparation: Art 105.

Art 230 - Drawing II (4)
Continues to explore drawing as a means of personal expression with an emphasis on drawing from observation. Students deepen drawing strategies and continue to develop fluency in the language of line, shape, value, space, and color.

Prerequisite: Art 131.

Art 250 - Life Drawing I (4)
Developing skills for drawing the human figure from observation in a variety of poses and media. This is the first of a sequence of three classes. Develops skills in observation and perception. Later, analytic skills are combined with personal expression and invention. A variety of media is used to explore the implications of line and modeled form to explore the figure in compositional environments. The skeleton and muscles will be studied in relationship to the model poses. Expected preparation for Art & Art History Majors: Art 115 or Art 101, Art 102, Art 103, Art 104, and Art 105.

Prerequisite: Art 131.

Art 255 - Two-dimensional Animation I (4)
Studio introduction to principles and processes of two-dimensional animation composed in digital form. Storytelling and animation skills are developed in projects that apply tools and techniques for writing, staging, movement, timing, key framing, editing, and the use of sound and music. The language and aesthetics of animation are investigated through the design and production of a two-dimensional animation. Focus may be placed on either pixel or vector graphics. Project planning and workflow are explored in response to technical requirements for presenting the work in multiple media delivery formats.

Art 256 - Three-dimensional Animation I (4)
Studio introduction to principles and processes of three-dimensional modeling and animation composed in digital form. Projects apply tools and techniques for modeling, lighting, surface rendering, scene construction, animation sequencing, editing, and the integration of sound and music. The language and aesthetics of animation and cinematography are investigated through the design and production of a three-dimensional animation. Project planning and workflow are explored in response to technical
requirements for presenting the work in multiple media delivery formats. Expected preparation for Art & Art History Majors: Art 101, Art 102, Art 103, Art 104, and Art 105.

**Art 257 - Introduction to Video Art (4)**

Introduction to fundamental techniques of digital video production in the context of contemporary art practices. Topics cover a range of experimental and non-narrative forms, focusing on artists' use of video and other related media theory. Technical information covered includes cinematography, camera operations and digital video editing.

**Art 260 - Black and White Photography (4)**

Studio introduction to black and white photography using both film-based darkroom and digital imaging techniques, including 35mm camera controls, film processing, enlargement, digital image capture, and basic digital image adjustment. Assignments focus on two dimensional design principles of line, shape, pattern, texture, symmetry, asymmetry, and vantage point, and culminate in a coherent photo story. While learning basic photographic techniques, students discuss form, content, and the aesthetics of photographic image-making. Studio includes lecture, demonstration, critique, and supervised lab work. Students must furnish a focusing film camera with adjustable f-stops and shutter speeds. Automatic cameras must have manual override. Expected preparation for Art & Art History Majors: Art 101, Art 102, Art 103, Art 104, and Art 105.

**Art 261 - Digital Photography (4)**

Studio introduction to digital photography, exploring digital image capture, editing, and printing. Examination of the work of photographers with emphasis on conceptual development, the use of color, and digital craft, and mastery of basic digital camera controls. Course includes lectures, demonstrations, critique, and supervised lab work. Students must provide own camera. Expected preparation for Art & Art History Majors: Art 101, Art 102, Art 103, Art 104, and Art 105.

**Art 270 - Introduction to Printmaking: Relief (4)**

A studio focused course concentrating on the planographic printmaking processes traditionally identified as "relief printmaking". This specialized technique will be presented utilizing the practice and concepts unique to historic, traditional/nontraditional and contemporary printmaking methodology.

Monoprinting one of a kind image making and edition printing creating identical multiple images will be explored. Graphic languages developed through researching historical and contemporary influences will be presented to inspire and stimulate the students imagination and knowledge of graphic languages. Sequential thinking processes and theory will also be addressed. May be repeated twice for credit maximum 8 credits.

Prerequisite: Art 131.

**Art 271 - Introduction to Printmaking: Etching ()**

A studio focused course concentrating on the Intaglio method of Printmaking also identified as "Etching". This specialized technique will introduce basic theories, practice and concepts unique to historic, traditional/nontraditional and contemporary Printmaking methodology. Monoprinting (one of a kind image making processes) and edition printing -sequential image making will be explored. Technical processes of black and white drypoint, etching and softground will be at the core of the students investigation. Understanding manipulation of technical processes unique to etching, additive and subtractive processes will be equally explored. Graphic languages developed through researching historical and contemporary influences will be presented to inspire and stimulate the students imagination and knowledge of graphic languages. Sequential thinking processes and theory will also be addressed. Zinc and copper plates will be the central focus of this introductory course. May be repeated twice for credit. Maximum 8 credits.

Prerequisite: Art 131.

**Art 281 - Intro to Painting (4)**

Course introduces basic principles of painting by exploring the use of color, form, composition and a variety of surface applications. Course assignments involve direct observational approaches presented through a variety of traditional and modern painting styles and techniques.

Prerequisite: Art 131.

**Art 282 - Painting Topics (4)**

Introductory topics in painting based on various subjects of inquiry. Focusing on a specific material exploration and/or application, approaches will vary according to instructor.

Prerequisite: Art 131.

**Art 291 - Introduction to Sculpture (4)**

Introduction to the basic fundamentals to sculpture. Students gain command of specific sculptural processes and materials while engaging in assignments that develop ideation and critical
WELCOME TO PORTLAND STATE UNIVERSITY

Art 292 - Introductory Sculpture Topics (4)
Introduction to specific topics in sculpture based on various subjects of inquiry. Focus on a specific theme, media, and/or process while engaging in assignments that develop ideation and critical thinking. This course may be repeated for up to 12 credits with different topics. Expected preparation for Art & Art History Majors: Art 115 or Art 101, Art 102, Art 103, Art 104, and Art 105.
Prerequisite: Art 102.

Art 294 - Water Media (4)
The techniques and uses of watercolor, gouache, and other water-based mediums with attention to unique characteristics as painting mediums. Collage and mixed media may be included with water-soluble pencils and crayons. Lectures on historic uses of these media and discussions of the aesthetic possibilities for layering and transparencies.

Art 296 - Digital Drawing, Painting and Printmaking (4)
Studio course introducing concepts and processes in computer graphics through a set of defined problems examined through digital drawing, and painting applications. Projects explore a range of tools and techniques used in the digital paint environment, including the acquisition of imagery. The unique features of digital tools and techniques are investigated in terms of their relationships with traditional materials and processes. A critical and conceptual framework is developed for the many uses of these tools in a fine art context through an emphasis on using the computer as an artist's tool and the inclusion of digital art forms and processes into the mixed media studio.

Art 297 - Book Arts (4)
This mixed media class will explore the book as an art form. The relationship of images and/or words will be explored in relationship to narrative and sequential structures. Traditional and experimental methods of binding will be taught. Lectures on the history of the artist's book and issues in imagery and/or typography will be presented. Class emphasizes an experimental and conceptual approach that integrates content and form. Maximum 8 credits.

Art 299 - Special Studies (0-6)
(Credit to be arranged.)

Art 318 - Weaving: Pattern & Structure (4)
An introduction to the conceptual and technical aspects of weaving. Students will be introduced to hand-weaving on a floor loom and tapestry looms as a way to understand basic woven structures and how to utilize weaving to create color, pattern, and texture. Students will be assigned a series of samples and projects that incorporate dyeing and hand-manipulated techniques in addition to basic structures. Demonstrations, lectures, readings, and critiques will incorporate historic and contemporary textiles to provide a basic understanding of the possibilities of weaving in a fine art context. This course may be taken for credit twice. 
Prerequisite: Art 216 or instructor approval.

Art 301 - Processes and Practices of the Creative Industries (4)
This course provides an overview of creative industries, its practices, production, and consumption, and its importance to global knowledge-based economies. Students are introduced to key creative industries theoretical and analytical frameworks and will learn how these frameworks converge and can be applied in creative industries, as well as the importance of multidisciplinary collaborations to creative industries. Students will gain the foundational vocabulary and skills to critique, present and discuss creative industries ideas and case studies.

Art 303 - Making and Meaning (4)
Explores the relationship of material, method and process in the construction of meaning in art. Students experiment with interdisciplinary research methods to generate projects reflecting current topics of interest. Required for all BFA Art Practice majors.
Prerequisite: ART 105 or instructor approval.

Art 312 - Art in the Elementary School (4)
Designed to give the elementary educator knowledge, skills, methodologies and resources that encourage the incorporation of art education as a regular, ongoing and sequential part of the core curriculum. Based on contemporary theory and practice focused exclusively on the teaching of art at k-5 levels. This course is required for all students seeking a general multi-subject teaching license at the elementary level. General objectives include establishing a theoretical and methodological foundation that enables the student to teach age appropriate art lessons that
engage children not only in art production activities but also to address the areas of art history, criticism and aesthetics. Open to Non-majors. Maximum 4 credits.

**Art 313 - Textile Design (4)**

Intended for upper-division students wanting to incorporated 2D textile materials and processes into their established creative practice. Students gain exposure to sourcing and manipulating experience textiles through a combination of hand and digital processes - including immersion dyeing, fabric painting, screen-printing, resist techniques, and digital fabric printing. Students develop projects around the skills learned that intersect with goals for their individual practices.

Prerequisite: Art Practice major or minor, or instructor consent.

**Art 316 - Fabric & Form (4)**

Covers sculptural approaches to using textiles for studio art and design practices. Students will learn the fundamentals of flat patterning and sewn construction for 3D form, wearables, and installation. Students will learn techniques for manipulating commercial patterns, adding structure to fabric and pliable material, and advanced methods of machine sewing. Lectures and readings expose students to the history of fiber, the use of textiles in contemporary art, and applications in fashion and costume.

Prerequisite: Art 216 or instructor consent. The course is restricted to Art Practice Majors/Minors.

**Art 322U - History of Dress I (4)**

Throughout human history, dress and adornment have been vehicles for communicating both individual and collective identities. This course examines clothing and its context from Prehistory - 1900.

Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as TA 322U and may be taken only once for credit.

**Art 323U - History of Dress II (4)**

Throughout human history, dress and adornment have been vehicles for communicating both individual and collective identities. This course examines clothing and its context from 1900 to the present.

Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as TA 323U and may be taken only once for credit.

**Art 327 - Intermediate Art and Social Practices (4)**

Students will choose a department on campus other than the art department and will become "artists in residence" for that dept during the quarter. They will work with people in their selected departments to create projects that respond to the department's qualities, needs and interests. Students will document their process and projects, and will be graded on engagement in class and with their departments, journals, and projects. Recommended that it be taken in sequence. Open to non-majors. Recommended preparation: Art 227.

**Art 328 - KSMoCA: Museum in a Public School (4)**

Students meet outside of the PSU campus at Dr. MLK Jr School in NE Portland where they contribute to the operation of the King School Museum of Contemporary Art, a contemporary art museum inside a functioning K-5 public school. The students work collaboratively in teams to research the surrounding neighborhood and prepare presentations/zines about an artist exhibiting at KSMoCA. Students work as mentors with elementary students, and they help to install a museum exhibition. This course is repeatable for up to 8 credits.

**Art 330 - Critical Theories in Art I (4)**

After a brief look at art of the 1960s and 1970s, this class will explore major theoretical and philosophical developments in the art world over the last quarter-century. Various themes and forms of art and individual artists will be examined as manifestations of specific theories and philosophies that have emerged during the past 25 years. Particular emphasis will be on art of the post-9/11 era. Material will be covered through readings, slide lectures and films as well as frequent visits to the Portland Art Museum; we will also take advantage of gallery shows, lectures and other relevant local events. Assignments will include critical response and research papers, group presentations.

Prerequisite: ArH 206.

**Art 331 - Art and Privilege (4)**

Examines identity (personal, social, cultural) and privilege as they pertain to visual and socially engaged arts practices. Explores the definition(s) and impact of privilege from cultural, historical, racial, institutional, and economic perspectives via readings, films, discussions/debates, visits, and projects. Focuses on contemporary perspectives.
Art 336 - BFA: Research and Proposal (4)
Required third year seminar course offered spring term for accepted BFA students. Introduction to both contemporary research methodologies and final project proposal development. Emphasis is placed on developing a body of work and preparing proposals for the final year BFA Project.
Prerequisite: Art 339 or instructor consent.

Art 339 - BFA Vertical Lab I: Collaboration and Presentation Strategies (4)
First of a two-terms sequence that introduces artists’ research methods and explores a range of strategies and platforms for presenting art work in public settings. Students collaborate on theme-based projects that culminate in public presentations. Coursework includes lectures, demonstrations, studio production and field trips. Required for BFA.
Prerequisite: Art 303 (concurrent enrollment allowed).

Art 350 - Life Drawing II (4)
This is the second class in the Life Drawing sequence. The course continues development of skills in drawing the human figure in a variety of poses working with a variety of materials with an emphasis on the muscular system. The student should be able to state the figure quickly, economically and in proportion.
Prerequisite: Art 250.

Art 356 - Visual Storytelling (4)
Studio course exploring strategies of representation of stories, characters, and other narrative elements in time-based visual media. Focuses on the use and creation of storyboards, graphic novels, and animation in fiction and non-fiction storytelling.
Expected preparation: Art 255, Art 256, and/or Art 257. Open to Non-majors with instructor's consent.

Art 357 - Intermediate Video (4)
Studio course covering intermediate video production skills such as audio recording and sound editing, image compositing, and other relevant technical topics. Includes the study of current trends and theories in video art and experimental media to inform individual creative projects. Recommended preparation: Art 103 & Art 257 (expected of art & art history majors). Open to Non-majors with instructor's consent.
Prerequisite: Art 257.

Art 358 - Video, Design & Community (4)
Focus on collaboration in video production and community-based media. Production of a promotional/informational video for community organizations in Portland. History of community and independent media. Basic video and audio recording, post-production, interviewing, and group decision-making skills.
Cross-Listed as: This is the same course as Des 358 and may be taken only once for credit.

Art 360 - Special Topics in Photography (4)
A variety of photographically based practices presented through lectures, demonstrations, and assignments. Students explore technical, aesthetic, and ethical issues while developing photographic portfolios, with an emphasis placed on series, sequence and narrative.
Prerequisite: Art 260 and Art 261.

Art 362 - Intermediate Photography (4)
Studio introduction to concepts, techniques, practices, aesthetics, and ethics of photographic imaging and image-making with digital technology. Investigations in photographic media are enabled through a variety of digital imaging techniques, including retouching, color correction, filtering, masking, layering, and compositing.

Art 365 - Digital Portfolios for Visual Artists (4)
Studio course for visual artists focusing on design and development of digital portfolios. Concepts of portfolio development, graphic design, and interactive design are applied to create an effective communication of the artist's body of work. Digital production techniques are practiced as portfolios are assembled and published in a variety of print, time-based, and interactive formats.
Prerequisite: upper-division standing..

Art 370 - Topics in Printmaking Techniques (4)
Adding on to the principles and skill sets first investigated in lower-level printmaking this course explores additional techniques in printmaking. Varying practices, methodologies, and theories will be explored. Topics include but are not limited to etching, relief, mixed media print, screen printing, and mono-print. May be repeated for credit up to a maximum of 12 credits. Open to non-majors with instructors consent.
Prerequisite: Art 270 or Art 271.
Art 371 - Intermediate Printmaking (4)
Through the techniques of fine art printmaking, students challenge themselves to think creatively and conceptually to develop a varied but cohesive print portfolio that explores a central theme. Students will support their creative expression with research and historical reference. This course is repeatable for up to 12 credits.
Prerequisite: Art 270 or Art 271 or Art 370.

Art 373 - Intermediate Sculpture (4)
Intermediate-level course. Students work in a variety of media with a focus on contemporary sculptural practices. Assignments emphasize ideation and critical thinking in preparation for developing an independent, cohesive body of work. Maximum 4 credits.
Prerequisite: Art 291 or consent of instructor.

Art 374 - Intermediate Sculpture Topics (4)
Intermediate-level topics in sculpture based on various subjects of inquiry. Focus on a specific theme, media, and/or process. Assignments emphasize ideation and critical thinking in preparation for developing an independent, cohesive body of work.
Prerequisite: Art 373 or consent of instructor.

Art 391 - Intermediate Drawing and Mixed Media (4)
Develops drawing and compositional strategies, languages and methods that build on skills learned in foundation courses. Students explore historical and contemporary strategies of visual analysis, surface and space as tools for creative exploration.
Prerequisite: Art 230.

Art 392 - Intermediate Painting (4)
Using traditional and contemporary technical processes and conceptual approaches, students start developing a personal vocabulary with emphasis on the relationship of form and content, while investigating a variety of ways of researching and applying methods towards developing a body of work.
Prerequisite: Art 282 or consent of instructor.

Art 393 - Painting Topics (4)
Intermediate level special topics in painting based on various subjects of inquiry. Focusing on a specific theme, material explorations and applications, and/or specific content, approaches will vary according to instructor.
Prerequisite: Art 281.

Art 399 - Special Studies (0-8)
Terms, section, instructor and hours to be arranged. Consent of instructor and Chair of the Department of Art required.

Art 401 - Research (1-8)
(Credit to be arranged.) Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required.

Art 402 - Independent Study (1-6)
Terms, section, instructor and hours to be arranged. Consent of instructor and Chair of the Department of Art Required.

Art 403 - Thesis (1-12)
(Credit to be arranged.)

Art 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.) Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required.

Art 405 - Reading or Studio and Conference (1-9)
(Credit to be arranged.) Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required.

Art 406 - Projects (1-8)
(Credit to be arranged.) Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required.

Art 407 - Seminar (1-6)
(Credit to be arranged.) Terms, section, instructor, and hours to be arranged. Consent of instructor and chair of Department of Art required.

Art 408 - Workshop (1-6)
(Credit to be Arranged.) Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required.
Art 409 - Practicum (1-12)
(Credit to be arranged.)

Art 410 - Selected Topics (1-12)
(Credit to be arranged.) Maximum 12 credits in one area.
Prerequisite: consent of instructor and chair of Department of Art.

Art 416 - Textile Arts Studio (4)
Advanced studio course focusing on applications of textile arts including apparel and textile design, costume, installation, sculptural fiber, and material studies. Also focuses on conceptual development, research, and production towards a cohesive body of work that reflect the individual intentions with textile processes.
Prerequisite: Art 316 or Instructor Approval.

Art 427 - Advanced Art and Social Practices (4)
Students work outside of the PSU campus. The class will select a particular area of Portland, or a specific institution like a high school or senior center. The students will then become "artists-in-residence" in that area or institution. The students will keep journals documenting information presented in the class, personal project ideas. General class engagement and journal writing will form the basis for grades. Open to non-majors.
Prerequisite: Art 227 or Art 327 or consent of instructor.

Art 428 - KSMoCA: Museum and Community (4)
Students meet outside of the PSU campus at Dr. MLK Jr School in NE Portland to think critically about museums, education, site-specificity, and social topics. Students contribute to the operation of the King School Museum of Contemporary Art, and they lead reading discussions pertaining to topics associated with the museum, mentor elementary students, and help to install a museum exhibition. Collaboration, research, and participation are crucial elements of the course. This course is repeatable for up to 8 credits.
Also offered for graduate-level credit as Art 528.
Prerequisite: Art 227, Art 327, Art 328, or permission of the instructor.

Art 430 - Critical Art Theories II (4)
Artwork and artists of the 21st century are examined with in the context of contemporary art theory. A thematic rather than a chronological approach will be used when examining theoretical, philosophical and socio-cultural aspects. Material will be presented through in-class instruction and field trips.
Also offered for graduate-level credit as Art 530 and may be taken only once for credit.
Prerequisite: Art 350.

Art 439 - BFA Vertical Lab II: Collaboration and Presentation Strategies (4)
Second of a two-terms sequence that introduces research methods, strategies and project management skills for publicly presenting artwork. Students collaborate on theme-based projects that culminate in public display. Coursework includes lectures, demonstrations, studio production and field trips. Required for BFA.
Prerequisite: Departmental admission to the Art Practice BFA, Art 339 and Art 336 or consent of instructor.

Art 450 - Life Drawing III (4)
The third course in the life drawing sequence. If students have had the preparation of prior classes in learning to draw the figure accurately from observation and have learned a little about basic anatomy then they will continue to develop skills in drawing the human figure in a variety of poses with the addition of compositions dealing with two or more figures when possible. Emphasis on compositional and expressive means Use of variety of materials. Recommended that it be taken in sequence. Open to non-majors with instructor's consent.
Prerequisite: Art 350.

Art 455 - Time-Based Art Studio (4)
Advanced studio course focused on production of time-based arts including video art, animation, sound, performance, experimental film, installation, and other interdisciplinary forms. Course content focuses on the representation of time in art.
Prerequisite: Art 255 and Art 257 or consent of instructor.

Art 457 - Low Tech Cinema (4)
This studio course uses readily accessible technologies and inexpensive techniques to create media artwork. Course topics include cell phones and mobile devices, conceptual and text-based movies, handmade 16mm film techniques, toy cameras, diary videos, consumer-grade analog video equipment including VHS, glitch art, media appropriation, and hacking.
Also offered for graduate credit as Art 557 and may be taken only once for credit.
Prerequisite: Upper-division standing.
**Art 461 - Advanced Photography Studio (4)**
An advanced studio course focused on the study of photographic practices and portfolio development. Students engage in discussion regarding assigned readings, practices within contemporary photography, and the critique of their own work. This course allows for a variety of photographic methods. This course is repeatable.
Also offered for graduate-level credit as Art 561.
Prerequisite: Art 360 or Art 362.

**Art 462 - Professional Practices in Photography (4)**
Introduces senior and graduate students to the photography profession in its diverse forms and the commercial operation of photographic studios. Projects investigate one or more specialized forms of photographic practice, such as product, architectural, portrait, landscape, photo-illustration, or immersive photography. Specialized techniques in lighting and digital imaging may be explored.
Also offered for graduate-level credit as Art 562 and may be taken only once for credit.
Prerequisite: Art 360.

**Art 479 - Advanced Printmaking - Working Place (4)**
An advanced laboratory course for students in the BFA Program. The intention of this course is to explore and experiment with several print techniques to arrive at a cohesive body of work that speaks to a students' individual vision. Maximum 12 credits.
Open to non-majors who have prerequisites and instructor’s consent.
Prerequisite: Art 370 or Art 371.

**Art 485 - Professional Practices for Artists (2)**
This seminar explores issues of professional development for artists. Senior level art majors will be exposed to information that will aid them in the transition from student to professional. Intended for Art Practices majors only. Maximum 4 credits.
Prerequisite: Upper-division standing in Art Practices.

**Art 490 - Advanced Painting (4)**
Through guided individual assistance, this course concentrates on working methods of research and execution towards a specifically proposed project. Research, idea generation and production are emphasized within the context of a body of work, related to contemporary painting practices and theories.
Also offered for graduate-level credit as Art 590 and may be taken only once for credit.
Prerequisite: Art 392.

**Art 491 - Advanced Painting Topics (4)**
Advanced level special topics in painting based on various subjects of inquiry. Focusing on a specific theme, material explorations and applications, and/or specific content, approaches will vary according to instructor. The course should include subtitles highlighting the selected topic.
Also offered for graduate-level credit as Art 591 and may be taken only once for credit.
Prerequisite: Art 490 or MFA/graduate status or instructor's consent.

**Art 493 - Advanced Drawing Mixed Media (4)**
This class represents the culminating experience in drawing and mixed media. Students are expected to develop a unified body of work that reflects and is informed by art history and contemporary theory. Open to non-majors who have prerequisites and consent of the instructor.
Also offered for graduate-level credit as Art 593 and may be taken only once for credit. Maximum 8 credits.
Prerequisite: Art 391.

**Art 494 - Advanced Sculpture (4)**
Advanced-level sculpture course which focuses on conceptual development, research, and production as an advanced level sculpture student. Students develop an independent, cohesive body of work within a historical and theoretical context. Maximum 4 credits.
Also offered for graduate-level credit as Art 594 and may be taken only once for credit. Prerequisite: Art 373 and Art 374 or instructor's consent.

**Art 495 - Advanced Sculpture Topics (4)**
Advanced-level topics in sculpture based on various subjects of inquiry. Focus on a specific theme, media, and/or process. Students develop an independent, cohesive body of work within a historical and theoretical context. Maximum: 8 credits.
Also offered for graduate-level credit as Art 595 and may be taken only once for credit. Prerequisite: Art 494 or consent of instructor.

**Art 496 - BFA Project I (4)**
Studio production and exhibition preparation in which students produce a body of work for a culminating presentation. Focus on studio production, research, editing, documentation, publication/catalog design and written statements. This is the first course in a sequence of two: Art 496 and Art 498 and must be taken in sequence. Required for all BFA students.
Prerequisite: Art 439.

Art 497 - A History of Art and Social Practice (4)
A history of social practice in art. Investigate the current critiques, debates and issues surrounding its current state in relation to its historical context. The course will examine social practice from 1920 to present and touch on the key movements. Will place a strong emphasis on contemporary examples of social practice art through readings, assignments, and online participation. This course will give a historic and critical context for social art. Open to non-majors.

Also offered for graduate-level credit as Art 597 and may be taken only once for credit. Prerequisite: Upper-division standing.

Art 498 - BFA Project II (4)
Second in a sequence of two directed study courses in studio production and exhibition preparation in which students complete and select work for a culminating Project Exhibition. Course will focus on completing projects, work selection, exhibition preparation and installation of Project. This is the second course in a sequence of two: Art 496 and Art 498 and must be taken in sequence. Required for all BFA students. Prerequisite: Art 496. Corequisite: Art 499.

Art 499 - BFA Oral Review (2)
Course prepares BFA students for the final oral review of their individual culminating projects. Format includes individual research, group critique, practice presentations, written reflections and final formal faculty-reviewed student presentations. Required for all BFA students. Co-requisite: Art 498. Prerequisite: Art 336 and Art 496. Corequisite: Art 498.

Art 501 - Research (1-9)
(Credit to be arranged.) Terms, section, instructor and hours to be arranged. Consent of instructor and chair of the Department of Art required.

Art 502 - Independent Study (1-6)
Terms, section, instructor and hours to be arranged. Consent of instructor and Chair of the Department of Art Required.

Art 503 - Thesis (1-9)
(Credit to be arranged.)
education. This is the first course in a sequence of two: Art 514 and Art 515. Open to non-majors with instructor's consent.

Art 515 - Art Methods For Secondary School Teachers (4)
Methods and materials for teaching and coordination of art programs in grades 5-12, with an emphasis on organizing historical, aesthetic, critical and studio demonstrations, lectures, and classroom/model presentations. Translating theory(ies) into practice(s) will be a continuing and ongoing focus of the classes in lessons, research and readings. Students will develop Art lessons and programs that reflect current state and national standards. Art 514 is an introduction to the history of Art Education, the methods of instruction, philosophy of art education, and organization of art materials and tools. Art 515 explores the current best practices and issues in Art Education, technology (media-computer) application to art, continuing research/issues in art education, Practical and contemporary issues in public/private education. This is the second course in a sequence of two: Art 514 and Art 515. Open to non-majors with instructor's consent.

Prerequisite: Admission into the Art Education GTEP program and Art 514.

Art 528 - KSMoCA: Museum and Community (4)
Students meet outside of the PSU campus at Dr. MLK Jr School in NE Portland to think critically about museums, education, site-specificity, and social topics. Students contribute to the operation of the King School Museum of Contemporary Art, and they lead reading discussions pertaining to topics associated with the museum, mentor elementary students, and help to install a museum exhibition. Collaboration, research, and participation are crucial elements of the course. This course is repeatable for up to 8 credits.

Also offered for undergraduate-level credit as Art 428.

Art 530 - Critical Art Theories II (4)
Artwork and artists of the 21st century are examined within the context of contemporary art theory. A thematic rather than a chronological approach will be used when examining theoretical, philosophical and socio-cultural aspects. Material will be presented through in-class instruction and field trips.

Also offered for undergraduate-level credit as Art 430 and may be taken only once for credit.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

Art 557 - Low Tech Cinema (4)
This studio course uses readily accessible technologies and inexpensive techniques to create media artwork. Course topics include cell phones and mobile devices, conceptual and text-based movies, handmade 16mm film techniques, toy cameras, diary videos, consumer-grade analog video equipment including VHS, glitch art, media appropriation, and hacking.

Also offered for undergraduate credit as Art 457 and may be taken only once for credit.

Art 561 - Advanced Photography Studio (4)
An advanced studio course focused on the study of photographic practices and portfolio development. Students engage in discussion regarding assigned readings, practices within contemporary photography, and the critique of their own work. This course allows for a variety of photographic methods. Graduate students are required to complete an additional research project. This course is repeatable.

Also offered for undergraduate-level credit as Art 461.

Art 562 - Professional Practices in Photography (4)
Introduces senior and graduate students to the photography profession in its diverse forms and the commercial operation of photographic studios. Projects investigate one or more specialized forms of photographic practice, such as product, architectural, portrait, landscape, photo-illustration, or immersive photography. Specialized techniques in lighting and digital imaging may be explored.

Also offered for undergraduate-level credit as Art 462 and may be taken only once for credit.

Prerequisite: Graduate-level standing and instructor's consent.

Art 578 - Studio Practice: Workshop (2)
This course is a co-requisite to Art 580 Studio Practice: Directed Studies. In this workshop the focus will be on group dialogue and peer critique of individual and collaborative work with an emphasis on the relationship between research, production and presentation. In addition to requiring that students experiment with new methods, materials and modes of research in regard to their studio work, Art 578 develops students' ability to assess the strength of developing work, enhances their ability to speak about their work and the work of their peers and gives them a wider view into issues and aspects of studio production. Includes reading assignments, student-led discussion, guest speakers and field trips. May be repeated for credit. Maximum credits 24. Required for MFA.
Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 580 - Studio Practice: Directed Studies (2)**

Tutorial and directed study in studio production with a supervising faculty member. In-depth discussions and assessment of graduate student’s studio work-in-progress in relation to contemporary art practices and criticism, historical practices, technical and formal concerns and/or related interdisciplinary interests. Directed assignments and course of study will be given as appropriate. May be repeated for credit. Maximum credits 40. Required for MFA.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 581 - MFA Graduate Seminar I: Special Topics in Contemporary Art (2)**

Examines selected issues in contemporary art and culture. The given instructor’s current research interests determine course material. Examples of topics include: post-colonialism and Diaspora; issues in feminism; gender and queer studies; modernisms and modernity; new technologies and digital culture; autobiography and memoir; cultural production and censorship; globalism and new economies of art. Course format consists of assigned readings, discussion and a writing component. Field trips, student presentations, screenings and assigned lectures may also be included. May be repeated for credit. Maximum credits 4. Required for MFA.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 582 - MFA Graduate Seminar II: Writing and Research (2)**

Explores the role of writing and research in contemporary art practice. Course materials include library research and developing bibliographies relevant to students’ studio practice, discussion of methodologies and practices of contemporary art production. Preparatory course for written component of the MFA exhibition project: second-year students are expected to develop an abstract and outline for their exhibition project. May be repeated for credit. Maximum credits 4. Required for MFA.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 583 - MFA Graduate Seminar III: Pedagogy + Praxis (2)**

Explores teaching at local and national institutions as preparation for teaching in higher ed. This seminar includes curriculum development, syllabi development, assessment, educational objectives reading and discussion of post-modern theory and other matters in the area of art education and visual culture. Required for MFA. Maximum credits 2.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 584 - Social Practice: Directed Studies (2)**

Tutorial and directed study in social practice production with a supervising faculty member. In-depth discussions and assessment of graduate student’s work-in-progress in relation to contemporary art practices and criticism, historical practices, technical and formal concerns and/or related interdisciplinary interests. Directed assignments and course of study will be given as appropriate. May be repeated for credit. Maximum credits 20. Required for MFA.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 585 - MFA Graduate Seminar IV: Professional Practices (2)**

Explores practical issues of career development for professional artists including preparing a portfolio, grant writing, C.V. writing, applying for teaching positions and residencies, working with museums and galleries, working in and with public, nonprofit and community arts organizations. The course includes guest speakers and individual research projects. Required for MFA.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 586 - Visiting Artist Program (2)**

Through presentations and conversations, students will learn about the work of a diverse range of artists and cultural producers. Visiting artists participate in group critiques, and/or conduct individual studio critiques. May be repeated for credit. Maximum credits 12. Required for MFA.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 587 - Exhibition Project (4)**

Tutorials and directed study in developing a final MFA exhibition project. Conducts supporting research and studio production with approval of the students’ individual MFA advisor, Exhibition committee chair and committee members. Required for MFA. Maximum credits 4.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

**Art 588 - Advanced Painting (4)**

Through guided individual assistance, this course concentrates on working methods of research and
execution towards a specifically proposed project. Research, idea generation and production are emphasized within the context of a body of work, related to contemporary painting practices and theories.

Also offered for undergraduate-level credit as Art 490 and may be taken only once for credit. Prerequisite: Art 393 or MFA/graduate status or consent of instructor.

Art 591 - Advanced Painting Topics (4)
Advanced level special topics in painting based on various subjects of inquiry. Focusing on a specific theme, material explorations and applications, and/or specific content, approaches will vary according to instructor. The course should include subtitles highlighting the selected topic.

Also offered for undergraduate-level credit as Art 491 and may be taken only once for credit. Prerequisite: Art 490 or MFA/graduate status or instructor's consent.

Art 593 - Advanced Drawing Mixed Media (4)
This class represents the culminating experience in drawing and mixed media. Students are expected to develop a unified body of work that reflects and is informed by art history and contemporary theory. Open to non-majors who have prerequisites and consent of the instructor. Maximum 8 credits.

Also offered for undergraduate-level credit as Art 493 and may be taken only once for credit. Prerequisite: Graduate-level standing and instructor's consent.

Art 594 - Advanced Sculpture (4)
Advanced-level sculpture course which focuses on conceptual development, research, and production as an advanced level sculpture student. Students develop an independent, cohesive body of work within a historical and theoretical context. Maximum 4 credits.

Also offered for undergraduate-level credit as Art 494 and may be taken only once for credit. Prerequisite: Graduate-level standing.

Art 595 - Advanced Sculpture Topics (4)
Advanced-level topics in sculpture based on various subjects of inquiry. Focus on a specific theme, media, and/or process. Students develop an independent, cohesive body of work within a historical and theoretical context. Maximum: 8 credits.

Also offered for undergraduate-level credit as Art 495 and may be taken only once for credit. Prerequisite: Graduate-level standing.

Art 597 - A History of Art and Social Practice (4)
A history of social practice in art. Investigate the current critiques, debates and issues surrounding its current state in relation to its historical context. The course will examine social practice from 1920 to present and touch on the key movements. Will place a strong emphasis on contemporary examples of social practice art through readings, assignments, and online participation. This course will give a historic and critical context for social art. Open to non-majors.

Also offered for undergraduate-level credit as Art 497 and may be taken only once for credit. Prerequisite: Graduate-level standing.

Art 598 - Social Practice: Workshop (2)
This course is a co-requisite to Art 584 Social Practice: Directed Studies. In this workshop the focus will be on the creative aspects involved in social practice rather than theory. Formulate and work on collaborative public projects, discuss the creative aspect and practical application of art and social practice. May be repeated for credit. Maximum credits 20. Required for MFA.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

Art 599 - Exhibition Critique (2)
Public presentation of MFA exhibition project and MFA exhibition lecture; production of written MFA exhibition statement with the student’s individual MFA advisor, graduate faculty and graduate program coordinator. Required for MFA. Maximum credits 2.

Prerequisite: Admission into the MFA in Contemporary Art Practice program.

ASL - American Sign Language

ASL 101 - First-Year American Sign Language Term 1 (4)
Basic mastery of American Sign Language (ASL). Covers ASL vocabulary, grammatical structure, and elements of Deaf culture. Includes sign language practice in class and in the Deaf community. This is the first course in a sequence of three: ASL 101, ASL 102, and ASL 103.

ASL 102 - First-Year American Sign Language Term 2 (4)
Continuation of American Sign Language with the goal of expanding the student's vocabulary and conversational skills. Students will also gain awareness of Deaf culture. Placement interview may be required. This is the second course in a sequence of three: ASL 101, ASL 102, and ASL 103. Expected preparation: ASL 101 or proficiency at 101 level.

ASL 103 - First-Year American Sign Language Term 3 (4)
Continuation of American Sign Language aimed at intermediate proficiency. Emphasizes enhanced vocabulary, expressive and receptive skills, and communication interactions in the language and culture of the Deaf. This is the third course in a sequence of three: ASL 101, ASL 102, and ASL 103. Expected preparation: ASL 102 or proficiency at 102 level.

ASL 199 - Special Studies (1-8)
(Credit to be arranged.)

ASL 201 - Second-Year American Sign Language Term 1 (4)
Expansion and refinement of first-year comprehension and production skills; expansion of grammatical and lexical repertoires through task-based instruction in transactions such as asking/giving directions, making plans, describing and identifying people, places and things, giving simple instructions, and telling what happened. This course is the first course in a sequence of three: ASL 201, ASL 202, and ASL 203. Expected preparation: ASL 103 for ASL 201, ASL 201 for ASL 202, ASL 202 for ASL 203.

ASL 202 - Second-Year American Sign Language Term 2 (4)
Expansion and refinement of first-year comprehension and production skills; expansion of grammatical and lexical repertoires through task-based instruction in transactions such as asking/giving directions, making plans, describing and identifying people, places and things, giving simple instructions, and telling what happened. This is the second course in a sequence of three: ASL 201, ASL 202, and ASL 203.

ASL 203 - Second-Year American Sign Language Term 3 (4)
Expansion and refinement of first-year comprehension and production skills; expansion of grammatical and lexical repertoires through task-
based instruction in transactions such as asking/giving directions, making plans, describing and identifying people, places and things, giving simple instructions, and telling what happened. This is the third course in a sequence of three: ASL 201, ASL 202, and ASL 203.

ASL 299 - Special Studies (1-8)
(Credit to be arranged.)

ASL 301 - Third-Year American Sign Language Term 1 (4)
This course will assist students in developing improved and advanced vocabulary, receptive and expressive skills, and specific terminology used in the fields of education, medicine, law, and artistic/dramatic performances. Students' confidence and fluency in ASL will improve to ensure effective interaction and communication with Deaf and hard of hearing ASL users.
Prerequisite: ASL 203. Corequisite: NA.

ASL 302 - Third-Year American Sign Language Term 2 (4)
This course aims to improve receptive and expressive fluency of students in two essential elements of American Sign Language—fingerspelling and numbers—in a variety of contexts and settings. Students will develop mastery of hand positioning and movement pertaining to the use of fingerspelling and numbers in a variety of communication settings and contexts. Students will also improve their abilities to utilize ASL numbering systems for time, money, measurements, game scores, and others in a variety of settings and contexts.
Prerequisite: ASL 301.

ASL 303 - Third-Year American Sign Language Term 3 (4)
This course focuses on the advanced utilization of gestures, mime, pantomime, facial expressions, body movements, and handshapes that often accompany non-manual communication and which convey meaningful information in American Sign Language. Strategies for developing fluency and skills in these elements will be presented.
Prerequisite: ASL 302.

ASL 330 - Deaf Culture (4)
Introduction to major aspects of American Deaf Culture such as the history of deaf culture and community, its art, literature, folklore and language (American Sign Language), including current attitudes, movements, policies, and trends that affect the Deaf as a linguistic minority.

ASL 399 - Special Studies (1-8)
(Credit to be arranged.)

ASL 402 - Independent Study (1-12)
(Credit to be arranged.)

ASL 406 - Special Project/Problems (1-12)
(Credit to be arranged.)

ASL 410 - Selected Studies (1-12)
(Credit to be arranged.)

BA - Business Administration

BA 100 - Summer Business Institute (1)
The Summer Business Institute is a unique opportunity for high school students to explore the world of business with Portland State business faculty and local business leaders. The institute will provide an overview of the functional areas of business and business practices in Oregon with an emphasis on diversity and inclusion and social responsibility. The institute is specially designed for Black, Indigenous, people of color, and those with culturally diverse backgrounds. This course is repeatable for up to 2 credits.

BA 101 - Introduction to Business and World Affairs (4)
Introduction to the business firm operating in the local, national, and global marketplace. Emphasizes the integration of the various functional areas of business as the firm evolves from its entrepreneurial origins to a mature corporation.

BA 199 - Special Studies (1-6)
(Credit to be arranged.)

BA 205 - Business Communications Using Technology (4)
Provides students with the tools that are needed to collect, organize, and present information in a
business environment. Students will learn how to use library and Internet resources to collect information. Word processing, spreadsheet, and graphics applications will be used to organize and present business information. Students will be introduced to business report writing, developing and delivering a persuasive presentation, and electronic-mail methods for team-based communication.

Prerequisite: BA 101.

**BA 211 - Fundamentals of Financial Accounting (4)**

Assists students in developing an understanding of financial statements and the tools used by external users such as lenders, shareholders, and competitors to evaluate the performance of the firm. Balance sheets, income statements, statements of cash flows, and industry reports will be used to introduce topics such as: assessing risk, liquidity, solvency, operating efficiency, and profitability of the firm.

Prerequisite: BA 101.

**BA 213 - Decision Making with Accounting Information (4)**

Designed to aid students in developing effective decision making skills. Course elements include: understanding the organization as a system, information assessment, cash management, operations and capital budgeting, manufacturing cost systems, cost control procedures, managing inventory, problem solving, and measuring the health of the organization.

Prerequisite: BA 211.

**BA 299 - Special Studies (1-6)**

(Credit to be arranged.)

**BA 301 - Research and Analysis of Business Problems (4)**

Development and use of business tools and techniques as applied to business problems. Students will identify business problems, articulate the issues, research, develop, and evaluate solution alternatives relevant to the problem, and present the results orally and in writing. Students will integrate and reinforce their skills in logical and analytical processing, critical thinking, and communication.

Prerequisite: BA 205, BA 213, Comm 220, Stat 241 or Stat 243, Ec 202, and Wr 121 or the third term of FRINQ.

**BA 302 - Organizational Behavior (0-4)**

Focuses on issues that are relevant to the three levels of organizational behavior (i.e., individual, group, and organizational). Key topics include: the nature and dynamics of teams, personal values and employee job attitudes, communication, conflict resolution, motivation, leadership, decision making, employee effectiveness, and the impact of organizational level issues such as policies, structure, design, and culture. Techniques used to facilitate learning may include role plays, cases, presentations, organizational simulations, teamwork, and/or term research papers.

Prerequisite: BA 301 or concurrent registration in BA 301.

**BA 303 - Business Finance (4)**

Development and study of a decision framework for financial management with special emphasis on small- and medium-sized businesses. Topics include analysis of financial health, planning for future financial performance, evaluation of investment opportunities, and analyses of risk. Financing of firm growth and valuation will be introduced. An integration of the concepts of financial management into a total system approach to business decision making will be facilitated with the use of cases, as appropriate.

Prerequisite: BA 213, Ec 202, Stat 241 or Stat 243.

**BA 306U - Essentials of Finance for Non-Business Majors (4)**

Essential topics in accounting and finance for business minors and non-business majors. Reading and interpreting income statements and balance sheets, especially for small businesses. Forecasting to determine financing requirements. Use of techniques in time value of money to determine present values, loan payments, etc. Sources of business financing.

**BA 311 - Marketing Management (4)**

Basic marketing concepts from the perspective of the marketing manager. Key focus is to examine the marketing planning and analysis necessary to develop sound marketing plans and strategies. Specific topics include the role of marketing within the firm, analysis of marketing opportunities, selection of target markets and market segmentation, marketing strategies in a global marketplace, use of technology in marketing, and marketing mix decisions. Experiential learning approaches for class participation will be used.

Prerequisite: BA 301 or concurrent registration in BA 301.
BA 316U - Essentials of Marketing for Non-Business Majors (4)

Essential topics in marketing for business minors and non-business majors. Students will be introduced to the basic concepts of marketing and customer satisfaction. Students will explore primary considerations of the market environment and marketing practices including price, promotion, distribution, and product in an applied setting.

BA 325 - Information Literacy & Technical Competence for Business Professionals (4)

Presents the key information literacy skills future business leaders need to be successful. Data represent people, places, things, activities, and events in a business. Making sense of these data is the work of every business person at all levels of the organization. The course is designed to do three things: help students develop proficiency in MS Excel and Access software applications, (2) develop the thinking that is required for students to dive into data and make sense of it, and (3) introduce key information and technology related concepts of which every business person should be aware. Using adaptive technology (SimNet), the course is designed to provide students with working knowledge and a broad overview of applications they will utilize throughout their time at PSU and beyond. Students have long-term access to the SimNet library so the resource travels with them throughout their education and career.

Prerequisite: BA 213, Ec 202, Stat 241 or Stat 244.

BA 326U - Essentials of Management for Non-Business Majors (4)

Essential topics in management and business communications for business minors and non-business majors. Focuses on the management of business organizations in an applied setting. Key topics include motivating and leading individuals and groups, working effectively in teams, and conflict management. In addition, students will learn to collect, organize, and present information in a business setting.

BA 327 - Data Analysis & Visualization (2)

This course is required of all business students in order for them to have basic competency in Data Analytics and be able to succeed in 400-level discipline specific Data Analytics courses as well as for them to perform well in the BA 495 Capstone class. Using a large dataset from industry, this two-credit combined-lab-and-lecture course will give students experience with tools while walking them through the data analytics cycle in order to prepare students for the work force, and their 400-level SB coursework.

Prerequisite: BA 325.

BA 332U - Property, Management & Society (4)

Introduces students to the field of real estate property management. Students attain fundamental knowledge of real estate, economics and the built environment’s impact on communities. Encompasses managerial concepts, operational principles, market economics and real estate terminology for income-producing properties.

BA 336U - Essentials of Information Technology for Non-Business Majors (4)

Discusses the importance of information and its support of a business organization. An understanding of the essential relationships among information, business process, and information technology. This is a survey course for business minors and non-business majors.

BA 339 - Supply Chain Management (0–4)

Develops an understanding of the various issues and strategies involved in the operation of a service or manufacturing organization. These considerations include the support by the operation’s organization of corporate strategy through design and operating decisions. Issues such as global supply sources, worldwide business system influences, continuous improvement, and total quality management will be discussed.

Prerequisite: BA 301 or concurrent registration in BA 301.

BA 339L - Lab for BA 339 (0)

Lab for BA 339.

BA 346U - Essentials of Entrepreneurship for Non-Business Majors (4)

Team-based capstone course in the business minor that provides students experience developing a new business opportunity and transferable skills applicable to entrepreneurship, intrapreneurship, and the promotion of new initiatives within an organization. Students will develop a final project that involves determining the market potential and strategy for a business idea using collaboration tools to create a feasibility study and a business pitch.
BA 385 - Business Environment (4)
Study and critical analysis of the role of business in its environment with special references to the interrelationships of legal, technological, economic, political, and social forces with the business enterprise and to the legal and ethical obligations of the business enterprise with its owners, employees, consumers, and society.
Prerequisite: BA 301.

BA 399 - Special Studies (1-6)
(Credit to be arranged.)

BA 404 - Internship (1-12)
(Credit to be arranged.)

BA 407 - Seminar (1-9)
(Credit to be arranged.) Seminars in selected cross-functional and integrative business topics.

BA BA - Practicum (1-12)
(Credit to be arranged.)

BA 410 - Selected Topics (1-6)
(Credit to be arranged.)

BA 423 - Executive Perspectives on Leadership (1)
This course provides students the opportunity to interact and learn directly from executives at for-profit, not-for-profit, and government organizations. Students will listen to and discuss the concepts and practices of leadership as it relates to the professional experiences of the executives. Also offered for graduate-level credit as BA 523.

BA 495 - Business Strategy (6)
Capstone course for the SBA; should be taken in the student’s final term. This course meets University Studies’ Capstone requirement. Students learn to systematically analyze a firm’s internal and external environments and, through engagement with community partners, apply concepts and theories related to the formulation and implementation of business/organization strategies. Students join an interdisciplinary team; pool their knowledge, skills, and interests; use strategy to address a problem or concern of the community partner. Emphasis on multiple functions and perspectives to understand diverse management and stakeholder interpretations, conceive integrative solutions, and address social and organizational outcomes.
Prerequisite: BA 301, BA 302, BA 303, BA 311, BA 325, BA 339, and BA 385. Priority to graduating seniors who have applied for graduation.

BA 501 - Research (1-9)
(Credit to be arranged.)

BA 504 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)
BA 522 - Communications for Leaders (1)
Focus on building effective communication skills, including writing, speaking and listening. Students will learn how to create and engage in clear and well-structured communications - both oral and written. Students will be introduced to specific techniques that students can use to increase their effectiveness as communicators, engage their audience and respond to ‘expected’ and ‘unexpected’ questions that arise in a way that is authentic, collaborative and influential.

BA 523 - Executive Perspectives on Leadership (1)
This course provides students with the opportunity to interact and learn directly from executives at for-profit, not-for-profit and government organizations. Students will listen to and discuss the concepts and practices of leadership as it relates to the professional experiences of the executives.
Also offered for undergraduate-level credit as BA 423.

BA 524 - Leadership Immersion (1)
A business simulation experience designed to assess students’ technical and leadership skills. This course can only be taken as a pass/no pass grading option.
Prerequisite: BA 521, BA 522, BA 529, Fin 513.

BA 525 - Capstone Consulting Project (2)
Under the direction of a faculty member, students work in teams over two terms to apply MBA knowledge, skills and leadership competencies to an actual organizational problem in a consulting framework. This course requires two consecutive terms to complete. MBA prerequisites: BA 529, Mgmt 511, Mgmt 516, Fin 513, Mktg 511, Mktg 512, BA 524 (may be taken concurrently); and completion of at least 37 hours of the MBA core sequence.

BA 526 - MBA International Experience (4)
The MBA International Experience provides the opportunity for students to study international business and intercultural topics and gain hands-on experience in a different country or in the Portland Metro region. Locations and course topics are determined based on the strategic priorities of the MBA program. International Experiences conducted in different countries require approximately two weeks overseas. International Experience conducted in the Portland Metro region will be offered in four to eight week formats.
Prerequisite: Students will need to have completed the first year of their MBA program in order to participate in the MBA International Experience.

BA 527 - MBA Domestic Business Experience (4)
Explores global business issues through the lens of one or more of the region’s key industry sectors. Students will learn from executives and innovators leading groundbreaking global efforts and initiatives.
Corequisite: BA 528.

BA 528 - MBA Culture Module (1)
This course is intended to help students prepare for their international experience trips by developing a greater understanding of culture and cross-cultural communication in the business setting.

BA 529 - Building Effective Teams (1)
The purpose of this course is to teach the theory and processes of group and team behavior so that students can successfully manage groups and work effectively in a variety of team settings.

BA 530 - Thought Leadership (1)
Under the direction of a faculty member, students will examine relevant topics in business, and explore the connection between academic research and the needs of the business community.

BA 548 - Special Topics in Business (1-6)
The courses offered under this number cover a range of specialized topics in business such as Product Design and Stewardship for Global Corporations, Sustainability Metrics in Business, Cross-Sector Partnerships for Sustainable Enterprise, Global Marketing Research, Marketing in Asia, Global Marketing, Global Human Resource Management, etc. Only open to graduate students of the School of Business Administration. May be repeated with different topics; maximum of 12 credits may be applied to the master's degree.

BBE - Bilingual Bicultural Ed
BBE 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

BBE 407 - Seminar (1-12)
(Credit to be arranged.)
BBE 410 - Selected Studies (1-12)
(Credit to be arranged.)

BBE 424 - Professional Development and Reflection (2)
Course designed to assist students in the beginning development of their profession as teachers, become familiar with national, state, and district teaching standards for teachers and K-12 students and become knowledgeable on educational law. Students will develop an initial teaching philosophy paper that will reflect their personal expression of values and goals as they relate to their practice. This paper will be refined throughout the program. Additionally, students will begin observation and data gathering in their district’s learning community.
Also offered for graduate-level credit as BBE 524 and may be taken only once for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.

BBE 432 - Language and Literacy Development for Diverse Learners (3)
Course designed for preservice teachers to help them guide elementary, mid-level, and secondary students in acquiring skills needed for reading, thinking, writing, and study in the content areas. Emphasis on the functional teaching of reading and writing - the design and preparation of materials to use with textbooks in all school subjects.
Also offered for graduate-level credit as BBE 532 and may be taken only once for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.

BBE 434 - Planning, Assessment, and Curriculum (3)
This course explores the theoretical frameworks and practical strategies that assist new teachers in planning effective classroom curriculum, assessments and instruction across academic subject areas, while focusing on the developmental and learning needs of students. Students will learn and practice a variety of techniques for unit and lesson planning, thoughtful instructional strategies and best practices in specific content areas, and how to develop formative classroom assessments that are standards-based and are aligned with instruction and curriculum design.
Also offered for graduate-level credit as BBE 534 and may be taken only once for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.

BBE 502 - Independent Study (1-9)
(Credit to be arranged.)

BBE 504 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

BBE 507 - Seminar (1-6)
(Credit to be arranged.)

BBE 509 - Practicum (1-9)
(Credit to be arranged.)

BBE 510 - Selected Studies (1-15)
(Credit to be arranged.)

BBE 524 - Professional Development and Reflection (2)
Course designed to assist students in the beginning development of their profession as teachers, become familiar with national, state, and district teaching standards for teachers and K-12 students and become knowledgeable on educational law. Students will develop an initial teaching philosophy paper that will reflect their personal expression of values and goals as they relate to their practice. This paper will be refined throughout the program. Additionally, students will begin observation and data gathering in their district’s learning community.
Also offered for undergraduate-level credit as BBE 424 and may be taken only once for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.

BBE 532 - Language and Literacy Development for Diverse Learners (3)
Course designed for preservice teachers to help them guide elementary, mid-level, and secondary students in acquiring skills needed for reading, thinking, writing, and study in the content areas. Emphasis on the functional teaching of reading and writing - the design and preparation of materials to use with textbooks in all school subjects.
Also offered for undergraduate-level credit as BBE 432 and may be taken only once for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.

BBE 534 - Planning, Assessment, and Curriculum (3)
This course explores the theoretical frameworks and practical strategies that assist new teachers in planning effective classroom curriculum, assessments and instruction across academic subject areas, while focusing on the developmental and learning needs of students. Students will learn and practice a variety of techniques for unit and lesson planning, thoughtful instructional strategies and best practices in specific content areas, and how to develop formative classroom assessments that are standards-based and are aligned with instruction and curriculum design.
Also offered for undergraduate-level credit as BBE 434 and may be taken only once for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.
BBE 534 - Planning, Assessment, and Curriculum (3)

This course explores the theoretical frameworks and practical strategies that assist new teachers in planning effective classroom curriculum, assessments and instruction across academic subject areas, while focusing on the developmental and learning needs of students. Students will learn and practice a variety of techniques for unit and lesson planning, thoughtful instructional strategies and best practices in specific content areas, and how to develop formative classroom assessments that are standards-based and are aligned with instruction and curriculum design.

Also offered for undergraduate-level credit as BBE 434 and may be taken only once for credit.

Prerequisite: Admission to the Bilingual Teacher Pathway Program.

Bi - Biology

Bi 101 - General Biology (3)

The fundamental principles of life as they apply to both plants and animals. If taken after completing courses with similar materials credit will be restricted. This is first course in a sequence of three: Bi 101, Bi 102, and Bi 103. Concurrent enrollment in Bi 104, Bi 105, Bi 106 required.

Bi 102 - General Biology (3)

The fundamental principles of life as they apply to both plants and animals. If taken after completing courses with similar materials credit will be restricted. This is second course in a sequence of three: Bi 101, Bi 102, and Bi 103. Concurrent enrollment in Bi 104, Bi 105, Bi 106 required.

Bi 103 - General Biology (3)

The fundamental principles of life as they apply to both plants and animals. If taken after completing courses with similar materials credit will be restricted. This is third course in a sequence of three: Bi 101, Bi 102, and Bi 103. Concurrent enrollment in Bi 104, Bi 105, Bi 106 required.

Bi 104 - General Biology Labs (1)

Laboratory to accompany General Biology (Bi 101, Bi 102, Bi 103). This is the first lab in a sequence of three: Bi 104, Bi 105, and Bi 106. Previous or concurrent enrollment in 101, 102, 103 is required. One 2-hour laboratory per week.

Bi 105 - General Biology Labs (1)

Laboratory to accompany General Biology (Bi 101, Bi 102, Bi 103). This is the second lab in a sequence of three: Bi 104, Bi 105, and Bi 106. Previous or concurrent enrollment in 101, 102, 103 is required. One 2-hour laboratory per week.

Bi 106 - General Biology Labs (1)

Laboratory to accompany General Biology (Bi 101, Bi 102, Bi 103). This is the third lab in a sequence of three: Bi 104, Bi 105, and Bi 106. Previous or concurrent enrollment in 101, 102, 103 is required. One 2-hour laboratory per week.

Bi 161 - Food, Plants, and People (3)

The role of plants in human affairs as sources of food, fiber, fuel, beverages, and drugs. This course does not satisfy the Department of Biology botany course requirement and is intended for nonmajors.

Bi 163 - Organic Gardening (3)

An in-depth study of the principles and practices of modern home gardening. Plants, soils, and climates are studied in relation to the production of vegetables, herbs, flowers, and perennial food plants. The organic and chemical approaches to gardening are discussed with the goal of helping students to formulate intelligently their own philosophy of gardening. Not intended for biology majors.

Bi 175 - Evolutionary Concepts (3)

This class is designed to provide background in evolutionary concepts for nonmajors and to address current issues in evolution as they are perceived and are being investigated by various members of our faculty in biology and geology. It is a combined lecture and discussion class and will include occasional guest lecturers presenting their research and views on various topics in evolution.

Bi 199 - Special Studies (1-5)

Please see department for course description. (Credit to be arranged.)

Bi 201 - Fundamentals of Biology: Cells, Genes and Heredity (3)

An overview of basic concepts of biology and applications to everyday life. Topics include the
material basis of living systems; cell and molecular structures and interactions, and genetics and heredity, as applied to issues such as cancer, nutrition, reproductive and genetic testing, and biotechnology. Fulfills the science requirement for non-majors. This course will not fulfill biology major requirements or pre-allied health requirements for introductory biology.

**Bi 202 - Fundamentals of Biology: Ecology, Conservation, and Health (3)**

A fundamental introduction to the biological concepts and principles underlying the relationships among ecology, conservation, sustainability, and public health. Topics include ecological principles, population ecology, and public health. These will translate into a better scientific understanding of ecology and health. Fulfills the science requirement for non-majors. This course will not fulfill biology major requirements or pre-allied health requirements for introductory biology.

**Bi 203 - Fundamentals of Biology: Evolution and Diversity of Life (3)**

An introduction to fundamental principles of evolution, origins, and diversity of life on Earth. Topics include history, development, mechanisms and processes of evolution, patterns of ancestry, diversity and extinction, and surveys of the major life forms including the origin and evolution of modern humans. Fulfills the science requirement for non-majors. This course will not fulfill biology major requirements or pre-allied health requirements for introductory biology.

**Bi 204 - Fundamentals of Biology Laboratory: Cells, Genes and Heredity (1)**

A laboratory course to accompany Bi 201 Fundamentals of Biology. Hands-on inquiry and investigations of topics relating to the material basis of living systems; cell and molecular structures and interactions, and genetics and heredity. Fulfills the university laboratory science requirement.

**Bi 205 - Fundamentals of Biology Laboratory: Ecology Conservation and Health (1)**

**Bi 206 - Fundamentals of Biology Lab: Evolution and Diversity of Life (1)**

A laboratory course to accompany Bi 203 Fundamentals of Biology. Hands-on inquiry and investigations of topics relating to the major groups of organisms. Fulfills the university laboratory science requirement.

**Bi 207 - Biology for Allied Health I (4)**

Three-term preparatory biology lecture and integrated lab course for students preparing for allied health career tracks. Bi 207: Cell, Molecular and Genetics: topics include cell structure and function, molecular basis of life, cellular basis of reproduction, heredity and genetics. Bi 208: Evolution and Diversity of Life: topics include origin and evolution of diversity of life from viruses and microbes to vertebrates; animal behavior, organismal interactions. Bi 209: Anatomy and Physiology Systems: topics include skeletal, circulatory, respiratory, digestive, urinary, endocrine, nervous, immunological, reproductive systems; organization, development, and homeostasis in animals. Integrated lab exercises emphasize the process of scientific inquiry using critical thinking and communication skills. This is the first course in a sequence of three: Bi 207, Bi 208, and Bi 209.

Corequisite: Bi 207L.

**Bi 207L - Biology for Allied Health Lab I (0)**

Biology for Allied Health Lab.

Corequisite: Bi 207.

**Bi 208 - Biology for Allied Health: Evolution and Diversity of Life (4)**

Three-term preparatory biology lecture and integrated lab course for students preparing for allied health career tracks. Bi 207: Cell, Molecular and Genetics: topics include cell structure and function, molecular basis of life, cellular basis of reproduction, heredity and genetics. Bi 208: Evolution and Diversity of Life: topics include origin and evolution of diversity of life from viruses and microbes to vertebrates; animal behavior, organismal interactions. Bi 209: Anatomy and Physiology Systems: topics include skeletal, circulatory, respiratory, digestive, urinary, endocrine, nervous, immunological, reproductive systems; organization, development, and homeostasis in animals. Integrated lab exercises emphasize the process of scientific inquiry using critical thinking and communication skills. This is the second course in a sequence of three: Bi 207, Bi 208, and Bi 209.
Corequisite: Bi 208L.

**Bi 208L - Biology for Allied Health Lab II (0)**

Biology for Allied Health Lab.

Corequisite: Bi 208.

**Bi 209 - Biology for Allied Health: Anatomy and Physiology Systems (4)**

Three-term preparatory biology lecture and integrated lab course for students preparing for allied health career tracks. Bi 207: Cell, Molecular and Genetics: topics include cell structure and function, molecular basis of life, cellular basis of reproduction, heredity and genetics. Bi 208: Evolution and Diversity of Life: topics include origin and evolution of diversity of life from viruses and microbes to vertebrates; animal behavior, organismal interactions. Bi 209: Anatomy and Physiology Systems: topics include skeletal, circulatory, respiratory, digestive, urinary, endocrine, nervous, immunological, reproductive systems; organization, development, and homeostasis in animals. Integrated lab exercises emphasize the process of scientific inquiry using critical thinking and communication skills. This is the third course in a sequence of three: Bi 207, Bi 208, and Bi 209.

Corequisite: Bi 209L.

**Bi 209L - Biology for Allied Health Lab III (0)**

Biology for Allied Health Lab.

Corequisite: Bi 209.

**Bi 211 - Principles of Biology: Molecular Cell Biology & Genetics (4)**

Study of the basic principles of living organisms. This course will study the molecular and cellular underpinnings of living organisms. Specific topics include biochemistry, cell biology, molecular biology, biotechnology, microbiology, and genetics. Four hours lecture. Co-requisite: Bi 214 Laboratory.

Prerequisite: Ch 221 and Ch 227, or concurrent enrollment in Ch 221 and Ch 227. Corequisite: Bi 214.

**Bi 212 - Principles of Biology: Development, Evolution & Ecology (4)**

Study of the basic principles of living organisms. This course focuses on the development, evolution and ecology of living organisms. Specific topics include plant and animal development, natural selection, speciation, form function of organisms, biodiversity, and the introduction of major phyla. Four hours lecture. Co-requisite: Bi 215.

Corequisite: Bi 215.

**Bi 213 - Principles of Biology: Organisms, Biodiversity & Conservation (4)**

Study of the basic principles of living organisms. This course focuses how biotic and abiotic factors impact living organisms and the physiological underpinnings that allow organisms to survive. Specific topics include ecology, physiology, organismal systems (water balance, gas exchange, nervous, circulatory, endocrine), community and population ecology, biodiversity and conservation. Four lecture hours. Co-requisite: Bi 216.

Corequisite: Bi 216.

**Bi 214 - Principles of Biology Lab I (1)**

Laboratory work to accompany Principles of Biology I (Bi 211). Completion of, or concurrent enrollment in the appropriate lecture course is required. One 3-hour laboratory. Graded only.

Corequisite: Bi 211.

**Bi 215 - Principles of Biology Lab II (1)**

Laboratory work to accompany Principles of Biology II (Bi 212). Completion of, or concurrent enrollment in the appropriate lecture course is required. One 3-hour laboratory. Graded only.

Corequisite: Bi 212.

**Bi 216 - Principles of Biology Lab III (1)**

Laboratory work to accompany Principles of Biology III (Bi 213). Completion of, or concurrent enrollment in the appropriate lecture course is required. One 3-hour laboratory. Graded only.

Corequisite: Bi 213.

**Bi 234 - Elementary Microbiology (4)**

Introduction to the basic and applied aspects of microbiology, with special emphasis on the role of microorganisms in human affairs. Such fields as nursing, environmental protection, food technology, and public health are given special attention. Topics will include microbial growth and death, human disease, environmental microbiology, food and industrial microbiology, microbial aspects of water and sewage treatment, aspects of microbial gene flow, genetic engineering and vaccine development.

Corequisite: Bi 234.

**Bi 235 - Microbiology Laboratory (2)**

The laboratory is designed for science majors and others who need practical experience in culturing and observation of microorganisms. Topics will include culture techniques, use of the microscope for observation of microorganisms, and procedures for
study of microorganisms in the laboratory and field.

Two 2-hour laboratory periods.

Bi 299 - Special Studies (1-8)
See department for course description. (Credit to be arranged.)

Bi 301 - Human Anatomy and Physiology (4)
Microanatomy, macroanatomy, genetics, embryology, and physiology. Comprehensive understanding of man as a functionally integrated biological entity. One 3-hour laboratory. This is the first course in a sequence of three: BI 301, BI 302, and BI 303. Expected preparation: One year of college biological science; for BI 302: Completion of BI 301 with C- or above; for BI 303: Completion of BI 302 with a C- or above.

Prerequisite: Prior completion (with a C- or higher) of either BI 207 Allied Health or Data BI 211 Principles of Biology. Prerequisite cannot be taken concurrently. Corequisite: BI 301L.

Bi 301L - Human Anatomy and Physiology Lab (0)
Lab for BI 301.
Corequisite: BI 301.

Bi 302 - Human Anatomy and Physiology (4)
Microanatomy, macroanatomy, genetics, embryology, and physiology. Comprehensive understanding of man as a functionally integrated biological entity. One 3-hour laboratory. This is the second course in a sequence of three: BI 301, BI 302, and BI 303. Expected preparation: One year of college biological science; for BI 303: Completion of BI 301 with C- or above; for BI 303: Completion of BI 302 with a C- or above.

Corequisite: BI 302L.

Bi 302L - Human Anatomy and Physiology Lab (0)
Lab for BI 302.
Corequisite: BI 302.

Bi 303 - Human Anatomy and Physiology (4)
Microanatomy, macroanatomy, genetics, embryology, and physiology. Comprehensive understanding of man as a functionally integrated biological entity. One 3-hour laboratory. This is the third course in a sequence of three: BI 301, BI 302, and BI 303. Expected preparation: One year of college biological science; for BI 303: Completion of BI 301 with C- or above; for BI 303: Completion of BI 302 with a C- or above.

Corequisite: BI 303L.

Bi 303L - Human Anatomy and Physiology Lab (0)
Lab for BI 303.
Corequisite: BI 303.

Bi 320 - Introduction to Organismal Physiology (4)
An overview of fundamental principles of physiology. Course covers the physical and chemical mechanisms responsible for how animals, plants and microbes function.

Prerequisite: Prior completion of BI 211, BI 212, and BI 213 with a C- or above.

Bi 326 - Comparative Vertebrate Embryology (5)
Comparative study of the development of representative vertebrates, including the cellular mechanisms responsible for early morphogenesis. One 4-hour laboratory period.

Prerequisite: Completion of BI 211, BI 212, and BI 213 with a C- or above in each section. Corequisite: BI 326L.

Bi 326L - Vertebrate Embryology Lab (0)
Lab for BI 326.
Corequisite: BI 326.

Bi 328 - Comparative Vertebrate Anatomy (5)
Gross dissection and comparison of organ systems in representative vertebrate forms. Two 4-hour laboratory periods.

Prerequisite: Completion of BI 212 with a C- or above. Corequisite: BI 328L.

Bi 328L - Comparative Vertebrate Anatomy Lab (0-1)
Lab for BI 328.
Corequisite: BI 328.

Bi 330 - Introduction to Plant Biology (4)
Plant diversity, structure and function in relationship to evolution, habitat, and interactions with other organisms. Historical impacts of plants on human culture, including conservation, biotechnology, and world food supply.

Prerequisite: Completion of BI 211, BI 212, and BI 213 with C- or above in each section.
**Bi 334 - Molecular Biology (4)**
The principles, concepts and methods of molecular biology focusing on structure, biochemistry, biosynthesis, and regulation of cellular macromolecules-DNA, RNA, and proteins. Topics covered include the nature, structure, regulation and expression of genes, molecular aspects and regulation of translation, DNA replication and repair, mutagenesis, and an introduction to molecular techniques.
Prerequisite: Completion of Bi 211 with a C- or above.

**Bi 336 - Cell Biology (5)**
Biology of eukaryotic (plant/animal) and prokaryotic cells (bacteria, etc.) with emphasis on physiology, biochemistry, morphology, and energetic. Four hours of lecture and one hour of recitation. Expected preparation: BI 334 Molecular.
Corequisite: Bi 336R.

**Bi 336R - Cell Biology Recitation (0)**
Recitation for Bi 336.
Corequisite: Bi 336.

**Bi 337 - Cell Biology Laboratory (1)**
Experiments in cell biology to complement lecture. One three-hour laboratory. Recommended prerequisite: prior completion of or concurrent enrollment in Bi 336.

**Bi 341 - Introduction to Genetics (4)**
The mechanism of biological inheritance. One 2-hour recitation period.
Prerequisite: Completion of Bi 211 with a C- or above. Corequisite: Bi 341R.

**Bi 341R - Introduction to Genetics Recitation (0)**
Recitation for Bi 341.
Corequisite: Bi 341.

**Bi 346U - Genes and Society (4)**
Explores the principles of genetics, molecular biology, and biotechnology within social and historical context. Emphasis on the ethical issues arising from the intersection of genetics, technology, and society, with attention to the role of gender, race, and class in the formation and application of scientific knowledge. This is the same course as WS 346U and may be taken only once for credit.
Cross-Listed as: WS 346U.

**Bi 357 - General Ecology (4)**
The interrelationships of plants and animals with their environments. Emphasis is on basic ecological principles and concepts, not on current environmental problems.
Prerequisite: Bi 211, Bi 212, Bi 213 with a C- or above in each section.

**Bi 358 - Evolution (4)**
Examination of processes underlying evolutionary change and patterns of biodiversity generated by these processes. Introduction to elementary population genetics, quantitative genetics, and phylogenetics. Emphasizes methods of reasoning and experimentation used in evolutionary research.
Expected preparation: Bi 341.
Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above.

**Bi 360 - Introduction to Marine Biology (3)**
The marine environment and its life forms. Survey of organismal diversity with emphasis on structural and physiological adaptations to the marine realm.
Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above in each section.

**Bi 361 - Introduction to Marine Biology Laboratory (1)**
Laboratory and field work in marine biology. One 3-hour laboratory period. Recommended prerequisite: completion of or concurrent enrollment in Bi 360.

**Bi 370 - Mushrooms (4)**
An introduction to the distribution, systematics, identification, ecology, morphology, and life histories of visible fungi (mushrooms). Two 3-hour laboratory periods; field trips.
Prerequisite: Successful completion of the Principles of Biology sequence (Bi 211, Bi 212, Bi 213, Bi 214, Bi 215, Bi 216) with a C- or higher. Corequisite: Bi 370L.

**Bi 370L - Mushrooms Lab (0)**
Lab for Bi 370 Mushrooms.
Corequisite: Bi 370.

**Bi 380 - Microbiology (4)**
Fundamental concepts and techniques of microbiology. The general principles of microbial cell structure and function, physiology and biochemistry, growth, survival, classification, and diversity are emphasized.
Prerequisite: Prior completion of any of the following: Bi 334 Molecular, Bi 336 Cell, or Bi 341 Genetics with a C- or higher. Prerequisite cannot be taken concurrently.

**Bi 386 - Invertebrate Zoology (6)**
Invertebrate animal diversity, with a focus on species of the Pacific Northwest. Emphasis on evolution of adaptations in anatomy, physiology, and behavior. Two 2-hour lectures, one 3-hour laboratory, with some field trips outside of class time.
Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above. Corequisite: Bi 386L.

**Bi 386L - Invertebrate Zoology Lab (0)**
Lab for Bi 386.
Corequisite: Bi 386.

**Bi 387 - Vertebrate Zoology (6)**
Classification, anatomical characteristics, distribution, and life habits of fishes, amphibians, reptiles, birds, and mammals. Two 2-hour lectures, one 3-hour laboratory.
Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above in each section. Corequisite: Bi 387L.

**Bi 387L - Vertebrate Zoology Lab (0)**
Lab for Bi 387.

**Bi 388 - Microbiology Techniques (2)**
Techniques in microbiology, including staining and microscopy, isolation and maintenance of bacteria, counting techniques, and methods for a wide range of physiological and morphological tests.
Prerequisite: Bi 235, or Bi 337, or consent of instructor.

**Bi 399 - Special Studies (0-6)**
See department for course description. (Credit to be arranged.)

**Bi 401 - Research (0-6)**
See department for course description. (Credit to be arranged.)

**Bi 402 - Independent Study (1-6)**
(Credit to be arranged.)

**Bi 403 - Thesis (1-6)**
(Credit to be arranged.)

**Bi 404 - Cooperative Education/internship (1-12)**
See department for course description. (Credit to be arranged.)

**Bi 405 - Reading and Conference (0-6)**
See department for course description. (Credit to be arranged.)

**Bi 406 - Laboratory Project (1-6)**
See department for course description. (Credit to be arranged.)

**Bi 407 - Seminar (1-6)**
Selected topics in biology. (Credit to be arranged.)

**Bi 409 - Practicum (1-12)**
(Credit to be arranged.)

**Bi 410 - Selected Topics (0-12)**
Consent of instructor. See department for course description. (Credit to be arranged.)

**Bi 410L - Selected Topics Lab (0)**
Consent of instructor. See department for course description. (Credit to be arranged.)

**Bi 412 - Animal Behavior (4)**
An evolutionary approach to the study of animal behavior. The importance of ecological, physiological, and social variables will be examined in relation to the behavior of the individual animal. Expected preparation: upper-division standing.
Also offered for graduate-level credit as Bi 512 and may be taken only once for credit. Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above in each section.

**Bi 413 - Herpetology (6)**
Distinguishing features, anatomy, physiology, origins, evolution, and ecology of amphibians and
reptiles. North American species are emphasized. Two 2-hour lectures, two 2-hour laboratories.

Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above in each section. Corequisite: Bi 413L.

**Bi 413L - Herpetology Lab (0)**
Lab for Bi 413 Herpetology. Corequisite: Bi 413.

**Bi 414 - Ornithology (6)**
Evolution, diversity, ecology, physiology, and behavior of birds. One 3-hour laboratory. Laboratory emphasizes species identification and exposes students to techniques used in museum and field studies. Students conduct a research project outside of scheduled laboratory time.

Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above. Corequisite: Bi 414L.

**Bi 414L - Ornithology Lab (0)**
Lab for Bi 414 Ornithology. Corequisite: Bi 414.

**Bi 415 - Mammalogy (6)**
Diversity, characteristics, evolution, structure, function, distribution, and life habits of mammals. North American species are emphasized. Two 2-hour lectures, two 2-hour laboratories.

Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above in each section. Corequisite: Bi 415L.

**Bi 415L - Mammal Lab (0)**
Lab for Bi 415 Mammalogy. Corequisite: Bi 415.

**Bi 416 - Marine Mammals (6)**
Study of the distinguishing features, classification, origins, evolution, physiology, anatomy, behavior, ecology, and status of groups of marine mammals. Two 2-hour lectures, two 3-hour laboratories.

Also offered for graduate-level credit as Bi 516 and may be taken only once for credit. Prerequisite: Completion of Bi 380, or Bi 415. Corequisite: Bi 416L.

**Bi 416L - Marine Mammal Lab (0)**
Lab for Bi 416 Marine Mammals. Corequisite: Bi 416.

**Bi 417 - Mammalian Physiology (4)**
Physiology of the mammalian cardiovascular, respiratory, renal and digestive systems with emphasis on homeostatic control and integration of these systems in normal and pathophysiological states.

Also offered for graduate-level credit as Bi 517 and may be taken only once for credit. Prerequisite: Completion of Bi 320 with a C- or above.

**Bi 418 - Comparative Animal Physiology (4)**
Physiology of metabolic, respiratory, circulatory, excretory, muscle, and nervous systems with emphasis on a comparative ecological approach.

Also offered for graduate-level credit as Bi 518 and may be taken only once for credit. Prerequisite: Completion of Bi 320 with a C- or above.

**Bi 419 - Animal Physiology Laboratory (4)**
Laboratory experiments on the physiology of animals from the cell through organismic levels. Two 3.5-hour laboratory periods.

Also offered for graduate-level credit as Bi 519 and may be taken only once for credit. Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above.

**Bi 421 - Virology (4)**
Classification, structure, genetics, molecular biology of replication, cell interactions, and host response of representative groups of bacterial, plant, and animal viruses, and the medical aspects of important human viruses. Expected preparation: Bi 336.

Also offered for graduate-level credit as Bi 521 and may be taken only once for credit. Prerequisite: Bi 334 with a C- or above.

**Bi 423 - Microbial Ecology (4)**
Study of the interaction of microorganisms with each other and plants and animals; soil and aquatic systems; microbial evolution; cycles of matter; biodegradation and microbial pest control.

Also offered for graduate-level credit as Bi 523 and may be taken only once for credit. Prerequisite: Bi 380.

**Bi 424 - Molecular Genetics (4)**
The nature of the gene and its mode of action, organization of the genetic material, and the regulation of gene action.

Also offered for graduate-level credit as Bi 524 and may be taken only once for credit. Prerequisite: Bi 334.

**Bi 425 - Natural History of Antarctica (5)**
Evolution and systematics of the Antarctic and sub-Antarctic flora and fauna, physiological adaptation to
an extreme environment, conservation concerns and
the history of exploration and exploitation of the
Antarctic region.

Also offered for graduate-level credit as Bi.525 and
may be taken only once for credit. Prerequisite:
Completion of Bi.211, Bi.212, Bi.213 with a C- or
above. Corequisite: Bi.425L.

Bi.425L - Natural History of Antarctica Lab (0)
Lab for Bi.425.
Corequisite: Bi.425.

Bi.426 - Advanced Topics in Evolutionary Biology
(3)
Lectures and discussions on advanced topics in
evolutionary biology; evaluation of historical and
current trends in this field.

Also offered for graduate-level credit as Bi.526 and
may be taken only once for credit. Prerequisite: Bi.358 or equivalent (course must be passed with a
minimum of a B).

Bi.427 - Evolutionary Genomics (4)
An introduction to theory used in population genetics
genomics, and application of evolutionary
principles through computer exercises and
simulations. Examination and application of
techniques for the analysis of genetic and genomic
data using the R programming language.

Also offered for graduate-level credit as Bi.527 and
may be taken only once for credit. Prerequisite: Bi.341 and Bi.358.

Bi.428 - Human Genetics (4)
The organization of the human genome, pedigree
analysis, genemapping, chromosome abnormalities,
sex determination, and gene defects (metabolic and
hemoglobin). Topics are discussed from the point of
view of clinical applications and current research.

Also offered for graduate-level credit as Bi.528 and
may be taken only once for credit. Prerequisite: Bi.341.

Bi.429 - Conservation Biology (4)
Examination of the principles of conservation
biology and applications of theory to conservation
issues, globally and in the Northwest. Expected
preparation: Bi.341, Bi.357, Bi.387, Bi.426.

Also offered for graduate-level credit as Bi.529 and
may be taken only once for credit.

Bi.430 - Theory of Recombinant DNA Techniques
(4)
Lectures on the principles and theory of recombinant
DNA and molecular cloning techniques. Topics will
cover use of restriction and other DNA modifying
enzymes, host-vector systems, DNA fragment and
plasmid isolation techniques, genemapping,
subcloning techniques, in vitro mutagenesis, cDNA
and genomic cloning, screening of clones, blot
hybridizations, DNA transfection and use of reporter
genes, DNA sequencing and PCR.

Also offered for graduate-level credit as Bi.530 and
may be taken only once for credit. Prerequisite: Bi.334.

Bi.431 - Advanced Molecular and Cell Biology
Research Laboratory (2)
Laboratory using recombinant DNA and molecular
cloning techniques applied to current research
projects. Presentations and discussions of scientific
literature.

Also offered for graduate-level credit as Bi.531 and
may be taken only once for credit. Prerequisite: Bi.334; Bi.235 or Bi.337.

Bi.432 - Plant Diversity and Evolution (5)
Study of the morphology, structure, and life history
of green algae, bryophytes, and vascular plants from
an evolutionary point of view. Two 2-hour lectures
and one 3-hour laboratory.

Also offered for graduate-level credit as Bi.532 and
may be taken only once for credit. Prerequisite: Bi.341 and Bi.358. Corequisite: Bi.432L.

Bi.432L - Lab for Bi.432 (0)
Lab for Bi.432.
Corequisite: Bi.432.

Bi.433 - Morphology of Vascular Plants (4)
Study of the gross morphology, development, and
structure of roots, stems, leaves, and flowers from an
evolutionary point of view. One 3-hour laboratory.

Also offered for graduate-level credit as Bi.533 and
may be taken only once for credit. Prerequisite:
Completion of Bi.211, Bi.212, Bi.213 with a C- or
above.

Bi.434 - Plant Anatomy (5)
Structure of meristems, cells, tissues, and tissue
systems or roots, stems, leaves, flowers and fruits
from the developmental and comparative standpoint.
One 3-hour laboratory.

Also offered for graduate-level credit as Bi.534 and
may be taken only once for credit. Prerequisite:
Completion of Bi 211, Bi 212, Bi 213 with a C- or above.

**Bi 434L - Plant Anatomy Lab (0)**
Lab for Plant Anatomy

**Bi 435 - Plant Systematics (4)**
Angiosperm classification, diversity, and evolutionary relationships. Methods of phylogenetic analysis and current hypotheses regarding angiosperm phylogeny are emphasized. Lab will focus on the form and floral structure of about 30 local plant families. One 3-hour laboratory.

Also offered for graduate-level credit as Bi 535 and may be taken only once for credit. Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above. Corequisite: Bi 435L.

**Bi 435L - Plant Systematics Lab (0)**
Lab for Bi 435.
Corequisite: Bi 435.

**Bi 436 - Behavioral Endocrinology (4)**
Comparative examination of the major hormone systems that regulate behavior across the animal kingdom. Emphasizes the reciprocating nature of hormone and behavior interactions and seeks to understand how natural selection drives the evolution of hormone structure and function.

Also offered for graduate-level credit as Bi 536 and may be taken only once for credit. Prerequisite: Completion of Bi 320 with a C- or above.

**Bi 437 - Physiological Adaptations to Extreme Environments (3)**
Cellular, biochemical and physiological adaptations that allow animals to thrive in the Earth’s harshest habitats with a focus on what makes species from extreme environments unique.

Also offered for graduate-level credit as Bi 537 and may be taken only once for credit. Prerequisite: Completion of Bi 320 with a C- or above.

**Bi 438 - Plant Chemical Biology (3)**
Covers the diversity and function of chemical plant traits and their impact on plant-associated organisms. Students will learn about groups of compounds, their regulation, effects and potential applications and will gain an understanding of how different plant traits functionally interact including positive (defense syndromes) and negative (tradeoffs) associations. Prior completion of Bi 330 recommended.

Prerequisite: Bi 211 and Bi 212.

**Bi 440 - Evolutionary Medicine (4)**
An introduction to evolutionary thinking as it applies to human diseases, traits, diet, and aging. Concepts in evolutionary theory will provide a framework for understanding the ultimate causes of human ailments. Expected preparation: Bi 358.

Also offered for graduate-level credit as Bi 540 and may be taken only once for credit. Prerequisite: One year of introductory biology.

**Bi 441 - Plant Physiology (5)**
Metabolic activities of plants. Two 3-hour laboratory periods. Expected preparation: Bi 320. Co-requisite: Bi 441L.

Also offered for graduate-level credit as Bi 541 and may be taken only once for credit. Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above. Corequisite: Bi 441L.

**Bi 441L - Plant Physiology Lab (0)**
Lab for Bi 441.
Corequisite: Bi 441.

**Bi 442 - Plant Physiology (3)**
Biochemical activities of plants, photosynthesis, and respiration. Course is intended to be taken in sequence with Bi 441. Expected preparation: Bi 441.

Also offered for graduate-level credit as Bi 542 and may be taken only once for credit.

**Bi 447 - Scientific Teaching (4)**
Designed for upper-division science majors and graduate students interested in learning about best practices in teaching and learning science. In this interactive course students will gain experience in curriculum design and delivery as well as engage with education research literature.

Also offered for graduate-level credit as Bi 547 and may be taken only once for credit. Prerequisite: Upper-division standing.

**Bi 450 - Phylogenetic Biology (4)**
The history of life’s diversification through the use of phylogenetic trees, with a focus on how genes, organisms, and traits have evolved. Includes hands-on computer analyses of DNA sequences.

Also offered for graduate-level credit as Bi 550 and may be taken only once for credit. Prerequisite: Bi 358 with a C- or above, or concurrent enrollment in Bi 358.

**Bi 452 - Cancer Biology (4)**
Provides the fundamentals of cancer biology. Topics include: altered membrane receptor and cytoplasmic
signaling; altered cell: cell interactions; dysregulated cell cycle, apoptosis, and senescence; angiogenesis; and altered cellular adhesion. Expected preparation: one quarter of Organic Chem recommended.

Also offered for graduate-level credit as Bi 552 and may be taken only once for credit. Prerequisite: Bi 334, Bi 336, Bi 341.

Bi 453 - Biology of Aging (3)
The study of molecular and structural changes in animals as a function of age. Emphasis is on the basic biological factors which limit life-span. Recommended prerequisites: Bi 336 or biochemistry, Bi 487.

Bi 455 - Histology (6)
Systemic study, description, and identification of histological structures. Two 3-hour laboratory periods.

Also offered for graduate-level credit as Bi 555 and may be taken only once for credit. Prerequisite: Completion of Bi 211, Bi 212, and Bi 213 with a C- or above and Bi 320 or Bi 336 with a C- or above. Corequisite: Bi 455L.

Bi 455L - Histology Lab (0)
Lab for Bi 455.
Corequisite: Bi 455.

Bi 456 - Developmental Biology (4)
Explores basic principles of how organisms develop from a fertilized egg into a complex, multicellular adult. Focuses on contemporary issues in developmental biology, including pattern formation, morphogenesis, determination, and differentiation in vertebrates and invertebrates.

Also offered for graduate-level credit as Bi 556 and may be taken only once for credit. Prerequisite: Bi 336 and Bi 341.

Bi 460 - Marine Biology of the Deep Sea (4)
The deep sea is the largest, least well-known, living space on the planet. This upper-division Biology majors course provides students with indepth knowledge of deep sea, its inhabitants and their diverse life history strategies, and the anthropogenic factors shaping the deep sea as we know it. Classes will alternate between lectures and student-led discussions. Students will be expected to have knowledge of general biology prior to the start of the course.

Prerequisite: Bi 211, Bi 212, and Bi 213. Concurrent enrollment is allowed only for Bi 213.

Bi 462 - Neuroscience I: Physiology of synapses and circuits (4)
Presents a study of the sophisticated electrical and chemical signals used by cells of the brain to coordinate and disseminate information about the body and its environment. This working knowledge of the cellular and molecular biology of neurons will serve as the foundation for the understanding of activity dependent circuit formation and brain development.

Also offered for graduate-level credit as Bi 562 and may be taken only once for credit. Prerequisite: Completion of Bi 320 with a C- or above or concurrent enrollment.

Bi 463 - Neuroscience II: Sensory and Motor Systems (4)

Also offered for graduate-level credit as Bi 563 and may be taken only once for credit. Prerequisite: Completion of Bi 320 with a C- or above.

Bi 471 - Plant Ecology (4)
A study of the interrelationships between plants and their environment with emphasis upon individual adaptation and community dynamics. One 3-hour laboratory period.

Also offered for graduate-level credit as Bi 571 and may be taken only once for credit. Prerequisite: Bi 357. Corequisite: Bi 471L.

Bi 471L - Plant Ecology Lab (0)
Lab for Bi 471.
Corequisite: Bi 471.

Bi 472 - Natural History (3)
A study of plant and animal interrelationships, emphasizing maintenance of proper field records, identification, distribution, and ecology of vertebrates in Oregon. Includes one two-hour laboratory.

Also offered for graduate-level credit as Bi 572 and may be taken only once for credit. Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above. Corequisite: Bi 472L.
Bi 472L - Lab for Bi 472 (0)
Lab for Bi 472.
Corequisite: Bi 472.

Bi 473 - Field Sampling (4)
The methods commonly employed for collecting and interpreting ecological data. One 3-hour laboratory.
Also offered for graduate-level credit as Bi 573 and may be taken only once for credit. Prerequisite: Completion of Bi 211, Bi 212, Bi 213 with a C- or above.

Bi 476 - Population Ecology (5)
Course is designed to explore methods to describe population growth and dynamics of plants and animals. The theoretical foundation for the evolution of life histories will be explored, along with analysis of the influence of interspecific interactions on population processes. Larger landscape-level questions will be addressed by examining populations from the framework of source-sink dynamics, ecological traps, and metapopulations.
Also offered for graduate-level credit as Bi 576 and may be taken only once for credit. Prerequisite: Bi 357.

Bi 476L - Population Ecology Lab (0)
Lab for Bi 476.

Bi 479 - Plant Reproductive Biology (5)
Covers the diversity processes and functions of sexual and asexual reproduction of plants. Students will learn about pollination, anatomy, morphology, and physiology of plant reproduction. They will develop an understanding of how biological processes contribute to the ecology and evolution of vegetative growth and flowering. Three hours of lecture and 5 hours of lab per week; there are 2 mandatory field trips.
Also offered for graduate-level credit as Bi 579 and may be taken only once for credit. Prerequisite: Successful completion of Bi 330 with a C- or better.

Bi 481 - Microbial Physiology (3)
Physiology and biochemistry of microorganisms. Modern contributions to microbiology emphasized. Micro- and macro-molecular anatomy of microbial cells; energy metabolism, biosynthetic pathways and their regulation, kinetic and molecular aspects of growth, genetics, evolution, and ecology.
Also offered for graduate-level credit as Bi 581 and may be taken only once for credit. Prerequisite:
Completion of Bi 211, Bi 212, Bi 213 with a C- or above.

Bi 486 - Pathogenic Bacteriology (4)
Also offered for graduate-level credit as Bi 586 and may be taken only once for credit. Prerequisite: Bi 380.

Bi 487 - Immunology and Serology (4)
Topics include the tissues and cells of the immune system, discrimination between self versus foreign antigen, the structure, function and genetics of antigen receptors, components and coordination between innate and adaptive responses, and disease response and susceptibility.
Also offered for graduate-level credit as Bi 587 and may be taken only once for credit. Prerequisite: Completion of Bi 334 and Bi 336 with a C- or above.

Bi 489 - Microbiology Physiology Laboratory (1)
Application of the principles of microbiology in the laboratory. One 3-hour laboratory period. Expected preparation: concurrent with Bi 481/581.
Also offered for graduate-level credit as Bi 589 and may be taken only once for credit.

Bi 501 - Research (0-12)
See department for course description. (Credit to be arranged.)

Bi 502 - Independent Study (1-6)
(Credit to be arranged.)

Bi 503 - Thesis (0-12)
See department for course description. (Credit to be arranged.)

Bi 504 - Cooperative Education/internship (1-9)
See department for course description. (Credit to be arranged.)

Bi 505 - Reading and Conference (0-12)
See department for course description. (Credit to be arranged.)
Bi 506 - Special Projects (1-8)
See department for course description. (Credit to be arranged.)

Bi 507 - Seminar (1-6)
Selected topics in biology. (Credit to be arranged.)

Bi 509 - Practicum (1-9)
(Credit to be arranged.)

Bi 510 - Selected Topics (0-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Bi 510L - Selected Topics Lab (0)
Consent of instructor. See department for course description. (Credit to be arranged.)

Bi 512 - Animal Behavior (4)
An evolutionary approach to the study of animal behavior. The importance of ecological, physiological, and social variables will be examined in relation to the behavior of the individual animal. Expected preparation: one year of introductory biology and upper-division standing.
Also offered for undergraduate-level credit as Bi 412 and may be taken only once for credit.

Bi 513 - Herpetology (6)
Distinguishing features, anatomy, physiology, origins, evolution, and ecology of amphibians and reptiles. North American species are emphasized. Two 2-hour lectures, two 2-hour laboratories.

Bi 514 - Ornithology (6)
Evolution, diversity, ecology, physiology, and behavior of birds. One 3-hour laboratory. Laboratory emphasizes species identification and exposes students to techniques used in museum and field studies. Students conduct a research project outside of scheduled laboratory time.
Corequisite: Bi 514L.

Bi 514L - Ornithology Lab (0)
Lab for Bi 514.
Corequisite: Bi 514.

Bi 515 - Mammalogy (6)
Diversity, characteristics, evolution, structure, function, distribution, and life habits of mammals. North American species are emphasized. Two 2-hour lectures, two 2-hour laboratories.

Bi 515L - Mammal Lab (0)
Lab for Bi 515.
Corequisite: Bi 515.

Bi 516 - Marine Mammals (6)
Study of the distinguishing features, classification, origins, evolution, physiology, anatomy, behavior, ecology, and status of groups of marine mammals. Two 2-hour lectures, two 3-hour laboratories.
Also offered for undergraduate-level credit as Bi 416 and may be taken only once for credit. Prerequisite: Bi 387 or Bi 415. Corequisite: Bi 516L.

Bi 516L - Marine Mammal Lab (0)
Lab for Bi 516.
Corequisite: Bi 516.

Bi 517 - Mammalian Physiology (4)
Physiology of the mammalian cardiovascular, respiratory, renal and digestive systems with emphasis on homeostatic control and integration of these systems in normal and pathophysiological states.
Also offered for undergraduate-level credit as Bi 417 and may be taken only once for credit.

Bi 518 - Comparative Animal Physiology (4)
Physiology of metabolic, respiratory, circulatory, excretory, muscle, and nervous systems with emphasis on a comparative ecological approach.
Also offered for undergraduate-level credit as Bi 418 and may be taken only once for credit.

Bi 519 - Animal Physiology Laboratory (4)
Laboratory experiments on the physiology of animals from the cell through organismic levels. Two 3.5-hour laboratory periods.
Also offered for undergraduate-level credit as Bi 419 and may be taken only once for credit.

Bi 520 - Ethical Practice in the Life Sciences (3)
Addresses issues pertaining to the ethical and responsible conduct of scientific research, including role of research in society; biosafety; human and animal subjects and welfare; funding, conflict of interest, and intellectual property; publication and
peer review; and fraud, bias and misconduct. Satisfies NSF and NIH requirements for research ethics training. Open to graduate students in Biology, Chemistry, and Environmental Sciences. Post-bac students not currently enrolled in a graduate program may take this course with departmental approval.

**Bi 521 - Virology (4)**

Classification, structure, genetics, molecular biology of replication, cell interactions, and host response of representative groups of bacterial, plant, and animal viruses, and the medical aspects of important human viruses.

Also offered for undergraduate-level credit as Bi 421 and may be taken only once for credit.

**Bi 522 - Bioinformatics and Genomics (3)**

Introduction to computational tools and databases that enable genome-scale research.

Also offered for undergraduate-level credit as Bi 422 and may be taken only once for credit. Prerequisite: Complete Bi 334: Molecular Biology with C- or better.

**Bi 523 - Microbial Ecology (4)**

Study of the interaction of microorganisms with each other and plants and animals; soil and aquatic systems; microbial evolution; cycles of matter; biodegradation and microbial pest control.

Also offered for undergraduate-level credit as Bi 423 and may be taken only once for credit.

**Bi 524 - Molecular Genetics (4)**

The nature of the gene and its mode of action, organization of the genetic material, and the regulation of gene action.

Also offered for undergraduate-level credit as Bi 424 and may be taken only once for credit.

**Bi 525 - Natural History of Antarctica (5)**

Evolution and systematics of the Antarctic and sub-Antarctic flora and fauna, physiological adaptation to an extreme environment, conservation concerns and the history of exploration and exploitation of the Antarctic region.

Also offered for undergraduate-level credit as Bi 425 and may be taken only once for credit. Corequisite: Bi 525L.

**Bi 525L - Natural History of Antarctica Lab (0)**

Lab for Bi 525.

Corequisite: Bi 525.

**Bi 526 - Advanced Topics in Evolutionary Biology (3)**

Lectures and discussions on advanced topics in evolutionary biology; evaluation of historical and current trends in this field. Expected preparation: Bi 358 or equivalent.

Also offered for undergraduate-level credit as Bi 426 and may be taken only once for credit.

**Bi 527 - Evolutionary Genomics (4)**

An introduction to theory used in population genetics and genomics, and application of evolutionary principles through computer exercises and simulations. Examination and application of techniques for the analysis of genetic and genomic data using the R programming language.

Also offered for undergraduate-level credit as Bi 427 and may be taken only once for credit. Prerequisite: Bi 341 and Bi 358.

**Bi 528 - Human Genetics (4)**

The organization of the human genome, pedigree analysis, gene mapping, chromosome abnormalities, sex determination, and gene defects (metabolic and hemoglobin). Topics are discussed from the point of view of clinical applications and current research.

Also offered for undergraduate-level credit as Bi 428 and may be taken only once for credit. Prerequisite: Bi 341.

**Bi 529 - Conservation Biology (4)**

Examination of the principles of conservation biology and applications of theory to conservation issues, globally and in the Northwest. Expected preparation: Bi 341, Bi 357, Bi 387, Bi 426.

Also offered for undergraduate-level credit as Bi 429 and may be taken only once for credit.

**Bi 530 - Theory of Recombinant DNA Techniques (4)**

Lectures on the principles and theory of recombinant DNA and molecular cloning techniques. Topics will cover use of restriction and other DNA modifying enzymes, host-vector systems, DNA fragment and plasmid isolation techniques, gene mapping, subcloning techniques, in vitro mutagenesis, cDNA and genomic cloning, screening of clones, blot hybridizations, DNA transfection and use of reporter genes, DNA sequencing and PCR.

Also offered for undergraduate-level credit as Bi 430 and may be taken only once for credit. Prerequisite: Bi 334.
Bi 531 - Advanced Molecular and Cell Biology Research Laboratory (2)
Laboratory using recombinant DNA and molecular cloning techniques applied to current research projects. Presentations and discussions of scientific literature.
Also offered for undergraduate-level credit as Bi 431 and may be taken only once for credit. Prerequisite: Bi 334; Bi 235 or Bi 337.

Bi 532 - Plant Diversity and Evolution (5)
Study of the morphology, structure, and life history of green algae, bryophytes, and vascular plants from an evolutionary point of view. Two 2-hour lectures and one 3-hour laboratory.
Also offered for undergraduate-level credit as Bi 432 and may be taken only once for credit. Corequisite: Bi 532.

Bi 532L - Lab for Bi 532 (0)
Lab for Bi 532. Corequisite: Bi 532.

Bi 533 - Morphology of Vascular Plants (4)
Study of the gross morphology, development, and structure of roots, stems, leaves, and flowers from an evolutionary point of view. One 3-hour laboratory.
Also offered for undergraduate-level credit as Bi 433 and may be taken only once for credit.

Bi 534 - Plant Anatomy (5)
Structure of meristems, cells, tissues, and tissue systems or roots, stems, leaves, flowers and fruits from the developmental and comparative standpoint. One 3-hour laboratory.
Also offered for undergraduate-level credit as Bi 434 and may be taken only once for credit.

Bi 534L - Plant Anatomy Lab (0)
Lab for Bi 534 Plant Anatomy.

Bi 535 - Plant Systematics (4)
Angiosperm classification, diversity, and evolutionary relationships. Methods of phylogenetic analysis and current hypotheses regarding angiosperm phylogeny are emphasized. Lab will focus on the formal and floral structure of about 30 local plant families. One 3-hour laboratory. Expected preparation: Bi 330.
Also offered for undergraduate-level credit as Bi 435 and may be taken only once for credit. Corequisite: Bi 535L.

Bi 535L - Plant Systematics Lab (0)
Lab for Bi 535. Corequisite: Bi 535.

Bi 536 - Behavioral Endocrinology (4)
Comparative examination of the major hormone systems that regulate behavior across the animal kingdom. Emphasizes the reciprocating nature of hormone and behavior interactions and seeks to understand how natural selection drives the evolution of hormone structure and function.
Also offered for undergraduate-level credit as Bi 436 and may be taken only once for credit. Prerequisite: Completion of Bi 320 with a C- or above.

Bi 537 - Physiological Adaptations to Extreme Environments (3)
Cellular, biochemical and physiological adaptations that allow animals to thrive in the Earth’s harshest habitats with a focus on what makes species from extreme environments unique.
Also offered for undergraduate-level credit as Bi 437 and may be taken only once for credit.

Bi 538 - Plant Chemical Biology (3)
Covers the diversity and function of chemical plant traits and their impact on plant-associated organisms. Students will learn about groups of compounds, their regulation, effects and potential applications and will gain an understanding of how different plant traits functionally interact including positive (defense syndromes) and negative (tradeoffs) associations. Prior completion of Bi 330 recommended.
Also offered for undergraduate-level credit as Bi 438 and may be taken only once for credit. Prerequisite: Bi 211 and Bi 212.

Bi 540 - Evolutionary Medicine (4)
An introduction to evolutionary thinking as it applies to human diseases, traits, diet, and aging. Concepts in evolutionary theory will provide a framework for understanding the ultimate causes of human ailments. Expected preparation: Bi 358.
Also offered for undergraduate-level credit as Bi 440 and may be taken only once for credit. Prerequisite: one year of introductory biology.

Bi 541 - Plant Physiology (5)
Metabolic activities of plants. Two 3-hour laboratory periods.
Also offered for undergraduate-level credit as Bi 441 and may be taken only once for credit. Corequisite: Bi 541L.
Bi 541L - Plant Physiology Lab (0)
Lab for Bi 541.
Corequisite: Bi 541.

Bi 542 - Plant Physiology (3)
Biochemical activities of plants, photosynthesis, and respiration. Course is intended to be taken in sequence with Bi 441. Expected preparation: Bi 441.
Also offered for undergraduate-level credit as Bi 442 and may be taken only once for credit.

Bi 543 - Advances in Plant Physiology (3)
Lectures and discussions on selected topics in plant physiology; evaluation of current trends in this field. Expected preparation: Bi 441. May be repeated once for credit.
Also offered as Bi 643.

Bi 547 - Scientific Teaching (4)
Designed for upper-division science majors and graduate students interested in learning about best practices in teaching and learning science. In this interactive course students will gain experience in curriculum design and delivery as well as engage with education research literature.
Also offered for undergraduate credit as Bi 447 and may be taken only once for credit. Prerequisite: Graduate-level standing.

Bi 550 - Phylogenetic Biology (4)
The history of life’s diversification through the use of phylogenetic trees, with a focus on how genes, organisms, and traits have evolved. Includes hands-on computer analyses of DNA sequences.
Also offered for undergraduate-level credit as Bi 450 and may be taken only once for credit.

Bi 552 - Cancer Biology (4)
Provides the fundamentals of cancer biology. Topics include: altered membrane receptor and cytoplasmic signaling; altered cell: cell interactions; dysregulated cell cycle, apoptosis, and senescence; angiogenesis; and altered cellular adhesion.
Also offered for undergraduate-level credit as Bi 452 and may be taken only once for credit. Prerequisite: Bi 334, Bi 336, Bi 341, one quarter of Organic Chem recommended.

Bi 553 - Biology of Aging (3)
The study of molecular and structural changes in animals as a function of age. Emphasis is on the basic biological factors which limit life-span.
Recommended prerequisites: Bi 336 or biochemistry, Bi 487.

Bi 555 - Histology (6)
Systemic study, description, and identification of histological structures. Two 3-hour laboratory periods.
Also offered for undergraduate-level credit as Bi 455 and may be taken only once for credit.

Bi 555L - Histology Lab (0)
Lab for Bi 555.

Bi 556 - Developmental Biology (4)
Explores basic principles of how organisms develop from a fertilized egg into a complex, multicellular adult. Focuses on contemporary issues in developmental biology, including pattern formation, morphogenesis, determination, and differentiation in vertebrates and invertebrates.
Also offered for undergraduate-level credit as Bi 456 and may be taken only once for credit. Prerequisite: Bi 356 and Bi 341.

Bi 562 - Neuroscience I: Physiology of Synapses and Circuits (4)
Presents a study of the sophisticated electrical and chemical signals used by cells of the brain to coordinate and disseminate information about the body and its environment. This working knowledge of the cellular and molecular biology of neurons will serve as the foundation for the understanding of activity dependent circuit formation and brain development.
Also offered for undergraduate-level credit as Bi 462 and may be taken only once for credit.

Bi 563 - Neuroscience II: Sensory and Motor Systems (4)
Also offered for undergraduate-level credit as Bi 463 and may be taken only once for credit.
Bi 571 - Plant Ecology (4)
A study of the interrelationships between plants and their environment with emphasis upon individual adaptation and community dynamics. One 3-hour laboratory period.
Also offered for undergraduate-level credit as Bi 471 and may be taken only once for credit. Corequisite: Bi 571L.

Bi 571L - Plant Ecology Lab (0)
Lab for Bi 571.
Corequisite: Bi 571.

Bi 572 - Natural History (3)
A study of plant and animal interrelationships, emphasizing maintenance of proper field records, identification, distribution, and ecology of vertebrates in Oregon. Includes one two-hour laboratory.
Also offered for undergraduate-level credit as Bi 472 and may be taken only once for credit. Corequisite: Bi 572L.

Bi 572L - Lab for Bi 572 (0)
Lab for Bi 572.
Corequisite: Bi 572.

Bi 573 - Field Sampling (4)
The methods commonly employed for collecting and interpreting ecological data. One 3-hour laboratory.
Also offered for undergraduate-level credit as Bi 473 and may be taken only once for credit.

Bi 576 - Population Ecology (5)
Course is designed to explore methods to describe population growth and dynamics of plants and animals. The theoretical foundation for the evolution of life histories will be explored, along with analysis of the influence of interspecific interactions on population processes. Larger landscape-level questions will be addressed by examining populations from the framework of source-sink dynamics, ecological traps, and metapopulations.
Also offered for undergraduate-level credit as Bi 476 and may be taken only once for credit.

Bi 576L - Population Ecology Lab (0)
Lab for Bi 576.

Bi 579 - Plant Reproductive Biology (5)
Covers the diversity processes and functions of sexual and asexual reproduction of plants. Students will learn about pollination, anatomy, morphology, and physiology of plant reproduction. They will develop an understanding of how biological processes contribute to the ecology and evolution of vegetative growth and flowering. Three hours of lecture and 5 hours of lab per week; there are 2 mandatory field trips.
Also offered for undergraduate-level credit as Bi 479 and may be taken only once for credit. Prerequisite: Successful completion of Bi 330 with a C- or better.

Bi 581 - Microbial Physiology (3)
Physiology and biochemistry of microorganisms. Modern contributions to microbiology emphasized. Micro- and macro-molecular anatomy of microbial cells; energy metabolism, biosynthetic pathways and their regulation, kinetic and molecular aspects of growth, genetics, evolution, and ecology.
Also offered for undergraduate-level credit as Bi 481 and may be taken only once for credit.

Bi 585 - Advances in Microbiology (3)
Analysis of new developments in microbiology including metabolic pathways, anaerobic systems, mechanisms of pathogenicity, and the exploitation of microorganisms to generate products for mankind. Expected preparation: Bi 380.
Also offered as Bi 685 and may be taken only once for credit.

Bi 586 - Pathogenic Bacteriology (4)
Also offered for undergraduate-level credit as Bi 486 and may be taken only once for credit. Prerequisite: BI 480.

Bi 587 - Immunology and Serology (4)
Topics include the tissues and cells of the immune system, discrimination between self versus foreign antigen, the structure, function and genetics of antigen receptors, components and coordination between innate and adaptive responses, and disease response and susceptibility.
Also offered for undergraduate-level credit as Bi 487 and may be taken only once for credit.

Bi 589 - Microbiology Physiology Laboratory (1)
Application of the principles of microbiology in the laboratory. One 3-hour laboratory period. Expected preparation: concurrent with Bi 481/581.
Also offered for undergraduate-level credit as Bi 489 and may be taken only once for credit.
Bi 590 - Advanced Comparative Physiology (4)
Advanced topics and current research on various aspects of comparative physiology. Expected preparation: Bi 417 or Bi 418 and Bi 419.
Also offered as Bi 690 and may be taken only once for credit.

Bi 592 - Advanced Topics in Marine Mammals (2)
A study of one or more advanced topics in marine mammals; covering new developments in regard to their evolution, physiological and anatomical adaptations, echolocation, population structure and dynamics, and behavior. Expected preparation: Bi 416.
Also offered as Bi 692 and may be taken only once for credit.

Bi 595 - Advanced Topics in Genetics (2)
New developments in genetics. Topics to include current research in the areas of genetics, human genetics, evolutionary genetics, and molecular genetics. Expected preparation: Bi 341.
Also offered as Bi 695 and may be taken only once for credit.

Bi 596 - Advanced Topics in Evolution (2)
New developments in evolution. A study of one or more advanced topics relating to the patterns and processes of microevolution and macroevolution. Expected preparation: Bi 426.
Also offered as Bi 696 and may be taken only once for credit.

Bi 597 - Advanced Topics in Mammalogy (3)
Study of one or more advanced topics in mammalogy.
Also offered as Bi 697 and may be taken only once for credit.

Bi 598 - Graduate Research Prospectus (3)
Each student develops and presents a thesis prospectus. The prospectus is to include a review of the literature and a detailed statement of significance, specific aims, research design, and methods. All entering biology graduate students (M.S.T., M.A./M.S. and Ph.D.) are required to take this course. Expected preparation: Bi 598.
Also offered as Bi 699 and may be taken only once for credit.

Bi 601 - Research (0-9)
See department for course description. (Credit to be arranged.)

Bi 603 - Dissertation (0-12)
See department for course description. (Credit to be arranged.)

Bi 604 - Cooperative Education/Internship (1-9)
See department for course description. (Credit to be arranged.)

Bi 605 - Reading and Conference (0-9)
See department for course description. (Credit to be arranged.)

Bi 606 - Projects (1-9)
(Credit to be arranged.)

Bi 607 - Seminar (1-9)
See department for course description. (Credit to be arranged.)

Bi 610 - Selected Topics (1-9)
See department for course description. (Credit to be arranged.)

Bi 643 - Advances in Plant Physiology (3)
Lectures and discussions on selected topics in plant physiology; evaluation of current trends in this field. Expected preparation: Bi 442 (or concurrently). May be repeated once for credit.
Also offered as Bi 543.

Bi 685 - Advances in Microbiology (3)
Analysis of new developments in microbiology including metabolic pathways, anaerobic systems, mechanisms of pathogenicity, and the exploitation of microorganisms to generate products for mankind. Expected preparation: Bi 380.
Also offered as Bi 585 and may be taken only once for credit.

**Bi 690 - Advanced Comparative Physiology (4)**
Advanced topics and current research on various aspects of comparative physiology. Expected preparation: Bi 417 or Bi 418 and Bi 419.

Also offered as Bi 590 and may be taken only once for credit.

**Bi 692 - Advanced Topics in Marine Mammals (2)**
A study of one or more advanced topics in marine mammals; covering new developments in regard to their evolution, physiological and anatomical adaptations, echolocation, population structure and dynamics, and behavior. Expected preparation: Bi 416.

Also offered as Bi 592 and may be taken only once for credit.

**Bi 695 - Advanced Topics in Genetics (2)**
New developments in genetics. Topics to include current research in the areas of genetics, human genetics, evolutionary genetics, and molecular genetics. Expected preparation: Bi 341.

Also offered as Bi 595 and may be taken only once for credit.

**Bi 696 - Advanced Topics in Evolution (2)**
New developments in evolution. A study of one or more advanced topics relating to the patterns and processes of microevolution and macroevolution. Expected preparation: Bi 426.

Also offered as Bi 596 and may be taken only once for credit.

**Bi 697 - Advanced Topics in Mammalogy (3)**
Study of one or more advanced topics in mammalogy.

Also offered as Bi 597 and may be taken only once for credit.

**Bi 699 - Graduate Research Prospectus (3)**
Each student develops and presents a thesis prospectus. The prospectus is to include a review of the literature and a detailed statement of significance, specific aims, research design, and methods. All entering biology graduate students (M.S.T., M.A./M.S. and Ph.D.) are required to take this course.

Also offered as Bi 599 and may be taken only once for credit.

**Bi 699 - Graduate Grant Writing (3)**
Each student is required to write a major grant proposal based on their research prospectus. All biology graduate students (M.S.T., M.A./M.S. and Ph.D.) are required to take this course. Expected preparation: Bi 598.

Also offered as Bi 599 and may be taken only once for credit.

**BSt - Black Studies**

**BSt 199 - Special Studies (1-4)**
See department for course description. (Credit to be arranged.)

**BSt 202 - Introduction to Black Studies (4)**
Overview of African, African American, Afro-Latin@ and Caribbean studies and the historical and theoretical underpinnings of black studies and inter? and multidisciplinary fields of study.

**BSt 203 - African American History I - Slavery to the Harlem Renaissance (4)**
Historical foundations of African Americans in the New World focusing on significant events and eras including slavery, the Civil War, Reconstruction, and the Harlem Renaissance. This is the first course in a sequence of two: BSt 203 and BSt 204.

**BSt 204 - African American History II - From the Depression Era to Civil Rights (4)**
African Americans in the New World focusing on significant events and eras including the Great Depression, Black Migration, and the burgeoning civil rights era. This is the second course in a sequence of two: BSt 203 and BSt 204.

**BSt 206 - Caribbean Studies (4)**
Interdisciplinary examination of the historical and cultural experience of the Caribbean and Afro-Latin@. Special attention will be given to issues in the creation of multicultural society, such as the dynamics of resistance and the interplay of cultural identity and political domination.

**BSt 207 - Race, Class, and Gender (4)**
Analysis of the intersections of the socially constructed categories of race, class, and gender in African diasporic societies.
BSt 211 - Introduction to African Studies (4)
An introductory course designed to provide students with an understanding of methods and sources used by the historian of the African past. Museum visits, guest speakers, and films will supplement the lecture format. In addition to a survey of major themes and issues in the history of the African continent, the course will consider the rise of complex societies, indigenous African towns, agricultural and technological achievements, African state systems, and the impact of international trade and Islam on Africa.

BSt 214 - Contemporary Race and Ethnic Relations (4)
Addresses the origins and manifestations of the socio-historical concept of race. Critical theory approach is used to analyze the manner in which race has been interpreted and its influence on the socio-political relations between races and ethnic groupings. Emphasis is on topical race issues.

BSt 221 - Introduction to African American Literature (4)
An overview of African American fiction, poetry, drama, and expository prose.

BSt 261 - The African American Economic Experience (4)
African Americans and the economic system. Overview of slave and peonage systems, sharecropping, occupational and employment discrimination, economic boycotts, welfare system, and the underground economy.

BSt 299 - Special Studies (1-4)
(Credit to be arranged.)

BSt 302U - The Contemporary African American Experience (4)
Survey course on the African American experience in the 20th and 21st centuries, including social conditions, family, economics, legal cases, race relations, arts.

BSt 304 - The Civil Rights Movement (4)
Covers the history of the Civil Rights Movement from its early days during WWII through the end of the 1960s. Explores the social, political, economic, and legal challenges, movement leaders, organizations, movement resources, key movement events, and the role of the media and U.S. government.
Prerequisite: BSt 202 or BSt 203.

BSt 305U - African History, Before 1800 (4)
Survey the history of the African continent from the period of European exploration to the eve of colonialism. Examines impact of the European presence on African institutions and trade, and the relative importance of the environment, technology, and indigenous social systems on the transformation of African society prior to 1800. This is the same course as Hst 312U and may be taken only once for credit.
Prerequisite: BSt 202 or BSt 211. Cross-Listed as: Hst 312U.

BSt 306U - African History, 1800-Present (4)
Survey the history of the African continent from 1800 to the present with an emphasis on the colonial period, independence, and post-independence. This is the same course as Hst 313U and may be taken only once for credit.
Prerequisite: BSt 211. Cross-Listed as: Hst 313U.

BSt 316 - Issues in African American Education (4)
The U.S. education systems and African-Americans. An historical overview and contemporary analysis of legal issues related to education, including public and private education, community control of schools, citizen involvement, alternative education forms, school desegregation and re-segregation.

BSt 318U - Black Families in the U.S. (4)
Overview of contemporary theories and research of the Black family in the U.S. Examination of the historical and socio-economic contexts surrounding families and the impacts on family structure and experiences. Topics for discussion include health issues, family formations, racism, community organizing, welfare and economic security.

BSt 319U - Traditional Cultures of Africa (4)
Examines features of African cultures, including environment and people, oral traditions, time and
seasons, naming and numbering systems, language and communication systems, religious, political and legal institutions, music, dance, and family. This is the same course as Anth 319U and may be taken only once for credit. Expected preparation: BSt 211 or Sophomore Inquiry.

Cross-Listed as: Anth 319U.

**BSt 325U - Race and Ethnicity in Latin America (4)**
African descent in Latin America using theoretical and empirical research on race and ethnicity in the region. Regional and national variations concerning racial and ethnic identity and the intersection of race/ethnicity, gender and social class and an exploration of how Blackness is contested in the media.

**BSt 326U - Cuba, Dominican Republic, Puerto Rico (4)**
History, culture, politics, geography, gender relations, race, ethnicity, and spirituality of the people of the Spanish speaking Caribbean?Cuba, the Dominican Republic, and Puerto Rico. Focus on Indigenous people of the Caribbean, impact of European colonization on the region, political resistance, nation building and creative identity-making.

**BSt 335U - The Multi-Racial Experience (4)**
Explores what it means to identify oneself or be identified as multiracial/ethnic. Considers how social class, gender, race and other factors shape the multiracial experience. In addition, explores interracial relationships and the representation of multiracials in the media.

**BSt 339U - Afro-Futurisms/Black Science Fiction (4)**
This class begins with the historical roots of Afro-Futurisms/Black Science Fiction. Using selected reading the class will compare and contrast the science fiction and fantasy written by Africans & African Diaspora authors. Will also explore in movies and television the contributions of Black people in science fiction.

**BSt 342U - Black Feminism/Womanism (4)**
Historical evolution of black feminist theory from slave narratives to contemporary manifestations of black feminism including hip hop feminism. Feminist resistance in the context of race and gender. Analysis of the pluralism within black feminism including black lesbian feminism, womanist theology, and radical black subjectivity.

**BSt 345U - Black Popular Music: Contextualizing the Black Experience (4)**
Explore and contextualize the cultural politics of Black popular music and its implications as a vehicle for interrogating race, class, gender, and sexuality in contemporary U.S. culture. Historical unfolding and developing trends used to demonstrate relevant and associated black experience(s).

**BSt 351U - African American Literature I (4)**
An introduction to literature written by and about African Americans from the colonial period to the end of the abolition of slavery. Cross-Listed as: This is the same course as Eng 351U and may be taken only once for credit.

**BSt 352U - African American Literature II (4)**
An introduction to African American literature from the mid-nineteenth century to the beginnings of the "Black Arts" movement. Cross-Listed as: This is the same course as Eng 352U and may be taken only once for credit.

**BSt 353U - African Women in Film (4)**
This course examines portrayals of African women in cinema using selected films from African and African American, traditional Hollywood films and films by African filmmakers. Approaches in comparative analyses of African films are used to examine depictions of African women in traditional and contemporary cultural settings through discussions and reviews.

**BSt 356U - Cuban Film: Politics and Culture (4)**
Topics in Cuban history, culture, race, gender, and politics, focusing on the impact of the Cuban revolution on Cuban society, presented through Cuban films are addressed. Films, particularly popular films made in Cuba, and media as primary methods of inquiry, and their global political and cultural implications are critically examined.
BSt 357U - Caribbean Spirituality and Resistance (4)

BSt 359U - The African Diaspora in Europe (4)

The primary focus of this course is to understand and explore what it means to be a person and/or community of African descent living in Europe. The methodology will be based on a social, cultural and historical analysis.

BSt 362U - African Prehistory (4)

Methods, sources of evidence, and the results of the study of prehistoric cultures of Africa from the earliest traces until the first written records; it includes human origins (physical and cultural evolution), the earliest civilization, peopling of Africa, migrations, earliest settlements, origins of agriculture and metallurgy. This is the same course as Anth 362U and may be taken only once for credit.

Prerequisite: BSt 211, Anth 102. Cross-Listed as: Anth 362U.

BSt 363U - African Cinema and African Cultures (4)

African cultures are explored through reviews of African cinema using an annual Portland film festival occurring during the term, and/or in-class screenings. Nature and relevance of African cinema are examined from global perspectives and approaches to film analysis and interpretations; the impact and contributions to understanding African cultures are discussed.

BSt 372U - Post-colonial Studies of Africa (4)

Study of the social, political, and economic dimensions of imperialism in twentieth century Africa from the perspective of post-colonial studies. This is the same course as Intl 372U and may be taken only once for credit.

Cross-Listed as: This is the same course as Intl 372U and may be taken only once for credit.

BSt 377U - Vodoun, Rasta and Islam in the African Diaspora (4)

Historical and cultural background on how Voudun, Islam, and Rastafarianism became major ingredients in political, religious, and social movements in the African Diaspora. Cultural, political and economic implications and impacts are discussed.

BSt 378 - Philosophy of Race (4)

Explores philosophical assumptions involved in the concept of race, as well as the political realities of racial identities. This course is concerned with the metaphysical legitimacy of race, as well as the social, ethical, and political effects of race. Students will explore the relationship of the social categories of race to the persistence of racism.

BSt 384U - African Immigrant Communities in Oregon (4)

Historical and recent African immigration to the United States are interrogated for form/nature and function in light of assimilation (i.e., melting pot) expectations. Survey of classical and contemporary migration literature and discovery of the Oregon African immigrant milieu in a global context and perspective are used in search for answers. Expected preparation: BSt 202, 211A or any lower division BSt course.

BSt 396 - Research Methodologies in Black Studies (4)

Introduces students to the process of conducting research using qualitative research methods in the humanities and social sciences. Exploration of research methods including, but not limited to, interviewing, content analysis, archival research, library research, Internet research, and participant-observation.

Prerequisite: BSt 202, BSt 203, BSt 204 or BSt 206 and upper-division standing.

BSt 399 - Special Studies (1-5)

See department for course description. (Credit to be arranged.)

BSt 399U - Special Studies (1-4)

(Credit to be arranged.)
BSt 401 - Research (0-6)
See department for course description. (Credit to be arranged.)

BSt 402 - Independent Study (1-12)
See department for course description. (Credit to be arranged.)

BSt 404 - Cooperative Education/internship (1-12)
See department for course description. (Credit to be arranged.)

BSt 405 - Reading and Conference (0-6)
See department for course description. (Credit to be arranged.)

BSt 406 - Special Projects (1-12)
(Credit to be arranged).

BSt 407 - Seminar (1-6)
See department for course description. (Credit to be arranged.)

BSt 408 - Workshop (1-6)
See department for course description. (Credit to be arranged.)

BSt 409 - Practicum (1-12)
See department for course description. (Credit to be arranged.)

BSt 409U - Practicum (4)
(Credit to be arranged.)

BSt 410 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

BSt 411 - African American History Seminar (4)
In-depth analysis of critical topics and issues in African American history. The content of the course is topical rather than chronological and the approach will emphasize specific periods, individuals, or relevant developments for a concentrated treatment in a seminar environment. This course may be repeated twice for credit.

Also offered for graduate-level credit as BSt 511.
Prerequisite: BSt 202 or BSt 203 or BSt 204; or advisor approval of a comparable course; and junior or senior status.

BSt 412 - Oregon African American History (4)
Examination of the black experience in Oregon history. Topics include the slavery controversy in early Oregon development, contributions of blacks to the growth of the state, black migration during World War II, the Vanport flood, and various legislative actions related to black status in Oregon.

Prerequisite: Junior or senior status or permission from the instructor.

BSt 413 - Slavery (4)
An examination of the role of slavery in establishing and reinforcing the status and position of the black population in the U.S. and the Caribbean, including physical and psychological impacts, racial classifications, and colorism. Comparative analysis of the numerous forms of slave systems and the impact of slave rebellions.

Prerequisite: BSt 202, BSt 203, BSt 206 and BSt 214.

BSt 414 - Racism (4)
Survey of the social-psychological, pseudo-scientific, and biological literature and their impact on individual and cultural forms of racism in America. Utilization of rationalizations and the processes and machinery of oppression as constructed by white European and American governments to control and exploit the resources of non-white peoples will be examined.

BSt 415 - Race, Justice, and Punishment (4)
Examination of historical and contemporary incarceration in the U.S. including slavery, Reconstruction, and Jim Crow eras through the lens of race, class, gender, sexual identity, nationality, power and privilege. Responses to demands for justice and exploration of the use of racial ideologies in the development of a racialized prison/carceral system.

Prerequisite: BST 202 or permission of the chair.
Corequisite: NA.
BSt 419 - African American Women in America (4)

Designed to investigate the evolution of the African American woman from slavery to the contemporary period. African American women's agency will be examined in the antislavery, suffrage, club, civil rights, nationalist, black feminist, and current movements for social justice.
Prerequisite: BSt 207.

BSt 420 - Caribbean Literature (4)

A selection of poetry and fiction from the English and French speaking Caribbean (in translation where necessary).
Prerequisite: One previous African American literature course and 12 additional literature credits..

BSt 421 - African American Writers (4)

Examination of significant African American literary figures. A particular author or literary period of writing is identified, read, analyzed, and discussed. Major works and history of the period are included with special consideration given to the relationships between the topic of focus and the larger spheres of writing.
Also offered for graduate-level credit as BSt 521 and may be taken only once for credit. Prerequisite: BSt 221.

BSt 422 - African Fiction (4)

Readings in African fiction in regional, cultural, generational, and gender contexts. This is the first course in a sequence of two: BSt 422 and BSt 423.
Prerequisite: One previous African American literature course and 12 additional literature credits..

BSt 425 - Black Cinema: the 1970s (4)

Examination of the treatment of Black themes, issues and characterization during the decade of the 1970s in the cinema industry. Particular attention on the genre of the Blaxploitation film as an industry response to the rapidly shifting social and racial dynamics of American culture as the Civil Rights era concluded.
Prerequisite: Upper-division standing.

BSt 426 - Contemporary African American Cinema (4)

Examination of the treatment of Black themes, issues, and characterization in the contemporary cinema industry. Particular attention will be focused on the development of new Black actors, directors, and producers. The impact of these new factors in the industry will be analyzed for the influence they have on the traditions of cinema history relative to the Black experience.
Prerequisite: Upper-division standing.

BSt 430 - Black Political Thought (4)

Theories of Black nationalism, including the political thought of Martin Delany, Aimé Césaire, Frantz Fanon, Albert Memmi, Booker T. Washington, W.E.B. DuBois, Malcolm X, Marcus Garvey, and others.
Also offered for graduate-level credit as BSt 530 and may be taken only once for credit. Prerequisite: Upper-division standing.

BSt 440 - Caribbean Studies (4)

Interdisciplinary examination of historical or cultural issues in the Caribbean experience. Emphasis will be on issues and dilemmas related to the creation of a multicultural society.
Prerequisite: BSt 206 or BSt 211.

BSt 444 - Food Justice (4)

Food justice is studied from a holistic perspective, which considers the complexities and intersections of ecological, cultural, nutritional, political and socioeconomic factors in the production and consumption of food. As a Black Studies food justice class, we study the historic background and diversity of Afro descent food ways, and look at contemporary topics of environmental justice, land and food access, cultural identity and appropriation. We also employ pedagogies that engage our understanding of growing food, cooking food, and eating food.
Prerequisite: Upper-division standing.

BSt 450 - Topics in African/Caribbean History And Culture (4)

In-depth exploration of selected topics in African and/or Caribbean cultural history. Special attention will be given to thematic issues of broad application to the understanding of cultural interaction, continuity, and change.
Also offered for graduate-level credit as BSt 550.
Prerequisite: BSt 203, BSt 204, BSt 206, or BSt 211.

BSt 466 - History of the Black Panther Party (4)

Examination of historical conditions and context that gave birth to the Black Panther Party. Analysis of the political platform, work and ideology of the Party and governmental and societal responses. Issues of race, class, gender and sexuality, the intersections of identity, and the Party’s legacy nationally and globally.
Also offered for graduate-level credit as BSt 566 and may be taken only once for credit. Prerequisite: Two courses in BSt or permission from the department chair.

BSt 467 - African Development Issues (4)
An examination of the causes of poverty and underdevelopment of the African continent. A comparative analysis of pre-colonial, colonial and post-colonial circumstances will be conducted.
Prerequisite: BSt 211.

BSt 484 - African American Community Development (4)
Study of community development and applicability to African American communities. Topics include community development, community organization, ghettos as colonies, citizen participation, change agents, planning, and social change implications. Expected preparation: BSt 202, BSt 203, or BSt 204 or course in Black history and culture.
Prerequisite: Junior or senior status.

BSt 489 - Afro-Latin@ Narratives (4)
This course explores through poetry, songs, music, stories, (auto-)biographical accounts and novels the creativity and meaning produced by people of African descent living in or from Latin America. Through examining the narrative expressions of Afro-Latin Americans we can consider the relationship that social historical processes have on narrative production.
Also offered for graduate-level credit as BSt 589 and may be taken only once for credit. Prerequisite: Upper-division standing.

BSt 502 - Independent Study (1-9)
(Credit to be arranged.)

BSt 505 - Reading and Conference (1-8)
(Credit to be arranged.)

BSt 506 - Overseas Experience (1-8)
Community-based learning in an international context through immersion in departmental programs in Africa and/or the Caribbean. Travel programs provide students with rich, multicultural environments in which to learn and serve international communities.
Prerequisite: Application for admission to the overseas programs is required.

BSt 507 - Seminar (1-6)
See department for course description. (Credit to be arranged.)

BSt 509 - Practicum (1-9)
(Credit to be arranged.)

BSt 510 - Selected Studies (1-6)
(Credit to be arranged.)

BSt 511 - African American History Seminar (4)
In-depth analysis of critical topics and issues in African American history. The content of the course is topical rather than chronological and the approach will emphasize specific periods, individuals, or relevant developments for a concentrated treatment in a seminar environment. This course may be repeated twice for credit.
Also offered for undergraduate-level credit as BSt 411. Prerequisite: BSt 202 or BSt 204 and junior or senior status.

BSt 512 - Oregon African American History (4)
Examination of the black experience in Oregon history. Topics include the slavery controversy in early Oregon development, contributions of blacks to the growth of the state, black migration during World War II, the Vanport flood, and various legislative actions related to black status in Oregon.
Prerequisite: BSt 202 or BSt 204 and junior or senior status.

BSt 513 - Slavery (4)
An examination of the role of slavery in establishing and reinforcing the status and position of the black population in the U.S. and the Caribbean, including physical and psychological impacts, racial classifications, and colorism. Comparative analysis of the numerous forms of slave systems and the impact of slave rebellions.
Prerequisite: BSt 202, BSt 203, BSt 206 and BSt 214.

BSt 514 - Racism (4)
A survey of the pertinent social-psychological literature on individual and cultural forms of racism in America. The rationalizations, processes and machinery of oppression as constructed by white European and American governments which control and exploit the resources of non-white peoples will be examined. Special attention will be paid to the
theoretical social-psychological explanations of black/white differences.
Prerequisite: BST 207, BST 211, or BST 214, UnSt 212.

**BST 520 - Caribbean Literature (4)**
A selection of poetry and fiction from the English and French speaking Caribbean (in translation where necessary).
Prerequisite: One previous African American literature course and 12 additional literature credits.

**BST 521 - African American Writers (4)**
Examination of significant African American literary figures. A particular author or literary period of writing is identified, read, analyzed, and discussed. Major works and history of the period are included with special consideration given to the relationships between the topic of focus and the larger spheres of writing.
Also offered for undergraduate-level credit as BST 421 and may be taken only once for credit.
Prerequisite: BST 221.

**BST 522 - African Fiction (4)**
Readings in African fiction in regional, cultural, generational, and gender contexts. This is the first course in a sequence of two: BST 522 and BST 523.
Prerequisite: One previous African American literature course and 12 additional literature credits.

**BST 525 - Black Cinema: the 1970s (4)**
Examination of the treatment of Black themes, issues and characterization during the decade of the 1970s in the cinema industry. Particular attention on the genre of the Blaxploitation film as an industry response to the rapidly shifting social and racial dynamics of American culture as the Civil Rights era concluded.
Prerequisite: upper-division standing.

**BST 526 - Contemporary African American Cinema (4)**
Examination of the treatment of Black themes, issues, and characterization in the contemporary cinema industry. Particular attention will be focused on the development of new Black actors, directors, and producers. The impact of these new factors in the industry will be analyzed for the influence they have on the traditions of cinema history relative to the Black experience.
Prerequisite: upper-division standing.

**BST 530 - Black Political Thought (4)**
Theories of Black nationalism, including the political thought of Martin Delany, Aime Cesaire, Frantz Fanon, Albert Memmi, Booker T. Washington, W.E.B. DuBois, Malcolm X, Marcus Garvey, and others.
Also offered for undergraduate-level credit as BST 430 and may be taken only once for credit.
Prerequisite: Upper-division standing.

**BST 540 - Caribbean Studies (4)**
Interdisciplinary examination of historical or cultural issues in the Caribbean experience. Emphasis will be on issues and dilemmas related to the creation of a multicultural society.
Prerequisite: BST 211 or 206.

**BST 550 - Topics in African/Caribbean History and Culture (4)**
In-depth exploration of selected topics in African and/or Caribbean cultural history. Special attention will be given to thematic issues of broad application to the understanding of cultural interaction, continuity, and change.
Also offered for undergraduate-level credit as BST 450.

**BST 566 - History of the Black Panther Party (4)**
Examination of historical conditions and context that gave birth to the Black Panther Party. Analysis of the political platform, work and ideology of the Party and governmental and societal responses. Issues of race, class, gender and sexuality, the intersections of identity, and the Party's legacy nationally and globally.
Also offered for undergraduate-level credit as BST 466 and may be taken only once for credit.
Prerequisite: Prerequisites: Two courses in BST or permission from the department chair.

**BST 567 - African Development Issues (4)**
An examination of the causes of poverty and underdevelopment of the African continent. A comparative analysis of pre-colonial, colonial and post-colonial circumstances will be conducted.
Prerequisite: BST 211.

**BST 584 - African American Community Development (4)**
Study of community development and applicability to African American communities. Topics include community development, community organization, ghettos as colonies, citizen participation, change agents, planning, and social change implications.
Prerequisite: BSt 202 or BSt 204 and junior or senior status.

**BS 589 - Afro-Latin@ Narratives (4)**

This course explores through poetry, songs, music, stories, (auto-)biographical accounts and novels the creativity and meaning produced by people of African descent living in or from Latin America. Through examining the narrative expressions of Afro-Latin Americans we can consider the relationship that social historical processes have on narrative production.

Also offered for undergraduate-level credit as BSt 489 and may be taken only once for credit.

Prerequisite: Upper-division standing.

**Bsta - Biostatistics**

Courses offered as part of the joint OHSU-PSU School of Public Health.

**Bsta 511 - Estimation and Hypothesis Testing for Applied Biostatistics (4)**

This course covers a broad range of basic statistical methods used in the health sciences. The course begins by covering methods of summarizing data through graphical displays and numerical measures. Basic probability concepts will be explored to establish the basis for statistical inference. Confidence intervals and hypothesis testing will be studied with emphasis on applying these methods to relevant situations. Both normal theory and nonparametric approaches will be studied including one- and two-sample tests of population means and tests of independence for two-way tables. Students will be introduced to one-way analysis of variance (ANOVA), correlation, and simple linear regression.

The course focuses on understanding when to use basic statistical methods, how to compute test statistics and how to interpret and communicate the results. Computer applications are included as part of the course to introduce students to basic data management, reading output from computer packages, interpreting and summarizing results.

Also offered as Bsta 611.

**Bsta 512 - Linear Models (4)**

BSTA 512 is primarily designed for Biostatistics Graduate Certificate students in Department of Public Health and Preventive Medicine, and BSTA 612 for PhD students from Behavioral Neuroscience or other PhD programs. In this course, we will focus on Linear models that include Regressions Analysis and Analysis of Variance (ANOVA). In conjunction with the conceptual and theoretical supporting the topics.

For students of BSTA 612, extra homework problems and reading materials will be assigned along with one extra week of lecture on mixed-effects models for longitudinal/repeated measure data.

Also offered as Bsta 612 for doctoral students.

**Bsta 513 - Categorical Data Analysis (4)**

Categorical Data Analysis is the third course in the required sequence for applied Biostatistics (Bsta 511, Bsta 512, Bsta 513 or Bsta 611, Bsta 612, Bsta 613). This course covers topics in categorical data analysis such as cross tabulation statistics, statistics for matched samples, and methods to assess confounding and interaction via stratified tables. Students will learn logistic regression, and relate results back to those found with stratified analyses. Similar to linear regression in Bsta 512/Bsta 612, topics for logistic regression will include parameter interpretation, statistical adjustment, variable selection techniques and model fit assessment. Students will have the opportunity to be exposed to other analysis methods, such as Poisson regression and multinomial logistic regression, etc. We will also learn some machine learning techniques other than logistic regression model. Most homework assignments for this course require the use of statistical software.

Also offered as Bsta 613 for doctoral students.

**Bsta 514 - Statistical Analysis of Time-to-Event Data (3)**

This course introduces students to analysis of time-to-event (i.e. survival) data, covering methods for estimation, hypothesis testing, and regression methods for censored data with covariates. Methods widely used in the health sciences are covered, including Kaplan-Meier (empirical) estimate of the survival function and its associated statistical tests. The Cox proportional hazards regression model is presented in detail, along with some extensions of this model. As time allows, other topics will be introduced including parametric survival models, frailty models and/or models incorporating competing risks. Power and sample size computations for time-to-event data will also be introduced. Most assignments will be completed using statistical computing software. Contextualizing results in the context of health sciences problems and research questions is stressed throughout the course.

Prerequisite: A standard pre-calculus course in probability & statistics (e.g. Bsta 511), a course in applied linear regression models (e.g. Bsta 512).

**Bsta 515 - Data Management & Analysis in SAS (3)**

This course is designed for students who want to develop and expand their skills in data management, statistical analyses and graphics for the real world applications using SAS. The course will give students
opportunities to build their data management
programming skills from basic to advanced levels in
SAS. As part of the course competencies, students
will have chance to learn how to export SAS datasets
and create ODS files for Microsoft Excel. Students
will have chance to build their analysis skills from
basic to advanced levels using SAS. The class will be
taught in a computer lab in order to give the student
hand on experience using SAS to manage data,
perform analyses and produce graphs. Class sessions
and homework will be oriented around particular data
management and analysis tasks. Health-related data
sets will be provided for students to practice. This
course could be extremely helpful in preparation for
thesis, capstone or other research projects.

**Bsta 516 - Design and Analysis of Surveys (3)**

This course is designed to introduce basic concepts,
techniques, and current practice of sample survey
design and analysis. Specific topics covered include
introduction to statistical sample design, such as
simple random sampling, systematic sampling,
stratified random sampling, cluster sampling,
multistage sampling. Complex designs will also be
included. Topics in estimation and analysis include
probability weighting, weight adjustments, ratio and
regression estimators, and methods for estimating
variance from complex surveys. In conjunction with
the conceptual and theoretical developments,
homework assignments and data analysis projects
will be assigned in supporting the topics.

**Bsta 517 - Statistical Methods in Clinical Trials (3)**

This is an online course designed for students and
researchers who are interested in learning statistical
methods in the design and analysis of clinical trials.
Students are expected to have certain statistical
background in order to gain deep understanding to
the topics covered in this course. Topics to be
discussed in the course include introduction to
clinical trials, fundamentals of Bayesian statistics,
sample size computation for trials with dichotomous,
continuous and time-to-event outcomes, methods of
randomization, design challenges for oncology
clinical trials, Bayesian methods in clinical trials,
adaptive clinical trial design and designs for
predictive biomarkers.

**Bsta 518 - Spatial Data with GIS (3)**

Geographic information system (GIS) software is a
powerful tool for assessment, decision-making, and
information sharing. GIS provides a platform for the
analysis of health data in relationship to population
demographics, socioeconomic factors, surrounding
social and health services, and the natural
environment. The course will also cover basic
statistical methods for the analysis of spatial data
such as kriging and spatial clustering. Some
statistical methods may use R. The format of class
will be intensive in-class session during the first two
weeks of summer quarter and students are required to
do homework and course projects with data sets
throughout the quarter under the supervision of the
instructor.

Prerequisite: Bsta 525 or Bsta 511 and Bsta 512.

**Bsta 519 - Applied Longitudinal Data Analysis (3)**

This course is designed for students who have taken
the basic applied statistical courses and wish to learn
the more advanced statistical methods for
longitudinal data. Longitudinal data consist of
measurements of response variables at two or more
points in time for many individuals. This course
covers the statistical properties of longitudinal data
and special challenges due to the repeated
measurements on each individual, exploratory
methods and statistical models for longitudinal data
as well as some exposure to estimation methods and
statistical properties of coefficient estimates. For
statistical methods, the course will briefly mention
the traditional repeated measure analysis of variance
(ANOVA) approach for continuous data, and focus
more on mixed effects model approach and
estimation based on generalized estimating equation.
Real life examples will be used to explain the concept
and application of these models by using continuous,
binary and count data. Homework assignments and
final class project play a central role to understand
and appropriately apply the methods covered in the
course.

Prerequisite: Bsta 511, Bsta 512, and Bsta 513.

**Bsta 521 - Bayesian Methods for Data Analysis (3)**

This course is an elective course for students in the
MS, MPH and Graduate Certificate program in
Biostatistics and may also be used as an elective
course for students in MPH and PhD in
Epidemiology programs and other programs, if they
have taken the appropriate prerequisites. The
methods students learned in the biostatistics applied
and theoretical sequences were based on the
"frequentist" method of statistical reasoning, where
probability is understood to be the longrun frequency
of a 'repeatable' event, and statistics that are
computed are based on a specific study only.
Bayesian methods are based on a different
philosophy – that probability of an event is based on
ALL information known at the time. Bayesian
methods for data analysis enable one to combine
information from previous similar and independent
Bayesian analysis, posterior distribution, Bayesian inference and prediction, prior determination, one parameter and two parameter models, Bayesian hierarchical models, Bayesian computation, model criticism and selection as well as basic comparison of Bayesian and Frequentist Inferences. Real life examples in medical and health science will be used to explain the concept and application of Bayesian models.

**Bsta 522 - Statistical Learning and Data Science (3)**

This course is designed to introduce theory and methods for statistical learning and data science. Data science is an emerging field that overlaps with computer science, artificial intelligence, machine learning/deep learning and statistics. This is an exciting time to observe the birth of the new field. In recent years, statistical learning has been increasingly becoming crucial in data science. Ever-increasing data complexity and unconventional data create new challenges for traditional statistical learning, and this is an active research area. This course will cover traditional statistical learning methods as well as newer methods for such challenges.

**Prerequisite:** Bsta 512.

**Bsta 523 - Design and Analysis of Experimental Designs (3)**

This course covers an experimental design and statistical analysis of biological/clinical data from various experiments. The course provides not only the theoretical aspect of experimental design but also hand-on experience in designing and analyzing experiments. The course begins design principles that include concepts of replication, randomization, blocking, multifactorial studies, and confounding. Basic matrix algebra concepts will be explored to establish the basis for linear models. Students, then, are introduced to various experimental designs including analysis of variance (ANOVA) in both single and multi-factorial setting, experiments to study variances, complete/incomplete block designs (CBD), split plot design, repeated measures ANOVA, analysis of covariance (ANOCOVA), response surface design, and diagnosing agreement between the data and model. The course also provides experience in analyzing unbalanced experimental. Computer application is included as part of the course to introduce students to data management, reading output, interpreting and summarizing results.

**Prerequisite:** Bsta 511.

**Bsta 524 - Statistical Methods for Next Gen Sequencing (3)**

This course is designed to introduce the statistical theory and methods for next generation sequencing data (NGS). In recent years, NGS has been the choice of platform for genomic studies. Due to the high dimensionality of NGS, it provides unique challenges in statistical analysis and requires different statistical methods. Although NGS data are the main focus, the theory and methods are applicable to other high dimensional data such as microarray and proteomics. This course will cover statistical theory and methods specialized for NGS and other high dimensional data. It is strongly recommended that students bring their own laptop computers to classes given.

This is the same course as Bsta 624 and may be taken only once for credit. **Prerequisite:** Bsta 512 or Bsta 612 and previous experience in R.

**Bsta 525 - Introduction to Biostatistics (4)**

The goal of this course is to cover the broad range of statistical methods used in health sciences. Methods of summarizing data through graphical displays and numerical measures will be discussed. Basic probability concepts will be explored to establish the basis for statistical inference. Confidence intervals and hypothesis testing will be studied with emphasis in applying these methods to relevant situations. Both normal theory and non-parametric approaches will be studied. Course focus will be to understand when to use basic statistical methods how to compute tests to statistics and how to interpret results. Computer applications (using statistical software) are included as part of the course.

**Prerequisite:** Graduate standing.

**Bsta 530 - Biostatistics Lab (3)**

The course provides hands-on data analysis and/or biostatistical consulting experience to students outside classroom settings. Students will have opportunities to perform data analysis with inputs from faculty members. Students should have adequate skills in at least one statistical program among STATA, SAS or R and finished BSTA 512 Linear Models or equivalent. Students meet weekly for 1–2 hour with the course instructor for discussion on their projects and are required to have regular meetings with an assigned faculty advisor and/or consultee(s), if applicable. Students are expected to work individually or in a team of 2–3 on actual data analysis. In addition, there is weekly reading assignment. The workload will be at least 9 hours per week including all activities (classes, meetings, readings, coding, and analysis).

**Prerequisite:** Bsta 512.
**Bsta 550 - Intro to Probability (3)**

This course is an introduction to the methods and concepts of probability theory, including combinatorics, conditional probability and independence, discrete and continuous random variables, probability distributions, joint distributions, expectation, transformations of random variables, moment generating functions, and the central limit theorem.

Prerequisite: Acceptance to MS in Biostatistics program.

**Bsta 551 - Statistical Inference I (3)**

Statistical Inference I is the first course of a two term course (BSTA 551 & 552) covering the foundations of statistical inference. It is targeted to graduate students majoring in biostatistics and other disciplines requiring an understanding of statistical theory. The course starts with a review of the probability theory that is the basis for that inference. We will then focus on principles of data reduction and estimation (frequentist and Bayesian methods). We will also introduce hypothesis testing, time permitting. The two courses must be taken in sequence.

Prerequisite: Bsta 550 and differential and integral calculus.

**Bsta 552 - Statistical Inference II (3)**

Statistical Inference II is the second of a two term course (BSTA 551 & BSTA 552) and provides the theoretical foundation in biostatistics. Topics in the second course will include sampling distributions, point and interval estimation, tests of hypotheses, and an introduction to asymptotic theory. The two courses must be taken in sequence.

**Bsta 611 - Estimation and Hypothesis Testing for Applied Biostatistics (4)**

This course covers a broad range of basic statistical methods used in the health sciences. The course begins by covering methods of summarizing data through graphical displays and numerical measures. Basic probability concepts will be explored to establish the basis for statistical inference. Confidence intervals and hypothesis testing will be studied with emphasis on applying these methods to relevant situations. Both normal theory and nonparametric approaches will be studied including one- and two-sample tests of population means and tests of independence for two-way tables. Students will be introduced to one-way analysis of variance (ANOVA), correlation, and simple linear regression. The course focuses on understanding when to use basic statistical methods, how to compute test statistics and how to interpret and communicate the results. Computer applications are included as part of the course to introduce students to basic data management, reading output from computer packages, interpreting and summarizing results.

Also offered as Bsta 511.

**Bsta 612 - Linear Models (4)**

BSTA 512 is primarily designed for Biostatistics Graduate Certificate students in Department of Public Health and Preventive Medicine, and BSTA 612 for PhD students from Behavioral Neuroscience or other PhD programs. In this course, we will focus on Linear models that include Regressions Analysis and Analysis of Variance (ANOVA). In conjunction with the conceptual and theoretical supporting the topics. For students of BSTA 612, extra homework problems and reading materials will be assigned along with one extra week of lecture on mixed-effects models for longitudinal/repeared measure data.

Also offered for graduate-level credit as Bsta 512.

**Bsta 613 - Categorical Data Analysis (3)**

Categorical Data Analysis is the third course in the required sequence for applied Biostatistics (Bsta 511, Bsta 512, Bsta 513 or Bsta 611, Bsta 612, Bsta 613). This course covers topics in categorical data analysis such as cross tabulation statistics, statistics for matched samples, and methods to assess confounding and interaction via stratified tables. Students will learn logistic regression, and relate results back to those found with stratified analyses. Similar to linear regression in Bsta 512/Bsta 612, topics for logistic regression will include parameter interpretation, statistical adjustment, variable selection techniques and model fit assessment. Students will have the opportunity to be exposed to other analysis methods, such as Poisson regression and multinominal logistic regression, etc. We will also learn some machine learning techniques other than logistic regression model. Most homework assignments for this course require the use of statistical software.

Also offered for graduate-level credit as Bsta 513 and may be taken only once for credit.

**Bsta 624 - Statistical Methods for Next Gen Sequencing (3)**

This course is designed to introduce the statistical theory and methods for next generation sequencing data (NGS). In recent years, NGS has been the choice of platform for genomic studies. Due to the high dimensionality of NGS, it provides unique challenges in statistical analysis and requires different statistical methods. Although NGS data are the main focus, the theory and methods are applicable to other high dimensional data such as microarray and proteomics.
This course will cover statistical theory and methods specialized for NGS and other high dimensional data. It is strongly recommended that students bring their own laptop computers to classes given.

This is the same course as Bsta 624 and may be taken only once for credit. Prerequisite: Bsta 512 or Bsta 612 and previous experience in R.

Bsta 699 - Special Studies (1-8)
(Credit to be arranged.)

BTA - Business Technology & Analytics

BTA 350 - Business Problem Solving with Analytics and Visualization (4)
Focuses on addressing business problems by using quantitative models and computer software to analyze data. Through the use of business scenarios, students develop the skills to structure decision making and assess their findings. Using datasets from industry, the course provides students with working knowledge and a broad overview of applications that facilitate analysis. Particular emphasis is placed on the application of quantitative analysis tools to real-world datasets, the ability of students to make managerial recommendations based on these analyses, and the use of Excel & Tableau.
Prerequisite: BA 327.

BTA 380 - Data Communications (4)
Topics include communication between people and machines, transmission systems, protocols for communication technologies, and digital communication and networks. Application areas reviewed include data communications, voice and electronic mail, Internet, and mobile systems. Management issues covered include cost/benefit analysis, organizational impact, international systems, and emerging technologies.
Prerequisite: BA 325, CS 106.

BTA 401 - Research (1-6)
(Credit to be arranged.)

BTA 404 - Internship (1-6)
(Credit to be arranged.)

BTA 407 - Seminar (1-6)
(Credit to be arranged.) Student-selected problems in information systems, quantitative analysis, or operations and materials management to be studied by the individual and discussed in group meeting under direction of academic staff.

BTA 409 - Practicum (1-12)
(Credit to be arranged.) Field work involving the practice of professional activities away from campus.
Prerequisite: consent of instructor.

BTA 410 - Selected Topics (1-6)
(Credit to be arranged.)

BTA 415 - Database Management (4)
Introductory database management course for undergraduates in business. The course covers theories of data modeling, techniques for database analysis, design, development, and implementation; Structured Query Language (SQL), and management of databases. Although all major database management systems, including hierarchical, network, relational, and object-oriented will be covered; the focus will be on relational database systems. Students will learn both the theory and practice of successful design, development and implementation of databases.
Prerequisite: BA 327.

BTA 418 - Client-Server Application Development (4)
Provides an introduction to client server application development with emphasis on the client. Topics include graphical user interface development, event-driven programming, and rapid application development tools. Students will participate in the development of projects using programming languages such as Visual Basic.
Prerequisite: ISQA 360.

BTA 419 - Business Analytics with Programming (4)
Introduces structured design and programming in order to solve business problems. Through hands-on development using Python programming language, students learn fundamental concepts and implementations of programming relevant to business today. Students will be prepared to understand the nature of coding, what sorts of things are easy or hard to code, what makes coders more or less productive, what sorts of problems arise, and how hard it is to maintain code. Emphasis will be placed on developing the understanding of business people who manage or work with software developers and programmers. The course focuses on developing skills relevant to the design and development of
interactive business analytics using Python. Students will learn how to use the principles of programming, especially in Python to develop applications for business.

Prerequisite: BA 327.

**BTA 420 - Systems Analysis and Design (4)**

Introduces the foundations of systems analysis and design (SAD). It examines the scope and organization of the systems development process and the role of the systems development professional. Topics include system requirements, system analysis, process and data modeling, implementation, and project management, as well as systems analyst skills and competencies. Standard system analysis methods and techniques will be presented and applied. Designed to give you a generalized, portable, and adaptable understanding of the standard SAD methodology. The purpose of the course is to prepare you, as a business professional, to: [1] understand how SAD techniques are applied in solving business problems, and [2] communicate effectively with information-technology professionals on SAD-related issues.

Prerequisite: BTA 415, BTA 419.

**BTA 424 - LAN Management (4)**

Hands-on introduction to the administration of client/server-based local area networks addressing both conceptual and operational aspects of network operating systems management and client operating system configuration. Topics include: design and implementation of network directory services and file systems; network security, backup, and recovery; the implementation and control of distributed print services; user access management and environment automation; and remote workstation management.

Prerequisite: BTA 380.

**BTA 426 - Introduction to Decision Technologies (4)**

Provides an introduction to the technologies used in aiding decision making in organizations. In addition to the theoretical aspects of decision support, the course exposes students to current technologies. Topics include: human decision making; database technologies for decision support; statistical, analytical, and artificial-intelligence models for decision support; data mining; and on-line analytical processing.

Prerequisite: BTA 415.

**BTA 428 - Data Privacy, Security and Ethics (4)**

Examines topics of information privacy and data security that are of fundamental importance in modern organizations from an ethical lens. The theories, concepts, and practices relating to the deployment and management of information security systems, and the collection and use of data. Topics include threat analysis and risk management; encryption and security technology; data use and reuse, data brokering; and the legal, ethical, and social implications of data-driven environments.

Prerequisite: BTA 420.

**BTA 436 - Advanced Database Administration (4)**

Advanced study of data environments, data modeling techniques, database design, query processing, and optimization. Emphasis will be placed on client-server architecture and data environments such as Oracle and SQL Server. Students will participate in database design projects. Other topics will include industry trends and opportunities, and database administration.

Prerequisite: BTA 415.

**ISQA 481 - Blockchain Fundamentals (4)**

This course introduces the fundamentals of blockchain technology and provides a comprehensive survey of the essential building blocks and unique characteristics of this innovative technology. Also offered for graduate-level credit as BTA 581 and may be taken only once for credit. Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course.

**BTA 482 - Blockchain Fundamentals Lab (2)**

This course provides practice using technologies that will help students understand the core features of blockchain networks as well as the cryptocurrencies and smart contracts that they enable. Also offered for graduate-level credit as BTA 582 and may be taken only once for credit. Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course.

**BTA 483 - Blockchain in Business (4)**

This course explores business uses of distributed ledger technology (DLT), including for transferring value, executing smart contracts, tracking chain of custody, and verifying identity.

Also offered for graduate-level credit as BTA 583 and may be taken only once for credit. Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course.
BTA 484 - Blockchain in Business Lab (2)
This course provides extensive hands-on practice using distributed ledger technologies and discussions about the appropriate uses of relational databases and various permissioned and permissionless blockchain systems.
Also offered for graduate-level credit as BTA 584 and may be taken only once for credit. Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course.

BTA 485 - Blockchain Uses and Applications (4)
This course explores current and proposed blockchain uses in variety of industries and sectors and enables students to design and develop distributed applications (DApps).
Also offered for graduate-level credit as BTA 585 and may be taken only once for credit. Prerequisite: This course is part of the Business Blockchain Certificate. All students must complete the Blockchain Primer before registering for this course.

BTA 486 - Emerging Topics in Blockchain (2)
This course explores current and future blockchain innovations and resources available for learning about blockchain developments.
Also offered for graduate-level credit as BTA 586 and may be taken only once for credit. Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course.

BTA 514 - Survey Research Techniques (1)
Focus on business applications for designing, administering and analyzing a survey, such as for market research. This section will build directly from coursework in Mktg 511, Mktg 512 and ISQA 513.
Prerequisite: BTA 513.

BTA 515 - Series and Forecasting Techniques (1)
Focus on business applications that incorporate Time Series and Forecasting Techniques, including multiple regression procedures. This section will build directly from coursework in Fin 513 and ISQA 513.
Prerequisite: BTA 513.

BTA 516 - Multiple Regression with Business Applications (3)
Prepares some linear model building and evaluation techniques using multiple regression. The course is organized around applications to understand related and potentially causal factors in a management context with implications for management decision making. The goal is to construct and interpret regression models according to specified predictor variables that contribute to predicting the unknown value of the response variable of interest. Students who do not have familiarity with basic statistical analyses will be given access to a primer.

BTA 518 - Electronic Commerce (3)
Survey of technologies and technological applications to conduct business electronically today and in the future. Students will learn about electronic data interchange, the role of technology in electronic markets, the Internet, and the organizational impact of these technologies. Internet based technologies will be presented and used.

BTA 519 - Managerial Analytics (4)
Introduction to the role of "big data analytics" related to strategic decision making. Exploration of concepts fundamental to analytics programs, including data-driven decision making, interpreting and gaining insight from structured data, effective communication of strategic decisions, and managing an analytics team.

BTA 520 - Introduction to Business Intelligence and Analytics (4)
An overview on leveraging data resources to develop and deploy business strategies to enhance their
decision-making capabilities so organizations can gain and sustain a competitive advantage. Specifically, the course shows how to discover subtle patterns and associations in business data and develop and deploy predictive, clustering, and market basket models to optimize decision-making throughout the organization.

**BTA 521 - Data Visualization (2)**
An essential component of Business Intelligence/Analytics is data visualization. This course prepares students to generate data visualizations using several standard software applications in analytics, and to interpret and communicate the results to an organization's decision makers.

Prerequisite: BTA 520.

**BTA 522 - Special Topics in Data Science, Technology for Business (2)**
To do data science in business requires skills in data analysis. Much of the work of data science in business requires the manipulation of data stored in a variety of data structures possible in the R language. Students will learn the basics of the R language for data analysis, data visualization, and data manipulation. Students will expand their skills using R to accomplish applied analyses with business data.

**BTA 523 - Special Topics in Data Science, Machine Learning Applications for Managers (2)**
The capability of "machine learning" is literally revolutionizing aspects of society, becoming a major disruptive technology and an important tool in business processes, e.g., sales forecasts, employee retention, inventory control, personalized advertisements, price optimization, and quality control. Students will learn basic machine learning models and understand how such models can contribute to business success.

**BTA 581 - Blockchain Fundamentals (4)**
This course introduces the fundamentals of blockchain technology and provides a comprehensive survey of the essential building blocks and unique characteristics of this innovative technology.

Also offered for undergraduate-level credit as BTA 481 and may be taken only once for credit.

Prerequisite: Blockchain primer or equivalent and admitted to a graduate business program. Cross-Listed as: This is the same course as BTA 581 and may be taken only once for credit.

**BTA 582 - Blockchain Fundamentals Lab (2)**
This course provides practice using technologies that will help students understand the core features of blockchain networks as well as the cryptocurrencies and smart contracts that they enable.

Also offered for undergraduate-level credit as BTA 482 and may be taken only once for credit.

Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 582S and may be taken only once for credit.

**BTA 582S - Blockchain Fundamentals Lab (2)**
This course provides practice using technologies that will help students understand the core features of blockchain networks as well as the cryptocurrencies and smart contracts that they enable.

Also offered for undergraduate-level credit as BTA 482 and may be taken only once for credit.

Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 582S and may be taken only once for credit.

**BTA 588 - Blockchain in Business (4)**
This course explores business uses of distributed ledger technology (DLT), including for transferring value, executing smart contracts, tracking chain of custody, and verifying identity.

Also offered for undergraduate-level credit as BTA 488 and may be taken only once for credit.

Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 588S and may be taken only once for credit.
BTA 583S - Blockchain in Business (4)
This course explores business uses of distributed ledger technology (DLT), including for transferring value, executing smart contracts, tracking chain of custody, and verifying identity.

Also offered for undergraduate-level credit as BTA 483 and may be taken only once for credit.
Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 583 and may be taken only once for credit.

BTA 584 - Blockchain in Business Lab (2)
This course provides extensive hands-on practice using distributed ledger technologies and discussions about the appropriate uses of relational databases and various permissioned and permissionless blockchain systems.

Also offered for undergraduate-level credit as BTA 484 and may be taken only once for credit.
Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 584S and may be taken only once for credit.

BTA 584S - Blockchain in Business Lab (2)
This course provides extensive hands-on practice using distributed ledger technologies and discussions about the appropriate uses of relational databases and various permissioned and permissionless blockchain systems.

Also offered for undergraduate-level credit as BTA 484 and may be taken only once for credit.
Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 584 and may be taken only once for credit.

BTA 585 - Blockchain Uses and Applications (4)
This course explores current and proposed blockchain uses in variety of industries and sectors and enables students to design and develop distributed applications (DApps).

Also offered for undergraduate-level credit as BTA 485 and may be taken only once for credit.
Prerequisite: This course is part of the Business Blockchain Certificate. All students must complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 585 and may be taken only once for credit.

BTA 585S - Blockchain Uses and Applications (4)
This course explores current and proposed blockchain uses in variety of industries and sectors and enables students to design and develop distributed applications (DApps).

Also offered for undergraduate-level credit as BTA 485 and may be taken only once for credit.
Prerequisite: This course is part of the Business Blockchain Certificate. All students must complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 585S and may be taken only once for credit.

BTA 586 - Emerging Topics in Blockchain (2)
This course explores current and future blockchain innovations and resources available for learning about blockchain developments.

Also offered for undergraduate-level credit as BTA 486 and may be taken only once for credit.
Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 586S and may be taken only once for credit.

BTA 586S - Emerging Topics in Blockchain (2)
This course explores current and future blockchain innovations and resources available for learning about blockchain developments.

Also offered for undergraduate-level credit as BTA 486 and may be taken only once for credit.
Prerequisite: This course is part of the Business Blockchain Certificate. All students are expected to complete the Blockchain Primer before registering for this course. Cross-Listed as: This is the same course as BTA 586 and may be taken only once for credit.

CCJ - Criminology & Criminal Justice
CCJ 199 - Special Studies (1-4)
(Credit to be arranged.) Pass/no pass option.

CCJ 200 - Criminology and Criminal Justice (4)
An introduction and overview of the criminology and criminal justice major designed to provide students with an understanding of law, crime, and the criminal justice system in America. Examines the law's proactive function in teaching people how to live peacefully within their communities and the law's
reactive function in sanctioning criminal behavior. Includes an introduction to various theories of crime causation and an overview of the criminal justice system and its response in processing those who transgress the law.

**CCJ 210 - Introduction to Juvenile Justice Process (4)**

A general overview of the various activities and decisions involved in the processing of young law violators. Examination of the justice system especially designed to handle children, consideration of the many stages in the system, and considerations of issues in juvenile justice policy formulation.

**CCJ 230 - Policing in America (4)**

An introduction to the study of policing in the United States. Policing is studied from three perspectives: the police officer-citizen interaction, the agency-community relationship, and the legal and ethical questions of policing in a democratic society. The course considers the history and future of policing, the police task, police strategies, and police relationships with the community and criminal justice system.

**CCJ 240 - Punishment and Corrections (4)**

Examination of historical and contemporary approaches to the punishment of adult and juvenile offenders in institutional and community settings. Includes discussion of theories of punishment as they relate to today's correctional policies and practices. Controversial topics like prisoner rights, the death penalty, and mandatory sentencing are covered.

**CCJ 250 - Criminal Behavior (4)**

Examination of psychosocial theories of crime and identification of the individual-level factors associated with the onset, continuity, and desistance of criminal behavior in juveniles and adults. Special topics covered include the relationship between mental illness and violence, psychopathy, sexual deviancy, substance abuse, human aggression, and the rehabilitation of offenders.

**CCJ 260 - Criminal Justice and Popular Culture (4)**

This course analyzes mass media products such as news programs and periodicals, music, film, and fictional literature to investigate the representation of crime and criminal justice in popular culture and the media impact on the criminal justice system.

**CCJ 299 - Special Studies (1-4)**

(Credit to be arranged) Pass/no pass option.

**CCJ 300 - Criminology and Criminal Justice (4)**

An introduction and overview of the criminology and criminal justice major designed to provide students with an understanding of law, crime, and the criminal justice system in America. Examines the law's proactive function in teaching people how to live peacefully within their communities and the law's reactive function in sanctioning criminal behavior. Includes an introduction to various theories of crime causation and an overview of the criminal justice system and its response in processing those who transgress the law.

**CCJ 301 - Policing in America (4)**

An introduction to the study of policing in the United States. Policing is studied from three perspectives: the police officer-citizen interaction, the agency-community relationship, and the legal and ethical questions of policing in a democratic society. The course considers the history and future of policing, the police task, police strategies, and police relationships with the community and criminal justice system.

**CCJ 303 - Punishment and Corrections (4)**

Examination of historical and contemporary approaches to the punishment of adult and juvenile offenders in institutional and community settings. Includes discussion of theories of punishment as they relate to today's correctional policies and practices. Controversial topics like prisoner rights, the death penalty, and mandatory sentencing are covered.

**CCJ 305 - Juvenile Justice Reform (4)**

Modern approaches, evolving issues, and best practices for juvenile delinquency prevention and juvenile justice reform are the foci of the course. Students explore identifiers of “at-risk” youths, and the role disproportionate minority contact, poverty, trauma, mental health disorders, and physical or intellectual disabilities play in affecting the behavior of juveniles. Examination of past practices like the “school to prison pipeline” phenomenon that have disproportionately impacted youth from communities
of color are critiqued and contrasted with more efficacious and equitable approaches.

CCJ 310 - American Courts (4)
Comprehensive survey of the role and function of courts in the United States. Emphasis placed on the operations of trial-level courts hearing criminal cases. Explores the roles and duties of courtroom participants, structure of the judiciary, relationship between the formal rule of law and daily activities of courts, decision-making, and perspectives from which to view the courts. Attention also to appellate courts, juvenile courts, court reform, and issues of gender, race, and ethnicity.

CCJ 315 - Crime Myths (4)
Crime in various forms is a common topic of conversation among individuals at work, at home, at school and in a variety of other settings. Much of what people believe about crime, its perpetrators and its victims often does not fit very well with what we can learn from careful scientific study of crime. Misperceptions about crime and justice are commonly fostered by the media, political leaders, and from overgeneralizations of personal experience. This course will introduce students to the value of rigorous research evidence as the primary way to identify the existence of crime myths.

CCJ 320U - Theories of Crime & Justice (4)
An overview of historical, sociological, biological, psychological, economic, and Marxist theories of crime causation. Particular attention is made to critically analyzing each theory presented in terms of its internal consistency and logic as well as its fit with data on crime, criminals, and victims. Policy implications stemming from these theories will be discussed.

CCJ 325U - Crime in the City (4)
Crime is a relatively rare event. Urban crimes, in particular, tend to happen in specific and predictable locations. In this class, we introduce a set of criminological theories that explore the role that city structure plays in influencing human behavior and shaping where crime events occur. By understanding both where and why crimes concentrate in specific locations, we are able to introduce approaches for addressing and preventing these crime concerns. Throughout this course, we use our own routines and experiences to understand how environmental crime theories apply within our own lives.

CCJ 330U - Crime Control Strategies (4)
An analysis of the methods used to control crime in American society. Emphasis on understanding the sometimes conflicting goals of the criminal justice system; attention is given to the general categories of general and specific deterrence, aggressive enforcement, situational and environmental defensive measures, and modification of the social order. Special attention will be given to how other countries control crime and the problems of comparison because of political and cultural differences.

CCJ 340 - Crime Analysis (4)
An introduction to the basic methods used in analyzing data from criminal justice agencies, including temporal and spatial analysis of crime patterns, calculation of crime rates, descriptive analyses of victim and offender characteristics, recidivism, and the identification of offense typologies. Students get hands-on experience coding, analyzing, interpreting, and presenting crime data from a number of sources like police homicide reports, the FBI, Department of Corrections, and attitudinal surveys.
Prerequisite: CS 105 or basic computing skills.

CCJ 345 - Human Behavior and the Law (4)
As the study of human behavior, psychology must include the study of law, which is a primary instrument used by society to control human behavior. The law makes many assumptions about human behavior – are they accurate? This course concerns the application of behavioral science research and practice to the legal system.

CCJ 350U - Ethical Leadership in Criminal Justice (4)
Ethical leadership is a topic of longstanding theoretical and practical importance for the criminal justice system. Criminal and social justice issues are deeply embedded in the social fabric of the community and ethical leadership issues frequently have ramifications beyond the boundaries of our discipline. Students will be taught to recognize, understand, and analyze the significance of ethical leadership for the criminal justice system and the community within which it exists.

CCJ 355U - Perspectives on Terrorism (4)
A survey of international and domestic terrorism, the organizations, philosophies, key players, counter-
terror organizations, and response. Investigation of the social, psychological, cultural, historical, political, religious, and economic dynamics of the phenomena will provide preparation for discussion of possible approaches to control.

**CCJ 360 - Victimology (4)**
Provides a comprehensive overview of the study of victims of crime. This includes research on the process, etiology and consequences of criminal victimization. The criminal justice's response to crime victims, both historically and more recently, will be discussed in terms of the changing role of victims in the criminal equation. Topics covered may include restorative justice, restitution, and mediation programs now offered through the criminal justice system.

**CCJ 365U - Criminology and Social Justice Theory (4)**
Begin with an analysis of critical criminology theories and their underlying assumptions. Explores the connections between critical criminology and social justice, the social justice movement, and the communities wherein social justice is practiced. Application of social justice theory to criminal justice policy and practice has created a new set of social response mechanisms to crime and delinquency: mediation, restitution, and restorative justice.

**CCJ 370U - Women, Crime, and Justice (4)**
Women as criminals, victims, and professionals in the criminal justice system are the focus of this course. Theories, policies, and relevant empirical studies will be discussed in the context of the historical, socio-political, and cultural forces that shaped them. Topics may include: girls in gangs, female police officers, mothers behind bars, domestic violence, and pregnancy and drug use.

**CCJ 375 - Global Perspectives on Crime and Justice (4)**
An exploration of international criminal justice systems that compares and contrasts the general features and cultural foundations of criminal justice procedures and institutions in different countries throughout the world.

**CCJ 380 - Criminal Justice Research (4)**
Introduction to the basic concepts of social science research including hypothesis testing, research design, causality, sampling, and measurement. Course is intended to provide students with necessary skills to critically evaluate crime and delinquency research as well as design and implement basic research projects.

**CCJ 390U - Crimes of the Powerful (4)**
Crimes committed by persons of respectability and high social status as opposed to traditional "street crimes" normally highlighted in criminology and criminal justice courses. White collar corporate, governmental, and occupational crime examples include: violations of environmental, safety, health, and labor laws; finance crimes; corporate abuses of power; fraud; crimes of globalization; and violations of the public trust. Final course section covers law, regulating, policing, prosecuting, adjudicating, and responding to challenges of white collar crime.

**CCJ 399 - Special Studies (1-9)**
(Credit to be arranged) Pass/no pass option.

**CCJ 399U - Special Studies (4)**
(Credit to be arranged) Pass/no pass option.

**CCJ 401 - Research (1-6)**
(Credit to be arranged) Consent of instructor.

**CCJ 402 - Independent Study (1-4)**
(Credit to be arranged) Consent of instructor.

**CCJ 404 - Cooperative Education/Internship (1-12)**
(Credit to be arranged) Supervised placement in a community criminal justice agency or on a criminal justice research project. Evaluations of students are completed by agency staff and/or University faculty. A minimum of 8 credits is required of CCJ majors. An additional 8 credits can be applied toward CCJ elective credits required of majors. Required: senior status and consent of instructor.
CCJ 405 - Reading and Conference (1-6)
(Credit to be arranged) Consent of instructor.

CCJ 406 - Projects (1-8)
(Credit to be arranged) Consent of instructor.

CCJ 407 - Seminar (1-8)
(Credit to be arranged) Consent of instructor.

CCJ 409 - Senior Practicum (0-16)
(Credit to be arranged) Consent of instructor and senior status.

CCJ 410 - Selected Topics (1-8)
(Credit to be arranged) Pass/no pass option.

CCJ 410U - Selected Topics (1-4)
(Credit to be arranged) Consent of instructor. Pass/no pass option.

CCJ 415 - Counseling Skills for Criminal Justice (4)
A practice-oriented course covering the basic interviewing, assessment, and counseling skills routinely used by professionals in the criminal justice field (e.g., police, correctional staff, probation officers, prosecutors). Includes coverage of techniques for developing rapport with clients, soliciting information, screening for mental illness, threat/risk assessment, and crisis intervention.

CCJ 420 - Criminal Law and Legal Reasoning (4)
Study of the basic concepts related to criminal law, including: historical development, legal elements of crime and proof, defenses and mitigation, reasonable doubt, and presumptions of fact; with particular emphasis on the application of logical reasoning to make legal decisions.
Prerequisite: Senior status.

CCJ 435 - Crime, Grime and Fear (4)
Crime, grime, and fear is a course designed to study the social, economic, political, and physical factors underlying neighborhood crime and decline. Special attention is given to physical and social incivilities, the "broken windows" theory, police-community partnerships, and problem-solving. Students will work on neighborhood-centered projects to explore solutions to neighborhood crime patterns, disorder, and fear of crime, and ideas for strengthening police-citizen relations, and community building.

CCJ 480 - Community-based Treatment of Offenders (4)
An analysis of the history, philosophy, theory, and function of probation, parole, pardon, halfway houses, work release centers, and other forms of community-based treatment; evaluation of the effectiveness of treatment of the offender in the community; contemporary usage of the presentence investigation report, selection, supervision, and release of probationers and parolees; exploration of current innovations in corrections such as use of volunteers and offenders as correctional manpower resources.
Also offered for graduate-level credit as CCJ 580 and may be taken only once for credit.

CCJ 485 - Offender Rehabilitation (4)
Examines the history of the rehabilitative ideal in corrections. Students will develop an understanding of assessment and classification systems, treatment programs, as well as evidence-based theories and approaches to the treatment of offenders. Finally, this course will consider how correctional programs should be implemented, monitored and evaluated.
Prerequisite: Sophomore Standing or Completion of CCJ 200 or CCJ 300.

CCJ 501 - Research (1-9)
(Credit to be arranged) Consent of instructor.

CCJ 502 - Independent Study (1-8)
(Credit to be arranged) Consent of instructor.

CCJ 503 - Thesis (1-9)
(Credit to be arranged)

CCJ 504 - Cooperative Education/Internship (1-9)
(Credit to be arranged) Supervised placement in a community criminal justice agency or on a criminal justice research project. Evaluations of students are completed by agency staff and/or University faculty. A minimum of 8 credits is required of CCJ majors. An additional 8 credits can be applied toward CCJ
elective credits required of majors. Required: senior status and consent of instructor.

CCJ 505 - Reading and Conference (1-6)
(Credit to be arranged) Consent of instructor.

CCJ 506 - Projects (1-12)
(Credit to be arranged) Consent of instructor.

CCJ 507 - Seminar (1-6)
(Credit to be arranged) Consent of instructor.

CCJ 508 - Workshop (1-8)
(Credit to be arranged) Consent of instructor.

CCJ 509 - Graduate Practicum (1-8)
(Credit to be arranged.)

CCJ 510 - Special Topics (1-8)
(Credit to be arranged) Pass/no pass option.

CCJ 511 - Historical Perspectives of Criminal Justice (3)
A chronological survey of significant social events and trends in Western and Eastern civilizations that have influenced crime and the development of law, the police, the courts, and corrections and have formed the interrelationships among these parts of the criminal justice system.

CCJ 512 - Institutions of the Criminal Justice System (3)
Introduces students to the complex relationship between the three formal institutions (police, courts, and corrections), how their agents work to achieve various goals, and the multifaceted impact of such efforts.

CCJ 513 - Professional Orientation in Criminology and Criminal Justice (3)
Designed for development of graduate-level writing proficiency and a general orientation to the discipline. Through lectures, discussion, workshops, and practical application students will refine grammar, conventions, organization, citations, and research expertise. Students will also be introduced to the Criminal Justice Department faculty and their particular research interests. Finally, the students will be oriented to the ways in which the discipline is organized and how specific sub-areas fit together.

CCJ 515 - Theories of Crime and Justice (3)
An overview of historical, sociological, biological, psychological, economic, and Marxist theories of crime causation. Particular attention is given to analyzing each theory presented in terms of its internal consistency and logic as well as its fit with data on crime, criminals, and victims. Students will have to test the effectiveness of these individual theories through the research literature available in the criminal justice literature. Policy and programmatic implications stemming from these theories and what the research literature indicates will be discussed in class.

Also offered as CCJ 615 and may be taken only once for credit.

CCJ 520 - Analysis of Crime and Justice Data (3)
An applied approach to the analysis of criminal justice data. Includes an overview of the collection, storage, and retrieval of data from various sources (e.g., police, courts, corrections). Basic techniques commonly used to analyze and present criminal justice data are covered with an emphasis on the use of empirical findings to solve problems and develop policy. Advanced statistical procedures introduced.

Also offered as CCJ 620 and may be taken only once for credit.

CCJ 521 - Advanced Regression in Criminology & Criminal Justice (3)
An applied approach designed to give you a comprehensive overview of the analysis of criminal justice data using some of the most commonly used regression techniques utilized by criminology and criminal justice researchers. This course introduces a number of useful statistical models that move beyond standard linear regression. Among the topics covered are logit and probit models for both binary and ordinal dependent variables, event count models, mixed models including HLM and panel models, factor analysis, and structural equation modeling in the context of CCJ data.

Prerequisite: CCJ 520.

CCJ 525 - Criminal Justice Theory (3)
This course introduces students to the theoretical work on criminal justice process, decision-making,
and discretion using multiple disciplinary perspectives. Topics discussed include examination of the stages of the justice process and theoretical approaches to studying individual, organizational, system, and political behavior. Emphasis is placed on the practical utilization of theory to inform development of research problems.

Also offered as CCJ 625 and may be taken only once for credit.

CCJ 530 - Criminal Justice Research (3)
The purpose of the course is to familiarize students with typical research methods used in the study of criminology and criminal justice along with their resulting databases. This knowledge base will be used as a foundation upon which to teach students how to critically research in criminology and criminal justice. Expected preparation: CCJ 520.

Also offered as CCJ 630 and may be taken only once for credit.

CCJ 535 - Criminal Justice Policy (3)
An advanced course in criminal justice policy analysis. Course examines the development, implementation, and outcomes of interventions designed to impact crime and the criminal justice system. Theories of criminal justice intervention will be studied across multiple levels: individual, organizational, community, and system. Emphasis is placed on the utilization of research findings to inform criminal justice policy and future research. Expected preparation: CCJ 520 and CCJ 530.

Also offered as CCJ 635 and may be taken only once for credit.

CCJ 540 - Legal Perspective of Criminal Justice (3)
An advanced course that examines the legal environment within which the criminal and quasi-criminal justice systems function, with particular emphasis on philosophical and procedural issues related to deprivation of liberty decisions.

Also offered as CCJ 640 and may be taken only once for credit.

CCJ 541 - Evidence Based Practices in Criminal Justice (4)
Analyzes the scientific and theoretical bases of effective criminal justice practices. Application of evidence-based principles and findings to address problems specific to policing, courts, corrections, juvenile justice, or crime prevention. May be repeated once.

Also offered as CCJ 641.

CCJ 545 - Advanced Topics in Research Methods (3)
Advanced training in select research methodologies practiced in criminology and criminal justice. Topics may include, but are not limited to; survey methods, field methods, advanced statistics, advanced crime analysis, content and document analysis, evaluation research, secondary data analysis, and interviews. Topics will vary yearly. May be repeated once.

Also offered as CCJ 645.

CCJ 546 - Contemporary Problems in Criminal Justice (4)
Critical analysis of contemporary criminal justice problems. Examines the effect of legal, structural, political and cultural factors on criminal justice responses to social problems. Topic of focus varies. May be repeated once.

Also offered as CCJ 646.

CCJ 552 - Crime, Space and Time (3)
Crime is a rare event, concentrating in both space, and time. In Crime, Space and Time, we will introduce, critically examine, and apply the criminological theories that help us to understand why crimes concentrate where and when they do. Designed for the beginning crime analyst, this course provides students with the theoretical foundations of spatial-temporal criminology needed in order to develop practical and applied skills within the field. Students will learn about the interconnections between spatial-temporal theories of crime, and applied crime analysis.

CCJ 555 - Crime Mapping (3)
Mapped information has become an important part of daily urban life. Maps are also increasingly used within policing environments to display and disseminate information about crime patterns, to identify crime concentrations, and to analyze existing or projected crime hotspots. In Crime Mapping, students will be introduced to spatial crime analysis and Geographic Information Systems (GIS). Students learn essential principles of cartography and geography, as these fields apply to crime analysis. Participants learn how to collect, clean, geocode, analyze and present spatial crime data.

CCJ 580 - Community-based Treatment of Offenders (3)
An analysis of the history, philosophy, theory, and function of probation, parole, pardon, halfway houses, work release centers, and other forms of
community-based treatment; evaluation of the effectiveness of treatment of the offender in the community; contemporary usage of the presentence investigation report, selection, supervision, and release of probationers and parolees; exploration of current innovations in corrections such as use of volunteers and offenders as correctional manpower resources.

**CCJ 601 - Research (1-9)**
(Credit to be arranged) Consent of instructor.

**CCJ 602 - Independent Study (1-8)**
(Credit to be arranged) Consent of instructor.

**CCJ 604 - Internship (1-9)**
(Credit to be arranged) Supervised placement in a community criminal justice agency or on a criminal justice research project. Evaluations of students are completed by agency staff and/or University faculty. A minimum of 8 credits is required of CCJ majors. An additional 8 credits can be applied toward CCJ elective credits required of majors. Required: senior status and consent of instructor.

**CCJ 605 - Reading and Conference (1-6)**
(Credit to be arranged) Consent of instructor.

**CCJ 606 - Projects (1-12)**
(Credit to be arranged) Consent of instructor.

**CCJ 607 - Seminar (1-6)**
(Credit to be arranged) Consent of instructor.

**CCJ 608 - Workshop (1-8)**
(Credit to be arranged) Consent of instructor.

**CCJ 609 - Graduate Practicum (1-8)**
(Credit to be arranged.)

**CCJ 610 - Special Topics (1-4)**
(Credit to be arranged.) Consent of instructor.

**CCJ 615 - Theories of Crime and Justice (3)**
An overview of historical, sociological, biological, psychological, economic, and Marxist theories of crime causation. Particular attention is given to analyzing each theory presented in terms of its internal consistency and logic as well as its fit with data on crime, criminals, and victims. Students will have to test the effectiveness of these individual theories through the research literature available in the criminal justice literature. Policy and programmatic implications stemming from these theories and what the research literature indicates will be discussed in class.

Also offered as CCJ 515 and may be taken only once for credit.

**CCJ 620 - Analysis of Crime and Justice Data (3)**
An applied approach to the analysis of criminal justice data. Includes an overview of the collection, storage, and retrieval of data from various sources (e.g., police, courts, corrections). Basic techniques commonly used to analyze and present criminal justice data are covered with an emphasis on the use of empirical findings to solve problems and develop policy. Advanced statistical procedures introduced.

Also offered as CCJ 520 and may be taken only once for credit.

**CCJ 625 - Criminal Justice Theory (3)**
This course introduces students to the theoretical work on criminal justice process, decision-making, and discretion using multiple disciplinary perspectives. Topics discussed include examination of the stages of the justice process and theoretical approaches to studying individual, organizational, system, and political behavior. Emphasis is placed on the practical utilization of theory to inform development of research problems.

Also offered as CCJ 525 and may be taken only once for credit.

**CCJ 630 - Criminal Justice Research (3)**
The purpose of the course is to familiarize students with typical research methods used in the study of criminology and criminal justice along with their resulting databases. This knowledge base will be used as a foundation upon which to teach students how to critically research in criminology and criminal justice. Expected preparation: CCJ 620.

Also offered as CCJ 530 and may be taken only once for credit.

**CCJ 635 - Criminal Justice Policy (3)**
An advanced course in criminal justice policy analysis. Course examines the development,
implementation, and outcomes of interventions designed to impact crime and the criminal justice system. Theories of criminal justice intervention will be studied across multiple levels: individual, organizational, community, and system. Emphasis is placed on the utilization of research findings to inform criminal justice policy and future research. Expected preparation: CCJ 620 and CCJ 630.

Also offered as CCJ 535 and may be taken only once for credit.

**CCJ 640 - Legal Perspective of Criminal Justice (3)**

An advanced course that examines the legal environment within which the criminal and quasi-criminal justice systems function, with particular emphasis on philosophical and procedural issues related to deprivation of liberty decisions.

Also offered as CCJ 540 and may be taken only once for credit.

**CCJ 641 - Evidence Based Practices in Criminal Justice (4)**

Analyzes the scientific and theoretical bases of effective criminal justice practices. Application of evidence-based principles and findings to address problems specific to policing, courts, corrections, juvenile justice, or crime prevention. May be repeated once.

Also offered as CCJ 541.

**CCJ 645 - Advanced Topics in Research Methods (3)**

Advanced training in select research methodologies practiced in criminology and criminal justice. Topics may include, but are not limited to; survey methods, field methods, advanced statistics, advanced crime analysis, content and document analysis, evaluation research, secondary data analysis, and interviews. Topics will vary yearly. May be repeated once.

Also offered as CCJ 545. Prerequisite: CCJ 520 and CCJ 530.

**CCJ 646 - Contemporary Problems in Criminal Justice (4)**

Critical analysis of contemporary criminal justice problems. Examines the effect of legal, structural, political and cultural factors on criminal justice responses to social problems. Topic of focus varies. May be repeated once.

Also offered as CCJ 546.

---

**CE - Civil & Environmental Engineering**

**CE 111 - Introduction to Civil and Environmental Engineering (3)**

Introduction to Civil and Environmental Engineering (CEE) through interaction with practicing professionals, upper class mentors, and professors in CEE. This course will consider the history, ethical concepts, sustainability issues, and communication in CEE. Lectures and laboratory. CBL course.

Corequisite: CE 111L.

**CE 111L - Introduction to Civil and Environmental Engineering Lab (0)**

Lab for CE 111.

Corequisite: CE 111.

**CE 112 - Civil and Environmental Engineering Computations (3)**

Computational techniques in Civil and Environmental Engineering. Development of mathematical techniques to solve engineering problems. Use of statistical and graphical techniques to present engineering data. Introduction to data visualization and computer programming techniques in engineering. Lectures and laboratory.

Corequisite: CE 112L.

**CE 112L - Civil and Environmental Engineering Computations Lab (0)**

Lab for CE 112.

Corequisite: CE 112.

**CE 115 - Civil Engineering Drawing and Spatial Analysis (3)**

The graphic language applied to civil engineering. Projection systems. Multiview and pictorial representation. Introduction to computer assisted drawing software, geographic information systems and spatial analysis. Lecture and laboratory.

Corequisite: CE 115L.

**CE 115L - Civil Engineering Drawing and Spatial Analysis Lab (0)**

Lab for CE 115.

Corequisite: CE 115.

**CE 199 - Special Studies (1-3)**

(Credit to be arranged.) Consent of instructor.

Corequisite: CE 199L.
CE 211 - Plane Surveying and Mapping (3)
An introductory analytical treatment of the principles of engineering measurements applied to plane surveys. Origin of datums, random error, observation systems, computations, nonrigorous adjustments, and topographic mapping. Computer applications.
Prerequisite: Mth 251. Corequisite: CE 212.

CE 212 - Field Problems in Plane Surveying (1)
CE 212: Care and operation of plane survey instruments. Field projects in testing instrumental adjustment and executing basic survey circuits. CE 213: Development and completion of a topographic map by field method. CE 214: Layout of a route design; adjustment of optical instruments. Elementary field astronomy. This is the first course in a sequence of three: CE 212, CE 213, and CE 214.
Prerequisite: CE 211 concurrently. Corequisite: CE 211.

CE 299 - Special Studies (1-12)
(Credit to be arranged.)

CE 315 - The Civil and Environmental Engineering Profession (1)
Introduction to civil and environmental engineering (CEE) practice in structural, environmental, geotechnical, and transportation engineering. Overview of education, training, research, and employment opportunities for each area of CEE. Engineering registration and ethics.
Prerequisite: junior standing in CEE.

CE 321 - CEE Properties of Materials (4)
Introduction to structure and properties of civil engineering materials such as steel, asphalt, cement, concrete, soil, wood and polymers. Laboratory tests include evaluation of behavior of these materials under a wide range of conditions. Lectures and laboratory.
Prerequisite: EAS 212. Corequisite: CE 321L.

CE 321L - Lab for CE 321 (0)
Lab for CE 321.
Corequisite: CE 321.

CE 324 - Elementary Structural Analysis (4)
Loads on structures as dictated in various codes and specification; load flow through a structural system and tributary areas; methods of analysis of statistically determinate planar trusses, beams, and frames; concepts of stability and indeterminacy; axial, shear, and bending moment; calculations of displacements and rotations by virtual work, Castigliano's theorem for trusses, beams and frames; computer analysis of structures using an existing commercial program.
Prerequisite: Completion of EAS 212 and Mth 261 with a C or better.

CE 325 - Indeterminate Structures (4)
Analysis of indeterminate structures by force and displacement methods; consistent deformations and the theorem of least work; slope deflection; moment distribution including sway; approximate methods.
Prerequisite: CE 324.

CE 341 - Soil Classification and Properties (4)
Determination and interpretation of significant engineering properties and behavior of soils; selected application in mechanics of foundations and earth structures. Three lectures; one 3-hour laboratory period.
Prerequisite: CE 321. Corequisite: CE 341L.

CE 341L - Soil Classification and Properties Lab (0)
Lab for CE 341 Soil Classification and Properties.
Corequisite: CE 341.

CE 345 - Environmental Soil Mechanics (2)
Introduction to the description, classification and significant engineering properties of soils for environmental majors. Emphasis on index properties, permeability and flow nets.
Prerequisite: EAS 212. Corequisite: CE 345L.

CE 345L - Environmental Soil Mechanics Lab (0)
Lab for CE 345.
Corequisite: CE 345.

CE 351 - Introduction to Transportation Engineering (4)
A study of engineering problems associated with the planning and design of urban and intercity transportation with emphasis on systems approach to problem definition and solution. Vehicle operational characteristics and traffic control devices for land, air, and water, data collection methods and development of transportation models for the establishment of design criteria for transportation structures.
Prerequisite: Stat 451 and junior standing in engineering.
CE 361 - Fluid Mechanics (4)
Properties of fluid; fluid statics; fluid dynamics; control volume and Reynolds transport theorem; conservation of mass, momentum and energy; differential analysis; rotational and irrotational flows, non-viscous and viscous flows, Navier-Stokes equations. 3 units lecture and 1 unit laboratory.
Prerequisite: EAS 215 and Mth 256. Corequisite: CE 361L.

CE 361L - Fluid Mechanics Lab (0)
Lab for CE 361 Fluid Mechanics.
Corequisite: CE 361.

CE 362 - Engineering Hydraulics (4)
Application of the principles of fluid mechanics to flow in closed conduits, turbomachinery and open channels. Topics include flow resistance, laminar and turbulent flow and introduction to boundary layer theory; flow in pressurized closed conduits including pipes in series and parallel; turbomachinery including pump systems and turbines; uniform and non-uniform flow in open channels, gradually and rapid varied flow; dimensional analysis and similarity. 3 units lecture and 1 unit laboratory.
Prerequisite: CE 361. Corequisite: CE 362L.

CE 362L - Hydraulics Lab (0)
Lab for CE 362 Hydraulics.

CE 364 - Water Resources Engineering (4)
Principles of hydrology and hydraulic engineering applied to water supply systems design. Collection and distribution, pump stations, water quality and treatment, economic considerations.
Prerequisite: CE 362.

CE 371 - Environmental Engineering (4)
Prerequisite: Ch 222, Ch 228, and CE 361L.

CE 399 - Special Studies (1-6)
(Credit to be arranged.)

CE 399L - Special Studies Lab (0)
Special studies lab. (Credit to be arranged.)

CE 401 - Research (1-6)
(Credit to be arranged.) Consent of instructor.

CE 403 - Honors Thesis (1-4)
(Credit to be arranged.) Consent of instructor.

CE 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.) Consent of instructor.

CE 405 - Reading and Conference (1-6)
(Credit to be arranged.) Consent of instructor.

CE 406 - Special Projects (1-6)
(Credit to be arranged.) Consent of instructor.

CE 407 - Seminar (1-6)
(Credit to be arranged.) Consent of instructor. Up to 3 credits of Seminar courses are allowed; further seminars must be approved by the Department prior to registration.

CE 410 - Selected Topics (0-6)
(Credit to be arranged.) Consent of instructor.

CE 411 - Law & Civil/Environmental Engineering (4)
Overview of legal issues relevant to civil and environmental engineers, including contract law, environmental law, professional liability/negligence, and property law. This course will consider legal decisions, statutes and administrative rules, and case studies relevant to the practice of civil and environmental engineering.
Also offered for graduate-level credit as CE 511 and may be taken only once for credit. Prerequisite: Senior-standing in BSCE, BSENVE, or CEEV.

CE 412 - Sustainability in Civil & Environmental Engineering Seminar (1)
This course features seminar speakers discussing sustainable practices in the broad discipline of
### CE 414 - Transportation Seminar (1)
This weekly seminar features a different speaker each week covering various topics in transportation research and practice. The topics cover all modes of transportation, with a focus on current practice. This course may be taken for credit up to three times.

Also offered for graduate-level credit as CE 514.

Cross-listed as: This is the same course as USP 414.

### CE 416 - Forensic Structural Engineering (2)
Application of engineering principles to investigate failures and performance problems of structures; case studies and examples of actual structural failures.

Also offered for graduate-level credit as CE 516 and may be taken only once for credit. Prerequisite: CE 434 and CE 432 and CE 437.

### CE 417 - Timber Design (4)
Design of solid and glued-laminated beams, columns and arches; shear walls and diaphragms; connections; design provisions for wind and seismic forces.

Also offered for graduate-level credit as CE 517 and may be taken only once for credit. Prerequisite: CE 325.

### CE 419 - Bridge Engineering (4)
Introduction to analysis and design of short to medium span highway bridges, including load descriptions, analysis and design procedures outlined in AASHTO Load Resistance Factor Design specifications.

Also offered for graduate-level credit as CE 519 and may be taken only once for credit. Prerequisite: CE 325.

### CE 423 - Vibration Analysis in Structural Engineering (4)
Fundamentals of vibration theory; applications in structural engineering. Free, forced, and transient vibration of single and multi-degrees of freedom systems including damping, normal modes, coupling, and normal coordinates.

Also offered for graduate-level credit as CE 523 and may be taken only once for credit. Prerequisite: EAS 212 and Mth 261.

### CE 431 - Stability of Structures (4)
Study of elastic and inelastic flexural buckling of bars and frames; use of energy methods and successive approximations; bracing of columns and frames; torsional, lateral-torsional, and local buckling.

Also offered for graduate-level credit as CE 531 and may be taken only once for credit. Prerequisite: CE 432, Mth 261 or equivalent.

### CE 432 - Structural Steel Design (4)
Design of components of steel structures based on allowable strength design and load and resistance factor design methods.

Also offered for graduate-level credit as CE 532 and may be taken only once for credit. Prerequisite: CE 321 and CE 325.

### CE 433 - Cold-Formed Steel Design (4)
Design of cold-formed steel beams, columns, beam-columns, cylindrical tubular members, and connections based on the Allowable Stress Design (ASD) and the Load and Resistance Factor Design (LRFD) methods of the AISI specification.

Also offered for graduate-level credit as CE 533 and may be taken only once for credit. Prerequisite: CE 432.

### CE 434 - Principles of Reinforced Concrete (4)
Loads, load factors and structural safety, ultimate strength analysis; short column behavior, design of simple and continuous beams; one-way slabs; serviceability and detailing requirements with reference to current codes.

Prerequisite: CE 321 and CE 325.

### CE 435 - Design of Reinforced Concrete Structures (4)
Development and splicing of reinforcement; design of long columns, retaining walls, footings, and slabs with reference to current codes; lateral loads; laboratory demonstration of beam and column behavior.

Also offered for graduate-level credit as CE 535 and may be taken only once for credit. Prerequisite: CE 434.

### CE 436 - Masonry Design (3)
Materials of construction; design of masonry elements, lateral load resisting systems, and connections with reference to current codes.

Also offered for graduate-level credit as CE 536 and may be taken only once for credit. Prerequisite: CE 434.
CE 438 - Design of Composite Structures (4)
Design of composite steel-concrete members based on allowable stress design and load and resistance factor design methods.
Also offered for graduate-level credit as CE 538 and may be taken only once for credit. Prerequisite: CE 432.

CE 440 - Geosynthetics in Infrastructure Engineering (2)
Testing and design with polymer-based geosynthetic products in and on soil for the civil infrastructure. Strength-based design applications are introduced with design-by-function principles, and product approval for transportation, structural, and geotechnical disciplines. Use of geotextiles, geogrids, and geo-composites in slopes, mechanically stabilized earth retaining walls, pavement subgrades, and overlays.
Also offered for graduate-level credit as CE 540 and may be taken only once for credit. Prerequisite: CE 444.

CE 442 - In Situ Behavior and Testing of Soils (4)
Introduction to field behavior of soils related to engineering properties; site investigation procedures and in situ testing. Development of fundamental analytical solution techniques for engineering with soil, the use and limitations of elasticity assumptions. Three lectures, one 3-hour laboratory period.
Also offered for graduate-level credit as CE 542 and may be taken only once for credit. Prerequisite: CE 341.

CE 443 - Introduction to Geotechnical Earthquake Engineering (4)
This course introduces basics of geotechnical earthquake engineering. Topics include earthquake characteristics, attenuation relationships, fundamentals of soil liquefaction, semi-empirical procedures for liquefaction triggering assessment for cohesionless soils, consequences of liquefaction, cyclic softening of cohesive soils, liquefaction mitigation techniques, and current research on liquefaction modeling.
Also offered for graduate-level credit as CE 543 and may be taken only once for credit. Prerequisite: CE 341.

CE 444 - Geotechnical Design (4)
Effect of soil conditions upon the behavior and choice of type of foundation; study of earth pressure theories; design of foundations and earth-retaining structures.
CE 454 - Urban Transportation Systems (4)
Urban street patterns and transportation demand, highway capacity analysis, process of urban transport planning, travel-demand forecasting and its application to traffic studies. Development of transport models, multiple regression analysis, models of land use and trip generations, stochastic trip distribution models, applications and case studies. Route assignment analysis and traffic flow theory.
Prerequisite: CE 351.

CE 458 - Public Transportation Systems (4)
Performance characteristics of public transportation systems, with emphasis on urban systems. Planning, design, and operational issues related to public transportation systems. Emerging technologies. Expected preparation: CE 454.
Also offered for graduate-level credit as CE 558 and may be taken only once for credit. Prerequisite: CE 351.

CE 459 - Transportation Operations (4)
Operation, modeling, and control of unscheduled and scheduled transportation modes; elementary traffic flow concepts; flow, density and speed; scheduling; route and bottleneck capacities; networks; data interpretation; analysis techniques; diagrams; simulation queuing; optimization. Expected preparation: CE 454.
Also offered for graduate-level credit as CE 559 and may be taken only once for credit. Prerequisite: CE 351.

CE 462 - Traffic Engineering Applications and Signal Timing (4)
Theory and practice of traffic signal timing. Focuses on terms associated with signal timing, relating practice in the field with analysis completed using the Highway Capacity Manual and other traffic engineering software. A significant portion of the class is focused on applications, specifically focused on multimodal applications.
Also offered for graduate-level credit as CE 562 and may be taken only once for credit. Prerequisite: CE 351.

CE 469 - Subsurface Hydrology (4)
Basic principles of aqueous flow in the subsurface, emphasizing the importance of groundwater as a resource. Hydrologic cycle, history of groundwater usage, aquifer classification and properties, Darcy’s experiments and Law, hydraulic head and potential, porosity and permeability, transmissivity and storativity, heterogeneity and anisotropy, saturated vs. unsaturated subsurface flow, and hydraulics of pumping wells (drawdown, flow in confined and unconfined aquifers, steady-state vs. transient flow, slug tests, and aquifer-test design).
Also offered for graduate-level credit as CE 569 and may be taken only once for credit. Prerequisite: Senior standing.

CE 474 - Unit Operations of Environmental Engineering (4)
Unit operations of water and wastewater treatment; pretreatment; sedimentation, filtration, aeration, disinfection, sludge treatment and disposal, advanced waste-water treatment processes.
Also offered for graduate-level credit as CE 574 and may be taken only once for credit. Prerequisite: CE 371 or CE 487 or CH 223.

CE 479 - Fate and Transport of Toxics in the Environment (4)
Chemical, physical, and biological principles that govern the behavior of toxic materials such as heavy metals and synthetic organic compounds in the environment. Course emphasizes practical ways to represent chemical processes in models of pollutant behavior. Topics include: adsorption of pollutants on soils and sediments; transport across sediment-water and air-water interfaces; bioamplification of pollutants; multiphase fugacity models of organics; case studies of contaminated surface water, sediment and groundwater. This course is the same as ESM 479 and may be taken only once for credit.
Also offered for graduate-level credit as CE 579 and may be taken only once for credit. Prerequisite: Senior standing. Cross-Listed as: ESM 479.

CE 480 - Chemistry of Environmental Toxins (4)
The fate and transport-related behavior of toxic compounds in the environment. Classification, nomenclature, examples of anthropogenic compounds, and case studies. Introducing the physical and chemical processes associated with air-water exchange, organic-liquid exchange, sorption processes, chemical transformations, and bioaccumulation. Expected preparation: Ch 222.
Also offered for graduate-level credit as CE 580 and may be taken only once for credit. Prerequisite: Ch 221.

CE 481 - The Columbia River as a System (2)
Explores the climate and hydrologic processes that shape the Columbia River basin ecosystem, and relates these processes to the basin’s management context. The geographic scope includes the watershed, the mainstem and its reservoirs, major tributaries, the tidal river below Bonneville Dam, the
estuary, the Columbia plume, and coastal waters that interact with the plume. Lectures and outside speakers will present or discuss vital issues in contemporary Columbia Basin management, along with relevant background information. Expected preparation: CE 361 and CE 371.

Also offered for graduate-level credit as CE 581 and may be taken only once for credit. Prerequisite: Junior standing.

**CE 482 - Introduction to Sediment Transport (4)**

Fundamentals of sediment transport in natural surface waters. Analysis of the governing equations of mass, momentum, and sediment conservation. Covers bedload and suspended material transport in riverine and estuarine waters, focusing on non-cohesive materials. Cohesive material transport will be briefly introduced.

Also offered for graduate-level credit as CE 582 and may be taken only once for credit. Prerequisite: CE 361 and CE 371.

**CE 483 - Estuarine Circulation (4)**

Introduction to the physical processes that govern estuarine and buoyant plume circulation. These include tides, density-driven circulation, internal tidal asymmetry and frontal propagation. Expected preparation: CE 576.

Also offered for graduate-level credit as CE 583 and may be taken only once for credit. Prerequisite: CE 361 and CE 371.

**CE 484 - Civil & Environmental Engineering Project Management and Design I (3)**

Engineering design process including owner design, professional-constructor relationships, procurement procedures, project evolution, contracts, dispute resolution, bonds, warranties; construction documents, including specifications; cost estimating, planning, and scheduling; construction administration; group process, diversity, and leadership. Two lectures, one 3-hour design project laboratory period. CBL course.

Prerequisite: CE students: Completion of, at minimum, two of the following courses: CE 364, CE 450 (or CE 458, or CE 459, or CE 462, or CE 493), CE 432 (or CE 434), CE 444; ENVE students: Completion of, at minimum, two of the following: CE 474, CE 345, CE 364. Corequisite: CE 484L.

**CE 484L - Civil Engineering Project Management and Design I Lab (0)**

Lab for CE 484 Civil Engineering Project Management and Design I.

Corequisite: CE 484.

**CE 485 - Environmental Cleanup and Restoration (4)**

Survey of procedures for evaluating risks posed by hazardous waste sites and the cleanup steps that lead to an acceptable restoration of such sites. Topics include U.S. environmental law and regulation, site investigations, risk assessment, and a focus on actual case studies, many in Portland and the Pacific Northwest.

Also offered for graduate-level credit as CE 585 and may be taken only once for credit. Prerequisite: Junior standing.

**CE 486 - Environmental Chemistry (4)**

Survey of chemical aspects of major environmental issues: stratospheric ozone holes and chlorofluorocarbons; air pollution; global climate change; fossil fuel energy/"carbon footprint"; renewable energy; nuclear energy/radioactivity; toxic chemicals (pesticides, PCBs); endocrine disruptors; surfactants, chemical dispersants/oil spills; biodegradability of chemicals; chemistry of natural waters/acid rain; toxic heavy metals. This is the same course as Ch 486 and can be taken only once for credit.

Also offered for graduate-level credit as CE 586 and may be taken only once for credit. Prerequisite: CE 371, or Ch 334 or Ch 331 with a grade of "C-" or higher. Cross-Listed as: Ch 486.

**CE 487 - Aquatic Chemistry (4)**

Aqueous chemistry in natural waters: simple-to-complex acid/base chemistry; titration curves; buffer strength; acid/base chemistry of carbon dioxide in open and closed systems; alkalinity as system variable (blood); mineral dissolution/precipitation (metal carbonates); redox chemistry: pH, redox succession/organic loading/dissolved oxygen loss, nitrate reduction, iron oxide dissolution, hydrogen sulfide production, methane formation. This is the same course as Ch 487 and can be taken only once for credit.

Also offered for graduate-level credit as CE 587 and may be taken only once for credit. Prerequisite: CE 371 or Ch 223 with a "C-" or better. Cross-Listed as: Ch 487.

**CE 488 - Air Quality (4)**

An overview of urban air quality issues facing cities in the US and globally. Examine effects of air pollution on public health and environment, as well as technologies and regulatory practices. Review pollution measurement and modeling techniques. Expected preparation: CE 371.
Also offered for graduate-level credit as CE 588 and may be taken only once for credit. Prerequisite: Junior standing. Cross-Listed as: ESM 460.

**CE 489 - Introduction to Advanced Environmental Fluid Mechanics (4)**

Advanced introduction to the geophysical fluid flows, including properties of seawater; conservation of mass, energy and momentum; dimensional analysis; the Navier-Stokes, Reynolds and turbulent kinetic energy equations; geostrophy and potential vorticity; long and short waves; and turbulence and boundary layers. Lecture and laboratory.

Also offered for graduate-level credit as CE 589 and may be taken only once for credit. Prerequisite: EAS 215, Mth 256, CE 361, CE 362. Corequisite: CE 489L.

**CE 489L - Lab for CE 489 (0)**

Lab for CE 489.

Corequisite: CE 489.

**CE 490 - Soil and Groundwater Restoration (4)**

Methods for restoring contaminated soil and groundwater; Factors and processes influencing the efficacy of remediation systems. Emphasis is on the scientific principles upon which soil and groundwater remediation is based. Containment, pump and treat, cosolvents and surfactants, soil venting, in-situ physical and chemical treatment.

Also offered for graduate-level credit as CE 590 and may be taken only once for credit. Prerequisite: Senior standing.

**CE 493 - Design and Operation of Bicycle and Pedestrian Infrastructure (4)**

Design and operational concepts in the engineering design of bicycle and pedestrian infrastructure. Course covers on-road and shared path locations. Specific topics include design details of bikeways, basic geometric design, intersection and signalization considerations, and ADA requirements supporting non-motorized modes.

Also offered for graduate credit as CE 593 and may be taken only once for credit. Prerequisite: CE 351 with a grade of C- or higher.

**CE 494 - Civil & Environmental Engineering Project Management and Design II (3)**

Synthesis of civil engineering specialties in a diverse multi-disciplinary project. Teamwork approach in design of components and systems to meet stated objectives. Consideration of alternative solutions, methods, and products including constraints such as economic factors, safety, reliability, and ethics.

Preparation of design documents, including: memoranda, computations, drawings, cost estimates, specifications, bidding materials; written and oral presentations. Two lectures, one 3-hour design project laboratory period. CBL course.

Prerequisite: CE 484. Corequisite: CE 494L.

**CE 494L - Civil Engineering Project Management and Design II Lab (0)**

Lab for CE 494 Civil Engineering Project Management and Design II.

Corequisite: CE 494.

**CE 495 - Sustainable Transportation in the Netherlands (5)**

Introduction to transportation engineering and planning applications in the Netherlands, focusing on pedestrian, bicycle and public transport. Contrasts between U.S. and Dutch engineering principles, policies and standards. Design principles and practice will be explored through field trips and guest lectures while abroad and in Portland. Faculty led study abroad course.

Also offered for graduate-level credit as CE 595 and may be taken only once for credit. Prerequisite: Minimum GPA 3.0, senior status or graduate level from all disciplines and majors.

**CE 497 - Transportation & Health (4)**

Introduction to the linkages between transportation investments, public policy, and behaviors and various related public and individual health outcomes. Content is divided into four modules covering: a) healthy behaviors, b) exposure to unsafe conditions, c) disaster relief/emergency response and d) integration into practice/health impact analyses.

Prerequisite: CE 351.

**CE 501 - Research (1-9)**

(Credit to be arranged.) Consent of instructor.

**CE 503 - Thesis (1-9)**

(Credit to be arranged.) Consent of instructor.

**CE 504 - Cooperative Education/internship (1-9)**

(Credit to be arranged.) Consent of instructor.

**CE 505 - Reading and Conference (1-6)**

(Credit to be arranged.) Consent of instructor.
CE 506 - Special Projects (1-9)
(Credit to be arranged.) Consent of instructor.

CE 507 - Seminar (1-6)
(Credit to be arranged.) Consent of instructor.

CE 510 - Selected Topics (0-6)
(Credit to be arranged.) Consent of instructor.

CE 511 - Law & Civil/Environmental Engineering (4)
Overview of legal issues relevant to civil and environmental engineers, including contract law, environmental law, professional liability/negligence, and property law. This course will consider legal decisions, statutes and administrative rules, and case studies relevant to the practice of civil and environmental engineering.
Also offered for undergraduate-level credit as CE 411 and may be taken only once for credit. Prerequisite: Graduate-standing.

CE 512 - Sustainability in Civil & Environmental Engineering Seminar (1)
This course features seminar speakers discussing sustainable practices in the broad discipline of engineering, and optimal collaborations in pursuit of that goal. Examples topics include green building design for zero net energy, urban heat management and minimization, “green vs. “gray” in waste water treatment, and feasibility of energy from biomass.
Also offered for undergraduate-level credit as CE 412. Prerequisite: CE 362 or CE 341 or CE 464 or CE 325.

CE 514 - Transportation Seminar (1)
This weekly seminar features a different speaker each week covering various topics in transportation research and practice. The topics cover all modes of transportation, with a focus on current practice. This course may be taken for credit up to three times.
Also offered for undergraduate-level credit as CE 414. Cross-Listed as: This is the same course as USP 514.

CE 516 - Forensic Structural Engineering (2)
Application of engineering principles to investigate failures and performance problems of structures; case studies and examples of actual structural failures.

CE 517 - Timber Design (4)
Design of solid and glued-laminated beams, columns and arches; shear walls and diaphragms; connections; design provisions for wind and seismic forces.
Also offered for undergraduate-level credit as CE 417 and may be taken only once for credit. Prerequisite: CE 325.

CE 518 - Prestressed Concrete Design (4)
Analysis and design of components of prestressed concrete structures with reference to current codes.
Also offered as CE 618 and may be taken only once for credit. Prerequisite: CE 435/535.

CE 519 - Bridge Engineering (4)
Introduction to analysis and design of short to medium span highway bridges, including load descriptions, analysis and design procedures outlined in AASHTO Load Resistance Factor Design specifications.
Also offered for undergraduate-level credit as CE 419 and may be taken only once for credit. Prerequisite: CE 325.

CE 523 - Vibration Analysis in Structural Engineering (4)
Fundamentals of vibration theory; applications in structural engineering. Free, forced, and transient vibration of single and multi-degrees of freedom systems including damping, normal modes, coupling, and normal coordinates.
Also offered for undergraduate-level credit as CE 423 and may be taken only once for credit. Prerequisite: CE 421 and Mth 261.

CE 524 - Matrix and Computer Methods in Structural Analysis (4)
Fundamental concepts of analysis for statically determinate and indeterminate structures utilizing matrices and computers; displacement and force methods applied to trusses and rigid frames; techniques for the analysis of large complex structures for static and dynamic loads. This is the first course in a sequence of two: CE 524 and CE 525.
Also offered as CE 624 and may be taken only once for credit. Prerequisite: CE 325.

CE 526 - Theory of Plates (4)
Small and large deformation theories of thin plates; numerical and energy methods; free vibrations.
Also offered as CE 626 and may be taken only once for credit. Prerequisite: Mth 256.

**CE 529 - Structural Dynamics (4)**

Also offered as CE 629 and may be taken only once for credit. Prerequisite: CE 423/523.

**CE 531 - Stability of Structures (4)**
Study of elastic and inelastic flexural buckling of bars and frames; use of energy methods and successive approximations; bracing of columns and frames; torsional, lateral-torsional, and local buckling.

Also offered for undergraduate-level credit as CE 431 and may be taken only once for credit. Prerequisite: CE 432/532, Mth 261 or equivalent.

**CE 532 - Structural Steel Design (4)**
Design of components of steel structures based on allowable strength design and load and resistance factor design methods.

Also offered for undergraduate-level credit as CE 432 and may be taken only once for credit.

**CE 533 - Cold-Formed Steel Design (4)**
Design of cold-formed steel beams, columns, beam-columns, cylindrical tubular members, and connections based on the Allowable Stress Design (ASD) and the Load and Resistance Factor Design (LRFD) methods of the AISI specification.

Also offered for undergraduate-level credit as CE 433 and may be taken only once for credit. Prerequisite: CE 432/532.

**CE 534 - Advanced Reinforced Concrete Design (3)**
Design of spandrel beams, slabs on beams, shear walls, deep beams, corbels, and other components of reinforced concrete structures with reference to current codes.

Also offered as CE 634 and may be taken only once for credit. Prerequisite: CE 435.

**CE 535 - Design of Reinforced Concrete Structures (4)**
Development and splicing of reinforcement; design of long columns, retaining walls, footings, and slabs with reference to current codes; lateral loads; laboratory demonstration of beam and column behavior.

Also offered for undergraduate-level credit as CE 435 and may be taken only once for credit. Prerequisite: CE 434.

**CE 536 - Masonry Design (3)**
Materials of construction; design of masonry elements, lateral load resisting systems, and connections with reference to current codes.

Also offered for undergraduate-level credit as CE 436 and may be taken only once for credit. Prerequisite: CE 434.

**CE 537 - Earthquake Engineering (4)**
Response of structures to ground motions; determination and use of response spectra; seismic design criteria and provisions for buildings and other structures; and review of current practices for earthquake resistant design.

Also offered as CE 637 and may be taken only once for credit. Prerequisite: CE 529/629.

**CE 538 - Design of Composite Structures (4)**
Design of composite steel-concrete members based on allowable stress design and load and resistance factor design methods.

Also offered for undergraduate-level credit as CE 438 and may be taken only once for credit. Prerequisite: CE 432/532.

**CE 539 - Advanced Steel Design (4)**
Analysis and design of metal structures including connections, plate girders, design loads, structural systems, and bracing.

Also offered as CE 639 and may be taken only once for credit. Prerequisite: CE 432 or CE 532.

**CE 540 - Geosynthetics in Infrastructure Engineering (2)**
Testing and design with polymer-based geosynthetic products in and on soil for the civil infrastructure. Strength-based design applications are introduced with design-by-function principles, and product approval for transportation, structural, and geotechnical disciplines. Use of geotextiles, geogrids, and geo-composites in slopes, mechanically stabilized earth retaining walls, pavement subgrades, and overlays.

Also offered for undergraduate-level credit as CE 440 and may be taken only once for credit. Prerequisite: CE 444.
CE 541 - Advanced Soil Mechanics (4)
Study of the advanced principles of soil behavior related to stress-strain, shear strength, permeability, and consolidation.
Also offered as CE 641 and may be taken only once for credit. Prerequisite: CE 341 or graduate standing.
CE 542 - In Situ Behavior and Testing of Soils (4)
Introduction to field behavior of soils related to engineering properties; site investigation procedures and in situ testing. Development of fundamental analytical solution techniques for engineering with soil, the use and limitations of elasticity assumptions. Three lectures, one 3-hour laboratory period.
Also offered for undergraduate-level credit as CE 442 and may be taken only once for credit. Prerequisite: CE 341.
CE 543 - Introduction To Geotechnical Earthquake Engineering (4)
Introduces basics of geotechnical earthquake engineering. Topics include earthquake characteristics, attenuation relationships, fundamentals of soil liquefaction, semi-empirical procedures for liquefaction triggering assessment for cohesionless soils, consequences of liquefaction, cyclic softening of cohesive soils, liquefaction mitigation techniques, and current research on liquefaction modeling.
Also offered for undergraduate-level credit as CE 443 and may be taken only once for credit. Prerequisite: Graduate standing.
CE 544 - Advanced Shallow Foundation Design (4)
Advanced topics in settlement and bearing capacity analysis of shallow foundation; application of numerical schemes to foundation design.
Also offered as CE 644 and may be taken only once for credit. Prerequisite: CE 444.
CE 545 - Geo-environmental Engineering with Geosynthetics (2)
Application of polymer-based geosynthetic products for geo-environmental and municipal engineering including landfills, soil erosion control, filters, and drains. Testing, design, and product selection for hydraulic, degradation, and chemical stability properties. Introduction to reliability, endurance, and design life with reference to RCRA, ESA, and EPA laws.
Also offered for undergraduate-level credit as CE 445 and may be taken only once for credit. Prerequisite: CE 341.
CE 546 - Numerical Methods in Soil-Structure Interaction (4)
Application of finite difference and finite element methods to the solution of soil-structure problems, stability of soil masses and foundation installation. Use of commercial computer programs in working applied problems.
Also offered as CE 646 and may be taken only once for credit. Prerequisite: CE 444.
CE 547 - Slope Stability Analysis (4)
Covers soil strength as it relates to slope stability (drained strength, undrained strength, residual strength), principles of slope stability analysis and applications to natural and man-made slopes, available instrumentation to monitor slope stability, and methods to mitigate or increase the factor of safety of marginal slopes.
Also offered for undergraduate-level credit as CE 447 and may be taken only once for credit. Prerequisite: Graduate standing.
CE 548 - Geotechnical Case Studies (4)
Provides exposure to many different aspects of geotechnical engineering practice through a wide range of project case studies presented by local, practicing geotechnical engineers. The case studies will illustrate how to identify important site parameters within the site data and how these parameters might affect the project design.
Also offered for undergraduate-level credit as CE 448 and may be taken only once for credit. Prerequisite: Graduate standing.
CE 549 - Deep Foundation Design and Analysis (4)
Comprehensive study of both driven and augered pile foundations, including concrete, steel, and timber. In-depth review of design methods for axial and lateral capacity. Special emphasis on the differences between driven piles and drilled shafts, including the role of full-scale load testing in the semi-empirical methods. Introduction to group theory in elasticity and plasticity.
Also offered as CE 649 and may be taken only once for credit. Prerequisite: CE 444.
CE 550 - Transportation Safety Analysis (4)
Incorporating safety in highway engineering and transportation planning that includes highway design, operation, and maintenance, as well as human
factors, statistical analysis, traffic control and public policy. Design concepts of intersections, interchanges, signals, signs and pavement markings; analyzing data sets for recommendations and prioritization; principles of driver and vehicle characteristics in relation to the roadway.

Also offered for undergraduate-level credit as CE450 and may be taken only once for credit. Prerequisite: CE 351.

CE 553 - Freight Transportation and Logistics (4)
Study of freight transportation and logistics systems and their modeling, planning, design and operation. Focus on urban freight and city logistics and their connections to planning, land use, and urban design. Discussion and analysis of the impacts of freight and logistics on the transportation system and the economy, equity, emissions, and sustainability. Roles of public and private actors in freight/logistics systems.

Prerequisite: Graduate standing.

CE 554 - Introduction to Multimodal Transportation Engineering Data Analysis (4)
An introduction to multimodal transportation engineering data sets through applied analysis and visualization techniques. Includes an overview of data types, techniques for graphical analysis of data, and exposure to common software and statistical tools and visualizations in transportation engineering.

Prerequisite: graduate admission in Civil and Environmental Engineering.

CE 558 - Public Transportation Systems (4)
Performance characteristics of public transportation systems, with emphasis on urban systems. Planning, design, and operational issues related to public transportation systems. Emerging technologies.

Also offered for undergraduate-level credit as CE458 and may be taken only once for credit. Prerequisite: CE 351. CE 454 recommended.

CE 559 - Transportation Operations (4)
Operation, modeling, and control of unscheduled and scheduled transportation modes; elementary traffic flow concepts; flow, density and speed; scheduling; route and bottleneck capacities; networks; data interpretation; analysis techniques; diagrams; simulation queuing; optimization.

Also offered for undergraduate-level credit as CE459 and may be taken only once for credit. Prerequisite: CE 351. CE 454 recommended.

CE 561 - Water Resource Systems Analysis (4)
A development of quantitative techniques used in the analysis of water resource systems for planning, design and operation. Emphasis is placed on the physical, legal and economic aspects and their incorporation into simulation models. Applications include reservoir systems for water supply and hydropower, irrigation planning and operation, and water quality management.

Also offered as CE 661 and may be taken only once for credit.

CE 562 - Traffic Engineering Applications and Signal Timing (4)
Theory and practice of traffic signal timing. Focuses on terms associated with signal timing, relating practice in the field with analysis completed using the Highway Capacity Manual and other traffic engineering software. A significant portion of the class is focused on applications, specifically focused on multimodal applications.

Also offered for undergraduate-level credit as CE 462 and may be taken only once for credit. Prerequisite: CE 351.

CE 563 - Transportation and Logistics Optimization and Modeling (4)
Introduces students to mathematical modeling techniques including linear and non-linear programming, duality, Lagrangian, quadratic and geometric models, integer programming, basic network models and their application to transportation and logistics systems/problems. The focus is on model formulation, complexity analysis, and the utilization of software to obtain solutions and analyze system properties. The concepts taught in this course focus on civil engineering systems/applications with an emphasis on transportation and logistics problems.

Prerequisite: Graduate standing.

CE 565 - Watershed Hydrology (4)
Study of the movement and storage of water in watersheds, emphasizing physical processes. Includes systems analysis of watersheds, precipitation, snowmelt, infiltration, evapotranspiration, groundwater flow, streamflow generation, open channel flow, hydrograph analysis, and an introduction to watershed hydrological modeling.

Prerequisite: Mth 252, Ph 201, Stat 244; recommended: ESR 320 and/or an undergraduate course. Cross-Listed as: This is the same course as ESM 525 and may be taken only once for credit.
**CE 566 - Environmental Data Analysis (4)**

Application of probabilistic and statistical models to the description of environmental data with a focus on hydrology and water quality. Graphical and quantitative techniques of exploratory data analysis, selection and fitting of appropriate probability distributions, simple and multiple and multivariate regression and their applications to analysis and modeling, and detection of changes and trends in environmental time series. This is the same course as ESM 566 and may be taken only once for credit.

Also offered as CE 666 and may be taken only once for credit. Prerequisite: graduate standing and Stat 243 and 244 or Stat 460. Cross-Listed as: ESM 566.

**CE 568 - Advanced Methods in Hydrologic System Analysis (4)**

Principles in analysis of dynamic systems with specific emphasis on hydrologic model building. Variety of techniques in hydrologic system analysis with mathematical formulation, development and use of computer-based models for solving scientific and engineering problems are discussed. Among the topics presented will be the discussion of optimization theory, artificial intelligence, model calibration (parameter estimation), ensemble (probabilistic) forecasting, data assimilation and uncertainty analysis. Recommended prerequisites: CE 465/565 or similar course.

Also offered as CE 668 and may be taken only once for credit.

**CE 569 - Subsurface Hydrology (4)**

Basic principles of aqueous flow in the subsurface, emphasizing the importance of groundwater as a resource. Hydrologic cycle, history of groundwater usage, aquifer classification and properties, Darcy’s experiments and Law, hydraulic head and potential, porosity and permeability, transmissivity and storativity, heterogeneity and anisotropy, saturated vs. unsaturated subsurface flow, and hydraulic of pumping wells (drawdown, flow in confined and unconfined aquifers, steady-state vs. transient flow, slug tests, and aquifer-test design).

Also offered for undergraduate-level credit as CE 469 and may be taken only once for credit.

**CE 571 - Subsurface Contaminant Transport (4)**

Principles associated with the transport and fate of contaminants in subsurface systems. Complex, heterogeneous factors and processes (both physical and geochemical) influencing contaminant transport. Emphasis on the impact of these processes on contaminant fate across the multitude of scales in the subsurface. Case studies linking theory and measured/observed transport behavior.

Prerequisite: graduate standing. Also offered as CE 671 and may be taken only once for credit.

**CE 572 - Environmental Fluid Mechanical Transport (4)**

Introduction to the basic physical processes which transport pollutants in natural waters (rivers, lakes, reservoirs, estuaries); mathematical formulations of heat and mass advective and diffusive transport; descriptions of molecular diffusion, turbulent diffusion, and dispersion. Use of predictive mathematical models as a basis for water and air quality management.

Also offered as CE 672 and may be taken only once for credit. Prerequisite: CE 361 and CE 371.

**CE 573 - Numerical Methods in Environmental and Water Resources Engineering (4)**

Introduction to the mathematical solution of partial differential equations by finite difference and finite element techniques. Development of solution approaches to water quality and hydraulic problems in surface and groundwater systems. Analysis of model sensitivities, calibration and verification.

Also offered as CE 673 and may be taken only once for credit. Prerequisite: CE 361 and CE 371.

**CE 574 - Unit Operations of Environmental Engineering (4)**

Unit operations of water and wastewater treatment; pretreatment; sedimentation, filtration, aeration, disinfection, sludge treatment and disposal, advanced waste-water treatment processes.

Also offered for undergraduate-level credit as CE 474 and may be taken only once for credit. Prerequisite: Ch 223 or CE 371 or CE 487 or graduate standing.

**CE 576 - Environmental Fluid Mechanics (4)**

Introduction to the fundamentals of the fluid dynamics of natural surface waters by analysis of the governing equations of mass, momentum, and heat conservation. Applications include turbulence modeling, finite depth water motions, stratified flow phenomena, and seiche phenomena.

Also offered as CE 676 and may be taken only once for credit. Prerequisite: CE 361, CE 362 and CE 371.

**CE 578 - Water Quality Modeling (4)**

Introduction to descriptive modeling approaches for analyzing water quality changes in lakes, reservoirs, rivers, and estuaries. Applications include modeling
dissolved oxygen, temperature, nutrients, and algal dynamics.

Also offered as CE 678 and may be taken only once for credit. Prerequisite: EAS 361, CE 371.

CE 579 - Fate and Transport of Toxics in the Environment (4)

Chemical, physical, and biological principles that govern the behavior of toxic materials such as heavy metals and synthetic organic compounds in the environment. Course emphasizes practical ways to represent chemical processes in models of pollutant behavior. Topics include: adsorption of pollutants on soils and sediments; transport across sediment-water and air-water interfaces; bioamplification of pollutants; multiphase fugacity models of organics; case studies of contaminated surface water, sediment and groundwater. This is the same course as ESM 579 and may be taken only once for credit.

Also offered for undergraduate-level credit as CE 479 and may be taken only once for credit. Prerequisite: senior or graduate standing. Cross-Listed as: ESM 579.

CE 580 - Chemistry of Environmental Toxins (4)
The fate and transport-related behavior of toxic compounds in the environment. Classification, nomenclature, examples of anthropogenic compounds, and case studies. Introducing the physical and chemical processes associated with air-water exchange, organic-liquid exchange, sorption processes, chemical transformations, and bioaccumulation.

Also offered for undergraduate-level credit as CE 480 and may be taken only once for credit. Prerequisite: Ch 221; Ch 222 recommended.

CE 581 - The Columbia River as a System (2)
Explores the climate and hydrologic processes that shape the Columbia River basin ecosystem, and relates these processes to the basin’s management context. The geographic scope includes the watershed, the mainstem and its reservoirs, major tributaries, the tidal river below Bonneville Dam, the estuary, the Columbia plume, and coastal waters that interact with the plume. Lectures and outside speakers will present or discuss vital issues in contemporary Columbia Basin management, along with relevant background information. Expected preparation: CE 361 and CE 371.

Also offered for undergraduate-level credit as CE 481 and may be taken only once for credit. Prerequisite: junior standing.

CE 582 - Introduction to Sediment Transport (4)
Fundamentals of sediment transport in natural surface waters. Analysis of the governing equations of mass, momentum, and sediment conservation. Covers bedload and suspended material transport in riverine and estuarine waters, focusing on non-cohesive materials. Cohesive material transport will be briefly introduced.

Also offered for undergraduate-level credit as CE 482 and may be taken only once for credit. Prerequisite: CE 361, CE 371.

CE 583 - Estuarine Circulation (4)
Introduction to the physical processes that govern estuarine and buoyant plume circulation. These include tides, density-driven circulation, internal tidal asymmetry and frontal propagation. Expected preparation: CE 576.

Also offered for undergraduate-level credit as CE 483 and may be taken only once for credit. Prerequisite: CE 361 and CE 371.

CE 585 - Environmental Cleanup and Restoration (4)
Survey of procedures for evaluating risks posed by hazardous waste sites and the cleanup steps that lead to an acceptable restoration of such sites. Topics include U.S. environmental law and regulation, site investigations, risk assessment, and a focus on actual case studies, many in Portland and the Pacific Northwest.

Also offered for undergraduate-level credit as CE 485 and may be taken only once for credit. Prerequisite: junior standing or graduate standing.

CE 586 - Environmental Chemistry (4)
Survey of chemical aspects of major environmental issues: stratospheric ozone holes and chlorofluorocarbons; air pollution; global climate change; fossil fuel energy/"carbon footprint"; renewable energy; nuclear energy/radioactivity; toxic chemicals (pesticides, PCBs); endocrine disruptors; surfactants, chemical dispersants/oil spills; biodegradability of chemicals; chemistry of natural waters/acid rain; toxic heavy metals. This is the same course as Ch 586 and can be taken only once for credit.

Also offered for undergraduate-level credit as CE 486 and may be taken only once for credit. Prerequisite: Ch 334 or 331. Cross-Listed as: Ch 586.

CE 587 - Aquatic Chemistry (4)
Aqueous chemistry in natural water systems: simple-to-complex acid/base chemistry; titration curves; buffer strength; acid/base chemistry of carbon
dioxide in open and closed systems; alkalinity as system variable (blood); mineral dissolution/precipitation (metal carbonates); redox chemistry: pe-pH, redox succession/organic loading/dissolved oxygen loss, nitrate reduction, iron oxide dissolution, hydrogen sulfide production, methane formation. This is the same course as Ch 587 and can be taken only once for credit.

Also offered for undergraduate-level credit as CE 487 and may be taken only once for credit. Prerequisite: Ch 223 with a C- or better. Cross-Listed as: Ch 587.

CE 588 - Air Quality (4)

An overview of urban air quality issues facing cities in the US and globally. Examine effects of air pollution on public health and environment, as well as technologies and regulatory practices. Review pollution measurement and modeling techniques. Expected preparation: CE 371.

Also offered for undergraduate-level credit as CE 488 and may be taken only once for credit. Prerequisite: junior standing. Cross-Listed as: ESM 560.

CE 589 - Introduction to Advanced Environmental Fluid Mechanics (4)

Advanced introduction to the geophysical fluid flows, including properties of seawater; conservation of mass, energy and momentum; dimensional analysis; the Navier-Stokes, Reynolds and turbulent kinetic energy equations; geostrophy and potential vorticity; long and short waves; and turbulence and boundary layers. Lecture and laboratory.

Also offered for undergraduate-level credit as CE 489 and may be taken only once for credit. Prerequisite: EAS 215, Mth 256, CE 361, CE 362. Corequisite: CE 589L.

CE 589L - Lab for CE 589 (0)

Lab for CE 589.

Corequisite: CE 589.

CE 590 - Soil and Groundwater Restoration (4)

Methods for restoring contaminated soil and groundwater; Factors and processes influencing the efficacy of remediation systems. Emphasis is on the scientific principles upon which soil and groundwater remediation is based. Containment, pump and treat, cosolvents and surfactants, soil venting, in-situ physical and chemical treatment.

Also offered for undergraduate-level credit as CE 490 and may be taken only once for credit. Prerequisite: senior/graduate standing.

CE 593 - Design and Operation of Bicycle and Pedestrian Infrastructure (4)

Design and operational concepts in the engineering design of bicycle and pedestrian infrastructure. Course covers on-road and shared path locations. Specific topics include design details of bikeways, basic geometric design, intersection and signalization considerations, and ADA requirements supporting non-motorized modes.

Also offered for undergraduate credit as CE 493 and may be taken only once for credit.

CE 595 - Sustainable Transportation in the Netherlands (5)

Introduction to transportation engineering and planning applications in the Netherlands, focusing on pedestrian, bicycle and public transport. Contrasts between U.S. and Dutch engineering principles, policies and standards. Design principles and practice will be explored through field trips and guest lectures while abroad and in Portland. Faculty led study abroad course.

Also offered for undergraduate-level credit as CE 495 and may be taken only once for credit. Prerequisite: Minimum GPA 3.0, senior status or graduate level from all disciplines and majors.

CE 596 - Theories & Methods of Travel Behavior (4)

Covers the various theoretical perspectives on travel behavior and the methodological approaches used to analyze and understand behavior. Travel behavior includes the study of the set of transportation choices and outcomes, including: vehicle ownership, activity engagement and scheduling, mode choices, destination choices, and routing decisions.

Also offered as CE 696. Prerequisite: Graduate standing or consent of instructor.

CE 597 - Transportation & Health (4)

This course will introduce the linkages between transportation investments, public policy, and behaviors and various related public and individual health outcomes. The content is divided into four modules covering: a) healthy behaviors, b) exposure to unsafe conditions, c) disaster relief/emergency response and d) integration into practice/health impact analyses.

Also offered as undergraduate-level credit as CE 497 and may be taken only once for credit. Prerequisite: CE 351 or graduate standing.

CE 598 - Travel Survey Methods & Analysis (4)

Focuses on the design, administration, and analysis of various types of surveys used to collect transportation
CE 601 - Research (1-9)
(Credit to be arranged.) Consent of instructor.

CE 603 - Dissertation (1-12)
(Credit to be arranged.) Consent of instructor.

CE 604 - Cooperative Education/Internship (1-9)
(Credit to be arranged.) Consent of instructor.

CE 605 - Reading and Conference (1-9)
(Credit to be arranged.) Consent of instructor.

CE 606 - Special Projects (1-9)
(Credit to be arranged.) Consent of instructor.

CE 607 - Seminar (1-9)
(Credit to be arranged.) Consent of instructor.

CE 610 - Selected Topics (1-9)
(Credit to be arranged.) Consent of instructor.

CE 618 - Prestressed Concrete Design (4)
Analysis and design of components of prestressed concrete structures with reference to current codes.
Also offered as CE 518 and may be taken only once for credit. Prerequisite: CE 435/535.

CE 624 - Matrix and Computer Methods in Structural Analysis (4)
Fundamental concepts of analysis for statically determinate and indeterminate structures utilizing matrices and computers; displacement and force methods applied to trusses and rigid frames; techniques for the analysis of large complex structures for static and dynamic loads. This is the first course in a sequence of two: CE 624 and CE 625.
Also offered as CE 524 and may be taken only once for credit. Prerequisite: CE 325.

CE 626 - Theory of Plates (4)
Small and large deformation theories of thin plates; numerical and energy methods; free vibrations.
Also offered as CE 526 and may be taken only once for credit. Prerequisite: Mth 256.

CE 629 - Structural Dynamics (4)
Also offered as CE 529 and may be taken only once for credit. Prerequisite: CE 423/523.

CE 634 - Advanced Reinforced Concrete Design (3)
Design of spandrel beams, slabs on beams, shear walls, deep beams, corbels, and other components of reinforced concrete structures with reference to current codes.
Also offered as CE 534 and may be taken only once for credit. Prerequisite: CE 435.

CE 637 - Earthquake Engineering (4)
Response of structures to ground motions; determination and use of response spectra; seismic design criteria and provisions for buildings and other structures; and review of current practices for earthquake resistant design.
Also offered as CE 537 and may be taken only once for credit. Prerequisite: CE 435.

CE 639 - Advanced Steel Design (4)
Analysis and design of metal structures including connections, plate girders, design loads, structural systems, and bracing.
Also offered as CE 539 and may be taken only once for credit. Prerequisite: CE 432 or CE 532.

CE 641 - Advanced Soil Mechanics (4)
Study of the advanced principles of soil behavior related to stress-strain, shear strength, permeability, and consolidation.
Also offered as CE 541 and may be taken only once for credit. Prerequisite: CE 444.

CE 644 - Advanced Shallow Foundation Design (4)
Advanced topics in settlement and bearing capacity analysis of shallow foundation; application of numerical schemes to foundation design.
CE 646 - Numerical Methods in Soil-Structure Interaction (4)
Application of finite difference and finite element methods to the solution of soil-structure problems, stability of soil masses and foundation installation. Use of commercial computer programs in working applied problems.
Also offered as CE 546 and may be taken only once for credit.. Prerequisite: CE 444..

CE 649 - Deep Foundation Design and Analysis (4)
Comprehensive study of both driven and augered pile foundations, including concrete, steel, and timber. In-depth review of design methods for axial and lateral capacity. Special emphasis on the differences between driven piles and drilled shafts, including the role of full-scale load testing in the semi-empirical methods. Introduction to group theory in elasticity and plasticity.
Also offered as CE 549 and may be taken only once for credit. Prerequisite: CE 444..

CE 661 - Water Resource Systems Analysis (4)
A development of quantitative techniques used in the analysis of water resource systems for planning, design and operation. Emphasis is placed on the physical, legal and economic aspects and their incorporation into simulation models. Applications include reservoir systems for water supply and hydropower, irrigation planning and operation, and water quality management.
Also offered as CE 561 and may be taken only once for credit..

CE 666 - Environmental Data Analysis (4)
Application of probabilistic and statistical models to the description of environmental data with a focus on hydrology and water quality. Graphical and quantitative techniques of exploratory data analysis, selection and fitting of appropriate probability distributions, simple and multiple and multivariate regression and their applications to analysis and modeling, and detection of changes and trends in environmental time series.
Also offered as CE 566 and may be taken only once for credit. Prerequisite: CE 243 and 244 or Stat 460..

CE 668 - Advanced Methods in Hydrologic System Analysis (4)
Principles in analysis of dynamic systems with specific emphasis on hydrologic model building. Variety of techniques in hydrologic system analysis with mathematical formulation, development and use of computer-based models for solving scientific and engineering problems are discussed. Among the topics presented will be the discussion of optimization theory, artificial intelligence, model calibration (parameter estimation), ensemble (probabilistic) forecasting, data assimilation and uncertainty analysis. Recommended prerequisites: CE 465/565 or similar course.
Also offered as CE 568 and may be taken only once for credit.

CE 671 - Subsurface Contaminant Transport (4)
Principles associated with the transport and fate of contaminants in subsurface systems. Complex, heterogeneous factors and processes (both physical and geochemical) influencing contaminant transport. Emphasis on the impact of these processes on contaminant fate across the multitude of scales in the subsurface. Case studies linking theory and measured/observed transport behavior.
Also offered as CE 571 and may be taken only once for credit. Prerequisite: graduate standing..

CE 672 - Environmental Fluid Mechanical Transport (4)
Introduction to the basic physical processes which transport pollutants in natural waters (rivers, lakes, reservoirs, estuaries); mathematical formulations of heat and mass advective and diffusive transport; descriptions of molecular diffusion, turbulent diffusion, and dispersion. Use of predictive mathematical models as a basis for water and air quality management.
Prerequisite: CE 361 and CE 371.. Cross-Listed as: Also offered as CE 572 and may be taken only once for credit.

CE 673 - Numerical Methods in Environmental and Water Resources Engineering (4)
Introduction to the mathematical solution of partial differential equations by finite difference and finite element techniques. Development of solution approaches to water quality and hydraulic problems in surface and groundwater systems. Analysis of model sensitivities, calibration and verification.
Also offered as CE 573 and may be taken only once for credit. Prerequisite: senior or graduate standing in civil or environmental engineering.
CE 676 - Environmental Fluid Mechanics (4)
Introduction to the fundamentals of the fluid dynamics of natural surface waters by analysis of the governing equations of mass, momentum, and heat conservation. Applications include turbulence modeling, finite depth water motions, stratified flow phenomena, and seiche phenomena.
Also offered as CE 576 and may be taken only once for credit. Prerequisite: CE 361, CE 362 and CE 371.

CE 678 - Water Quality Modeling (4)
Introduction to descriptive modeling approaches for analyzing water quality changes in lakes, reservoirs, rivers, and estuaries. Applications include modeling dissolved oxygen, temperature, nutrients, and algal dynamics.
Also offered as CE 578 and may be taken only once for credit. Prerequisite: EAS 361, CE 371.

CE 696 - Theories and Methods of Travel Behavior (4)
Covers the various theoretical perspectives on travel behavior and the methodological approaches used to analyze and understand behavior. Travel behavior includes the study of the set of transportation choices and outcomes, including: vehicle ownership, activity engagement and scheduling, mode choices, destination choices, and routing decisions.
Also offered as CE 596. Prerequisite: Graduate Standing.

CE 698 - Travel Survey Methods & Analysis (4)
Focuses on the design, administration, and analysis of various types of surveys used to collect transportation data, including but not limited to household travel surveys, establishment surveys, intercept surveys, and freight/commercial vehicle surveys.
Also offered as CE 598, and can only be taken once for credit. Prerequisite: Graduate Standing.

CFS - Child & Family Studies
CFS 101 - Introduction to Child and Family Studies (2)
Overview of the field of child and family studies, reviewing its historic development and the advantages of an interdisciplinary approach to studying children, youth, and families. Students will survey services that support children, youth, and families. Students will explore professional opportunities, careers choices, and professional organizations.

CFS 310 - Critical Histories in CYFS: Gender/Race/Class (4)
This course provides a space for critical reflection on the nature of power in professions serving children, youth, and families. Students will explore historical and contemporary patterns of feminization of these professions and the implications, including the social and economic de-valuation of this work and institutions as gendered settings. Students will also critically consider the racialized history of this work and resistance by communities served by these professions.

CFS 360 - Critical Disability: Impacts on Children, Youth, & Families (4)
Focuses on the social, historical, and cultural constructions and contexts of disability in the US. Through the lens of critical disability studies, examines how power relationships and discourse function in the lives of people with and without disabilities, and the structures and policies that empower these discourses. Emphasizes intersections of disability with other identities and positionalities (gender, sexuality, race, class, etc.). Impacts of disability discourses and structures on children, youth, and families will be examined.
Prerequisite: Upper-division standing.

CFS 386U - Youth Healthy Relationships and Sexuality Education (4)
Explores the demands, parameters and possibilities of healthy relationship and sexuality education (HRSE) for youth. Together we will wrestle with what has come before and imagine what could be, focusing on the strengths and voices of people who are currently and historically pushed to the margins, and exploring what youth tell us they want and need. Through active participation, students can gain ‘best practices’ foundational skills and understanding of equitable methods for facilitating group HRSE lessons.

CFS 312U - Families in Lifecourse Perspective (4)
This course offers a deeper understanding of family life and its intersection with individual development across the lifespan. Life Course Theory will provide the foundation for understanding the dynamic experiences of families as we explore physical, social/emotional, and cognitive development from birth to death. Students will have the opportunity to critically process developmental theories through lecture, discussion, videos, and assignments. There will be a focus on issues of diversity, anti-oppression, and social justice.
CFS 320U - ABCs of Early Childhood Education (4)
An introductory class for students preparing for parenthood or interested in careers in early childhood education. History and philosophy; observation processes; guidance approaches; and program assessment.

CFS 330U - American Families in Film and Television (4)
Examines portrayals of American families in film and television over time, including the effect of film and television portrayals on expectations around such family issues as gender roles, conflict resolution, parenting, and traditions. Exposes students to film and media criticism and highlights issues of inclusion/exclusion in family portrayals.

CFS 340U - Queer Families (4)
Explores and investigates issues facing lesbian, gay, bisexual, and transgender (LGBT) families, including all relationships in which primary care-giving responsibilities are shared by individuals who are interdependent upon each other, including conjugal and non-conjugal relationships. We will consider LGBT families and their cultural, political, gender, racial, and economic dimensions.

CFS 350U - Interpersonal Violence: Impact on Children & Families (4)
Focuses on interpersonal violence (IPV) and its impacts on children, including developmental implications of witnessing IPV from birth to adulthood, and the behavioral, social, and emotional effects of exposure to violence. Prepares students to identify tactics of violence, assess children’s exposure to IPV, and respond through prevention and early intervention.

CFS 381U - Families, Stress, and Change (4)
Overview of issues related to family health, including health promotion/prevention domestic violence/child abuse, alcohol/chemical dependence, chronic and terminal illnesses, and accessing health systems. Special attention to ethnic, political, ideological, religious, economic, and geographic influences. Includes community-based learning components.

CFS 382U - Mental Disorders: Issues for Families and Communities (4)
Explores the etiology of mental and emotional disorders and the impact on individuals, their families and communities. The course emphasizes current social, cultural and political forces affecting individuals and families, and factors that contribute to resilience and recovery. The course includes a community-based learning component.

CFS 385U - Working with Diverse Families (4)
For individuals who are preparing to work professionally with families. Theoretical perspectives on working with families. Issues involved when working with diverse U.S. families (African American, Asian, Russian, and Hispanic) as well as international families.

CFS 390U - Sex and the Family (4)
Explores how responses to sexuality are influenced by family and other social systems including culture, gender, economics, and religion. Family systems theory will be used to evaluate family relationships.

CFS 391 - Family Theories (4)
Theoretical and conceptual foundations of working with children, youth, and families in professional settings. Historical, socio-political contexts of significant theories and their relevance for professional application.

CFS 393U - Community Resources and Family Support (4)
Examination of community resources in the context of community building, family support and empowerment, cultural competence, and cultural democracy. Factors that influence the effectiveness of community programs serving children and families. The mission, professional roles, and services of particular community agencies and programs that serve, support, and/or advocate on behalf of children and families.

CFS 399 - Special Studies (1-4)
(Credit to be arranged.)

CFS 399U - Special Studies (4)
(Credit to be arranged.)
CFS 401 - Research (1-8)
(Credit to be arranged.)

CFS 402 - Independent Study (1-12)
(Credit to be arranged.)

CFS 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

CFS 405 - Reading and Conference (1-8)
(Credit to be arranged.)

CFS 406 - Projects (1-8)
(Credit to be arranged.)

CFS 407 - Seminar (1-12)
(Credit to be arranged.)

CFS 408 - Workshop (1-4)
(Credit to be arranged.)

CFS 409 - Practicum (0-12)
(Credit to be arranged.) Supervised community-based learning experience in organizations and agencies that serve children and families. One credit equals 30 hours. Includes reflective, integrative seminar.
Prerequisite: CFS 494.

CFS 410 - Selected Topics (1-8)
(Credit to be arranged.)

CFS 410U - Selected Topics (4)
(Credit to be arranged.)

CFS 450 - Youth and Youth Work (4)
Emphasizes multiple lenses through which young people are seen and treated. Explores youth work principles, multiple youth work traditions, experiential/outdoor education, youth development, and other dimensions of youth work. Includes community-based component for application of theory. Intended for students planning careers in education, policy, and direct service with youth. Required course for Child & Family Studies Youth Worker specialization. Graduate students will participate in one hour of additional class time per week, to be scheduled with the instructor at the first class session.
Also offered for graduate-level credit as CFS 550 and may be taken only once for credit. Prerequisite: Junior standing.

CFS 486 - Parent and Family Education (4)
Introduction to parenting rights, responsibilities, practices, processes, parent/child relationships, changing parenting roles and general philosophy/broad principles of family life education. Planning, observing, and evaluating family life education programs will be included through a community-based experience. Recommended prerequisite: Junior status.
Also offered for graduate-level credit as CFS 586 and may be taken only once for credit.

CFS 487 - Examining Bias and Belief (4)
Individuals preparing for human or social services professions have been influenced by family and societal events, values, beliefs, and assumptions which have interacted with their lives. Students will examine those influences (including gender, culture, and socioeconomic status) for the purpose of gaining insight into the ways their professional practice might be affected. Projects will include a professional practice action plan.
Prerequisite: upper-division standing.

CFS 488 - Structural Oppression (4)
Examines and applies principles of anti-oppressive practice (AOP) in the helping professions served by students with degrees in Child and Family Studies. The course will present theoretical foundations for AOP grounded in discussions of power and privilege, voice, marginalization and oppression, and the role of the helping professional in working to transform oppressive social structures, values, and behaviors.
Prerequisite: CFS 487 and junior standing.

CFS 489 - Activism for Social Change (2)
This course prepares students for activism in professional settings serving children, youth, and families. Building on CFS 487 and CFS 488, students will study social change and activism. They will research a social injustice, conceptualize and carry out a social change action, and reflect on lessons learned for their activism.
**CFS 492 - Family Law and Policy (4)**

Laws and policies that influence the well-being of families, youth, and children will be examined from a historical, socio-political perspective. Analysis of contextual influences and community-based learning experience will assist students in practical applications related to professional roles.

**CFS 493 - Professional Self: Ways of Knowing (2)**

This course is the first in a series of four courses that introduces students to understanding interdisciplinary perspectives and the ways in which personal development, professional identity, and professional action contribute to our developing professional self. This course will examine "ways of knowing" and the construction of knowledge in our interdisciplinary professional fields. Students will critically reflect on the "ways of knowing" and develop their research literacy. Emphasis will be placed on reflection, personal ethics, self-care, interdisciplinary career paths, and scholarly foundations.

Prerequisite: Admittance to Child & Family Studies.

**CFS 494 - Professional Self: Critical Thinking (2)**

Students will begin the process of documenting their achievement of the first CFS Learning Outcome as they establish the foundation of the CFS Professional Portfolio. The history and development of female-intensive professions, professionalization, ethical decision-making, and the creation and use of theoretical knowledge will also be a focus.

Prerequisite: Admittance into the Child and Family Studies Program and CFS 493.

**CFS 495 - Professional Self: Identity (2)**

Continued examination of interdisciplinary perspectives and the ways in which personal development, professional identity, and professional action contribute to professional development. Emphasis will be on reflective practice, professional ethics, professional boundaries, professionalization processes, legislation, and advocacy.

Prerequisite: CFS 494.

**CFS 496 - Professional Self: Integration (2)**

Students will complete their CFS Professional Portfolio as they document their achievement of the final CFS Learning Outcomes. They will consider the relationship between person and professional ethical decisions, the role of change agents in society, and attend a professional organization meeting.

Prerequisite: CFS 495.

**CFS 497 - Practicum I (5)**

Child and Family Studies practicum conducted in approved professional settings with consideration for students’ professional goals.

Prerequisite: junior standing, admittance to Child and Family Studies Program, grade of IP in CFS 494.

**CFS 498 - Practicum II (5)**

Child and Family Studies practicum conducted in approved professional settings selected with consideration of students’ professional goals. Accompanying seminar.

Prerequisite: admittance into the CFS program, five credits of CFS 497 (Practicum I) senior status, and CFS 487 (completion or concurrent registration).

**CFS 501 - Research (1-9)**

(Credit to be arranged.)

**CFS 505 - Reading and Conference (1-6)**

(Credit to be arranged.)

**CFS 510 - Selected Studies (1-8)**

(Credit to be arranged.)

**CFS 550 - Youth and Youth Work (4)**

Emphasizes multiple lenses through which young people are seen and treated. Explores youth work principles, multiple youth work traditions, experiential/outdoor education, youth development, and other dimensions of youth work. Includes community-based component for application of theory. Intended for students planning careers in education, policy, and direct service with youth. Required course for Child & Family Studies Youth Worker specialization. Graduate students will participate in one hour of additional class time per week, to be scheduled with the instructor at the first class session.

Also offered for undergraduate-level credit as CFS 450 and may be taken only once for credit.

**CFS 580 - Societal Influences on Professional Practice (4)**

Individuals preparing for human or social services professions have been influenced by family and societal events, values, beliefs, and assumptions which have interacted with their lives. Students will examine those influences (including gender, culture, and socioeconomic status) for the purpose of gaining
insight into the ways their professional practice might be affected. Projects will include a professional practice action plan.

**CFS 586 - Parent and Family Education (4)**
Introduction to parenting rights, responsibilities, practices, processes, parent/child relationships, changing parenting roles and general philosophy/broad principles of family life education. Planning, observing, and evaluating family life education programs will be included through a community based experience. Recommended prerequisite: junior status.

Also offered for undergraduate-level credit as CFS 486 and may be taken only once for credit.

**Ch - Chemistry**

**Ch 104 - Introductory Chemistry I (4)**
A survey of chemistry for students in nursing, in allied health fields such as dental hygiene, in forestry, and in the liberal arts. This course is not intended for science or engineering majors. This is the first course in a sequence of three: Ch 104, Ch 105 and Ch 106 which must be taken in sequence. Ch 104 - Ch 109 does not satisfy the first-year Chemistry requirement for most science and engineering majors.

Prerequisite: Two years of high school algebra or Mth 095.

**Ch 105 - Introductory Chemistry II (4)**
A survey of chemistry for students in nursing, in allied health fields such as dental hygiene, in forestry, and in the liberal arts. This course is not intended for science or engineering majors. This is the second course in a sequence of three: Ch 104, Ch 105 and Ch 106 which must be taken in sequence. Ch 104 - Ch 109 does not satisfy the first-year Chemistry requirement for most science and engineering majors.

**Ch 106 - Introductory Chemistry III (4)**
A survey of chemistry for students in nursing, in allied health fields such as dental hygiene, in forestry, and in the liberal arts. This course is not intended for science or engineering majors. This is the third course in a sequence of three: Ch 104, Ch 105 and Ch 106 which must be taken in sequence. Ch 104 - Ch 109 does not satisfy the first-year Chemistry requirement for most science and engineering majors.

**Ch 107 - Introductory Chemistry Laboratory I (1)**
Laboratory work to accompany Ch 104, 105, 106 respectively. Concurrent enrollment in the appropriate lecture course is required. Ch 107, 108; one 2-hour laboratory period. Pass/no pass only. Ch 109: one 3-hour laboratory period. This is the first lab in a sequence of three: Ch 107, Ch 108. and Ch 109 which must be taken in sequence.

**Ch 108 - Introductory Chemistry Laboratory II (1)**
Laboratory work to accompany Ch 104, 105, 106 respectively. Concurrent enrollment in the appropriate lecture course is required. Ch 107, 108; one 2-hour laboratory period. Pass/no pass only. Ch 109: one 3-hour laboratory period. This is the second lab in a sequence of three: Ch 107, Ch 108. and Ch 109 which must be taken in sequence.

**Ch 109 - Introductory Chemistry Laboratory III (1)**
Laboratory work to accompany Ch 104, 105, 106 respectively. Concurrent enrollment in the appropriate lecture course is required. Ch 107, 108; one 2-hour laboratory period. Pass/no pass only. Ch 109: one 3-hour laboratory period. This is the third lab in a sequence of three: Ch 107, Ch 108. and Ch 109 which must be taken in sequence.

**Ch 121 - Preparatory Chemistry (4)**
Introduction to mathematics and science presupposed by the General Chemistry sequence (Ch 221, Ch 222, and Ch 223). Designed for students needing a review of topics from high school chemistry and Mth 111. Successful completion of this course should leave students prepared for Ch 221.

Prerequisite: Mth 111 or equivalent.

**Ch 170 - Fundamentals of Environmental Chemistry (4)**
A course designed to increase the scientific knowledge of the non-science major. The interaction between science and society, the nature of matter and chemical reactions. Energy, radiation, and nuclear power.

**Ch 199 - Special Studies (1-9)**
See department for course description. (Credit to be arranged.)
Ch 199L - Lab for Ch 199 (0)
Lab for Ch 199.

Ch 221 - General Chemistry I (4)
Fundamental basis of chemistry for science, engineering and health professional students (such as pre-dental, pre-medical, pre-medical technology and veterinary students). Concurrent enrollment in Ch 227 for Ch 221, Ch 228 for Ch 222, and Ch 229 for Ch 223 is recommended. This is the first course in a sequence of three: Ch 221, Ch 222, and Ch 223. Ch 104 - Ch 109 does not satisfy the first-year Chemistry requirement for most science and engineering majors.
Prerequisite: Math Department-approved placement into Mth 111 or Mth 112. High school chemistry or equivalent is recommended.

Ch 221H - Honors General Chemistry I (4)
Honors General Chemistry will address the topics of general chemistry with a focus on the urban context and the principles of green chemistry. The course is designed to challenge well-prepared students and will utilize alternative modes of instruction in smaller class sizes. Students will work in groups to address real-world problems with the guidance of the lecture instructor. The course is limited to students admitted to the University Honors Program. Students should have taken at least one year of high-school chemistry.
Corequisite: Ch 227H.

Ch 222 - General Chemistry II (4)
Fundamental basis of chemistry for science, engineering and health professional students (such as pre-dental, pre-medical, pre-medical technology and veterinary students). Concurrent enrollment in Ch 227 for Ch 221, Ch 228 for Ch 222, and Ch 229 for Ch 223 is recommended. This is the second course in a sequence of three: Ch 221, Ch 222, and Ch 223. Ch 104 - Ch 109 does not satisfy the first-year Chemistry requirement for most science and engineering majors.
Prerequisite: Ch 221.

Ch 222H - Honors General Chemistry II (4)
Honors General Chemistry will address the topics of general chemistry with a focus on the urban context and the principles of green chemistry. The course is designed to challenge well-prepared students and will utilize alternative modes of instruction in smaller class sizes. Students will work in groups to address real-world problems with the guidance of the lecture instructor. The course is limited to students admitted to the University Honors Program. Students should have taken at least one year of high-school chemistry.
Corequisite: Ch 228H.

Ch 223 - General Chemistry III (4)
Fundamental basis of chemistry for science, engineering and health professional students (such as pre-dental, pre-medical, pre-medical technology and veterinary students). Concurrent enrollment in Ch 227 for Ch 221, Ch 228 for Ch 222, and Ch 229 for Ch 223 is recommended. This is the third course in a sequence of three: Ch 221, Ch 222, and Ch 223. Ch 104 - Ch 109 does not satisfy the first-year Chemistry requirement for most science and engineering majors.
Prerequisite: Ch 222.

Ch 223H - Honors General Chemistry III (4)
Honors General Chemistry will address the topics of general chemistry with a focus on the urban context and the principles of green chemistry. The course is designed to challenge well-prepared students and will utilize alternative modes of instruction in smaller class sizes. Students will work in groups to address real-world problems with the guidance of the lecture instructor. The course is limited to students admitted to the University Honors Program. Students should have taken at least one year of high-school chemistry.
Corequisite: Ch 229H.

Ch 227 - General Chemistry Laboratory (1)
Laboratory work to accompany General Chemistry (Ch 221, Ch 222, Ch 223). Concurrent enrollment in the appropriate lecture course is recommended. One 3-hour laboratory. This is the first lab in a sequence of three: Ch 227, Ch 228, and Ch 229.
Prerequisite: Ch 221 or concurrent enrollment.

Ch 227H - Honors Lab for Ch 221H (1)
Laboratory work to accompany Honors General Chemistry (Ch 221H, Ch 222H, Ch 223H). Completion of or concurrent enrollment in lecture required. One 3-hour laboratory.
Corequisite: Ch 221H.

Ch 228 - General Chemistry Laboratory (1)
Laboratory work to accompany General Chemistry (Ch 221, Ch 222, Ch 223). Concurrent enrollment in the appropriate lecture course is recommended. One 3-hour laboratory. This is the second lab in a sequence of three: Ch 227, Ch 228, and Ch 229.
Prerequisite: Ch 222 or concurrent enrollment.

Ch 228H - Honors Lab for Ch 222H (1)
Laboratory work to accompany Honors General Chemistry (Ch 221H, Ch 222H, Ch 223H). Completion of or concurrent enrollment in lecture required. One 3-hour laboratory.
Corequisite: Ch 222H.
Ch 229 - General Chemistry Laboratory (1)
Laboratory work to accompany General Chemistry (Ch 221, Ch 222, Ch 223). Concurrent enrollment in the appropriate lecture course is recommended. One 3-hour laboratory. This is the third lab in a sequence of three: Ch 227, Ch 228, and Ch 229.
Prerequisite: Ch 223 or concurrent enrollment.

Ch 229H - Honors Lab for Ch 223H (1)
Laboratory work to accompany Honors General Chemistry (Ch 221H, Ch 222H, Ch 223H). Completion of or concurrent enrollment in lecture required. One 3-hour laboratory.
Corequisite: Ch 223H.

Ch 250 - Nutrition (4)
Nutritive value of foods from the standpoint of newer scientific investigations; nutritional requirements for normal human beings; selection of an optimal diet for health; present-day problems in nutrition; recent trends in American dietary habits.

Ch 284 - General Chemistry Workshop I (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ch 221, Ch 222, Ch 223 general chemistry sequence. Corequisite: corresponding lecture course Ch 221, Ch 222, Ch 223. Pass/no pass only. This is the first course in a sequence of three: Ch 284, Ch 285, and Ch 286.
Corequisite: Ch 221.

Ch 285 - General Chemistry Workshop II (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ch 221, Ch 222, Ch 223 general chemistry sequence. Corequisite: corresponding lecture course Ch 221, Ch 222, Ch 223. Pass/no pass only. This is the second course in a sequence of three: Ch 284, Ch 285, and Ch 286.
Corequisite: Ch 222.

Ch 286 - General Chemistry Workshop III (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ch 221, Ch 222, Ch 223 general chemistry sequence. Corequisite: corresponding lecture course Ch 221, Ch 222, Ch 223. Pass/no pass only. This is the third course in a sequence of three: Ch 284, Ch 285, and Ch 286.
Corequisite: Ch 223.

Ch 299 - Special Studies (1-6)
(Credit to be arranged.)

Ch 301 - Special Studies (1-6)
(Credit to be arranged.)

Ch 320 - Quantitative Analysis (4)
Fundamental principles of quantitative analytical chemistry.
Prerequisite: Ch 223 and Ch 229.

Ch 321 - Quantitative Analysis Laboratory (2)
Basic quantitative analytical laboratory work including volumetric and instrumental methods.
Prerequisite: Ch 320 or concurrent enrollment.

Ch 327 - Elements of Organic Chemistry Laboratories I (2)
Laboratory work to accompany the sequence of Ch 331, 332. One 4-hour laboratory period. Concurrent enrollment in Ch 331 is recommended.
Corequisite: Ch 331.

Ch 328 - Elements of Organic Chemistry Laboratories II (2)
Laboratory work to accompany the sequence of Ch 331, 332. One 4-hour laboratory period. Prerequisite: Ch 327. Concurrent enrollment in Ch 332 is recommended.
Prerequisite: Ch 327. Corequisite: Ch 328.

Ch 331 - Elements of Organic Chemistry I (4)
Chemistry of the carbon compounds, the aliphatics, aromatics, and derivatives. The corresponding laboratory courses are Ch 327, Ch 328. This is the first course in a sequence of two: Ch 331 and Ch 332.
Prerequisite: Ch 223. Corequisite: Ch 331.

Ch 332 - Elements of Organic Chemistry II (4)
Chemistry of the carbon compounds, the aliphatics, aromatics, and derivatives. The corresponding laboratory courses are Ch 327, Ch 328. This is the second course in a sequence of two: Ch 331 and Ch 332. Recommended prerequisite: Ch 331; concurrent enrollment in Ch 328 is recommended.
Corequisite: Ch 331.

Ch 334 - Organic Chemistry I (4)
A comprehensive study of the chemistry of the compounds of carbon. Meets chemistry and biochemistry major requirements. The corresponding laboratory courses are Ch 337, Ch 339 for chemistry and biochemistry majors, and Ch 337, Ch 338 for non-chemistry majors. This is the first course in a sequence of three: Ch 334, Ch 335, and Ch 336.
Prerequisite: Ch 223. Concurrent enrollment in the laboratory course is recommended.
Prerequisite: Ch 223.
Ch 335 - Organic Chemistry II (4)
A comprehensive study of the chemistry of the compounds of carbon. Meets chemistry and biochemistry major requirements. The corresponding laboratory courses are Ch 337, Ch 339 for chemistry and biochemistry majors, and Ch 337, Ch 338 for non-chemistry majors. This is the second course in a sequence of three: Ch 334, Ch 335, and Ch 336. Concurrent enrollment in the laboratory course is recommended.
Prerequisite: Ch 334.

Ch 336 - Organic Chemistry III (4)
A comprehensive study of the chemistry of the compounds of carbon. Meets chemistry and biochemistry major requirements. The corresponding laboratory courses are Ch 337, Ch 339 for chemistry and biochemistry majors, and Ch 337, Ch 338 for non-chemistry majors. This is the third course in a sequence of three: Ch 334, Ch 335, and Ch 336. Concurrent enrollment in the laboratory course is recommended.
Prerequisite: Ch 335.

Ch 337 - Organic Chemistry Laboratory I (2)
Part one of the laboratory work to accompany the sequence of Ch 334, Ch 335, Ch 336. One 4-hour laboratory period.
Prerequisite: Ch 334 or concurrent enrollment.

Ch 338 - Organic Chemistry Laboratory II (nonmajors) (2)
Part two of the laboratory work to accompany the sequence Ch 334, Ch 335, Ch 336. One 4-hour laboratory period. Not open to chemistry majors.
Prerequisite: Ch 337 and Ch 335 or concurrent enrollment in Ch 335.

Ch 338R - Recitation for CH 337/CH 338 (0)
Recitation for Ch 337 and Ch 338.

Ch 339 - Organic Chemistry Laboratory II (chem majors) (3)
Part two of the laboratory work to accompany the sequence Ch 334, Ch 335, Ch 336. More extensive laboratory course than Ch 338; required for chemistry and biochemistry majors. Two 4-hour laboratory periods.
Prerequisite: Ch 337 and Ch 336 or concurrent enrollment in Ch 336.

Ch 350 - Biochemistry (4)
Biochemistry for students having a limited background in physical chemistry.
Prerequisite: Ch 229 and (Ch 332 or Ch 336).

Ch 360U - Origins of Life on Earth (4)
Scientific description of the chemical events leading to life on the Earth. Current and past theories of how life arose and experiments that support these ideas will be presented. Cultural and societal issues surrounding the origins of life will also be discussed. Expected preparation: one college-level course in biology, chemistry, geology, or physics.

Ch 384 - Organic Chemistry Workshop I (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ch 334, 335, 336 organic chemistry sequence. Corequisite: corresponding lecture course Ch 334, 335, 336. Pass/no pass only. This is the first course in a sequence of three: Ch 384, Ch 385, and Ch 386.
Corequisite: Ch 334.

Ch 385 - Organic Chemistry Workshop II (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ch 334, 335, 336 organic chemistry sequence. Corequisite: corresponding lecture course Ch 334, 335, 336. Pass/no pass only. This is the second course in a sequence of three: Ch 384, Ch 385, and Ch 386.
Corequisite: Ch 335.

Ch 386 - Organic Chemistry Workshop III (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ch 334, 335, 336 organic chemistry sequence. Corequisite: corresponding lecture course Ch 334, 335, 336. Pass/no pass only. This is the third course in a sequence of three: Ch 384, Ch 385, and Ch 386.
Corequisite: Ch 336.

Ch 399 - Special Studies (1-6)
See department for course description. (Credit to be arranged.)

Ch 399U - Special Studies (4)
(Credit to be arranged.)
Ch 401 - Research (0-6)
Consent of instructor and chair of department. Credit will only be awarded after filing in the department office a well-written, detailed report approved by the instructor and the department chair. Ch 501 pass/no pass only. (Credit to be arranged.)

Ch 402 - Independent Study (1-12)
(Credit to be arranged.)

Ch 403 - Honor Thesis (1-4)
(Credit to be arranged.)

Ch 404 - Cooperative Education/Internship (0-12)
See department for course description. (Credit to be arranged.)

Ch 405 - Reading and Conference (0-6)
Consent of instructor and department chair. Ch 505 pass/no pass only. (Credit to be arranged.)

Ch 406 - Chemical Preparations (1-2)
Methods of synthesis of compounds in the fields of inorganic, organic, or biochemistry. Maximum: 6 credits. Recommended prerequisites: consent of instructor and chair of department. (Credit to be arranged.)

Ch 407 - Seminar (1-6)
Consent of instructor. Ch 507 pass/no pass only. (Credit to be arranged.)

Ch 408 - Workshop Leader (1-3)
Optional peer-led problem-solving sessions designed to promote the success of students in Chemistry. Corequisite: corresponding lecture course.

Ch 410 - Selected Topics (1-6)
Consent of instructor and chair of department. (Credit to be arranged.)

Ch 411 - Advanced Inorganic Chemistry I (4)
Atomic orbitals, ionic bonding, valence bond theory, molecular orbital theory, crystal field theory, and introduction to coordination theory. Also offered for graduate-level credit as Ch 511 and may be taken only once for credit. Prerequisite: Ch 223.

Ch 412 - Advanced Inorganic Chemistry II (4)
Ligand field theory, coordination chemistry, transition metals, organometallic chemistry, acids and bases, nonaqueous solvents, and descriptive chemistry of the elements. Also offered for graduate-level credit as Ch 512 and may be taken only once for credit. Prerequisite: Ch 411. Recommended prerequisites: Ch 442.

Ch 412a - MODULE: Coordination Chemistry (2)
An exploration of bonding in metal complexes and the effect that bonding has on the properties of the complex. Including topics are: crystal field theory, molecular orbital theory, ligand field theory, pi-bonding, the chelate effect, electron counting. Also offered for graduate credit as Ch 512a and may only be taken once for credit. Prerequisite: Ch 412.

Ch 412b - MODULE: Bioinorganic Chemistry (2)
This course examines the way in which coordination chemistry and biochemistry intersect. It will examine how the choice and/or coordination of particular metals affords properties beneficial to biological system. Also offered for graduate credit as Ch 512b and may only be taken once for credit. Prerequisite: Ch 412a.

Ch 416 - Physical Chemistry for the Biosciences I (4)
Intended primarily for students in the biological sciences and allied medical health fields. The emphasis is on the application of modern physical chemistry to problems of biological interest. Ch 416 includes the study of heat, work, energy, entropy, vapor pressure, chemical equilibrium, and transport phenomena. Ch 417 covers chemical and enzyme kinetics, quantum chemistry, photochemistry, and spectroscopy. Courses must be taken in sequence. Recommended prerequisite: Ch 320, 321, a year of general physics with calculus, and two terms of calculus. Recommended prerequisites: Ch 223 and Ch 229.
Ch 417 - Physical Chemistry for the Biosciences II (4)
Intended primarily for students in the biological sciences and allied medical health fields. The emphasis is on the application of modern physical chemistry to problems of biological interest. Ch 416 includes the study of heat, work, energy, entropy, vapor pressure, chemical equilibrium, and transport phenomena. Ch 417 covers chemical and enzyme kinetics, quantum chemistry, photochemistry, and spectroscopy. Courses must be taken in sequence. Recommended prerequisite: Ch 320, 321, a year of general physics with calculus, and two terms of calculus. Recommended prerequisites: Ch 223 and Ch 229.

Ch 418 - Advanced Chemistry Laboratory (4)
Advanced techniques and their use in the preparation of compounds. One lecture; two 3-hour laboratory periods. Expected preparation: Ch 338 or 339.
Also offered for graduate-level credit as Ch 518 and may be taken only once for credit.

Ch 424 - Electronics and Instrumentation for Chemists (2)
Selected topics in chemical instrumentation will be presented at a basic level. Representative topics are current and voltage measurements, voltage dividers, simple filters, introduction to operational amplifiers and digital circuits. Requires concurrent enrollment in Ch 425/525. Expected preparation: Ch 320, Ch 321, Ph 203, and Ch 416 or Ch 440/540.
Also offered for graduate-level credit as Ch 524 and may be taken only once for credit.

Ch 425 - Electronics and Instrumentation Laboratory (3)
Laboratory work to accompany Ch 424/524. Two 3-hour lab periods. Requires concurrent enrollment in Ch 424/524.
Also offered for graduate-level credit as Ch 525 and may be taken only once for credit.

Ch 426 - Instrumental Analysis (4)
Theory and application of modern instrumental methods, including UV-visible, fluorescence, atomic absorption, emission, infrared, nuclear magnetic resonance, and mass spectrometry; potentiometry and voltammetry; gas and liquid chromatography, and capillary electrophoresis.
Also offered for graduate-level credit as Ch 526 and may be taken only once for credit.

Ch 427 - Instrumental Analysis Laboratory (4)
Laboratory work to accompany Ch 426, including electrochemistry, chromatography, and atomic and molecular spectroscopy instruments. Writing intensive course. One 5-hour laboratory period, two 2-hour recitations.
Also offered for graduate-level credit as Ch 527 and may be taken only once for credit.

Ch 430 - Advanced Organic Chemistry (4)
Advanced treatment of general organic reactions and structure; emphasis on bonding, stereochemistry, the correlation of structure and reactivity, scope and mechanisms of organic reactions classified by reaction type. This is the first course in a sequence of two: Ch 430 and Ch 431. Expected preparation: Ch 336, 442/542, or 417/517.
Also offered for graduate credit as Ch 530 and may be taken only once for credit.

Ch 431 - Advanced Organic Chemistry (4)
Advanced treatment of general organic reactions and structure; emphasis on bonding, stereochemistry, the correlation of structure and reactivity, scope and mechanisms of organic reactions classified by reaction type. This is the second course in a sequence of two: Ch 430 and Ch 431. Expected preparation: Ch 336, 442/542, or 417/517.
Also offered for graduate credit as Ch 531 and may be taken only once for credit.

Ch 435 - Polymer Chemistry (4)
Fundamentals of polymers. Topics include polymer structures, molecular weights and determination, methods of polymerization including kinetics and statistics, testing and spectroscopy characterization of polymers, polymer composites and fillers, polymer reactions.
Also offered for graduate-level credit as Ch 535 and may be taken only once for credit. Prerequisite: Ch 336.

Ch 436 - Spectrometric Analysis (3)
Ultraviolet, infrared, nuclear magnetic resonance and mass spectrometry in the analysis of molecular structure. Expected preparation: Ch 336 and Ch 339.
Also offered for graduate-level credit as Ch 536 and may be taken only once for credit.

Ch 437 - Spectrometric Analysis Laboratory (1)
Use of infrared spectrometers and nuclear magnetic resonance spectrometers. One 3-hour laboratory period. Expected preparation: Ch 436/536 or concurrent enrollment.
Also offered for graduate-level credit as Ch 537 and may be taken only once for credit.

**Ch 440 - Physical Chemistry I (4)**
The study of thermodynamics, phase and chemical equilibria, solutions, electrochemistry, reaction rates and mechanisms, quantum mechanics, spectroscopy, electron transport, molecular modeling and statistical mechanics. This is the first course in a sequence of three: Ch 440, Ch 441, and Ch 442. Expected preparation: Ch 320, Ph 213, and Mth 253.

Also offered for graduate-level credit as Ch 540 and may be taken only once for credit.

**Ch 441 - Physical Chemistry II (4)**
The study of thermodynamics, phase and chemical equilibria, solutions, electrochemistry, reaction rates and mechanisms, quantum mechanics, spectroscopy, electron transport, molecular modeling and statistical mechanics. This is the second course in a sequence of three: Ch 440, Ch 441, and Ch 442. Expected preparation: Ch 320, Ph 213, and Mth 253.

Also offered for graduate-level credit as Ch 541 and may be taken only once for credit. Prerequisite: Ch 440.

**Ch 442 - Physical Chemistry III (4)**
The study of thermodynamics, phase and chemical equilibria, solutions, electrochemistry, reaction rates and mechanisms, quantum mechanics, spectroscopy, electron transport, molecular modeling and statistical mechanics. This is the third course in a sequence of three: Ch 440, Ch 441, and Ch 442. Expected preparation: Ch 320, Ph 213, and Mth 253.

Also offered for graduate-level credit as Ch 542 and may be taken only once for credit.

**Ch 443 - Numerical Data Analysis and Modeling in Chemistry (2)**
The study of statistical analysis of experimental data and modeling of chemical systems using modern computational resources.

Also offered for graduate-level credit as Ch 543 and may be taken only once for credit. Prerequisite: Ch 320/321, and Ph 223 or Ph 213. Concurrent enrollment in Ch 440/540 recommended.

**Ch 444 - Physical Chemistry Laboratory (2)**
Laboratory work to accompany Ch 441/541, 442/542. One 4-hour laboratory period. This is the first lab in a sequence of two: Ch 444 and Ch 445. Expected preparation: Ch 321 and concurrent enrollment in Ch 441/541, 442/542 respectively.

Also offered for graduate-level credit as Ch 544 and may be taken only once for credit.

**Ch 445 - Physical Chemistry Laboratory (2)**
Laboratory work to accompany Ch 441/541, 442/542. One 4-hour laboratory period. This is the second lab in a sequence of two: Ch 444 and Ch 445. Expected preparation: Ch 321 and concurrent enrollment in Ch 441/541, 442/542 respectively.

Also offered for graduate-level credit as Ch 545 and may be taken only once for credit.

**Ch 446 - Module: Biophsyical methods I (2)**
This 5-week intensive course covers the principal methodologies used to study biological macromolecules at the ‘atomic-level’ (e.g. X-ray Crystallography, NMR Spectroscopy and Electron Microscopy). Students will learn the underlying principles, practical aspects and means for validation and assessment applied to these techniques.

Also offered for graduate-level credit as Ch 546 and may be taken only once for credit. Prerequisite: (Ch 490 or Ch 350) and (Ph 203 or Ph 213).

**Ch 451 - Materials Chemistry Laboratory (3)**
A suite of laboratory experiments in modern materials chemistry. Topics include nonmolecular inorganic solids (semiconductors, superconductors, sols, and gels), thin polymeric films, magnetic and photonic materials. Equal emphasis is placed on synthesis and physical characterization. Expected preparation: Ch 338 or Ch 339.

Also offered for graduate-level credit as Ch 551 and may be taken only once for credit.

**Ch 460 - Prebiotic Chemistry (4)**
Reaction pathways for the abiological production of molecules involved in biological information flow. Expected Preparation: completion or concurrent enrollment in Ch 492/592.

Also offered for graduate-level credit as Ch 560 and may be taken only once for credit.

**Ch 470 - NMR Spectroscopy (4)**
Nuclear magnetic resonance spectroscopy theory and practice. Basic quantum theory of magnetic moments, the semi-classical vector model of spins, and the product operator formalism will be applied using a variety of NMR spectroscopic techniques. Expected preparation: Ch 417 or Ch 442.

Also offered for graduate-level credit as Ch 570 and may be taken only once for credit.

**Ch 470c - MODULE: Practical NMR Spectroscopy (2)**
This course will focus on the practical aspects of obtaining NMR spectroscopic data from...
instrumentation such as one would encounter in a research or industrial setting.

Also offered for graduate-level credit as Ch 570c and may be taken only once for credit. Prerequisite: Ch 417 or Ch 442.

**Ch 471 - Biological NMR Spectroscopy (4)**

Nuclear magnetic resonance spectroscopy (NMR) of biological systems. The basic theory of NMR, its application to complex biological molecules and complexes. Expected preparation: Ch 470/570.

Also offered for graduate-level credit as Ch 571 and may be taken only once for credit.

**Ch 471a - MODULE: Biological NMR Spectroscopy (2)**

Nuclear magnetic resonance spectroscopy (NMR) of biological systems. The basic theory of NMR, its application to complex biological molecules and complexes. This course will bring the student an understanding of the application of NMR to biological systems, which is important because this is different to small-molecule NMR. There is also a large and expanding literature in biological NMR, that the upon which students may be able to model their research projects.

Also offered for graduate-level credit as Ch 571a and may be taken only once for credit. Prerequisite: Ch 470.

**Ch 486 - Environmental Chemistry (4)**

Survey of chemical aspects of major environmental issues: stratospheric ozone holes and chlorofluorocarbons; air pollution; global climate change; fossil fuel energy/"carbon footprint"; renewable energy; nuclear energy/radioactivity; toxic chemicals (pesticides, PCBs); endocrine disruptors; surfactants, chemical dispersants/oil spills; biodegradability of chemicals; chemistry of natural waters/acid rain; toxic heavy metals. This is the same course as CE 486 and can be taken only once for credit.

Prerequisite: Ch 334 or Ch 331. Cross-Listed as: CE 486.

**Ch 487 - Aquatic Chemistry (4)**

Aqueous chemistry in natural water systems: simple- to-complex acid/base chemistry; titration curves; buffer strength; acid/base chemistry of carbon dioxide in open and closed systems; alkalinity as system variable (blood); mineral dissolution/precipitation (metal carbonates); redox chemistry: pe-pH, redox succession/organic loading/dissolved oxygen loss, nitrate reduction, iron oxide dissolution, hydrogen sulfide production, methane formation. This is the same course as CE 487 and can be taken only once for credit.

Prerequisite: Ch 223. Cross-Listed as: CE 487.

**Ch 490 - Biochemistry: Structure and Function (4)**

First term of a three-term course for students preparing for professional biochemical work. Structures of biological molecules and assemblies, including proteins, nucleic acids, and lipids, and how these structures give rise to their biological functions.

Expected preparation: Ch 336. Recommended pre- or corequisites: Ch 416 or Ch 440/540, Ch 320/321, and Bi 253.

Also offered for graduate-level credit as Ch 590 and may be taken only once for credit.

**Ch 491 - Biochemistry: Enzymology and Metabolism (4)**

Second term of a three-term course for students preparing for professional biochemical work. Basic principles of enzyme catalysis and mechanism, the chemistry and energetics of the primary metabolic pathways responsible for life, including glycolysis/glyconeogenesis, citric acid cycle, lipid and amino acid metabolism, oxidative phosphorylation, and photosynthesis.

Also offered for graduate-level credit as Ch 591 and may be taken only once for credit. Prerequisite: Ch 490.

**Ch 492 - Biochemistry: Nucleic Acids and Biological Information Flow (4)**

Also offered for graduate-level credit as Ch 592 and may be taken only once for credit. Prerequisite: Ch 491.

**Ch 493 - Biochemistry Laboratory (3)**

Introduction to general techniques of biochemistry including purification and characterization of enzymes. One 4-hour laboratory period, plus one hour of lecture. Expected preparation: Ch 491/591 or concurrent enrollment.

Also offered for graduate-level credit as Ch 593 and may be taken only once for credit.

**Ch 496 - Synthetic Biology (4)**

Advanced seminar-style class surveying the applied interdisciplinary field of synthetic biology. Topics on engineering and design of new microbial cells include: minimal gene sets, large scale genome
assembly, manipulation of metabolic pathways, and alteration of the genetic code. Required preparation: Organic Chemistry AND either Biochemistry or Molecular Biology. Co-requisite: Ch 492 or Bi 334 (for students who completed Ch 491 but neither Ch 350 nor Bi 334).

Prerequisite: Ch 335. Grade of B- or better in Ch 491 or Ch 350 or Bi 334.

Ch 497 - Module: Nucleic Acids (2)

Chemical and physical features and functions of DNA and RNA primary, secondary and tertiary structures and protein recognition; unusual DNA structures; chromatin organization; thermodynamics of DNA sequence dependent stability, RNA secondary structure prediction and RNA folding; chemistry and thermodynamics of structure/functional mechanisms of ribozymes, large DNA-protein and RNA–protein complexes

Also offered for graduate-level credit as Ch 597 and may be taken only once for credit. Prerequisite: Ch 492.

Ch 498 - MODULE: Protein Dynamics and Folding (2)

This 5-week intensive course will develop an advanced understanding of the molecular forces that govern protein structure, folding and dynamics. We will discuss the theoretical aspects used to describe these principles, as well as the methods used to experimentally characterize and computationally model protein folding and dynamics.

Also offered for graduate-level credit as Ch 598 and may be taken only once for credit. Prerequisite: (Ch 490 or Ch 350) and (Ph 203 or Ph 213) and Mth 251 and Mth 252.

Ch 501 - Research (1-9)

Consent of instructor and chair of department. Credit will only be awarded after filing in the department office a well-written, detailed report approved by the instructor and the department chair. Ch 501 pass/no pass only. (Credit to be arranged.)

Ch 502 - Independent Study (1-4)

(Credit to be arranged.)

Ch 503 - Thesis (1-9)

See department for course description. Pass/no pass only. (Credit to be arranged.)

Ch 504 - Cooperative Education/Internship (0-9)

See department for course description. (Credit to be arranged.)

Ch 505 - Reading and Conference (0-6)

Consent of instructor and department chair. Ch 505 pass/no pass only. (Credit to be arranged.)

Ch 507 - Seminar (1-6)

Consent of instructor. Ch 507 pass/no pass only. (Credit to be arranged.)

Ch 510 - Selected Topics (1-6)

Consent of instructor and chair of department. (Credit to be arranged.)

Ch 511 - Advanced Inorganic Chemistry I (4)

Atomic orbitals, ionic bonding, valence bond theory, molecular orbital theory, crystal field theory, and introduction to coordination theory.

Also offered for undergraduate-level credit as Ch 411 and may be taken only once for credit.

Ch 512 - Advanced Inorganic Chemistry II (4)

Ligand field theory, coordination chemistry, transition metals, organometallic chemistry, acids and bases, nonaqueous solvents, and descriptive chemistry of the elements.

Also offered for undergraduate-level credit as Ch 412 and may be taken only once for credit. Prerequisite: Ch 411. Recommended prerequisites: Ch 442.

Ch 512a - MODULE: Coordination Chemistry (2)

An exploration of bonding in metal complexes and the effect that bonding has on the properties of the complex. Including topics are: crystal field theory, molecular orbital theory, pi-bonding, the chelate effect, electron counting.

Also offered for undergraduate credit as Ch 412a and may only be taken once for credit. Prerequisite: Ch 511.

Ch 512b - MODULE: Bioinorganic Chemistry (2)

This course examines the way in which coordination chemistry and biochemistry intersect. It will examine how the choice and/or coordination of particular metals affords properties beneficial to biological system.
Also offered for undergraduate credit as Ch 412b and may only be taken once for credit. Prerequisite: Ch 512a.

**Ch 515 - Selected Topics in Inorganic Chemistry (3)**

Current topics in inorganic chemistry such as advances in oxidation, solution chemistry, and fluorine chemistry. As subject matter varies, course may be repeated with consent of instructor.

Also offered as Ch 615. Prerequisite: Ch 511.

**Ch 516 - Physical Chemistry for the Biosciences I (4)**

Intended primarily for students in the biological sciences and allied medical health fields. The emphasis is on the application of modern physical chemistry to problems of biological interest. Ch 416 includes the study of heat, work, energy, entropy, vapor pressure, chemical equilibrium, and transport phenomena. Ch 417 covers chemical and enzyme kinetics, quantum chemistry, photochemistry, and spectroscopy. Courses must be taken in sequence. Recommended prerequisite: Ch 320, 321, a year of general physics with calculus, and two terms of calculus. Recommended prerequisites: Ch 223 and Ch 229.

**Ch 517 - Physical Chemistry for the Biosciences II (4)**

Intended primarily for students in the biological sciences and allied medical health fields. The emphasis is on the application of modern physical chemistry to problems of biological interest. Ch 416 includes the study of heat, work, energy, entropy, vapor pressure, chemical equilibrium, and transport phenomena. Ch 417 covers chemical and enzyme kinetics, quantum chemistry, photochemistry, and spectroscopy. Courses must be taken in sequence. Recommended prerequisite: Ch 320, 321, a year of general physics with calculus, and two terms of calculus. Recommended prerequisites: Ch 223 and Ch 229.

**Ch 518 - Advanced Chemistry Laboratory (4)**

Advanced techniques and their use in the preparation of compounds. One lecture; two 3-hour laboratory periods. Expected preparation: Ch 338 or 339.

Also offered for undergraduate-level credit as Ch 418 and may be taken only once for credit.

**Ch 524 - Electronics and Instrumentation for Chemists (2)**

Selected topics in chemical instrumentation will be presented at a basic level. Representative topics are current and voltage measurements, voltage dividers, simple filters, introduction to operational amplifiers and digital circuits. Requires concurrent enrollment in Ch 425/525. Expected preparation: Ch 320, Ch 321, Ph 203, and Ch 416 or Ch 440/540.

Also offered for undergraduate-level credit as Ch 424 and may be taken only once for credit.

**Ch 525 - Electronics and Instrumentation Laboratory (3)**

Laboratory work to accompany Ch 424/524. Two 3-hour lab periods. Requires concurrent enrollment in Ch 424/524.

Also offered for undergraduate-level credit as Ch 425 and may be taken only once for credit.

**Ch 526 - Instrumental Analysis (4)**

Theory and application of modern instrumental methods, including UV-visible, fluorescence, atomic absorption and emission, infrared, nuclear magnetic resonance, and mass spectrometry; potentiometry and voltammetry; gas and liquid chromatography, and capillary electrophoresis.

Also offered for undergraduate-level credit as Ch 426 and may be taken only once for credit.

**Ch 527 - Instrumental Analysis Laboratory (4)**

Laboratory work to accompany Ch 526, including electrochemistry, chromatography, and atomic and molecular spectroscopy instruments. Writing intensive course. One 5-hour laboratory period, two 2-hour recitations.

Also offered for undergraduate-level credit as Ch 427 and may be taken only once for credit.

**Ch 530 - Advanced Organic Chemistry (4)**

Advanced treatment of general organic reactions and structure; emphasis on bonding, stereochemistry, the correlation of structure and reactivity, scope and mechanisms of organic reactions classified by reaction type. This is the first course in a sequence of two: Ch 530 and Ch 531. Expected preparation: Ch 336, 442/542, or 417/517.

Also offered for undergraduate credit as Ch 430 and may be taken only once for credit.

**Ch 531 - Advanced Organic Chemistry (4)**

Advanced treatment of general organic reactions and structure; emphasis on bonding, stereochemistry, the correlation of structure and reactivity, scope and
mechanisms of organic reactions classified by reaction type. This is the second course in a sequence of two: Ch 530 and Ch 531. Expected preparation: Ch 336, 442/542, or 417/517.

Also offered for undergraduate credit as Ch 431 and may be taken only once for credit.

Ch 535 - Polymer Chemistry (4)
Fundamentals of polymers. Topics include polymer structures, molecular weights and determination, methods of polymerization including kinetics and statistics, testing and spectroscopy characterization of polymers, polymer composites and fillers, polymer reactions.

Also offered for undergraduate-level credit as Ch 435 and may be taken only once for credit. Prerequisite: Ch 336.

Ch 536 - Spectrometric Analysis (3)
Ultraviolet, infrared, nuclear magnetic resonance and mass spectrometry in the analysis of molecular structure. Expected preparation: Ch 336 and Ch 339.

Also offered for undergraduate-level credit as Ch 436 and may be taken only once for credit.

Ch 537 - Spectrometric Analysis Laboratory (1)
Use of infrared spectrometers and nuclear magnetic resonance spectrometers. One 3-hour laboratory period. Expected preparation: Ch 436/536 or concurrent enrollment.

Also offered for undergraduate-level credit as Ch 437 and may be taken only once for credit. Prerequisite: Ch 536 (concurrent enrollment allowed).

Ch 540 - Physical Chemistry (4)
The study of thermodynamics, phase and chemical equilibria, solutions, electrochemistry, reaction rates and mechanisms, quantum mechanics, spectroscopy, electron transport, molecular modeling and statistical mechanics. This is the first course in a sequence of three: Ch 540, Ch 541, and Ch 542. Expected preparation: Ch 320, Ph 213, and Mth 253.

Also offered for undergraduate-level credit as Ch 440 and may be taken only once for credit.

Ch 541 - Physical Chemistry (4)
The study of thermodynamics, phase and chemical equilibria, solutions, electrochemistry, reaction rates and mechanisms, quantum mechanics, spectroscopy, electron transport, molecular modeling and statistical mechanics. This is the second course in a sequence of three: Ch 540, Ch 541, and Ch 542. Expected preparation: Ch 320, Ph 213, and Mth 253.

Ch 542 - Physical Chemistry (4)
The study of thermodynamics, phase and chemical equilibria, solutions, electrochemistry, reaction rates and mechanisms, quantum mechanics, spectroscopy, electron transport, molecular modeling and statistical mechanics. This is the third course in a sequence of three: Ch 540, Ch 541, and Ch 542. Expected preparation: Ch 320, Ph 213, and Mth 253.

Also offered for undergraduate-level credit as Ch 442 and may be taken only once for credit.

Ch 543 - Numerical Data Analysis and Modeling in Chemistry (2)
The study of statistical analysis of experimental data and modeling of chemical systems using modern computational resources.

Also offered for undergraduate-level credit as Ch 443 and may be taken only once for credit. Prerequisite: Ch 320/321, and Ph 223 or Ph 213. Concurrent enrollment in Ch 440/540 recommended.

Ch 544 - Physical Chemistry Laboratory (2)
Laboratory work to accompany Ch 441/541, 442/542. One 4-hour laboratory period. This is the first lab in a sequence of two: Ch 544 and Ch 545. Expected preparation: Ch 321 and concurrent enrollment in Ch 441/541, 442/542 respectively.

Also offered for undergraduate-level credit as Ch 444 and may be taken only once for credit.

Ch 545 - Physical Chemistry Laboratory (2)
Laboratory work to accompany Ch 441/541, 442/542. One 4-hour laboratory period. This is the second lab in a sequence of two: Ch 544 and Ch 545. Expected preparation: Ch 321 and concurrent enrollment in Ch 441/541, 442/542 respectively.

Also offered for undergraduate-level credit as Ch 445 and may be taken only once for credit.

Ch 546 - MODULE: Biophysical Methods I (Macromolecular Structure) (2)
This 5-week intensive course covers the principle methodologies used to study biological macromolecules at the ‘atomic-level’ (e.g. X-ray Crystallography, NMR Spectroscopy and Electron Microscopy). Students will learn the underling principles, practical aspects and means for validation and assessment applied to these techniques.

Also offered for undergraduate-level credit as Ch 446 and may be taken only once for credit. Prerequisite: (CH490 or CH350) and (PH203 or PH213).
Ch 551 - Materials Chemistry Laboratory (3)
A suite of laboratory experiments in modern materials chemistry. Topics include nonmolecular inorganic solids (semiconductors, superconductors, sols, and gels), thin polymeric films, magnetic and photonic materials. Equal emphasis is placed on synthesis and physical characterization. Expected preparation: Ch 338 or Ch 339.
Also offered for undergraduate-level credit as Ch 451 and may be taken only once for credit..

Ch 560 - Prebiotic Chemistry (4)
Reaction pathways for the abiological production of molecules involved in biological information flow. Expected Preparation: completion or concurrent enrollment in Ch 492/592.
Also offered for undergraduate-level credit as Ch 460 and may be taken only once for credit.

Ch 570 - NMR Spectroscopy (4)
Nuclear magnetic resonance spectroscopy theory and practice. Basic quantum theory of magnetic moments, the semi-classical vector model of spins, and the product operator formalism will be applied using a variety of NMR spectroscopic techniques. Expected preparation: Ch 417 or Ch 442.
Also offered for undergraduate-level credit as Ch 470 and may be taken only once for credit.

Ch 570c - MODULE: Practical NMR Spectroscopy (2)
This course will focus on the practical aspects of obtaining NMR spectroscopic data from instrumentation such as one would encounter in a research or industrial setting.
Also offered for undergraduate-level credit as Ch 470c and may be taken only once for credit.
Prerequisite: Ch 417 or Ch 442.

Ch 571 - Biological NMR Spectroscopy (4)
Nuclear magnetic resonance spectroscopy (NMR) of biological systems. The basic theory of NMR, its application to complex biological molecules and complexes. Expected preparation: Ch 470/570.
Also offered for undergraduate-level credit as Ch 471 and may be taken only once for credit.

Ch 571a - MODULE: Biological NMR Spectroscopy (2)
Nuclear magnetic resonance spectroscopy (NMR) of biological systems. The basic theory of NMR, its application to complex biological molecules and complexes.

Ch 571b - MODULE: Biological NMR Spectroscopy (2)
Nuclear magnetic resonance spectroscopy (NMR) of biological systems. The basic theory of NMR, its application to complex biological molecules and complexes.

Ch 586 - Environmental Chemistry (4)
Survey of chemical aspects of major environmental issues: stratospheric ozone holes and chlorofluorocarbons; air pollution; global climate change; fossil fuel energy/"carbon footprint"; renewable energy; nuclear energy/radioactivity; toxic chemicals (pesticides, PCBs); endocrine disruptors; surfactants, chemical dispersants/oil spills; biodegradability of chemicals; chemistry of natural waters/acid rain; toxic heavy metals. This is the same course as CE 586 and can be taken only once for credit.
Prerequisite: Ch 334 or Ch 331. Cross-Listed as: CE 586.

Ch 587 - Aquatic Chemistry (4)
Aqueous chemistry in natural water systems: simple-to-complex acid/base chemistry; titration curves; buffer strength; acid/base chemistry of carbon dioxide in open and closed systems; alkalinity as system variable (blood); mineral dissolution/precipitation (metal carbonates); redox chemistry: pe-pH, redox succession/organic loading/dissolved oxygen loss, nitrate reduction, iron oxide dissolution, hydrogen sulfide production, methane formation. This is the same course as CE 587 and can be taken only once for credit.
Prerequisite: Ch 223. Cross-Listed as: CE 587.

Ch 590 - Biochemistry: Structure and Function (4)
First term of a three-term course for students preparing for professional biochemical work. Structures of biological molecules and assemblies, including proteins, nucleic acids, and lipids, and how these structures give rise to their biological functions. Expected preparation: Ch 336. Recommended pre-or corequisites: Ch 416 or Ch 440/540, Ch 320/321, and Bi 253.
Also offered for undergraduate-level credit as Ch 490 and may be taken only once for credit.

Ch 591 - Biochemistry: Enzymology and Metabolism (4)
Second term of a three-term course for students preparing for professional biochemical work. Basic principles of enzyme catalysis and mechanism, the chemistry and energetics of the primary metabolic pathways responsible for life, including glycolysis/glyconeogenesis, citric acid cycle, lipid and amino acid metabolism, oxidative phosphorylation, and photosynthesis. Expected preparation: Ch 490/590.
Also offered for undergraduate-level credit as Ch 491 and may be taken only once for credit.

**Ch 592 - Biochemistry: Nucleic Acids and Biological Information Flow (4)**

Also offered for undergraduate-level credit as Ch 492 and may be taken only once for credit.

**Ch 593 - Biochemistry Laboratory (3)**

Introduction to general techniques of biochemistry including purification and characterization of enzymes. One 4-hour laboratory period, plus one hour of lecture. Expected preparation: Ch 491/591 or concurrent enrollment.

Also offered for undergraduate-level credit as Ch 493 and may be taken only once for credit.

**Ch 596 - Synthetic Biology (4)**

Advanced seminar-style class surveying the applied interdisciplinary field of synthetic biology. Topics on engineering and design of new microbial cells include: minimal gene sets, large scale genome assembly, manipulation of metabolic pathways, and alteration of the genetic code. Required preparation: Organic Chemistry AND either Biochemistry or Molecular Biology. Co-requisite: Ch 492 or Bi 334 (for students who completed Ch 491 but neither Ch 350 nor Bi 334).

Prerequisite: Ch 335. Grade of B- or better in Ch 491 or Ch 350 or Bi 334.

**Ch 597 - MODULE: Nucleic Acids (2)**

Chemical and physical features and functions of DNA and RNA primary, secondary and tertiary structures and protein recognition; unusual DNA structures; chromatin organization; thermodynamics of DNA sequence dependent stability, RNA secondary structure prediction and RNA folding; chemistry and thermodynamics of structure/functional mechanisms of ribozymes, large DNA-protein and RNA–protein complexes.

Also offered for undergraduate-level credit as Ch 497 and may be taken only once for credit. Prerequisite: Ch 592.

**Ch 598 - MODULE: Protein Dynamics and Folding (2)**

This 5-week intensive course will develop an advanced understanding of the molecular forces that govern protein structure, folding and dynamics. We will discuss the theoretical aspects used to describe these principles, as well as the methods used to experimentally characterize and computationally model protein folding and dynamics.

Also offered for undergraduate-level credit as Ch 498 and may be taken only once for credit. Prerequisite: (CH 490 or CH 350) and (PH 203 or PH 213) and Mth 251 and Mth 252.

**Ch 601 - Research (1-9)**

See department for course description. Pass/no pass only. (Credit to be arranged.)

**Ch 602 - Independent Study (1-9)**

(Credit to be arranged.)

**Ch 603 - Dissertation (1-12)**

See department for course description. (Credit to be arranged.)

**Ch 604 - Cooperative Education/internship (1-9)**

See department for course description. (Credit to be arranged.)

**Ch 605 - Reading and Conference (0-9)**

See department for course description. Pass/no pass only. (Credit to be arranged.)

**Ch 606 - Projects (1-9)**

(Credit to be arranged.)

**Ch 607 - Seminar (1-9)**

See department for course description. Pass/no pass only. (Credit to be arranged.)

**Ch 610 - Selected Topics (1-9)**

See department for course description. (Credit to be arranged.)

**Ch 615 - Selected Topics in Inorganic Chemistry (3)**

Current topics in inorganic chemistry such as advances in oxidation, solution chemistry, and
fluorine chemistry. As subject matter varies, course may be repeated with consent of instructor.

**Prerequisite:** Ch 511. Cross-Listed as: Also offered as Ch 515.

**Ch 621 - Advanced Analytical Theory (3)**
Modern methods of analysis and their application to the analytical chemistry of elements.
**Prerequisite:** Ch 425/525 and 442/542.

**Ch 633 - Organic Synthesis (3)**
Organic reactions, mechanisms and stereochemistry with application to multi-step synthesis.
**Recommended prerequisite:** Ch 431/531.

**Ch 634 - Advanced Topics in Organic Chemistry (3)**
Current topics such as stereochemistry, natural products, pericyclic reactions, carbonium ions, heterocyclic and polycyclic compounds, organic photochemistry. As subject matter varies, course may be repeated with consent of instructor. **Recommended prerequisite:** Ch 431/531.

**Ch 635 - Physical Organic Chemistry (3)**
Modern concepts of physical-organic chemistry and their use in the study of mechanisms of organic reactions and reactivities of organic compounds. **Recommended prerequisite:** Ch 431/531.

**Ch 661 - Photochemistry (3)**
An introduction to the chemistry of the interaction of light with matter. Absorption and emission of light, photochemical and photophysical processes, photochemical kinetics and mechanisms. Reactivity of excited states of molecules and atoms.
**Prerequisite:** Ch 441/541.

**Ch 662 - Chemical Kinetics (4)**
Chemical kinetics in the gas phase and in solution, catalysis, and absolute rate theory.
**Prerequisite:** Ch 442/542.

**Ch 663 - Chemical Thermodynamics (3)**
The laws of thermodynamics and their applications.
**Prerequisite:** Ch 442/542.

**Ch 665 - Statistical Thermodynamics (3)**
Foundations of the subject with application to the equilibrium thermodynamics of gases, liquids, and solids.
**Prerequisite:** Ch 664.

**Ch 670 - Atmospheric Chemistry (3)**
Physical chemistry of the earth's atmosphere, including global chemical budgets, atmospheric thermodynamics, photo-chemical reactions in the lower and upper atmosphere, chemical properties of aerosols, and global climate change.
**Prerequisite:** Ch 442/542.

**Ch 693 - Enzyme Structure and Function (4)**
Chemical and physical properties of enzymes; energetics, kinetics, and mechanism of enzymatic reactions.
**Prerequisite:** Ch 492/592.

**Ch 694 - Nucleic Acid Structure and Function (4)**
Comprehensive examination of nucleic acid structure-function relationships at the molecular level. Geometry of DNA and RNA will be presented, along with the impact this has on gene expression. DNA structural thermodynamics and RNA-directed catalysis will also be covered.
**Prerequisite:** completion of a full year of undergraduate-level biochemistry (Ch 490, 491, 492).

**Ch 695 - Advances in Biochemistry (3)**
Current topics in biochemistry such as neurobiochemistry, membrane structure, differentiation, metabolic regulation, bioenergetics, nucleic acids. As subject matter varies, course may be repeated with consent of instructor.
**Prerequisite:** Ch 492/592.

**Ch 699 - Special Studies (1-6)**
(Credit to be arranged.)

**ChLa - Chicano-Latino**

**ChLa 201 - Introduction to Chicano/Latino Studies (4)**
An introductory history of Latinos in the United States. Beginning with Spanish colonization and moving to the recent migration of Latin and South Americans in the 1970s, 1980s, and early 1990s. Special attention will be given to particular events that shaped and influenced the Latino experience, such as the Mexican-American War, Repatriation,
Bracero Program, World War II, War on Poverty, the Chicano Movement, and U.S. foreign policy in Latin America.

**ChLa 301U - Chicano/Latino Communities (4)**

Contemporary sociological studies and theory used to understand and explain the status of Chicanos and Latinos in the U.S. Topics will include family, gender relations, immigration, work and employment, inter- and intra-ethnic and racial relations in the community.

**ChLa 302U - Survey of Chicano/Latino Literature (4)**

A representative overview of Chicano/Latino literature covering poetry, theater, novel, short story, and essay. The course will include literary techniques, modes of expression, trends in Chicano and Latino creativity, critical approaches, and will expose students to available bibliographic resources in the field.

**ChLa 303U - Chicana/Latina Experience (4)**

The social, political, and literary experience of women in the Chicano and Latino communities. The women’s perspective and position in historical events, community organizing, and social issues will be explored through literature, art, music, and social science research.

**ChLa 325 - Mexican American/Chicano History I, 1492-1900 (4)**

Mexican American/Chicano/a history from the Conquest of the Americas to 1900 with an emphasis on empire, civil rights, identity, culture, sexuality, and war. This is the same course as Hst 325 and may be taken only once for credit.

Cross-Listed as: Hst 325.

**ChLa 326U - Mexican American/Chicano History II, 1900-Present (4)**

Mexican American/Chicano/a history from 1900 to the present with an emphasis on migration, ethnicity, labor, civil rights, identity, and culture. This is the same course as Hst 326U and may be taken only once for credit.

Cross-Listed as: Hst 326U.

**ChLa 330U - Latino Popular Culture (4)**

Explores a wide scope of Latino popular culture: highly produced entertainment (television, radio, films, magazines); commercial and noncommercial musical and artistic expression; popular celebrations; and the culture of “everyday life,” from traditional folklore to newly invented customs and rituals. Popular culture is examined to reveal how Latino groups (Mexicans, Cubans, Dominicans, Puerto Ricans, etc.), reinvent their culture, heritage, and ethnic identity in the United States, and how Latinos in the process are changing American popular culture and national identity. Students will become familiar with theories of popular culture and get hands-on experience investigating a Latino popular culture form.

**ChLa 331U - Barrio Culture: Art and Literature (4)**

A focus on barrio communities as a construction model to Chicano/Latino Studies yields barrio cultures as dynamic sites of historical, visual and cultural production. Examination of traditions, lifestyles, and values of Chicana/Chicano communities and representations of legends, icons, and stereotypes through literature, music, media, cinema, and history.

**ChLa 335 - Chicano/Latin American Film (4)**

Exploration of Chicano/Latin American film through close readings of representative films from each of the following major periods: silent cinema (1890s-1930s), studio cinema (1930s-1950s), Neorealism/Art Cinema (1950s), the New Latin American Cinema (1960s-1980s), and contemporary cinema (1990s to today). Examine representations to different constructions of gender, race, sexuality, and nationality.

**ChLa 340 - Mayas, Aztecs, and Chicanos (4)**

Will focus on the flourishing of Mayan civilization and the cultural and artistic contributions of other Mesoamerican societies, such as the Aztecs, during the Classic and Post-Classic period. The fall of the Aztec so-called empire will be studied, including the first years of New Spain’s viceregal society, which saw the beginning of class and race relations. Early-Mexican identity will be explored during this period, including its relations to Chicano identity.
ChLa 345 - Public Art: Mexican-American/Chicano Muralism (4)
Introduces the historical background of public art and mural creation from the mural movement origins in Mexico to current community mural movements in the United States. Identifies a wide range of mural styles and trends. Considers practical information, skills, and techniques. Applies this base knowledge to formulate and evaluate a personal approach to mural art in the development of a mural proposal. Create along with the instructor a local mural project and/or public art project.

ChLa 360 - Bilingualism in U.S. Latinx Communities (4)
Due to the constant contact between English and Spanish in the U.S., a natural bilingual context flourishes in which new linguistic innovations emerge. Even though these two languages coexist, the political, economic, and social capital that English represents accords it a dominant status over Spanish. From an interdisciplinary perspective, this course critically analyzes Spanish-English bilingualism through sociohistorical, sociopolitical, and sociocultural lenses with the goal of dismantling monolingual ideologies and empowering speakers of multilingual discourses.

ChLa 375U - Southwestern Borderlands (4)
Social, economic, political organization, and representation of the United States/Mexico borderlands. While conflict characterizes the history of the interactions among border actors, the contemporary period reveals growing interdependence and economic integration. Explores cultural and social formations of Anglo-Americans and Mexican Americans in a dynamic contact zone, as well as the continuities and discontinuities in popular and academic representations of the border experience.

ChLa 380U - Latinos in the Economy and Politics (4)
Offers an overview of economic and political issues facing Latino communities in the United States, with an emphasis on labor market experience, the causes of poverty, and the role of political and civic organizations in shaping Latino ethnic identity.

ChLa 390U - Latinos in the Pacific Northwest (4)
Introduction to past and present experiences of Mexicans and other Latin American-origin populations in the U.S. Pacific Northwest. Attention to current population growth, including sources of migration and settlement patterns. Explores the present social, economic, and political status of Latinos in this region of the country.

ChLa 399 - Special Studies (1-8)
See department for course description. (Credit to be arranged.)

ChLa 399U - Special Studies (4)
(Credit to be arranged.)

ChLa 401 - Research (1-8)
Consent of instructor. See department for course description. (Credit to be arranged.)

ChLa 404 - Internship (1-12)
(Credit to be arranged.)

ChLa 405 - Reading and Conference (1-8)
Consent of instructor. See department for course description. (Credit to be arranged.)

ChLa 407 - Seminar (1-8)
Consent of instructor. See department for course description. (Credit to be arranged.)

ChLa 408 - Workshop (1-8)
Consent of instructor. See department for course description. (Credit to be arranged.)

ChLa 410 - Selected Topics (1-8)
See department for course description. (Credit to be arranged.)

ChLa 410U - Selected Topics (4)
(Credit to be arranged.)
ChLa 411 - Chicano/Latino History Seminar (4)
This course will take an in-depth look at the history of Chicano/Latino experience in this country examining such issues as the Treaty of Guadalupe-Hidalgo and its affect on Latinos. Additional topics will include issues dealing with why the Puerto Rican and Cuban experience has been different than for other Latinos in this country. Recommended prerequisite: ChLa 201.

ChLa 414 - Chicano/Latino Literature (4)
Examination of the works created by some of the leading Chicano/Latino novelists, poets, and short fiction writers from the 1960s to present day. The course will look at the impact of their work and how it impacts how Latinos view themselves and their place in American society. Recommended prerequisite: ChLa 302U.

ChLa 450U - Latinos in Education (4)
Surveys historical and contemporary social science research on the factors influencing the educational status of Latinos in the United States. A brief history of the Latino schooling experience serves as an introduction to current issues such as bilingual education, school segregation, and higher education access. Special attention is given to educational inequalities among Latinos and to the relationship between schooling and limited class mobility.
Prerequisite: upper-division standing.

ChLa 507 - Seminar (1-8)
(Credit to be arranged.)

ChLa 510 - Selected Topics (1-8)
See department for course description. (Credit to be arranged.)

Chn - Chinese

Chn 101 - First-Year Chinese Term 1 (5)
An introduction to Mandarin: listening, speaking, reading, and writing. Characters and spoken language presented concurrently throughout the year. This is the first course in a sequence of three: Chn 101, Chn 102, and Chn 103. For non-native speakers only.

Chn 102 - First-Year Chinese Term 2 (5)
An introduction to Mandarin: listening, speaking, reading, and writing. Characters and spoken language presented concurrently throughout the year. This is the second course in a sequence of three: Chn 101, Chn 102, and Chn 103. For non-native speakers only.

Chn 103 - First-Year Chinese Term 3 (5)
An introduction to Mandarin: listening, speaking, reading, and writing. Characters and spoken language presented concurrently throughout the year. This is the third course in a sequence of three: Chn 101, Chn 102, and Chn 103. For non-native speakers only.

Chn 199 - Special Studies (1-12)
(Credit to be arranged.)

Chn 201 - Second-Year Chinese Term 1 (5)
Continued work in Mandarin, with emphasis on mastering all basic grammatical structures, developing conversation skills, and building vocabulary in characters with correct pronunciation. This is the first course in a sequence of three: Chn 201, Chn 202, and Chn 203. Expected preparation: Chn 103. For non-native speakers only.

Chn 202 - Second-Year Chinese Term 2 (5)
Continued work in Mandarin, with emphasis on mastering all basic grammatical structures, developing conversation skills, and building vocabulary in characters with correct pronunciation. This is the second course in a sequence of three: Chn 201, Chn 202, and Chn 203. Expected preparation: Chn 103. For non-native speakers only.

Chn 203 - Second-Year Chinese Term 3 (5)
Continued work in Mandarin, with emphasis on mastering all basic grammatical structures, developing conversation skills, and building vocabulary in characters with correct pronunciation. This is the third course in a sequence of three: Chn 201, Chn 202, and Chn 203. Expected preparation: Chn 103. For non-native speakers only.

Chn 299 - Special Studies (1-12)
(Credit to be arranged.)
Chn 301 - Third-Year Chinese Term 1 (4)
Intermediate conversation, reading, writing, vocabulary building, and grammar. Introduction to literary and expository texts. This is the first course in a sequence of three: Chn 301, Chn 302, and Chn 303. Expected preparation: Chn 203. For non-native speakers only.

Chn 302 - Third-Year Chinese Term 2 (4)
Intermediate conversation, reading, writing, vocabulary building, and grammar. Introduction to literary and expository texts. This is the second course in a sequence of three: Chn 301, Chn 302, and Chn 303. Expected preparation: Chn 203. For non-native speakers only.

Chn 303 - Third-Year Chinese Term 3 (4)
Intermediate conversation, reading, writing, vocabulary building, and grammar. Introduction to literary and expository texts. This is the third course in a sequence of three: Chn 301, Chn 302, and Chn 303. Expected preparation: Chn 203. For non-native speakers only.

Chn 304 - Chinese Newspaper Readings (4)
Practical introduction to the reading and accurate understanding of Chinese newspapers and related specialized styles of writing. Recommended as a complement to third-year Chinese. Expected preparation: Chn 303. For non-native speakers only.

Chn 306 - Business Chinese (4)
Practice in oral and written Chinese at the upper-intermediate level, with emphasis on business vocabulary and procedures. Recommended as a complement to third-year Chinese. Expected preparation: Chn 203; Chn 303, Chn 304. For non-native speakers only.

Chn 311 - Introductory Classical Chinese (4)
Readings in the traditional literary language, designed to provide familiarity with essential particles and structures, build vocabulary, and introduce works from all genres and periods. Recommended as a complement to third-year Chinese; preparation for advanced work in either modern or classical Chinese. This is the first course in a sequence of two: Chn 311 and Chn 312.

Chn 312 - Introductory Classical Chinese (4)
Readings in the traditional literary language, designed to provide familiarity with essential particles and structures, build vocabulary, and introduce works from all genres and periods. Recommended as a complement to third-year Chinese; preparation for advanced work in either modern or classical Chinese. This is the second course in a sequence of two: Chn 311 and Chn 312. Expected preparation: Chn 203. For non-native speakers only.

Chn 341U - Topics in Chinese Literature and Thought: Service and Retreat (4)
Interdisciplinary readings from the core of the written tradition, including history, poetry, classical anecdotes and essays, related to the central issues facing the Chinese elite throughout history: whether, how, and under what conditions to serve the state. Conducted in English.

Chn 342U - Chinese Vernacular Literature (4)
342 emphasizes traditional poetry and fiction from 700 BC to the late nineteenth century; 343 emphasizes influential works of the twentieth century, from semi-traditional to avant-garde. This is the first course in a sequence of two: Chn 342 and Chn 343. Conducted in English.

Chn 343U - Chinese Vernacular Literature (4)
342 emphasizes traditional poetry and fiction from 700 BC to the late nineteenth century; 343 emphasizes influential works of the twentieth century, from semi-traditional to avant-garde. This is the second course in a sequence of two: Chn 342 and Chn 343. Conducted in English.

Chn 399 - Special Studies (1-6)
(Credit to be arranged.)

Chn 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)
Chn 405 - Reading and Conference (1-8)
(Credit to be arranged.)

Chn 408 - Workshop (1-8)
(Credit to be arranged.)

Chn 409 - Practicum (1-12)
(Credit to be arranged.)

Chn 410 - Selected Topics (1-6)
(Credit to be arranged.)

Chn 411 - Advanced Chinese (4)
Development of facility with complex patterns in conversation, reading and writing. Topics such as Rural China, The Philosophers, Documentary Chinese, The Structure of Chinese. This is the first course in a sequence of two: Chn 411 and Chn 412. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312. For non-native speakers only.
Also offered for graduate-level credit as Chn 511 and may be taken only once for credit.

Chn 412 - Advanced Chinese (4)
Development of facility with complex patterns in conversation, reading and writing. Topics such as Rural China, The Philosophers, Documentary Chinese, The Structure of Chinese. This is the second course in a sequence of two: Chn 411 and Chn 412. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312. For non-native speakers only.
Also offered for graduate-level credit as Chn 512 and may be taken only once for credit.

Chn 413 - Advanced Classical Chinese (4)
Readings from classical works of various genres and historical periods, designed to solidify the structures introduced in Chn 311 and 312, build further vocabulary and introduce the fundamentals of classical Chinese literary history. Expected preparation: extensive third-year coursework in Chinese, preferably including Chn 311 and Chn 312. For non-native speakers only.
Also offered for graduate-level credit as Chn 513 and may be taken only once for credit.

Chn 420 - Readings in Chinese Literature (4)
Reading, analysis, and discussion of representative literary texts. Chn 420 focuses on pre-modern topics such as "Traditional Chinese Fiction" and "Chinese Classical Masterpieces," while Chn 421 addresses primarily twentieth-century topics such as "Chinese Nativist Literature" or "Chinese Urban Literature." This is the first course in a sequence of two: Chn 420 and Chn 421. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312. For non-native speakers only.
Also offered for graduate-level credit as Chn 520 and may be taken only once for credit.

Chn 421 - Readings in Chinese Literature (4)
Reading, analysis, and discussion of representative literary texts. Chn 420 focuses on pre-modern topics such as "Traditional Chinese Fiction" and "Chinese Classical Masterpieces," while Chn 421 addresses primarily twentieth-century topics such as "Chinese Nativist Literature" or "Chinese Urban Literature." This is the second course in a sequence of two: Chn 420 and Chn 421. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312. For non-native speakers only.
Also offered for graduate-level credit as Chn 521 and may be taken only once for credit.

Chn 490 - History of the Chinese Language (4)
History of the Chinese language and language family, with emphasis on the development of the current standard language. Evolution of phonology, morphology, and syntax in spoken Chinese, development of the Chinese writing system, history of Chinese lexicography, and current language policy. Conducted in English. Expected preparation: at least one course in linguistics (Ling 290 or above), or proficiency in Chinese equivalent to Chn 203.
Also offered for graduate-level credit as Chn 590 and may be taken only once for credit.

Chn 505 - Reading and Conference (1-8)
(Credit to be arranged.)

Chn 509 - Practicum (1-12)
(Credit to be arranged.)

Chn 510 - Selected Studies (1-6)
(Credit to be arranged.)

Chn 511 - Advanced Chinese (4)
Development of facility with complex patterns in conversation, reading and writing. Topics such as Rural China, The Philosophers, Documentary
Chinese, The Structure of Chinese. This is the first course in a sequence of two: Chn 511 and Chn 512. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312.

Also offered for undergraduate-level credit as Chn 411 and may be taken only once for credit.

**Chn 512 - Advanced Chinese (4)**

Development of facility with complex patterns in conversation, reading and writing. Topics such as Rural China, The Philosophers, Documentary Chinese, The Structure of Chinese. This is the second course in a sequence of two: Chn 511 and Chn 512. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312.

Also offered for undergraduate-level credit as Chn 412 and may be taken only once for credit.

**Chn 513 - Advanced Classical Chinese (4)**

Readings from classical works of various genres and historical periods, designed to solidify the structures introduced in Chn 311 and 312, build further vocabulary and introduce the fundamentals of classical Chinese literary history. Expected preparation: extensive third-year coursework in Chinese, preferably including Chn 311 and Chn 312.

Also offered for undergraduate-level credit as Chn 413 and may be taken only once for credit.

**Chn 520 - Readings in Chinese Literature (4)**

Reading, analysis, and discussion of representative literary texts. Chn 420 focuses on pre-modern topics such as "Traditional Chinese Fiction" and "Chinese Classical Masterpieces," while Chn 421 addresses primarily twentieth-century topics such as "Chinese Nativist Literature" or "Chinese Urban Literature." This is the first course in a sequence of two: Chn 520 and Chn 521. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312.

Also offered for undergraduate-level credit as Chn 420 and may be taken only once for credit.

**Chn 521 - Readings in Chinese Literature (4)**

Reading, analysis, and discussion of representative literary texts. Chn 420 focuses on pre-modern topics such as "Traditional Chinese Fiction" and "Chinese Classical Masterpieces," while Chn 421 addresses primarily twentieth-century topics such as "Chinese Nativist Literature" or "Chinese Urban Literature." This is the second course in a sequence of two: Chn 520 and Chn 521. Expected preparation: Chn 303; Chn 304, Chn 311, Chn 312.

Also offered for undergraduate-level credit as Chn 421 and may be taken only once for credit.

**Chn 590 - History of the Chinese Language (4)**

History of the Chinese language and language family, with emphasis on the development of the current standard language. Evolution of phonology, morphology, and syntax in spoken Chinese, development of the Chinese writing system, history of Chinese lexicography, and current language policy. Conducted in English. Expected preparation: at least one course in linguistics (Ling 290 or above), or proficiency in Chinese equivalent to Chn 203.

Also offered for undergraduate-level credit as Chn 490 and may be taken only once for credit.

**CI - Curriculum & Instruction**

**CI 199 - Special Studies (1-3)**

(Credit to be arranged.)

**CI 251 - Introduction to Early Childhood Education (3)**

This course will provide an overview of the early childhood education profession, including issues, research, historical influences, programs for young children, and career options. Field experience required.

**CI 252 - Instruction and Management in Preschool Education (3)**

Growth and development characteristics of preschool children (ages 3-5) for planning educational programs, curriculum, instruction, scheduling, and environment, management, and parent communication. Field experience required. Recommended prerequisite: CI 251 or coursework in human growth and development.

**CI 253 - Preschool Programming (3)**

This course will provide experience and guidance in planning, implementing and evaluating developmentally appropriate teaching and learning experiences in preschool settings. Field experience required. Recommended prerequisite: CI 252.

**CI 350 - Aesthetics and Physical Education for Young Children (4)**

This course will provide preparation for planning, implementing, and evaluating developmentally appropriate integrated teaching and learning experiences in art, music, movement, drama, and physical education for young learners, ages 4-8 years.
CI 351 - Science, Social Studies and Health for Young Children (5)
This course will provide preparation for planning, implementing, and evaluating developmentally appropriate integrated teaching and learning experiences in science, social studies, and health for young learners, ages 4-8 years. Recommended prerequisites: admission to teacher education; CI 251.

CI 401 - Research (1-6)
(Credit to be arranged.) Consent of instructor.

CI 402 - Independent Study (1-3)
(Credit to be arranged.)

CI 403 - Thesis (1-6)
(Credit to be arranged.)

CI 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

CI 405 - Reading and Conference (1-6)
(Credit to be arranged.) Consent of instructor.

CI 406 - Special Problems (1-6)
(Credit to be arranged.)

CI 407 - Seminar (1-6)
(Credit to be arranged.)

CI 408 - Workshop (1-8)
(Credit to be arranged.)

CI 409 - Practicum (1-15)
(Credit to be arranged.) Consent of instructor.

CI 410 - Experimental Course (1-12)
(Credit to be arranged.)

CI 432 - Computer Applications for the Classroom (3)
This course is designed for pre-service or in-service teachers who wish to become comfortable with the use of the computer to enhance classroom teaching and learning. Topics include: introduction to computers and technology in education; review and curriculum integration of courseware; use of word processing; designing and using computer-based databases in the classroom; computer literacy; and graphics software for the classroom.
Also offered for graduate-level credit as CI 532 and may be taken only once for credit.

CI 433 - Computer Applications in Instruction (3)
A comprehensive survey of the use of microcomputers in instruction. Terminology, educational applications, ethical issues, courseware, evaluation and selection, multimedia applications, management tools for educators, planning and organizing for school computer use, hardware selection, computer literacy and technological literacy, and network resources for teachers. Hands-on use of the computer to review courseware is an important part of the course. Expected preparation: CI 432 or equivalent.
Also offered for graduate-level credit as CI 533 and may be taken only once for credit.

CI 434 - Microcomputer-based Management and Research Tools for Educators (3)
This course introduces educators to important and useful tools for classroom, personal, and professional use: word processing, database, spreadsheet, survey, and statistical applications. Each class session includes demonstration and hands-on use of microcomputers. Each student will develop a word-processed document, a database, a spreadsheet application, a survey, and a statistical document. Expected preparation: CI 432 or equivalent.
Cross-Listed as: Also offered for graduate-level credit as CI 534 and may be taken only once for credit.

CI 443 - Effective Tchg Strategies & Materials for Working with Linguistically & Culturally Diverse Stdnts (3)
What strategies and materials work in teaching children who are learning English? Become acquainted with the current research on identification, development, and practice of developmentally and
linguistically appropriate strategies and materials to effectively engage English Language Learners (ELL) at all grade levels in the learning process. Special attention will be given to students' bilingual/bicultural characteristics as important aspects of developing successful curriculum.

Also offered for graduate-level credit as CI 543 and may be taken only once for credit.

CI 455 - LGBTQ Advocacy In PRE-K-12 Classrooms (1-2)

Provides students with knowledge and skills to facilitate increased understanding of others and self around issues of identity, context, sexual orientation, and gender. Using constructivist approaches, participants develop a personal framework for encountering and making sense of gender and sexual identity as they manifest in PRE-K-12 schools.

Also offered for graduate-level credit as CI 555 and may be taken only once for credit. Prerequisite: upper-division standing.

CI 491 - Enriching Children's Reading (3)

CI 496 - Second Language Acquisition and Development for K-12 Educators (3)

Gain historical perspectives on language teaching. Study major concepts, theories, research and variables related to the nature and acquisition of language. Consider individual differences and patterns common to all learners. Collect/analyze natural language from language learners. Construct environments that support ESOL/bilingual students' language/literacy development and content-area achievement.

Also offered for graduate-level credit as CI 596 and may be taken only once for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), the Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

CI 497 - Assessment of Language and Content Learning for K-12 English Learners (2)

Consider fair, accurate, and meaningful assessment for English learners. Learn about common standards-based assessment instruments. Examine differences between and uses for assessments measuring language proficiency and content area achievement as they affect ESOL and bilingual student learning.

Explore issues in classroom-based assessment of ELLs.

Also offered for graduate-level credit as CI 597 and may be taken only once for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), the Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

CI 501 - Research (1-9)

(Credit to be arranged.) Consent of instructor.

CI 550 - Teacher Leadership (3)

Teacher Leadership is a course for educators, particularly K-12 teachers, curriculum developers, mentors, coaches, and other leaders, who would like to learn more about how to be effective leaders in their school agencies. There is a focus on successfully meeting the needs of a diverse student population and promoting equity and social justice.

CI 502 - Independent Study (1-12)

(Credit to be arranged.)

CI 503 - Thesis (1-9)

(Credit to be arranged.)

CI 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

CI 505 - Reading and Conference (1-15)

(Credit to be arranged.) Consent of instructor.

CI 506 - Special Problems (1-6)

(Credit to be arranged.)

CI 507 - Seminar (1-6)

(Credit to be arranged.)

CI 508 - Workshop (1-8)

(Credit to be arranged.)
CI 509 - Practicum: Reading Endorsement (1-9)
Practicum requires reading endorsement candidates to work directly with students. Candidates will enact the various responsibilities of a reading specialist/literacy coach, to include: assessing and instructing a struggling reader, developing curriculum for various groups of readers, assessing and making recommendations for individual teachers or for a school’s reading program, developing literacy-focused professional development sessions for instructional assistants, and communicating with parents and community members.

CI 510 - Experimental Course (1-15)
(Credit to be arranged.)

CI 511 - Examining Base Ten Numeration and Operations (3)
Explore the base ten structure of the number system and how that structure is used in multi-digit computation. Investigate how basic concepts of whole numbers reappear when working with decimals. Student thinking is at the center of this course through examination of student work and students at work.

CI 512 - Examining Operations with Whole Numbers and Fractions (3)
Examine the actions and situations modeled by the four basic operations. Begin with a view of how counting moves toward solving whole number problems and then how whole number operations extend to the context of fractions. Student thinking is at the center of this course through examination of student work.

CI 513 - Enhancing Algebraic Thinking: Generalization about Operations (3)
Examine generalizations at the heart of studying operations in the elementary grades. Express generalizations in common language and algebraically, develop representation-based arguments, study what it means to prove, and extend generalizations from whole numbers to integers. Student thinking is at the center of this course through examination of student work.

CI 514 - Enhancing Algebraic Thinking: Patterns and Functions (3)
Discover how patterns lead to functions, learn to read tables and graphs to interpret change, and use algebraic notation to write rules. With emphasis on linear functions, explore nonlinear functions, examine how function features are seen in graphs, tables, or rules. Student thinking is at the center of this course.

CI 515 - Developing Geometric Thinking and Concepts (3)
Examine aspects of two- and three-dimensional shapes, develop geometric vocabulary, and explore both definitions and properties of geometric objects. Study angle, similarity, congruence, and the relationships between 3-D objects and their 2-D representations. Student thinking is at the center of this course through examination of student work.

CI 516 - Exploring Measurement Concepts (3)
Examine different attributes of size, develop facility in composing and decomposing shapes, and apply these skills to make sense of area and volume formulas. Explore conceptual issues of length, area, and volume, as well as inter-relationships. Student thinking is at the center of this course through examination of student work.

CI 517 - Developing Concepts of Data Analysis (3)
Focus attention on data representation, analysis, and how students’ ideas develop over time. Work with collection, representation, and interpretation of data. Learn what various graphs and statistical measures show about data, study how to summarize data when comparing groups, and consider whether data provide insight into questions inspiring data collection.

CI 518 - Implementing Mathematics Reform (3)
Exploration of worthwhile mathematical tasks provides the context for examining learning, teaching, and assessment. Topics include effective learning environments, strategies for planning lessons with a focus on student thinking/understanding, and analysis of materials and resources.
Prerequisite: Students are required to complete at least four content-focused pedagogy courses.
CI 519 - Mathematics Leadership: Influencing and Facilitating Improvement (3)

Develop an understanding of the role of and the challenges faced by mathematics instructional leaders in their work. Attention to the multiple levels of learning i.e., classroom and the professional learning community within grade-level, building, district, and beyond - each focusing strategies for influencing and facilitating improvement in mathematics instruction.

CI 520 - Linguistics for Teachers (3)

What should classroom teachers know about language and how it works? This course will give teachers background knowledge about the sounds, grammar, meaning system, and social context of language and the implications these have for classroom practice in reading, writing, and speaking. Addresses topics such as invented spelling, the role of phonics in reading, the teaching of grammar, and Black English and other linguistic variations.

CI 521 - Practicum: Mathematics Leadership (1-3)

Enact the varied responsibilities of a mathematics instructional leader, to include: assessing and making recommendations for individual teachers or a school's mathematics program, developing mathematics-focused professional development, assessing and instructing struggling or advanced mathematicians, and communicating with stakeholders - always inquiring into how high-quality teaching ensures mathematics success for all.

Prerequisite: CI 519.

CI 523 - Language Arts in Middle Schools (4)

Designed for teachers at the middle school level. Explores the nature of teaching young adolescents, including developmental psychology and methods of literacy education with a corresponding field experience. Includes ways of studying language through literature and the arts, using writing and speaking to study language, language use in different academic settings and content areas, and emerging trends for studying language in the 21st century.

CI 524 - Writing Workshop (3)

Primary focus is on establishing writing workshops in the elementary/secondary classrooms. Approach guides educators through all phases of establishing a writing workshop atmosphere. Inclusion of state writing standards and peer editing procedures as well as integrating writing across the curriculum are included.

CI 525 - Issues and Perspectives in the Teaching of Reading (3)

An examination of the development of current practices in the teaching of reading. The identification of major trends and issues and a critical review of relevant past and present research.

Prerequisite: completion of student teaching.

CI 526 - Reading for the Creative and Gifted (3)

A study of the unique reading characteristics of the creative and gifted and an overview of psychological and philosophical understandings important for the teacher teaching reading to these able students.

Prerequisite: Lib 428/528.

CI 528 - Literacy Assessment for Reading Specialists (3)

This course focuses on the purposes for literacy assessment, types of assessments, the impact of culture and language on assessment, and the fundamental link between literacy assessment and instruction. Topics include the purposes of literacy assessment tools, the selection of assessments that inform instruction and assessments that inform various stakeholders, the development of a schoolwide assessment program, and an analysis of current assessment practices. The course is designed to develop a more extensive understanding of assessment as it relates to evidence-based literacy instruction, diversity issues, and students’ literacy development.

CI 529 - School Reading Program Leadership (3)

The course is for current or future administrators, coordinators, curriculum consultants, or teachers whose responsibilities will include leadership roles in the administration of school-wide or district-wide reading programs. It deals with long- and short-term objectives, school organizational patterns, staff competencies, materials selection, program evaluation, needs assessment, and the use of community resources.

Prerequisite: CI 474/574 or equivalent.

CI 530 - Teaching Struggling Adolescent Readers (3)

Designed to help teachers to develop an understanding of adolescent readers within school settings, to expand their teaching repertoire, to assist struggling readers, and to organize plans that improve
secondary literacy programs. Appropriate for classroom teachers, reading specialists, and administrators interested in adolescent literacy.

CI 531 - Facilitating Content Area Literacy Strategies (3)
Course designed to help literacy leaders to facilitate content area literacy strategies in elementary, middle, and high schools and to guide students in acquiring skills needed for adequate reading, thinking, writing, and study in the disciplines. Emphasis will be on collaborating with teachers in a leadership role to facilitate strategies in all school subjects.

CI 532 - Computer Applications for the Classroom (3)
This course is designed for pre-service or in-service teachers who wish to become comfortable with the use of the computer to enhance classroom teaching and learning. Topics include an introduction to computers and technology in education; review and curriculum integration of courseware; use of word processing; designing and using computer-based databases in the classroom; computer literacy; and graphics software for the classroom.

CI 533 - Computer Applications in Instruction (3)
A comprehensive survey of the use of microcomputers in instruction. Terminology, educational applications, ethical issues, courseware, evaluation and selection, multimedia applications, management tools for educators, planning and organizing for school computer use, hardware selection, computer literacy and technological literacy, and network resources for teachers. Hands-on use of the computer to review courseware is an important part of the course. Expected preparation: CI 432 or equivalent.

CI 534 - Microcomputer-based Management and Research Tools for Educators (3)
This course introduces educators to important and useful tools for classroom, personal, and professional use: word processing, database, spreadsheet, survey, and statistical applications. Each class session includes demonstration and hands-on use of microcomputers. Each student will develop a word-processed document, a database, a spreadsheet application, a survey, and a statistical document. Expected preparation: CI 432 or equivalent.

CI 536 - Language, Literacy, and Culture (3)
Understanding the central importance of language as it functions within educational contexts. Implications of social, cultural, and linguistic diversity on teaching and learning.

CI 540 - Modeling with and Using Representations in Mathematics (3)
Examine the role of modeling and representing in mathematics learning and teaching. Investigate ways in which teachers and students use representations and translations across representations in support of mathematics teaching and learning. Finally, consider how using representations support equitable teaching.

CI 541 - Reasoning and Proving Across Mathematics (3)
Examine the role of reasoning and proving across the mathematical domains. Investigate student conceptions of proof and the appropriate curriculum treatment of topics related to conjecturing, justifying, and generalizing. Design instructional and assessment tasks that elicit student thinking and formulate ways to move student thinking forward in mathematically productive ways.

CI 543 - Effective Tchg Strategies & Materials for Working with Linguistically & Culturally Diverse Stds (3)
What strategies and materials work in teaching children who are learning English? Become acquainted with the current research on identification, development, and practice of developmentally and linguistically appropriate strategies and materials to effectively engage English Language Learners (ELL) at all grade levels in the learning process. Special attention will be given to students' bilingual/bicultural characteristics as important aspects of developing successful curriculum.

CI 545 - Educating Early Adolescents (3)
Focuses on the nature of early adolescence and examines theory and practice informing development of the philosophy of early adolescent education, organizational structures appropriate for these learners, and the diverse roles of the middle-level teacher. Introduces students to the curriculum and
delivery methods appropriate for emerging adolescents.

**CI 547 - Advanced Elementary Literacy Methods (3)**
Concentrated study of recent trends and recurring problems in selecting, organizing, evaluating, and presenting concepts, information, and materials of instruction in subjects taught in elementary school: art, health, language arts, mathematics, music, physical education, reading (includes one additional field work credit), science, social studies.

**CI 555 - LGBTQ Advocacy In PRE-K-12 Classrooms (1-2)**
Provides students with knowledge and skills to facilitate increased understanding of others and self around issues of identity, context, sexual orientation, and gender. Using constructivist approaches, participants develop a personal framework for encountering and making sense of gender and sexual identity as they manifest in PRE-K-12 schools.

Also offered for undergraduate-level credit as CI 455 and may be taken only once for credit. Prerequisite: upper-division standing.

**CI 561 - Advanced Educational Psychology (3)**
Review and development of modern viewpoints in educational psychology with particular attention to theories of learning and their application to school and educational problems; an examination of experimental material that seems most useful and relevant to educational psychology.

**CI 565 - Theoretical Models of Curriculum (3)**
Study of the history of curriculum and curriculum theory in the United States. Emphasis is placed on the historical, philosophical, and scientific foundations of curriculum theory. A main goal of the course is to provide a framework for evaluation, selection, and development of school curricula.

Also offered as CI 665 and may be taken only once for credit.

**CI 566 - Curriculum Construction (3)**

**CI 567 - Curriculum and Culture (3)**
Understanding the cultural basis of instructional materials in curriculum development and teaching and how the organization of knowledge in a subject area and the explanation of new ideas are influenced by cultural root metaphors. Planning and administering the instructional materials center in the modern school. The cooperative roles of the teacher, administrator, and librarian in curricular development and materials.

**CI 568 - The Curriculum of the Public School (3)**
Overview of the public school curriculum with emphasis on the various subject fields; organization of the school for curriculum development; education objectives; the course of study; evaluation of the public school curriculum.

**CI 570 - Child Development and Education (3)**
In-depth study of child development theory, principles, current research, practice of observational strategies, and application of growth and development data to educational programs for young children. Study will extend to decision making and developmentally appropriate practice in early childhood education.

Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children.

**CI 574 - Assessing and Teaching Struggling Elementary Readers (3)**
This course focuses on working with elementary students experiencing difficulties in learning to read. It deals with theoretically-based understanding and analysis of students’ reading; developing students reading knowledge and strategies; social and psychological aspects of literacy problems. The course includes a field experience in the form of a case study of a struggling reader. Students are responsible for arranging to work with a struggling reader in a school or other setting once or twice a week throughout the quarter.

**CI 580 - Theories of Instruction (3)**
An investigation of what happens in the classroom, emphasizing the interrelatedness of learning, subject matter, and teaching; testing of scholars' and the students' own ideas against concrete case studies of instruction; formulation and defense of one's own theory.
Prerequisite: teaching experience or consent of instructor.

CI 581 - Issues in Education (3)
An introduction to the study of contemporary issues which impact teaching and learning environments for K-12 students and their teachers. This course is a graduate seminar in which students will identify critical issues in contemporary education and analyze those issues from a variety of perspectives.
Also offered as CI 681 and may be taken only once for credit.

CI 590 - Action Research Proposal (3)
Designed to help educators see themselves as researchers so that they can conduct research in educational settings that contribute to the improvement of education. Knowledge of accessing and using research literature, the range of educational research paradigms and using appropriate research methods included. Students will develop a proposal for an action research project related to improving educational outcomes for all learners.

CI 591 - Action Research Implementation (3)
Implementation of action research project designed in ECED 590. Discuss issues related to implementation of action research project designed in ECED 590. Learn skills to analyze data collected during implementation of action research proposal from surveys, interviews, focus groups, observation, journaling, writing and concept maps. Develop critical thinking abilities to analyze, synthesize and evaluate research results. Present final project in written paper.
Prerequisite: CI 590.

CI 596 - Second Language Acquisition and Development for K-12 Educators (3)
Gain historical perspectives on language teaching. Study major concepts, theories, research and variables related to the nature and acquisition of language. Consider individual differences and patterns common to all learners. Collect/analyze natural language from language learners. Construct environments that support ESOL/bilingual students’ language/literacy development and content-area achievement.
Also offered for undergraduate-level credit as CI 496 and may be taken only once for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), the Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

CI 597 - Assessment of Language and Content Learning for K-12 English Learners (2)
Consider fair, accurate, and meaningful assessment for English learners. Learn about common standards-based assessment instruments. Examine differences between and uses for assessments measuring language proficiency and content area achievement as they affect ESOL and bilingual student learning. Explore issues in classroom-based assessment of ELLs.
Also offered for undergraduate-level credit as CI 497 and may be taken only once for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), the Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

CI 601 - Research (1-9)
(Credit to be arranged.)

CI 602 - Independent Study (1-9)
(Credit to be arranged.)

CI 603 - Dissertation (1-16)
(Credit to be arranged.)

CI 604 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

CI 605 - Reading and Conference (1-9)
(Credit to be arranged.)

CI 606 - Special Problems/Projects (1-9)
(Credit to be arranged.)

CI 607 - Seminar (1-9)
(Credit to be arranged.)

CI 608 - Workshop (1-9)
(Credit to be arranged.)

CI 609 - Practicum (1-9)
(Credit to be arranged.)
CI 610 - Selected Topics (1-9)  
(Credit to be arranged.)

CI 665 - Theoretical Models of Curriculum (3)  
Study of the history of curriculum and curriculum theory in the United States. Emphasis is placed on the historical, philosophical, and scientific foundations of curriculum theory. A main goal of the course is to provide a framework for evaluation, selection, and development of school curricula.  
Also offered as CI 565 and may be taken only once for credit.

CI 681 - Issues in Education (3)  
An introduction to the study of contemporary issues which impact teaching and learning environments for K-12 students and their teachers. This course is a graduate seminar in which students will identify critical issues in contemporary education and analyze those issues from a variety of perspectives.  
Also offered as CI 581 and may be taken only once for credit.

CI 801 - Research (0-9)  
(Credit to be arranged.)

CI 802 - Independent Study (0-9)  
(Credit to be arranged.)

CI 804 - Cooperative Education/Internship (0-12)  
(Credit to be arranged.)

CI 805 - Reading and Conference (0-9)  
(Credit to be arranged.)

CI 806 - Special Problems (0-9)  
(Credit to be arranged.)

CI 807 - Seminar (0-9)  
(Credit to be arranged.)

CI 808 - Workshop (0-9)  
(Credit to be arranged.)

CI 809 - Practicum (0-9)  
(Credit to be arranged.)

CI 810 - Experimental Course (0-12)  
(Credit to be arranged.)

Comm - Communication  
Comm 100 - Introduction to Communication (4)  
Overview of major topic areas in communication, including models of communication, social uses of language, communication codes - verbal/nonverbal, listening and communication in interpersonal, group, intercultural, public, and mass media contexts. Application of theory through skills development and community focused assessments.

Comm 199 - Special Studies (1-4)  
See department for course description. (Credit to be arranged.)

Comm 215 - Introduction to Intercultural Communication (4)  
Designed to give a theoretical understanding of the process and role of communication (both mass and interpersonal) when faced with cultural differences and plurality. Provides a background of classical theories in intercultural communication, and in interdisciplinary areas (cultural studies, gender studies, cultural anthropology, political science, and international development) where culture and communication have been theorized. Discussions will focus on the changing cultural terrain in the United States and upon internationalization and globalization of mass or popular culture as it impacts other parts of the world.

Comm 218 - Interpersonal Communication (4)  
Study of communication concepts, processes, and practices in interpersonal contexts with application of principles and concepts to actual interpersonal communication situations. Includes situational management and behavioral repertoire development, verbal/nonverbal code features structuring conversation and relationships, characteristics of functional relational systems, intercultural/inter-ethnic factors.
Comm 220 - Public Speaking (4)
Research, writing, delivery, and listening skills for oral presentation in a variety of settings, including multicultural. Equal consideration given to speech preparation and delivery with critical thinking, argument forms, and audience analysis emphasized. Issues of speech anxiety addressed.

Comm 227 - Nonverbal Communication (4)
The study of nonverbal communication as related to verbal communication. Course emphasis on theories and typologies of nonverbal behavior. Examination of the influence of such factors as para-language, body movement, eye behavior, touch space, time, and physical and social environments. Course requirements include completion and report of a personal research project.

Comm 299 - Special Studies (1-6)
(Credit to be arranged.)

Comm 300 - Principles of Communication (4)
Introduces the skills and concepts students need for literacy in communication and provides a broad introduction to the perspectives on communication that will be encountered in upper-division Communication courses.

Comm 311 - Research Methods in Communication (4)
Introduction to the assumptions and methods of research in the study of human communication. Students will learn to design and conduct practical research projects and improve their ability to understand, evaluate, and use reports of research and scholarship encountered in future coursework and in everyday life.
Prerequisite: Comm 300.

Comm 312U - Media Literacy (4)
Focuses on building critical skills for evaluating mass media, going beyond the ways that messages represent the world to the ways that messages and the institutions that produce them actually constitute the social world. Primary issues include cultural domination and empowerment; public opinion and the legitimizing role of the media; mass culture and ideology; cultural opposition; the political-economy of news media; and the general role of media in political socialization. Extensive in-class and small-group media analysis.

Comm 313U - Communication in Groups (4)
Focuses on communication processes in small, decision-making groups. Students examine the relation between actual communicative behaviors of group members and group structure, functions, and outcomes. Topics include leadership emergence and enactment, quality of problem-solving strategies utilized, the impact of socio-cultural and institutional features on small group communicative practices. Theoretical application in the critical analysis of various group settings and effective communication in ongoing group projects.

Comm 314U - Persuasion (4)
A consideration of concepts, principles, and theories related to persuasion, and a consideration of the role of persuasive communication in public discourse. Opportunity for practical application of principles in student projects. Sp 100 or Sp 220 recommended.

Comm 316 - Communication, Individuals, and Discourse (4)
Extends the discussion of empirical approaches to communication introduced in Comm 300. Introduces relevant social science theories of communication including theories based on cognitive and social psychological approaches that depict communication as a process. Comm 316 is a requirement for the major and a recommended prerequisite for 400-level communication courses.
Prerequisite: Comm 300.

Comm 317U - Communicating About Violence and Children (4)
Investigation of endangered and violated children in environments including domestic and global. Threats to children’s safety, survival, quality of life, family or alternative care, education, health and health care, and basic human rights are examined. Trends in public awareness, information systems, organizational advocacy and intervention efforts are assessed for impact and effectiveness. Students will employ specific listening and speaking practices to promote substantive class discussions. Areas of violence investigated include: physical, sexual and verbal abuse; child soldiers; slavery; war; starvation, disease and displacement; teaching hatred; religion used as a weapon; cyber-stalking and bullying.
Comm 318U - Family Communication (4)
Focuses on the study of families from a communication perspective; that is, how families create, maintain and reinforce patterns of interaction through daily living, story-telling and other habitual forms of communication. Course applies theoretical frameworks such as family systems theory, social construction theory and dialectical theory to issues of courtship and relational development, the changes in the life of families, and family roles.

Comm 319 - Social Media (4)
This course provides students with a deeper understanding of social media and its role in identity/personality, close and less close relationships, and societal change.

Comm 320 - Introduction to Political Communication (4)
Communication activities relating directly to the election of candidates and the passage of initiatives. Presented through the context of deliberative democracy and the First Amendment to the U.S. Constitution, which provides a set of "political rules of the road" for democratic processes.

Comm 322 - Mass Communication and Society (4)
A survey of the development of print, broadcast, film, and new communication technology as social, cultural, and economic forces in American society. Examination of news media and their relationship to American political institutions. Discussion of advertising as an economic and popular cultural force. Survey of major trends in media research.

Comm 323U - Introduction to Organizational Communication (4)
The goal of this course is to introduce students to theories that examine how communication works in business contexts. Students will study organizational management, interpersonal conflict and conflict management in organizations. Students will learn to apply course concepts to business interactions and practices. This course is recommended preparation for Comm 423.

Comm 326 - Communication, Society, and Culture (4)
Develops the idea that communicative action is theoretically driven as introduced in Comm 300; continues the discussion of interpretive, constitutive, social-cultural, and critical theories of communication. Comm 326 is a requirement for the major and a recommended prerequisite for 400-level communication courses.

Comm 327 - Environmental Campaigns (4)
Introduction to the principles of environmental communication and environmental campaigns. Students will improve their environmental literacy, learn to communicate about the environment with different audiences, and develop the skills necessary to be a professional environmental communicator. The skills developed in this class will transfer to a variety of communication-related careers.

Comm 329U - Introduction to Health Communication (4)
Introduces students to the breadth of health communication theory and research. Course topics include provider-patient communication, social support, uncertainty management, health literacy, and health campaigns.

Comm 336U - Metaphors in Communication (4)
An introduction to the use and understanding of metaphors in conversation, public communication, and mediated communication. Topics include metaphor comprehension, metaphorical framing, patterns of metaphor use in discourse and interaction of metaphors with communication context. No prior familiarity with the metaphor literature is assumed.

Comm 337U - Communication and Gender (4)
Study and practice of the skills involved in competent communication (primarily comprehensive listening and reading, and speaking and writing) in order to separate myths, assumptions and notions from the facts, realities and truths about communication and about women and men. Examination of communication and gender topics will include: the role of anger in communicating about gender issues; the impact of the type of information on discussions about gender; gender difference as a "catch all" explanation for gender problems; the facts of differences being confused with attitudes about differences; perception of women and men as
speaking different languages and communicator behaviors as choices.

Comm 341 - Introduction to Public Relations (4)
An introduction to the principles and practice of professional public relations, focusing on the functions of PR in organizations, the concept of strategic communication in persuasion, relevant professional skills, the role of research, and an understanding of common ethical issues encountered.

Comm 342 - Media and Cultural Industries (4)
An overview of the mass media & cultural industries. Students will examine a range of issues, such as the institutional, social and technological histories of media and cultural industries, the influence of economic factors in shaping content, and issues governing regulatory policy. Special emphasis will be given to media’s role in society, the concentration of ownership, the impact of new communication technologies, and increasing convergence of particular media with one another.

Comm 346 - Humor, Irony, and Laughter in Communication (4)
An introduction to theories of humor, irony, and laughter from social-interactional perspectives. Particular attention is given to how humor, irony, and laughter are used and understood in conversation and other forms of discourse.

Comm 362 - Bollywood: Communicating Contemporary South Asia through Cinema (4)
Bollywood is a spectrum of major media industries in India and South Asia that produce entertainment for worldwide consumption. Bollywood is a recent term that highlights the transnational character of the Industry, very much like Hollywood. Specifically we will examine transnational Indian Cinema with the following emphases: 1. globalization and the politics of transnational film production, distribution, and reception; 2. local-regional-global dynamics; 3. the construction and negotiation of gender, family, nation, religion/communalism, and emerging new filmic genres; 4. issues of filmic representation and diasporic identities.

Comm 370 - Debates and Forensics (4)
Development of advanced public speaking and argumentation skills. Each student will attend college tournaments and engage in a variety of forensics events, including platform speeches, limited-preparation speeches, interpretive speeches, and team debate.

Comm 389U - Ethics of Human Communication (4)
Applies important ethical theories to communication settings and problems, including aspects of interpersonal, group, organization, public, Internet and mass communication, showing how ethics relate to all communication events. Reveals how communication can either validate or undermine the basic humanity, dignity and value of others in the communication setting.

Prerequisite: junior standing, open to those outside of communication.

Comm 398 - Topics in Communication in the Workplace (2-4)
Examine communication in and for the workplace. Different topics will include: leadership, collaboration, consensus, and career-building. You will assess your communication style and critically think about the workforce. Use this course to make better sense of your current life situation and develop working knowledge.

Comm 399 - Special Studies (1-6)
See department for course description. (Credit to be arranged.)

Comm 401 - Research (1-12)
Consent of instructor. Communication Laboratory. See department for course description. (Credit to be arranged.)

Comm 402 - Independent Study (1-12)
(Credit to be arranged.)

Comm 403 - Thesis (1-6)
(Credit to be arranged.)

Comm 404 - Cooperative Education/Internship (1-12)
See department for course description. (Credit to be arranged.)
Comm 405 - Reading and Conference (1-12)
Consent of instructor. See department for course description. (Credit to be arranged.)

Comm 406 - Special Projects (1-8)
Consent of instructor. See department for course description. (Credit to be arranged.)

Comm 407 - Seminar (1-12)
See department for course description. (Credit to be arranged.)

Comm 408 - Workshop (1-6)
See department for course description. (Credit to be arranged.)

Comm 409 - Practicum (1-12)
See department for course description. (Credit to be arranged.)

Comm 410 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

Comm 412 - Empirical Theories of Mass Communication (4)
Surveys social scientific theories of mass communication.
Also offered for graduate-level credit as Comm 512 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322 ? Mass Communication & Society.

Comm 415 - Problems of Intercultural Communication (4)
Builds upon the theories and issues discussed in the introductory course by including contemporary and classical literature on multicultural and intercultural communication. Identifies and analyzes politically constructed categories of race, age, class, gender in society against the backdrop of debates on multiculturalism in the United States. Examines categorizations of race, class, etc. in their historical, social, and cultural context, and how those have influenced mass-mediated and interpersonal communication. Uses mass media (television, radio, daily print media, music) texts to provide examples of how we understand ?difference? and ?otherness? in our daily lives.
Also offered for graduate-level credit as Comm 515 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 215 ? Introduction to Intercultural Communication.

Comm 416 - Communicating Environmental Controversies (4)
With a special emphasis on environmental conflicts and controversies, this course explores how communication shapes the way we think about, talk about, and relate to the natural world. The class covers the latest theoretical and practical approaches to environmental communication, the anatomy of environmental controversies, and the different factors that shape public opinion on those controversies within the United States. The goal of this course is to support students in becoming sophisticated consumers and producers of environmental communication.
Also offered for graduate-level credit as Comm 516 and may be taken only once for credit. Prerequisite: Upper division standing.

Comm 418 - Advanced Interpersonal Communication (4)
Theory course in which students analyze current concepts and theories related to interpersonal communication, comparing and contrasting various models and their relative adequacy in representing the complexity of communication processes. The impact on actual communicative practices is examined. The influence of particular historical perspectives and contemporary issues and trends on interpersonal communication is analyzed through evaluation of empirical data and general cultural texts. Research project required.
Also offered for graduate-level credit as Comm 518 and may be taken only once for credit. Prerequisite: Upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 218 ? Interpersonal Communication.

Comm 420 - Political Communication (4)
An analysis of the relationship of communication to the exercise of politics and political power. Topics may include the ethics and practices of electoral politics, political ideologies, political advertising,
propaganda, public opinion formation, the role of mass media as a source and form of political communication, speech writing, public policy writing and analysis, political news writing, and political campaigning. The focus is on how communication strategies and media can be used to organize consent or dissent to ruling parties, representatives, and ideas.

Also offered for graduate-level credit as Comm 520 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322-Mass Comm & Society or Comm 314U - Persuasion.

Comm 422 - Critical Theories in Mass Communication (4)

Surveys critical and institutional theories of mass communication. Primary focus is analysis of the relationship between media and communication institutions and the state and other social institutions.

Also offered for graduate-level credit as Comm 522 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322-Mass Comm & Society.

Comm 423 - Advanced Organizational and Strategic Communication (4)

Application of communication theory to the study of human interaction in the organizational context. Examination of the relationships between structural variables in the organization and informal communication channels, organizational culture, and strategic communication. Course requirements include completion and report of a research project.

Also offered for graduate-level credit as Comm 523 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322-Mass Comm & Society.

Comm 427 - Issues in International Communication (4)

A study of historical and contemporary theories and practices in the conduct of trans-border communication. Topics may include international communication issues of law, diplomacy, conflict, the Cold War, international organizations, mass media, information, advertising and news flows, and social-economic development, as well as discussions of specific cases of cultural and institutional communication, spoken, written and produced, in various industrial and developing societies.

Also offered for graduate-level credit as Comm 527 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 215 - Introduction to Intercultural Communication.

Comm 429 - Health Communication Campaigns (4)

In-depth examination of health communication campaigns that promote behavior change using theories at the individual, interpersonal, small group, and community levels. We will explore the current media environment, in which health communication campaigns can utilize a variety of communication channels including mobile phones, social networks, video games, and entertainment television.

Also offered for graduate-level credit as Comm 529 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 314U - Persuasion or Comm 329U - Introduction to Health Communication.

Comm 432 - Communication and Technology (4)

Examination of several approaches to communication technology and how it affects human behavior and society. Topics include psychological aspects of communication technology; how design plays a role in the way we use the technology and interact with others; and the ways in which communication technology affects social institutions. Expected preparation: core communication courses (Comm 200, Comm 311, Comm 316, Comm 326).

Also offered for graduate-level credit as Comm 532 and may be taken only once for credit. Prerequisite: Upper-division standing.

Comm 436 - Communication and Cognition (4)

Exploration of human communication from a cognitive perspective.

Also offered for graduate-level credit as Comm 536 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326).

Comm 437 - Urban Communication (4)

Course utilizes a cultural, contextual approach to the study of urban communication structures, processes and practices. Macro and micro features are examined with the goal of understanding the role of communication in structuring social life in urban environments. Relevant theories on urban life and multiple dimensions of verbal and nonverbal
communication codes are examined as they apply in urban contexts. Theoretical and empirical approaches recognize urban centers as dynamic multicultural environments. Research project required.

Also offered for graduate-level credit as Comm 537 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322 - Mass Comm & Society.

Comm 438 - Everyday Talk: Structure and Process (4)

How humans organize talk, with a primary emphasis on face-to-face talk in an informal setting. Attention will be given to the structure of roles and turns, sequencing of stages and topics, issues of common ground and relevance, and cognitive processes of message origination and interpretation in particular contexts.

Also offered for graduate-level credit as Comm 538 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 218 - Interpersonal Communication or Comm 313U - Communication in Groups.

Comm 439 - Gesture and Meaning in Everyday Talk (4)

How humans use gesture and vocal intonation in conversation, with a primary emphasis on informal settings, interaction of gesture with language, metaphorical aspects of gesture, and the contribution of gesture to cognitive and interactive processes of message origination and interpretation. Expected preparation: Comm 311 or equivalent; upper-division or graduate standing.

Also offered for graduate-level credit as Comm 539 and may be taken only once for credit. Prerequisite: Upper-division standing.

Comm 440 - Metaphor, Play, and Humor (4)

How metaphor, play, humor, and other forms of non-serious? language and gesture contribute to the creation of meaning and sustaining of relationships in everyday social interactions. Topics vary from quarter to quarter, and may include: metaphor; playful communication; humor and irony; and narratives. May be repeated for undergraduate or graduate credit.

Also offered for graduate-level credit as Comm 540 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 336U - Metaphors in Communication.

Comm 442 - Sport, Media and Culture (4)

An in depth examination of the interrelationship between sports and media in contemporary (western) society, and how that interrelationship reinforces social values, sometimes challenges social norms, and draws on the cultural identification of class, race, and gender to identify sports values with cultural values. Drawing on theories of political economy, media studies, and cultural studies, we will examine media’s role in telling the story of sports and, in telling that story, shaping and reinforcing cultural values and developing material impacts on peoples’ lives.

Prerequisite: Upper-division standing.

Comm 445 - Risk and Strategic Communication (4)

Examination of the theoretical background and the intricacies of risk communication, with a focus on strategic communication. From health crises to earthquakes to environmental disasters, this course explores several modern day challenges through a series of cases studies and exercises emphasizing preparation/mitigation, audience analysis, message development, communication channel identification, and outcome evaluation. Expected preparation: research methods (e.g Comm 311).

Also offered for graduate-level credit as Comm 545 and may be taken only once for credit. Prerequisite: Upper-division standing.

Comm 448 - Issues in Science & Environmental Communication (4)

Centers on how we focus a critical lens on how issues in science and the environment are communicated. Students are asked to examine the question: "How do we know what we know?" by exploring how scientists, policy-makers, lay publics and mass media practitioners understand and communicate in this domain. Students examine how scientific meanings are produced in public arenas, ranging from such issues as childhood vaccines to the discovery of ancient mummies.

Also offered for graduate-level credit as Comm 548 and may be taken only once for credit. Prerequisite: Comm 311.

Comm 452 - Gender and Race in the Media (4)

Primarily examines the representations of gender and race, including age, class and sexual orientation in various media (mainstream and alternative), and will examine theoretical and methodological approaches which may be used to interpret these representations. In addition, considers the potential impact that media institutions have on people’s lives, political decisions and social relations. The overall aim is for students to
understand how their own cultural identities affect their media consumption and social positioning. Expected preparation: core communication courses (Comm 200, Comm 311, Comm 316, Comm 326), and Comm 322.

Also offered for graduate-level credit as Comm 552 and may be taken only once for credit. Prerequisite: upper-division standing. Cross-listed as: WS 452.

Comm 460 - Framing and Mass Media (4)
Examines how messages are constructed and the effects frames have on audiences. Framing theory is linked to propaganda, public relations, marketing, political communication and cognition, and has a rich theoretical and methodological tradition. Examines the conceptual definitions, and the underpinning theory and methodology used in framing scholarship. Agenda setting, bias and framing, public opinion formation, cultivation analysis, behavioral effects, and macrolevel and microlevel methods are also examined.

Also offered for graduate-level credit as Comm 560 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322 - Mass Comm & Society.

Comm 472 - Communication and Public Opinion Seminar (4)
This course explores research questions that relate to mass communication and American public opinion. Important normative and philosophical issues are identified and reviewed via early writings (ca. 1900) in social philosophy and social science. These issues are further investigated by examining relevant work from sociology, social psychology, and mass communication.

Also offered for graduate-level credit as Comm 572 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses and Comm 314U Persuasion.

Comm 487 - Propaganda, Public Relations, and Media (4)
The course encourages students to think critically about how mass media promote ideologies and agendas to influence opinion, policies and sales. Theories of media effects, propaganda and public relations explored.

Also offered for graduate-level credit as Comm 587 and may be taken only once for credit. Prerequisite: upper-division standing with expected preparation in mass media and persuasion theories.

Comm 489 - Media Ethics (4)
Applies important ethical theories to decision-making within the mass media, including considerations of personal, organizational, professional and cultural understandings of ethics to analyze how decisions regarding media content are made. Provides guidelines for identifying and understanding ethical dilemmas commonly encountered by media professionals and help in making theory-grounded decisions in print and broadcast journalism, advertising and public relations, the Internet, and entertainment media.

Prerequisite: junior, senior or graduate standing.

Comm 501 - Research (1-9)
Consent of instructor. Communication Laboratory. See department for course description. (Credit to be arranged.)

Comm 502 - Independent Study (1-6)
(Credit to be arranged.)

Comm 503 - Thesis (1-9)
See department for course description. (Credit to be arranged.)

Comm 504 - Cooperative Education/Internship (1-9)
See department for course description. (Credit to be arranged.)

Comm 505 - Reading and Conference (1-9)
Consent of instructor. See department for course description. (Credit to be arranged.)

Comm 506 - Special Projects (1-9)
See department for course description. (Credit to be arranged.)

Comm 507 - Seminar (1-6)
See department for course description. (Credit to be arranged.)
Comm 508 - Workshop (0-6)
See department for course description. (Credit to be arranged.)

Comm 509 - Practicum (1-9)
See department for course description. (Credit to be arranged.)

Comm 510 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

Comm 511 - Introduction to Communication Theory (4)
Introduction to the theoretical perspectives currently represented in the department, with attention to meta-theoretical considerations including ontology, epistemology, and axiology, and how these considerations shape the understanding of key concepts. Students will learn to critique and synthesize theoretical literature within each perspective.

Comm 512 - Empirical Theories of Mass Communication (4)
Surveys social scientific theories of mass communication.
Also offered for undergraduate-level credit as Comm 412 and may be taken only once for credit.
Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322 ? Mass Communication & Society.

Comm 513 - Seminar: Communication in Institutional Contexts (4)
Various configurations and features of institutional life are examined. The impact of culture, politics, media on organizational communicative structures and processes, communication consultation, institutional-community interface are among the topics covered. Current research is examined. Students conduct an organizational research project.
Prerequisite: graduate standing or instructor permission. Repeatable for credit.

Comm 514 - Topics in Communication, Culture, and Community (4)
Examination and analysis of human symbolic activity as the management of meaning, with the capacity to shape and influence thought, action, and world view. Particular attention given to assumptions regarding intent, effects, meaning, understanding, and interpretation, and their implications for studying communication from modernist and post-modernist perspectives. Specific topics vary with instructor. May be repeated for graduate credit.

Comm 515 - Problems of Intercultural Communication (4)
Builds upon the theories and issues discussed in the introductory course by including contemporary and classical literature on multicultural and intercultural communication. Identifies and analyzes politically constructed categories of race, age, class, gender in society against the backdrop of debates on multiculturalism in the United States. Examines categorizations of race, class, etc. in their historical, social, and cultural context, and how those have influenced mass-mediated and interpersonal communication. Uses mass media (television, radio, daily print media, music) texts to provide examples of how we understand ?difference? and ?otherness? in our daily lives.
Also offered for undergraduate-level credit as Comm 415 and may be taken only once for credit.
Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 215 ? Introduction to Intercultural Communication.

Comm 516 - Communicating Environmental Controversies (4)
With a special emphasis on environmental extremes and controversies, this course explores how everyday communication shapes the way we think about, talk about, and relate to the natural world. The class covers the latest theoretical and practical approaches to environmental communication, the makeup of environmental controversies, and the different factors that shape public opinion on those controversies within the United States. The goal of this course is to support students in becoming sophisticated consumers and producers of environmental communication. Expected prep: Comm 300, Comm 311.
Also offered for undergraduate-level credit as Comm 416 and may be taken only once for credit.

Comm 518 - Advanced Interpersonal Communication (4)
Theory course in which students analyze current concepts and theories related to inter-personal communication, comparing and contrasting various
models and their relative adequacy in representing the complexity of communication processes. The impact on actual communicative practices is examined. The influence of particular historical perspectives and contemporary issues and trends on interpersonal communication is analyzed through evaluation of empirical data and general cultural texts. Research project required.

Also offered for undergraduate-level credit as Comm 418 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 218 - Interpersonal Communication.

Comm 520 - Political Communication (4)

An analysis of the relationship of communication to the exercise of politics and political power. Topics may include the ethics and practices of electoral politics, political ideologies, political advertising, propaganda, public opinion formation, the role of mass media as a source and form of political communication, speech writing, public policy writing and analysis, political news writing, and political campaigning. The focus is on how communication strategies and media can be used to organize or dissent to ruling parties, representatives, and ideas.

Also offered for undergraduate-level credit as Comm 420 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322-Mass Comm & Society or Comm 314U - Persuasion.

Comm 521 - Quantitative Methods in Communication Research (4)

An examination of the methods of quantitative empirical research in communication. Emphasis is upon selected research designs, data collection and analysis, data input for computer analysis with statistical packages, results interpretation, and writing reports of completed research.

Comm 522 - Critical Theories in Mass Communication (4)

Surveys critical and institutional theories of mass communication. Primary focus is analysis of the relationship between media and communication institutions and the state and other social institutions.

Also offered for undergraduate-level credit as Comm 422 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322-Mass Comm & Society.

Comm 523 - Advanced Organizational and Strategic Communication (4)

Application of communication theory to the study of human interaction in the organizational context. Examination of the relationships between structural variables in the organization and informal communication channels, organizational culture, and strategic communication. Course requirements include completion and report of a research project.

Also offered for undergraduate-level credit as Comm 423 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 313U - Communication in Groups or Comm 323U - Introduction to Organizational Communication.

Comm 525 - International Communication and Culture (4)

Study and analysis of the international dimensions of communication. Focus is on understanding the cultural and power contexts and differences among and between peoples and institutions that establish the boundaries in the exchange of meanings, values, and ideas. Emphasis is given to questions of cultural, economic and political sovereignty in the pursuit of national, regional, and personal identity and development.

Comm 527 - Issues in International Communication (4)

A study of historical and contemporary theories and practices in the conduct of trans-border communication. Topics may include international communication issues of law, diplomacy, conflict, the Cold War, international organizations, mass media, information, advertising and news flows, and social-economic development, as well as discussions of specific cases of cultural and institutional communication, spoken, written and produced, in various industrial and developing societies.

Also offered for undergraduate-level credit as Comm 427 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 215 - Introduction to Intercultural Communication.
Comm 528 - Seminar: Communication in Relational Contexts (4)
Advanced work in interpersonal communication theories, and concepts such as family, aging, and conflict. Critique of current research in light of such considerations as cultural constraints, shifts in relational definitions and configurations. Research project.
Prerequisite: graduate standing or permission of instructor.

Comm 529 - Health Communication Campaigns (4)
In-depth examination of health communication campaigns that promote behavior change using theories at the individual, interpersonal, small group, and community levels. We will explore the current media environment, in which health communication campaigns can utilize a variety of communication channels including mobile phones, social networks, video games, and entertainment television.
Also offered for undergraduate-level credit as Comm 429 and may be taken only once for credit.
Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 314U - Persuasion or Comm 329U - Introduction to Health Communication.

Comm 531 - Qualitative Methods in Communication Research (4)
An examination of naturalistic empirical communication research and the assumptive bases. Particular attention given to descriptive, interpretive, and critical approaches for analysis, and to specific methods of participant observation, interviewing, and textual analysis. Critical examination of selected research as models for original student research.
Prerequisite: Comm 511.

Comm 532 - Communication and Technology (4)
Examination of several approaches to communication technology and how it affects human behavior and society. Topics include psychological aspects of communication technology; how design plays a role in the way we use the technology and interact with others; and the ways in which communication technology affects social institutions. Expected preparation: core communication courses (Comm 200, Comm 311, Comm 316, Comm 326).
Also offered for undergraduate-level credit as Comm 432 and may be taken only once for credit.

Comm 533 - Seminar: Organizational Communication (4)
Examines the implications of evolving perspectives in organizational theory, as well as cultural factors which may influence communication processes in the organizational context. Different approaches to assessing organizational communication processes are considered with relevance to enhancing organizational effectiveness and facilitating organizational transition and change. Course requirements include completion and report of a research project.

Comm 536 - Communication and Cognition (4)
Exploration of human communication from a cognitive perspective.
Also offered for undergraduate-level credit as Comm 436 and may be taken only once for credit.
Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326).

Comm 537 - Urban Communication (4)
Course utilizes a cultural, contextual approach to the study of urban communication structures, processes and practices. Macro and micro features are examined with the goal of understanding the role of communication in structuring social life in urban environments. Relevant theories on urban life and multiple dimensions of verbal and nonverbal communication codes are examined as they apply in urban contexts. Theoretical and empirical approaches recognize urban centers as dynamic multicultural environments. Research project required.
Also offered for undergraduate-level credit as Comm 437 and may be taken only once for credit.
Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322 - Mass Comm & Society.

Comm 538 - Everyday Talk: Structure and Process (4)
How humans organize talk, with a primary emphasis on face-to-face talk in an informal setting. Attention will be given to the structure of roles and turns, sequencing of stages and topics, issues of common ground and relevance, and cognitive processes of message origination and interpretation in particular contexts.
Also offered for undergraduate-level credit as Comm 438 and may be taken only once for credit.
Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm
Comm 300, Comm 311, Comm 316, Comm 326), and Comm 218 - Interpersonal Communication or Comm 313U - Communication in Groups.

Comm 539 - Gesture and Meaning in Everyday Talk (4)
How humans use gesture and vocal intonation in conversation, with a primary emphasis on informal settings, interaction of gesture with language, metaphorical aspects of gesture, and the contribution of gesture to cognitive and interactive processes of message originination and interpretation. Expected preparation: Comm 311 or equivalent; upper-division or graduate standing.

Also offered for undergraduate-level credit as Comm 439 and may be taken only once for credit.

Comm 540 - Metaphor, Play, and Humor (4)
How metaphor, play, humor, and other forms of non-serious? language and gesture contribute to the creation of meaning and sustaining of relationships in everyday social interactions. Topics vary from quarter to quarter, and may include: metaphor; playful communication; humor and irony; and narratives. May be repeated for undergraduate or graduate credit.

Also offered for undergraduate-level credit as Comm 440 and may be taken only once for credit.

Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 336U - Metaphors in Communication.

Comm 541 - Methods of Rhetorical Criticism (4)
An examination of philosophical and conceptual bases of contemporary rhetorical theory and their implications for the conduct of rhetorical criticism. Selected approaches to criticism examined, along with exemplars for analysis. Special attention given to critical invention, and to the social positioning of the critic. Students will select and examine a specific example of contemporary rhetoric.

Prerequisite: Sp 511.

Comm 545 - Risk and Strategic Communication (4)
Examination of the theoretical background and the intricacies of risk communication, with a focus on strategic communication. From health crises to earthquakes to environmental disasters, this course explores several modern day challenges through a series of cases studies and exercises emphasizing preparation/mitigation, audience analysis, message development, communication channel identification, and outcome evaluation. Expected preparation: research methods.

Also offered for undergraduate-level credit as Comm 445 and may be taken only once for credit.

Prerequisite: Graduate standing. Cross-Listed as: This is the same course as EMCR 545 and may be taken only once for credit.

Comm 548 - Issues in Science & Environmental Communication (4)
Centers on how we focus a critical lens on how issues in science and the environment are communicated. Students are asked to examine the question: "How do we know what we know?" by exploring how scientists, policy-makers, lay publics and mass media practitioners understand and communicate in this domain. Students examine how scientific meanings are produced in public arenas, ranging from such issues as childhood vaccines to the discovery of ancient mummies.

Also offered for undergraduate-level credit as Comm 448 and may be taken only once for credit.

Comm 552 - Gender and Race in the Media (4)
Primarily examines the representations of gender and race, including age, class and sexual orientation in various media (mainstream and alternative), and will examine theoretical and methodological approaches which may be used to interpret these representations. In addition, considers the potential impact that media institutions have on people’s lives, political decisions and social relations. The overall aim is for students to understand how their own cultural identities affect their media consumption and social positioning.

Also offered for undergraduate-level credit as Comm 452 and may be taken only once for credit.

Cross-Listed as: WS 552.

Comm 556 - Seminar: Topics in Language, Meaning, and Interpretation (4)
Exploration of cognitive, linguistic, and interpretive approaches of emerging interest in the study of human communication. Specific topics vary with instructor. May be repeated for graduate credit.

Prerequisite: graduate standing.

Comm 560 - Framing and Mass Media (4)
Examines how messages are constructed and the effects of frames have on audiences. Framing theory is linked to propaganda, public relations, marketing, political communication and cognition, and has a rich theoretical and methodological tradition. Examines the conceptual definitions, and the underpinning theory and methodology used in framing scholarship. Agenda setting, bias and framing, public opinion formation, cultivation analysis, behavioral effects, and macrolevel and microlevel methods are also examined.
Also offered for undergraduate-level credit as Comm 460 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses (Comm 300, Comm 311, Comm 316, Comm 326), and Comm 322 - Mass Comm & Society.

Comm 572 - Communication and Public Opinion Seminar (4)
This course explores research questions that relate to mass communication and American public opinion. Important normative and philosophical issues are identified and reviewed via early writings (ca. 1900) in social philosophy and social science. These issues are further investigated by examining relevant work from sociology, social psychology, and mass communication.

Also offered for undergraduate-level credit as Comm 472 and may be taken only once for credit. Prerequisite: upper-division standing. Expected preparation: core communication courses and Comm 314U Persuasion.

Comm 587 - Propaganda, Public Relations, and Media (4)
The course encourages students to think critically about how mass media promote ideologies and agendas to influence opinion, policies and sales. Theories of media effects, propaganda and public relations explored.

Also offered for undergraduate-level credit as Comm 487 and may be taken only once for credit. Prerequisite: upper-division standing with expected preparation in mass media and persuasion theories.

Comm 589 - Media Ethics (4)
Applies important ethical theories to decision making within the mass media, including considerations of personal, organizational, professional and cultural understandings of ethics to analyze how decisions regarding media content are made. Provides guidelines for identifying and understanding ethical dilemmas commonly encountered by media professionals and help in making theory-grounded decisions in print and broadcast journalism, advertising and public relations, the Internet, and entertainment media.

Prerequisite: junior, senior or graduate standing.

COTA - College of the Arts
COTA 135 - Artist as Citizen: A Survey of Art Activism (2)
Examines art activism and the artist’s role in pursuing social change. Through reflection on their own values, beliefs, and artistic agency, as well as studying a broad spectrum of artistic engagement— from grassroots creativity to global celebrity culture— students will gain an understanding of the ways that artists engage with communities, and address contemporary issues in society. Guests will visit through the term to share their work and discuss art activism in practice.

COTA 199 - Special Studies (1-8)
(Credit to be arranged.)

COTA 335 - Artist as Citizen: Engage in Art Activism (2)
Provides a hands-on, community-based experience that delves into the process of artistic activism. Students will collaborate with their peers, and arts-related community partners and engage with K-5 public school students to examine social-justice issues, and create and share artistic responses that reflect these issues. In the process, examining their roles as both artists and socially engaged members of their communities. This course is repeatable for up to 4 credits.

COTA 399 - Special Studies (1-8)
(Credit to be arranged.)

COTA 405 - Reading and Conference (1-12)

Coun - Counseling
Coun 199 - Special Studies (1-4)
(Credit to be arranged.)

Coun 401 - Research (1-6)
(Credit to be arranged.)

Coun 402 - Independent Study (1-9)
(Credit to be arranged.)

Coun 403 - Thesis (1-6)
(Credit to be arranged.)
Coun 405 - Reading and Conference (1-6)
(Credit to be arranged.)

Coun 406 - Special Problems (1-6)
(Credit to be arranged.)

Coun 407 - Seminar (1-6)
(Credit to be arranged.)

Coun 408 - Workshop (1-6)
(Credit to be arranged.)

Coun 409 - Practicum (1-12)
(Credit to be arranged.)

Coun 410 - Experimental Course (1-6)
(Credit to be arranged.)

Coun 425 - Guidance for the Classroom Teacher (3)
A study of the responsibilities and procedures of teachers for guiding students at all levels in becoming more effective and capable persons. Expected preparation: completion of 135 credits; student teaching or teaching experience.
Also offered for graduate-level credit as Coun 525 and may be taken only once for credit.

Coun 430 - Introduction to Psychiatric Diagnoses (3)
Covers the causation, criteria, diagnosis and classification of the major psychiatric disorders. Emphasis is placed on both the traditional medical model and on the psychosocial model of diagnosis. Developmental aspects associated with normal and abnormal personalities will also be discussed. This course is a prerequisite for the Counselor Education graduate programs and will not be credited toward the completion of the degrees. Expected preparation: Psy 311.
Also offered for graduate-level credit as Coun 530 and may be taken only once for credit.

Coun 437 - Current Issues in Addictions Counseling (3)
Presentation of current issues and new developments in the treatment of substance abusing clients. Emphasis is on new knowledge from research and current trends in treatment with particular focus on the interface between chemical dependency and mental health.
Also offered for graduate-level credit as Coun 537 and may be taken only once for credit.

Coun 441 - Introduction to Counseling (3)
This course provides an introduction to the counseling profession. Specifically, it focuses on introducing theories and skills related to working with individuals, groups, and families across a variety of settings. It also provides an introduction to various career and educational options within the counseling profession.
Also offered for graduate-level credit as Coun 541 and may be taken only once for credit.

Coun 445 - Youth at Risk (3)
Designed to provide participants with an overview of information focused on counseling and teaching youth-at-risk. Emphasis will be placed on identifying youth-at-risk for depression, suicide, eating disorders, pregnancy, AIDS, use and abuse of alcohol and drugs, homelessness, gang membership and several other at-risk behaviors. Ideas for primary, secondary and tertiary prevention from individual, family, school and community perspectives will also be presented. Particular attention will be paid to guidelines for development of tragedy response plans for school campuses in conjunction with the topic of tertiary prevention. Presented in a varied format structured to include lecture/discussion, audio-visual presentations, participant self-evaluation of their own at-risk behaviors, role-plays and small group discussion.
Also offered for graduate-level credit as Coun 545 and may be taken only once for credit.

Coun 501 - Research (1-9)
(Credit to be arranged.)

Coun 502 - Independent Study (1-9)
(Credit to be arranged.)

Coun 503 - Thesis (1-9)
(Credit to be arranged.)
Coun 504 - Internship (1-9)
(Credit to be arranged.)

Coun 505 - Reading and Conference (1-6)
(Credit to be arranged.)

Coun 506 - Special Problems (1-6)
(Credit to be arranged.)

Coun 507 - Seminar (1-6)
(Credit to be arranged.)

Coun 508 - Workshop (1-6)
(Credit to be arranged.)

Coun 509 - Practicum (1-15)
(Credit to be arranged.)

Coun 510 - Experimental Course (1-12)
(Credit to be arranged.)

Coun 520 - Collaborative Partnerships to Support Infants and Toddlers (1-3)

Development and maintenance of effective partnerships among service providers and their respective systems is fundamental to the provision of quality services for infants, young children and their families. Students will examine systems of care and the impact of different systems from the perspective of family and community.

Coun 525 - Guidance for the Classroom Teacher (3)

A study of the responsibilities and procedures of teachers for guiding students at all levels in becoming more effective and capable persons. Expected preparation: completion of 135 credits; student teaching or teaching experience.

Also offered for undergraduate-level credit as Coun 425 and may be taken only once for credit.

Coun 526 - Effective Teaching (2)

Designed to meet the education and student teaching requirements for track II school counseling students.

Topics covered include effective teaching strategies designed to help school counselors-in-training to meet the TSPC prescribed teaching competencies: planning for instruction, establishing a classroom climate conducive to learning, implementing instructional plans, evaluating pupil achievement, fostering professional relationships, and addressing organizational expectations. Students are required to complete a 200-hour teaching practicum in the field (125 hours of observation and 75 hours as classroom teacher) and complete a work sample. Students are expected to complete two credits per term during one school year for a total of six credits. Restricted to students admitted to the track II school counselor specialization.

Coun 527 - Counseling Individuals with Diverse Needs (3)

Designed to prepare counselors to provide collaborative services for individuals with diverse needs in elementary, secondary, and postsecondary educational settings. Topics will include an overview of the legal mandates that impact educational requirements and services for students with disabilities, including eligibility and various types of disabling conditions related to educational success. Issues related to counseling students and family members, transitional planning, and collaborating with special educators and other service providers will also be covered.

Coun 530 - Introduction to Psychiatric Diagnoses (3)

Covers the causation, criteria, diagnosis and classification of the major psychiatric disorders. Emphasis is placed on both the traditional medical model and on the psychosocial model of diagnosis. Developmental aspects associated with normal and abnormal personalities will also be discussed. This course is a prerequisite for the Counselor Education graduate programs and will not be credited toward the completion of the degrees.

Also offered for undergraduate-level credit as Coun 430 and may be taken only once for credit.

Coun 531 - Foundations of Addictions Counseling (3)

Provides an overview of the biological, psychological, social, and spiritual dimensions of substance use disorders. Emphasizes the developmental course of addictions and the relationship of addictive behavior to common psychological disorders. Models and theories of addictive behavior that counselors need to treat...
clients with addictive and co-occurring disorders are reviewed.

Coun 532 - Assessment and Diagnosis in Addictions Counseling (3)
Focuses on the development of the knowledge and skills of assessment and diagnosis of psychoactive substance use disorders. The elements of the biopsychosocial assessment process, including basic interviewing and motivational interviewing skills, will be reviewed, as well as standardized screening and assessment instruments for chemical dependency.

Coun 533 - Treatment of Substance Use Disorders I (3)
Focuses on the development of the knowledge and skills of treatment planning and implementation of individualized treatment for psychoactive substance use disorders. Students will review the various modalities of substance use disorder treatment along with the efficacy and indications of each modality. This is the first course in a sequence of two: Coun 533, Coun 534 and must be taken in sequence.

Prerequisite: Coun 532.

Coun 534 - Treatment of Substance Use Disorders II (3)
Focuses on the knowledge and skills of substance use disorder treatment for diverse client populations. Includes HIV/infectious diseases and how to complete a risk assessment. Examines the ethical and professional issues involved in addictions counseling. Focuses on practical skills including documentation, treatment planning, and clinical interventions. This is the second course in a sequence of two: Coun 533, Coun 534 and must be taken in sequence.

Prerequisite: Coun 533.

Coun 535 - Co-Occurring Disorders (3)
Focuses on helping individuals who suffer from co-occurring psychiatric and substance use disorders by examining state of the art treatment approaches and the public policy and program management challenges that exist in responding to this complex population.

Prerequisite: Coun 531.

Coun 536 - Addictions Counseling Capstone (3)
Merges theoretical components of addiction treatment with practical applications. Students practice counseling skills through role-plays of client issues. Practice domains include individual and group counseling skills, counseling diverse populations, and working with co-occurring disorders.

Prerequisite: Coun 534.

Coun 537 - Current Issues in Addictions Counseling (3)
Presentation of current issues and new developments in the treatment of substance abusing clients. Emphasis is on new knowledge from research and current trends in treatment with particular focus on the interface between chemical dependency and mental health.

Also offered for undergraduate-level credit as Coun 437 and may be taken only once for credit.

Coun 541 - Introduction to Counseling (3)
This course provides an introduction to the counseling profession. Specifically, it focuses on introducing theories and skills related to working with individuals, groups, and families across a variety of settings. It also provides an introduction to various career and educational options within the counseling profession.

Also offered for undergraduate-level credit as Coun 441 and may be taken only once for credit.

Coun 543 - Interpersonal Relations II (3)
Focuses on the development of foundational active listening, counseling skills. The course is taken concurrently with Coun 509 Practicum Counseling.

Coun 544 - Consultation: Theory and Practice (2)
Focus on the theory and practice of consultation and collaboration with various populations (e.g., parents, families, clinical practitioners) and across a variety of settings, particularly mental health agencies and schools. Class time will include lecture/discussions, experiential exercises, and student group presentations.

Prerequisite: graduate standing.

Coun 545 - Youth at Risk (3)
Designed to provide participants with an overview of information focused on counseling and teaching youth-at-risk. Emphasis will be placed on identifying youth-at-risk for depression, suicide, eating disorders, pregnancy, AIDS, use and abuse of alcohol and drugs, homelessness, gang membership and several other at-risk behaviors. Ideas for primary, secondary and tertiary prevention from individual, family, school and community perspectives will also be presented. Particular attention will be paid to guidelines for development of tragedy response plans for school campuses in conjunction with the topic of
tertiary prevention. Presented in a varied format structured to include lecture/discussion, audio-visual presentations, participant self-evaluation of their own at-risk behaviors, role-plays and small group discussion.

Also offered for undergraduate-level credit as Coun 445 and may be taken only once for credit.

Coun 546 - Grief and Loss (2)
Focus on developing knowledge and skills related to counseling individuals and families having experienced loss through death. Students will receive information about theories of grief, explore the neurobiology of the brain in relation to trauma, recognize factors that complicate grief and develop counseling strategies for working with these issues.
Prerequisite: graduate standing.

Coun 547 - Legal & Ethical Issues in School Counseling (1)
Focus on the legal and ethical considerations specifically related to the practice of school counseling. Class time will include lecture/discussions, experiential exercises, and completion of case vignettes related to common legal and ethical issues.
Prerequisite: graduate standing.

Coun 551 - Theories and Interventions I (3)
This course focuses on providing an overview of counseling theories and their practical applications with various populations. The emphasis will be on learning the key concepts of each major theory across three dimensions: (a) human nature, (b) pathology, and (c) treatment. Focus will also be on conceptually applying each theory to client cases and on understanding underlying values and common elements across theories. Graduate standing is a prerequisite for this class.

Coun 552 - Theories and Interventions II (3)
This course focuses on providing an overview of advanced and contemporary counseling theories and their practical applications with various populations. The emphasis will be on learning the key concepts of each major theory across three dimensions: (a) human nature, (b) pathology, and (c) treatment. Focus will also be on conceptually applying each theory to client cases. Completion of Coun 551 is a prerequisite for this class.

Coun 553 - Advanced Therapeutic Strategies (3)
Focuses on advanced interventions for clients seeking personal counseling. Emphasis is focused upon cognitive-behavioral, brief therapy, and selected experiential interventions and their use in treatment planning. The theory and research connected with the application of these interventions in the treatment planning process is also addressed.
Prerequisite: Coun 551, 552.

Coun 555 - Counseling Children and Youth (3)
Theoretical overview of growth and development of children and youth. Emphasis on translating theory into practice through a "person environment interaction" conception of counseling, consultation, and educational intervention in school settings.

Coun 556 - Appraisal Instruments (1)
Accompanies Coun 567 and is intended to be an evaluation and application practicum of tests used in each counselor education specialty track. Must be taken concurrently with Coun 567.

Coun 567 - Using Tests in Counseling (3)
The course is a graduate level introduction to testing. It offers the student the option of test usage in the counseling process and introduces issues related to such usage. In addition, the course acquaints the student, through hands-on experience, with test taking, scoring, norming, profiling and interpreting.
Prerequisite: Coun 541.

Coun 568 - Career and Lifestyle Planning (3)
This course examines the theoretical research foundation for career choices, factors that influence choices, the role of information, the skills and practices of effective helpers, the exploration/testing/ labor market information sources which contribute to the value choices that are made, and related issues and problems.
Prerequisite: admission to the program and Coun 541.

Coun 569 - Developmental Foundations of Counseling (3)
Theoretical overview of life-span growth and development, emphasizing cognitive-intellectual, cognitive-moral, emotional-self, and social aspects of developmental growth in the human being. Emphasis is on translating theory into practice through a "person-environment interaction" conception of counseling, consultation, and educational intervention.
Coun 570 - Ethical and Legal Issues in Counseling (3)

Designed to further develop the professional identity of counselors by studying the content and application of the ethical standards of the American Counseling Association, the American Psychological Association, and related professional organizations. Also addresses legal issues in counseling and laws that affect the practice of counseling. Course content includes respecting diversity; client welfare; informed consent; confidentiality and privileged communication; records, technology, and court subpoenas; competence and malpractice; boundary issues; child and adolescent clients; family and group counseling; evaluation, testing, and diagnosis; supervision and consultation, conducting research and methods of resolving ethical and legal issues.

Coun 571 - Group Counseling (3)

This course is designed to provide students with opportunities to learn about group counseling theories and skills. Particular emphasis will be placed on understanding group dynamics and leadership skills as they may apply to different populations and settings. Class time will include lecture/discussion and group-based experiential learning.

Coun 572 - Systemic Perspectives on Human Sexuality (3)

Designed to provide participants with the opportunity to study the expression of human sexuality and intimacy across the life span as well as strategies to both facilitate healthy sexual development and overcome common sexual functioning problems. Students will be assisted in the process of recognizing personal attitudes and values about various aspects of sexuality and their effect on practice as well as the process of comfortably discussing sexuality with individuals and couples. Also addresses the impact of sexual abuse and sexuality and treatment considerations. Presented in a varied format structured to include lecture/discussion, audio-visual presentations, participant self-evaluation of their own attitudes and values, role plays and small group discussion.

Coun 573 - Contemporary Couples, Marriage, and Family Systems (3)

Focus on contemporary couples, marriage and family systems as they exist in American society today. Explore the past, present, and future of these systems, including changing demographics and their implications for professionals.

Coun 574 - Family Life Cycle and Transitions (3)

Intended for graduate students taking the MFT series, this course examines family development as a foundational framework for family therapy. The developmental context provides opportunity to consider symptoms and dysfunction as related to tasks and challenges of reorganization at transition points.

Coun 575 - Foundations of Couples, Marriage, and Family Counseling (3)

This course constitutes an introduction to the theory and methodology of marriage and family counseling. Attention is given to the major family interactional patterns which lead to family system breakdowns as well as the development of skills in the identification of such patterns. Family process assessment techniques, beginning work with families, dealing with resistance in family counseling, use of “self,” doubling, sculpting, etc., are interventions which are taught using an experiential format.

Coun 576 - Parents, Families, and Communities in Schools (3)

Examines effective methods for including parents, families, and communities in schools. Emphasizes a systems perspective that includes consultation and collaboration in addressing academic, career, and personal/social success for all students. Family dynamics and influences on school success will be addressed. Application of school counseling consultation, collaboration, and family support for all students will result in a school-based project integrated into a school's comprehensive counseling program.

Coun 577 - Family Therapy (3)

This course will provide an overview of family therapy, particularly related to parent-child relationships. Families will be understood from practical, structural, intergenerational, cultural, developmental, topical, and process perspectives. A foundation in family therapy theory is a prerequisite for this course; the emphasis here will be on application of theory and the development of family therapy skills. Experiential learning (role plays) will occur during class, with participation required from all students.
Coun 578 - Couples Therapy (3)
Students learn to conceptualize and intervene systemically with couple units. Attention is given to maintaining therapeutic balance, developing an intersystem treatment plan, and asking systemic/interactional questions. A major emphasis is supervised skill practice through role play.

Coun 579 - Advanced Systemic Interventions: Couples and Families (3)
Intended for graduate students taking the MFT series, this course analyzes current therapeutic assessment tools and interventions grounded in systemic theory/research as they pertain to family transitions. Success in this course builds upon requisite mastery of major systemic concepts that have to do with systemic function, structure, and motivation as related to assessing similarities and differences between normative and paranormative marriage and family life transitions. Appropriate systemic assessment integrates with systemic therapeutic interventions in resolving crisis resulting from family transitional difficulty, chronic illness, divorce, separation, remarriage, death.

Coun 580 - Supervision (1)
Presents a systemic model of clinical supervision and its application to the supervisory process. Relationship of the model to existing conceptual and empirical literature also overviewed. Techniques and skills for debriefing and mentoring supervisees also addressed.

Coun 581 - Multicultural Perspectives in Counseling (3)
A study of the human, ecological and societal forces influencing the provision of counseling services to culturally diverse students and other clients in educational and community settings. Current issues, problems and trends will be examined. Increased competence in individual and group counseling strategies and techniques will be emphasized, using didactic and experiential approaches.
Prerequisite: Coun 541..

Coun 582 - Research and Program Evaluation in Counseling (3)
Covers the areas of research design, basic psychometric principles and statistical procedures, test/scale construction, needs assessment, program evaluation, use of library as a research tool, and writing research reports. Specific counseling applications to community, rehabilitation, and school settings are made.

Coun 583 - Job Placement and Development (3)
Designed to provide students with a solid understanding of job placement principles, practice and knowledge needed to assist people with disabilities in securing and maintaining employment, and job development and marketing techniques required for seeking both competitive and supported employment.

Coun 584 - Crisis Assessment and Intervention (1)
Designed to provide students with knowledge and skills in crisis assessment and intervention in a variety of settings. Course content includes the types of crisis situations many counselors experience, including suicidal clients, clients who are victims of abuse or neglect, and potentially homicidal clients. Students will learn and practice strategies for assessing risk level, minimizing potential liability, and promoting client safety.

Coun 585 - Diagnosis and Treatment Planning I (3)
First in a sequence of two courses introducing students to the diagnosis and treatment of psychiatric disorders as outlined in the current Diagnostic and Statistical Manual of Mental Disorders. Emphasis on diagnostic reasoning, basic map and thinking process embedded in the current Manual. Use of decision trees to arrive at accurate diagnoses. Overview of conditions covered in the Manual.
Prerequisite: Coun 541..

Coun 586 - Psychopharmacology and Mental Illness (3)
Examines important psychotropic medications and their therapeutic applications. Drug efficacy, side effects, treatment of specific disorders such as anxiety and mood disorders, psychoactive substance use disorders, and schizophrenia.
Prerequisite: Coun 541..

Coun 587 - Foundations of Mental Health Services (3)
Examines community mental health movement, policy, service sequence, and related legislation; organization and delivery of mental health services at
the federal, state, and local levels; influences and trends in service delivery.

Prerequisite: Coun 541.

**Coun 588 - Diagnosis and Treatment Planning II (3)**

Second in a sequence of two courses that examine the diagnosis and treatment of mental disorders, as outlined in the current Diagnostic and Statistical Manual.

**Coun 589 - Action Research in Counseling (1-2)**

Designed to enable school counselors to conduct action research projects which align with school goals and CGCP standards and objectives. Students learn about action research methods, literature reviews, needs assessments, and guidance interventions. Students develop a research proposal, conduct the research, analyze data, and disseminate results through a formal report. Two credits in Fall term, One in Winter, Two in Spring.

**Coun 590 - Foundation of Rehabilitation Counseling (3)**

Introductory course for students pursuing graduate study in rehabilitation counseling and is also oriented toward students with a more peripheral interest in related human service fields. Intended to provide a broad overview of the profession of rehabilitation counseling with an emphasis on both theoretical and practical aspects of the field.

Prerequisite: Psy 534 or Coun 541.

**Coun 591 - Medical Aspects of Disability (3)**

Covers the most common physical, sensory, and mental disabilities encountered by the rehabilitation professional. The major symptomatology, diagnostic procedures, treatment modalities, functional implications, and psychosocial and vocational correlates of each disabling condition will be discussed.

Prerequisite: Coun 590.

**Coun 592 - Psychosocial Aspects of Disability (3)**

Covers the psychological and social aspects of adjustment and adaptation to a variety of disabling conditions. Theoretical and practical issues relating to various types of physical, psychiatric, mental and social disabilities will be examined and discussed.

Prerequisite: Coun 590.

**Coun 593 - Case Management (3)**

Students will study case management systems and skills as used in both public and private rehabilitation and related other human service agencies. Topics covered include case identification, referral, eligibility determination, assessment, goal setting, plan development, intervention strategies, case monitoring, inter-agency coordination, advocacy, promotion of self-advocacy by client, software systems, information flow, organizational structures, time management, critical case management skills, funding sources and billing, as well as other topics of interest to the student.

Prerequisite: Coun 590.

**Coun 594 - Occupational Analysis/Vocational Evaluation (3)**

Content and experiences presented through this course are designed to familiarize the student with the basic principles and imperatives of occupational analysis and vocational evaluation and how these are applied and used in real-world settings. Didactic instruction, experiential research, and collegial participation will be used to help students integrate course teachings into a core of personal and professional understanding which can then be applied to many different settings or systems.

Prerequisite: Coun 590.

**Coun 595 - Contemporary Issues and Applications in Rehabilitation Counseling (3)**

Covers contemporary issues in the field of rehabilitation counseling as well as recent applications of rehabilitation theories, technologies, assessment procedures, and counseling modalities, to a variety of rehabilitation settings and across rehabilitation populations.

**Coun 596 - Foundations of School Counseling (3)**

Foundational course for students pursuing graduate study in the specialized field of school counseling. Intended to provide a broad overview of the school counseling profession with an emphasis on both theoretical and practical aspects of comprehensive school counseling programs. Field study required.

**Coun 597 - Strengths, Risk Factors, and Disturbance in Infants, Toddlers, and Their Families (3)**

Focus on infants, toddlers, and their families and how they cope successfully with life tasks and external stressors. Examination of what happens when coping breaks down and problems emerge in families with
WELCOME TO PORTLAND STATE UNIVERSITY

young children. Students will (1) identify relevant strengths and resiliency factors for infants, toddlers, and their families; (2) understand developmentally relevant risk factors, especially parental mental health issues, and their potential impact on infants, toddlers, and their families; and (3) gain knowledge of major forms of psychopathology within infant/toddler mental health.

Coun 601 - Research (1-9)
(Credit to be arranged.)

Coun 602 - Independent Study (1-9)
(Credit to be arranged.)

Coun 603 - Dissertation (1-9)
(Credit to be arranged.)

Coun 604 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

Coun 605 - Reading and Conference (1-9)
(Credit to be arranged.)

Coun 606 - Special Problems/Projects (1-9)
(Credit to be arranged.)

Coun 607 - Seminar (1-9)
(Credit to be arranged.)

Coun 608 - Workshop (1-9)
(Credit to be arranged.)

Coun 609 - Practicum (1-9)
(Credit to be arranged.)

Coun 610 - Selected Topics (1-9)
(Credit to be arranged.)

Coun 801 - Research (0-9)
(Credit to be arranged.)

Coun 802 - Independent Study (0-9)
(Credit to be arranged.)

Coun 804 - Cooperative Education/Internship (0-9)
(Credit to be arranged.)

Coun 805 - Reading and Conference (0-9)
(Credit to be arranged.)

Coun 806 - Special Problems (0-9)
(Credit to be arranged.)

Coun 807 - Seminar (0-9)
(Credit to be arranged.)

Coun 808 - Workshop (0-9)
(Credit to be arranged.)

Coun 809 - Practicum (0-9)
(Credit to be arranged.)

Coun 810 - Experimental Course (0-9)
(Credit to be arranged.)

CPH - Community & Public Health

Courses offered as part of the joint OHSU-PSU School of Public Health.

CPH 511 - Research Methods and Evidence-based Practice (3)
The purpose of this course is to enhance students’ abilities to comprehend critique and apply research methodology and research-based evidence. Students will locate and critically evaluate evidence generated from quantitative, qualitative, and epidemiological methods, with particular attention paid to statistical significance and clinically meaningful outcomes. Students will transform their own clinical
inquisitiveness into practice-based researchable questions and focus on the application of research methods in clinical settings. Students will also gain experience in using publicly available databases and displaying data in a variety of formats.

Also offered as CPH 611. Prerequisite: Statistics.

**CPH 515 - Geographic Information Systems for Public Health (3)**

Public health practitioners track population data to plot disease trends and associated patterns of social and biological determinants of health disparities. This course will cover concepts of basic mapping using Geographic Information System (GIS) software. Types and sources of data will be reviewed, along with their uses for understanding demographic and socioeconomic trends. This is an asynchronous, online “lab” course based on tutorials and case studies. Students interested in a strong understanding of underlying GIS principles should consider GEOG 588 instead of this course.

Also offered as CPH 615 for doctoral students..

**CPH 521 - Social Determinants of Health (3)**

How do socioeconomic conditions “get under our skin”? Why and how socioeconomic inequalities translate into biological outcomes thus shaping health inequalities? What are the drivers of population health and what can we do about it? Such questions are analyzed and debated in this online course. The aim of this course is to comprehend theories, methods and evidence regarding the powerful influence of social and economic factors on public health. This introductory-level course aspires that students translate academic contents into public health practice. To that end, students will make readings about the social determinants of health, and will apply its contents to a chosen population to see first-hand how the social determinants affect the health of a chosen population. This assessment could lay the basics for culturally and economically congruent interventions/policies to mitigate health problems.

Also offered as CPH 621..

**CPH 522 - Communicating Public Health Data (3)**

Traditionally, public health findings and surveillance data are disseminated through publications and reports designed for the academic and scientific community. Today, with growing access to public health data for the general population, there is also the increasing risk of data being misunderstood, misused or poorly interpreted. Thus we have a significant role in synthesizing, interpreting and presenting data in ways that nonscientific audiences can understand and use. The purpose of this course is to explore public health surveillance systems; retrieve and analyze data for health disparities and inequities, and develop communication approaches regarding the findings for: the community at risk, the general public, policy makers, and the press. Principles of communicating scientific data to lay audiences and the concept of “place based approaches” as effective framing language will be explored. The strengths and limitations of various data presentation formats will be tested as students research different audiences and determine what data to use, the key messages, and how to present the data effectively.

Also offered as CPH 622 for doctoral credit..

**CPH 523 - Primary Health Care and Health Disparities: Global Perspectives and Program Development (3)**

This online course will examine the contextual factors of primary health care and global health disparities. Current trends in global health will be described and discussed utilizing research, best practices, international guidelines, and expert opinion. Students will gain a broadened perspective on the impact of primary care interventions in international venues. Students will develop an increased understanding of the complexities associated with global health disparities, interventions and relief efforts, and development.

Also offered as CPH 623..

**CPH 526 - Epidemiology of Aging & Chronic Disease (3)**

This course introduces the application of epidemiologic methods to the study of older persons and chronic disease. The course will examine concepts and topics including trends in aging and the health of aging populations; health transition, and explanations and consequences of mortality decline; determinants of health and survival; distinctions between normal aging, disease and disability; health promotion and primary, secondary, and tertiary prevention, as applied to older persons; the epidemiology of selected diseases; syndromes and conditions common to older age and chronic illness.

Also offered as CPH 626..

**CPH 528 - Management Practice and Quality Improvement in Health Care and Public Health Organizations (3)**

Introduction to leadership and management, focusing on effective strategies for creating a productive work environment through techniques like conflict resolution, building collaborative teams, and providing team leadership. Issues of measuring, managing and improving the quality of health care will also be addressed. Current national efforts in performance measures in public health (ie., county
Certification) are discussed. Case studies taken from public health departments and other settings will be used to master problem-solving methods.

Also offered as CPH 628.

CPH 530 - Introduction to Biostatistics (4)

This course covers a broad range of statistical methods used in the health sciences. Although statistical methodology will be presented to the extent needed for students to understand the models and methods, the course will emphasize practical applications over theoretical derivations. Students will learn how to use a computer package for data analysis, and how to interpret the results of data analyses. Homework assignments and exams will address conceptual, methodological and data analytic issues.

Also offered as CPH 630.

CPH 531 - Social Context of Public Health Policy (3)

Public health ethics is a weighing and balancing of the needs of the community with the rights of the individual. Therefore, this course will involve both intra-reflective and interreflective examination of the social and structural inequalities and injustices within our society, locally and globally, and how they affect policy and ethical practice in public health. The relationship of human rights to health and how human rights cut across law, ethics, policies, and advocacy in public health is examined. The role of a human rights perspective will also be addressed as an important part of international health practice.

Also offered as CPH 631.

CPH 535 - Professionalism, Ethics & Systems Thinking in Public Health (3)

This course presents several key theoretical principles and practices of public health. Using a case-based format, the course will examine six competencies of public health (Attachment E.2 p. 1 of 3 practice identified by the Academic Council on Linkages including familiarity with the Core Functions and Essential Services of public health; facility in grant-writing; the relationship of the legal and political systems to public health; interpretation of public health data for public use; pitfalls of policy-making; and the ethics of public health practice and study design. In-depth examination of these issues will prepare the student for leadership roles in community and in public health.

Also offered as CPH 635.

CPH 536 - Community Based Participatory Research (3)

This course examines Community-Based Participatory Research (CBPR) as a research paradigm to understand and address health disparities at the community level. Review of operating principles includes the central place that communities are accorded as units of identity and as equals in research, a process that is perceived by community constituents as not dominated by elitists, an emphasis on long-term commitment by all partners, emphasis on co-learning so that the process flows back and forth, use of exercises that stimulate collective visioning among all partners, incorporation of social ecology approaches as departures for research and practice, use of innovative problem solving approaches and use of multiple methods of data collection. Topics include community theory, development strategies, promising interventions, group development techniques, community diagnosis, and capacity assessments.

Also offered as CPH 636.

CPH 537 - Principles of Health Behavior (3)

This overview course is designed to provide students with basic information concerning the interaction of biological, psychological, behavioral, sociocultural, and environmental processes that function in the promotion of health and prevention of disease. Theories developed to explain health and illness behaviors at the intrapersonal, interpersonal, and group/community levels are introduced and critiqued. Ethical considerations inherent to efforts designed to produce health-related behavior change are examined.

Also offered as CPH 637.

CPH 538 - Public Health Program Evaluation (3)

Using case study methodology, this course focuses on the acquisition of technical skills in design, data collection and analysis for the purpose of evaluating public health programs. Program justification and evaluation for policy-making purposes will be emphasized. In addition, alternative forms of evaluation will be examined including rapid assessment, participatory evaluation and historical, social networking and other techniques. Students will have the opportunity to examine public health data sets and to design an evaluation focused on a disparate population as well as develop policy based on critical analysis of several types of evaluations.

Also offered as CPH 638. Prerequisite: CPH 550.

CPH 539 - Concepts of Environmental Health (3)

This course is designed to introduce graduate students in the MPH degree programs of the OHSU-
PSU School of Public Health to the fundamental concepts of theory and practice in environmental public health. Students will become familiar with principles of hazard identification, exposure assessment, toxicology, epidemiology, intervention, and policy and regulation. Application of concepts will be illustrated in a wide variety of agents and diseases, ranging from toxic air pollutants, pesticides, noise, and ionizing radiation, to the emerging issues of endocrine disruptors, climate change, and the built environment.

Also offered as CPH 550.

**CPH 550 - Public Health Program Planning (3)**

This course provides an introduction to program planning and experience in the grant writing process, with an emphasis on public health intervention programs. Students will be introduced to program planning, with an emphasis on logic models. Students will be introduced to the key areas of a proposal that must be addressed in grant writing.

Also offered as CPH 650.

**CPH 611 - Research Methods and Evidence-based Practice (3)**

The purpose of this course is to enhance students’ abilities to comprehend, critique, and apply research methodology and research-based evidence. Students will locate and critically evaluate evidence generated from quantitative, qualitative, and epidemiological methods, with particular attention paid to statistical significance and clinically meaningful outcomes. Students will transform their own clinical inquisitiveness into practice-based researchable questions and focus on the application of research methods in clinical settings. Students will also gain experience in using publicly available databases and displaying data in a variety of formats.

Also offered as CPH 651. Prerequisite: Statistics.

**CPH 615 - Geographic Information Systems for Public Health (3)**

Public health practitioners track population data to plot disease trends and associated patterns of social and biological determinants of health disparities. This course will cover concepts of basic mapping using Geographic Information System (GIS) software. Types and sources of data will be reviewed, along with their uses for understanding demographic and socioeconomic trends. This is an asynchronous, online “lab” course based on tutorials and case studies. Students interested in a strong understanding of underlying GIS principles should consider GEOG 588 instead of this course.

Also offered for graduate-level credit as CPH 515.

**CPH 621 - Social Determinants of Health (4)**

How do socioeconomic conditions “get under our skin”? Why and how do socioeconomic inequalities translate into biological outcomes thus shaping health inequalities? What are the drivers of population health and what can we do about it? Such questions are analyzed and debated in this online course. The aim of this course is to comprehend theories, methods, and evidence regarding the powerful influence of social and economic factors on public health. This introductory-level course aspires that students translate academic contents into public health practice. To that end, students will make readings about the social determinants of health, and will apply its contents to a chosen population to see first-hand how the social determinants affect the health of a chosen population. This assessment could lay the basics for culturally and economically congruent interventions/policies to mitigate health problems.

Also offered as CPH 521.

**CPH 622 - Communicating Public Health Data (3)**

Traditionally, public health findings and surveillance data are disseminated through publications and reports designed for the academic and scientific community. Today, with growing access to public health data for the general population, there is also the increasing risk of data being misunderstood, misused or poorly interpreted. Thus we have a significant role in synthesizing, interpreting and presenting data in ways that nonscientific audiences can understand and use. The purpose of this course is to explore public health surveillance systems; retrieve and analyze data for health disparities and inequities, and develop communication approaches regarding the findings for: the community at risk, the general public, policy makers, and the press. Principles of communicating scientific data to lay audiences and the concept of “place-based approaches” as effective framing language will be explored. The strengths and limitations of various data presentation formats will be tested as students research different audiences and determine what data to use, the key messages, and how to present the data effectively.

Also offered for graduate-level credit as CPH 522.

**CPH 623 - Primary Health Care and Health Disparities: Global Perspectives and Program Development (3)**

This online course will examine the contextual factors of primary health care and global health disparities. Current trends in global health will be described and discussed utilizing research, best practices, international guidelines, and expert opinion. Students will gain a broadened perspective
on the impact of primary care interventions in international venues. Students will develop an increased understanding of the complexities associated with global health disparities, interventions and relief efforts, and development.

Also offered as CPH 523.

CPH 626 - Epidemiology of Aging & Chronic Disease (3)

This course introduces the application of epidemiologic methods to the study of older persons and chronic disease. The course will examine concepts and topics including trends in aging and the health of aging populations; health transition, and explanations and consequences of mortality decline; determinants of health and survival; distinctions between normal aging, disease and disability; health promotion and primary, secondary, and tertiary prevention, as applied to older persons; the epidemiology of selected diseases; syndromes and conditions common to older age and chronic illness.

Also offered as CPH 526.

CPH 628 - Management Practice and Quality Improvement in Health Care and Public Health Organizations (3)

Introduction to leadership and management, focusing on effective strategies for creating a productive work environment through techniques like conflict resolution, building collaborative teams, and providing team leadership. Issues of measuring, managing and improving the quality of health care will also be addressed. Current national efforts in performance measures in public health (i.e., county certification) are discussed. Case studies taken from public health departments and other settings will be used to master problem-solving methods.

Also offered as CPH 528.

CPH 630 - Introduction to Biostatistics (4)

This course covers a broad range of statistical methods used in the health sciences. Although statistical methodology will be presented to the extent needed for students to understand the models and methods, the course will emphasize practical applications over theoretical derivations. Students will learn how to use a computer package for data analysis, and how to interpret the results of data analyses. Homework assignments and exams will address conceptual, methodological and data analytic issues.

Also offered as CPH 530.

CPH 631 - Social Context of Public Health Policy (3)

Public health ethics is a weighing and balancing of the needs of the community with the rights of the individual. Therefore, this course will involve both intra-reflective and interreflective examination of the social and structural inequalities and injustices within our society, locally and globally, and how they affect policy and ethical practice in public health. The relationship of human rights to health and how human rights cut across law, ethics, policies, and advocacy in public health is examined. The role of a human rights perspective will also be addressed as an important part of international health practice.

Also offered as CPH 531.

CPH 635 - Professionalism, Ethics & Systems Thinking in Public Health (3)

This course presents several key theoretical principles and practices of public health. Using a case-based format, the course will examine six competencies of public health practice identified by the Academic Council on Linkages including familiarity with the Core Functions and Essential Services of public health; facility in grant-writing; the relationship of the legal and political systems to public health; interpretation of public health data for public use; pitfalls of policy-making; and the ethics of public health practice and study design. In-depth examination of these issues will prepare the student for leadership roles in community and in public health.

Also offered as CPH 535.

CPH 636 - Community Based Participatory Research (3)

This course examines Community-Based Participatory Research (CBPR) as a research paradigm to understand and address health disparities at the community level. Review of operating principles includes the central place that communities are accorded as units of identity and as co-equals in research, a process that is perceived by community constituents as not dominated by elitists, an emphasis on long-term commitment by all partners, emphasis on co-learning so that the process flows back and forth, use of exercises that stimulate collective visioning among all partners, incorporation of social ecology approaches as departures for research and practice, use of innovative problem solving approaches and use of multiple methods of data collection. Topics include community theory, development strategies, promising interventions, group development techniques, community diagnosis, and capacity assessments.

Also offered as CPH 536.
**CPH 637 - Principles of Health Behavior (3)**

This overview course is designed to provide students with basic information concerning the interaction of biological, psychological, behavioral, sociocultural, and environmental processes that function in the promotion of health and prevention of disease. Theories developed to explain health and illness behaviors at the intrapersonal, interpersonal, and group/community levels are introduced and critiqued. Ethical considerations inherent to efforts designed to produce health-related behavior change are examined.

Also offered as CPH 537.

**CPH 638 - Public Health Program Evaluation (3)**

Using case study methodology, this course focuses on the acquisition of technical skills in design, data collection and analysis for the purpose of evaluating public health programs. Program justification and evaluation for policy-making purposes will be emphasized. In addition, alternative forms of evaluation will be examined including rapid assessment, participatory evaluation and historical, social networking and other techniques. Students will have the opportunity to examine public health data sets and to design an evaluation focused on a disparate population as well as develop policy based on critical analysis of several types of evaluations.

Also offered as CPH 538.

**CPH 639 - Concepts of Environmental Health (3)**

This course is designed to introduce graduate students in the MPH degree programs of the OHSU-PSU School of Public Health to the fundamental concepts of theory and practice in environmental public health. Students will become familiar with principles of hazard identification, exposure assessment, toxicology, epidemiology, intervention, and policy and regulation. Application of concepts will be illustrated in a wide variety of agents and diseases, ranging from toxic air pollutants, pesticides, noise and ionizing radiation, to the emerging issues of endocrine disruptors, climate change, and the built environment.

Corequisite: Also offered as CPH 539.

**CPH 650 - Public Health Program Planning (3)**

This course provides an introduction to program planning and experience in the grant writing process, with an emphasis on public health intervention programs. Students will be introduced to program planning, with an emphasis on logic models. Students will be introduced to the key areas of a proposal that must be addressed in grant writing.

Also offered as CPH 550.

---

**CR - Conflict Resolution**

**CR 101 - Nonviolent Interaction (2)**

Offers students a basic framework for transforming human interactions, especially social discourse and communication, from “calling out” to “calling in.” Covers techniques developed by nonviolent actionists, psychologists, and communication theorists to help humankind evolve past destructive communication toward constructive interactions.

**CR 199 - Special Studies (1-8)**

(Credit to be arranged.)

**CR 201 - Social Movement Messaging (2)**

Grassroots politics at every level from community to county to state to national and transnational are successful or not in large part due to the quality of messaging. Using interdisciplinary principles from Conflict Resolution, Communications, Psychology, and Writing (English), students develop frameworks and messaging techniques to advance campaign goals by affecting influencers.

**CR 299 - Special Studies (1-5)**

(Credit to be arranged.)

**CR 301U - Introduction to Conflict Resolution (4)**

Introduces conflict resolution studies. Explores both the nature of conflict and our understanding of what resolution seeks to achieve. Emphasizes strategies students currently employ toward resolving conflict in their own lives, with suggestions and examples that broaden their understanding of what is possible. Small groups, simulated conflict situations, role plays, and examples from community service provide students with the opportunity to both better understand their own strategies and develop new ones.

**CR 302U - Peace Studies (4)**

This introductory course explores the general questions of war and peace with units on history of peace, nonviolent conflict resolution, religious and philosophical peace orientations, costs and benefits of war and peace, laws of war and peace, selected peace leader biographies.
CR 303U - Consensus Building (4)
Competency development in seeking, building, and achieving consensus decisions in organizations and community coalitions. How to achieve community betterment using consensus organizing practices.

CR 304U - Participating in Democracy (4)
When individuals, groups, or coalitions want policy change they are not limited to simply voting. This course explores the many ways to work in a democracy even for people unable to vote (too young, non-citizens, purged from rolls for any reason). Looks at case studies of grassroots leading elected officials.

CR 305U - Ecology of War and Peace (4)
Looks at environmental effects of waging and preparing to wage war, natural resource drivers to war, and what an ecology of peace would look like and what it would accomplish. Conceptually, what is a more thorough and accurate cost-benefit analysis of methods of nation-state conflict management, using the US as the case example.

CR 306U - Nonviolence: History and Campaign Design (4)
This course examines nonviolence from several perspectives, including units on philosophical and religious nonviolence, nonviolent communication, nonviolent response to personal attack, Gandhian nonviolence, Sharp strategic nonviolence, and the emergent field of nonviolent conflict forensics.

CR 307 - Conflict Management Skills (4)
Interactive survey of practical array of conflict management competencies with units on facilitation, consensus building, mediation, conflict analysis, conflict mapping, de-escalation, negotiation, conflict management system design, community organizing, conflict management careers. Theory, simulations, and student team presentations generate new competencies and evaluative opportunities.

CR 308U - Conflict Resolution Values & Ethics (4)
Undergraduate introduction to the study of foundational concepts in the field of conflict resolution. The course also introduces the impact that conflict resolution practice may have on the critique and construction of theory. Professional ethical issues and other dilemmas in conflict resolution practice are also studied.

CR 311U - Conflict Resolution Psychology (4)
Introduction to the psychological research and insights that illuminate conflict resolution theory and practice. A dual focus on both methods and research.

CR 312 - Intercultural Conflict Resolution (4)
Intercultural conflict resolution explored through intercultural communication theory, and through study of its relationship to processes of conflict and outcomes of resolution. Considers how intercultural conflict resolution operates within ourselves, among ourselves, and in the personal, professional, and world-at-large through dialogue, interaction, and the creative arts.

CR 313 - Environmental Conflict Resolution (4)
Critically examines conflict resolution principles and practices as applied to environmental conflicts. Explores how the conflict between the duty to protect the environment against promoting economic well-being for humanity. Examines conflict resolution theory and practice in terms of case studies of environmental conflict, locally, nationally, and globally.

CR 314 - Introduction to Restorative Justice (4)
Defines restorative justice and differentiates from restorative practices. Explores restorative justice options in the justice system at juvenile and adult levels; and evaluates restorative practices in schools.

CR 315 - Divided America (4)
Through case studies drawn from US culture and politics, students will learn how conflict resolution strategies can soften divisions between people and gain allies for social betterment and moral improvement.

CR 399 - Special Studies (1-5)
(Credit to be arranged.)

CR 402 - Independent Study (1-12)
(Credit to be arranged.)
CR 405 - Reading and Conference (1-12)  
(Credit to be arranged.)

CR 406 - Special Projects (1-8)  
(Credit to be arranged.)

CR 407 - Seminar (1-5)  
(Credit to be arranged.)

CR 408 - Workshop (1-12)  
(Credit to be arranged.)

CR 409 - Practicum (1-12)  
(Credit to be arranged.)

CR 410 - Selected Topics (1-5)  
(Credit to be arranged.)

CR 411 - Conflict Resolution Career Preparation (4)  
Community based learning of variety and breadth of conflict transformation and peacebuilding through a combination of visits, field experience and project work. Development of reflective practice habits through online seminar discussion.  
Prerequisite: CR 301U, CR 307 (for majors only).

CR 416 - Evil and Hate (4)  
Explores the breakdown in dialogue surrounding the stereotyping and dehumanization of those who we view as "evil doers." Challenges unreflective use the terms, "hatred" and "evil" in political rhetoric, creating a dangerous "us and them" dichotomy, and making reconciliation across cultures and viewpoints nearly impossible.  
Also offered for graduate-level credit as CR 516 and may be taken only once for credit.  
Prerequisite: upper-division standing.

CR 419 - Forgiveness and Atonement (4)  
Explores both the theoretical and practical advantages and difficulties with forgiveness and atonement. Emphasis on how forgiveness and atonement inform conflict resolution practices.  
Also offered for graduate-level credit as CR 519 and may be taken only once for credit.

CR 420 - Individual and Group Reconciliation Processes (4)  
Explores various dimensions involved in the process of reconciliation between individuals, groups and societies. Topics covered include the evolution of historical wounds, memory, accountability, acknowledgment, restitution, forgiveness and truth. Case studies provide a focal point for class discussions and analysis.  
Also offered for graduate-level credit as CR 520 and may be taken only once for credit.  
Prerequisite: upper-division standing and CR 301U.

CR 423 - Dialogue Across Differences (4)  
An exploration of the theory and practice of dialogue to address conflict. Dialogue includes intention, purpose, process dimensions and outcomes and is utilized in various dimensions of peace and conflict resolution efforts. Dialogue crosses disciplines, creating a common thread through the many dimensions of peace work.  
Also offered for graduate-level credit as CR 523 and may be taken only once for credit.  
Prerequisite: upper-division standing.

CR 427 - Nationalism and Ethnic Conflict (4)  
Also offered for graduate-level credit as CR 527 and may be taken only once for credit.  
Prerequisite: upper-division standing.

CR 428 - Human Values in War and Peace: Value Dilemmas, Contradictions and Resolutions (4)  
Critically reflects on how similarly or differently values and belief systems function under conditions of war and peace. Explores value conflicts and possible resolutions, as well as how different approaches to values may be conducive to violent conflict or to empowering peace on the international stage.  
Also offered for graduate-level credit as CR 528 and may be taken only once for credit.  
Prerequisite: upper-division standing.

CR 429 - European Union as a Peacebuilding System (4)  
Interdisciplinary focus on the European Union as an inter- and trans-national system of conflict resolution and peace building. Examined by contrasting the
nationalist conflicts of old Europe to post-war efforts in building a system of peace and security that transcends belligerent ethnocentric nationalism.

Also offered for graduate-level credit as CR 529 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 439 - Family Mediation (2)**

In cases of divorce and custody Oregon State Law encourages/mandates the use of mediation. Particular concerns around power balancing, domestic violence, child-focused parenting, and other family issues will be explored. Specific training and ethical standards will be evaluated in relationship to the general practice of mediation.

Also offered for graduate-level credit as CR 539 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 440 - Peer Mediation (2)**

Overview of programs in the schools where youth serve as mediators to resolve conflict between other students. Focus will be on successes and challenges as well as other approaches schools undertake to respond to student conflict. Opportunity to practice conflict resolution skills and analyze conflict dynamics of race and oppression.

Also offered for graduate-level credit as CR 540 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 441 - Storytelling and Conflict Resolution (4)**

Storytelling plays a role in limiting, creating and sustaining creative conflict resolution. Critical thinking and deliberate analysis used to deconstruct the grand narratives of dominant discourse, explore counter narratives emerging from the margins, and examine how resolution – and social change – has surfaced as a result.

Also offered for graduate-level credit as CR 541 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 442 - Peace Education (4)**

A theoretical and practical introduction to the field of Peace Education. Explores the philosophical, cultural, pedagogical and curricular elements of Peace Education. Develops understanding of the theory and practice of effective conflict resolution education.

Also offered for graduate-level credit as CR 542 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 443 - Nationalism and Democracy in a Post-9/11 World (4)**

Examines the rise of American nationalism in the aftermath of 9/11 and its impact on America’s relationship to the world. From a peace and conflict studies perspective, the narrative of American nationalism is investigated in contrast to the narrative of American democracy, examining implications for war and peace.

Also offered for graduate-level credit as CR 543 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 444 - Neighbors and Enemies: Cyprus, Greece and Turkey (4)**

Focuses on the protracted ethno-nationalist conflict in Cyprus and Greek-Turkish relations. The Cyprus problem is investigated as a case study in nationalist conflict in the context of domestic, regional and international conflict dynamics. Trends toward conflict de-escalation and reconciliation in the context of the EU are also studied.

Also offered for graduate-level credit as CR 544 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 445 - Gender and Conflict Resolution (4)**

Explores the social construction of gender and its impact on conflict. Psychological theories, violence and aggression, communication styles, culture, societal structures, conflict resolution paradigms and war and peacebuilding are analyzed. Examines micro and macro issues connected to gender, peace, conflict and violence.

Also offered for graduate-level credit as CR 545 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 446 - Human Rights and Conflict Resolution (4)**

Key actors and core elements to promoting human rights as a conflict resolution mechanism around the world.

Also offered for graduate-level credit as CR 546 and may be taken only once for credit. Prerequisite: upper-division standing.

**CR 447 - Civil Society and Conflict Resolution (4)**

Explores the multi-faceted conflict resolution roles of civil society and non-governmental actors in helping societies experiencing strife, rebuild, manage and prevent conflict.
CR 448 - Transitional Justice and Peacebuilding (4)
Transitional justice as legal and non-legal initiatives to bring closure, healing, and reconciliation after tragedies.

CR 449 - Intro to Holocaust and Genocide Studies (4)
Introduction to Holocaust and Genocide Studies presents the historical context of the Holocaust, including timelines and events, as a means to understand how the definitions and understandings of genocide and atrocity have developed in response. Diverse stories of subsequent atrocities will be presented, and students will have the opportunity to draw parallels between the past and current events in the world, enhancing a robust and complex understanding of genocide. We will focus on genocide prevention, offering models of successful prevention noting key precursors to genocide/atrocities.

CR 501 - Research (1-9)
(Credit to be arranged.)

CR 502 - Independent Study (1-6)
(Credit to be arranged.)

CR 503 - Thesis (1-12)
(Credit to be arranged.)

CR 504 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

CR 505 - Reading and Conference (1-8)
(Credit to be arranged.)

CR 506 - Special Projects (1-9)
(Credit to be arranged.)

CR 507 - Seminar (1-8)
(Credit to be arranged.)

CR 508 - Workshop (1-12)
(Credit to be arranged.)

CR 509 - Practicum (1-9)
(Credit to be arranged.)

CR 510 - Selected Topics (1-4)
(Credit to be arranged.)

CR 511 - Research Methods in Conflict Resolution (4)
Introduction to academic and applied research, and specifically research within the interdisciplinary field of Conflict Resolution. Students will develop literacy in reading and understanding research, and will gain experience collecting and evaluating data.

CR 512 - Foundations of Conflict Resolution (4)
Introduction to full scope of the master's degree program, including advising and paths to degree. Students will survey models in the field of Conflict Resolution from both the humanities and social sciences. A particular focus will be given to the legal and ethical aspects of these models, along with a full exploration of legalities and professional ethics in conflict resolution practice. Expected preparation: 4 credits literature and 4 credits psychology or sociology.

CR 513 - Advanced Values and Ethics in Conflict Resolution (4)
Exploration of values and ethics in the field of conflict resolution. The course also examines the impact of conflict resolution on theory and practical philosophy.
CR 514 - Conflict Resolution in Divergent Settings (4)
Examination of the variety of settings where conflict resolution takes place. Guest speakers share their experience and theoretical insights.
Prerequisite: CR 512, 513.

CR 515 - Negotiation (4)
Introduction to collaborative approaches to responding to conflict. A theoretical framework will be established for using negotiation and mediation in a variety of settings. Students will learn how to function as a neutral third party focusing on: conflict analysis, communication skills, maintaining a neutral role, creating a safe environment, and ensuring procedural, substantive and psychological satisfaction. Ethical issues and concerns in the field of mediation will be presented. Recommended prerequisite: 3 credits psychology or sociology.

CR 516 - Evil and Hate (4)
Explores the breakdown in dialogue surrounding the stereotyping and dehumanization of those who we view as "evil doers." Challenges unreflective use the terms, "hatred" and "evil" in political rhetoric, creating a dangerous "us and them" dichotomy, and making reconciliation across cultures and viewpoints nearly impossible.
Also offered for undergraduate-level credit as CR 416 and may be taken only once for credit.

CR 517 - Nonviolence (4)
Designed to acquaint students with the theories and history of nonviolence from ancient times to the present, with some speculation as to future use. Recommended prerequisite: 3 credits of philosophy.

CR 518 - Psychology of Peace and Conflict (4)
Introduction to the psychological research and insights that illuminate conflict resolution theory and practice. A dual focus on both methods and research will be maintained throughout the curriculum. Expected preparation: 3 credits psychology.

CR 519 - Forgiveness and Atonement (4)
Explores both the theoretical and practical advantages and difficulties with forgiveness and atonement. Emphasis on how forgiveness and atonement inform conflict resolution practices.
Also offered for undergraduate-level credit as CR 419 and may be taken only once for credit.

CR 520 - Individual and Group Reconciliation Processes (4)
Explores various dimensions involved in the process of reconciliation between individuals, groups and societies. Topics covered include the evolution of historical wounds, memory, accountability, acknowledgment, restitution, forgiveness and truth. Case studies provide a focal point for class discussions and analysis.
Also offered for undergraduate-level credit as CR 420 and may be taken only once for credit.

CR 522 - Thesis and Project Preparation Seminar (4)
Introduction to the culminating requirement of the CR graduate program distinguishes between the two options: thesis and project. Students discuss the different goals, activities, processes, and outcomes of the two options and review theses and projects written by predecessors.
Prerequisite: Admission to graduate program.

CR 523 - Dialogue Across Differences (4)
An exploration of the theory and practice of dialogue to address conflict. Dialogue includes intention, purpose, process dimensions and outcomes and is utilized in various dimensions of peace and conflict resolution efforts. Dialogue crosses disciplines, creating a common thread through the many dimensions of peace work.
Also offered for undergraduate-level credit as CR 423 and may be taken only once for credit.
Prerequisite: upper-division standing.

CR 524 - Advanced Mediation (4)
Focus on the qualities of the practitioner that enhance the practice of mediation. The practice of mediation involves a particular kind of presence, that of a non-judgmental observer. To maintain such a presence while in the midst of emotions, intense interactions, hostility, and conflict requires much clarity, steadiness, and stability. Students will learn ways to achieve these qualities through the cultivation of mindfulness. Recommended prerequisites: CR 515.

CR 525 - Conflict Resolution Systems Design (4)
Acquaints the student with a systems approach to designing conflict resolution services. These services are designed for a wide variety of settings to handle conflicts effectively at the lowest cost. Students learn to diagnose and correct problems in an existing system, as well as create and implement a wholly new system.
CR 526 - Advanced Intercultural Conflict Resolution (4)
Explores the ways in which cultural similarities or difference might influence the conflict resolution process. In this context, culture is defined broadly and will be considered as it plays a part in either the actuality or perceptions of our experience. Issues of power and marginality as they relate to dynamics of culture will be explored. Students explore and learn from other cultures and apply this learning in the evaluation and use of conflict resolution paradigms.

CR 527 - Nationalism and Ethnic Conflict (4)
Interdisciplinary inquiry into leading perspectives and theories of nationalism. Examined through multiple case-specific conflict phenomena. Assessed in terms of its historical roots, evolution, structural patterns and socio-political antecedents and consequences.

CR 528 - Human Values in War and Peace: Value Dilemmas, Contradictions and Resolutions (4)
Critically reflects on how similarly or differently values and belief systems function under conditions of war and peace. Explores value conflicts and possible resolutions, as well as how different approaches to values may be conducive to violent conflict or to empowering peace on the international stage.

CR 529 - European Union as a Peacebuilding System (4)
Interdisciplinary focus on the European Union as an inter- and trans-national system of conflict resolution and peace building. Examined by contrasting the nationalist conflicts of old Europe to post-war efforts in building a system of peace and security that transcends belligerent ethnocentric nationalism.

CR 530 - Research and Professional Development Colloquium (1-4)
Graduate students meet in a collaborative environment in order to learn from each other, from faculty members, from community partners, and from other experts and practitioners in the field of conflict resolution. Each week, presentations, dialogue, and case exploration will offer real-time learning about current issues in the discipline. Topics will include innovations in research, trends in the field, community activities, professionalization, and the many applied dimensions of conflict resolution, locally and globally.

CR 539 - Family Mediation (2)
In cases of divorce and custody Oregon State Law encourages/mandates the use of mediation. Particular concerns around power balancing, domestic violence, child-focused parenting, and other family issues will be explored. Specific training and ethical standards will be evaluated in relationship to the general practice of mediation.

CR 540 - Peer Mediation (2)
Overview of programs in the schools where youth serve as mediators to resolve conflict between other students. Focus will be on successes and challenges as well as other approaches schools undertake to respond to student conflict. Opportunity to practice conflict resolution skills and analyze conflict dynamics of race and oppression.

CR 541 - Storytelling and Conflict Resolution (4)
Storytelling plays a role in limiting, creating and sustaining creative conflict resolution. Critical thinking and deliberate analysis used to deconstruct the grand narratives of dominant discourse, explore counter narratives emerging from the margins, and examine how resolution – and social change – has surfaced as a result.

CR 542 - Peace Education (4)
A theoretical and practical introduction to the field of Peace Education. Explores the philosophical, cultural, pedagogical and curricular elements of Peace Education. Develops understanding of the theory and practice of effective conflict resolution education.
CR 543 - Nationalism and Democracy in a Post-9/11 World (4)

Examines the rise of American nationalism in the aftermath of 9/11 and its impact on America’s relationship to the world. From a peace and conflict studies perspective, the narrative of American nationalism is investigated in contrast to the narrative of American democracy, examining implications for war and peace.

Also offered for undergraduate-level credit as CR 443 and may be taken only once for credit.

CR 544 - Neighbors and Enemies: Cyprus, Greece and Turkey (4)

Focuses on the protracted ethno-nationalist conflict in Cyprus and Greek-Turkish relations. The Cyprus problem is investigated as a case study in nationalist conflict in the context of domestic, regional and international conflict dynamics. Trends toward conflict de-escalation and reconciliation in the context of the EU are also studied.

Also offered for undergraduate-level credit as CR 444 and may be taken only once for credit.

CR 545 - Gender and Conflict Resolution (4)

Explores the social construction of gender and its impact on conflict. Psychological theories, violence and aggression, communication styles, culture, societal structures, conflict resolution paradigms and war and peacebuilding are analyzed. Examines micro and macro issues connected to gender, peace, conflict and violence.

Also offered for undergraduate-level credit as CR 445 and may be taken only once for credit.

CR 546 - Human Rights and Conflict Resolution (4)

Key actors and core elements to promoting human rights as a conflict resolution mechanism around the world.

Also offered for undergraduate-level credit as CR 446 and may be taken only once for credit.

CR 547 - Civil Society and Conflict Resolution (4)

Explores the multi-faceted conflict resolution roles of civil society and non-governmental actors in helping societies experiencing strife, rebuild, manage and prevent conflict.

Also offered for undergraduate-level credit as CR 447 and may be taken only once for credit.

CR 548 - Transitional Justice and Peacebuilding (4)

Transitional justice as legal and non-legal initiatives to bring closure, healing, and reconciliation after tragedies.

Also offered for undergraduate-level credit as CR 448 and may be taken only once for credit.

Prerequisite: Upper-division standing.

CR 549 - Intro to Holocaust and Genocide Studies (4)

Introduction to Holocaust and Genocide Studies presents the historical context of the Holocaust, including timelines and events, as a means to understand how the definitions and understandings of genocide and atrocity have developed in response. Diverse stories of subsequent atrocities will be presented, and students will have the opportunity to draw parallels between the past and current events in the world, enhancing a robust and complex understanding of genocide. We will focus on genocide prevention, offering models of successful prevention noting key precursors to genocide/atrocities.

Also offered for undergraduate-level credit as CR 449 and may be taken only once for credit.

CR 550 - Holocaust and Genocide/Atrocity Prevention Synthesis (4)

Students will have the opportunity to integrate their certificate learning into a project that prepares them to apply knowledge in their works as educators, activists, policy makers, social justice advocates, and/or ngo/international-development workers. This course will be run as a one-term seminar, inviting students into conversation with one another about their research interests, and/or their career goals that incorporate learning from coursework. This course may be taken for credit up to two times.

Prerequisite: CR 546, GRN 520, and 8 approved elective credits.

CS - Computer Science

CS 105 - Computing Fundamentals I (4)

Intended as an overview of computers and computer technology for non-CS majors, this course is often described as a computer literacy course. The primary focus is on the personal computer and personal productivity software. Hardware components of computers such as processors, memory, and input/output devices are discussed and compared. Software is the primary focus of the course. The main topics are system software (Windows, OS X, etc) and applications (such as browsers, word processors, spreadsheets, presentation graphics and database
managers). The course concludes with discussions concerning legal and ethical issues surrounding computer technology, management information systems, and systems analysis. Expected preparation: high school algebra.

**CS 106 - Computing Fundamentals II (4)**

Introduction to programming, appropriate for non-CS majors. Introduction to the logical thought processes and problem-solving strategies used when programming. Concepts presented include problem definition and requirements gathering, generating a description of a step-by-step solution (the algorithm), writing a program, testing, and documentation. The programming language Visual Basic is used; several programming projects are completed during the term. Expected preparation: high school algebra, knowledge of Windows and the ability to use Windows Explorer.

**CS 107 - Computing Fundamentals III (4)**

Introduction to Web programming and associated web tool usage for non-CS majors. Centering around the more sophisticated aspects of browsers. Web pages that represent the input to browsers are defined. In-depth study of HTML, VBScript and JavaScript. Brief exploration into CGI Scripts and other server-side tools. Course differentiates between Web page design (a graphics designer's role) and Web page programming, taking the results of their work and committing it to workable code. Recommended prerequisites: high school algebra and CS106 or some programming experience.

**CS 161 - Introduction to Programming and Problem-Solving (4)**

Introduction to fundamental concepts of computer science. Problem solving, algorithm and program design, data types, loops, control structures, subprograms, and arrays. Learn to write programs in a high level programming language. Surveys current social and ethical aspects of computer science. Recommended prerequisite: Mth 111.

**CS 161L - Introduction to Programming and Problem-Solving Laboratory (0)**

Lab for CS 161 Introduction to Programming and Problem-Solving.

**CS 162 - Introduction to Computer Science (4)**

The goals of this class are to teach the syntax of C++ to students who already know how to program. Students are expected to be proficient at using conditionals, I/O, loops, and functions with arguments. Topics include: conditionals, I/O files, functions, classes, pointers, dynamic memory, linear linked lists, and multi-dimensional arrays in C++, as well as program correctness, verification, and testing. Three hours lecture and one 3-hour laboratory. The laboratory emphasizes practical programming skills.

Prerequisite: Prior programming experience equivalent to CS161.

**CS 163 - Data Structures (4)**

Data abstraction with formal specification. Elementary algorithm analysis. Basic concepts of data and its representation inside a computer. Linear, linked, and orthogonal lists; tree structures. Data structures are implemented as data abstractions using pointer based implementations. Sorting and search strategies. Data management. Three hours lecture and one 3-hour laboratory. The laboratory emphasizes practical programming skills.

Prerequisite: CS 162 with a grade of C or better. Corequisites: concurrent enrollment in CS163L.

Corequisite: CS 163.

**CS 163L - Lab for CS 163 (0)**

Lab for CS 163.

Corequisite: CS 163.

**CS 199 - Special Studies (0-12)**

(Credit to be arranged.)

**CS 201 - Computer Systems Programming (4)**

Introduction to computer systems from a software perspective. Topics include: Basic machine organization, System programming using C and assembly language, Introduction to system programming tools (gcc, makefile, gdb), Data representation (bits, bytes, characters, integers, floating point numbers), Implementation of control flow, procedure calls, and complex data types at machine level, Linking and loading, Exceptions and interrupts, Process control and signals, System calls, File I/O, Timing and improving program performance, Introduction to memory hierarchy, dynamic memory allocation techniques.

Prerequisite: CS 162.
CS 202 - Programming Systems (4)
Students will become familiar with the language and operating system environment used in most upper division courses in the Computer Science major curriculum. Use of the file system, operating-system calls, and shell-level programming; low-level debugging of high-level programs. Programming exercises will include applications from data structures (e.g. B-trees) and memory management techniques.
Prerequisite: CS163. Corequisite: CS 202L.

CS 202L - Lab for CS 202 (0)
Lab for CS 202.

CS 250 - Discrete Structures I (4)
Prerequisite: CS 161 or CS 162, and Mth 251.

CS 251 - Discrete Structures II (4)
Prerequisite: CS 250.

CS 299 - Special Studies (0-4)
(Credit to be arranged.)

CS 299L - Lab for CS 299 (0)
Lab for CS 299.

CS 300 - Elements of Software Engineering (4)
Practical techniques of program development for medium-scale software produced by individuals. Software development from problem specification through design, implementation, testing, and maintenance. The fundamental design techniques of step-wise refinement and data abstraction. A software project will be carried through the development cycle.
Prerequisite: CS 163, 201, 202.

CS 300L - Elements of Software Engineering Laboratory (0)
Lab for CS 300 Elements of Software Engineering

CS 305 - Social, Ethical, and Legal Implications of Computing (2)
History of computing, social context of computing, professional and ethical responsibilities, risks and liabilities of safety-critical systems, intellectual property, privacy and civil liberties, social implications of the Internet, computer crime, economic issues in computing.
Prerequisite: a course in computer science at the 300 or higher level. Sophomore inquiry or a course in public speaking and a course in writing a research paper.

CS 311 - Computational Structures (4)
Introduces the foundations of computing. Regular languages and finite automata. Context free languages and pushdown automata. Turing machines and equivalent models of computation. Computability. Introduction to complexity. An appropriate programming language is used for programming experiments.
Prerequisite: CS 250, 251.

CS 313 - Artificial Intelligence and Game Design (4)
Study of the basic principles of computer game design, the most popular techniques and technologies for game implementation, focusing on the many ways in which advances in artificial intelligence influences game design.
Prerequisite: Prior computer programming experience equivalent to CS 163.

CS 320 - Principles of Programming Languages (4)
Syntax and semantics. Compilers and interpreters. Programs as data. Regular expressions and context free grammars. Programming paradigms, including procedural, functional, and object-oriented programming. Type systems, including dynamic and static typing disciplines. Binding, scope, data abstraction, and modularity. Denotational, operational, and axiomatic semantics. Introduction to program correctness.
Prerequisite: CS 202 and CS 251.

CS 333 - Introduction to Operating Systems (4)
Introduction to the principles of operating systems and concurrent programming. Operating system
services, file systems, resource management, synchronization. The concept of a process; process cooperation and interference. Introduction to networks, and protection and security. Examples drawn from one or more modern operating systems. Programming projects, including concurrent programming.

Prerequisite: CS 201, 202.

CS 333L - Introduction to Operating Systems Lab (0)
Lab for Introduction to Operating Systems.
Corequisite: CS 333.

CS 340 - Discrete Structures for Engineers (4)
A one-term introduction to discrete structures with applications to computing problems. Topics include sets, relations, functions, counting, graphs, trees, recursion, propositional and predicate logic, proof techniques, Boolean algebra. The course may not be used as part of the degree requirements for the BS degree in Computer Science.
Prerequisite: CS 163, Math 252.

CS 345 - Cyberculture: The Internet and Popular Culture (4)
Study of the effect of computers and the internet on popular culture. Graduates of the course will become more intelligent and successful users of the Internet, understand how the internet works, be aware of the wide variety of applications that exist on the internet, and will understand the primary principles that underlie the success the Internet has had in changing popular culture. Typical topics will include history and technologies of the web, social networks, the long tail in business and culture, the power of groups, user generated content, complex systems, virtual worlds and the power of search.
Prerequisite: Sophomore Inquiry: Popular Culture (UNST 254).

CS 345U - Exploring Complexity in Science and Technology (4)
Introduction to Complex Systems, an interdisciplinary field that studies how collections of simple entities organize themselves to produce complex behavior, use information, and adapt and learn. Focuses on common principles underlying complexity in science and technology, and includes ideas from physics, biology, the social sciences, and computer science. The course may not be used as one of the upper-division CS Electives for the BS degree in Computer Science. This course is the same as SySc 346; course may be taken only once for credit.
Cross-Listed as: SySc 346U.

CS 347U - The Internet Age (4)
Examination of the Internet and its evolution over the last 30 years to become an essential part of today’s society. Also examines the impact the Internet has had on society as well as potential threats to its continued success. The course may not be used as one of the upper-division CS Electives for the BS degree in Computer Science.

CS 348U - Digital Media, Technology and Society (4)
Covers, from a computing perspective, the transition of society to one that is primarily digital. Provides an understanding of digital media, its technical limitations, copyright and digital rights management, and digital media communications. The course may not be used as an upper-division CS Elective for the BS degree in Computer Science.

CS 350 - Algorithms and Complexity (4)
Techniques for the design and analysis of algorithms. Case studies of existing algorithms (sorting, searching, graph algorithms, dynamic programming, matrix multiplication, fast Fourier transform.) NP-Completeness.
Prerequisite: CS 250 and CS 251.

CS 399 - Special Studies (0-6)
(Credit to be arranged.) Consent of instructor.

CS 399L - Lab for CS 399 (0)
Lab for CS 399 special studies.
CS 399P - Special Studies (1-6)  
(Credit to be arranged.)

CS 401 - Research (1-6)  
(Credit to be arranged.) Consent of instructor.

CS 402 - Independent Study (1-12)  
(Credit to be arranged.)

CS 403 - Honors Thesis (1-4)  
(Credit to be arranged.) Consent of instructor.

CS 404 - Cooperative Education/Internship (1-12)  
(Credit to be arranged.) Consent of instructor.

CS 405 - Reading and Conference (1-6)  
(Credit to be arranged.) Consent of instructor.

CS 406 - Special Projects (1-6)  
(Credit to be arranged.) Consent of instructor.

CS 407 - Seminar (1-6)  
(Credit to be arranged.) Consent of instructor.

CS 409 - Practicum (1-9)  
(Credit to be arranged.) Consent of instructor.

CS 410 - Selected Topics (1-6)  
(Credit to be arranged.) Consent of instructor.

CS 410L - Selected Topics Lab (0)  
Lab for CS 410.

CS 410P - Selected Topics (1-6)  
Programming intensive version of CS 410. (Credit to be arranged.) Consent of instructor.

CS 415 - Parallel Programming (4)  
An introduction to parallel programming concepts and techniques. Topics include: parallel programming models and languages, share-memory programming, message-passing programming, performance models and analysis techniques, domain-specific parallel algorithms. Also offered for graduate-level credit as CS 515 and may be taken only once for credit. Prerequisite: CS 320 and CS 333.

CS 415L - Lab for CS 415P (0)  
Lab for CS 415P Parallel Programming.
Corequisite: CS 415P.

CS 415P - Parallel Programming (4)  
An introduction to parallel programming concepts and techniques. Topics include: parallel programming models and languages, share-memory programming, message-passing programming, performance models and analysis techniques, domain-specific parallel algorithms. Prerequisite: CS 320 and CS 333. Corequisite: CS 415L.

CS 420 - Object-Oriented Programming and Design (4)  
The fundamental concepts of object-oriented programming, including object-oriented modeling and design. The focus of the course will be to help students create programs that model their application domain, that exhibit that model to other programmers who read the code, and that are as a consequence maintainable and robust to change. Issues addressed may include data abstraction and modeling, the use and misuse of inheritance, higher-order data structures and their operations, reusability, refactoring, concurrency control, and usability. Includes programming assignments in an O O language. Also offered for graduate-level credit as CS 520 and may be taken only once for credit. Prerequisite: CS 320.

CS 420P - Object-Oriented Programming (4)  
The fundamental concepts of object-oriented programming languages, including data abstraction and typing, class inheritance and generic types, prototypes and delegation, concurrency control and distribution, object-oriented databases, and implementation. To illustrate these issues, programming assignments in languages such as Smalltalk, Eiffel and C++ will be given. Prerequisite: CS 320.
CS 421 - Programming Language
Implementation: Syntax and Static Semantics (4)
Techniques and tools for construction of compiler and interpreter front-ends, including: representation of programs using abstract syntax trees; lexical analysis, and lexer generators; parsing (recursive descent, top-down, and bottom-up), and parser generators; type checking and static analysis. Design and implementation of a front-end for a small programming language.
Prerequisite: CS 201, CS 202, CS 300, CS 311 and CS 320.

CS 421L - Lab for CS 421 (0)
Lab for CS 421.

CS 421P - Programming Language
Implementation: Syntax and Static Semantics (4)
Techniques and tools for construction of compiler and interpreter front-ends, including: representation of programs using abstract syntax trees; lexical analysis, and lexer generators; parsing (recursive descent, top-down, and bottom-up), and parser generators; type checking and static analysis. Design and implementation of a front-end for a small programming language.
Prerequisite: CS 201, CS 202, CS 300, CS 311 and CS 320.

CS 422 - Programming Language
Implementation: Code Generation and Dynamic Semantics (4)
Techniques and tools for construction of compiler and interpreter back-ends, including: interpreter design; code generation strategies for standard programming constructs; intermediate representations; optimization techniques; run-time organization, including functions, objects, and closures; run-time systems. Design and implementation of an interpreter and a compiler back-end for a small programming language.
Prerequisite: CS 201, CS 202, CS 300, CS 311 and CS 320.

CS 422L - Lab for CS 422 (0)
Lab for CS 422.

CS 422P - Programming Language
Implementation: Code Generation and Dynamic Semantics (4)
Techniques and tools for construction of compiler and interpreter back-ends, including: interpreter design; code generation strategies for standard programming constructs; intermediate representations; optimization techniques; run-time organization, including functions, objects, and closures; run-time systems. Design and implementation of an interpreter and a compiler back-end for a small programming language.
Prerequisite: CS 201, CS 202, CS 300, CS 311 and CS 320.

CS 430P - Internet, Web, & Cloud Systems (4)
Covers modern networked computing systems and the abstractions they provide. Specifically, students will learn about and apply their knowledge of topics such as Internet protocols, virtual machines and containers, web servers and frameworks, and databases as well as their deployment in modern cloud environments.
Also offered for graduate-level credit as CS 530 and may be taken only once for credit. Prerequisite: Upper-division standing and admission into the CS program.

CS 431 - Introduction to Performance Measurement, Modeling and Analysis (4)
A survey of the fundamentals of computer application and system performance. Hands-on programming exercises will allow us to apply the techniques to increasingly complex problems. We will use a variety of state-of-the-art tools for measurement, modeling, simulation, and analysis throughout the course.
Also offered for graduate-level credit as CS 531 and may be taken only once for credit. Prerequisite: CS 201 and CS 202 and CS 333.

CS 435 - Accelerated Computing (4)
Heterogeneous approaches that use special-purpose processors to accelerate the execution of a variety of applications. GPUs, Intel Xeon Phi, APUs, FPGUs. The sustainability implications of these platforms. Lectures, homeworks, labs, and group programming projects using NVIDIA GPUs and Intel Xeon Phi.
Also offered for graduate-level credit as CS 535 and may be taken only once for credit. Prerequisite: CS 333.

CS CS 435L - Lab for CS 435 (0)
Lab for CS 435.
Corequisite: CS 435.

CS 438 - Computer Architecture (4)
Processors, memory hierarchy, and bus systems. Multi-level caches and cache coherence in MP systems. Arithmetic algorithms. RISC vs. CISC

Also offered for graduate-level credit as CS 538 and may be taken only once for credit. Prerequisite: CS 333.

CS 441 - Artificial Intelligence (4)

Introduction to the basic concepts and techniques of artificial intelligence. Knowledge representation, problem-solving, machine learning, natural language understanding, and AI search techniques.

Also offered for graduate-level credit as CS 541 and may be taken only once for credit. Prerequisite: CS 202.

CS 442 - Advanced Artificial Intelligence: Combinatorial Games (4)

Covers the theory and practice of finding optimal and satisfying solutions to one-player and two-player combinatorial games, including such popular games as Sokoban, Othello, checkers, chess, backgammon, bridge, and CCGs. Simple applications in decision theory and economics may also be discussed. Emphasis on implementation of state-of-the-art solution techniques.

Also offered for graduate-level credit as CS 542 and may be taken only once for credit. Prerequisite: CS 202 or experience with algorithms and data structures.

CS 442P - Advanced Artificial Intelligence: Combinatorial Games (4)

Covers the theory and practice of finding optimal and satisfying solutions to one-player and two-player combinatorial games, including such popular games as Sokoban, Othello, checkers, chess, backgammon, bridge, and CCGs. Simple applications in decision theory and economics may also be discussed. Emphasis on implementation of state-of-the-art solution techniques.

Prerequisite: CS 202 or experience with algorithms and data structures.

CS 443 - Advanced Artificial Intelligence: Combinatorial Search (4)

Explores methods for the solution of constraint satisfaction and related problems using search techniques, in the context of real-world problems such as resource-bounded scheduling, enterprise planning, classical planning, and one- and two-player games. Emphasis on coding projects, and on reading and reporting on selected literature.

CS 445 - Machine Learning (4)

Provides a broad introduction to techniques for building computer systems that learn from experience; conceptual grounding and practical experience with several learning systems; and grounding for advanced study in statistical learning methods, and for work with adaptive technologies used in speech and image processing, robotic planning and control, diagnostic systems, complex system modeling, and iterative optimization. Students gain practical experience implementing and evaluating systems applied to pattern recognition, prediction, and optimization problems.

Also offered for graduate-level credit as CS 545 and may be taken only once for credit. Prerequisite: Mth 261 or Mth 343; CS 202.

CS 446 - Advanced Topics in Machine Learning (4)

Covers a number of more advanced topics in machine learning from a more mathematically oriented view. Provides preparation for successfully using machine-learning techniques for various applications. Also provides preparation for graduate-level research in machine learning and adaptive systems.

Also offered for graduate-level credit as CS 546 and may be taken only once for credit. Prerequisite: CS 445/545.

CS 447 - Computer Graphics (4)

This course will provide an introduction to graphics systems and applications. Basic structure of interactive graphics systems, characteristics of various hardware devices. Control of display devices, implementation of simple packages, device independence, and standard packages. Distributed architectures for graphics, hidden line and hidden surfaces algorithms, representations of curves and surfaces.

Also offered for graduate-level credit as CS 547 and may be taken only once for credit. Prerequisite: CS 202, Mth 261.

CS 447P - Computer Graphics (4)

This course will provide an introduction to graphics systems and applications. Basic structure of interactive graphics systems, characteristics of various hardware devices. Control of display devices, implementation of simple packages, device independence, and standard packages. Distributed architectures for graphics, hidden line and hidden
surfaces algorithms, representations of curves and surfaces.

Duration: 4

Prerequisite: CS 202, Mth 261.

**CS 451 - Numerical Computation (4)**

Introduction to numerical methods. Includes topics from elementary discussion of errors, polynomials, interpolation, quadrature, linear systems of equations, and solution of nonlinear equations.

Also offered for graduate-level credit as CS 551 and may be taken only once for credit. Prerequisite: Mth 261; CS 201.

**CS 452 - Building Software Systems with Components (4)**

Designed to familiarize students with the concepts behind and opportunities afforded by modern component architectures, such as Microsoft COM, Java Beans, and CORBA. Students are exposed to component development techniques and methods for developing complex software architectures using components. Students become familiar with component development, scripting and composing components, and the strengths and weaknesses of using components in designing large complex software systems.

Also offered for graduate-level credit as CS 552 and may be taken only once for credit. Prerequisite: CS 300, CS 333, CS 350; knowledge of C++ or Java programming.

**CS 454 - Software Engineering (4)**

Current methodologies for the development of large, industrial strength software systems. Topics include requirements, specification, design, implementation, testing, project management and cost estimation, formal methods, and software process improvement.

Also offered for graduate-level credit as CS 554 and may be taken only once for credit. Prerequisite: CS 300 and CS 320.

**CS 457 - Functional Programming (4)**

Introduction to functional notation, recursion, higher-order functions, reasoning about functions, and models for the evaluation of applicative expressions. Use of functional languages.

Also offered for graduate-level credit as CS 557 and may be taken only once for credit. Prerequisite: Senior-standing and admission into the CS program.

**CS 461 - Open Source Software Development Laboratory (4)**

Explores Open Source software engineering and its methodologies in a laboratory classroom setting. Focuses on the development and delivery of Open Source software projects by teams of 1-3 students. Students prepare and present material, working using email and the web.

Also offered for graduate-level credit as CS 561 and may be taken only once for credit. Prerequisite: CS 300.

**CS 461P - Open Source Software Development Laboratory (4)**

Explores Open Source software engineering and its methodologies in a laboratory classroom setting. Focuses on the development and delivery of Open Source software projects by teams of 1-3 students. Students prepare and present material, working using email and the web.

Prerequisite: CS 300.

**CS 462 - Advanced Open Source Software Engineering (4)**

Surveys the growing academic literature describing tools, techniques, community management, project management and collaboration strategies used in open source software development. Emphasis is placed upon tool-driven development, upon open development processes and tools, and upon comparison with processes and practices in proprietary software.

Also offered for graduate-level credit as CS 562 and may be taken only once for credit. Prerequisite: CS 300.

**CS 465P - Full-stack Web Development (4)**

This class provides an overview of how the web works and covers the spectrum of a full stack web developer, including both front-end and back-end development for delivering both mobile and desktop web applications.

Also offered for graduate-level credit as CS 565 and may be taken only once for credit.

**CS 467 - The Wireless Web (4)**

Covers the basics of the Wireless Application Protocol (WAP) as used in modern mobile phones and other handheld devices. Provides an overview of the WAP architecture, as well as an in-depth exploration of the WAP Application Layer (WAE), including WML, WMLScript, and the WAP push framework.

Also offered for graduate-level credit as CS 567 and may be taken only once for credit. Prerequisite: CS 465/565.

**CS 469 - Software Engineering Capstone I (3)**

Emphasizes teamwork on a substantial project that will be developed for a real customer. The course
integrates the knowledge and skills from the rest of the CS curriculum. This course creates an obligation for participation for two consecutive quarters. This is the first course in a sequence of two CS 469, CS 470 and must be taken in sequence. Offered as P/NP only.

Prerequisite: CS 300, CS 320, CS 333, CS 350 and at least one Programming intensive course.

CS 470 - Software Engineering Capstone II (3)
Emphasizes teamwork on a substantial project that will be developed for a real customer. The course integrates the knowledge and skills from the rest of the CS curriculum. This course creates an obligation for participation for two consecutive quarters. This is the second course in a sequence of two CS 469, CS 470 and must be taken in sequence. Offered as P/NP only.

Prerequisite: CS 469.

CS 480 - Randomized Algorithms and Probabilistic Analysis (4)
Probabilistic tools used in the design and analysis of modern algorithms and data structures. Topics include: review discrete random, occupancy problems, tail bounds, Markov chains, the probabilistic method, martingales, Monte Carlo methods. The course explores a variety of CS applications.

Also offered for graduate-level credit as CS 580 and may be taken only once for credit. Prerequisite: CS 350, Stats 451.

CS 485 - Cryptography (4)
The goal of cryptography is the encoding of information via a cryptographic system. Cryptanalysis studies the breaking of cryptosystems. This course focuses on cryptography but with respect to cryptanalysis. An overview of classical systems with an in-depth examination of modern cryptosystems. This includes block algorithms such as DES; public-key cryptosystems, such as RSA; and one-way functions. Additional topics include cryptographic protocols, signature schemes, pseudorandom number generation, Shannon's information theory, and stream ciphers.

Also offered for graduate-level credit as CS 585 and may be taken only once for credit. Prerequisite: CS 350.

CS 486 - Introduction to Database Management Systems (4)
Introduction to fundamental concepts of database management systems using primarily the relational model. Schema design and refinement. Query languages. Database application development environments. Overview of physical data organization, query optimization and processing, physical design, security, and transactions used in recovery and concurrency control. Expected preparation: CS 251.

Also offered for graduate-level credit as CS 586 and may be taken only once for credit. Prerequisite: CS 161 and CS 250.

CS 487 - Database Management Systems Implementation (4)
Internal design of a relational database management system. Concurrency control; lock managers; crash recovery; query and operator evaluation; query optimization; storage management; index structures; system catalogs.

Also offered for graduate-level credit as CS 587 and may be taken only once for credit. Prerequisite: CS 486 and CS 333.

CS 487P - Database Management Systems Implementation (4)
Internal design of a relational database management system. Concurrency control; lock managers; crash recovery; query and operator evaluation; query optimization; storage management; index structures; system catalogs.

Prerequisite: CS 486 and CS 333.

CS 488P - Cloud and Cluster Data Management (4)
Covers advanced data management solutions emerging for cloud and cluster computing environments, focusing on horizontal and vertical scalable approaches. Also covers principles behind data management in these environments, plus specific data management systems that are currently in use or being developed. Topics range from novel data processing paradigms to commercial data management platforms and open-source NoSQL databases. Students will gain broad knowledge about these systems and practical experience with them.

Also offered for graduate-level credit as CS 588 and may be taken only once for credit. Prerequisite: CS 486 or consent of the instructor.

CS 490 - Introduction to Multimedia Computing and Networking (4)
Introductory course in multimedia computing and networking intended for senior undergraduate or graduate level students. The objective of this course is to introduce many of the fundamental concepts involved with handling multimedia data and applications. The course will cover (i) basic representation and compression of multimedia data types including H.261, JPEG, and MPEG, (ii) techniques to support multimedia quality-of-service
in computing and networked systems, and (iii) networked streaming media techniques such as buffering and adaptation.

Also offered for graduate-level credit as CS 590 and may be taken only once for credit. Prerequisite: CS 333 or instructor's permission.

CS 491 - Introduction to Computer Security (4)
Provides a broad overview of computer security. Provides a solid theoretical foundation, as well as real-world examples, for understanding computer security. Fundamental theoretical results, foundational models, and salient examples will be covered. Security in computer operating systems, networks, and data will be covered, with emphasis on operating system and program security.

Also offered for graduate-level credit as CS 591 and may be taken only once for credit. Prerequisite: CS 333, CS 350, C and Java programming.

CS 492 - Malware Reverse Engineering (4)
Studies the techniques malicious code developers employ to exploit vulnerable computer systems. The course explores the form and function of a range of malware while exploring how the increased mixing of code and data is now exposing us to an array of security vulnerabilities and exploits. Given these threats, the course will then examine modern defenses against malware and how they can be used to protect users.

Also offered for graduate-level credit as CS 592 and may be taken only once for credit. Prerequisite: Junior-standing and admission into the CS program.

CS 493 - Digital Forensics (4)
Detailed, hands-on approach to the investigation of criminal incidents in which computers or computer technology play a significant or interesting role. Familiarization with the core computer science theory and practical skills necessary to perform rudimentary computer forensic investigations, understanding the role of technology in investigating computer-based crime, and preparation to deal with investigative bodies. Recommended: CS 333 or CS 533. No prior background in criminal justice or law is assumed.

Also offered for graduate-level credit as CS 593 and may be taken only once for credit.

CS 494 - Internetworking Protocols (4)
Advanced study of the protocols and algorithms used in the Internet (IETF) family of networking protocols. For example, ARP, IP, UDP, TCP, multicasting, routing protocols like RIP and OSPF, and application protocols like DNS, NFS, SNMP, FTP and HTTP. Issues such as addressing, name service, protocol design, and scalability will be explored.

Also offered for graduate-level credit as CS 594 and may be taken only once for credit. Prerequisite: CS 333.

CS 494P - Internetworking Protocols (4)
Advanced study of the protocols and algorithms used in the Internet (IETF) family of networking protocols. For example, ARP, IP, UDP, TCP, multicasting, routing protocols like RIP and OSPF, and application protocols like DNS, NFS, SNMP, FTP and HTTP. Issues such as addressing, name service, protocol design, and scalability will be explored.

Prerequisite: CS 333.

CS 495 - Web and Cloud Security (4)
Covers web and cloud systems and how they can be subverted. The class will focus on the highest risk vulnerabilities, give students practical experience in how they work, and study how they can be prevented. The class will consist mostly of laboratory exercises focused on developing student skills in performing penetration testing.

Also offered for graduate-level credit as CS 595 and may be taken only once for credit. Prerequisite: CS 201.

CS 496 - Network Security (4)
Focus on network security including a review of various forms of network attacks; a review of basic techniques in applied cryptography, and secure protocols will be covered including network-layer security and various application-layer secure protocols. Also covers network-side security management including both passive measures, as well as active intrusion detection and response. Covers protocols for protection of privacy and anonymity.

Also offered for graduate-level credit as CS 596 and may be taken only once for credit. Prerequisite: CS 494.

CS 497 - Sensor Networks (4)
Foundations of sensor networks, with a focus on activity-based learning through a sequence of hands-on programming exercises with embedded devices with a high-level programming language. Basic building blocks in designing and deploying a sensor network application. Positioning and time synchronization of networked sensor devices, wireless communication characteristics of low-powered radios, energy conservation and harvesting, macro-programming a network of sensor devices and security. Recommended prerequisites: Familiarity
with computer systems concepts that could be satisfied by CS 200, CS 201. Familiarity with programming in C, C++ or Java. Familiarity with basic concepts in probability and linear algebra that could be satisfied by Mth 301 or equivalent.

Also offered for graduate-level credit as CS 597 and may be taken only once for credit.

CS 498 - Introduction to Wireless Network Protocols (4)
Classification of wireless networking systems; study of multiple access protocols in single hop and multi-hop networks; performance analysis of protocols; overview of emerging radio technologies for high-throughput next generation systems; study of wireless communication protocol standards for cellular systems; case studies of deployed systems.

Also offered for graduate-level credit as CS 598 and may be taken only once for credit. Prerequisite: CS 250 or ECE 271.

CS 501 - Research (1-9)
(Credit to be arranged.) Consent of instructor.

CS 502 - Independent Study (1-9)
(Credit to be arranged.)

CS 503 - Thesis (1-9)
(Credit to be arranged.) Consent of instructor.

CS 504 - Cooperative Education/Internship (1-9)
(Credit to be arranged.) Consent of instructor.

CS 505 - Reading and Conference (1-12)
(Credit to be arranged.) Consent of instructor.

CS 506 - Special Projects (1-9)
(Credit to be arranged.) Consent of instructor.

CS 507 - Seminar (1-6)
(Credit to be arranged.) Consent of instructor.

CS 509 - Practicum (1-9)
(Credit to be arranged.) Consent of instructor.

CS 510 - Selected Topics (1-6)
(Credit to be arranged.) Consent of instructor.

CS 515 - Parallel Programming (3)
An introduction to parallel programming concepts and techniques. Topics include: parallel programming models and languages, share-memory programming, message-passing programming, performance models and analysis techniques, domain-specific parallel algorithms.

Also offered for undergraduate-level credit as CS 415 and may be taken only once for credit. Prerequisite: CS 515L.

CS 515L - Lab for CS 515P (0)
Lab for CS 515P Parallel Programming. Corequisite: CS 515.

CS 520 - Object-Oriented Programming & Design (3)
The fundamental concepts of object-oriented programming, including object-oriented modeling and design. The focus of the course will be to help students create programs that model their application domain, that exhibit that model to other programmers who read the code, and that are as a consequence maintainable and robust to change. Issues addressed may include data abstraction and modeling, the use and misuse of inheritance, higher-order data structures and their operations, reusability, refactoring, concurrency control, and usability. Includes programming assignments in an OO language.

Also offered for undergraduate-level credit as CS 420 and may be taken only once for credit. Prerequisite: CS 553.

CS 530 - Internet, Web, & Cloud Systems (3)
Covers modern networked computing systems and the abstractions they provide. Specifically, students will learn about and apply their knowledge of topics such as Internet protocols, virtual machines and containers, web servers and frameworks, and databases as well as their deployment in modern cloud environments.

Also offered for graduate-level credit as CS 430P and may be taken only once for credit. Prerequisite: Graduate standing and admission into CS program.
CS 531 - Introduction to Performance Measurement, Modeling and Analysis (3)
A survey of the fundamentals of computer application and system performance. Hands-on programming exercises will allow us to apply the techniques to increasingly complex problems. We will use a variety of state-of-the-art tools for measurement, modeling, simulation, and analysis throughout the course.
Also offered for undergraduate-level credit as CS 431 and may be taken only once for credit. Prerequisite: Graduate standing; CS 333 or an equivalent introductory course in Operating Systems.

CS 532 - Operating System Foundations (3)
Foundational concepts of operating system design including processes, threads, scheduling, concurrent programming, synchronization mechanisms, memory management, virtual address translation, file systems and security. A primary goal of the course is to help graduate students acquire the foundational knowledge necessary to succeed in CS 533.

CS 533 - Concepts of Operating Systems (3)
Survey of concepts and techniques used in modern operating systems. Sample concepts covered are concurrency, IPCs, scheduling, resource allocation, memory management, file systems, and security. Techniques for implementing operating systems taught through a programming project.
Prerequisite: CS 333.

CS 535 - Accelerated Computing (3)
Heterogeneous approaches that use special-purpose processors to accelerate the execution of a variety of applications. GPUs, Intel Xeon Phi, APUs, FPGAs. The sustainability implications of these platforms. Lectures, homeworks, labs, and group programming projects using NVIDIA GPUs and Intel Xeon Phi.
Also offered for undergraduate-level credit as CS 435 and may be taken only once for credit.

CS 538 - Computer Architecture (3)
Also offered for undergraduate-level credit as CS 438 and may be taken only once for credit.

CS 541 - Artificial Intelligence (3)
Introduction to the basic concepts and techniques of artificial intelligence. Knowledge representation, problem solving, machine learning, natural language understanding, and AI search techniques.
Also offered for undergraduate-level credit as CS 441 and may be taken only once for credit. Prerequisite: CS 202.

CS 542 - Advanced Artificial Intelligence: Combinatorial Games (3)
Covers the theory and practice of finding optimal and satisfying solutions to one-player and two-player combinatorial games, including such popular games as Sokoban, Othello, checkers, chess, backgammon, bridge, and CCGs. Simple applications in decision theory and economics may also be discussed. Emphasis on implementation of state-of-the-art solution techniques.
Also offered for undergraduate-level credit as CS 442 and may be taken only once for credit. Prerequisite: CS 202 or experience with algorithms and data structures.

CS 543 - Advanced Artificial Intelligence: Combinatorial Search (3)
Explores methods for the solution of constraint satisfaction and related problems using search techniques, in the context of real-world problems such as resource-bounded scheduling, enterprise planning, classical planning, and one- and two-player games. Emphasis on coding projects, and on reading and reporting on selected literature.
Also offered for undergraduate-level as CS 443 and may be taken only once for credit. Prerequisite: CS 202 or experience with algorithms and data structures.

CS 545 - Machine Learning (3)
Provides a broad introduction to techniques for building computer systems that learn from experience; conceptual grounding and practical experience with several learning systems; and grounding for advanced study in statistical learning methods, and for work with adaptive technologies used in speech and image processing, robotic planning and control, diagnostic systems, complex system modeling, and iterative optimization. Students gain practical experience implementing and evaluating systems applied to pattern recognition, prediction, and optimization problems.
Also offered as undergraduate-level credit as CS 445 and may be taken only once for credit. Prerequisite: Mth 261 or Mth 343 and CS 202.
CS 546 - Advanced Topics in Machine Learning (3)
Covers a number of more advanced topics in machine learning from a more mathematically oriented view. Provides preparation for successfully using machine-learning techniques for various applications. Also provides preparation for graduate-level research in machine learning and adaptive systems.
Also offered for undergraduate-level credit as CS 446 and may be taken only once for credit. Prerequisite: CS 445/545.

CS 547 - Computer Graphics (3)
This course will provide an introduction to graphics systems and applications. Basic structure of interactive graphics systems, characteristics of various hardware devices. Control of display devices, implementation of simple packages, device independence, and standard packages. Distributed architectures for graphics, hidden line and hidden surfaces algorithms, representations of curves and surfaces.
Also offered for undergraduate-level credit as CS 447 and may be taken only once for credit.

CS 549 - Computational Geometry (3)
Perspective and projective geometry. Analytic projective geometry, projective lines and projective planes. Projective transformations of lines and planes. Homogeneous coordinates. Applications to two-dimensional computer graphics. Conic sections in design.
Prerequisite: CS 163 and 451.

CS 550 - Parallel Algorithms (3)
Definition and nature of parallel computation. Parallel computation from the point of view of hardware/architecture, program/scheduling, and algorithms. Why and how parallel computation is different from serial computation. Examples to highlight the differences. Parallel algorithms in general: illustration of the most important features and techniques. Illustration of the limitations. A survey of major results, general form of results, limitations on speed-up.
Prerequisite: CS 350.

CS 551 - Numerical Computation (3)
Introduction to numerical methods. Includes topics from elementary discussion of errors, polynomials, interpolation, quadrature, linear systems of equations, and solution of nonlinear equations.
Also offered for undergraduate-credit as CS 451 and may be taken only once for credit.

CS 552 - Building Software Systems with Components (3)
Designed to familiarize students with the concepts behind and opportunities afforded by modern component architectures, such as Microsoft COM, Java Beans, and CORBA. Students are exposed to component development techniques and methods for developing complex software architectures using components. Students become familiar with component development, scripting and composing components, and the strengths and weaknesses of using components in designing large complex software systems.
Also offered for undergraduate-level credit as CS 452 and may be taken only once for credit. Prerequisite: CS 300, CS 333, CS 350; knowledge of C++ or Java programming.

CS 553 - Design Patterns (3)
Software design patterns are reusable solutions to recurring software problems. They capture successful experiences and convey expert insight and knowledge to less experienced developers. Course provides an in-depth view of patterns using Java as the presentation language. Course is suitable to software architects and developers who are already well-versed in this language. In addition, it offers continuous opportunities for learning the most advanced features of the Java language and understanding some principles behind the design of its fundamental libraries.
Also offered as CS 653 and may be taken only once for credit. Prerequisite: programming in Java and CS 520.

CS 554 - Software Engineering (3)
Current methodologies for the development of large, industrial strength software systems. Topics include requirements, specification, design, implementation, testing, project management and cost estimation, formal methods, and software process improvement.
Also offered for undergraduate-level credit as CS 454 and may be taken only once for credit.

CS 555 - Software Specification and Verification (3)
Theoretical and practical aspects of the software development process or software lifecycle. Covers the first part of the cycle: formulating the external requirements, specifying what the software is to do, and the abstract design. Emphasis will be on the formal aspects of specification and verification.
Also offered as CS 655 and may be taken only once for credit.
CS 556 - Software Implementation and Testing (3)
Theoretical and practical aspects of the software development process or software lifecycle. Covers the second part of the cycle: detailed design, implementation in a programming language, testing, and maintenance. Emphasis will be on the technical aspects of software testing.
Also offered as CS 656 and may be taken only once for credit.

CS 557 - Functional Programming (3)
Introduction to functional notation, recursion, higher-order functions, reasoning about functions, and models for the evaluation of applicative expressions. Use of functional languages.
Also offered for undergraduate-level credit as CS 457 and may be taken only once for credit. Prerequisite: Graduate-standing and admission into the CS program.

CS 558 - Programming Languages (3)
In-depth study of current and historical issues in the design, implementation, and application of programming languages. Topics range from basic to advanced. Areas include syntax, semantics, scoping, typing, abstraction, exceptions, and concurrency. Computational paradigms such as functional, logic, and/or object-oriented are analyzed. Several "recent" programming languages used. Expected preparation: CS 320.
Also offered as CS 658 and may be taken only once for credit.

CS 559 - Software Measurement and Models (3)
Survey, evaluation, and application of software measurement techniques and models. Particular emphasis on product metrics such as Software Science, Cyclomatic Complexity, and Function Points.

CS 560 - Human-Computer Interaction (3)
Introduction to the basic theory of human-computer interaction. Principles of human cognition and interface design, interface evaluation techniques. Several prototyping tools will be presented. A project is required.
Prerequisite: Stat 460, CS 202.

CS 561 - Open Source Software Development Laboratory (3)
Explores Open Source software engineering and its methodologies in a laboratory classroom setting. Focuses on the development and delivery of Open Source software projects by teams of 1-3 students. Students prepare and present material, working using email and the web.
Also offered for undergraduate-level credit as CS 461 and may be taken only once for credit.

CS 562 - Advanced Open Source Software Engineering (3)
Surveys the growing academic literature describing tools, techniques, community management, project management and collaboration strategies used in open source software development. Emphasis is placed upon tool-driven development, upon open development processes and tools, and upon comparison with processes and practices in proprietary software.
Also offered for undergraduate-level credit as CS 462 and may be taken only once for credit.

CS 565 - Full-stack Web Development (3)
This class provides an overview of how the web works and covers the spectrum of a full stack web developer, including both front-end and back-end development for delivering both mobile and desktop web applications.
Also offered for undergraduate-level credit as CS 465P and may be taken only once for credit.

CS 567 - The Wireless Web (3)
Covers the basics of the Wireless Application Protocol (WAP) as used in modern mobile phones and other handheld devices. Provides an overview of the WAP architecture, as well as an in-depth exploration of the WAP Application Layer (WAE), including WML, WMLScript, and the WAP push framework.
Also offered for undergraduate-level credit as CS 467 and may be taken only once for credit. Prerequisite: CS 465/565.

CS 568 - Functional Logic Programming (3)
Introduction to functional logic programming. Foundations and basic principles of this paradigm will be explained in some depth and complemented by encoding practical problems in a functional logic language using a leading compiler/interpreter. Focus on non-determinism and computations with incomplete information. Implementation techniques will be briefly discussed.
Also offered as CS 668 and may be taken only once for credit. Prerequisite: CS 558 Programming Languages.
CS 569 - Scholarship Skills for Computer Science and Engineering (3)

The purpose of this course is to make participants better scholars in Computer Science. In particular it attempts to help students become better researchers, better writers, better presenters, and better reviewers. It concentrates on reading, writing and composition skills: on the production and consumption of the "media" used by computer scientists to communicate professionally. At the completion of the course, students should be familiar with the tasks and activities of modern scholars in computer science.

Also offered as CS 669 and may be taken only once for credit. Prerequisite: admission into a Ph.D. program within MCECS.

CS 570 - Machine Learning Seminar (1)

Graduate seminar on machine learning. Students will read and discuss recent papers in the machine learning literature. This one-credit course will be offered each term, and students may take it multiple times.

Prerequisite: CS 445 or CS 545 or permission of instructor.

CS 572 - Operating System Internals (3)

Internals of a specific operating system including structure of the kernel, block buffering cache, file system structure and system calls, process structure and scheduling, memory management, device driver interface, and inter process communication.

Also offered as CS 672 and may be taken only once for credit.

CS 575 - Computer Systems Analysis (3)

An advanced course on computer systems. Topics include operating systems, performance evaluation, device analysis, construction and proof of monitors, file systems, objects and processes, reliability, and protection.

Prerequisite: CS 333, Stat 460.

CS 576 - Computer Security Research Seminar (3)

Seminar on emerging topics in computer security.

Also offered as CS 676 and may be taken only once for credit.

CS 577 - Modern Language Processors (3)

An advanced course on compiler construction for modern programming languages, such as object-oriented or functional languages. Topics include type-checking, executable intermediate representations, interpretation and virtual machines, code generation for modern architectures, memory management and garbage collection, and optimization.

Also offered as CS 677 and may be taken only once for credit. Prerequisite: CS 421.

CS 578 - Programming Language Semantics (3)

Introduction to the formal mathematical study of programming meaning (semantics), using one or more approaches such as operational semantics, denotational semantics, or programming logics. Emphasis is on rigorous mathematical development and formal proof techniques. Language features to be studied may include types and type safety, purity and imperative effects, functional and modular abstraction, polymorphism, higher-order functions, and object-oriented features. Expected preparation: CS 558 and/or CS 557.

Also offered as CS 678 and may be taken only once for credit.

CS 579 - Formal Verification of Hardware/Software Systems (3)

Introduction to the formal verification of functional correctness of hardware and software systems. Topics to be covered include: formal logics for system verification (first-order logic, higher order logic, temporal logic), formal specifications, theorem proving systems, circuit verification, microprocessor verification, and systems software verification.

Prerequisite: CS 333.

CS 580 - Randomized Algorithms and Probabilistic Analysis (3)

Probabilistic tools used in the design and analysis of modern algorithms and data structures. Topics include: review discrete random, occupancy problems, tail bounds, Markov chains, the probabilistic method, martingales, Monte Carlo methods. The course explores a variety of CS applications.

Also offered for undergraduate-level credit as CS 480 and may be taken only once for credit. Prerequisite: CS 350, Stats 451.

CS 581 - Theory of Computation (3)

Computability theory: study of models of computation (Turing, Church, Kleene), recursive function theory, properties of recursive, and recursively innumerable sets.

Prerequisite: CS 311.

CS 582 - Theory of Computation: Advanced Topics (3)

Complexity theory: study of resource bounded computation, the complexity classes (P, NP,
PSPACE, and PH), NP-completeness, relativized computation, randomized classes.

Prerequisite: CS 311, 350.

CS 583 - Automata and Formal Languages (3)
An advanced study of the theory of automata, formal languages and computational complexity. Main subjects are finite state concepts, formal grammars, computability, Turing machines, and computational complexity.
Prerequisite: CS 582/682.

CS 584 - Algorithm Design and Analysis (3)
An advanced in-depth study in the design and analysis of algorithms. Topics include models of computation, sorting, data structures, graph algorithms, matrix multiplication, fast Fourier transform, polynomial arithmetic, pattern matching, and NP-complete problems.
Also offered as CS 684 and may be taken only once for credit.

CS 585 - Cryptography (3)
The goal of cryptography is the encoding of information via a cryptographic system. Cryptanalysis studies the breaking of cryptosystems. This course focuses on cryptography but with respect to cryptanalysis. An overview of classical systems with an in-depth examination of modern cryptosystems. This includes block algorithms such as DES; public-key cryptosystems, such as RSA; and one-way functions. Additional topics include cryptographic protocols, signature schemes, pseudo-random number generation, Shannon's information theory, and stream ciphers.
Also offered for undergraduate-level credit as CS 485 and may be taken only once for credit.

CS 586 - Introduction to Database Management Systems (3)
Introduction to fundamental concepts of database management systems using primarily the relational model. Schema design and refinement. Query languages. Database application development environments. Overview of physical data organization, query optimization and processing, physical design, security, and transactions used in recovery and concurrency control.
Also offered for undergraduate-level credit as CS 486 and may be taken only once for credit.

CS 587 - Database Management Systems Implementation (3)
Internal design of a relational database management system. Concurrency control; lock managers; crash recovery; query and operator evaluation; query optimization; storage management; index structures; system catalogs.
Also offered for undergraduate-level credit as CS 487 and may be taken only once for credit. Prerequisite: CS 486/586 and CS 333.

CS 588 - Cloud and Cluster Data Management (3)
Covers advanced data management solutions emerging for cloud and cluster computing environments, focusing on horizontal and vertical scalable approaches. It covers principles behind data management in these environments, plus specific data management systems that are currently in use or being developed. The topics range from novel data processing paradigms to commercial data management platforms and open-source NoSQL databases. Students will gain broad knowledge about these systems and practical experience with them.
Also offered for undergraduate-level credit as CS 488P and may be taken only once for credit.
Prerequisite: CS 586 or consent of the instructor.

CS 590 - Introduction to Multimedia Computing and Networking (3)
Introductory course in multimedia computing and networking intended for senior undergraduate or graduate level students. The objective of this course is to introduce many of the fundamental concepts involved with handling multimedia data and applications. The course will cover (i) basic representation and compression of multimedia data types including H.261, JPEG, and MPEG, (ii) techniques to support multimedia quality-of-service in computing and networked systems, and (iii) networked streaming media techniques such as buffering and adaptation.
Also offered for undergraduate-level credit as CS 490 and may be taken only once for credit.

CS 591 - Introduction to Computer Security (3)
Provides a broad overview of computer security. Provides a solid theoretical foundation, as well as real-world examples, for understanding computer security. Fundamental theoretical results, foundational models, and salient examples will be covered. Security in computer operating systems, networks, and data will be covered, with emphasis on operating system and program security.
Also offered for undergraduate-level credit as CS 491 and may be taken only once for credit. Prerequisite: CS 333, CS 350, C and Java programming.

CS 592 - Malware Reverse Engineering (3)
Studies the techniques malicious code developers employ to exploit vulnerable computer systems. The
course explores the form and function of a range of malware while exploring how the increased mixing of code and data is now exposing us to an array of security vulnerabilities and exploits. Given these threats, the course will then examine modern defenses against malware and how they can be used to protect users.

Also offered for undergraduate-level credit as CS 492 and may be taken only once for credit. Prerequisite: Admission into the CS program.

CS 593 - Digital Forensics (3)
Detailed, hands-on approach to the investigation of criminal incidents in which computers or computer technology play a significant or interesting role. Familiarization with the core computer science theory and practical skills necessary to perform rudimentary computer forensic investigations, understanding the role of technology in investigating computer-based crime, and preparation to deal with investigative bodies. Recommended: CS 333 or CS 533. No prior background in criminal justice or law is assumed.

Also offered for undergraduate-level credit as CS 493 and may be taken only once for credit.

CS 594 - Internetworking Protocols (3)
Advanced study of the protocols and algorithms used in the Internet (IETF) family of networking protocols. For example, ARP, IP, UDP, TCP, multicasting, routing protocols like RIP and OSPF, and application protocols like DNS, NFS, SNMP, FTP and HTTP. Issues such as addressing, name service, protocol design, and scalability will be explored.

Also offered for undergraduate-level credit as CS 494 and may be taken only once for credit.

CS 595 - Web and Cloud Security (3)
Covers web and cloud systems and how they can be subverted. The class will focus on the highest risk vulnerabilities, giving students practical experience in how they work, and study how they can be prevented. The class will consist mostly of laboratory exercises focused on developing student skills in performing penetration testing.

Also offered for undergraduate-level credit as CS 495 and may be taken only once for credit.

CS 596 - Network Security (3)
The class will focus on network security. In order to understand the network security problem, the course will include a review of various forms of network attacks. We will then review basic techniques in applied cryptography, and then secure protocols will be covered including network-layer security and various application-layer secure protocols. We then turn to network-side security management including both passive measures like firewall defense schemes, including packet filters and bastion hosts, as well as active intrusion detection and response. Finally, we will cover protocols for protecting privacy and anonymity.

Also offered for undergraduate-level credit as CS 496 and may be taken only once for credit. Prerequisite: CS 594.

CS 597 - Sensor Networks (3)
Foundations of sensor networks, with a focus on activity-based learning through a sequence of hands-on programming exercises with embedded devices with a high-level programming language. Basic building blocks in designing and deploying a sensor network application. Positioning and time synchronization of networked sensor devices, wireless communication characteristics of low-powered radios, energy conservation and harvesting, macro-programming a network of sensor devices and security. Recommended prerequisites: Familiarity with computer systems concepts that could be satisfied by CS 200, CS 201. Familiarity with programming in C, C++ or Java. Familiarity with basic concepts in probability and linear algebra that could be satisfied by Math 301 or equivalent.

Also offered for undergraduate-level credit as CS 497 and may be taken only once for credit.

CS 598 - Introduction to Wireless Network Protocols (3)
Classification of wireless networking systems; study of multiple access protocols in single hop and multi-hop networks; performance analysis of protocols; overview of emerging radio technologies for high-throughput next generation systems; study of wireless communication protocol standards for cellular systems; case studies of deployed systems.

Also offered for undergraduate-level credit as CS 498 and may be taken only once for credit. Prerequisite: CS 250 or ECE 271.

CS 601 - Research (1-12)
(Credit to be arranged.) Consent of instructor.

CS 602 - Independent Study (1-12)
(Credit to be arranged.)

CS 603 - Dissertation (1-12)
(Credit to be arranged.) Consent of instructor.
CS 604 - Cooperative Education/Internship (1-8)
(Credit to be arranged.) Consent of instructor.

CS 605 - Reading and Conference (1-8)
(Credit to be arranged.) Consent of instructor.

CS 606 - Special Projects (1-12)
(Credit to be arranged.) Consent of instructor.

CS 607 - Seminar (1-4)
(Credit to be arranged.)

CS 610 - Selected Topics (1-8)
(Credit to be arranged.) Consent of instructor.

CS 653 - Design Patterns (3)
Software design patterns are reusable solutions to recurring software problems. They capture successful experiences and convey expert insight and knowledge to less experienced developers. Course provides an in-depth view of patterns using Java as the presentation language. Course is suitable to software architects and developers who are already well-versed in this language. In addition, it offers continuous opportunities for learning the most advanced features of the Java language and understanding some principles behind the design of its fundamental libraries.
Also offered as CS 553 and may be taken only once for credit. Prerequisite: programming in Java and CS 520.

CS 655 - Software Specification and Verification (3)
Theoretical and practical aspects of the software development process or software lifecycle. Covers the first part of the cycle: formulating the external requirements, specifying what the software is to do, and the abstract design. Emphasis will be on the formal aspects of specification and verification.
Also offered as CS 555 and may be taken only once for credit.

CS 656 - Software Implementation and Testing (3)
Theoretical and practical aspects of the software development process or software lifecycle. Covers the second part of the cycle: detailed design, implementation in a programming language, testing, and maintenance. Emphasis will be on the technical aspects of software testing.
Also offered as CS 556 and may be taken only once for credit.

CS 658 - Programming Languages (3)
In-depth study of current and historical issues in the design, implementation, and application of programming languages. Topics range from basic to advanced. Areas include syntax, semantics, scoping, typing, abstraction, exceptions, and concurrency. Computational paradigms such as functional, logic, and/or object oriented are analyzed. Several "recent" programming languages used.
Also offered as CS 558 and may be taken only once for credit.

CS 659 - Software Measurement and Models (3)
Survey, evaluation, and application of software measurement techniques and models. Particular emphasis on product metrics such as Software Science, Cyclomatic Complexity, and Function Points.

CS 668 - Functional Logic Programming (3)
Introduction to functional logic programming. Foundations and basic principles of this paradigm will be explained in some depth and complemented by encoding practical problems in a functional logic language using a leading compiler/interpreter. Focus on non-determinism and computations with incomplete information. Implementation techniques will be briefly discussed.
Also offered as CS 568 and may be taken only once for credit. Prerequisite: CS 558 Programming Languages.

CS 669 - Scholarship Skills for Computer Science and Engineering (3)
The purpose of this course is to make participants better scholars in Computer Science. In particular it attempts to help students become better researchers, better writers, better presenters, and better reviewers. It concentrates on reading, writing and composition skills: on the production and consumption of the "media" used by computer scientists to communicate professionally. At the completion of the course, students should be familiar with the tasks and activities of modern scholars in computer science.
Also offered as CS 569 and may be taken only once for credit. Prerequisite: admission into a Ph.D. program within MCECS.
CS 672 - Operating System Internals (3)
Internals of a specific operating system including structure of the kernel, block buffering cache, file system structure and system calls, process structure and scheduling, memory management, device driver interface, and interprocess communication.
Also offered as CS 572 and may be taken only once for credit.

CS 676 - Computer Security Research Seminar (3)
Seminar on emerging topics in computer security.
Also offered as CS 576 and may be taken only once for credit.

CS 677 - Modern Language Processors (3)
An advanced course on compiler construction for modern programming languages, such as object-oriented or functional languages. Topics include type-checking, executable intermediate representations, interpretation and virtual machines, code generation for modern architectures, memory management and garbage collection, and optimization.
Also offered as CS 577 and may be taken only once for credit. Prerequisite: CS 421.

CS 678 - Programming Language Semantics (3)
Introduction to the formal mathematical study of programming (semantics), using one or more approaches such as operational semantics, denotational semantics, or programming logics. Emphasis on rigorous mathematical development and formal proof techniques. Language features to be studied may include types and type safety, purity and imperative effects, functional and modular abstraction, polymorphism, higher-order functions, and object-oriented features. Expected preparation: CS 558 and/or CS 557.
Also offered as CS 578 and may be taken only once for credit.

CS 684 - Algorithm Design and Analysis (3)
An advanced in-depth study in the design and analysis of algorithms. Topics include models of computation, sorting, data structures, graph algorithms, matrix multiplication, fast Fourier transform, polynomial arithmetic, pattern matching, and NP-complete problems.
Also offered as CS 584 and may be taken only once for credit.

CS 696 - Network Management and Security (3)
Covers both network management and network security. Network management will include the design of LAN-based networks, including spanning tree protocols, bridge learning protocols, virtual LANs, and Ethernet switches, and the security of switches and routers. Network management protocols will be covered in-depth including switch and router management information bases, as well as associated SNMP protocols, and network monitoring tools. The second half of the class will focus on network security. In order to understand the network security problem, the security section will begin with a review of various forms of network attacks. We then turn to network-side security management including both passive measures like firewall defense schemes including packet filters, and bastion hosts. Newer secure protocols will then be covered including network-layer security and various application-layer secure protocols.
Prerequisite: CS 594.

CS 699 - Special Studies (1-6)
Credit to be arranged.

CS 699 - Special Studies (1-6)
Credit to be arranged.

D - Dance

D 104 - Dance Appreciation (4)
Develop an awareness and appreciation of dance in its artistic, social and cultural contexts through a variety of experiences, viewing and participating in dance. Will cover the basic roles in dance along with concepts and principals such as space, time and effort as well as expression, form, style and period.

D 193 - Dance Laboratory: Modern I, II, III (2)
Beginning modern dance technique, emphasis on body alignment, strength, flexibility and development of basic technical skills. Maximum: 12 credits.

D 195 - Dance Laboratory: Topics I, II, III (2)
Beginning dance technique in topics to be named, for example musical theatre, tap, hip hop, etc. Maximum: 12 credits.

D 196 - Dance Laboratory: Ballet I, II, III (2)
Beginning ballet technique, emphasis on body alignment, development of basic technical skills, and
understanding basic ballet vocabulary. Maximum: 12 credits.

D 197 - Dance Laboratory: Jazz I, II, III (2)
Beginning laboratory in jazz dance technique emphasizing body alignment, contraction, and isolation technique of Latin, West Indian, African and American rhythms. Maximum: 12 credits.

D 304 - Dance Appreciation (4)
Develop an awareness and appreciation of dance in its artistic, social and cultural contexts through a variety of experiences, viewing and participating in dance. Covers the basic roles involved in dance along with concepts and principals of dance such as space, time and effort as well as expression, form, style and period.
Prerequisite: Upper-division standing.

D 350 - Dance Improvisation (4)
An exploration of spontaneous movement as individual and group creativity and expression, as a potential performance formand as the beginnings of choreography. "The body thinks." Designed to develop awareness, focus, sensitivity and personal movement vocabularies. Expected preparation: upper division standing.

D 351 - Dance Composition (4)
Exploration of basic elements of dance and choreographic strategies through readings, observations and preparation of solo dance studies. Expected preparation: upper division standing.

D 352 - Dance Choreography (4)

D 355 - Dance Production (4)
Introductory course covering technology for the production of dance. Students will gain a working knowledge of theatre terminology and a familiarity with basic tools and techniques for props, set pieces, costumes, lighting, audio, video, stage management and marketing for a public performance. Students will produce the choreography class concert.

D 362U - Contemporary Dance 1920 to Present (4)
Historical foundations for the development of current dance forms. Contemporary dance styles and theories will be studied via lectures and videos, field trips to exhibits and concerts. Expected preparation: upper division standing.

D 366U - Dance in Film: Early Years through the 1940s (4)
Focus on the Hollywood musical genre, early years of film to 40's, including choreographers, performers, dance styles, what role the dance serves in the films, what defines the genre and how it developed, the social cultural connections, industry practices, dance history - popular trends to modern dance. Also cultural context, concurrent historical events, social trends, innovations, politics.

D 367U - Dance in Film: 1940s to Present (4)
Focus on dance in popular film, 1948 to present, including choreographers, performers, dance styles, role dance serves in the films, social cultural connections, dance history – popular trends to modern dance. Will consider cultural context -- concurrent historical events, social trends, innovations, politics.

D 393 - Dance Laboratory: Modern I, II, III (2)
Intermediate modern dance technique, emphasis on body alignment, strength, flexibility and development of intermediate level technical skills. Maximum: 12 credits. Expected preparation: D 193 I, II, III or previous dance experience.

D 395 - Dance: Topics (2)
Intermediate Dance techniques in selected topics, for example, Tap, Musical Theater, Hip Hop, African etc.
Prerequisite: D 195.

D 396 - Dance Laboratory: Ballet I, II, III (2)
Intermediate level ballet technique. Emphasis on execution and application of all basic ballet vocabulary and on alignment and skill development. Maximum: 12 credits.
Prerequisite: low-intermediate technique required; D 196.
D 397 - Dance Laboratory: Jazz I, II, III (2)
Intermediate laboratory in jazz dance technique emphasizing body alignment, contraction, and isolation technique of Latin, West Indian, and American rhythms. Maximum: 12 credits.
Prerequisite: D 197.

D 399 - Special Studies (1-12)
(Credit to be arranged.)

D 402 - Independent Study (1-12)
(Credits to be arranged.)

D 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

D 405 - Reading & Conference (1-8)
(Credit to be arranged.)

Des - Design
Des 100 - Introduction to Communication Design for Non-Majors (4)
Introduction for non-majors to communication design principles and methods used in composition. Lectures, readings, and projects enable creative application of design principles, color theory, and typography. Projects address formal concerns of visual communication design, visual literacy, design nomenclature, and design process through methods and strategies for creative problem-solving. Students demonstrate verbal and visual application of a design and compositional vocabulary, an effective design process, and skillful use of materials and tools. Projects do not require computer experience.

Des 111 - Design Thinking (4)
Introduction to the various creative strategies and methodologies designers use in practice. Specific attention is given to problem-solving techniques, and the incorporation of empathy and research within a design process.
Prerequisite: Instructor approval for non-majors.

Des 120 - Digital Graphics (4)
Digital media is a creative tool for graphic designers. Lectures introduce current and creative practitioners as well as concepts of vector and raster graphics, including digital type, image and device resolution, file formats, and digital print technologies. Creative projects and exercises assist in developing fluency in computer graphics applications.

Des 121 - Introduction to Type and Design Principles (4)
Introduction to typography and design principles. Methods, strategies and processes for thinking creatively are investigated through execution in both typography and design principles. Emphasis is placed on projects that address design principles, materials and tools.
Prerequisite: Des 120. Concurrent enrollment is permissible.

Des 125 - Show and Tell (1)
Introduces students to a wide range of practices and practitioners in the field of design. Students will become embedded with professionals in the graphic design community through a series of guest lectures and field trips. This course may be repeated for credit four times.

Des 140 - Foundations in Motion, UI, and UX (4)
Introduction to working in digital media. Methods, strategies and processes for thinking creatively are investigated through execution in both motion graphics and UI/UX (user interface and user-experience) design. Emphasis is placed on projects that address design principles, materials and tools.
Prerequisite: Des 120.

Des 200 - Digital Page Design I (4)
Studio course introducing single and multi-page document design. Projects embody the entire process of creating a publication from concept, through compositional and typographic skills, clear use of hierarchy, and pre-press. Emphasis is placed on work-flow and project management for production of documents in print and electronic media. This course requires that students furnish a laptop computer that meets the departmental standards in terms of hardware and software (see departmental website for requirements). The ideal sequence for design majors is to take Des 200 and 210 before taking Des 224, 225, 254. Open to non-majors with instructor’s consent.
Prerequisite: Des 120.

Des 210 - Digital Imaging and Illustration I (4)
Studio course in digital image creation with an emphasis on raster and vector-based illustration.
Hybrid illustration techniques of mixing handmade work with digital imagery and photography may also be explored. Basic ways in which form communicates meaning are parsed and explored. This course requires that students furnish a laptop computer that meets the departmental standards for hardware and software. See departmental site for requirements. The ideal sequence for design majors is to take Des 200 and 210 before taking Des 224, 225, 254.

Prerequisite: Des 120.

Des 224 - Storytelling and Narrative (4)
The theme for this course is narrative structures relating to printed matter and motion. Projects explore visual languages, storytelling, storyboards and the visual essay. Problemsolving, idea generation, typography, point of view, conceptual thinking and composition are reinforced. Critical readings, group and individual critiques, and written assignments support visual design exploration.

Prerequisite: (Des 121 and Des 120) or (Des 100 and Des 120).

Des 225 - Design Systems (4)
Introduction to design systems, specifically relating to branding and data visualization. Students develop strong conceptual solutions and systems for managing projects with large amounts of information and branding applications. Emphasis is placed on the expansion of a strong design process and a continuing to develop a personal visual language. Theoretical approaches, critical readings, group and individual critiques, and written assignments support visual design exploration. Restricted to Graphic Design majors, and Graphic Design and Design Management minors.

Prerequisite: Des 224.

Des 254 - Typography I (4)
First course in a sequence on typography. Builds on the principles introduced in Art 121. Projects focus on typography as medium and message. Typographic history, including the history of letterforms and the construction and use of grids. Design projects range from purely textual to problems that require the successful integration of typography and image. Conceptual solutions are emphasized. This course requires that students furnish a laptop computer that meets the departmental standards in terms of hardware and software (see departmental website for requirements).

Prerequisite: Des 121 and Des 120.

Des 290 - History of Modern Design (4)
History of graphic design from 1800 to the present, focusing on the changes in style within the field, but also on the interconnection between design and other forms of expression. Open to non-majors.

Des 299 - Special Studies (1-8)
(Credit to be arranged.)

Des 300 - Digital Page Design II (4)
Studio course with an emphasis on typographic grids and systems for presenting messages in sequence over multiple pages or screens. Industry standards for design, digital pre-press and production practices are examined. This course requires that students furnish a laptop computer that meets the departmental standards in terms of hardware and software (see departmental website for requirements).

Prerequisite: (Des 200, Des 210, Des 225 and Des 254); OR formal acceptance into the third year by Sophomore Portfolio Review.

Des 302U - Design is Everywhere (4)
Explores the work of designers and their work in every part of our lives, often invisibly. Shows how designers identify problems, engage with audiences to discover their needs, and craft appropriate solutions by exploring how design thinking strategies can be applied to real-world scenarios through collaborative, project-based experimentation, readings offering perspectives on designers and design topics, and critiques of design solutions. Course is open to all students, but Graphic Design majors cannot take this course for cluster credit.

Prerequisite: Upper-division standing.

Des 343 - Creative Coding (4)
Studio course exploring code-based approaches for creative projects including generative design and interactivity. Students will work primarily with the open source programming language Processing but will also be exposed to other programming languages and tools. No previous coding experience is required.

Prerequisite: (Des 200, Des 210, Des 225 and Des 254); OR formal acceptance into the third year by Sophomore Portfolio Review.

Des 310 - Digital Imaging and Illustration II (4)
Studio course in advanced composition using photo-illustration, vector illustration, and hybrid illustration techniques. Emphasis is placed on a conceptual approach to composition and creative process
Des 315 - Professional Development (4)
Focus on topics related to professional practices and preparation to enter the field of graphic design. Some professional practices covered are: Internship preparation, effective written and verbal presentation, contracts and copyrights, team dynamics, client meetings, and project management.
Prerequisite: Formal acceptance into the third year by Sophomore Portfolio Review.

Des 320 - Information Design (4)
A sequence focusing on concept development and solutions for communication design problems. History, theoretical approaches, ethical design concerns, critical readings, group and individual critiques, and written assignments support visual design exploration. Des 320: Focus is placed on narrative structures, information design and data visualization. These courses require that students furnish a laptop computer that meets the departmental standards in terms of hardware and software (see departmental website for requirements). This is the first course in a sequence of two: Des 320 and Des 321.
Prerequisite: Formal acceptance into the third year by Sophomore Portfolio Review.

Des 321 - Brand Lab (6)
A sequence focusing on concept development and solutions for communication design problems. History, theoretical approaches, ethical design concerns, critical readings, group and individual critiques, and written assignments support visual design exploration. Des 321: Projects focus on solving complex communication design problems, identity design and branding. This is the second course in a sequence of two: DES 320 and DES 321.
Prerequisite: Des 320.

Des 333 - Friendship: Design, Art and Social Change (4)
Mentoring high school students through hands on creative projects around themes such as social justice, art literacy and community. This course should be of particular value and interest to students who have a desire to teach and inspire, increasing access to arts learning for under-served teens.

Des 340 - Interaction Design Principles (4)
Studio course dealing in the fundamentals of Interaction Design, incorporating the concepts of sound Graphic Design principles with User Experience processes. Students will examine a series of interfaces, learn to analyze their effectiveness, and create designs that better serve real human needs. Topics include User Interface design, Systems Thinking, and User Experience research methods.
Prerequisite: Des 121 and Des 120.

Des 341 - Interactive Media I (4)
Interactive design for the Web focusing on principles of information architecture, navigation systems, and visual interface. HTML / CSS markup and the use of visual design tools. Creation and optimization of graphics in compressed formats. Introduction to Web production work-flow through development of site projects and a personal portfolio. Topics include usability and the aesthetics of web media. This course requires that students furnish a laptop computer that meets the departmental standards in terms of hardware and software (see departmental website for requirements). Open to non-majors who have prerequisites and consent of the instructor.
Prerequisite: Des 340; Formal acceptance into the third year by Sophomore Portfolio Review.

Des 342 - Interactive Media II (4)
Interactive design that expands on principles of information architecture, navigation systems, and visual interface through the exploration of advanced design and development techniques. Advanced Web production work-flow will be explored through development of site projects. Critical analysis of work in the field establishes vocabulary and principles for effective design, usability, and interactivity. Technical standards for cross-browser design, client-side scripting, advanced HTML / CSS and basic frame-based web animation. This course requires that students furnish a laptop computer that meets the departmental standards in terms of hardware and software (see departmental website for requirements). Open to non-majors who have prerequisites and consent of the instructor.
Prerequisite: Des 341 and formal acceptance into the third year of the graphic design program by Sophomore Portfolio Review.
Des 345 - Introduction to Motion Graphics for Designers (4)

Motion graphics for graphic designers. Apply compositional and typographic skills to sequential story-telling, using self-generated graphic and photographic imagery. Emphasis on workflow, storyboards, and clear communication with increasingly conceptual projects. Introduction to essential After Effects skills.

Prerequisite: Formal acceptance into the third year by Sophomore Portfolio Review. Open to non-majors who have prerequisites and consent from the instructor.

Des 353 - Typeface Design (4)

Focus on developing the skills and critical thinking necessary for producing digital typefaces. History, technology and contemporary practices of the industry. Basic lettering skills and theory explored, to aid in the primary focus of creating a functional, flexible and useful typeface.

Prerequisite: Des 254.

Des 354 - Typography II (4)

The second course in a sequence on typography. An emphasis is placed on developing strong conceptual solutions for complex typographic communication design problems. Continued emphasis is placed on understanding typography within historical and contemporary contexts. Projects may include multiple page/screen formats, such as books, editorial design, campaigns, motion, identity, and websites. This course requires that students furnish a laptop computer that meets the departmental standards in terms of hardware and software (see departmental website for requirements).

Prerequisite: Formal acceptance into the third year of the graphic design program by Sophomore Portfolio Review.

Des 358 - Video, Design & Community (4)

Focus on collaboration in video production and community-based media. Production of a promotional/informational video for community organizations in Portland. History of community and independent media. Basic video and audio recording, post-production, interviewing, and group decision-making skills.

Cross-listed as: This is the same course as Art 358 and may be taken only once for credit.

Des 367 - Design Business Practices (4)

Introduction to team-based problem-solving practices in communication design. Projects include hypothetical projects or case studies related to current business problems, issues, and trends. Emphasis is placed on strategic design and planning, creative process, project management, and studio management. Students demonstrate skills in research, conceptual development, persuasive writing and communication, negotiation, collaboration, and team dynamics. May be taken twice for credit. Maximum 8 credits. Open to non-majors with instructor’s consent.

Prerequisite: For non-majors: Des 224, and Des 290/Des 302U. For Design majors, Des 200, Des 210, Des 225 and Des 254.

Des 399 - Special Studies (1-8)

(Credit to be arranged.)

Des 402 - Independent Study (1-6)

(Credit to be arranged.)

Des 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

Des 406 - Special Projects (1-12)

(Credit to be arranged.)

Des 407 - Seminar (1-6)

(Credit to be arranged.)

Des 408 - Workshop (1-6)

(Credit to be arranged.)

Des 409 - Practicum (1-12)

(Credit to be arranged.)

Des 410 - Selected Topics (1-12)

(Credit to be arranged.)

Des 425 - A+D Projects (4)

Advanced development of graphic design skills with emphasis placed upon conceptual development, research, visual and written messages, multi-task time and materials management, budgets and production. Emphasis will be placed on studio management, teamwork and production.
Des 440 - Interactive Team (4)
Interactive media design and development for internal and external community clients. Design solutions are presented, critiqued, and revised based on initial and ongoing client contact. Sites are developed, tested, and maintained on web servers. Team-based design and development process is coordinated through project management practices. Emphasis is placed on strategic and tactical design process, industry standards, usability studies, business proposals, design documents, and other professional practices. This course requires that students furnished a laptop computer that meets the departmental standards in terms of hardware and software (see the departmental website for requirements).
Prerequisite: Des 341 and Des 342.

Des 441 - Interface Design (4)
Studio course in Interaction Design, with an emphasis on design concepts and techniques in several media including mobile and non-conventional interfaces. Thorough examination of design trends, usability testing and prototyping, and communicating content within the interactive space. Topics include interaction design patterns, user experience, environmental design, information architecture, and understanding industry standards in UX design.
Prerequisite: Des 341.

Des 470 - Design Thesis I (4)
Students pursue their own sustained, integrated body of work that demonstrates refinement of visual and verbal communication ideas. This course emphasizes independent working practices along with the role of theory and criticism. This is the first course in a sequence of two: Des 470 and Des 471 and must be taken in sequence.
Prerequisite: Des 320, Des 321 and Des 354.

Des 471 - Design Thesis II (4)
Students pursue their own sustained, integrated body of work that demonstrates refinement of visual and verbal communication ideas. This course emphasizes independent working practices along with the role of theory and criticism. This is the second course in a sequence of two: Des 470 and Des 471 and must be taken in sequence.
Prerequisite: Des 470.

Des 472 - Design Portfolio (6)
Development of a design portfolio that presents the creative, conceptual, strategic and technical abilities of the designer. Independent exploration is expected, as well as consistent and professional written and verbal presentation. Emphasis is placed on professional skills required in the marketplace. Required course for all majors in design.
Prerequisite: Des 321, Des 340, Des 354, Des 470, and senior status in the major.

EAS - Engineering & Applied Science

EAS 101 - Engineering Problem Solving (4)
Introduction to basic ideas and tools used in the engineering profession. Basic preparation in rudiments and working methods of engineering design, analysis, and problem solving, with emphasis on developing skills in computer-aided problem solving methods utilizing tools such as MATLAB, Mathcad, and EXCEL. Introduction to structured computer programming methods via MATLAB scripting language. Lecture and recitation.
Prerequisite: Mth 112.

EAS 101R - Recitation: Engineering Problem Solving (0)
Recitation for EAS 101 Engineering Problem Solving.
Corequisite: EAS 101.

EAS 102 - Engineering Computation Structures (4)

EAS 115 - Engineering Graphics (3)
The graphic language applied to engineering. Projection systems. Multiview and pictorial representation. Introduction to computer graphics. Lecture and laboratory.

EAS 115L - Engineering Graphics Lab (0)
Lab for EAS 115 Engineering Graphics.
Corequisite: EAS 115.

EAS 199 - Special Studies (1-4)
(Credit to be arranged.) Consent of instructor.
EAS 211 - Statics (4)
Principles and applications of static equilibrium to structures and machines.
Prerequisite: (must be passed with grade of "C" or better): Mth 252, Ph 211, or Ph 221 (may be taken concurrently with EAS 211). (Ph 211 or Ph 221 may be taken concurrently with EAS 211).

EAS 212 - Strength of Materials (4)
Study of the relationship between strain and stress in deformable bodies; principles of stress analysis for axial force, flexure, torsion, and shear; studies in combined stresses and column stability.
Prerequisite: (must be passed with grade of "C" or better): EAS 211, Ph 211, or Ph 221.

EAS 215 - Dynamics (4)
Fundamental principles and methods of Newtonian mechanics including kinematics and kinetics of motion and the conservation laws of mechanics. Basic particle and rigid body applications.
Prerequisite: (must be passed with grade of "C" or better): EAS 211, Mth 252, Mth 261.

EAS 333U - Problems, Solutions, and Systems Thinking (4)
Provides the basis of systems thinking, foundational in addressing modern challenges. Develops skills, through diverse team and individual exploration in real-world applications, to assist in understanding vague problems, examine causes and solutions to complex scenarios. Gives an appreciation of systems thinking and the foundational philosophy of a modern learning organization.

EAS 401 - Research (1-6)
(Credit to be arranged.) Consent of instructor.

EAS 405 - Reading and Conference (1-6)
(Credit to be arranged.) Consent of instructor.

EAS 406 - Special Projects (1-6)
(Credit to be arranged.) Consent of instructor.

EAS 407 - Seminar (0-6)
(Credit to be arranged.) Consent of instructor.

EAS 410 - SelectedTopics (1-6)
(Credit to be arranged.) Consent of instructor.

EAS 461 - Reliability Engineering (4)
Design of reliable components and systems for engineering fields. Includes elements of probability and statistics, reliability, mathematics, failure modes and effect analysis; and design for given reliabilities under constraints. Also offered for graduate-level credit as EAS 561 and may be taken only once for credit. Prerequisite: senior standing in engineering.

EAS 507 - Seminar (1-6)
(Credit to be arranged.)

EAS 510 - SelectedTopics (1-6)
(Credit to be arranged.)

EAS 561 - Reliability Engineering (4)
Design of reliable components and systems for engineering fields. Includes elements of probability and statistics, reliability, mathematics, failure modes and effect analysis; and design for given reliabilities under constraints. Also offered for undergraduate-level credit as EAS 461 and may be taken only once for credit. Prerequisite: senior standing in engineering.

Ec - Economics

Ec 200 - Contemporary Economic Issues (4)
Introduction to the economic approach to current political and economic issues. Topics will vary depending upon the instructor, but may include markets and competition, sustainable development and growth, poverty and inequality, government policy, international economic relationships, the economic approach to environmental protection.

Ec 201 - Principles of Microeconomics (4)
A study of the choices individuals face as participants in the markets for goods, services and factors of production like labor; behavior of profit-maximizing firms operating in markets with varying degrees of competitive pressure; potential role of government in intervening to influence market outcomes using taxes and subsidies; reasons for international trade and economic inequality.
Ec 201H - Honors Principles of Microeconomics (4)
A study of the market system, involving the essentials of demand and supply analysis; competition and monopoly; labor public policy toward business; the distribution of income; international trade and commercial policy; comparative advantage, tariffs, and quotas.

Ec 202 - Principles of Macroeconomics (4)
A study of factors affecting the level of national income: the essentials of money and banking; the role of government expenditure and taxation in achieving economic stability, growth, and development; international monetary issues including exchange rates and the balance of payments.
Prerequisite: Ec 201.

Ec 202H - Honors Principles of Macroeconomics (4)
A study of factors affecting the level of national income: the essentials of money and banking; the role of government expenditure and taxation in achieving economic stability, growth, and development; international monetary issues including exchange rates and the balance of payments.

Ec 299 - Special Studies (1-12)
(Credit to be arranged.)

Ec 311 - Microeconomic Theory (4)
Theories of consumer behavior and demand, production and cost, the firm and market organization, strategic behavior, and functional income distribution. Course may not be taken for credit if taken after completion of, or concurrently with, EC 415.
Prerequisite: Ec 201.

Ec 312 - Macroeconomic Theory (4)
Tools and models to analyze factors influencing the levels of output, employment and prices. Fundamentals of the theory of business cycles, economic growth, and inflation. The role of government in solving macroeconomic problems.
Prerequisite: Ec 202; Ec 311 or Ec 415 or concurrent enrollment. Concurrent enrollment only allowed for Ec 311 or Ec 415.

Ec 314U - Private and Public Investment Analysis (4)
Examines the tools required to analyze expenditures that yield benefits over time-investments. The use of accounting documents and a focus on the time value of money allows students to analyze choices in a variety of security, loan, and equipment investment decisions.

Ec 316U - Introduction to Health Care Economics (4)
Provides an introduction to basic economic concepts that are most relevant to the study of the health care system. Examines the efficiency and equity implications of providing health care under the traditional fee-for-service system versus providing health care under the relatively new systems of health care delivery such as health maintenance organizations (HMOs), preferred provider organizations (PPOs), etc. Compares the American health care system to the systems employed in other developed countries. Special attention will be paid to the delivery of health care in Oregon.

Ec 321U - Fundamentals of Game Theory (4)
Introduction to the theory of games and their applications in economics. Examines how some broad classes of games can be used to study the strategic choices of economic agents under circumstances of imperfect competition and/or information.

Ec 325 - Latin American Economics (4)
By means of discussions, presentations, and lectures this course tackles common themes that characterize Latin America: economic growth barriers, the curse of commodities, import substitution industrialization, trade policy, exchange rate policy, public debt management, macroeconomic stability, and the poverty and inequality vicious cycle.
Prerequisite: Consent of instructor.

Ec 332U - Economics of Environmental Issues (4)
Examines several local, national and global environmental issues. Students will be introduced to some basic economic concepts and tools fundamental to understanding the social, economic and environmental impacts of current and proposed environmental policies.
Ec 340 - International Economics (4)
Examines trade and financial relations among countries with an emphasis on policy perspectives. Outlines international policy options and the principles that govern world trade and financial arrangements. Regional and international trade organizations and currency arrangements will be discussed. Credit is not given for both Ec 340 and Ec 440 or Ec 441.

Ec 345 - Marxist Political Economy (4)
An inquiry into the contribution to social and economic thought advanced by Karl Marx. Based on reading and interpreting primary sources. Considers the legacy of Marx's ideas on the course of history in the 20th century, and the potential influence in the 21st century.

Ec 350U - Economics of Developing Countries (4)
The economics of most of the world. Examines the concept and history of development, the causes of economic growth, poverty and inequality, population growth, education and health, sustainable development, the impact of international trade, and foreign aid.

Ec 380 - Introduction to Mathematical Economics (4)
Economic concepts are explored using mathematical methods. Applications are drawn from a wide range of fields in economics including microeconomics, macroeconomics, economic growth, international trade, international finance, labor and environmental economics, industrial organization and development economics. Mathematical methods utilized include equations, functions, sets, total and partial differentiation, and linear algebra.
Prerequisite: Mth 251, Ec 201, Ec 202.

Ec 399 - Special Studies (1-6)
See department for course description. (Credit to be arranged.)

Ec 401 - Research (1-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Ec 402 - Independent Study (1-12)
(Credit to be arranged.)

Ec 403 - Honors Thesis (1-4)
Consent of instructor. See department for course description. (Credit to be arranged.)

Ec 404 - Cooperative Education/Internship (1-12)
By prior arrangement with a faculty member, economics majors may integrate their practical experience with an economics issue into their academic education. Students are expected to provide a brief proposal of the topic they wish to pursue, demonstrating some familiarity with the economics literature in the area and the way in which their internship or other experience will illustrate practical aspects of the proposed topic. Evaluation on the basis of written and oral syntheses of academic and practical knowledge. Only in unusual circumstances will more than 4 credits be granted for cooperative education/internship.
Prerequisite: Ec 201, Ec 202, and consent of instructor. (Credit to be arranged.)

Ec 405 - Reading and Conference (1-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Ec 407 - Seminar (1-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Ec 409 - Practicum (1-3)
By prior arrangement with the department, economics majors may receive a maximum of 3 credits in their total undergraduate program for economics research done in the community in conjunction with guided reading and regular consultations with the practicum instructor. Recommended prerequisites: Ec 201, 202, and consent of instructor. (Credit to be arranged.)

Ec 410 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

Ec 410U - Selected Topics (4)
(Credit to be arranged.)
Ec 415 - Microeconomic Theory with Calculus (4)
Mathematical analysis of consumers, firms and markets. Uncertainty, Game Theory, Partial Equilibrium Analysis, General Equilibrium Analysis and Welfare. Economics majors take either Ec 311 or Ec 415. Ec 415 cannot be used as an elective in the economics major.
Prerequisite: Ec 201, and Ec 380 or Mth 251.

Ec 417 - Women in the Economy (4)
Different economic theoretical perspectives are presented to account for women's particular economic roles currently and historically. Emphasis on women's responsibility for child rearing and housework; women's relatively low wages; occupational segregation by gender; economic differences among women due to ethnicity, generation, and class; and policy issues with particular importance for women's economic situation. Expected preparation: Ec 201.
Also offered for graduate-level credit as Ec 517 and may be taken only once for credit.

Ec 418 - Economics Department Seminar (1)
Economics majors, minors, graduate students and other students currently enrolled in an economics course may enroll in the Economics Department Seminar, which brings academic and professional economists to campus to present research on a wide variety of topics, using the spectrum of methodological approaches.
Also offered for graduate-level credit as Ec 518.
Prerequisite: junior standing.

Ec 419 - Economics of Race and Ethnicity (4)
Survey of the economic history of ethnic groups in the United States, various economic theoretical perspectives advanced to account for past and current experience of people of color in the U.S. economy, and examination of selected economic policy issues. Expected preparation: Ec 201.
Also offered for graduate-level credit as Ec 519 and may be taken only once for credit.

Ec 420 - Money and Banking (4)
Also offered for graduate-level credit as Ec 520 and may be taken only once for credit.
Prerequisite: Ec 201, Ec 202, Ec 312 or consent of instructor.

Ec 425 - Economics of Industrial Organization (4)
Also offered for graduate credit as Ec 525 and may be taken only once for credit.
Prerequisite: Ec 201; Ec 311 or Ec 415, or consent of instructor.

Ec 426 - Economics of Regulation (4)
Study of government regulation designed to control or at least to influence the performance of the market in specific ways. Historical and economic analyses of three main forms of regulation: direct regulation of monopoly and competition, and social regulation to protect the environment and the individual. Expected preparation: Ec 201.
Also offered for graduate credit as Ec 526 and may be taken only once for credit.

Ec 427 - Cost-Benefit Analysis (4)
Main theory and empirical methodologies for assessing costs and benefits of projects with varying timeframes and levels of uncertainty. Focus on public projects, including environmental, infrastructure and social service activities. Methodologies for valuation of nonmarket goods, such as environmental services, also covered.
Also offered for graduate-level credit as Ec 527 and may be taken only once for credit.
Prerequisite: Ec 201.

Ec 428 - Project Evaluation (4)
Methodology for progam evaluation from needs assessment through outcome and effectiveness evaluation. Heavy reliance on case studies. Students may participate in ongoing evaluations.
Also offered for graduate-level credit as Ec 528 and may be taken only once for credit.
Prerequisite: Ec 311, Ec 415 or consent of instructor.

Ec 430 - Resource and Environmental Economics (4)
Overview of different approaches to economic analysis of resources and environment, and fundamental issues of economy/environment interactions, as well as the emerging subject of sustainability. Covers the basics of standard environmental and resource economics including the theory of externalities, resource allocation over time, common property resources, public goods and valuation. Includes an overview of the economic dimension of policies designed to protect and
improve environmental quality and protect and efficiently manage natural resources.

Also offered for graduate credit as Ec 530 and may be taken only once for credit. Prerequisite: Ec 201.

Ec 431 - Urban Economics (4)
Functions of the urban economy; the market sector and the public sector. Land use, environmental quality, transportation, housing, income distribution, the organization and financing of urban public services. This is the same course as USP 431 and RE 431 and may be taken only once for credit. Expected preparation: Ec 201, Ec 202.

Also offered for graduate credit as Ec 531 and may be taken only once for credit.. Prerequisite: Upper-division standing.. Cross-Listed as: USP 431 and RE 431.

Ec 432 - Advanced Environmental Economics (4)
Examination of the economics of environmental degradation, externalities and pollution control. Emphasis is on the theoretical aspects of market failure, policies/regulations to promote efficient outcomes and policy applications. Expected preparation: Ec 469 or equivalent.

Also offered for graduate-level credit as Ec 532 and may be taken only once for credit.. Prerequisite: Ec 311 or Ec 415, and Ec 430 or permission of instructor.. Cross-Listed as: ESM 433.

Ec 433 - Advanced Natural Resource Economics (4)
Analyze natural resource production, extraction and use. Focus on resources such as land, minerals, forests, fisheries and wildlife. Problems achieving sustainability. Regional, national and international case studies used to illustrate key policy issues. This is the same course as ESM 433 and may be taken only once for credit. Recommended preparation: Ec 469.

Also offered for graduate-level credit as Ec 533 and may be taken only once for credit.. Prerequisite: Ec 311 or Ec 415, and Ec 430 or Ec 530.. Cross-Listed as: ESM 433.

Ec 434 - Business Environmental Management Economics (4)
Examines the economic costs and benefits that affect the decisions of business firms to develop integrated environmental management systems. Analysis of policy options to foster business environmental management for public goods. Case studies of selected firms. This is the same course as ESM 434 and may be taken only once for credit. Recommended: Ec 201.

Also offered for graduate-level credit as Ec 534 and may be taken only once for credit.. Cross-Listed as: ESM 434.

Ec 435 - Public Spending and Debt Policy (4)
Analysis of the role of the state in a competitive economy. Development of decision rules for state economic action. Includes a detailed study of the principles of voting, public budgeting including cost benefit analysis and PPBS, the theory of fiscal federalism and the theory and principles of public debts. Recommended: Ec 201, 202.

Also offered for graduate-level credit as Ec 535 and may be taken only once for credit. Prerequisite: Ec 415 or (Ec 311 and Mth 251).

Ec 436 - Taxation and Income Policies (4)

Also offered for graduate-level credit as Ec 536 and may be taken only once for credit. .

Ec 437 - Public Utility Economics (4)
Examines the rationale, economic principles, and institutions of historic economic regulation. Contemporary theory of the firm and regulatory practice with a focus on energy are analyzed. Recommended: Ec 201, Ec 202.

Also offered for graduate-level credit as Ec 537 and may be taken only once for credit. .

Ec 438 - Energy Economics (4)
Economics and structure of energy markets, with a focus on electricity. Examines current policy issues arising from energy production and use. Recommended: Ec 201, Ec 202.

Also offered for graduate-level credit as Ec 538 and may be taken only once for credit. Prerequisite: Ec 311 or Ec 415.

Ec 440 - International Trade Theory and Policy (4)
Theories of international trade. Analysis of the normative aspects of trade including the gains from trade and the effect of trade on economic welfare. Examination of international trade policy and issues of economic integration, economic growth, and current trade problems.

Also offered for graduate-level credit as Ec 540 and may be taken only once for credit. . Prerequisite: Ec 201; Ec 311 or Ec 415 or consent of instructor..
Ec 441 - International Monetary Theory and Policy (4)
Balance of payments theory including balance of payments accounting and foreign exchange market; theoretical models of fixed and flexible exchange rate systems using both Neoclassical and Keynesian approaches. Historical evolution of the international monetary system. Current international monetary policies and problems.
Also offered for graduate-level credit as Ec 541 and may be taken only once for credit. Prerequisite: Ec 201, Ec 202; Ec 312 or consent of instructor.

Ec 442 - The Multinational Enterprise in the World Economy (4)
The study of the multinational (transnational) enterprise as a form of direct foreign investment. Analysis of theories of direct investment; the impact of the multinational enterprise on the national and international economy and the relationship of such firms to the concept of the nation-state.
Recommended: Ec 201, Ec 202.
Also offered for graduate-level credit as Ec 542 and may be taken only once for credit.

Ec 443 - Global Environmental Economics (4)
An examination of economic forces and theories to understand the causes of global environmental problems and evaluate policy options. Primary emphasis is on developing countries and countries in transition, though linkages with developed countries also considered. Topics include poverty, population, economic development and the environment, global warming, biodiversity protection, sustainability, and pollution control. This is the same course as ESM 443 and may be taken only once for credit.
Also offered for graduate-level credit as Ec 543 and may be taken only once for credit. Cross-Listed as: ESM 443.

Ec 444 - Economics of Green Power (4)
The economic feasibility and rationale of producing electricity using several alternative environmentally friendly technologies. The economic and environmental costs and benefits of employing these technologies are identified and compared to the dominant technologies (coal, oil, hydropower). Alternative policies that provide incentives for the adoption of green technologies are examined.
Recommended: Ec 201.
Also offered for graduate-level credit as Ec 544 and may be taken only once for credit.

Ec 445 - Comparative Economic Systems (4)
Introduces the evolutionary-institutional method of analysis, incorporating history, the legacy of ideas, and the dynamics of change over time. Using this method, we shall examine economic systems of Ancient Rome, Medieval Feudalism, the Laissez-Faire Market Economy, Fascist Command Economy, and others.
Recommended: Ec 201, 202.
Also offered for graduate-level credit as Ec 545 and may be taken only once for credit.

Ec 446 - Institutional Economics (4)
Considers the contributions of seminal thinkers to what is regarded as an alternate or heterodox school in economic science. Contribution of Thorstein Veblen, John R. Commons, Wesley Mitchell, Simon Kuznets, Clarence Ayres, Gunnar Myrdal, and John Kenneth Galbraith, as well as more contemporary thinkers will be explored. Institutional theory will be compared and contrasted with neoclassical economics, and shown as a viable theory posing a formidable challenge to the dominant paradigm of orthodoxy. Neo-institutionalist challenges will also be considered.
Also offered for graduate-level credit as Ec 546 and may be taken only once for credit.

Ec 447 - Economics of Transition (4)
Examines the formation of the Soviet-type economic system in the 1920s and 30s and its dissemination after World War II to Eastern Europe, China, and other selected countries. Emphasis is placed on the history of ideas and the historical setting which gave rise to the Soviet model. Includes the examination of the internal contradictions of the model, the "unwinding" of planned socialism, and the prospects for the move toward mixed market economies.
Recommended: Ec 201, Ec 202.
Also offered for graduate-level credit as Ec 547 and may be taken only once for credit.

Ec 448 - East Asian Economic Development (4)
Key topics in the development of East Asian economies, especially Japan, China, South Korea, and several Southeast Asian countries. Economic theory will be applied to investigate the validity of the "Asian economic growth model," while examining political, social and historical factors of the area and comparing the experience of these economies with that of other developing countries.
Also offered for graduate-level credit as Ec 548 and may be taken only once for credit.
Ec 450 - Economics of Development (4)
Also offered for graduate-level credit as Ec 550 and may be taken only once for credit. Prerequisite: Ec 201, 202.

Ec 453 - Theory of Economic Growth (4)
Introduction to the theory of economic growth. This course will emphasize the theoretical basis and the models developed to measure growth and change in modern industrial societies. Recommended: Ec 201, 202.
Also offered for graduate-level credit as Ec 553 and may be taken only once for credit.

Ec 456 - American Economic History: the First Century (4)
Also offered for graduate-level credit as Ec 556 and may be taken only once for credit.

Ec 457 - American Economic History: the 20th Century (4)
Also offered for graduate-level credit as Ec 557 and may be taken only once for credit.

Ec 460 - History of Economic Thought (4)
Selections from the economic writings of various thinkers from antiquity through the Reformation. A survey of the work of the most important economic theorists of the 18th, 19th, and 20th centuries including Adam Smith, Ricardo, Marx, Marshall, Veblen, and Keynes. Readings include original writings and interpretations by later economists. Scholars will be studied in terms of their historical context and the contemporary relevance of the theories and policy recommendations.
Also offered for graduate-level credit as Ec 560 and may be taken only once for credit.

Ec 465 - Labor Economics (4)
This course investigates the determinants of wages, the decision to work, the reasons demographic groups fare differently in the labor market, and sources of unemployment. Also considers current developments in labor markets of increasing wage inequality, globalization, declining unionization, and widespread use of new technologies.
Also offered for graduate-level credit as Ec 565 and may be taken only once for credit. Prerequisite: Ec 415 or (Ec 311 and Mth 251).

Ec 469 - Introduction to Econometrics (4)
General survey of empirical techniques useful for economic analysis. Focus on the applications of mathematical tools and regression analysis in economics. Quantitative topics will be introduced systematically with hands-on case studies and examples related to the fields of economics, public policy, and urban studies. This course will not be counted as credit for economics graduate students, but may be taken by graduate students in other programs.
Also offered for graduate-level credit as Ec 569 and may be taken only once for credit. Prerequisite: Mth 251, Stat 243 and Stat 244.

Ec 472 - Time Series Analysis and Forecasts (4)
Time series analysis, emphasizing model identification, estimation, and forecasting. Non-stationary time series analysis includes unit root and cointegration tests. Techniques of moving average, differencing, and autocorrelation adjustment are introduced. Diagnostic checking following the model evaluation provides the base model for forecasting. Expected preparation: Ec 370. This course assumes background knowledge of linear regression, algebra, probability theory, statistical inference, distribution theory, hypothesis testing, introductory calculus (slopes, derivatives, maximization, and minimization) and matrix algebra.
Also offered for graduate-level credit as Ec 572 and may be taken only once for credit. Prerequisite: Ec 469.

Ec 476 - Implementing Econometrics using Stata and R (4)
Nuts and bolts techniques for implementing econometric analysis using Stata software, the R
statistical package and a short introduction to SAS. Topics include organizing data, nonparametric smoothing, graphing techniques, regression diagnostics, Stata and Mata programming.

Preparation: an econometrics course or statistics courses including regression analysis.

Also offered for graduate-level credit as Ec 576 and may be taken only once for credit. Prerequisite: Ec 469 or Ec 570 or permission of the instructor.

Ec 480 - Mathematical Economics (4)
Mathematics for Economists. Application of differential calculus and matrix algebra to economics. Topics include consumer theory, production functions, and applied general equilibrium models.

Also offered for graduate-level credit as Ec 580 and may be taken only once for credit. Prerequisite: Ec 311 or Ec 415; Ec 312, and Ec 380 (or equivalently: Mth 251, Mth 252, and Mth 261, in place of Ec 380).

Ec 501 - Research (1-9)
Consent of instructor. See department for course description. (Credit to be arranged.)

Ec 503 - Thesis (1-9)
See department for course description. (Credit to be arranged.)

Ec 504 - Cooperative Education/internship (1-9)
By prior arrangement with a faculty member, economics majors may integrate their practical experience with an economics issue into their academic education. Students are expected to provide a brief proposal of the topic they wish to pursue, demonstrating some familiarity with the economics literature in the area and the way in which their internship or other experience will illustrate practical aspects of the proposed topic. Evaluation on the basis of written and oral syntheses of academic and practical knowledge. Only in unusual circumstances will more than 4 credits be granted for cooperative education/internship.

Prerequisite: Ec 201, Ec 202, and consent of instructor. (Credit to be arranged.)

Ec 505 - Reading and Conference (1-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Ec 506 - Special Projects (1-9)
(Credit to be arranged.)

Ec 507 - Seminar (1-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Ec 510 - Selected Topics (1-5)
See department for course description. (Credit to be arranged.)

Ec 517 - Women in the Economy (4)
Different economic theoretical perspectives are presented to account for women's particular economic roles currently and historically. Emphasis on women's responsibility for child rearing and housework; women's relatively low wages; occupational segregation by gender; economic differences among women due to ethnicity, generation, and class; and policy issues with particular importance for women's economic situation.

Also offered for undergraduate-level credit as Ec 417 and may be taken only once for credit.

Ec 518 - Economics Department Seminar (1)
Economics majors, minors, graduate students and other students currently enrolled in an economics course may enroll in the Economics Department Seminar, which brings academic and professional economists to campus to present research on a wide variety of topics, using the spectrum of methodological approaches.

Also offered for undergraduate-level credit as Ec 418.

Ec 519 - Economics of Race and Ethnicity (4)
Survey of the economic history of ethnic groups in the United States, various economic theoretical perspectives advanced to account for past and current experience of people of color in the U.S. economy, and examination of selected economic policy issues.

Also offered for undergraduate-level credit as Ec 419 and may be taken only once for credit.

Ec 520 - Money And Banking (4)
Also offered for undergraduate-level credit as Ec 420 and may be taken only once for credit.

Ec 522 - Economics of Sustainability: Theory and Practice (4)
Economic concepts and theories for analyzing sustainable development, including the emerging field of ecological economics. Roles and practices of the business, government and nonprofit sectors in fostering sustainability.

Ec 525 - Economics of Industrial Organization (4)

Ec 526 - Economics of Regulation (4)
Study of government regulation designed to control-or at least to influence-the performance of the market in specific ways. Historical and economic analyses of three main forms of regulation: direct regulation of monopoly and competition, and social regulation to protect the environment and the individual.

Ec 527 - Cost-Benefit Analysis (4)
Main theory and empirical methodologies for assessing costs and benefits of projects with varying timeframes and levels of uncertainty. Focus on public projects, including environmental, infrastructure and social service activities. Methodologies for valuation of nonmarket goods, such as environmental services, also covered.

Ec 528 - Project Evaluation (4)
Methodology for program evaluation from needs assessment through outcome and effectiveness evaluation. Heavy reliance on case studies. Students may participate in ongoing evaluations.

Ec 530 - Resource and Environmental Economics (4)
Overview of different approaches to economic analysis of resources and environment, and fundamental issues of economy/environment interactions, as well as the emerging subject of sustainability. Covers the basics of standard environmental and resource economics including the theory of externalities, resource allocation over time, common property resources, public goods and valuation. Includes an overview of the economic dimension of policies designed to protect and improve environmental quality and protect and efficiently manage natural resources.

Ec 531 - Urban Economics (4)
Functions of the urban economy; the market sector and the public sector. Land use, environmental quality, transportation, housing, income distribution, the organization and financing of urban public services.

Ec 532 - Advanced Environmental Economics (4)
Examination of the economics of environmental degradation, externalities and pollution control. Emphasis is on the theoretical aspects of market failure, policies/regulations to promote efficient outcomes and policy applications.

Ec 533 - Advanced Natural Resource Economics (4)
Analyze natural resource production, extraction and use. Focus on resources such as land, minerals, forests, fisheries and wildlife. Problems achieving sustainability. Regional, national and international case studies used to illustrate key policy issues. This is the same course as ESM 533 and may be taken only once for credit.

Ec 534 - Business Environmental Management Economics (4)
Examines the economic costs and benefits that affect the decisions of business firms to develop integrated environmental management systems. Analysis of policy options to foster business environmental management for public goods. Case studies of selected firms.

Also offered for undergraduate-level credit as Ec 432 and may be taken only once for credit. Cross-Listed as: ESM 534.
Ec 535 - Public Spending and Debt Policy (4)
Analysis of the role of the state in a competitive economy. Development of decision rules for state economic action. Includes a detailed study of the principles of voting, public budgeting including cost benefit analysis and PPBS, the theory of fiscal federalism and the theory and principles of public debts.
Also offered for undergraduate-level credit as Ec 435 and may be taken only once for credit.

Ec 536 - Taxation and Income Policies (4)
Principles and problems of government financing. Critical analysis of alternative taxes as sources of public revenue with emphasis on theories of incidence and economic effect.
Also offered for undergraduate-level credit as Ec 436 and may be taken only once for credit.

Ec 537 - Public Utility Economics (4)
Examines the rationale, economic principles, and institutions of historic economic regulation. Contemporary theory of the firm and regulatory practice with a focus on energy are analyzed. Expected preparation: Ec 311, Ec 314 or Ec 581.
Also offered for undergraduate-level credit as Ec 437 and may be taken only once for credit.

Ec 538 - Energy Economics (4)
Economics and structure of energy markets, with a focus on electricity. Examines current policy issues arising from energy production and use. Expected preparation: Ec 311, Ec 415 or Ec 581.
Also offered for undergraduate-level credit as Ec 438 and may be taken only once for credit.

Ec 540 - International Trade Theory and Policy (4)
Theories of international trade. Analysis of the normative aspects of trade including the gains from trade and the effect of trade on economic welfare. Examination of international trade policy and issues of economic integration, economic growth, and current trade problems.
Also offered for undergraduate-level credit as Ec 440 and may be taken only once for credit.

Ec 541 - International Monetary Theory and Policy (4)
Balance of payments theory including balance of payments accounting and foreign exchange market; theoretical models of fixed and flexible exchange rate systems using both Neoclassical and Keynesian approaches. Historical evolution of the international monetary system. Current international monetary policies and problems.
Also offered for undergraduate-level credit as Ec 441 and may be taken only once for credit.

Ec 542 - The Multinational Enterprise in the World Economy (4)
The study of the multinational (transnational) enterprise as a form of direct foreign investment. Analysis of theories of direct investment; the impact of the multinational enterprise on the national and international economy and the relationship of such firms to the concept of the nation-state.
Also offered for undergraduate-level credit as Ec 442 and may be taken only once for credit.

Ec 543 - Global Environmental Economics (4)
An examination of economic forces and theories to understand the causes of global environmental problems and evaluate policy options. Primary emphasis is on developing countries and countries in transition, though linkages with developed countries also considered. Topics include poverty, population, economic development and the environment, global warming, biodiversity protection, sustainability, and pollution control. This is the same course as ESM 543 and may be taken only once for credit.
Also offered for undergraduate-level credit as Ec 443 and may be taken only once for credit. Cross-Listed as: ESM 543.

Ec 544 - Economics of Green Power (4)
The economic feasibility and rationale of producing electricity using several alternative environmentally friendly technologies. The economic and environmental costs and benefits of employing these technologies are identified and compared to the dominant technologies (coal, oil, hydropower). Alternative policies that provide incentives for the adoption of green technologies are examined.
Also offered for undergraduate-level credit as Ec 444 and may be taken only once for credit.

Ec 545 - Comparative Economic Systems (4)
Introduces the evolutionary-institutional method of analysis, incorporating history, the legacy of ideas, and the dynamics of change over time. Using this method, we shall examine economic systems of Ancient Rome, Medieval Feudalism, the Laissez-Faire Market Economy, Fascist Command Economy, and others.
Also offered for undergraduate-level credit as Ec 445 and may be taken only once for credit.
Ec 546 - Institutional Economics (4)
Considers the contributions of seminal thinkers to what is regarded as an alternate or heterodox school in economic science. Contribution of Thorstein Veblen, John R. Commons, Wesley Mitchell, Simon Kuznets, Clarence Ayres, Gunnar Myrdal, and John Kenneth Galbraith, as well as more contemporary thinkers will be explored. Institutional theory will be compared and contrasted with neoclassical economics, and shown as a viable theory posing a formidable challenge to the dominant paradigm of orthodoxy. Neo-institutionalist challenges will also be considered.
Also offered for undergraduate-level credit as Ec 446 and may be taken only once for credit.

Ec 547 - Economics of Transition (4)
Examines the formation of the Soviet-type economic system in the 1920s and 30s and its dissemination after World War II to Eastern Europe, China, and other selected countries. Emphasis is placed on the history of ideas and the historical setting which gave rise to the Soviet model. Includes the examination of the internal contradictions of the model, the "unwinding" of planned socialism, and the prospects for the move toward mixed market economies.
Also offered for undergraduate-level credit as Ec 447 and may be taken only once for credit.

Ec 548 - East Asian Economic Development (4)
Key topics in the development of East Asian economies, especially, Japan, China, South Korea, and several Southeast Asian countries. Economic theory will be applied to investigate the validity of the "Asian economic growth model," while examining political, social and historical factors of the area and comparing the experience of these economies with that of other developing countries.
Also offered for undergraduate-level credit as Ec 448 and may be taken only once for credit.

Ec 550 - Economics of Development (4)
Also offered for undergraduate-level credit as Ec 450 and may be taken only once for credit.

Ec 553 - Theory of Economic Growth (4)
Introduction to the theory of economic growth. This course will emphasize the theoretical basis and the models developed to measure growth and change in modern industrial societies.
Also offered for undergraduate-level credit as Ec 453 and may be taken only once for credit.

Ec 556 - American Economic History: the First Century (4)
The economic background of the War of Independence and the seeds of the Civil War. Industrialization, urbanization, and development of the frontier. Rise of big business and organized labor. Laissez-faire, federalism, and the gradual emergence of the national government in economic policy. Changes in foreign trade and in the international position of the U.S.
Also offered for undergraduate-level credit as Ec 456 and may be taken only once for credit.

Ec 557 - American Economic History: the 20th Century (4)
Also offered for undergraduate-level credit as Ec 457 and may be taken only once for credit.

Ec 560 - History of Economic Thought (4)
Selections from the economic writings of various thinkers from antiquity through the Reformation. A survey of the work of the most important economic theorists of the 18th, 19th, and 20th centuries including Adam Smith, Ricardo, Marx, Marshall, Veblen, and Keynes. Readings include original writings and interpretations by later economists. Scholars will be studied in terms of their historical context and the contemporary relevance of the theories and policy recommendations.
Also offered for undergraduate-level credit as Ec 460 and may be taken only once for credit.

Ec 565 - Labor Economics (4)
This course investigates the determinants of wages, the decision to work, the reasons demographic groups fare differently in the labor market, and sources of unemployment. Also considers current developments in labor markets of increasing wage inequality, globalization, declining unionization, and widespread use of new technologies.
Also offered for undergraduate-level credit as Ec 465 and may be taken only once for credit.
Ec 569 - Introduction to Econometrics (4)

General survey of empirical techniques useful for economic analysis. Focus on the applications of mathematical tools and regression analysis in economics. Quantitative topics will be introduced systematically with hands-on case studies and examples related to the fields of economics, public policy, and urban studies. This course will not be counted as credit for economics graduate students, but may be taken by graduate students in other programs.

Also offered for undergraduate-level credit as Ec 469 and may be taken only once for credit.

Ec 570 - Econometrics (4)

Covers the theory and application of statistical regression, hypothesis testing, and simulation of econometric models. Emphasis is placed on model construction and efficient use of economic data. Problems of multicolinearity, heteroscedasticity, autocorrelation, and distributed lags are discussed. Some familiarity with calculus, matrix algebra, and computer applications are assumed.

Prerequisite: Ec 469 or consent of instructor.

Ec 571 - Advanced Econometrics (4)

Advanced econometrics topics including systems of linear equations, panel data, nonlinear models, nonparametric estimation and prediction, and applications in consumption and production models. Data resources available to the practicing economist will be covered.

Ec 572 - Time Series Analysis and Forecasts (4)

Time series analysis, emphasizing model identification, estimation, and forecasting. Non-stationary time series analysis includes unit root and cointegration tests. Techniques of moving average, differencing, and autocorrelation adjustment are introduced. Diagnostic checking following the model evaluation provides the base model for forecasting.

Also offered for undergraduate-level credit as Ec 472 and may be taken only once for credit. Prerequisite: Ec 570 or permission of instructor.

Ec 575 - Applied Advanced Econometrics (4)

Covers advanced topics related to methodological issues in econometrics, with emphases on computation, simulation, and non-linear methods in econometrics. Nonlinear econometric models including Box-Cox variable transformation, autoregressive time series analysis, and qualitative choice models. Simulation-based econometrics covers topics of Monte Carlo experiments and bootstrapping methods.

Prerequisite: Ec 570, Ec 571 or consent of instructor.

Ec 576 - Implementing Econometrics using Stata and R (4)

Nuts and bolts techniques for implementing econometric analysis using Stata software, the R statistical package and a short introduction to SAS. Topics include organizing data, nonparametric smoothing, graphing techniques, regression diagnostics, Stata and Mata programming.

Prerequisite: an econometrics course or statistics courses including regression analysis.

Also offered for undergraduate-level credit as Ec 476 and may be taken only once for credit. Prerequisite: Ec 469 or Ec 570 or permission of the instructor.

Ec 580 - Mathematical Economics (4)

Mathematics for Economists. Application of differential calculus and matrix algebra to economics. Topics include consumer theory, production functions, and applied general equilibrium models.

Also offered for undergraduate-level credit as Ec 480 and may be taken only once for credit.

Ec 581 - Advanced Microeconomics (4)

Prerequisite: Ec 480/580 or consent of instructor.

Ec 584 - Applications of Advanced Microeconomic Theory (4)

Applies theories of consumer and producer behavior to a variety of real world problems. Different sub-disciplines of microeconomics will be covered, which may include one or two of the following: information economics, environmental economics, economics of regulation, industrial organization, law and economics, natural resource economics, labor economics, regional economics, urban economics, and the economics of contracting. For each sub-discipline covered, the most important economic model will be discussed and a review of major research studies and techniques will be undertaken.

Prerequisite: Ec 581 or consent of instructor.

Ec 590 - Advanced Macroeconomics (4)

Theories of national income, employment and price levels with special emphasis on recent developments in analytical techniques and empirical findings.

Prerequisite: Ec 480/580 or consent of instructor and Ec 581 or consent of instructor.
Ec 592 - Applications of Advanced Macroeconomic Theory (4)

Coverage includes current topics of interest in macroeconomics. The focus is on the applications of neoclassical and Keynesian theories of macroeconomic theory to a variety of real world problems. The various sub-disciplines of macroeconomics that may be covered include: Financial Economics, Monetary Economics, Economic Growth Models, Labor Economics, Public Finance, International Economics, and Radical Macroeconomic Thought.

Prerequisite: Ec 590 or consent of instructor.

Ec 596 - Research Project I (4)

Intended for graduate students to complete the field project requirement. Course activities include: independent reading on researchable field-related topics; individual development of a research project, i.e., selection of a subject and plan of study; and periodic reporting of individual research projects progress. This is the first course in a sequence of two: Ec 596 and Ec 597. Recommended: Ec 595.

Ec 597 - Research Project II (4)

Intended for graduate students to complete the field project requirement. Course activities include: independent reading on researchable field-related topics; individual development of a research project, i.e., selection of a subject and plan of study; and periodic reporting of individual research projects progress. This is the second course in a sequence of two: Ec 596 and Ec 597. Recommended: Ec 595.

Ec 675 - Advanced Macroeconomics II (4)

Extended analysis of macroeconomic theory covering static, deterministic models through recent dynamic and stochastic macro modeling. Analytic tools in both theoretic and empirical models are illustrated in the study of inflation, unemployment, growth and government policy. Recommended: Ec 575.

Ec 676 - Advanced Microeconomics II (4)

Extended analysis of microeconomic theory covering individual and social choice issues. Selected topics of interest and significance include but are not limited to: rational choice behavior of consumers and producers, theory of the market, partial and general equilibrium analysis, welfare economics, and economics of inflation. Recommended: Ec 576.

Ec 698 - Ecosystem Services Valuation: An Integrated Assessment (4)

Explore environmental, social and economic theories of valuation, quantitative and qualitative methods for incorporating the values into ecosystem service management decisions, novel approaches for integrating each type of values into comprehensive measures, and applications through interdisciplinary team projects. This is the same course as Mgmt 698; may only be taken once for credit.

Prerequisite: ESR 692, Soc 694 and Geog 694 or instructor's permission. Cross-Listed as: Mgmt 698.

ECE - Elect and Computer Engineering

ECE 101 - Exploring Electrical Engineering (4)

Freshman introductory course for students interested in electrical engineering. Students learn the design process, problem-solving, teamwork and presentation skills through completion of a hands-on project. Lab activities familiarize students with basic equipment and components. Speakers present an overview of different fields and career opportunities in electrical engineering. Weekly lab.

Prerequisite: Mth 112 with a grade of C or better or passing at the necessary level on the mathematics placement test (see PSU Math Department webpage at pdx.edu/math for information). Corequisite: ECE 101L.

ECE 101L - Lab for ECE 101 (0)

Lab for ECE 101.

Corequisite: ECE 101.

ECE 102 - Engineering Computation (4)

Prerequisite: ECE 101 or equivalent with a grade of C or better. Mth 112 with a grade of C or better or passing at the necessary level on the mathematics placement test (see PSU Math Department webpage at pdx.edu/math for information). Corequisite: ECE 102L.

ECE 102L - Lab for ECE 102 (0)

Lab for ECE 102.

Corequisite: ECE 102.

ECE 103 - Engineering Programming (4)

Introduction to software design, algorithms, data structures, and programming using the "C" language. Interfacing to sensors, actuators, and other hardware.

Prerequisite: MTH 112 with a grade of C or better, or passing at the necessary level on the mathematics placement test (see PSU Math Department webpage at pdx.edu/math for information). Corequisite: ECE 103L.

**ECE 103L - Lab for ECE 103 (0)**
Lab for ECE 103.
Corequisite: ECE 103.

**ECE 171 - Digital Circuits (4)**
Foundation course in digital design. Topics such as number systems, basic logic gates, TTL device parameters, Boolean algebra, logic circuit simplification techniques, timing analysis, the application of MSI combinational logic devices, programmable logic devices, flip-flops, synchronous state machines and counters. Introduces students to a systematic design methodology. Uses computer based tools such as schematic capture programs, programmable logic development programs, and digital circuit simulators.

Prerequisite: MTH 112 with a grade of C or better, or passing at the necessary level on the mathematics placement test (see Math Department webpage at pdx.edu/math for information).

**ECE 172 - Digital Systems (4)**
Second course in the digital and microprocessor sequence. Covers shift registers, synchronous state machines, programmable logic devices, memories, and simple arithmetic circuits; introduction to timing analysis, design for test techniques; weekly laboratory.

Prerequisite: ECE 171. Corequisite: ECE 172L.

**ECE 172L - Lab for ECE 172 (0)**
Lab for ECE 172.
Corequisite: ECE 172.

**ECE 199 - Special Studies (0-4)**
(Credit to be arranged.) Consent of instructor.

**ECE 211 - Introduction to Design Processes (1)**
Introduction to design for electrical and computer engineers. Preparation for a team project in ECE 212. Discussion of design processes, needs, requirements, functional decomposition, testing and project management. This is the first course in a sequence of two: ECE 211 and ECE 212 and must be taken in sequence. Co-requisite: ECE 221.

Prerequisite: ECE 103 and ECE 172 (with a grade of C or better). Corequisite: ECE 221.

**ECE 212 - Introduction to Project Development (2)**
Continuation of ECE 211. Teams of students work on design projects that integrate electrical and computer engineering skills, knowledge and concepts gained up to this point. Application of structured design methodology to an authentic engineering problem. This is the second course in a sequence of two: ECE 211 and ECE 212 and must be taken in sequence.

Prerequisite: ECE 211 (with a grade of C or better).

**ECE 221 - Electric Circuit Analysis I (4)**
Introduction to the basic methods of circuit analysis including Kirchhoff’s laws, resistive circuits, techniques of circuit analysis, operational amplifiers, and energy storage elements. Weekly lab.

Prerequisite: ECE 102 (with a grade of C or better) and MTH 252. Corequisite: ECE 221L.

**ECE 221L - Electric Circuit Analysis I Lab (0)**
Lab for Electric Circuit Analysis I.
Corequisite: ECE 221.

**ECE 222 - Electric Circuit Analysis II (4)**

Prerequisite: ECE 221 (with a grade of C or better).
Corequisite: ECE 222L.

**ECE 222L - Electric Circuit Analysis II Lab (0)**
Lab for Electric Circuit Analysis II.
Corequisite: ECE 222.

**ECE 223 - Electric Circuit Analysis III (4)**
Frequency response and ac power. Includes transfer functions, design of analog filters, Bode plot analysis, pole-zero diagrams, and ac and three-phase power. Weekly Lab.

Prerequisite: ECE 222 (with a grade of C or better).
Corequisite: ECE 223L.

**ECE 223L - Electric Circuit Analysis III Lab (0)**
Lab for Electric Circuit Analysis III.
Corequisite: ECE 223.
**ECE 241 - Introduction to Electrical Engineering (4)**

DC circuit theory, passive electrical components, transient and sinusoidal steady state circuit responses, ac and three-phase power, op-amp circuits, and transformers; laboratory.

Prerequisite: Mth 252. Corequisite: ECE 241L.

**ECE 241L - Introduction to Electrical Engineering Lab (0)**

Lab for ECE 241 Introduction to Electrical Engineering.

Corequisite: ECE 241.

**ECE 299 - Special Studies (0-4)**

(Credit to be arranged.) Consent of instructor.

**ECE 315 - Signals and Systems I (4)**

Fundamentals of signals and systems including fundamental signals, basic system properties, linear time-invariant systems, Fourier series, Fourier transforms, and filters. This is the first course in a sequence of two: ECE 315 and ECE 316 and must be taken in sequence.

Prerequisite: ECE 223 (with a grade of C or better), Mth 256, Mth 253.

**ECE 316 - Signals and Systems II (4)**

Introduction to fundamentals of communications and discrete-time system analysis including sampling, modulation, multiplexing, and the z-transform. This is the second course in a sequence of two: ECE 315 and ECE 316 and must be taken in sequence.

Prerequisite: ECE 315 (with a grade of C or better).

**ECE 317 - Feedback and Control Systems (4)**

Control of continuous single-input/single-output linear systems using classical feedback techniques. Time and frequency domain analysis. Design in the s-plane and frequency domain. Use of time and frequency system identification techniques for developing plant models. Design of feedback compensators for steady-state error reduction, disturbance rejection, transient stability, and dynamic response.

Prerequisite: ECE 223 and Mth 256 (with a grade of C or better).

**ECE 321 - Electronics I (4)**

Introduction to solid state electronics, leading to the physical properties and characteristics of solid state electronic devices: diodes, bipolar junction transistors and field effect transistors. Analysis and design of rectifier topologies and biasing circuits. Application of a computer-aided design (CAD) tool, such as SPICE. Weekly Lab.

Prerequisite: ECE 222 (with a grade of C or better).

Corequisite: ECE 321L.

**ECE 321L - Electronics I Lab (0)**

Lab for Electronics I.

Corequisite: ECE 321.

**ECE 322 - Electronics II (4)**

Ideal and non-ideal OPAMP circuits; Analysis of electronic amplifiers using small-signal models of electronic devices; Differential and operational amplifier design techniques involving current mirrors and active loads; Frequency response of analog circuits; Computer-aided design. Weekly Lab.

Prerequisite: ECE 223 and ECE 321 (with a grade of C or better).

Corequisite: ECE 322L.

**ECE 322L - Electronics II Lab (0)**

Lab for Electronics II.

Corequisite: ECE 322.

**ECE 323 - Electronics III (4)**

Prerequisite: ECE 322 (with a grade of C or better).

Corequisite: ECE 323L.

**ECE 323L - Electronics III Lab (0)**

Lab for Electronics III.

Corequisite: ECE 323.

**ECE 331 - Engineering Electromagnetics I (4)**

Concept of a traveling wave with application to transmission lines; review of vector algebra and calculus in various coordinate systems; Maxwell’s equations for magnetostatics and electrostatics; weekly lab.

Prerequisite: Mth 254, Mth 256, Ph 223 or Ph 213.

Corequisite: ECE 331L.

**ECE 331L - Engineering Electromagnetics I Lab (0)**

Lab for Engineering Electromagnetics I.

Corequisite: ECE 331.
ECE 332 - Engineering Electromagnetics II (4)
Maxwell's equations for time-varying fields; plane wave propagation and reflection; waveguide structures; radiation and antennas. Topics in wave propagation include scattering, optics, principles of radar, signal integrity and mathematical solution techniques; weekly lab.
Prerequisite: ECE 331 (with a grade of C or better).
Corequisite: ECE 332L.

ECE 332L - Lab for ECE 332 (0)
Lab for ECE 332 Engineering Electromagnetics II.
Corequisite: ECE 332.

ECE 341 - Introduction to Computer Hardware (4)
An overview of computer architecture and programming from a hardware viewpoint. Topics covered include: digital logic; arithmetic operations; pipelining; CISC/RISC; memory hierarchy; virtual memory; input/output techniques; computer system components. This course may not be used towards degree requirements for an electrical engineering or a computer engineering baccalaureate degree.
Prerequisite: CS 201.

ECE 351 - Verilog and FPGA Design (4)
Introduces the students to the Verilog Hardware Description Language and describes its role in the electronic design automation environment. Students learn how to prototype digital designs using FPGAs.
Prerequisite: ECE 172 (with a grade of C or better).

ECE 361 - Computer System Organization (4)
Basic concepts of modern computer systems, computer programming, and data structures. Topics include system organization, programming and debugging tools, project and software management tools, C, C++, scripting languages, performance benchmarking, data structures, lists.
Prerequisite: ECE 102 and ECE 103 (with a grade of C or better) or CS 161 and CS 162 or equivalents.

ECE 362 - Embedded Operating Systems (4)
Introduction to the principles of modern operating systems design. Topics include: introduction to basic operating system concepts, processes, inter-process communication and concurrent programming, scheduling, memory management, file systems, device management, introductions to protection security, RTOS structure and operation. Linux will be used for class examples and lab assignments.
Prerequisite: ECE 361 (with a grade of C or better).

ECE 371 - Microprocessors (4)
Microprocessor instruction set architecture of a 32-bit microprocessor, structured development of assembly language programs, interfacing assembly language and high-level language programs, interrupt procedures, handshake data transfer, and interfacing with simple digital devices. Introductions to microcomputer memory systems, virtual memory, and overview of microprocessor evolution. Course includes two software/hardware development projects.
Prerequisite: ECE 103 (with a grade of C or better) or CS 162, ECE 172 (with a grade of C or better).

ECE 371L - Lab for ECE 371 (0)
Lab for ECE 371 Microprocessors.
Corequisite: ECE 371.

ECE 372 - Microprocessor Interfacing and Embedded Systems (5)
Teaches the hardware and software design of embedded microprocessor systems. Topics include sensor, transducer, and actuator interfacing; microprocessor-based process control; interfacing with display, vision, and speech systems; Real Time Operating System (RTOS) operation; creation of device drivers; intelligent robotics applications; and an introduction to the Unified Modeling Language (UML); weekly laboratory.
Prerequisite: ECE 371 (with a grade of C or better).
Corequisite: ECE 372L.

ECE 372L - Lab for ECE 372 (0)
Lab for ECE 372 Microprocessor Interfacing and Embedded Systems.
Corequisite: ECE 372.

ECE 373 - Embedded Operating Systems & Device Drivers (5)
Extends the microprocessor interfacing skills gained in ECE 372 to the design of hardware and device drivers for a microprocessor system with an embedded operating system. After a brief introduction to the basic structure and operations of the Linux OS, students will gain extensive practice developing Linux device drivers for a wide variety of hardware devices. Course will also include discussions of security and power management techniques commonly used in embedded microprocessors systems.
Prerequisite: ECE 372 (with a grade of C or better) or co-requisite CS 333.
Corequisite: ECE 373L.

ECE 373L - Lab for ECE 373 (0)
Lab for ECE 373.
Corequisite: ECE 373.
ECE 383U - Nanotechnology: Simulation & Design (4)

Introductory circuit simulation; properties of selected nanotechnology devices and systems; nanodevice simulation; development of nanodevice models. May be taken to satisfy the ECE technical writing requirement. This is the same course as SCI 383 and may be taken only once for credit.

Prerequisite: junior standing or permission of the instructor. Cross-Listed as: SCI 383U.

ECE 399 - Special Studies (0-8)
(Credit to be arranged.)

ECE 401 - Research (1-6)
(Credit to be arranged.) Consent of instructor.

ECE 402 - Independent Study (1-12)
(Credit to be arranged.)

ECE 403 - Honors Thesis (1-4)
(Credit to be arranged.) Consent of instructor.

ECE 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.) Consent of instructor.

ECE 405 - Reading and Conference (1-6)
(Credit to be arranged.) Consent of instructor.

ECE 406 - Special Projects (1-6)
(Credit to be arranged.) Consent of instructor.

ECE 407 - Seminar (1-6)
(Credit to be arranged.) Consent of instructor.

ECE 409 - Practicum (1-8)
(Credit to be arranged.) Consent of instructor.

ECE 410 - Selected Topics (0-6)
(Credit to be arranged.) Consent of instructor.

ECE 411 - Industry Design Processes (2)

Prepares students for ECE 412 and ECE 413 Senior Project Development I and II. Topics include: design documentation standards; building and managing effective teams; product development steps; developing and presenting project proposals; design processes; project scheduling and management; design to meet desired needs. Lectures and a team-based term project.

Prerequisite: EE students need ECE 315 and ECE 316 and ECE 321 and ECE 322 and ECE 331 and ECE 371 and EE 347 or CmpE students need ECE 315 and ECE 321 and ECE 361 and ECE 362 and ECE 371 and ECE 372. All courses must be passed with a grade of C or better.

ECE 412 - Senior Project Development I (4)

Project teams apply structured design methodology from ECE 411 to original projects with assistance of faculty and industrial/community advisers and after initial research, prepare written and oral project proposals. Students keep logs of their design work and submit weekly progress reports. Groups periodically give oral progress reports.

Prerequisite: ECE 411 (with a grade of C or better).

ECE 413 - Senior Project Development II (2)

Concludes development of design projects started in ECE 412. Students maintain logs of their individual work and submit weekly progress reports. Each group prepares final written and oral reports for the project sponsor. Each group creates a poster and participates in the poster session at the end of the quarter.

Prerequisite: ECE 412.

ECE 414 - Microsystem Integration and Packaging (4)

Introduction to integrated circuit packaging and microelectronics system integration; signal integrity; electrical, mechanical, and thermal aspects of microsystem package simulation and design; electronics packaging materials; microsystem reliability and failure mechanisms; current technology developments.

Prerequisite: senior or graduate standing in ECE. Cross-Listed as: Also offered for graduate-level credit as ECE 514 and may be taken only once for credit.
ECE 415 - Fundamentals of Semiconductor Devices (4)
Solid-state electronic devices; operation, fabrication and applications; single crystal growth, p-n junction, diodes, bipolar junction transistors, MOS capacitor, FETs. Course provides students with a sound understanding of existing devices and gives the necessary background to understand the problems and challenges of the micro-electronic manufacturing.
Also offered for graduate-level credit as ECE 515 and may be taken only once for credit. Prerequisite: Ph 319, ECE 322 (with a grade of C or better).

ECE 416 - Integrated Circuit (IC) Technologies (4)
Microelectronic processing of solid-state devices and integrated circuits. A base for understanding more advanced processing and what can and cannot be achieved through IC fabrication. Oxidation, diffusion, and ion implantation will be discussed. Bipolar, CMOS and BiCMOS fabrication processes. DRAM technology. Defining system rules for IC layout. Packaging and yield. New technologies, such as Wafer-Scale Integration and Multi-Chip Modules, will be discussed. Students will be introduced to the concept of designing for manufacturability.
Also offered for graduate-level credit as ECE 516 and may be taken only once for credit. Prerequisite: ECE 415 (with a grade of C or better).

ECE 417 - Nanoelectronics (4)
Operational principles and circuit applications of nanoelectronic devices: electron tunneling devices, (Esaki and resonant tunnel diodes, single electron transistors, nanodot arrays) carbon nanotubes, nanowires, molecular electronics, and spintronics; nano-fabrication techniques.
Also offered for graduate-level credit as ECE 517 and may be taken only once for credit. Prerequisite: ECE 322 (with a grade of C or better).

ECE 418 - Linear System Analysis I (4)
Also offered for graduate-level credit as ECE 518 and may be taken only once for credit. Prerequisite: ECE 315 (with a grade of C or better).

ECE 419 - Linear System Analysis II (4)
Also offered for graduate-level credit as ECE 519 and may be taken only once for credit. Prerequisite: ECE 418 (with a grade of C or better).

ECE 421 - Analog Integrated Circuit Design I (4)
Modeling of IC devices: transistors, capacitors, resistors. Temperature and device parameter variation effects. Building blocks of analog integrated circuits: current sources and mirrors, gain stages, level shifters, and output stages. Design of supply and temperature independent biasing schemes. CAD tools for circuit design and testing.
Also offered for graduate-level credit as ECE 521 and may be taken only once for credit. Prerequisite: ECE 323 (with a grade of C or better).

ECE 422 - Analog Integrated Circuit Design II (4)
Also offered for graduate-level credit as ECE 522 and may be taken only once for credit. Prerequisite: ECE 421 (with a grade of C or better).

ECE 424 - Engineering Professional Practice (2)
Prepares graduates for careers in electrical and computer engineering. Topics include ethical reasoning and considerations, strategies for job acquisition, career planning, certification and licensure, approaches to lifelong learning, and means of maintaining awareness of contemporary global and local societal issues.
Prerequisite: ECE 411 (with a grade of C or better).

ECE 425 - Digital Integrated Circuit Design I (4)
Students in electrical and computer engineering are introduced to the analysis and design of digital integrated circuits. A design project is an integral part of this course.
Also offered for graduate-level credit as ECE 525 and may be taken only once for credit. Prerequisite: ECE 321 (with a grade of C or better), Stat 351.

**ECE 426 - Digital Integrated Circuit Design II (4)**

Students are instructed in methods and the use of computer-aided design tools for the design and testing of large-scale integrated digital circuits. A design project is an integral part of this course.

Also offered for graduate-level credit as ECE 526 and may be taken only once for credit. Prerequisite: ECE 425 (with a grade of C or better).

**ECE 428 - VLSI Computer-Aided Design (4)**

Introduces basic techniques and algorithms for computer-aided design and optimization of VLSI circuits. The first part discusses VLSI design process flow for custom, ASIC and FPGA design styles and gives an overview of VLSI fabrication with emphasis on interconnections. The necessary background in graph theory and mathematical optimization is introduced. In the second part, application of different analytical and heuristic techniques to physical design (partitioning, placement, floor planning and routing) of VLSI circuits is studied. We shall emphasize VLSI design issues encountered in deep submicron technology. Throughout the course students will be exposed to research methodology and to a set of academic and commercial CAD tools for physical design.

Also offered for graduate-level credit as ECE 528 and may be taken only once for credit. Prerequisite: senior or graduate standing.

**ECE 431 - Microwave Circuit Design I (4)**

Also offered for graduate-level credit as ECE 531 and may be taken only once for credit. Prerequisite: ECE 332 (with a grade of C or better). Corequisite: ECE 431L.

**ECE 431L - Microwave Circuit Design I Lab (0)**

Lab for Engineering Electromagnetics I.

Corequisite: ECE 431.

**ECE 432 - Microwave Circuit Design II (4)**

Small-signal amplifier design for gain and noise. Non-linear effects and nonlinear circuit design. Oscillator design. Introduction to MMIC design. Design project is an integral part of this course.

Also offered for graduate-level credit as ECE 532 and may be taken only once for credit. Prerequisite: ECE 431 (with a grade of C or better). Corequisite: ECE 432L.

**ECE 432L - Microwave Circuit Design II Lab (0)**

Lab for Microwave Circuit Design II.

Corequisite: ECE 432.

**ECE 435 - Radar and Sonar Processing (4)**

Introduction to radar and sonar processing including detection and estimation theory, array processing, and signal propagation models. Course will concentrate on physics-based processing techniques applied to real systems with application to remote sensing, underwater sonar and medical imaging. Pulsed systems and spectroscopy may also be covered in the context of terahertz sensing. Coursework will involve readings from current scientific journals and MATLAB data processing.

Also offered for graduate-level credit as ECE 535 and may be taken only once for credit. Prerequisite: ECE 331 and ECE 332 (with a grade of C or better).

**ECE 445 - Power Electronic Systems Design I (4)**

Basic DC-to-DC switching converter topologies are presented. Operation in various modes is examined. Steady state design is undertaken using state space techniques and equivalent circuit modeling. Design issues concerning semiconductor devices and magnetics design are also addressed.

Also offered for graduate-level credit as ECE 545 and may be taken only once for credit. Prerequisite: ECE 322 (with a grade of C or better).

**ECE 446 - Power Electronic Systems Design II (4)**

Dynamic analysis of DC-to-DC converters is presented using state space techniques and the method of equivalent circuit modeling of the switching device. Different control techniques such as current programming and sliding mode control are introduced. Inverter and input current wave shaping rectifier circuits are also introduced.

Also offered for graduate-level credit as ECE 546 and may be taken only once for credit. Prerequisite: ECE 445 (with a grade of C or better).

**ECE 451 - Control Systems Design I (4)**

State space description of linear systems. Controllability and observability. Controller and observer design by pole placement. Optimal control, linear quadratic regulator, linear quadratic estimator (Kalman filter), linear quadratic Gaussian with loop transfer recovery design procedures.

Also offered for graduate-level credit as ECE 551 and may be taken only once for credit. Prerequisite:
ECE 317 (with a grade of C or better), Mth 261 or Mth 343.

**ECE 452 - Control Systems Design II (4)**
Discrete-time control systems, Z transforms, difference equations, pulse transfer function, sampling, data hold, block diagram reduction. Jury stability test. Various approaches to classical control design of discrete time controllers. State space analysis and design in discrete-time.

Also offered for graduate-level credit as ECE 552 and may be taken only once for credit. Prerequisite: ECE 451 (with a grade of C or better).

**ECE 455 - AI: Neural Networks I (4)**
Introduces approach for developing computing devices whose design is based on models taken from neurobiology and on notion of "learning." A variety of NN architectures and associated computational algorithms for accomplishing the learning are studied. Experiments with various of the available architectures are performed via a simulation package. Students do a major project on the simulator, or a special programming project.

Also offered for graduate-level credit as ECE 555 and may be taken only once for credit. Prerequisite: senior standing in ECE/CMPE or CS, or graduate standing.

**ECE 456 - AI: Neural Networks II (4)**
Focuses on applications. Topics in fuzzy set theory, control theory, and pattern recognition are studied and incorporated in considering neural networks. A design project (using NN simulator) in selected application area is done by each student.

Also offered for graduate-level credit as ECE 556 and may be taken only once for credit. Prerequisite: ECE 455 (with a grade of C or better).

**ECE 457 - Engineering Data Analysis and Modeling (4)**
Introduces statistical learning theory and practical methods of extracting information from data. Covers time-proven methods of statistical hypothesis testing, linear modeling, univariate smoothing, density estimation, nonlinear modeling, and multivariate optimization.

Also offered for graduate-level credit as ECE 557 and may be taken only once for credit. Prerequisite: Mth 343 and Stat 351.

**ECE 461 - Communication Systems Design I (4)**
An introduction to signals and noise in electrical communication systems; signal spectra and filters, noise and random signals, baseband transmission of analog and digital signals, linear modulation and exponential modulation.

Also offered for graduate-level credit as ECE 561 and may be taken only once for credit. Prerequisite: ECE 223 (with a grade of C or better).

**ECE 462 - Communication Systems Design II (4)**
Study of the relative merits of communication systems, noise in continuous wave and pulse modulation schemes, information theory, digital data systems, and advanced topics.

Also offered for graduate-level credit as ECE 562 and may be taken only once for credit. Prerequisite: ECE 461 (with a grade of C or better).

**ECE 478 - Intelligent Robotics I (4)**

Also offered for graduate-level credit as ECE 578 and may be taken only once for credit. Prerequisite: ECE 372 (with a grade of C or better).

**ECE 479 - Intelligent Robotics II (4)**

Also offered for graduate-level credit as ECE 579 and may be taken only once for credit. Prerequisite: ECE 478 (with a grade of C or better).

**ECE 481 - ASIC: Modeling and Synthesis (4)**
Covers the fundamentals of the ASIC design process. The topics include ASIC design Flow, basic HDL constructs, test benches, modeling combinational and synchronous logic, modeling finite state machines, multiple clock domain designs, qualitative design issues, ASIC constructions.

Also offered for graduate-level credit as ECE 581 and may be taken only once for credit. Prerequisite: ECE 371 (with a grade of C or better).
ECE 483 - Low Power Digital IC Design (4)
Introduction to the existing techniques for IC power modeling, optimization, and synthesis. Topics include: sources of power dissipation, design for low power, voltage scaling approaches, power analysis techniques, power optimization techniques, low-power system-level designs. Focus on abstraction, modeling, and optimization at all levels of design hierarchy, including the technology, circuit, layout, logic, architectural, and algorithmic levels.
Also offered for graduate-level credit as ECE 583 and may be taken only once for credit. Prerequisite: ECE 425 (with a grade of C or better).

ECE 485 - Microprocessor System Design (4)
Advanced hardware and software design of desktop type microcomputer systems. Topics include large project design management and documentation; DRAM system design, cache organization, connections, and coherency; memory hierarchy and virtual memory; I/O buses such as AGP, PCI-X, and Infiniband; multithreaded operating system considerations; JTAG(IEEE1149.1) and Design For Test; high frequency signal integrity; and power supply considerations. Team-based, independent design projects are a substantial part of the homework for this class.
Also offered for graduate-level credit as ECE 585 and may be taken only once for credit. Prerequisite: ECE 372 (with a grade of C or better).

ECE 486 - Computer Architecture (4)
An introduction to the key concepts of computer system architecture and design. Topics include the design and analysis of instruction set architectures, memory systems, and high-performance I/O systems; basic CPU implementation strategies; basic pipelined CPU implementation; performance analysis; and a survey of current architectures.
Also offered for graduate-level credit as ECE 586 and may be taken only once for credit. Prerequisite: ECE 485 (with a grade of C or better).

ECE 491 - Laser Systems Design I (4)
Laser topics: especially design of laser, fiberoptic, and related optical systems. Formation and propagation of modes and beams, matrix methods for the analysis and synthesis of optical systems.
Also offered for graduate-level credit as ECE 591 and may be taken only once for credit. Prerequisite: ECE 331 (with a grade of C or better).

ECE 492 - Laser Systems Design II (4)
Also offered for graduate-level credit as ECE 592 and may be taken only once for credit.

ECE 501 - Research (1-12)
(Credit to be arranged.) Consent of instructor.

ECE 502 - Independent Study (1-12)
(Credit to be arranged.)

ECE 503 - Thesis (1-12)
(Credit to be arranged.) Consent of instructor.

ECE 504 - Cooperative Education/Internship (1-12)
(Credit to be arranged.) Consent of instructor.

ECE 505 - Reading and Conference (1-6)
(Credit to be arranged.) Consent of instructor.

ECE 506 - Special Projects (1-9)
(Credit to be arranged.) Consent of instructor.

ECE 507 - Seminar (1-6)
(Credit to be arranged.) Consent of instructor.

ECE 508 - Workshop (1-9)
(Credit to be arranged.)

ECE 510 - Selected Topics (0-6)
(Credit to be arranged.) Consent of instructor.

ECE 511 - Solid State Electronics I (4)
The solid state electronics course sequence deals with advanced topics in solid state device physics and modeling. Following a discussion on semiconductor properties and modeling as a function of doping and temperature, advanced bipolar transistor structures and MOS transistors will be treated in detail. Device models aimed at numerical circuit simulators will be
discussed. This is the first course in a sequence of three: ECE 511, ECE 512, and ECE 513.

Also offered for ECE 611 and may be taken only once for credit.

**ECE 512 - Solid State Electronics II (4)**

The solid state electronics course sequence deals with advanced topics in solid state device physics and modeling. Following a discussion on semiconductor properties and modeling as a function of doping and temperature, advanced bipolar transistor structures and MOS transistors will be treated in detail. Device models aimed at numerical circuit simulators will be discussed. This is the second course in a sequence of three: ECE 511, ECE 512, and ECE 513.

Also offered for ECE 612 and may be taken only once for credit.

**ECE 513 - Solid State Electronics III (4)**

The solid state electronics course sequence deals with advanced topics in solid state device physics and modeling. Following a discussion on semiconductor properties and modeling as a function of doping and temperature, advanced bipolar transistor structures and MOS transistors will be treated in detail. Device models aimed at numerical circuit simulators will be discussed. This is the third course in a sequence of three: ECE 511, ECE 512, and ECE 513.

Also offered for ECE 613 and may be taken only once for credit. Prerequisite: ECE 323.

**ECE 514 - Microsystem Integration and Packaging (4)**

Introduction to integrated circuit packaging and microelectronics system integration; signal integrity; electrical, mechanical, and thermal aspects of microsystem package simulation and design; electronics packaging materials; microsystem reliability and failure mechanisms; current technology developments.

Also offered for undergraduate-level credit as ECE 414 and may be taken only once for credit. Prerequisite: ECE 323.

**ECE 515 - Fundamentals of Semiconductor Devices (4)**

Solid-state electronic devices; operation, fabrication and applications; single crystal growth, p-n junction, diodes, bipolar junction transistors, MOS capacitor, FETs. Course provides students with a sound understanding of existing devices and gives the necessary background to understand the problems and challenges of the micro-electronic manufacturing.

Also offered for undergraduate-level credit as ECE 415 and may be taken only once for credit. Prerequisite: Ph 319, ECE 322.

**ECE 516 - Integrated Circuit (IC) Technologies (4)**

Microelectronic processing of solid-state devices and integrated circuits. A base for understanding more advanced processing and what can and cannot be achieved through IC fabrication. Oxidation, diffusion, and ion implantation will be discussed. Bipolar, CMOS and BiCMOS fabrication processes. DRAM technology. Defining system rules for IC layout. Packaging and yield. New technologies, such as Wafer-Scale Integration and Multi-Chip Modules, will be discussed. Students will be introduced to the concept of designing for manufacturability.

Also offered for undergraduate-level credit as ECE 416 and may be taken only once for credit. Prerequisite: ECE 415/515.

**ECE 517 - Nanoelectronics (4)**

Operational principles and circuit applications of nanoelectronic devices: electron tunneling devices, (Esaki and resonant tunnel diodes, single electron transistors, nanodot arrays) carbon nanotubes, nanowires, molecular electronics, and spintronics; nanofabrication techniques.

Also offered for undergraduate-level credit as ECE 417 and may be taken only once for credit.

**ECE 518 - Linear System Analysis I (4)**

Also offered for undergraduate-level credit as ECE 418 and may be taken only once for credit. Prerequisite: ECE 315.

**ECE 519 - Linear System Analysis II (4)**

Also offered for undergraduate-level credit as ECE 419 and may be taken only once for credit. Prerequisite: ECE 418/518.
ECE 521 - Analog Integrated Circuit Design I (4)
Modeling of IC devices: transistors, capacitors, resistors. Temperature and device parameter variation effects. Building blocks of analog integrated circuits: current sources and mirrors, gain stages, level shifters, and output stages. Design of supply and temperature independent biasing schemes. CAD tools for circuit design and testing.
Also offered for undergraduate-level credit as ECE 421 and may be taken only once for credit.

ECE 522 - Analog Integrated Circuit Design II (4)
Also offered for undergraduate-level credit as ECE 422 and may be taken only once for credit.
Prerequisite: ECE 421/521.

ECE 523 - Analog Integrated Circuit Design III (4)
Integrated-circuit oscillators and timers, frequency-to-voltage converters, phase-locked-loop circuits, IC filters, self-tuning filters, digital-to-analog converters, analog-to-digital converters, CAD tools for circuit design and testing.
Prerequisite: ECE 421/521.

ECE 524 - Advanced Embedded In Silico and In Materio Computing (4)
Introduces and develops the advanced hardware and software concepts, design methodologies, and programming paradigms of emerging embedded in silico and in materio computing systems. Topics covered: physics of computation, spatial computing paradigms, self-assembly and self-organization, morphogenetic systems, molecular and nano-scale computing, non-classical computing and non-classical programming paradigms, amorphous computing.
Also offered as ECE 624 and may be taken only once for credit.
Prerequisite: ECE 371 or permission of the instructor.

ECE 525 - Digital Integrated Circuit Design I (4)
Students in electrical and computer engineering are introduced to the analysis and design of digital integrated circuits. A design project is an integral part of this course.
Also offered for undergraduate-level credit as ECE 425 and may be taken only once for credit.

ECE 526 - Digital Integrated Circuit Design II (4)
Students are instructed in methods and the use of computer-aided design tools for the design and testing of large-scale integrated digital circuits. A design project is an integral part of this course.
Also offered for undergraduate-level credit as ECE 426 and may be taken only once for credit.
Prerequisite: ECE 425/525.

ECE 527 - High-performance Digital Systems (4)
The use of computer-aided design tools in high performance digital systems is explored. The trade-offs between automated and hand design are examined in the context of performance vs. development time. The impact of new developments in MOS circuit technology are also examined.
Also offered as ECE 627 and may be taken only once for credit.
Prerequisite: ECE 426/526.

ECE 528 - VLSI Computer-Aided Design (4)
Introduces basic techniques and algorithms for computer-aided design and optimization of VLSI circuits. The first part discusses VLSI design process flow for custom, ASIC and FPGA design styles and gives an overview of VLSI fabrication with emphasis on interconnections. The necessary background in graph theory and mathematical optimization is introduced. In the second part, application of different analytical and heuristic techniques to physical design (partitioning, placement, floorplanning and routing) of VLSI circuits is studied. We shall emphasize VLSI design issues encountered in deep submicron technology. Throughout the course students will be exposed to research methodology and to a set of academic and commercial CAD tools for physical design.
Also offered for undergraduate-level credit as ECE 428 and may be taken only once for credit.
Prerequisite: senior or graduate standing.

ECE 529 - CAD for ULSI and Emerging Technologies (4)
Course will cover Computer-Aided Design (CAD) challenges for ultra submicron CMOS system design and circuit and system design in new emerging technologies. It will cover (1) system design approaches and optimization techniques in the presence of process and environmental parameter variations, (2) statistical approaches to circuit and system design, (3) physical design (layout) role in performance evaluation of digital systems, and (4) design and architecture outlook for beyond CMOS Switches.
ECE 531 - Microwave Circuit Design I (4)
Also offered for undergraduate-level credit as ECE 431 and may be taken only once for credit.
Prerequisite: ECE 428/528 or consent of instructor.
Corequisite: ECE 531L.
ECE 531L - Microwave Circuit Design I Lab (0)
Lab for Microwave Circuit Design I.
Corequisite: ECE 531.
ECE 532 - Microwave Circuit Design II (4)
Small-signal amplifier design for gain and noise. Non-linear effects and non-linear circuit design. Oscillator design. Introduction to MMIC design. Design project is an integral part of this course.
Also offered for undergraduate-level credit as ECE 432 and may be taken only once for credit.
Prerequisite: ECE 431/531. Corequisite: ECE 532L.
ECE 532L - Microwave Circuit Design II Lab (0)
Lab for Microwave Circuit Design II.
Corequisite: ECE 532.
ECE 533 - Advanced Electromagnetics (4)
Advanced course in electromagnetics. Mathematical methods, electrostatics, boundary value problems, magnetostatics, time varying fields, plane waves.
Also offered as ECE 633 and may be taken only once for credit.
Prerequisite: ECE 331.
ECE 534 - Acoustics (4)
Also offered as ECE 634 and may be taken only once for credit.
Prerequisite: graduate standing.
ECE 535 - Radar and Sonar Processing (4)
Introduction to radar and sonar processing including detection and estimation theory, array processing, and signal propagation models. Course will concentrate on physics-based processing techniques applied to real systems with application to remote sensing, underwater sonar and medical imaging. Pulsed systems and spectroscopy may also be covered in the context of terahertz sensing.
Coursework will involve readings from current scientific journals and MATLAB data processing.
Also offered for undergraduate-level credit as ECE 435 and may be taken only once for credit.
ECE 538 - Statistical Signal Processing I: Nonparametric Estimation (4)
Unified introduction to the theory, implementation, and applications of statistical signal processing methods. Focus on estimation theory, random signal modeling, characterization of stochastic signals and systems, and nonparametric estimation. Designed to give a solid foundation in the underlying theory balanced with a discussion of the practical advantages and limitations of nonparametric estimation methods.
Also offered as ECE 638 and may be taken only once for credit.
ECE 539 - Statistical Signal Processing II: Linear Estimation (4)
Unified introduction to the theory, implementation, and application of statistical signal processing methods. Focus on optimum linear filters, least square filters, the Kalman filter, signal modeling, and parametric spectral estimation. Designed to give a solid foundation in the underlying theory balanced with examples of practical applications and limitations. Recommended: ECE 538/638.
Also offered as ECE 639 and may be taken only once for credit.
ECE 540 - System-on-Chip Design with FPGAs (4)
Tools and techniques for designing, verifying and implementing System-on-Chip (SoC) designs using an FPGA development board. Along with class work, students take several projects from concept through synthesis and debug using key techniques for optimizing a design. Expected preparation: ECE 351 Hardware Description Languages and Prototyping or equivalent.
Prerequisite: Graduate standing. Student must be familiar with Verilog HDL or VHDL. Knowledge of a computer programming language such as Cor Assembly Language is helpful but not required.
ECE 543 - Power Systems Control (4)
State estimation, security and contingency monitoring, automatic generation control, economic dispatch, optimal power flow, power system stability, unit commitment and pool operation.
Prerequisite: ECE 448/548, or instructor permission.
ECE 544 - Embedded System Design with FPGAs (4)

Students take several embedded system projects from concept through debug on an FPGA development board while learning how to design and implement integrated hardware/software applications that interact with "real world" devices. Xilinx software tools and the GNU toolchain are used. Programming is done in C/C++.

Prerequisite: ECE 540 or consent of instructor.

ECE 545 - Power Electronic Systems Design I (4)

Basic DC-to-DC switching converter topologies are presented. Operation in various modes is examined. Steady state design is undertaken using state space techniques and equivalent circuit modeling. Design issues concerning semiconductor devices and magnetics design are also addressed.

Also offered for undergraduate-level credit as ECE 445 and may be taken only once for credit.

ECE 546 - Power Electronic Systems Design II (4)

Dynamic analysis of DC-to-DC converters is presented using state space techniques and the method of equivalent circuit modeling of the switching device. Different control techniques such as current programming and sliding mode control are introduced. Inverter and input current waveform shaping rectifier circuits are also introduced.

Also offered for undergraduate-level credit as ECE 446 and may be taken only once for credit.

Prerequisite: ECE 445/545.

ECE 551 - Control Systems Design I (4)

State space description of linear systems. Controllability and observability. Controller and observer design by pole placement. Optimal control, linear quadratic regulator, linear quadratic estimator (Kalman filter), linear quadratic Gaussian with loop transfer recovery design procedures.

Also offered for undergraduate-level credit as ECE 451 and may be taken only once for credit.

ECE 552 - Control Systems Design II (4)

Discrete-time control systems, z transforms, difference equations, pulse transfer function, sampling, data hold, block diagram reduction, Jury stability test. Various approaches to classical control design of discrete time controllers. State space analysis and design in discrete-time.

Also offered for undergraduate-level credit as ECE 452 and may be taken only once for credit.

Prerequisite: ECE 451/551.

ECE 553 - Control Systems Design III (4)

Topics in modern feedback control theory of nonlinear and multivariable systems, including considerations of stochastic and optimal control. Design methods of computer workstations.

Prerequisite: ECE 452/552.

ECE 555 - AI: Neural Networks I (4)

Introduces approach for developing computing devices whose design is based on models taken from neurobiology and on notion of "learning." A variety of NN architectures and associated computational algorithms for accomplishing the learning are studied. Experiments with various of the available architectures are performed via a simulation package. Students do a major project on the simulator, or a special programming project.

Also offered for undergraduate-level credit as ECE 455 and may be taken only once for credit.

Prerequisite: senior standing in ECE/CPE or CS, or graduate standing.

ECE 556 - AI: Neural Networks II (4)

Focuses on applications. Topics in fuzzy set theory, control theory, and pattern recognition are studied and incorporated in considering neural networks. A design project (using NN simulator) in selected application area is done by each student.

Also offered for undergraduate-level credit as ECE 456 and may be taken only once for credit.

Prerequisite: ECE 455/555.

ECE 557 - Engineering Data Analysis and Modeling (4)

Introduces statistical learning theory and practical methods of extracting information from data. Covers time-proven methods of statistical hypothesis testing, linear modeling, univariate smoothing, density estimation, nonlinear modeling, and multivariate optimization.

Also offered for undergraduate-level credit as ECE 457 and may be taken only once for credit.

ECE 558 - Embedded Systems Programming (4)

Equips students with the skills required to program modern embedded systems. Topics include object oriented and event-based programming, multitasking, advanced sensors, databases, location-based services, and networking. Heavily project-oriented, allowing students to acquire hands-on experiences based on the foundational material taught in the lectures.

Prerequisite: ECE 485 or ECE 585. Expected preparation: CS 202 and/or experience with Object-Oriented programming and Java.
ECE 559 - Genetic Algorithms (4)
Theory and applications of genetic algorithms. Study of the Schema and No Free Lunch theorems. Techniques for using genetic algorithms to solve multi-objective and NP-hard optimization problems from physical science, natural science, engineering and mathematical fields. Investigation of game theory problems, evolvable hardware problems, and constrained parameter optimization problems. Survey of current technical literature in evolutionary computation.
Prerequisite: CS 163 or equivalent.

ECE 560 - Assertion Based Verification (4)
Exploration of practical approaches to functional verification of industrial scale RTL designs using assertions and formal verification tools. Topics include pre-silicon simulation and formal verification, System Verilog Assertions, and system verification problem solving approaches. Course will emphasize hands on experience writing assertions and using formal verification techniques. Familiarity with computer architecture and hardware description languages is recommended.
Prerequisite: Graduate standing in ECE or permission of instructor.

ECE 561 - Communication Systems Design I (4)
An introduction to signals and noise in electrical communication systems; signal spectra and filters, noise and random signals, base band transmission of analog and digital signals, linear modulation and exponential modulation.
Also offered for undergraduate-level credit as ECE 461 and may be taken only once for credit.

ECE 562 - Communication Systems Design II (4)
Study of the relative merits of communication systems, noise in continuous wave and pulse modulation schemes, information theory, digital data systems, and advanced topics.
Also offered for undergraduate-level credit as ECE 462 and may be taken only once for credit.
Prerequisite: ECE 461/561.

ECE 567 - Statistical Communications Theory (4)
As an advanced course in communication theory, topics of statistical decision, estimation, and modulation theory are introduced. Statistical aspects of transmission detection and error detection/correction schemes are covered.
Also offered as ECE 667 and may be taken only once for credit. Prerequisite: ECE 461/561, 565/665.

ECE 568 - Introductory Image Processing (4)
Two-dimensional systems, image perception, image digitization (sampling and quantization), image transforms (Fourier, Cosine, K-L transforms), image enhancement (histogram equalization, filtering, spatial operation).
Also offered as ECE 668 and may be taken only once for credit. Prerequisite: ECE 223.

ECE 569 - Advanced Image Processing (4)
Introduction to random fields, image representation by stochastic models, image restoration (Wiener and Kalman filtering), image coding and compression (predictive and transform coding, vector quantization).
Also offered as ECE 669 and may be taken only once for credit. Prerequisite: ECE 565/665, ECE 568/668.

ECE 570 - Computer Vision (4)
Image detection and registration, image analysis (texture extraction, edge detection, segmentation), image reconstruction (radon transform, Fourier reconstruction), stereo imaging and motion analysis, pattern recognition (recognition, classification and clustering).
Prerequisite: ECE 568/668.

ECE 571 - Introduction to System Verilog for Design and Verification (4)
Introduction to System Verilog: language features to support both design and verification. Good practices for simulation and synthesis, techniques for constructing reusable testbenches. Additional topics may include hardware acceleration and transaction-based verification techniques. Course includes homework and significant final project with presentation. Familiarity with Verilog and finite state machines required.
Prerequisite: One of following: ECE 351, ECE 540, ECE 544 or ECE 508: Verilog Workshop, or permission of instructor.

ECE 572 - Advanced Logic Synthesis (4)
synthesis programs, systems, and methodologies. Project that continues in ECE 573.

Also offered as ECE 672 and may be taken only once for credit.

**ECE 573 - Control Unit Design (4)**

Also offered as ECE 673 and may be taken only once for credit. Prerequisite: ECE 572/672.

**ECE 574 - High-level Synthesis and Design Automation (4)**

Also offered as ECE 674 and may be taken only once for credit. Prerequisite: ECE 573/673.

**ECE 575 - Introduction to Integrated Circuit Test (4)**

Course will cover the traditional role of IC test in parametric and functional testing and the changing role of IC testing in semiconductor design and manufacturing. The course is divided into three parts. The first part reviews integrated circuit technologies and fault modeling. The second introduces digital IC test, DC parametric testing, and functional and structural testing. The third part examines technology trends.

Also offered as ECE 675 and may be taken only once for credit. Prerequisite: ECE 425/525, ECE 416/516.

**ECE 576 - Computational Methods in Electrical Engineering (4)**

Students are introduced to advanced mathematical techniques applicable to electrical engineering. Content includes topics such as: optimization techniques, solution of partial differential equations, solution of eigenvalue problems, Fourier methods, vector space operations, and complex variable theory. Additional mathematical topics will be introduced as application examples at the discretion of the instructor.

Also offered as ECE 676 and may be taken only once for credit. Prerequisite: graduate standing.

**ECE 577 - Interactive Computer Graphics (4)**

An introduction to the principles of interactive computer graphics including logical devices, physical devices, transformation, viewing and clipping in two and three dimensions.

Prerequisite: ECE 575/675.

**ECE 578 - Intelligent Robotics I (4)**

Also offered for undergraduate-level credit as ECE 478 and may be taken only once for credit. Prerequisite: ECE 372.

**ECE 579 - Intelligent Robotics II (4)**

Also offered for undergraduate-level credit as ECE 479 and may be taken only once for credit. Prerequisite: ECE 478/578.

**ECE 581 - ASIC: Modeling and Synthesis (4)**

Covers the fundamentals of the ASIC design process. The topics include ASIC design Flow, basic HDL constructs, test benches, modeling combinational and synchronous logic, modeling finite state machines, multiple clock domain designs, qualitative design issues, ASIC constructions.

Also offered for undergraduate-level credit as ECE 481 and may be taken only once for credit. Prerequisite: ECE 371.
ECE 582 - Formal Verification of Hardware/Software Systems (4)

Objective is to introduce the main formal verification methods of hardware/software systems. Topics to be covered include: formal logics for system verification (first-order logic, higher order logic, temporal logic), formal specifications, theorem proving systems, microprocessor verification, and system software verifications.

Also offered as ECE 682 and may be taken only once for credit. Prerequisite: ECE 371, or CS 321, CS 333.

ECE 583 - Low Power Digital IC Design (4)

Introduction to the existing techniques for IC power modeling, optimization, and synthesis. Topics include: sources of power dissipation, design for low power, voltage scaling approaches, power analysis techniques, power optimization techniques, low-power system-level designs. Focus on abstraction, modeling, and optimization at all levels of design hierarchy, including the technology, circuit, layout, logic, architectural, and algorithmic levels.

Also offered for undergraduate-level credit as ECE 483 and may be taken only once for credit. Prerequisite: ECE 425/525.

ECE 584 - Foundations of Cyber-Physical Systems (4)

Introduction to the design of microcontroller based embedded systems. Focus is on embedded systems where design seamlessly integrates computational resources with physical systems. Topics covered include: sampling theory, sensor/actuator interfacing, real-time and fault-tolerant embedded system design. Basics of wireless sensor networks. Modeling and formal verification techniques.

Prerequisite: Graduate standing.

ECE 585 - Microprocessor System Design (4)

Advanced hardware and software design of desktop type microcomputer systems. Topics include large project design management and documentation; DRAM system design, cache organization, connections, and coherency; the memory hierarchy and virtual memory; I/O buses such as AGP, PCI-X, and Infiniband; multithreaded operating system considerations; JTAG(IEEE1149.1) and Design For Test; high frequency signal integrity; and power supply considerations. Team-based, independent design projects are a substantial part of the homework for this class.

Also offered for undergraduate-level credit as ECE 485 and may be taken only once for credit. Prerequisite: ECE 372.

ECE 586 - Computer Architecture (4)

An introduction to the key concepts of computer system architecture and design. Topics include the design and analysis of instruction set architectures, memory systems, and high-performance IO systems; basic CPU implementation strategies; basic pipelined CPU implementation; performance analysis; and a survey of current architectures.

Also offered for undergraduate-level credit as ECE 486 and may be taken only once for credit. Prerequisite: ECE 485/585.

ECE 587 - Advanced Computer Architecture I (4)

An advanced course in computer system architecture and design. Key topics include advanced CPU implementation techniques including pipelining, dynamic instruction issue, superscalar architectures, and vector processing; high performance memory and IO systems design; an introduction to parallel computers; and a survey of current literature in computer architecture and current advanced computer systems. Students will begin a project that will be completed in ECE 588/688.

Also offered as ECE 687 and may be taken only once for credit. Prerequisite: 486/586.

ECE 588 - Advanced Computer Architecture II (4)

Discussion of parallel computer architectures and their uses. Key topics include MIMD architectures; associative processing; shared-memory and message-passing architectures; dataflow and reduction architectures; special-purpose processors; design and analysis of interconnection networks; and an overview of parallel software issues. Students will complete the project started in ECE 587/687.

Also offered as ECE 688 and may be taken only once for credit. Prerequisite: ECE 587/687.

ECE 589 - Performance Analysis of Local Area Networks (4)

ECE 590 - Digital Design Using Hardware Description Languages (4)

An introductory graduate class to digital design using hardware description languages and to advanced digital design for programmable devices. Class
covers the following topics: fundamentals of Hardware Description Languages; VHDL syntax and semantics; behavioral, functional, structural and register-transfer descriptions; combinational circuits; finite state machines; levels of system simulation; arithmetic and sequential blocks and interfaces; pipelined and systolic processors; advanced VHDL language features and extensions; specification of controllers and data path architectures; reconfigurable Field Programmable Gate Array systems; verilog for VHDL programmers. Students must complete two computer-based software mini-projects and a project.

Also offered as ECE 690 and may be taken only once for credit. Prerequisite: graduate standing in ECE.

ECE 591 - Laser Systems Design I (4)
Laser topics: especially design of laser, fiberoptic, and related optical systems. Formation and propagation of modes and beams, matrix methods for the analysis and synthesis of optical systems.

Also offered for undergraduate-level credit as ECE 491 and may be taken only once for credit. Prerequisite: ECE 331.

ECE 592 - Laser Systems Design II (4)
Interaction of light with atoms, Maxwell Schrodinger analysis and rate equation approximations. Effects of gain, dispersion, and saturation in the design of laser amplifiers and oscillators.

Also offered for undergraduate-level credit as ECE 492 and may be taken only once for credit.

ECE 593 - Fundamentals of Pre-Silicon Validation (4)
Introduction to theory, strategy, and methods to validate functionality of digital integrated circuit using simulation based techniques. Topics include complete validation flow, validation environment, stimulus, checking, and coverage. Familiarity with computer architecture and System Verilog is required. A design project is an integral part of this course.

Prerequisite: ECE 571 or permission of instructor.

ECE 594 - Applied Optics (4)
An overview of optics and such principal applications as fiberoptics; chemical, biological, and physical sensors; optical information processing, acousto-optics; lasers and detectors. This course is the same as Ph 564; course may only be taken once for credit. Recommended prerequisites: Ph 203 or 213 or 223, Mth 261.

Cross-Listed as: Ph 564.

ECE 595 - Emulation and Functional Specification Verification (4)
Introduction to theory and techniques to verify digital circuit designs with emphasis on non-simulation methods. Topics include hardware emulation, formal verification, and abstract system specification. Familiarity with computer architecture and System Verilog is required. A design verification project is an integral part of this course.

Prerequisite: ECE 571 or permission of instructor.

ECE 596 - Optoelectronics II (4)
Nonlinear optics, parametric oscillation, frequency conversion, self-focusing, acousto-optics, Brillouin scattering, Raman scattering, magneto-optics, opto-optics.

ECE 597 - Post-Silicon Electrical Validation (4)
Methods, tools, and processes used to validate electrical concerns of modern electronic designs, including silicon, circuit boards, and communication interfaces. Includes validation of design specifications and manufacturing processes. Hardware and software tools. Special emphasis to complex microprocessor based systems, though material applicable to any electronic system.

Prerequisite: Graduate standing in ECE or permission of instructor.

ECE 598 - Introduction to Quantum Mechanics (4)
An introduction to the formulation and application of wave mechanics; the Schrodinger equation and its application to time-independent problems (both one- and three-dimensional problems); identical particles; approximation methods including mainly time-independent perturbations. Brief exploration of the potential applications of quantum mechanics to engineering; quantum nano-structures and quantum computers. This course is the same as Ph 511; course may only be taken once for credit. Recommended prerequisites: Ph 318 or 311, Mth 261.

Cross-Listed as: Ph 511.

ECE 601 - Research (1-12)
(Credit to be arranged.)

ECE 603 - Dissertation (1-12)
(Credit to be arranged.)
ECE 604 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

ECE 605 - Reading And Conference (1-9)
(Credit to be arranged.)

ECE 606 - Special Problems/Projects (1-9)
(Credit to be arranged.)

ECE 607 - Seminar (1-9)
(Credit to be arranged.)

ECE 610 - Selected Topics (1-9)
(Credit to be arranged.)

ECE 611 - Solid State Electronics I (4)
The solid state electronics course sequence deals with advanced topics in solid state device physics and modeling. Following a discussion on semiconductor properties and modeling as a function of doping and temperature, advanced bipolar transistor structures and MOS transistors will be treated in detail. Device models aimed at numerical circuit simulators will be discussed. This is the first course in a sequence of three: ECE 611, ECE 612, and ECE 613.

Also offered for ECE 511 and may be taken only once for credit.

ECE 612 - Solid State Electronics II (4)
The solid state electronics course sequence deals with advanced topics in solid state device physics and modeling. Following a discussion on semiconductor properties and modeling as a function of doping and temperature, advanced bipolar transistor structures and MOS transistors will be treated in detail. Device models aimed at numerical circuit simulators will be discussed. This is the second course in a sequence of three: ECE 611, ECE 612, and ECE 613.

Also offered for ECE 512 and may be taken only once for credit.

ECE 613 - Solid State Electronics III (4)
The solid state electronics course sequence deals with advanced topics in solid state device physics and modeling. Following a discussion on semiconductor properties and modeling as a function of doping and temperature, advanced bipolar transistor structures and MOS transistors will be treated in detail. Device models aimed at numerical circuit simulators will be discussed. This is the third course in a sequence of three: ECE 611, ECE 612, and ECE 613.

Prerequisite: ECE 323.

ECE 623 - Analog Integrated Circuit Design III (4)
Integrated-circuit oscillators and timers, frequency-to-voltage converters, phase-locked-loop circuits, IC filters, self-tuning filters, digital-to-analog converters, analog-to-digital converters, CAD tools for circuit design and testing.

Also offered for ECE 523 and may be taken only once for credit. Prerequisite: ECE 422/522.

ECE 624 - Advanced Embedded In Silico and In Materio Computing (4)
Introduces and develops the advanced hardware and software concepts, design methodologies, and programming paradigms of emerging embedded in silico and in materio computing systems. Topics covered: physics of computation, spatial computing paradigms, self-assembly and self-organization, morphogenetic systems, molecular and nano-scale computing, non-classical computing and non-classical programming paradigms, amorphous computing.

Also offered as ECE 524 and may be taken only once for credit. Prerequisite: ECE 371 or permission of the instructor.

ECE 627 - High-performance Digital Systems (4)
The use of computer-aided design tools in high performance digital systems is explored. The trade-offs between automated and hand design are examined in the context of performance vs. development time. The impact of new developments in MOS circuit technology are also examined.

Also offered as ECE 527 and may be taken only once for credit. Prerequisite: ECE 426/526.

ECE 629 - CAD for ULSI and Emerging Technologies (4)
Course will cover Computer-Aided Design (CAD) challenges for ultra submicron CMOS system design and circuit and system design in new emerging technologies. It will cover (1) system design approaches and optimization techniques in the presence of process and environmental parameter variations (2) statistical approaches to circuit and system design, (3) physical design (layout) role in performance evaluation of digital systems, and (4) design and architecture outlook for beyond CMOS Switches.
Also offered as ECE 529 and may be taken only once for credit. Prerequisite: ECE 428/528 or consent of instructor.

**ECE 633 - Advanced Electromagnetics (4)**

Advanced course in electromagnetics. Mathematical methods, electrostatics, boundary value problems, magnetostatics, time varying fields, plane waves.

Also offered as ECE 533 and may be taken only once for credit.

**ECE 634 - Acoustics (4)**

Also offered as ECE 534 and may be taken only once for credit. Prerequisite: graduate standing.

**ECE 635 - Electromagnetic Fields and Interactions (4)**

Classical description of the electromagnetic field: classical electron theory and plasmas. This course is the same as Ph 631, Ph 632, Ph 633; course may only be taken once for credit. This is the first course in a sequence of three: ECE 635, ECE 636, and ECE 637.

Prerequisite: ECE 331 or Ph 431. Cross-Listed as: Ph 631.

**ECE 636 - Electromagnetic Fields and Interactions (4)**

Classical description of the electromagnetic field: classical electron theory and plasmas. This course is the same as Ph 631, Ph 632, Ph 633; course may only be taken once for credit. This is the second course in a sequence of three: ECE 635, ECE 636, and ECE 637.

Prerequisite: ECE 331 or Ph 431. Cross-Listed as: Ph 632.

**ECE 637 - Electromagnetic Fields and Interactions (4)**

Classical description of the electromagnetic field: classical electron theory and plasmas. This course is the same as Ph 631, Ph 632, Ph 633; course may only be taken once for credit. This is the third course in a sequence of three: ECE 635, ECE 636, and ECE 637.

Prerequisite: ECE 331 or Ph 431. Cross-Listed as: Ph 633.

**ECE 638 - Statistical Signal Processing I: Nonparametric Estimation (4)**

Unified introduction to the theory, implementation, and applications of statistical signal processing methods. Focus on estimation theory, random signal modeling, characterization of stochastic signals and systems, and nonparametric estimation. Designed to give a solid foundation in the underlying theory balanced with a discussion of the practical advantages and limitations of nonparametric estimation methods. Also offered as ECE 538 and may be taken only once for credit.

Also offered as ECE 538 and may be taken only once for credit.

**ECE 639 - Statistical Signal Processing II: Linear Estimation (4)**

Unified introduction to the theory, implementation, and application of statistical signal processing methods. Focus on optimum linear filters, least square filters, the Kalman filter, signal modeling, and parametric spectral estimation. Designed to give a solid foundation in the underlying theory balanced with examples of practical applications and limitations. Recommended: ECE 538/638. ECE 541 Transmission Operation and Control, (4) Introduces the following topics: state estimation, security analysis, contingency monitoring, optimal power flow, reliability, interchange of energy, market and pool operation. Also offered as ECEd 539 and may be taken only once for credit.

Also offered as ECEd 539 and may be taken only once for credit.

**ECE 653 - Control Systems Design III (4)**

Topics in modern feedback control theory of nonlinear and multivariable systems, including considerations of stochastic and optimal control. Design methods of computer workstations.

Prerequisite: ECE 452/552.

**ECE 667 - Statistical Communications Theory (4)**

As an advanced course in communication theory, topics of statistical decision, estimation, and modulation theory are introduced. Statistical aspects of transmission detection and error detection/correction schemes are covered.

Also offered as ECE 567 and may be taken only once for credit. Prerequisite: ECE 461/561, 565/665.

**ECE 668 - Introductory Image Processing (4)**

Two-dimensional systems, image perception, image digitization (sampling and quantization), image transforms (Fourier, Cosine, K-L transforms), image enhancement (histogram equalization, filtering, spatial operation).

Also offered as ECE 568 and may be taken only once for credit. Prerequisite: ECE 223.
ECE 669 - Advanced Image Processing (4)
Introduction to random fields, image representation by stochastic models, image restoration (Wiener and Kalman filtering), image coding and compression predictive and transform coding, vector quantization). Also offered as ECE 569 and may be taken only once for credit. Prerequisite: ECE 565/665, ECE 568/668.

ECE 670 - Computer Vision (4)
Image detection and registration, image analysis (texture extraction, edge detection, segmentation), image reconstruction (radon transform, Fourier reconstruction), stereo imaging and motion analysis, pattern recognition (recognition, classification and clustering). Prerequisite: ECE 568/668..

ECE 672 - Advanced Logic Synthesis (4)
Boolean and multivalued algebras. Cube calculus and its computer realization. Basic operators and algorithms of function minimization. Decomposition and factorization theories. Multilevel minimization. Orthogonal expansions and tree circuits. Cellular logic and its applications to Field Programmable Gate Arrays. Spectral theory of logic optimization. Ordered Binary and Multiple-Valued Decision Diagrams. Design for speed, testability, power consumption, reliability, Reed-Muller forms, and EXOR circuits. Technology mapping. Modern logic synthesis programs, systems, and methodologies. Project that continues in ECE 573. Also offered as ECE 572 and may be taken only once for credit.

ECE 673 - Control Unit Design (4)

ECE 674 - High-level Synthesis and Design Automation (4)
Comprehensive design automation systems. Problems of system and high-level synthesis. Register-transfer and hardware description languages. Data path design: scheduling and allocation. Design methods for systolic, pipelined, cellular and dynamic architectures. System issues. System-level silicon compilers. Group project: using high-level tools for design of a complete VLSI ASIC chip or FPGA architecture: vision, DSP, or controller. Also offered as ECE 574 and may be taken only once for credit. Prerequisite: ECE 573/673.

ECE 675 - Introduction to Integrated Circuit Test (4)
Course will cover the traditional role of IC test in parametric and functional testing and the changing role of IC testing in semiconductor design and manufacturing. The course is divided into three parts. The first part reviews integrated circuit technologies and fault modeling. The second introduces digital IC test, DC parametric testing, and functional and structural testing. The third part examines technology trends. Also offered as ECE 575 and may be taken only once for credit. Prerequisite: ECE 425/525, ECE 416/516.

ECE 676 - Computational Methods in Electrical Engineering (4)
Students are introduced to advanced mathematical techniques applicable to electrical engineering. Content includes topics such as: optimization techniques, solution of partial differential equations, solution of eigenvalue problems, Fourier methods, vector space operations, and complex variable theory. Additional mathematical topics will be introduced as application examples at the discretion of the instructor. Also offered as ECE 576 and may be taken only once for credit. Prerequisite: graduate standing.

ECE 677 - Interactive Computer Graphics (4)
An introduction to the principles of interactive computer graphics including logical devices, physical devices, transformation, viewing and clipping in two and three dimensions. Prerequisite: ECE 575/675.

ECE 682 - Formal Verification of Hardware/Software Systems (4)
Objective is to introduce the main formal verification methods of hardware/software systems. Topics to be covered include: formal logics for system verification (first-order logic, higher order logic, temporal logic), formal specifications, theorem proving systems, microprocessor verification, and systems software verifications.
Also offered as ECE 582 and may be taken only once for credit. Prerequisite: ECE 371, or CS 321, CS 333.

**ECE 687 - Advanced Computer Architecture I (4)**
An advanced course in computer system architecture and design. Key topics include advanced CPU implementation techniques including pipelining, dynamic instruction issue, superscalar architectures, and vector processing; high performance memory and IO systems design; an introduction to parallel computers; and a survey of current literature in computer architecture and of current advanced computer systems. Students will begin a project that will be completed in ECE 588/688.

Also offered as ECE 587 and may be taken only once for credit. Prerequisite: 486/586.

**ECE 688 - Advanced Computer Architecture II (4)**
Discussion of parallel computer architectures and their uses. Key topics include MIMD architectures; associative processing; shared-memory and message-passing architectures; dataflow and reduction architectures; special-purpose processors; design and analysis of interconnection networks; and an overview of parallel software issues. Students will complete the project started in ECE 587/687.

Also offered as ECE 588 and may be taken only once for credit. Prerequisite: ECE 587/687.

**ECE 689 - Performance Analysis of Local Area Networks (4)**

Also offered as ECE 590 and may be taken only once for credit. Prerequisite: graduate standing in ECE.

**ECE 696 - Optoelectronics II (4)**
Nonlinear optics, parametric oscillation, frequency conversion, self-focusing, acousto-optics, Brillouin scattering, Raman scattering, magneto-optics, opto-electrics.

**ECED - Early Childhood Education & Development**

**ECED 406 - Special Projects (1-6)**
(Credit to be arranged.)

**ECED 410 - Selected Studies (1-12)**
(Credit to be arranged.)

**ECED 421 - Supervision in Early Childhood Education Settings (3)**
Integrates theory and research of adult and professional development with supervisory models and practices appropriate for early childhood education settings. Expected preparation: Undergraduate early childhood education coursework or teaching experience with young children. Also offered for graduate-level credit as ECED 521 and may be taken only once for credit.

**ECED 424 - Creating Communities: Guiding Young Children (2)**
Students focus on fostering children’s sense of belonging through the course by examining four central themes: framing community, supporting emerging identities, establishing a classroom culture, and developing problem-solving strategies. Students will draw on social constructivist and critical perspectives in designing equitable classroom communities and in developing practical approaches as they guide children in their own learning.

Also offered for graduate-level credit as ECED 524 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor's approval.
ECED 425 - Culture and Language in Early Childhood Families (3)

Students construct a complex understanding of children and families in early childhood settings grounded in diverse cultural and political contexts. Students explore the role of theory in providing frameworks for understanding and interpreting child and family development in the early childhood classroom, including the identity development of immigrants and refugees. Explore the role of language acquisition from a strength-based perspective, including understanding the relationship between language and culture and bilingual development.

Also offered for graduate-level credit as ECED 525 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.

ECED 426 - Mathematical Thinking in Early Childhood (3)

Examine ideas and practices that help young children learn mathematics in diverse contexts. Students consider how mathematical ideas emerge from children’s real-life experiences in cultural settings and how to support math acquisition through play. Reflect on and create activities that are grounded in research about children’s development in numeracy and other math concepts. Explore how to nurture mathematical understanding through reflection, environmental design, the use of literature and games, and responsiveness to cultural diversity.

Also offered for graduate-level credit as ECED 526 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or mathematics coursework or teaching experience with young children or instructor’s approval.

ECED 427 - Inspirations in Early Childhood Education: The Reggio Emilia Approach (1)

Explore educational inspirations central to the infant, toddler and preprimary schools of Reggio Emilia, Italy, and unpacks the implications of this cultural and political context. Through readings, video, and dialogue, examine core concepts including image of the child, the hundred languages of children, the atelier, the environment as third teacher, project work, pedagogical documentation, and the role of family and civic participation. Engage in in-depth exploration of an issue or topic of particular relevance.

Also offered for graduate-level credit as ECED 527 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.

ECED 428 - Educational Rights and Inclusive Environments in Early Childhood (3)

Explores the collaborative bridge between the work of the early childhood classroom teacher and the intervention services needed to establish a truly inclusive classroom. Students will draw on social constructivist perspectives in developing classroom environments, pedagogy and curricula that ensure full access for all children and that recognize children’s strengths and educational “rights” (not needs) in order to ensure equity.

Also offered for graduate-level credit as ECED 528 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.

ECED 429 - Art as Languages of Early Childhood (3)

Consider children’s engagement in artistic and representational processes as a means of co-constructing knowledge. Challenge the assumption that children’s art is product-based and reframe the way we understand how the creative process contributes to learning and identity. Develop ways to facilitate creative expression and incorporate the arts into early childhood curriculum. Learn techniques for introducing children to drawing, painting, clay, wire, three-dimensional and digital media as tools for exploring ideas and creating theories.

Also offered for graduate-level credit as ECED 529 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.

ECED 430 - The Emotional Life of Toddlers (3)

Explore diverse caregiving practices designed to support learning during the toddler years, a critical period of social and emotional development. Links are made between theories and brain development research to the activities that educators implement every day with toddlers. Topics include observing, establishing nurturing relationships, planning secure environments, designing learning experiences to engage and reflect very young children from diverse cultural contexts, and implementing positive guidance strategies to support emotional well-being and identity development.

Also offered for graduate-level credit as ECED 530 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.
or teaching experience with young children or instructor's approval.

ECED 471 - Play: Curriculum in Early Childhood Education (3)
Inquiry into theory and research on play, including cultural contexts and meaning of play in early childhood. Develop a theoretical and working understanding of adult roles in the facilitation of play, including the role of development, culture, gender, and ability. Practice observation of children’s play as a context for assessment and documentation. Review, develop, and implement curriculum with a focus on play in child-centered inclusive approaches that draw on children’s diverse strengths and contexts.

Also offered for graduate-level credit as ECED 571 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor's approval.

ECED 422 - Advanced Curriculum Design in Kindergarten/Primary Grades (3)
This course will consider growth and development characteristics of children ages 5-8 years and research on teaching for planning educational programs, curricula, instruction, environment, management, and guidance.

Also offered for graduate-level credit as ECED 522 and may be taken only once for credit.

ECED 423 - Leading in ECE Programs (4)
Develop a strong sense of early childhood leadership identity through multiple lenses of directing, teamwork, and/or coordinating classroom pedagogy and practice. Explore leadership roles in schools for young children including teachers, supervisors, children, and parents. Collaborative and relational dimensions of the early childhood profession are also explored.

Also offered for graduate-level credit as ECED 523 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor's approval.

ECED 460 - Inclusive Early Childhood Models (3)
Present different approaches to early childhood education with a focus on inclusion and consultation in typical early childhood settings. Provides a framework for recommended practices for supporting young children with disabilities in early childhood settings. Discusses the underlying concepts and application of developmentally appropriate practice.

Also offered for graduate-level credit as ECED 560 and may be taken only once for credit. Prerequisite: Upper-division standing.

ECED 472 - Language and Literacy in Early Childhood Education (3)
Helps teachers understand, assess, and promote early experiences with language that contribute to the process of becoming literate. Expected preparation: Undergraduate early childhood education coursework or teaching experience with young children.

Also offered for graduate-level credit as ECED 572 and may be taken only once for credit.

ECED 476 - Equity and Cultural Diversity in Early Childhood Education (3)
Explore developmental early childhood education practices, emphasizing developmentally and culturally appropriate objectives as well as anti-bias learning goals. Develop awareness of quality teaching practices by exploring personal cultural history, gaining insights into living examples of difference, witnessing the effects of bias, and learning to support fairness and issues of equity in a classroom.

Also offered for graduate-level credit as ECED 576 and may be taken only once for credit.

ECED 477 - Learning Designs: Early Childhood Environments (3)
Study of quality learning environments and design, emphasizing the roles of children’s learning, adult engagement, and the environment as the third teacher. Investigate space planning, program layout, design theories, and aesthetic values.

Also offered for graduate-level credit as ECED 577 and may be taken only once for credit. Prerequisite: Junior level standing or prior coursework in child development.

ECED 478 - Constructivist Curriculum: Big Ideas in Early Childhood Education (3)
Examines the possibilities of exploring big ideas deeply over time and across the curriculum with preschool and primary age children. Focuses on the ways that integrated curriculum and project work support children’s learning and foster the connections necessary for them to construct knowledge. Students have the opportunity to develop resources and design classroom experiences related to big ideas.

Also offered for graduate-level credit as ECED 578 and may be taken only once for credit. Prerequisite: Junior level standing or prior coursework in child development.
ECED 479 - Young Child as Scientist (3)
Explores developmentally appropriate science for preschool and primary age children, focusing on experimentation and problem-solving. Students experience and design activities for young children around three questions that derive from traditional science content: can I make it move, can I make it change, and how does it fit? In the process, students will learn more about constructivist teaching and curriculum, particularly as applied to science education.

Also offered for graduate-level credit as ECED 579 and may be taken only once for credit. Prerequisite: Junior level standing or prior coursework in child development.

ECED 501 - Research (1-9)
(Credit to be arranged.)

ECED 505 - Reading and Conference (1-4)
(Credit to be arranged.)

ECED 506 - Problems/Projects (1-6)
(Credit to be arranged.)

ECED 507 - Seminar (1-9)
(Credit to be arranged.)

ECED 509 - Practicum (1-9)
(Credit to be arranged.)

ECED 510 - Selected Studies (1-9)
(Credit to be arranged.)

ECED 521 - Supervision in Early Childhood Education Settings (3)
Integrates theory and research of adult and professional development with supervisory models and practices appropriate for early childhood education settings. Expected preparation: Undergraduate early childhood education coursework or teaching experience with young children.

Also offered for undergraduate-level credit as ECED 421 and may be taken only once for credit.

ECED 522 - Advanced Curriculum Design in Kindergarten/Primary Grades (3)
This course will consider growth and development characteristics of children ages 5-8 years and research on teaching for planning educational programs, curricula, instruction, environment, management, and guidance.

Also offered for undergraduate-level credit as ECED 422 and may be taken only once for credit.

ECED 523 - Leading in ECE Programs (4)
Develop a strong sense of early childhood leadership identity through multiple lenses of directing, teamwork, and/or coordinating classroom pedagogy and practice. Explore leadership roles in schools for young children including: teachers, supervisors, children, and parents. Collaborative and relational dimensions of the early childhood profession are also explored.

Also offered for undergraduate-level credit as ECED 423 and may be taken only once for credit.

Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor's approval.

ECED 524 - Creating Communities: Guiding Young Children (2)
Students focus on fostering children's sense of belonging through the course by examining four central themes: framing community, supporting emerging identities, establishing a classroom culture, and developing problem-solving strategies. Students will draw on social constructivist and critical perspectives in designing equitable classroom communities and in developing practical approaches as they guide children in their own learning.

Also offered for undergraduate-level credit as ECED 424 and may be taken only once for credit.

Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor's approval.

ECED 525 - Culture and Language in Early Childhood Families (3)
Students construct a complex understanding of children and families in early childhood settings grounded in diverse cultural and political contexts. Students explore the role of theory in providing frameworks for understanding and interpreting child and family development in the early childhood classroom, including the identity development of immigrants and refugees. Explore the role of language acquisition from a strength-based perspective, including understanding the relationship between language and culture and bilingual development.
Also offered for undergraduate-level credit as ECED 425 and may be taken only once for credit.

Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.

**ECED 526 - Mathematical Thinking in Early Childhood (3)**

Examine ideas and practices that help young children learn mathematics in diverse contexts. Students consider how mathematical ideas emerge from children’s real-life experiences in cultural settings and how to support math acquisition through play. Reflect on and create activities that are grounded in research about children’s development in numeracy and other math concepts. Explore how to nurture mathematical understanding through reflection, environmental design, the use of literature and games, and responsiveness to cultural diversity.

Also offered for undergraduate-level credit as ECED 426 and may be taken only once for credit.

**ECED 527 - Inspirations in Early Childhood Education: The Reggio Emilia Approach (1)**

Explore educational inspirations central to the infant, toddler and preprimary schools of Reggio Emilia, Italy, and unpacks the implications of this cultural and political context. Through readings, video, and dialogue, examine core concepts including image of the child, the hundred languages of children, the atelier, the environment as third teacher, project work, pedagogical documentation, and the role of family and civic participation. Engage in in-depth exploration of an issue or topic of particular relevance.

Also offered for undergraduate-level credit as ECED 427 and may be taken only once for credit.

**ECED 528 - Educational Rights and Inclusive Environments in Early Childhood (3)**

Explores the collaborative bridge between the work of the early childhood classroom teacher and the intervention services needed to establish a truly inclusive classroom. Students will draw on social constructivist perspectives in developing classroom environments, pedagogy and curricula that ensure full access for all children and that recognize children’s strengths and educational “rights” (not needs) in order to ensure equity.

Also offered for undergraduate-level credit as ECED 428 and may be taken only once for credit.

Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.

**ECED 529 - Art as Languages of Early Childhood (3)**

Consider children’s engagement in artistic and representational processes as a means of co-constructing knowledge. Challenge the assumption that children’s art is product-based and reframe the way we understand how the creative process contributes to learning and identity. Develop ways to facilitate creative expression and incorporate the arts into early childhood curriculum. Learn techniques for introducing children to drawing, painting, clay, wire, three-dimensional and digital media as tools for exploring ideas and creating theories.

Also offered for undergraduate-level credit as ECED 429 and may be taken only once for credit.

**ECED 530 - The Emotional Life of Toddlers (3)**

Explore diverse caregiving practices designed to support learning during the toddler years, a critical period of social and emotional development. Links are made between theories and brain development research to the activities that educators implement every day with toddlers. Topics include observing, establishing nurturing relationships, planning secure environments, designing learning experiences to engage and reflect very young children from diverse cultural contexts, and implementing positive guidance strategies to support emotional well-being and identity development.

Also offered for undergraduate-level credit as ECED 430 and may be taken only once for credit.

Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children or instructor’s approval.

**ECED 550 - Foundations in Early Childhood and Inclusive Education (4)**

Focus on foundations of and approaches to inclusive early childhood education. Learn about developmental and inclusive practices, develop foundational knowledge and examine and challenge assumptions about inclusive teaching and learning.

Prerequisite: Admission to the Masters in Early Childhood Education: Inclusive Education and Curriculum and Instruction.

**ECED 551 - Child Development in Early Childhood and Inclusive Education (4)**

Study a multicultural perspective of child development (i.e., physical, social and emotional, language and literacy, cognitive) for young children (prenatal – preschool) with a range of ability levels. Examine theories of development and how those theories apply to young children with differing ability levels.
ECED 553 - Issues in Early Childhood and Inclusive Education (4)
Study contemporary issues related to inclusion in early childhood programs for children of all ability levels. Identify and respond to critical issues in contemporary early childhood education as it relates to inclusion. Analyze those issues from a variety of perspectives.
Prerequisite: Admission to the Masters in Early Childhood Education: Inclusive Education and Curriculum and Instruction..

ECED 560 - Inclusive Early Childhood Models (3)
Presents different approaches to early childhood education with a focus on inclusion and consultation in typical early childhood settings. Provides a framework for recommended practices for supporting young children with disabilities in early childhood settings. Discusses the underlying concepts and application of developmentally appropriate practice.
Also offered for undergraduate-level credit as ECED 460 and may be taken only once for credit.

ECED 571 - Play: Curriculum in Early Childhood Education (3)
Inquiry into theory and research on play, including cultural contexts and meaning of play in early childhood. Develop a theoretical and working understanding of adult roles in the facilitation of play, including the role of development, culture, gender, and ability. Practice observation of children’s play as a context for assessment and documentation. Review, develop, and implement curriculum with a focus on play in child-centered inclusive approaches that draw on children’s diverse strengths and contexts.
Also offered for undergraduate-level credit as ECED 471 and may be taken only once for credit.
Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children.

ECED 572 - Language and Literacy in Early Childhood Education (3)
Helps teachers understand, assess, and promote early experiences with language that contribute to the process of becoming literate. Expected preparation: Undergraduate early childhood education coursework or teaching experience with young children.
Also offered for undergraduate-level credit as ECED 472 and may be taken only once for credit.

ECED 573 - Assessment and Technology in Early Childhood Education (3)
Study of and experience with a range of developmentally appropriate assessment and technology strategies for use in diagnostic, formative, and summative evaluation of growth and development of young children and for appropriate educational decisions in early childhood education settings.
Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children.

ECED 576 - Equity and Cultural Diversity in Early Childhood Education (3)
Explore developmental early childhood education practices, emphasizing developmentally and culturally appropriate objectives as well as anti-bias learning goals. Develop awareness of quality teaching practices by exploring personal cultural history, gaining insights into living examples of difference, witnessing the effects of bias, and learning to support fairness and issues of equity in a classroom.
Also offered for undergraduate-level credit as ECED 476 and may be taken only once for credit.

ECED 577 - Learning Designs: Early Childhood Environments (3)
Study of quality learning environments and design, emphasizing the roles of children’s learning, adult engagement, and the environment as the third teacher. Investigate space planning, program layout, design theories, and aesthetic values.
Also offered for undergraduate-level credit as ECED 477 and may be taken only once for credit.
Prerequisite: Prior coursework in child development.

ECED 578 - Constructivist Curriculum: Big Ideas in Early Childhood Education (3)
Examines the possibilities of exploring big ideas deeply over time and across the curriculum with preschool and primary age children. Focuses on the ways that integrated curriculum and project work support children’s learning and foster the connections necessary for them to construct knowledge. Students have the opportunity to develop resources and design classroom experiences related to big ideas.
Also offered for undergraduate-level credit as ECED 478 and may be taken only once for credit.
Prerequisite: Prior coursework in child development.

ECED 579 - Young Child as Scientist (3)
Explores developmentally appropriate science for preschool and primary age children, focusing on
experimentation and problem-solving. Students experience and design activities for young children around three questions that derive from traditional science content: can I make it move, can I make it change, and how does it fit? In the process, students will learn more about constructivist teaching and curriculum, particularly as applied to science education.

Also offered for undergraduate-level credit as ECED 479 and may be taken only once for credit. Prerequisite: Prior coursework in child development.

**ECED 585 - Dynamic Models of Infant/Toddler Development (3)**

Provides information on typical infant and toddler mental health development and strategies for working with young children and their families within a culturally sensitive context. Includes prenatal and postnatal development, brain development as well as theories of development including attachment, resiliency, and self-regulation are presented from a cross-disciplinary perspective. Content reflects recommended practices across disciplines when working with young children and their families.

**Ed 410 - Experimental Course (1-6)**

(Credit to be arranged.)

**Ed 420 - Introduction to Education and Society (4)**

Explores the nature of public education in the social context of the United States. Purpose is to develop critical ways of thinking about schools as social institutions and as a means of cultural transmission and transformation. Includes one credit (30 hour) assigned practicum in public school setting.

Also offered for graduate-level credit as Ed 520 and may be taken only once for credit.

**Ed 502 - Independent Study (1-9)**

(Credit to be arranged.)

**Ed 506 - Special Problems (1-8)**

(Credit to be arranged.)

**Ed 507 - Seminar (1-6)**

(Credit to be arranged.)

**Ed 509 - Practicum of Children/Youth (1-9)**

(Credit to be arranged.) Consent of instructor.

**Ed 510 - Experimental Course (1-6)**

(Credit to be arranged.)

**Ed 511 - Reading/Language Arts Pre-K-12 (3)**

Provides an overview of language development and general education literacy instruction from pre-kindergarten to 12th grade. Age-appropriate methods for literacy instruction at each grade level are discussed and evaluated with respect to the exceptional learner.

Prerequisite: Ed 520.

**Ed 518 - Inclusive Elementary Classrooms (2)**

Overview of teaching students who experience disabilities and giftedness, with special consideration to cultural/linguistic factors. Provides an overview of applicable laws and regulations, eligibility for special education, and the IEP process. Explores the ramifications of learning diversity for the inclusive elementary classroom teacher and instruction that supports all learners.
Ed 519 - Inclusive Secondary Classrooms (3)
Overview of teaching students who experience disabilities and giftedness, with special consideration to cultural/linguistic factors. Provides an overview of applicable laws and regulations, eligibility for special education, and the IEP process. Explores the ramifications of learning diversity for the inclusive secondary classroom teacher and instruction that supports all learners.
Prerequisite: Admission into the Graduate Teacher Education Program.

Ed 520 - Introduction to Education and Society (4)
Explores the nature of public education in the social context of the United States. Purpose is to develop critical ways of thinking about schools as social institutions and as a means of cultural transmission and transformation. Includes one credit (30 hour) assigned practicum in public school setting.
Also offered for undergraduate-level credit as Ed 420 and may be taken only once for credit.

Ed 525 - Student Teaching (6-15)
(Credits to be arranged.)

Ed 530 - Introduction to Inclusion and Special Education (2)
Provides an introduction to special education and the philosophy and practices associated with inclusive education. Provides historical, social and legal foundations for inclusive education. Provides students with an opportunity to develop and defend a position regarding the inclusion of students with special needs in general education.
Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 531 - Planning and Instruction for Students with Special Needs (3)
This course examines instructional methods, knowledge, and skills needed by elementary classroom and special education teachers for the instruction of students with special learning needs. Other content includes relevant federal and state policies and procedures, individual education plans, and differentiated lesson plans.
Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 532 - Human Development and Learning (3)
Students will develop an understanding of psychological concepts, theories, and principles and apply them to learning and instruction. Four areas of psychological research that have significant implications for learning will be emphasized: cognitive and metacognitive factors, motivational and affective factors, developmental and social factors, and individual differences.
Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 533 - Literacy Methods for the Inclusive Classroom: I (3)
Provides a foundation in research-based instruction for teaching literacy to early childhood/elementary students in inclusive educational settings. Provides an overview of language and literacy development for typical and atypical learners. Presents effective instructional practices for teaching and assessing emerging reading, beginning reading, primary and intermediate decoding skills, vocabulary, comprehension, and writing. Practice opportunities will be provided at the teacher candidates’ field experience sites.
Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 534 - Literacy Methods for the Inclusive Classroom (3)
This course will examine instructional methods that are effective for teaching all students to read, write, and spell. Emphasis will be placed on key processes that have been demonstrated through research to be essential for developing competency in reading, writing, and spelling for students with special learning needs.
Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 535 - Classroom Based Assessment for the Inclusive Educator (2)
This course provides a theoretical framework for using assessment to guide instructional decisions. Teacher candidates will learn about formative assessment and data-based decision-making. The primary focus of the course is for teacher candidates to learn to understand critical features of assessment in education and use assessment to guide instructional decisions.
Prerequisite: Admission to the Inclusive Elementary Educators Program.
Ed 536 - Educational Research and Inclusive Education (3)

The goals of this course are to enable students to become intelligent consumers of educational research, assist students in the conceptualization and design of a research project, aid students in developing an understanding of the scientific process, and aid students in developing an understanding of research- and evidence-based educational practice.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 537 - Professional Seminar I: Law and Ethics (1)

This course has two major focuses: educational law and policy at the federal and state level, and ethics of the teaching profession. The course is also a forum for reflection and discussion of field experience.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 538 - Professional Seminar II: Philosophy (1)

This course provides a forum for discussion and reflection of the field experience, leads to the creation of a teaching philosophy statement and provides guidance for the completion of the work sample.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 539 - Professional Seminar III: Reflection and Job Search (1)

This course serves multiple purposes. It serves as a vehicle for discussion and reflection of field experiences. Seminars will focus on preparing materials for the job search. Some seminar time will be used for student advising, re licensure and graduation.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 540 - Functional Assessment for the Inclusive Elementary Educator (3)

Develops philosophical and social foundations for services to individuals with significant and multiple disabilities, early childhood through elementary. Emphasizes ecological and functional assessment strategies for life skills, communication, social, motor, and functional academic domains. Strategies for including students with significant and multiple disabilities in system-wide, standards-based assessment are addressed.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 541 - Functional Curriculum for the Inclusive Elementary Educator (3)

Course applies knowledge and skills for functional assessment and applied behavior analysis in the design and implementation of an individualized, functional curriculum for students with significant and multiple disabilities, early childhood through elementary.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 542 - Collaboration for the Inclusive Elementary Educator (2)

This course covers broadly the context, process, and content of collaboration and teamwork in the schools with a specific focus on the inclusion of students with disabilities and special needs in general education classrooms. Other topics include co-teaching, problem solving, and conflict resolution.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 543 - Specialized Techniques for the Inclusive Elementary Educator (1)

Presents Information and skills necessary for meeting the specialized support needs of students with significant disabilities. Course is designed to assist the educator in becoming an effective member of a trans-disciplinary team that serves students with routine and emergency medical and physical needs and is taught from an inclusive perspective.

Prerequisite: Admission to the Inclusive Elementary Educators Program.

Ed 580 - Adolescent Learners in Inclusive Settings (2)

Focuses on principles of human learning and related practices for teaching in inclusive classrooms in the middle/high school setting. The psychology of learning in a school setting includes both individual and group generalizations, with an emphasis on the developmental tasks of adolescence. Examines the roles and functions of teachers as facilitators of learning, and as decision makers concerning pupil needs and achievement in inclusive middle/high school settings.

Prerequisite: admission to SDEP.

Ed 581 - Inclusive Classroom Researcher (2)

Frames research questions concerning the principles, practices, promises, and problems of inclusive classrooms. Explores the philosophical and practical benefits of inclusive practices. Teacher networks, literature reviews and research design will provide
the groundwork for collecting data throughout the program.

Prerequisite: admission to SDEP.

**Ed 582 - Collaborative Teaming and the Special Education Process (4)**

Introduction to special education law and processes that prepares future teachers to actively participate, plan and facilitate IEP and school team meetings. Includes an overview of state and federal laws/regulations, the IEP process and special education service delivery systems. Explores collaborative teaming processes in middle and secondary school settings.

Prerequisite: admission to SDEP program.

**Ed 583 - Study Skills and Learning Strategies (2)**

Examines typical secondary class demands and instructional methods to enable students with disabilities and other low achievers to become independent learners. Emphasis on content enhancement tools to increase accessibility of content as well as instructional methods for teaching study skills and learning strategies. Includes models and methods for infusing this instruction into the secondary curriculum.

Prerequisite: admission to SDEP program.

**Ed 584 - Advocacy and Transition Planning (2)**

Focuses on student support and advocacy, school-family collaboration and transition planning. Concepts and curriculum related to person-centered planning and teaching self-determination skills addressed. Examines collaborative skills needed to empower students, families, communities, service agencies, and other support systems and facilitate inclusive practices in secondary settings.

Prerequisite: admission to SDEP program.

**Ed 585 - Instructional Planning for Inclusive Classrooms (3)**

Addresses principles and skills for organization and presentation of grades 6-12 inclusive standards-based instruction. Includes: student needs analysis, universal design for learning, differentiation, and assistive technology for effectively teaching a diverse group of adolescent learners.

Prerequisite: admission to SDEP program.

**Ed 586 - Collaborative Teaching (2)**

Students will study practices and techniques that enhance instructional collaboration and consultation among general education and special education teaching professionals. Models and methods for supporting students with disabilities in middle and secondary school general education classrooms will be explored.

Prerequisite: Admission to SDEP and (Advocacy and Planning with Secondary Students, Collaborative Teaming).

**Ed 587 - Inclusive Educational Research and Leadership (2)**

Critically reviews the principles, practices, promises, and problems of inclusive education. Teacher candidate work samples, compilation and analysis of action research data, and educational leadership project provide culminating experiences blending the dual perspectives of general and special education and benefits of inclusive practices in teaching content to all students.

Prerequisite: admission to SDEP program.

**Ed 607 - Seminar (1-9)**

(Credit to be arranged.)

**Ed 610 - Experimental Course (1-4)**

(Credit to be arranged.)

**Ed 620 - Doctoral Studies Proseminar (1-4)**

This three course four-credit sequence is required for all doctoral students and is taken during the first year of doctoral study, beginning with two credits in the fall and one credit each in winter and spring terms. The course is designed to extend and deepen thinking about education, "educational leadership" and inquiry through shared readings, interaction with faculty and local educational leaders, and critical reflective writing and conversation. Students are expected to initiate and maintain a learning and a professional portfolio and by the end of spring term to develop and present a formal paper that examines an educational issue using frameworks and concepts from Ed 630, 640 and 650, which are also taken during their first year. This paper may serve as an initial draft of the doctoral core examination paper.

Prerequisite: admission to doctoral program or permission of instructor.

**Ed 630 - Principles and Practices of Learning (4)**

The study of theories of learning in a variety of educational contexts: classrooms for youth and for adults, counseling, and non-school settings. Study of the narratives of teaching and learning to analyze the enactment of theory and to examine the variety of ways to research learning.
**Ed 640 - Organizational and Leadership Theory and Research in Education (4)**

Organizational and leadership theory and research in education informing the study, practice, and improvement of educational policy and practice in PreK-12 school, higher education, and non-school contexts; emphasis on emergent perspectives and their significance for theory, research, and practice.

**Prerequisite:** admission to doctoral program or permission of instructor.

**Ed 650 - Educational Policy and Politics (4)**

The study of how policy is proposed, adopted, implemented, and changed in educational organizations. Special emphasis on the political process and how it influences the policy cycle.

**Prerequisite:** admission to doctoral program or permission of instructor.

**Ed 660 - Foundations of Research Paradigms and Methods (4)**

An introduction to research paradigms and research methodologies that are useful to better understand and/or address problems of educational practice. Provides doctoral students with knowledge of basic processes of inquiry so they are able to begin designing individual research projects.

**Prerequisite:** admission to doctoral program and/or EPFA 511 or 515 or permission of instructor.

**Ed 661 - Qualitative Research Methods in Education (4)**

Introduces qualitative research methods of data collection and analysis in education. Reviews theoretical foundations, field research problems, and qualitative data collection and analysis methods including participant observation, depth interviewing, and development of grounded theory.

**Prerequisite:** admission to doctoral program or permission of instructor.

**Ed 662 - Quantitative Research Methods in Education (4)**

Introduces quantitative research methods of data collection and analysis in education. Reviews theoretical foundations, applications and design issues of methods such as survey, correlational and experimental research. Also, introduces how to conduct a statistical data analysis and use such methods as correlation, t-test, analysis of variance and chi-square.

**EE-Electrical Engineering**

**EE 347 - Power Systems I (4)**

**Prerequisite:** EE 223 (with a grade of C or better) or instructor approval. **Corequisite:** EE 347L.

**EE 347L - Lab for ECE 347 (0)**

Lab for ECE 347. **Corequisite:** EE 347.

**EE 348 - Power Systems II (4)**

Fundamentals of electrical power systems, particularly rotating three-phase machines. Electromechanical machine components: rotor, stator, poles. Rotating magnetic fields. Fundamental rotational mechanics. Three-phase (induction and synchronous) and split-phase AC motors and generators. DC machines: shunt, series, compound and brushless. Motor and generator controls. Weekly Lab. This is the second course in a sequence of two: EE 347, EE 348 and must be taken in sequence.

**Prerequisite:** EE 347 (with a grade of C or better). **Corequisite:** EE 348L.

**EE 348L - Power Systems II Lab (0)**

Lab for Power Systems II. **Corequisite:** EE 348.

**EE 430 - Analytical Methods for Power Systems (4)**

Also offered for graduate-level credit as EE 530 and may be taken only once for credit. Prerequisite: EE 347 (with a grade of C or better) or instructor permission.

EE 431 - Power Systems Protection (4)
Relaying concepts, per unit calculations & symmetrical components, phasors, polarity and direction sensing, current/voltage transformers, protection fundamentals & basic design principles, system grounding principles, device protection, directional comparison, blocking & blocking pilot protection, line differential & phase comparison pilot protection, out of step tripping and blocking. Weekly Lab.

Also offered for graduate-level credit as EE 531 and may be taken only once for credit. Prerequisite: EE 430 (with a grade of C or better) or instructor permission. Corequisite: EE 431L.

EE 431L - Lab for EE 431 (0)
Lab for EE 431.
Corequisite: EE 431.

EE 432 - Electrical Machine Analysis and Design (4)
The principals of magnetostatic and quasi-static analysis will be applied to study different classes of electromechanical devices. Reluctance, induction, permanent magnet and wound rotor synchronous machines will be analyzed using magnetic circuit and harmonic analysis techniques. Electrical machines in wind turbines and in automotive traction motors will be discussed.

Also offered for graduate-level credit as EE 532 and may be taken only once for credit. Prerequisite: EE 348, ECE 317 and ECE 331 (with a grade of C or better) or instructor permission.

EE 510 - Selected Topics (0-6)
(Credit to be arranged.)

EE 517 - Instrumentation and Sensing (4)
Introduction to instrumentation and sensing focused on low-cost, low-power short and long range wireless sensing and monitoring techniques. Topics include small-signal electronics for interconnecting deployable sensors to analog and digital signal processing hardware, system noise floor and dynamic range, and practical implementation of wireless systems with long battery life.

Prerequisite: Graduate standing or permission of instructor.

EE 520 - Random Processes (4)
Review of probability, random variables, and expectation followed by a study of the principles and properties of random sequences and random processes. Topics include random vectors, fundamentals of estimation, modeling random sequences with linear systems, stationarity, Markov random sequences, and common random process models.

Prerequisite: Stat 351 and ECE 316, graduate standing or permission of instructor.

EE 521 - Discrete Time Processing I (4)
Discrete time signals and systems, z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems.

Prerequisite: EE 520.

EE 522 - Discrete Time Processing II (4)
Filter design, discrete Fourier transform, faster Fourier transform, Fourier analysis of signals.

Prerequisite: EE 521.

EE 523 - Estimation and Detection I (4)
Theoretical and practical approaches to estimation including both classical estimation techniques such as maximum likelihood and best linear unbiased estimation and Bayesian estimation techniques. Discussion of the advantages, limitations, and tradeoffs for each of these methods.

Prerequisite: EE 520.

EE 524 - Estimation and Detection II (4)
Theoretical and practical approaches to detection algorithms. Hypothesis testing, composite hypothesis testing, non-Gaussian noise, model change detection. Many examples with on real-world signal processing applications, including state-of-the-art speech and communications technology as well as traditional sonar/radar systems.

Prerequisite: EE 523.

EE 525 - Statistical Signal Processing I: Spectral Estimation (4)
Unified introduction to theory, implementation, and applications of statistical signal processing methods. Focus on random signal modeling, characterization of
EE 526 - Statistical Signal Processing II: Linear Estimation and Adaptive Filters (4)
Unified introduction to the theory, implementation, and application of statistical signal processing methods. Focus on optimum linear filters, least square filters, adaptive filters, the Kalman filter, signal modeling, and parametric spectral estimation. Designed to give a solid foundation in the underlying theory balanced with examples of practical applications and limitations.

EE 527 - Sensor Array Processing (4)
Overview of applications in acoustics and electromagnetism that benefit from sensor array processing. Topics include array geometry design, performance measures, source tracking, passive and active approaches, wave propagation modeling, beamforming, noise modeling, and adaptive methods. Prerequisite: ECE 332 or equivalent.

EE 528 - State Space Tracking (4)
Modern approaches to estimating the state of linear and nonlinear systems. Topics include linear systems theory, the Kalman filter, the extended Kalman filter, unscented Kalman filter, and the particle filter. Designed to give a solid introduction and fundamental understanding of the advantages, limitations, and tradeoffs for each of these methods. Prerequisite: EE 521.

EE 529 - Signal Processing Practicum (4)
Topics include scholarship skills, framing of signal processing problems, and algorithm verification. Students design, implement, and verify an engineering solution for a signal processing application. This course is intended to be taken after students have completed most of their other graduate coursework in signal processing. Prerequisite: EE 519, EE 522, and permission of instructor.

EE 530 - Analytical Methods for Power Systems (4)

EE 531 - Power Systems Protection (4)
Relaying concepts, per unit calculations & symmetrical components, phasors, polarity and direction sensing, current/voltage transformers, protection fundamentals & basic design principles, system grounding principles, device protection, directional comparison, blocking & blocking pilot protection, line differential & phase comparison pilot protection, out of step tripping and blocking. Weekly Lab. Also offered for undergraduate-level credit as EE 431 and may be taken only once for credit. Prerequisite: EE 430/EE 530 or instructor permission. Corequisite: EE 531L.

EE 531L - Power System Protection Lab (0)
Lab for Power System Protection. Corequisite: EE 531.

EE 532 - Electrical Machine Analysis and Design (4)
The principals of magnetostatic and quasi-static analysis will be applied to study different classes of electromechanical devices. Reluctance, induction, permanent magnet and wound rotor synchronous machines will be analyzed using magnetic circuit and harmonic analysis techniques. Electrical machines in wind turbines and in automotive traction motors will be discussed. Also offered for undergraduate-level credit as EE 432 and may be taken only once for credit. Prerequisite: EE 348, ECE 317, and ECE 331 or instructor permission.

EE 534 - Power Operations Fundamentals I (4)
Power system operations theory and practice; fundamental concepts and applications. Balancing authority operations concepts concerning regulation and applied regulatory constraints, power operations trading markets, smart-grid systems, transmission and generation components, and cyber security. Prerequisite: EE 347 or instructor permission.
**EE 535 - Power Operations Fundamentals II (4)**
Power system operations theory and practice; advanced concepts and applications. Emphasis on understanding the electric industry as a complex system; operations concepts for balancing authority utilities; regulatory constraints, interoperability and impacts on operations; project management of smart-grid systems; design of programmatic, distribution and utility-scale renewable components; utility cyber security.
Prerequisite: EE 534 or instructor permission.

**EE 536 - Power System Stability (4)**
Prerequisite: ECE 431 or EE 531 or instructor permission.

**EE 537 - Advanced Power Systems Protection (4)**
The second course protection for students who have taken a previous class or have substantial experience in protective relaying. Emphasis: analysis of principles and application of microprocessor-based relays (digital relays) to protection of high-voltage transmission lines, power transformers, power generators, high-voltage substation equipment; wide-area approach to power systems protection.
Prerequisite: ECE 431 or EE 531 or instructor permission.

**EE 538 - Dynamics and Control of AC Drives (4)**
Focus on studying the theory behind the control of ac drive systems. Topics studied will include: coupled circuit modeling of ac machines, dynamic modeling of induction machines, power converter and converter modeling, the simulation of electric machines and drives, electric drive system control, steady state analysis with non-conventional sources, small signal dynamic response and doubly salient electric machines.
Prerequisite: EE 432/EE 532.

**EE 539 - Design of Electrical Machines (4)**
Modern methods used by engineers to design electromagnetic devices, specifically rotary machines will be presented. Topics covered include finite element analysis modeling using electromagnetic field theory. Magnetic circuit modeling of electric machines, analysis of electrical machines using winding functions. Emphasis will be placed on permanent magnet and induction machine design.
Prerequisite: EE 432/EE 532.

**ELP - Educational Ldrshp & Policy**

**ELP 199 - Special Studies (1-4)**
(Credit to be arranged.)

**ELP 318U - Introduction to Educational Leadership in Public Schools (4)**
Familiarizes students with the theoretical development, empirical studies, policies, and decision making processes of public schooling. Structured around a number of themes, including instructional leadership, moral leadership, democratic leadership, facilitative leadership, curricular leadership, constructivist leadership, and ethical leadership in education. Students explore the operational meaning of these perspectives through a combination of experiences including class discussions, case studies, guest speakers, and interviews and observations of school leaders at work. Course includes an additional, concurrent 30-hour minimum field project requirement.

**ELP 324U - Introduction to Spiritual Leadership (4)**
An introductory exploration into spirituality and its connection to leadership. The meaning of engaged spiritual leadership will be examined through such themes as: identity, paradox, interconnectedness, and sustainability. A community-based field project offers an opportunity to examine leadership issues through the lens of spirituality.

**ELP 348U - Introduction to Global Political Ecology (4)**
In order to grasp the emerging discipline of political ecology, engages in discussions regarding the following: impact of globalization on human and non-human communities; relationship between poverty and environmental degradation; distribution of resource use and commodification in the global North and global South, and the relationship of these issues in our personal lives.
ELP 349U - Gandhi, Zapata and New Agrarianism (4)
This course explores the emergence of "new agrarianism" by examining the social, political, economic and ecological implications of agriculture, and the revolutionary efforts of Zapata and Gandhi against the abuses of modern industrial practices. Recent philosophical and ecological models of new agrarianism are introduced, with emphasis on local food systems.

ELP 350U - Introduction to Leadership for Sustainability (4)
Multi-media seminar and discussion course reviews, analyzes, and critiques the history, politics, and rhetoric of sustainability. Four key themes are covered: issues surrounding the Johannesburg Summit 2002; growing conservation economy in the Pacific Northwest; the issue of indigenous cultures and sustainability, and a critical review of the emergence and future of transnational civil society. Examines the very idea of local, regional, and global and discusses the role social movement networks, information society, and globalization play in meaningful social change and leadership.

ELP 351U - Gender and Education (4)
Explores the significance of gender in educational work. The focus will be on the history of gender arrangements in educational organizations and the formation of gender roles in contemporary American society, particularly in the family, schools, and the economy. Students will examine differential socialization of males and females, ongoing practices in educational organizations that are gender-related and/or gender biased and the convergence of gender, race, and class in educational organizations. This course is cross-listed as WS 455, may only be taken once for credit. ELP 555 includes an additional, concurrent 30-hour minimum field project requirement.

ELP 356U - The Urban School and "at Risk" Status (4)
Draws upon theory, research, and practice for the examination of the conditions of being "at-risk" in urban schools. Explores the family, community, and school environments and their relationships in the hindrance of development of children and youth leading to their "at-risk" status. ELP 556 includes an additional, concurrent 30-hour minimum field project requirement.

ELP 362U - Introduction to School and Community Relations (4)
Major emphasis will be on exploring the ways schools interact with parents, citizens and special interest groups that lead to building a diverse community. Course includes an additional, concurrent 30-hour minimum field project requirement.

ELP 399 - Special Studies (1-4)
(Credit to be arranged.)

ELP 401 - Research (1-6)
(Credit to be arranged.)

ELP 402 - Independent Study (1-12)
(Credit to be arranged.)

ELP 403 - Thesis (1-6)
(Credit to be arranged.)

ELP 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

ELP 405 - Reading and Conference (1-6)
(Credit to be arranged.)

ELP 406 - Special Problems (1-12)
(Credits to be arranged.)

ELP 407 - Seminar (1-6)
(Credit to be arranged.)

ELP 408 - Workshop (1-6)
(Credit to be arranged.)

ELP 409 - Practicum (1-9)
(Credit to be arranged.)
ELP 410 - Experimental Course (1-6)
(Credit to be arranged.)

Permaculture is the study and observation of ecosystems, integrated with insights and practices of diverse indigenous peoples, combined to create an ethical whole systems design process. This course explores permaculture and whole systems design principles in order to apply these concepts to the designing of sustainable systems. Learners will gain a firm understanding of permaculture principles and an ecological design process, and will apply this understanding to create holistic, just, and regenerative, educational designs.
Also offered for graduate-level credit as ELP 518 and may be taken only once for credit. Prerequisite: Upper-division standing.

ELP 429 - Principles of Training and Development (3)
Examination of the principles of training and development with emphasis on applying adult learning theory to the training function. Essential principles include those related to developing training objectives, selecting training methods and resources, sequencing the learning experiences, and evaluating the training. Designed for trainers from a variety of work settings with a strong background in a content area who have little background in adult learning theory and its application to training and development practices.
Also offered for graduate-level credit as ELP 529 and may be taken only once for credit. Prerequisite: ELP 429/529.

ELP 430 - Course Design and Evaluation (4)
Examination of the field of instructional program design for adult learners within the training and development field, in educational and non-educational organizational settings. Focus on learning to design and manage instructional activities in response to training needs and skills analyses. Students are required to select and use an appropriate design model, design a preliminary needs assessment, develop program goals and learning objectives, develop an instructional plan, develop a plan to assess student learning and evaluate the program, and critically review the design document. Major emphasis given to developing the instructional design document that demonstrates a student’s ability to align and integrate effectively all aspects of the design process and to incorporate adult learning theory. Expected preparation: ELP 429/529.
Also offered for graduate-level credit as ELP 530 and may be taken only once for credit.

ELP 431 - Contemporary Issues in Training and Development (3)
Building on competencies developed during previous courses in the training and development series, provides a culminating experience to the series. Provides an opportunity for students to examine national and local trends in training and organizational development and to prepare for ongoing professional growth in the context of contemporary issues in the field. Expected preparation: ELP 429/529 plus two other courses in the series.
Also offered for graduate-level credit as ELP 531 and may be taken only once for credit.

ELP 432 - Training Methods (3)
Focuses on instructional strategies and effective delivery of training programs necessary for enhancing adult learning and professional development. Students will examine individual learning preferences and multiple types of active pedagogy for increasing transfer of learning. In addition, various techniques and tools for linking learning outcomes with organizational goals will be addressed.
Also offered for graduate-level credit as ELP 532 and may be taken only once for credit. Prerequisite: ELP 429/529.

ELP 434 - Leadership of the Training Function (3)
Focuses upon research-based, practical approaches for leading, managing, and evaluating the training and development function in organizations. It explores the role of training and development in achieving individual and organizational goals, as well as strategies and resources used in effective personnel development. Students analyze how to: develop, manage and evaluate the training function; identify strategies and resources for effective training management; and diagnose how the organization’s culture and needs affect the selection and success of training management efforts.
Also offered for graduate-level credit as ELP 534 and may be taken only once for credit. Prerequisite: ELP 429/529.

ELP 435 - Organization Transformation through Training and Development (3)
Designed for managers of the training and development function in organizations, this course focuses on the role of training and development in
organization transformation, improvement, and change. The course provides opportunities to bring real workplace examples into the classroom and to apply organization development and systems theory in the development strategies for organization improvement through the training and development function.

Also offered for graduate-level credit as ELP 535 and may be taken only once for credit. Prerequisite: ELP 429/529.

**ELP 439 - Developing Training Materials (3)**
Focus on the theories, knowledge and skills necessary to plan, develop and use effective participant and presentation training materials that enhance adult learning in training and development settings. Study the linkage of instructional design, adult learning representational systems and graphic design theories and how materials increase transfer of learning. In addition, examine writing issues relevant to effective communication, the selection and use of production methods, and project plans for training materials.

Also offered for graduate-level credit as ELP 539 and may be taken only once for credit.

**ELP 440 - Urban Farm Education: Leveraging Policy and Research to Cultivate Garden-Based Education in Practice (4)**
Students explore the policy and research context surrounding garden-based education in schools and communities with a focus on instructional design and assessment. As a learning community, students examine how policies and educational practices can pose barriers or potential leverage points for systemic change, and develop and teach integrated garden-based curriculum.

Also offered for graduate-level credit as ELP 540 and may be taken only once for credit. Prerequisite: Upper-division standing.

**ELP 444 - eLearning Instructional Design (3)**
Design of a self-paced eLearning simulation with appropriate instructional methods, user interface designs, media choices, and levels of interactivity and engagement. Expected preparation: ELP 484 or ELP 429.

Also offered for graduate-level credit as ELP 544 and may be taken only once for credit. Prerequisite: Upper-division standing.

**ELP 445 - Developing eLearning (4)**
Examination of development methodologies/processes, principles of task identification, risk mitigation, technical architecture, creative tools, and project management strategies used in developing eLearning. Application of learning theory to the development of eLearning.

Also offered for graduate-level credit as ELP 545 and may be taken only once for credit. Prerequisite: Upper-division standing.

**ELP 446 - Early Childhood Education: Relationships with Home and Society (3)**
Considers the sociology of families and communities in the development of cooperative relationships with programs for young children.

Also offered for graduate-level credit as ELP 546 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children.

**ELP 447 - Administration of Early Childhood Programs (3)**
Examines theory and practice informing the administration/leadership of early childhood programs to include: 1) organizational configurations, 2) leadership and the dynamics of the work group, 3) developmentally appropriate curriculum, 4) interaction with families of young children, and 5) significance of poverty, race, and gender for such programs.

Also offered for graduate-level credit as ELP 547 and may be taken only once for credit. Prerequisite: Child and family studies major or admission to an education graduate program.

**ELP 451 - Social Foundations of Education (4)**
Study of sociological theories that illuminate the effects of education on individuals and society. Problem areas in race, class, and gender are explored in the process of examining theories of socialization, certification, allocation, and legitimation and their application to historical and current educational situations.

Also offered for graduate-level credit as ELP 551 and may be taken only once for credit.

**ELP 452 - History of Education (3)**
A general review of the growth and development of education in relation to the civilization of the times; emphasis is placed upon the development of educational theories at various points in history.

Also offered for graduate-level credit as ELP 552 and may be taken only once for credit.

**ELP 453 - History of American Education (4)**
The historical development of the American educational system, from European backgrounds and colonial beginnings to the present time.
Also offered for graduate-level credit as ELP 553 and may be taken only once for credit.

ELP 454 - Philosophy of Education (4)
Study and comparison of the philosophical bases of educational ideas and of the educational implications of philosophical thought. ELP 554 includes an additional, concurrent 30 hour minimum field project requirement.

Also offered for graduate-level credit as ELP 554 and may be taken only once for credit.

ELP 457 - Cultural Pluralism and Urban Education (4)
This course is designed to explore the process of education policy development and implementation in culturally diverse, urban environments. The course is organized around several cultural pluralism perspectives; among the topics to be explored are the issues of socialization of the child, governmental operations, educational administration, teacher preparation and curriculum design. ELP 557 includes an additional, concurrent 30 hour minimum field project requirement.

Also offered for graduate-level credit as ELP 557 and may be taken only once for credit.

ELP 465 - ELL School Community Relations (3)
Learn how to work with families to overcome barriers to setting-up support systems in and out of school. Access appropriate community resources that can be critical for ensuring classrooms success with ELL students. Gain understanding about other cultures’ orientations to education and school. Learn strategies to build bridges between home, school, and the community.

Also offered for graduate-level credit as ELP 565 and may be taken only once for credit.

ELP 466 - Impact of Language and Culture in the Classroom (3)
Learn the importance of intercultural communication in working with children from a wide range of cultures in today’s classroom. Survey the cultural, linguistic, educational, and ethical issues present in all classrooms today. Study the sociological and language issues and immigration history. Learn how to identify and appreciate cultural factors that affect social adjustment and learning.

Also offered for graduate-level credit as ELP 566 and may be taken only once for credit.

ELP 467 - ESL/Bilingual Program Design and Models (3)
Exemplary schools provide second language learners with a rich intellectual diet, not a remedial or basic skills curriculum. They expect all students to achieve high standards in literacy and other academic areas. Learn how these schools combine their understandings and apply the knowledge of local, state, and federal laws and policies along with pedagogical considerations to create effective programs. Participants will examine a variety of local, regional, and national program models for ESL and Bilingual instruction. This will create opportunities to develop expertise in assessing the critical components of programs serving pre-school through adults.

Also offered for graduate-level credit as ELP 567 and may be taken only once for credit.

ELP 484 - Strategies for eLearning (3)
Best practices in eLearning and pedagogical issues related to design, development, and delivery. Application of research in learning and cognition to eLearning for design, analysis and problem solving.

Also offered for graduate-level credit as ELP 584 and may be taken only once for credit. Prerequisite: Upper-division standing.

ELP 501 - Research (1-9)
(Credit to be arranged.)

ELP 502 - Independent Study (1-9)
(Credit to be arranged.)

ELP 503 - Thesis (1-9)
(Credit to be arranged.)

ELP 504 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

ELP 505 - Reading and Conference (1-6)
(Credit to be arranged.)

ELP 506 - Special Problems (1-6)
See department for course description (Credit to be arranged.)
ELP 507 - Seminar (1-6)
(Credit to be arranged.)

ELP 508 - Workshop (1-6)
(Credit to be arranged.)

ELP 509 - Practicum (0-9)
(Credit to be arranged.)

ELP 510 - Selected Studies (1-6)
(Credit to be arranged.)

ELP 511 - Principles of Educational Research and Data Analysis I (4)
Research paradigm; measurement and test characteristics; planning and evaluation; library resources; identifying research problems; planning research; types of research; research designs, central tendency, variability and relationships; sampling, sampling error, and hypothesis testing; crossbreaks; one, two, and multiple group, and multiple independent variable designs; computer applications; information systems. This is the first course in a sequence of two: ELP 511 and ELP 512.
Prerequisite: graduate standing.

ELP 512 - Principles of Educational Research and Data Analysis II (4)
Research paradigm; measurement and test characteristics; planning and evaluation; library resources; identifying research problems; planning research; types of research; research designs, central tendency, variability and relationships; sampling, sampling error, and hypothesis testing; crossbreaks; one, two, and multiple group, and multiple independent variable designs; computer applications; information systems. This is the second course in a sequence of two: ELP 511 and ELP 512.
Prerequisite: graduate standing.

ELP 513 - Advanced Research Designs and Data Analysis in Education (4)
Designs for multiple independent variables; equating designs for multigroups; designs for multiple dependent variables; follow-up procedures for multiple dependent variable designs; selected data collection methods, including questionnaires, interviews, observation, sociometry, and objective tests and scales; computer application in the use of selected designs.

ELP 514 - Educational Measurement and Assessment (4)
Minimum competency, norm-referenced, and criterion-referenced tests; classroom student assessment; characteristics and levels of measurement; reliability; validity; interpreting test scores; standardized tests; using performance standards; planning and constructing classroom selection; supply and performance tests; portfolio assessment; evaluating test items.
Prerequisite: graduate standing.

ELP 515 - Program Evaluation (4)
An examination of evaluation theory and approaches and their applications in educational settings. Emphasis is given to program evaluation and to understanding how the usefulness of evaluation results may be increased.
Prerequisite: graduate standing.

ELP 516 - Collaborative Ethnographic Research Methods (4)
Explores if and how a participatory and collaborative form of research will foster knowledge democracy, and give ownership to those whose knowledge it is. Methodologies covered are: different genres of qualitative methods, community-based planning and research, participatory action-research, Gaian participatory science, classical ethnography, auto-ethnography, ethnographic performance, life histories, feminist methodologies, and "dialogue circles."
Also offered as ELP 616 and may be taken only once for credit.

ELP 517 - Ecological and Cultural Foundations of Learning (4)
Explores what constitutes ecological and cultural ways of knowing and how teaching and learning can be informed by ecological principles. As we question dominant taken-for-granted paradigms, we will explore modalities of pedagogy that are relational, co-created, place-based, participatory, experiential, critical, contemplative, multisensory, transformative, storied, embodied, and more. Students create a teaching philosophy that reflects an understanding of ecological principles and sustainability pedagogy, and design and facilitate an effective teaching experience to apply their understanding.

Permaculture is the study and observation of ecosystems, integrated with insights and practices of diverse indigenous peoples, combined to create an ethical whole systems design process. This course explores permaculture and whole systems design principles in order to apply these concepts to the designing of sustainable systems. Learners will gain a firm understanding of permaculture principles and an ecological design process, and will apply this understanding to create holistic, just, and regenerative, educational designs.

Also offered for undergraduate-level credit as ELP 418 and may be taken only once for credit.

ELP 519 - Sustainability Education (4)

Foregrounding urgency of climate change, this course explores theories and innovative practices of sustainability education in formal and informal settings. Participants critically assess earlier traditions such as nature education, environmental education, and outdoor education, as well as explore the intersections of indigenous, ecofeminist, and ecojustice perspectives on sustainability. Drawing upon global examples, the course promotes development of practitioners and scholars with proficiency, solutions-based knowledge, and tools to advance sustainability education in their own life/professional contexts.

ELP 520 - Developmental Perspectives on Adult Learning (4)

Explores professional applications of adult development theory and research to facilitating adult learning in a wide variety of contexts, including formal educational and training programs as well as general environments such as learning organizations. Course includes an additional, concurrent 30-hour minimum field project requirement.

Prerequisite: admission to a graduate program.

ELP 521 - Adult Learning and Motivation (4)

An examination of the complex interaction among adult development, motivation, and learning. Attention is focused on the intra- and inter-personal dynamics that motivate human behavior in general, and how they specifically motivate adult learning and behavior within a wide variety of educational settings. Course includes additional, concurrent 30-hour minimum field project requirement.

Prerequisite: graduate standing. Completion of ELP 520, Developmental Perspectives on Adult Learning, highly recommended.

ELP 522 - Teaching Diverse Adult Learners (4)

An examination of the theoretical, philosophical, and practical aspects of teaching adult students regarding issues of difference and diversity in the classroom. Students will develop skills in planning, delivering, and evaluating individual and group learning activities in a wide variety of learning environments. Course includes additional, concurrent 30-hour minimum field project requirement.

Prerequisite: graduate standing. Completion of ELP 520, Developmental Perspectives on Adult Learning, highly recommended.

ELP 523 - Assessing Adult Learning (4)

Introduction to the approaches, processes, and tools that can be used to assess adult learning. Emphasis is given to applications at the classroom and program levels and to practices that themselves contribute to adult learning. Course includes an additional, concurrent 30-hour minimum field project requirement.

Prerequisite: graduate standing.

ELP 524 - Spiritual Leadership for Sustainable Change (4)

This course explores how spirituality is integrated into teaching and learning, and into the work of engaged citizens. Spiritual leadership is explored through such themes such as: authenticity, identity, paradox, relationships, and sustainability. Community-based learning provides an opportunity to examine leadership and sustainability issues through a spiritual lens.

ELP 525 - Student Services in Higher Education (4)

Provides an introduction to the professional field of student affairs within the context of colleges and universities, including its historical, philosophical, ethical, and theoretical foundations. Current and future issues for the profession are also critically examined. Course includes an additional concurrent 30-hour minimum field project requirement.

Prerequisite: graduate standing.

ELP 526 - Facilitating Student Success in Postsecondary Education (4)

Provides an introduction to theory and research related to factors and conditions that affect student success in postsecondary education and to assessment
approaches and techniques in student services. Informed by theory, research, and practice, students develop an intervention proposal related to facilitating student success and a plan for assessing that intervention.

Prerequisite: graduate standing.

**ELP 527 - Legal Issues in Higher Education (4)**

Provides a general introduction to the law related to higher education and professional practice in colleges and universities. In addition to the substance of related law, the course explores how the law is applied to rules and policy and how ethical standards and principles impact that application. Course includes an additional concurrent 30-hour minimum field project requirement.

Prerequisite: graduate standing.

**ELP 528 - Leadership in Postsecondary Education (4)**

Examines emerging conceptualizations and forms of leadership and leadership development in postsecondary education. Ethical and value bases of leadership inform a focus on the creation of organizational and social change within postsecondary settings. Course emphasizes non-hierarchical models of leadership that value diversity and involve collaborative relationships and collective action. Application of leadership development issues within a variety of educational and social service organizations are explored. Course includes an additional concurrent 30-hour minimum field project requirement.

Prerequisite: graduate standing.

**ELP 529 - Principles of Training and Development (3)**

Examination of the principles of training and development with emphasis on applying adult learning theory to the training function. Essential principles include those related to developing training objectives, selecting training methods and resources, sequencing the learning experiences, and evaluating the training. Designed for trainers from a variety of work settings with a strong background in a content area who have little background in adult learning theory and its application to training and development practices.

Also offered for undergraduate-level credit as ELP 429 and may be taken only once for credit.

**ELP 530 - Course Design and Evaluation (4)**

Examination of the field of instructional program design for adult learners within the training and development field, in educational and non-educational organizational settings. Focus on learning to design and manage instructional activities in response to training needs and skills analyses. Students are required to select and use an appropriate design model, design a preliminary needs assessment, develop program goals and learning objectives, develop an instructional plan, and develop a plan to assess student learning and evaluate the program, and critically review the design document. Major emphasis is given to developing the instructional design document that demonstrates a student's ability to align and integrate effectively all aspects of the design process and to incorporate adult learning theory. Expected preparation: ELP 429/529.

Also offered for undergraduate-level credit as ELP 430 and may be taken only once for credit.

**ELP 531 - Contemporary Issues in Training and Development (3)**

Building on competencies developed during previous courses in the training and development series, provides a culminating experience to the series. Provides an opportunity for students to examine national and local trends in training and organizational development and to prepare for ongoing professional growth in the context of contemporary issues in the field. Expected preparation: ELP 429/529 plus two other courses in the series.

Also offered for undergraduate-level credit as ELP 431 and may be taken only once for credit.

**ELP 532 - Training Methods (3)**

Focuses on instructional strategies and effective delivery of training programs necessary for enhancing adult learning and professional development. Students will examine individual learning preferences and multiple types of active pedagogy for increasing transfer of learning. In addition, various techniques and tools for linking learning outcomes with organizational goals will be addressed.

Also offered for undergraduate-level credit as ELP 432 and may be taken only once for credit.

Prerequisite: ELP 429/529.

**ELP 533 - Planning and Budgeting in Postsecondary Education (4)**

Provides an introduction to the planning and budgeting processes used in colleges and universities. Major emphasis is placed on key concepts, planning models, and applications to institutional cases. Strategies for linking planning and budgeting function will be explored. Students will examine and use various planning and budgeting tools and techniques. Budget reduction and the connection between planning and assessment will be examined.
ELP 534 - Leadership of the Training Function (3)
Focuses upon research-based, practical approaches for leading, managing, and evaluating the training and development function in organizations. It explores the role of training and development in achieving individual and organizational goals, as well as strategies and resources used in effective personnel development. Students analyze how to: develop, manage and evaluate the training function; identify strategies and resources for effective training management; and diagnose how the organization’s culture and needs affect the selection and success of training management efforts.
Also offered for undergraduate-level credit as ELP 434 and may be taken only once for credit.
Prerequisite: ELP 429/529.

ELP 535 - Organization Transformation through Training and Development (3)
Designed for managers of the training and development function in organizations, this course focuses on the role of training and development in organization transformation, improvement, and change. The course provides opportunities to bring real workplace examples into the classroom and to apply organization development and systems theory in the development strategies for organization improvement through the training and development function.
Also offered for undergraduate-level credit as ELP 435 and may be taken only once for credit.
Prerequisite: ELP 429/529.

ELP 536 - Postsecondary Curriculum (4)
Provides an introduction to the field of curriculum or program design for adult learners and introduces students to a process of program planning and development. Curriculum development or design is viewed as both a technical and political process. It also provides a historical and philosophical perspective on postsecondary curriculum, with attention given to review and analysis of current practices and issues, including life-long and collaborative learning. A comprehensive program planning model will be examined.
Prerequisite: graduate standing.

ELP 537 - Policy and Governance in Postsecondary Education (4)
An examination of theory and research that relates to how policy is formulated and implemented in postsecondary environments. The course focuses on the policy and governance role of faculty, administrators, and trustees at the single college or university level, and state and federal roles in postsecondary policy and governance.
Prerequisite: graduate standing.

ELP 538 - Contemporary Issues in Postsecondary Education (4)
The course is designed to provide students with an introduction to the study of postsecondary education using as the vehicle a focus on some of the more pressing issues currently facing postsecondary education. The course is designed to increase the capacity for the identification and analyses of issues and the development of positions relative to the issue.
Prerequisite: graduate standing.

ELP 539 - Developing Training Materials (3)
Focus on the theories, knowledge and skills necessary to plan, develop and use effective participant and presentation training materials that enhance adult learning in training and development settings. Study the linkage of instructional design, adult learning representational systems and graphic design theories and how materials increase transfer of learning. In addition, examine writing issues relevant to effective communication, the selection and use of production methods, and project plans for training materials.
Also offered for undergraduate-level credit as ELP 439 and may be taken only once for credit.
Prerequisite: graduate standing.

ELP 540 - Urban Farm Education: Leveraging Policy and Research to Cultivate Garden-Based Education in Practice (4)
Students explore the policy and research context surrounding garden-based education in schools and communities with a focus on instructional design and assessment. As a learning community, students examine how policies and educational practices can pose barriers or potential leverage points for systemic change, and develop and teach integrated garden-based curriculum.
Also offered for undergraduate-level credit as ELP 440 and may be taken only once for credit.

ELP 541 - The Community College (4)
An introduction to the two-year college in the United States, with an emphasis on the public community college with a comprehensive educational program. Topics include: transfer studies; career education; general education; community services; basic skills education; and student development services. The purpose of the course is to provide students with theoretical and practical knowledge relative to the history, philosophy, students, staff, services, and patterns of organization of the public community college.
ELP 542 - Introduction to Service-Learning: Theoretical & Pedagogical Perspectives in Postsecondary Education (4)

Fundamental principles and practices of service-learning in postsecondary education. Service-learning pedagogy, its relationship to adult development, historical foundations in educational institutions, and civic education. Resources and organizations, and issues of race, class, gender, and power in service-learning. Required participation in a service-learning project provides practice in application of theories.

ELP 543 - Service-Learning & Community Based Learning in Postsecondary Educational Leadership & Policy Dom (4)

Service-learning in postsecondary educational institutions, their leadership, and policy. Role, organization, and policy of service-learning in different postsecondary institutions, from community colleges through graduate schools, and the varying ways in which service-learning is structured, researched, and assessed. Practical and theoretical concerns in an applied service-learning experience in the metro area. Challenges and opportunities of partnerships between academic institutions and community-based organizations. Implications of service-learning for students, faculty, partners, and the community in the context of civic engagement, social justice, and social change.

ELP 544 - eLearning Instructional Design (3)

Design of a self-paced eLearning simulation with appropriate instructional methods, user interface designs, media choices, and levels of interactivity and engagement. Expected preparation: ELP 584 or ELP 529.

Also offered for undergraduate-level credit as ELP 444 and may be taken only once for credit.

ELP 545 - Developing eLearning (4)

Examination of development methodologies/processes, principles of task identification, risk mitigation, technical architecture, creative tools, and project management strategies used in developing eLearning. Application of learning theory to the development of eLearning. Expected preparation: ELP 529 and ELP 530.

Also offered for undergraduate-level credit as ELP 445 and may be taken only once for credit.

ELP 546 - Early Childhood Education: Relationships with Home and Society (3)

Considers the sociology of families and communities in the development of cooperative relationships with programs for young children.

Also offered for undergraduate-level credit as ELP 446 and may be taken only once for credit. Prerequisite: Undergraduate early childhood education coursework or teaching experience with young children.

ELP 547 - Administration of Early Childhood Programs (3)

Examines theory and practice informing the administration/leadership of early childhood programs to include: 1) organizational configurations, 2) leadership and the dynamics of the work group, 3) developmentally appropriate curriculum, 4) interaction with families of young children, and 5) significance of poverty, race, and gender for such programs.

Also offered for undergraduate-level credit as ELP 447 and may be taken only once for credit. Prerequisite: Child and family studies major or admission to an education graduate program.

ELP 548 - Global Political Ecology (4)

To study the connections between political, economic, social, and ecological issues, we explore the following themes: the impact of globalization on human and non-human communities; the relationship between poverty and environmental degradation; the distribution of resource use and commodification in the global North and the global South; and our own relationships to food systems. Students apply these concepts through a multi-media study and presentation of a commodity in terms of its production, distribution and consumption.

ELP 549 - Service-Learning & Community Based Learning in Postsecondary Educational Leadership & Policy Intl (4)

Service-learning in postsecondary educational institutions, their leadership, and policy. Role, organization, and policy of service-learning in different postsecondary institutions, from community colleges through graduate schools, and the varying ways in which service-learning is structured, researched, and assessed. Practical and theoretical concerns in an applied service-learning experience abroad. Challenges and opportunities of international service-learning. Implications of service-learning for students, faculty, partners, and the community in the context of civic engagement, social justice, and social change.
Also offered as ELP 649 and may be taken only once for credit.

**ELP 550 - Leadership for Sustainability (4)**

Students review, analyze, and apply approaches to sustainability leadership through collaborative, holistic, experiential learning. Key themes explored include the meaning of sustainability leadership; approaches, strategies, and skills used by sustainability leaders; whole systems thinking and design; the role of eco-spiritual values and Traditional Ecological Knowledge (TEK) in sustainability leadership; and the importance of collaboration, creativity, relationships, and reflection. Students apply these concepts directly to a sustainability leadership challenge at the Learning Gardens Laboratory.

**ELP 551 - Social Foundations of Education (4)**

Study of sociological theories that illuminate the effects of education on individuals and society. Problem areas in race, class, and gender are explored in the process of examining theories of socialization, certification, allocation, and legitimation and their application to historical and current educational situations.

Also offered for undergraduate-level credit as ELP 451 and may be taken only once for credit.

**ELP 552 - History of Education (3)**

A general review of the growth and development of education in relation to the civilization of the times; emphasis is placed upon the development of educational theories at various points in history.

Also offered for undergraduate-level credit as ELP 452 and may be taken only once for credit.

**ELP 553 - History of American Education (4)**

The historical development of the American educational system, from European backgrounds and colonial beginnings to the present time.

Also offered for undergraduate-level credit as ELP 453 and may be taken only once for credit.

**ELP 554 - Philosophy of Education (4)**

Study and comparison of the philosophical bases of educational ideas and of the educational implications of philosophical thought. ELP 554 includes an additional, concurrent 30 hour minimum field project requirement.

Also offered for undergraduate-level credit as ELP 454 and may be taken only once for credit.

**ELP 557 - Cultural Pluralism and Urban Education (4)**

This course is designed to explore the process of education policy development and implementation in culturally diverse, urban environments. The course is organized around several cultural pluralism perspectives; among the topics to be explored are the issues of socialization of the child, governmental operations, educational administration, teacher preparation and curriculum design. ELP 557 includes an additional, concurrent 30 hour minimum field project requirement.

Also offered for undergraduate-level credit as ELP 457 and may be taken only once for credit.

**ELP 558 - Educational Leadership (4)**

Analysis of leadership theories, skills, and techniques as applied to the organization and administration of public education.

Prerequisite: graduate standing.

**ELP 559 - The Principalship (4)**

Designed to develop complementary theoretical and practical understanding of the principalship; to acquire knowledge and to learn practices and skills needed to become a successful first-year principal.

Prerequisite: ELP 569.

**ELP 560 - Supervision and Evaluation of Instruction (4)**

The role of the supervisor in keeping education geared to the changing demands of society; theories of leadership; group processes and individual conference techniques; action research and related approaches to curriculum change; analysis of concrete supervisory problems.

**ELP 561 - Staff Development: Planning, Implementation, and Evaluation (4)**

Staff development goals; characteristics of staff development programs; establishing a staff development organization; policy and decision-making; identifying and responding to the concerns of participants; assessing needs; planning and implementation of specific programs; networking; formal and informal methods of evaluation; models for staff development; program evaluation; management information systems; evaluating instructional effectiveness.

Prerequisite: graduate standing.
ELP 562 - School and Community Relations (4)
An intensive examination of the school and its environment. Major emphasis is on the linking mechanisms utilized by the school in interacting with parents, citizens, and special interest groups. Course includes an additional, concurrent 30 hour minimum field project requirement.
Prerequisite: graduate standing.

ELP 563 - Human Relations in Educational Organizations (4)
Issues and perspectives in group processes; models for studying groups; principles of group dynamics; human relations within educational organizations; strategies for group problem-solving and conflict management; application of group dynamics to leadership, communication, and decision-making within educational organizations; evaluating processes and production of educational groups.
Prerequisite: graduate standing.

ELP 564 - Administration of Curriculum (4)
Provides a broad and critical understanding of curricular matters that are relevant and important to administrators: 1) decision making about the choice of content; 2) politics of curriculum development; 3) implementation and monitoring of curriculum at building site; 4) testing and alignment of curriculum; and 5) evaluation of curriculum implementation.
Prerequisite: graduate standing.

ELP 565 - ELL School Community Relations (3)
Learn how to work with families to overcome barriers to setting-up support systems in and out of school. Access appropriate community resources that can be critical for ensuring classrooms success with ELL students. Gain understanding about other cultures’ orientations to education and school. Learn strategies to build bridges between home, school, and the community.
Also offered for undergraduate-level credit as ELP 465 and may be taken only once for credit.

ELP 566 - Impact of Language and Culture in the Classroom (3)
Learn the importance of intercultural communication in working with children from a wide range of cultures in today’s classroom. Survey the cultural, linguistic, educational, and ethical issues present in all classrooms today. Study the sociological and language issues and immigration history. Learn how to identify and appreciate cultural factors that affect social adjustment and learning.

ELP 567 - ESL/Bilingual Program Design and Models (3)
Exemplary schools provide second language learners with a rich intellectual diet, not a remedial or basic skills curriculum. They expect all students to achieve high standards in literacy and other academic areas. Learn how these schools combine their understandings and apply the knowledge of local, state, and federal laws and policies along with pedagogical considerations to create effective programs. Participants will examine a variety of local, regional, and national programs for ESL and Bilingual instruction. This will create opportunities to develop expertise in assessing the critical components of programs serving pre-school through adults.
Also offered for undergraduate-level credit as ELP 467 and may be taken only once for credit.

ELP 568 - Educational Organization and Administration (4)
Examination of the role, functions, and responsibilities of the educational leaders and administrators; study of administrative and organizational theory and its application to the operation of educational programs and organizations in various settings, including school districts, higher education and educational divisions in private sector organizations. Course includes an additional, concurrent 30 hour minimum field project requirement.
Prerequisite: graduate standing.

ELP 569 - Introduction to Educational Administration (4)
Introductory course required of applicants to the Initial Administrator certificate program. Considers educational, social, political, economic, organizational, and cultural forces shaping U.S. public schools and their administration. Course includes an additional, concurrent 30 hour minimum field project requirement.

ELP 570 - Human Relations and Educational Foundations (4)
Explores the historical, social, philosophical, and organizational foundations of public education. Examines the dynamics of human relationships, leadership, and community building in schools and educational settings. Analyzes public education goals and decision-making processes for achieving these goals.
**ELP 571 - Teaching, Learning, and Curriculum (4)**

Examines the complex relationships between staff evaluation, individual professional development, staff development, and effective teaching, learning, and curriculum. Students will examine those factors which make supervision and evaluation really work, i.e., contribute to the larger purpose of building an environment where teachers can deliver their best and children can learn most.

**ELP 572 - Human Resource Development and Organizational Change (4)**

Examines how the relationships between people and organizational structures, policies, and processes influence school culture and change efforts. Studies how school leaders secure and manage resources to improve teaching and learning for all within the school community.

**ELP 573 - Educational Leadership Project I (1)**

Focus on the development, in a school or agency setting, of an Educational Leadership Project demonstrating knowledge, skills, and dispositions required by the TSPC Initial Administrator License Standards. The first quarter of a three quarter project designed in conjunction with a practicum supervisor to address a leadership challenge area in teaching and learning for student success within an assigned practicum setting. Students will define the challenge area, research the problem context and related literature, and develop an action plan.

Prerequisite: admission to the Initial Administrator Licensure Program.

**ELP 574 - Educational Leadership Project II (1)**

Focus on the implementation, in a school or agency setting, of an Educational Leadership Project demonstrating knowledge, skills, and dispositions required by the TSPC Initial Administrator License Standards. The second quarter of a three quarter project designed in conjunction with a practicum supervisor to address a leadership challenge area in teaching and learning for student success within an assigned practicum setting. Students will implement their action plan by collecting, organizing, and analyzing data.

Prerequisite: admission to the Initial Administrator Licensure Program.

**ELP 575 - Educational Leadership Project III (1)**

Focus on final analysis of an Educational Leadership Project demonstrating knowledge, skills, and dispositions required by the TSPC Initial Administrator License Standards. The third quarter of a three quarter project designed in conjunction with a practicum supervisor to address a leadership challenge area in teaching and learning for student success within an assigned practicum setting. Students will analyze the outcome of their year-long project, suggest implications for further research, and reflect on the entire project.

Prerequisite: admission to the Initial Administrator Licensure Program.

**ELP 576 - Education, Community, and Society (4)**

A review of sociological theories and research that illuminates the social and economic functions of education in modern society, with special emphasis placed on application of the role of the practicing school administrator as instructional leader and manager. Race, class, gender, and differing ability levels are explored in the process of examining theories of socialization, certification, allocation, and legitimation and their application to historical and current educational situations, particularly in schools and school districts. 30-hours of field-based experiences are used to connect the theories and research covered in class to the practice of schooling and the work of a school administrator.

Prerequisite: admission to continuing administrator/initial superintendent licensure program or permission of instructor.

**ELP 577 - District and School Staff Supervision and Evaluation (4)**

Advanced course in alternative approaches to district and school staff supervision and evaluation in an era of school reform, heightened accountability, and emerging state and national standards. Topics to be covered are dealing with the at-risk and incompetent staff and new directions in teacher evaluation. 30-hours of field-based experiences are used to connect the theories and research covered in class to the practice of schooling and the work of a school administrator.

Prerequisite: admission to continuing administrator/initial superintendent licensure program or permission of instructor.

**ELP 578 - Communication and Conflict Management in Educational Organizations (4)**

Issues of communication within educational organizations and between educational organizations and various audiences. Definitions of conflict and models for peaceful resolution/management of
conflict within educational organizations and with various other individuals and organizations. Attention to world view, cultural styles, positions, underlying needs, bargaining, reforming, and finding common ground. Strategies for group problem-solving, conflict management including collective bargaining and contract management, and community-building. 30 hours of field-based experiences are used to connect the theories and research covered in class to the practice of schooling and the work of a school administrator.

Prerequisite: admission to continuing administrator/initial superintendent program or permission of instructor.

**ELP 579 - Curriculum, Instruction, and Assessment Leadership (4)**

An examination of standards-based reform, curriculum and instructional models, assessment models, school improvement strategies, and educational change theories. Emphasis is given to understanding how assessment information can be used to improve student learning and overall school performance within the context of Oregon’s state reform framework. 30 hours of field-based experiences are used to connect the theories and research covered in class to the practice of schooling and the work of a school administrator.

Prerequisite: admission to continuing administrator/initial superintendent program or permission of instructor.

**ELP 580 - District Policy, Operations, Facilities, and Finance (4)**

The role of the district superintendent and local school boards in planning, management, evaluation, and improvement of policies and programs related to school operations, personnel, facilities, and finance to meet school district needs. Examines state and federal laws, regulations, and the roles of ODE and the legislature in governing Oregon school finance, school budgeting, and school facilities. 30 hours of field-based experiences are used to connect the theories and research covered in class to the practice of schooling and the work of a school administrator.

Prerequisite: admission to continuing administrator/initial superintendent licensure program or permission of instructor.

**ELP 581 - U.S. and Oregon School Law and Policy (4)**

Examines federal and Oregon school law governing educational practice and policy at the school and district levels; the relationships among these factors and their implications for effective communication with educational stakeholders, instruction and student learning, and effective organizational management of schools. 30 hours of field-based experiences are used to connect the theories and research covered in class to the practice of schooling and the work of a school administrator.

Prerequisite: admission to continuing administrator/initial superintendent licensure program or permission of instructor.

**ELP 582 - Teaching, Learning and Curriculum I (2)**

Examines the role of effective school leadership for best practices in teaching, learning and curriculum which promote the success of all students. Students will examine those factors which make supervision and evaluation really work, i.e., contribute to the larger purpose of building an environment where teachers can deliver their best and children can learn the most.

Prerequisite: admission to Initial Administrator Licensure Program.

**ELP 583 - Teaching, Learning and Curriculum II (2)**

Examines the complex relationships between staff evaluation, individual professional development, staff development, and effective teaching, learning, and curriculum. Students will formulate a working knowledge of the change process, staffing, program, and faculty needs within an educational setting through problem-based learning.

Prerequisite: admission to Initial Administrator Licensure Program.

**ELP 584 - Strategies for eLearning (3)**

Best practices in eLearning and pedagogical issues related to design, development, and delivery. Application of research in learning and cognition to eLearning for design, analysis and problem solving.

Also offered for undergraduate-level credit as ELP 484 and may be taken only once for credit.

**ELP 594 - School Law (4)**

Critical analysis of the legal framework governing school law in the United States, with emphasis on contemporary legal problems of education. Implications of landmark and current court decisions.

Prerequisite: graduate standing.

**ELP 601 - Research (1-9)**

(Credit to be arranged.)
ELP 602 - Independent Study (1-9)
(Credit to be arranged.)

ELP 603 - Dissertation (1-16)
(Credit to be arranged.)

ELP 604 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

ELP 605 - Reading and Conference (1-9)
(Credit to be arranged.)

ELP 606 - Special Problems/Projects (1-6)
(Credit to be arranged.)

ELP 607 - Seminar (1-6)
(Credit to be arranged.)

ELP 608 - Workshop (1-9)
(Credit to be arranged.)

ELP 609 - Practicum (0-9)
(Credit to be arranged.)

ELP 610 - Selected Topics (1-9)
(Credit to be arranged.)

ELP 616 - Collaborative Ethnographic Research Methods (4)
Explores if and how a participatory and collaborative form of research will foster knowledge democracy, and give ownership to those whose knowledge it is. Methodologies covered are: different genres of qualitative methods, community-based planning and research, participatory action-research, Guian participatory science, classical ethnography, autoethnography, ethnographic performance, life histories, feminist methodologies, and "dialogue circles."
Also offered as ELP 516 and may be taken only once for credit.

ELP 617 - Ecological and Cultural Foundations of Learning (4)
Explores how we teach and learn ecologically and what constitutes ecological and cultural ways of knowing. One of the key foundational courses for LECL specialization, this course is beyond simply justifying or advocating that our education should be grounded in ecological principals. Rather it offers an opportunity to engage in critical and comparative analyses of what has been already accomplished and the new areas of innovations in environmental education, mature education, outdoors education, naturalist training, and other such genres.
Also offered as ELP 517 and may be taken only once for credit.

ELP 649 - Service-Learning & Community Based Learning in Postsecondary Educational Leadership & Policy Intl (4)
Service-learning in postsecondary educational institutions, their leadership, and policy. Role, organization, and policy of service-learning in different postsecondary institutions, from community colleges through graduate schools, and the varying ways in which service-learning is structured, researched, and assessed. Practical and theoretical concerns in an applied service-learning experience abroad. Challenges and opportunities of international service-learning. Implications of service-learning for students, faculty, partners, and the community in the context of civic engagement, social justice, and social change.
Also offered as ELP 549 and may be taken only once for credit.

ELP 658 - Social, Historical, Philosophical, and Cultural Foundations of Education (4)
Seminar for education doctoral students providing a detailed exploration of texts with a focus on the institutional aspects of education, the intellectual currents that have supported it, and the social constructs that maintain it. Cultural, historical, social, philosophical, and critical and feminist perspectives as well as modernist viewpoints are included. Participants will read in-depth and write analytical response papers as a grounding for discussion in the seminar and will produce an end of term project or research paper.
Prerequisite: admission to the Graduate School of Education doctoral program or permission of instructor.

ELP 659 - Theory, Research, and Practice in Educational Administration (4)
Seminar for education doctoral students providing a detailed exploration of research and theory
development in the field of educational administration. Participants will read in-depth and write analytical response papers as a basis for discussion in the seminar and will produce a term project or research paper.

Prerequisite: admission to the Graduate School of Education doctoral program or permission of instructor.

**ELP 801 - Research (1-9)**
(Credit to be arranged.)

**ELP 802 - Independent Study (1-9)**
(Credit to be arranged.)

**ELP 804 - Cooperative Education/Internship (1-9)**
(Credit to be arranged.)

**ELP 805 - Reading and Conference (1-6)**
(Credit to be arranged.)

**ELP 806 - Special Problems (1-6)**
(Credit to be arranged.)

**ELP 807 - Seminar (1-6)**
(Credit to be arranged.)

**ELP 808 - Workshop (1-9)**
(Credit to be arranged.)

**ELP 809 - Practicum (0-9)**
(Credit to be arranged.)

**ELP 810 - Selected Topics (0-9)**
(Credit to be arranged.)

**EMCR - Emergency Management**

**EMCR 520 - Anatomy and History of Disasters (4)**
This is survey of major natural disasters (both geological and weather related ones) that affect humans, focusing on causes, effects, recovery, planning and prediction. Many case histories will be covered with an emphasis on the Pacific Northwest.

**EMCR 530 - Building Community Resilience (4)**
Introduction to resilience theory, concepts, and applications in a hazards planning and disaster management. Surveys sociological, public administration, and planning theory literature to understand risk, resilience, and methods to address these at the community level.

Cross-Listed as: This is the same course as USP 530 and may be taken only once for credit.

**EMCR 535 - Strategies for Organizing Recovery, Mitigation and Resilience (3)**
Application of resilience concepts in the policy and planning context. The course provides tools for using resilience concepts in policy making, policy analysis, and hazards and disaster planning. Introduces practical tools for analyzing community vulnerabilities and actions to take to improve resilience.

Cross-Listed as: This is the same course and PA 535 and may be taken only once for credit.

**EMCR 545 - Risk and Strategic Communication (4)**
Examination of the theoretical background and the intricacies of risk communication, with a focus on strategic communication. From health crises to earthquakes to environmental disasters, this course explores several modern day challenges through a series of cases studies and exercises emphasizing preparation/mitigation, audience analysis, message development, communication channel identification, and outcome evaluation. Expected preparation: research methods.

Prerequisite: Graduate standing. Cross-Listed as: This is the same course as Comm 545 and may be taken only once for credit.

**EMCR 550 - International Perspectives on Disaster Management & Resilience (3)**
Narratives, images, and research across the globe continue to document the devastating effects of disasters, both human-made and natural. This documentation demonstrates the monumental effects disasters can have on human life, infrastructure, and the natural environment, let alone an economy. Emergency management systems vary across nations and cultures, reflecting differential challenges, government types and capacity, public involvement and commitment to response, and cultural backgrounds.
EMCR 560 - Climate Resiliency Planning (3)
Aims to examine the response of society to a changing climate, with an emphasis on the practices, processes, and programs that can improve the resiliency of communities to climate-induced impacts. We will investigate what it means to be “resilient”, exploring principles from planning, sociology, engineering, environmental studies, and disaster studies, and other related fields. We will also pay special attention to the interplay between social inequality, poverty, social exclusion and vulnerability to natural disaster.
Cross-Listed as: This is the same course as USP 560 and may be taken only once for credit.

EMCR 567 - Community Resilience in Coupled Socio-Ecological Systems (4)
Examines community vulnerability, adaptation, and resilience to environmental risks and hazards in the coupled human and natural systems from a geographical and spatial science perspective. Focuses on US and international case studies in major urban areas to investigate the questions of “why, when, for whom, and how” of community resilience across scales.
Cross-Listed as: This is the same course as Geog 567 and may be taken only once for credit.

EMCR 587 - Principles and Practices of Emergency Management (3)
Explores the history, doctrines, and authorities of emergency management as well as the role of the emergency manager. It provides background on this emerging field as well on theoretical foundations of effective emergency management and strategies for effective emergency management leadership.
Cross-Listed as: This is the same course as PA 587 and may be taken only once for credit.

EMCR 591 - Culture, Vulnerability and Disaster Resilience (4)
This class discusses the distinctions between natural hazards and disasters, human-made and natural events, and sudden and slow-moving catastrophes. It considers the effects of preexisting social inequalities (e.g., race) and vulnerabilities (e.g., poverty) and examines individual, household, and community resiliency as a function of social networks and social capital. The class also explores the roles of perceived risk, connectivity, and social memory. It concludes with an analysis on the successes and failures of humanitarian aid.
Cross-Listed as: This is the same course as Anth 591.

EMCR 595 - Capstone Seminar in Emergency Management and Resilience (4)
This seminar is the capstone experience for the Emergency Management and Community Resilience Program. It provides the opportunity to integrate the skills and perspectives of core courses with team learning generated through experiential learning. Students in the capstone seminar, working as a team, will develop a disaster management or business continuity plan for a public, private, or nonprofit organization that requests assistance in preparing a disaster response plan. Teams will make presentations of their plans at the end of the term.
Prerequisite: Students must complete all core courses and 45 credits of coursework in the program prior to enrolling in this capstone seminar.

Eng - English
Eng 100 - Introduction to Literature (4)
An introduction to the study of stories, plays, poems, and essays. Includes representative approaches for studying literature and writing about it. Recommended especially for students with no previous college-level coursework in literature.

Eng 104 - Introduction to Fiction (4)
Reading and analysis of significant works of fiction.

Eng 105 - Introduction to Drama (4)
Reading and analysis of significant works of drama.

Eng 106 - Introduction to Poetry (4)
Reading and analysis of significant poems.

Eng 107 - Introduction to World Literature (4)
An introduction to significant literary works from different regions, cultures, and periods.

Eng 199 - Special Studies (1-6)
See department for course description. (Credit to be arranged.)

Eng 201 - Introduction to Shakespeare (4)
Study of Shakespeare’s plays and poetry, with particular emphasis on understanding Shakespearean language, genres, and cultural contexts.
Eng 204 - Survey of British Literature I (4)
An introduction to British literature from its beginnings to the seventeenth century.

Eng 205 - Survey of British Literature II (4)
An introduction to British literature from the seventeenth century to the contemporary period.

Eng 253 - Survey of American Literature I (4)
An introduction to American literature from its beginnings to the mid-nineteenth century.

Eng 254 - Survey of American Literature II (4)
An introduction to American literature from the mid-nineteenth century to the present.

Eng 260 - Introduction to Women’s Literature (4)
Study of literature written by and about women across historical periods and genres. This is the same course as WS 260 and may be taken only once for credit.

Eng 299 - Special Studies (1-9)
See department for course description. (Credit to be arranged.)

Eng 300 - Literary Form and Analysis (4)
Emphasizes skills in close reading, formal analysis, the specialized study of literary genres, argumentation, and the process of drafting, revising, and editing academic essays. Required for, but not restricted to, English majors.

Eng 301U - Topics in Shakespearean Genre (4)
Study of Shakespeare’s plays and poetry, focusing on specific genres with an emphasis on close reading and historical context. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 304 - Critical Theory of Cinema (4)
An introduction to critical and historical approaches to the study of cinema, including feminism, structuralism, sociological criticism, and psychoanalysis, with discussion of cinema as art form and cultural commodity.

Eng 305U - Topics in Film (4)
Study of film as text, including author, formalist, historical, and cultural perspectives. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 306U - Topics in Literature and Popular Culture (4)
Study of literary forms in popular culture, including such topics as fantasy, the graphic novel, and detective fiction. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 307U - Science Fiction (4)
Study of science fiction, including its subgenres, media, histories, and cultural influences.

Eng 309U - Indigenous Nations Literature (4)
Introduction to the literatures and cultures of the indigenous nations of North America, from moral and ceremonial practices to contemporary fiction and poetry. Includes discussion of historical, political, and social contexts as well as relevant issues such as colonialism, sovereignty, stereotyping, and cultural authenticity.

Eng 310U - Topics in Children’s and Young Adult Literature (4)
Study of literary works written for young audiences, with attention to constructions of childhood and family in changing cultural contexts. Topics vary by genre, historical period, geographical region, author, theoretical approach, or theme. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 311 - Tragedy (4)
Study of the generic conventions and important aspects of tragedy in world literature.
Eng 312 - Comedy and Satire (4)
Study of literary works and popular media that emphasize the features and techniques of comedy and satire, investigating concepts such as genre, humor, irony, and laughter.

Eng 313U - The American Short Story (4)
A survey of the American short story, from its beginnings in the 19th century to the present.

Eng 314 - The Epic (4)
Study of the epic in Western and/or world literature, focusing on the characteristics of the genre and its aesthetic and moral dimensions.

Eng 315 - Poetry and Form (4)
Study of poems and poetic forms across historical periods and cultures.

Eng 316 - The Short Story (4)
A survey of the short story as it developed from the tale, the legend, and the anecdote to its modern form. Although fiction from many literatures will be studied, all works will be read in English.

Eng 317U - Greek Mythology (4)
Greek mythology as recorded by Homer, Hesiod, Ovid, and various of the Greek playwrights and philosophers. Special attention is given to the Greek legacy of ideas, themes, figures, and images.

Eng 318U - The Bible as Literature (4)
Study of the Hebrew Bible and Christian New Testament as literary anthologies of the ancient Near East, emphasizing cultural and historical contexts, political and theological histories, and close readings of the texts.

Eng 319U - Northern European Mythology (4)
Norse and Celtic mythologies in medieval texts.

Eng 320U - The English Novel I (4)
Study of the English novel from early fictional forms to the eighteenth century.

Eng 321 - The English Novel II (4)
Study of the English novel from the nineteenth century to the present.

Eng 325U - Postcolonial Literature (4)
Introduction to key texts, themes, issues, and approaches in postcolonial literature and theory.

Eng 326 - Literature, Community, and Difference (4)
Examines the relationship between cultural production and the formation, practice, and representation of social identities.

Eng 327 - Culture, Imperialism, and Globalization (4)
Examines cultural encounter and its effects. Topics may address various historical periods and geographical regions, but they will share a focus on connecting aesthetics to the political and institutional contexts of imperialism and globalization.

Eng 330U - Jewish and Israeli Literature (4)
Introduction to modern Jewish literature in its diasporic and national contexts. Emphasis on the transition from sacred to secular literature; reflection of historical and social realities; development of literatures in Europe and the Middle East.

Eng 331U - Introduction to Rhetoric and Composition (4)
Survey of the discipline of rhetoric and composition, including history, theory, practice, and teaching.

Eng 332U - History of Cinema and Narrative Media I (4)
Surveys the history of cinema and narrative media from the late nineteenth-century moving image to the Second World War.

Eng 333U - History of Cinema and Narrative Media II (4)
Surveys the history of cinema and narrative media from the end of the Second World War to the 1970s.
Issues will include the impact of postwar artistic and literary movements, postwar consumer cultures, the cold war, new wave movements, television, youth culture, and third cinemas.

**Eng 335U - Topics in Literature and Film (4)**
Study of the interplay between films and literary texts, focusing on aesthetic qualities, cultural contexts, practices of adaptation, and modes of reading and spectatorship. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Cross-Listed as: NAS 335U.

**Eng 340U - Medieval Literature (4)**
Study of medieval literature, including literary genres and themes, historical and cultural contexts, and major authors and movements.

**Eng 341U - Renaissance Literature (4)**
Study of sixteenth- and seventeenth-century literature, including literary genres and themes, historical and cultural contexts, and major authors and movements.

**Eng 342U - Eighteenth Century Literature (4)**
Study of eighteenth-century literature, including literary genres and themes, historical and cultural contexts, and major authors and movements.

**Eng 343U - Romanticism (4)**
Study of Romantic literature, including literary genres and themes, historical and cultural contexts, and major authors.

**Eng 344U - Victorian Literature (4)**
Study of Victorian literature, including literary genres and themes, historical and cultural contexts, and major authors and movements.

**Eng 345U - Modern British Literature (4)**
Study of modern British literature, including literary genres and themes, historical and cultural contexts, and major authors and movements.

**Eng 351U - African American Literature I (4)**
An introduction to literature written by and about African Americans from the colonial period to the era of the abolition of slavery.

Cross-Listed as: This is the same course as BSt 351U and may be taken only once for credit.

**Eng 352U - African American Literature II (4)**
An introduction to African American literature from the mid-nineteenth century to the beginnings of the "Black Arts" movement.

Cross-Listed as: This is the same course as BSt 352U and may be taken only once for credit.

**Eng 353U - African American Literature III (4)**
An introduction to African American literature of the post-civil rights era, from 1965 to the present.

**Eng 360U - American Literature and Culture I (4)**
Study of American literature from its beginnings to the mid-nineteenth century, including literary genres and themes, historical and cultural contexts, and major authors and movements.

**Eng 363U - American Literature and Culture II (4)**
Study of American literature from the mid-nineteenth century to the present, including literary genres and themes, historical and cultural contexts, and major authors and movements.

**Eng 367U - Topics in American Literature and Culture (4)**
Study of selected aspects of American literature and culture. Topics are unified by theme and may cover multiple historical periods. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Prerequisite: 12 credits in literature.

**Eng 368U - Literature and Ecology (4)**
Study of literary representations of the environment and our relation to it, including questions of anthropocentrism and ecocentrism, environmental justice, human/non-human relations, sustainability, and globalization.
Eng 369U - Asian American Literature (4)
An introduction to Asian American literature, including literary genres and themes, historical and cultural contexts, and major authors and movements.

Eng 371 - The Novel (4)
A theoretical and comparative approach to the study of the novel as a literary form.

Eng 372U - Topics in Literature, Gender, and Sexuality (4)
Study of representations of gender and sexuality in literature and related cultural forms. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major. This is the same course as WS 372U.

Eng 373U - Topics in Literature, Race, and Ethnicity (4)
Study of representations of race and ethnicity in literature and related cultural forms. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 377U - American Poetry I (4)
Study of American poetry from the Colonial period to the early twentieth century.

Eng 378U - American Poetry II (4)
Study of American poetry from the early twentieth century to the beginning of the twenty-first century.

Eng 380 - Introduction to Comparative Literary and Cultural Studies (4)
Overview of the practices, methods, and materials of comparative literary and cultural studies, with an emphasis on learning specific modes of encountering creative expression from different linguistic, cultural, and national backgrounds. Introduces students to major questions, concepts, and debates in the field as well as literary works in relation to various themes, ideas, genres, and contexts.
Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as WLL 380 and may be taken only once for credit.

Eng 381 - Topics in Translation Studies (4)
Students will develop analytical frameworks to understand translation and its implications for textual interpretation. Students work with case studies that highlight the role of translation throughout history; they also examine how methods from Translation Studies enrich the study of literary and non-literary texts alike. Those with second-language competency can optionally develop skills to produce translations of their own. Course may be repeated for up to 8 credits. Up to 8 credits of this course number can be applied to the English major.
Cross-Listed as: This is the same course as WLL 381.

Eng 383U - Topics in Comparative Literature, Film, and Comics (4)
Comparative study of literary, film, or comic-book genres across two or more world cultures. Students learn conventions of specific genres, significant differences between genres, and the role cultural environments play in shaping artistic responses. Readings and discussions are in English. Course may be repeated for up to 8 credits. Up to 8 credits of this course number can be applied to the English major.
Cross-Listed as: This is the same course as WLL 383U.

Eng 385U - Contemporary Literature (4)
Study of contemporary prose, poetry, drama, and/or texts of other genres and media, focusing on the formal devices, intellectual undercurrents, and cultural implications of texts from a range of global, national, or regional traditions.

Eng 387U - Women's Literature (4)
Study of works by women writers from the medieval period to the present, focusing on topics such as feminism, marginalization, and women's roles in the public and private spheres.

Eng 397U - Digital Literary Studies (4)
Introduction to digital literary studies using both theoretical readings and hands-on computational exercises. Explores how networked computers offer new contexts for reading, interpreting, and making literature and literary criticism. Focuses on using databases and archives to study and produce literary texts. No prior computer training is necessary.
Eng 399 - Special Studies (1-5)
See department for course description. (Credit to be arranged.)

Eng 401 - Research (0-6)
See department for course description. (Credit to be arranged.)

Eng 402 - Independent Study (1-12)
(Credit to be arranged.)

Eng 404 - Cooperative Education/Internship (0-12)
See department for course description. (Credit to be arranged.)

Eng 405 - Reading and Conference (0-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Eng 407 - Seminar (1-6)
Consent of instructor. See department for course description. (Credit to be arranged.)

Eng 408 - Workshop (0-6)
See department for course description. (Credit to be arranged.)

Eng 409 - Practicum (0-12)
See department for course description. (Credit to be arranged.)

Eng 410 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

Eng 411 - English Drama (4)
Study of important trends, traditions, and movements in English drama, examining drama both as a literary genre and as a complex mix of performance, spectatorship, cultural context, and theater history. Topics may be drawn from a range of historical periods, from medieval drama to the present day.

Eng 413 - Teaching and Tutoring Writing (4)
Study and practice of writing instruction in various contexts, with focus on process, evaluation, and feedback.

Eng 414 - Composition Theory (4)
Survey of composition theory, including rhetoric, cognition, pedagogy, and research across literacy contexts. Students will develop and pursue research projects according to their interests.

Eng 415 - Research Methods in Rhetoric and Composition (4)
Study and practice of empirical and ethnographic methodologies, with focus on epistemology, ethics, and representation. Students will develop and pursue research projects according to their interests.

Eng 416 - History of Rhetoric (4)
Survey of rhetorical theory and practice from classical through contemporary contexts. Students will develop and pursue research projects according to their interests.

Eng 420 - Caribbean Literature (4)
Study of important works and writers from across the Caribbean basin with an emphasis on understanding the historical and theoretical contexts of literary production, the cultural legacies of colonialism, and the linguistic innovations particular to the region.

Also offered for graduate-level credit as ENG 511 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 413 - Teaching and Tutoring Writing (4)
Study and practice of writing instruction in various contexts, with focus on process, evaluation, and feedback.

Also offered for graduate-level credit as Eng 513 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 414 - Composition Theory (4)
Survey of composition theory, including rhetoric, cognition, pedagogy, and research across literacy contexts. Students will develop and pursue research projects according to their interests.

Also offered for graduate-level credit as Eng 514 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 415 - Research Methods in Rhetoric and Composition (4)
Study and practice of empirical and ethnographic methodologies, with focus on epistemology, ethics, and representation. Students will develop and pursue research projects according to their interests.

Also offered for graduate-level credit as Eng 515 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 416 - History of Rhetoric (4)
Survey of rhetorical theory and practice from classical through contemporary contexts. Students will develop and pursue research projects according to their interests.

Also offered for graduate-level credit as Eng 516 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 420 - Caribbean Literature (4)
Study of important works and writers from across the Caribbean basin with an emphasis on understanding the historical and theoretical contexts of literary production, the cultural legacies of colonialism, and the linguistic innovations particular to the region.

Also offered for graduate-level credit as Eng 520 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).
Eng 422 - African Fiction (4)
Study of literary and cultural production from the African continent, focusing on topics such as colonialism, national liberation, globalization, gender, and the relationship between art and politics. Includes some consideration of the question of language and the appropriation of Western literary conventions.
Also offered for graduate-level credit as ENG 522 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 426 - Advanced Topics in Medieval Literature (4)
Study of Medieval English literature (c. 800-1500), including Anglo-Saxon works, continental vernacular and Latin medieval writing, and the Middle English vernacular tradition. Students will have some opportunity to learn to read Old and Middle English. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for graduate-level credit as Eng 526. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 428 - Canons and Canonicity (4)
Examines the historical, institutional, and ideological contexts in which traditions of "great works" have been established, contested, and creatively appropriated. Investigates how categories of social difference such as gender, race, and class have shaped the criteria by which works and authors have been included and excluded from dominant traditions.
Prerequisite: Eng 300 and Wr 301.

Eng 429 - Advanced Topics in Science Fiction (4)
Study of selected topics in science fiction and speculative fiction. Topics may include the history of the field and its various movements; single-author studies; themes of sociopolitical significance; or theoretical topics. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for graduate-level credit as Eng 529. Prerequisite: Eng 300 and Wr 301.

Eng 435 - Advanced Topics in Film and Media (4)
Specialized studies in the history, criticism, or theory of film and media culture. Topics may focus on genres, movements, figures, theoretical issues, or advanced historical topics. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for graduate-level credit as Eng 535. Prerequisite: Eng 300 or Eng 304 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 441 - Advanced Topics in Renaissance Literature (4)
Study of literature of the English Renaissance (1500–1700), including poetry, prose, drama, and other popular forms. Topics include cultural forces such as Humanism and the Reformation, literary traditions, and historical and political contexts. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for graduate-level credit as Eng 541. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 442 - Women Writers in Global Contexts (4)
Study of the works of women writers from the postcolonial and non-Western world.
Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.). Cross-Listed as: This is the same course as WS 442 and may be taken only once for credit.

Eng 444 - British Women Writers (4)
Study of the works of British women writers with attention to themes, styles, and characteristic concerns in the light of feminist criticism and scholarship. This is the same course as WS 444.
Also offered for graduate-level credit as Eng 544 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 445 - American Women Writers (4)
Study of American women writers, with attention to themes, styles, and characteristic concerns, in the light of feminist criticism and scholarship. This is the same course as WS 445.
Also offered for graduate-level credit as Eng 545 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.).

Eng 447 - Major Forces in Literature (4)
A study of literary forms, theories, and movements: i.e., The Comic Novel, Literature and Theology, Southern American Women Writers. Expected preparation: 8 additional upper division Literature credits.
Also offered for graduate-level credit as Eng 547. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 448 - Advanced Topics: Major Figures in Literature (4)**

Study of the works of one or more major authors such as Chaucer, Woolf, Coetzee, or Morrison. Course may be repeated for credit with different authors. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 548. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 449 - Advanced Topics in Cultural Studies (4)**

Study of selected topics in contemporary culture and media, analyzing the production and reception of cultural texts through a range of interdisciplinary and theoretical approaches. Topics may include: major figures/concepts in social theory; politics of consumer culture; globalization and American culture. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 549. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 450 - Advanced Topics in Eighteenth-Century Literature (4)**

Study of selected topics in British poetry, prose, and drama (1660-1800). Topics may include major developments (the Enlightenment, the novel, gender and literature, abolitionism, or the culture of sympathy); genres, modes, or forms; or the relation of writing to historical events (slavery, revolution, colonialism, capitalism). Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 550. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 458 - Advanced Topics in Romanticism (4)**

Study of selected aspects of Romantic literature and culture in Britain, with some attention to European Romanticism. Topics may include theories of Romanticism, poetry and poetics, the novel, the essay, autobiography, aesthetics, ecology, animals, politics, queerness, and race. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 558. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 460 - Advanced Topics in American Literature to 1800 (4)**

Study of early American literature in the context of the history, ideas, and culture of the period. Topics focus on writing’s relationship to historical events and movements such as European imperialism; captivity; Atlantic slavery; evangelicalism; the Enlightenment; the Revolution and national formation. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 560. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 461 - Topics: American Literature 1800–1900 (4)**

Study of nineteenth-century American literature in the context of the history, ideas, and culture of the period. Topics may include literary movements (such as Transcendentalism, sentimentality, realism); individual authors; genres, modes, or forms; or writing’s relation to historical events (such as slavery and abolition, the Civil War, American imperialism, industrialization, the women’s rights movement). Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 561. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 464 - Advanced Topics in American Literature: 20th Century (4)**

Study of twentieth-century American literature in the context of the history, ideas, and culture of the period. Topics may include literary movements (such as American Modernism or the Harlem Renaissance); individual authors; genres, modes, or forms; or writing’s relation to historical events (such as the Cold War, Civil Rights movements, or urbanization). Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 564. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

**Eng 467 - Advanced Topics in American Literature and Culture (4)**

Study of selected aspects of American literature and culture. Topics are unified by theme and may cover multiple historical periods. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Eng 469 - Advanced Topics in Asian American Literature and Culture (4)
Study of selected aspects of Asian American literature and culture. Topics are unified by theme and may cover multiple historical periods. Topics may include: Asian American and Pacific Islander Studies; comparative and critical ethnic studies; eco-criticism and sustainability; immigration and settler colonialism. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 475 - Advanced Topics in Victorian Literature (4)
Study of Victorian literature in the context of the history, ideas, and culture of the period. Topics include individual writers and literary movements such as pre-Raphaelitism, imperial romance, and literature of the industrial period. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 480 - Advanced Topics in Twentieth-Century British Literature (4)
Specialized studies in twentieth-century British literature. Topics include individual writers and literary groups; poetry, prose, and fiction; theories of modernism; technology, politics, propaganda, and the arts; literature and twentieth-century philosophy. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Eng 488 - Contemporary American Poetry (4)
Study of significant trends in contemporary American poetry and poetics.

Eng 489 - Advanced Topics in Contemporary Literature (4)
Study of specialized topics in late twentieth- and early twenty-first-century literature, focusing on specific literary movements, genres and forms, or modes of cultural representation. Topics may include postcolonialism, magic realism, posthumanism, queer theory, or digital/electronic literary forms. Course may be repeated for credit with different topics for up to 8 credits. Up to 8 credits of this course number can be applied to the English major.

Eng 490 - Advanced Topics in Rhetoric (4)
Advanced study of rhetorical theory and practice, with focus on ideology, identity, and public discourse. Students will develop and pursue research projects according to their interests. Course may be repeated for credit with different topics for up to 8 credits. Up to 8 credits of this course number can be applied to the English major.

Eng 491 - History of Literary Criticism and Theory I (4)
Historical survey of significant works in the Western critical and philosophical tradition from ancient Greece to the nineteenth century, with a focus on fundamental questions about literary composition, aesthetic judgment, and the nature and function of literature.

Eng 492 - History of Literary Criticism and Theory II (4)
Historical survey of significant works in the Western critical and philosophical tradition from Marxism to poststructuralism.

Eng 494 - Topics in Critical Theory and Methods (4)
Specialized study of important and influential strands in critical theory such as Marxism, psychoanalysis, feminism, postcolonialism, queer theory, and others. Course may be repeated for credit with different
topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-level credit as Eng 594. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

Eng 496 - Comics Theory (4)
Focus on various critical approaches to comics, exploring interdisciplinary theories and methods and applying these theories to primary texts.

Also offered for graduate-level credit as Eng 596 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

Eng 497 - Comics History (4)
Study of comics art as a medium of visual narrative and its evolution through the history of the American comics industry. Topics include the diversity of comics and their storytelling power by investigating the distinctive qualities of seminal texts, their origins and precedents, their relationships to particular cultural moments, and their potential as inspiration and influence on later comics art.

Also offered for graduate-level credit as Eng 597 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

Eng 498 - Ecology, Criticism, and Culture (4)
Examines ecological perspectives on the study of literature, culture, and critical theory as well as the use of literary analysis and cultural studies to illuminate environmental issues and problems of sustainability.

Also offered for graduate-level credit as Eng 598 and may be taken only once for credit. Prerequisite: Eng 300 and Wr 301. (Wr 301 may be taken concurrently.)

Eng 500 - Problems and Methods (4)
Required of all English M.A. students, ENG 500 introduces students to methods of analysis, interpretation, and research. Students take the course in the fall quarter of their first year of study.

Eng 501 - Research (0-12)
See department for course description. (Credit to be arranged.)

Eng 502 - Independent Study (1-6)
(Credit to be arranged.)

Eng 504 - Cooperative Education/Internship (0-9)
See department for course description. (Credit to be arranged.)

Eng 505 - Reading and Conference (0-9)
Consent of instructor. See department for course description. (Credit to be arranged.)

Eng 506 - Projects (1-9)
(Credit to be arranged.)

Eng 507 - Seminar (1-6)
Variable topics. Graduate only or consent of instructor. At least one Eng 507 seminar is required of M.A. candidates in English. (Credit to be arranged.)

Eng 508 - Workshop (0-6)
See department for course description. (Credit to be arranged.)

Eng 509 - Practicum (0-9)
See department for course description. (Credit to be arranged.)

Eng 510 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

Eng 511 - English Drama (4)
Study of important trends, traditions, and movements in English drama, examining drama both as a literary genre and as a complex mix of performance, spectatorship, cultural context, and theater history. Topics may be drawn from a range of historical periods, from medieval drama to the present day.

Also offered for undergraduate-level credit as Eng 411 and may be taken only once for credit. Prerequisite: Eng 300.

Eng 513 - Teaching and Tutoring Writing (4)
Study and practice of writing instruction in various contexts, with focus on process, evaluation, and feedback.
Eng 514 - Composition Theory (4)
Survey of composition theory, including rhetoric, cognition, pedagogy, and research across literacy contexts. Students will develop and pursue research projects according to their interests.
Also offered for undergraduate-level credit as Eng 413 and may be taken only once for credit.

Eng 515 - Research Methods in Rhetoric and Composition (4)
Study and practice of empirical and ethnographic methodologies, with focus on epistemology, ethics, and representation. Students will develop and pursue research projects according to their interests.
Also offered for undergraduate-level credit as Eng 414 and may be taken only once for credit.

Eng 516 - History of Rhetoric (4)
Survey of rhetorical theory and practice from classical through contemporary contexts. Students will develop and pursue research projects according to their interests.
Also offered for undergraduate-level credit as Eng 415 and may be taken only once for credit.

Eng 517 - Middle English (4)
Introduction to Middle English language through study of (largely non-Chaucerian) 12th to 15th century literature in the original. Graduate only or consent of instructor.

Eng 518 - College Composition Teaching (1)
Introduces and develops the theoretical and practical expertise of the graduate teaching assistant in the area of college composition teaching. May be taken up to three times for credit.
Prerequisite: appointment to teaching assistantship in English Department.

Eng 519 - Advanced College Composition Teaching (1)
Continues the development of the theoretical and practical expertise of the graduate teaching assistant in advanced areas of college composition teaching. May be repeated up to three times for credit.
Required prerequisite: appointment to 2nd year teaching assistantship in English Department.

Eng 520 - Caribbean Literature (4)
Study of important works and writers from across the Caribbean basin with an emphasis on understanding the historical and theoretical contexts of literary production, the cultural legacies of colonialism, and the linguistic innovations particular to the region.
Also offered for undergraduate-level credit as Eng 420 and may be taken only once for credit.

Eng 522 - African Fiction (4)
Study of literary and cultural production from the African continent, focusing on topics such as colonialism, national liberation, globalization, gender, and the relationship between art and politics. Includes some consideration of the question of language and the appropriation of Western literary conventions.
Also offered for undergraduate-level credit as Eng 422 and may be taken only once for credit.

Eng 525 - Practical Grammar (4)
Designed to enable students to understand, and therefore consciously to make effective, the structures of their written sentences. The course examines grammatical categories, structures, and terminology; relationships between grammatical structures and punctuation; and prescriptive grammars for written texts. Expected preparation: 4 upper division Literature/Writing credits.

Eng 526 - Advanced Topics in Medieval Literature (4)
Study of Medieval English literature (c. 800-1500), including Anglo-Saxon works, continental vernacular and Latin medieval writing, and the Middle English vernacular tradition. Students will have some opportunity to learn to read Old and Middle English. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for undergraduate-level credit as Eng 426. Prerequisite: Eng 300.

Eng 529 - Advanced Topics in Science Fiction (4)
Study of selected topics in science fiction and speculative fiction. Topics may include the history of the field and its various movements; single-author studies; themes of sociopolitical significance; or theoretical topics. Course may be repeated for up to 8 credits with different topics.
Also offered for undergraduate-level credit as Eng 429. Prerequisite: Graduate standing.
Eng 530 - Sixteenth Century Literature (4)
Specialized studies in Renaissance English literature. Topics include individual writers and literary groups; sixteenth-century poetry and prose; the English sonnet; the Renaissance epic and pastoral traditions; Elizabethan drama, verse narrative, satire, and invective; humanism; the rise of the professional writer; literature and the visual arts. Expected preparation: Eng 341U and 4 additional upper division Literature credits.
Prerequisite: Eng 300.

Eng 531 - Topics in English Studies (1)
Examines various theories, history, scholarship, pedagogy, and professional development in the field of English Studies. Topics always differ each term. May be repeated for up to six credits.

Eng 532 - Old English (4)
An introduction to the history and grammar of Old English. This is the first course in a sequence of three: Eng 532, Eng 533, and Eng 534. Recommended prerequisite: Eng 532 is prerequisite for Eng 533 or 534. Graduate only or consent of instructor.

Eng 533 - Old English (4)
An introduction to the history and grammar of Old English. This is the second course in a sequence of three: Eng 532, Eng 533, and Eng 534. Recommended prerequisite: Eng 532 is prerequisite for Eng 533 or 534. Graduate only or consent of instructor.

Eng 534 - Old English (4)
An introduction to the history and grammar of Old English. This is the third course in a sequence of three: Eng 532, Eng 533, and Eng 534. Recommended prerequisite: Eng 532 is prerequisite for Eng 533 or 534. Graduate only or consent of instructor.

Eng 535 - Advanced Topics in Film and Media (4)
Specialized studies in the history, criticism, or theory of film and media culture. Topics may focus on genres, movements, figures, theoretical issues, or advanced historical topics. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for undergraduate credit as Eng 435.

Eng 540 - Advanced Topics in Seventeenth Century Literature (4)
Specialized studies in seventeenth-century literature. Topics include cavalier and metaphysical poetry; revenge tragedy; prose forms of the early seventeenth century; popular genres of the English civil war; women writers; and Restoration drama. Expected preparation: Eng 341U or Eng 342U and 4 additional upper division Literature credits.
Prerequisite: Eng 300.

Eng 541 - Advanced Topics in Renaissance Literature (4)
Study of literature of the English Renaissance (1500–1700), including poetry, prose, drama, and other popular forms. Topics include cultural forces such as Humanism and the Reformation, literary traditions, and historical and political contexts. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for undergraduate-level credit as Eng 441. Prerequisite: Eng 300.

Eng 544 - British Women Writers (4)
Study of the works of British women writers with attention to themes, styles, and characteristic concerns in the light of feminist criticism and scholarship.
Also offered for undergraduate-level credit as Eng 444 and may be taken only once for credit. Prerequisite: Eng 300.

Eng 545 - American Women Writers (4)
Study of American women writers, with attention to themes, styles, and characteristic concerns, in the light of feminist criticism and scholarship.
Also offered for undergraduate-level credit as Eng 445 and may be taken only once for credit. Prerequisite: Eng 300.

Eng 547 - Major Forces in Literature (4)
A study of literary forms, theories, and movements: i.e., The Comic Novel, Literature and Theology, Southern American Women Writers. Expected preparation: 8 additional upper division Literature credits.
Also offered for undergraduate-level credit as Eng 447. Prerequisite: Eng 300.

Eng 548 - Advanced Topics: Major Figures in Literature (4)
Study of the works of one or more major authors such as Chaucer, Woolf, Coetzee, or Morrison.
Course may be repeated for credit with different authors. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 448. Prerequisite: Eng 300.

Eng 549 - Advanced Topics in Cultural Studies (4)
Study of selected topics in contemporary culture and media, analyzing the production and reception of cultural texts through a range of interdisciplinary and theoretical approaches. Topics may include: major figures/concepts in social theory; politics of consumer culture; globalization and American culture. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 449. Prerequisite: Eng 300.

Eng 550 - Advanced Topics in Eighteenth-Century Literature (4)
Study of selected topics in British poetry, prose, and drama (1660-1800). Topics may include major developments (the Enlightenment, the novel, gender and literature, abolitionism, or the culture of sympathy); genres, modes, or forms; or the relation of writing to historical events (slavery, revolution, colonialism, capitalism). Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 450. Prerequisite: Eng 300.

Eng 558 - Advanced Topics in Romanticism (4)
Study of selected aspects of Romantic literature and culture in Britain, with some attention to European Romanticism. Topics may include theories of Romanticism, poetry and poetics, the novel, the essay, autobiography, aesthetics, ecology, animals, politics, queerness, and race. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 458. Prerequisite: Eng 300.

Eng 560 - Advanced Topics in American Literature to 1800 (4)
Study of early American literature in the context of the history, ideas, and culture of the period. Topics focus on writing’s relationship to historical events and movements such as European imperialism; captivity; Atlantic slavery; evangelicalism; the Enlightenment; the Revolution and national formation. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 460. Prerequisite: Eng 300.

Eng 561 - Topics: American Literature 1800-1900 (4)
Study of nineteenth-century American literature in the context of the history, ideas, and culture of the period. Topics may include literary movements (such as Transcendentalism, sentimentalism,realism); individual authors; genres, modes, or forms; or writing’s relation to historical events (such as slavery and abolition, the Civil War, American imperialism, industrialization, the women’s rights movement). Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 461. Prerequisite: Eng 300.

Eng 564 - Advanced Topics in American Literature: 20th Century (4)
Study of twentieth-century American literature in the context of the history, ideas, and culture of the period. Topics may include literary movements (such as American Modernism or the Harlem Renaissance); individual authors; genres, modes, or forms; or writing’s relation to historical events (the Cold War, Civil Rights movements, or urbanization). Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 464. Prerequisite: Eng 300.

Eng 567 - Advanced Topics in American Literature and Culture (4)
Study of selected aspects of American literature and culture. Topics are unified by theme and may cover multiple historical periods. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 467. Prerequisite: Eng 300.

Eng 568 - American Literature and Culture (4)
Studies based on primary sources of American literature and culture from European contact to the present. The approach is thematic rather than chronological. Recommended prerequisite: 12 credits in literature.
Eng 569 - Advanced Topics in Asian American Literature and Culture (4)

Study of selected aspects of Asian American literature and culture. Topics are unified by theme and may cover multiple historical periods. Topics may include: Asian American and Pacific Islander Studies; comparative and critical ethnic studies; eco-criticism and sustainability; immigration and settler colonialism. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 469. Prerequisite: Eng 300. Expected preparation: Eng 369U and 4 additional upper division Literature credits.

Eng 575 - Advanced Topics in Victorian Literature (4)

Study of Victorian literature in the context of the history, ideas, and culture of the period. Topics include individual writers and literary movements such as pre-Raphaelitism, imperial romance, and literature of the industrial period. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 475. Prerequisite: Eng 300.

Eng 580 - Advanced Topics in Twentieth-Century British Literature (4)

Specialized studies in twentieth-century British literature. Topics include individual writers and literary groups; poetry, prose, and fiction; theories of modernism; technology, politics, propaganda, and the arts; literature and twentieth-century philosophy. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 480. Prerequisite: Eng 300.

Eng 584 - Modern Drama (4)

Examines major European, English, and American plays in the period 1880-1940. Expected preparation: 8 additional upper division Literature credits. Prerequisite: Eng 300.

Eng 585 - Contemporary Drama (4)

Examines major developments in world drama since World War II. Expected preparation: 8 additional upper division Literature credits. Prerequisite: Eng 300.

Eng 586 - Contemporary American Novel (4)

American novels since 1965, with emphasis upon traditions, themes and trends. Expected preparation: 8 additional upper division Literature credits. Prerequisite: Eng 300.

Eng 587 - Contemporary American Short Story (4)

The American short story from mid-20th century to the present. Expected preparation: 8 additional upper division Literature credits. Prerequisite: Eng 300.

Eng 588 - Contemporary American Poetry (4)

Study of significant trends in contemporary American poetry and poetics. Also offered for undergraduate-level credit as Eng 488 and may be taken only once for credit. Prerequisite: Eng 300.

Eng 589 - Advanced Topics in Rhetoric (4)

Advanced study of rhetorical theory and practice, with focus on ideology, identity, and public discourse. Students will develop and pursue research projects according to their interests. Course may be repeated for credit with different topics for up to 8 credits. Up to 8 credits of this course number can be applied to the English major.

Also offered for undergraduate-level credit as Eng 490. Prerequisite: Eng 300.

Eng 590 - History of Literary Criticism and Theory I (4)

Historical survey of significant works in the Western critical and philosophical tradition from ancient Greece to the nineteenth century, with a focus on fundamental questions about literary composition, aesthetic judgment, and the nature and function of literature. Also offered for undergraduate-level credit as Eng 491 and may be taken only once for credit. Prerequisite: Eng 300.

Eng 591 - History of Literary Criticism and Theory II (4)

Historical survey of significant works in the Western critical and philosophical tradition from Marxism to poststructuralism. Also offered for undergraduate-level credit as Eng 492 and may be taken only once for credit. Prerequisite: Eng 300.
Eng 593 - Advanced Topics in Feminist Literary Theory (4)
Provides in-depth study of specific critical schools within the larger arena of feminist theory. Possible topics will include postcolonialism, feminism, and the body; historical perspectives on feminism. Course may be repeated for credit with different topics. Expected preparation: Eng 492 and 4 additional upper division Literature credits.
Prerequisite: Eng 300.

Eng 594 - Topics in Critical Theory and Methods (4)
Specialized study of important and influential strands in critical theory such as Marxism, psychoanalysis, feminism, postcolonialism, queer theory, and others. Course may be repeated for credit with different topics. Up to 8 credits of this course number can be applied to the English major.
Also offered for undergraduate-level credit as Eng 494. Prerequisite: Eng 300.

Eng 595 - Contemporary Critical Theory (4)
Literary criticism in theory and practice in the 20th century. Graduate only or consent of instructor.

Eng 596 - Comics Theory (4)
Focus on various critical approaches to comics, exploring interdisciplinary theories and methods and applying these theories to primary texts.
Also offered for undergraduate-level credit as Eng 496 and may be taken only once for credit. Prerequisite: Upper-division standing.

Eng 597 - Comics History (4)
Study of comics art as a medium of visual narrative and its evolution through the history of the American comics industry. Topics include the diversity of comics and their storytelling power by investigating the distinctive qualities of seminal texts, their origins and precedents, their relationships to particular cultural moments, and their potential as inspiration and influence on later comics art.
Also offered for undergraduate-level credit as 497 and may be taken only once for credit.

Eng 598 - Ecology, Criticism, and Culture (4)
Examines ecological perspectives on the study of literature, culture, and critical theory as well as the use of literary analysis and cultural studies to illuminate environmental issues and problems of sustainability.
Also offered for undergraduate-level credit as Eng 498 and may be taken only once for credit. Prerequisite: Eng 300.

EnvE - Environmental Engineering

EnvE 365 - Physical Environmental Processes (2)
Engineering physics of environmental processes and system dynamics. Relates to separate laboratory course using quantitative techniques for conceptualizing and analyzing movement of energy and material at local and global scales. Co-requisite: EnvE 368. Expected preparation: Admission to EnvE Upper Division.
Prerequisite: Ch 222/Ch 228, Ph 213/Ph 216, Mth 256. Corequisite: EnvE 368.

EnvE 366 - Analytical Methods in Environmental Engineering (2)
Prerequisite: Ch 222/Ch 228, Ph 223 (Ph 213)/Ph 216, MTH 256. Corequisite: EnvE 369.

EnvE 368 - Physical Environmental Process Lab (2)
Laboratory and field exercises to accompany Physical Environmental Processes (EnvE 365). Requires concurrent enrollment in EnvE 365.
Prerequisite: Ch 222/Ch 228, Ph 223 (Ph 213)/Ph 216, Mth 256. Corequisite: EnvE 365.

EnvE 369 - Analytical Methods in Environmental Engineering Lab (2)
Laboratory and field exercises to accompany Analytical Methods in Environmental Engineering (EnvE 366). Requires concurrent enrollment in EnvE 366.
Prerequisite: Ch 222/Ch 228, Ph 223 (Ph 213)/Ph 216, Mth 256. Corequisite: EnvE 366.

EnvE 370 - Sampling, Analysis and Risk Assessment for Environmental Engineering Lab (2)
Synthesis of analytical chemistry and water quality knowledge. Laboratory and field exercises to implement water quality assessment project. Interpretation and presentation of project results.
Prerequisite: EnvE 366, EnvE 369.

EPI - Epidemiology
Courses offered as part of the joint OHSU-PSU School of Public Health.
Epi 512 - Epidemiology I (4)

Epidemiology I introduces the concepts, principles and methods of epidemiology to graduate students in the School of Public Health. Epidemiology is one of the fundamental sciences used by public health professionals to identify, prevent and control health problems in communities. Specifically, epidemiologic methods are used to investigate the distribution of health-related states or events (e.g. disease, health conditions, etc.) in populations and identify the factors or characteristics that influence or determine these distributions. In addition, epidemiology is used to aid in the implementation and evaluation of public health programs and policies designed to control or ameliorate health problems in populations. In this course, students will learn how to apply epidemiologic methods to address questions about the distribution of disease, death, disability and risk exposures in populations, as well as those relating to causal associations between exposures and health outcomes.

Also offered as Epi 612 and may be taken only once for credit.

Epi 513 - Epidemiology II (4)

This course is the second in a three-course sequence designed for the MPH Epidemiology and Biostatistics majors. Students will develop skills in recognizing strengths and weaknesses of various epidemiological study designs, describing sources of bias that can distort measures of effect/association, and designing case-control studies, cohort studies, and randomized clinical trials. The class will also explore additional study designs used less frequently, such as nested case-control studies and case-crossover studies. Students will gain experience in recognizing and evaluating the roles of bias, confounding, and interaction (effect modification) in data derived from epidemiological studies. Problem-solving exercises will focus on study designs and analysis. Written homework assignments and problem-oriented learning will occupy a central role in facilitating mastery of epidemiologic methods and issues.

Also offered as Epi 613. Prerequisite: Epi 512 and Bsta 525.

Epi 514 - Epidemiology III (4)

Will address the amount and types of data needed to establish and defend ideas of causation of community health problems. Will illustrate how data are most effectively translated into health agency policy, public testimony, and/or legislated regulation. Teaching will emphasize the problem-oriented seminar method.

Also offered as Epi 640 and may be taken only once for credit. Prerequisite: Epi 512.

Epi 536 - Epidemiological Data Analysis & Interpretation (4)

Students will apply epidemiologic and biostatistical principles to the analysis of National Health and Nutritional Examination Survey (NHANES) data. Hypotheses are formulated based on the NHANES variables and a brief literature review of the public health need for the research. Students work in pairs to plan, organize, and conduct analyses leading to final oral and written presentations of their findings. Class time allows for hands-on experience with data quality assessment, preparation of datasets and variables for analysis, and multivariable modeling. Emphasis is on planning and communicating analytic plans that reflect the causal models generated by students and allow for assessment of confounding and interaction (effect measure modification).

Also offered as Epi 636. Prerequisite: Epi 512, Epi 513, Epi 514, Bsta 525, Bsta 526, and Bsta 513.

Epi 540 - Introduction to Research Proposal and Design (3)

This course provides an introduction to research design and proposal writing. It builds upon concepts of epidemiology and biostatistics to enable students to develop a study plan to conduct public health research that is efficient, effective, and ethical. Writing a research proposal is a skill necessary in the professional practice of public health. During this course, students will prepare a written proposal that includes a concise statement of the epidemiologic research question, testable hypotheses, appropriate specific aims, and a plan of work. Students will learn how to formulate a logical argument to establish the significance of their question and to defend their approach. All of the elements of the study plan will be developed, including choice of design, sample size and power, sampling design and recruitment of subjects, measurement of predictor and outcome variables, control of bias and confounding, and statistical analysis. Limited time will be spent on an introduction to budget development and project management. The major product of the course is the completion of a research proposal, which will be prepared according to the submission requirements of a federal funding agency. The instructors will review written work with each student during the term to ensure that all required elements are included in the application.

Also offered as Epi 640. Prerequisite: Epi 512 and Bsta 525.
**Epi 556 - HIV/AIDS Epidemiology (3)**

The course will start with a review of the known characteristics and pathology of the human immunodeficiency virus infection and pathogenesis of the clinical acquired immunodeficiency syndrome. Biological and behavioral factors that determine the risks of transmission of the HIV infection will be emphasized and public health prevention strategies will be evaluated. The global HIV epidemic will be considered along with the impact of HIV infection on vulnerable populations, especially women and children. Ethical factors and the impact of stigma will be discussed.

Prerequisite: Epi 512 and Bsta 525.

**Epi 566 - Current Issues in Public Health (2)**

This is a core course for students in the Epidemiology and Biostatistics track of the OHSU-PSU School of Public Health MPH program. It is designed to introduce students to public health in a seminar-style (presentation and discussion) exploration of the basic principles, structures, and functions of public health, and selected important issues of public health relevance. The course also addresses competencies in public health communication for diverse audiences through a variety of exercises using different communication strategies. Public health and preventive medicine professionals from OHSU, PSU, the School of Public Health, and the community will present and facilitate discussions of their work and perspectives related to these public health topics and issues.

**Epi 567 - Global Health Epidemiology (3)**

This elective course is intended to broaden students’ understanding of the field of applied epidemiology through the context of a global perspective. Although offered to Masters Level, MPH students, other health professions students often register. Global Health Epidemiology is a required course for students enrolled in the Concentration in Global Health Studies Program for epidemiology students.

Prerequisite: Introductory epidemiology and biostatistics courses.

**Epi 568 - Infectious Disease Epidemiology (2)**

This course provides an introduction to infectious epidemiology, and includes fundamental topics such as outbreak investigation, public health communicable disease surveillance and reporting, biological concepts of disease introduction, evolution and spread, and design of population-based studies to evaluate features of infectious diseases (e.g., risk factors, method of spread, clinical features, disease prevalence). This course will also introduce some of the categories of communicable diseases and highlight some features of the major diseases within each category. It builds upon concepts of epidemiology (e.g., risk/odds ratio, case-control and cohort studies, statistical significance) to provide students with a strong understanding of infectious disease concepts and methods such as conducting an outbreak investigation.

Also offered as Epi 668 and may be taken only once for credit. Prerequisite: Epi 512 and Bsta 512.

**Epi 576 - Chronic Disease Epidemiology (2)**

This course is designed for MPH Epidemiology and MPH and MS Biostatistics program majors, as well as PhD candidates in Epidemiology. The course is intended to give students an understanding of the epidemiology of major chronic diseases in developed countries. It covers three aspects of chronic disease: 1) epidemiology methods used in their study, 2) epidemiologic findings and current status of epidemiologic research into various chronic diseases, and 3) the epidemiology of the major risk factors for chronic diseases. The course is based on presentations by researchers and public health practitioner experts on specific chronic disease topics. Students will gain familiarity with some of the important epidemiologic studies and study innovations that have contributed to our knowledge of chronic diseases and their control.

Also offered as Epi 676 and may be taken only once for credit. Prerequisite: Epi 512.

**Epi 603 - Dissertation (1-12)**

(Credit to be arranged.)

**Epi 610 - Epidemiology Doctoral Seminar (3)**

This advanced doctoral-level course synthesizes across students’ prior training in epidemiology, biostatistics, applied research, and the disciplines/content areas that are required for students’ doctoral research. Building on this foundation, and drawing from doctoral students’ and the instructor’s expertise, this course aims to facilitate the intellectual development required to conduct and present original epidemiologic research.

Prerequisite: Graduate training in epidemiologic methods and biostatistics. Epi 512, Epi 513, Epi 514, (Bsta 514 or Bsta 519), and Bsta 612.

**Epi 611 - Epidemiology Doctoral Seminar II (2)**

This advanced doctoral-level course synthesizes across students’ prior training in epidemiology, biostatistics, applied research, and the disciplines/content areas that are required for students’ doctoral research. Building on this
foundation, and drawing from doctoral students’ and the instructor’s expertise, this course aims to facilitate the intellectual development required to conduct and present original epidemiologic research.

Prerequisite: Epi 610.

**Epi 612 - Epidemiology I (4)**

Epidemiology I introduces the concepts, principles and methods of epidemiology to graduate students in the School of Public Health. Epidemiology is one of the fundamental sciences used by public health professionals to identify, prevent and control health problems in communities. Specifically, epidemiologic methods are used to investigate the distribution of health-related states or events (e.g., disease, health conditions, etc.) in populations and identify the factors or characteristics that influence or determine these distributions. In addition, epidemiology is used to aide in the implementation and evaluation of public health programs and policies designed to control or ameliorate health problems in populations. In this course, students will learn how to apply epidemiological methods to address questions about the distribution of disease, death, disability and risk exposures in populations, as well as those relating to causal associations between exposures and health outcomes.

Also offered as Epi 512 and may be taken only once for credit.

**Epi 613 - Epidemiology II (4)**

This course is the second in a three-course sequence designed for the MPH Epidemiology and Biostatistics majors. Students will develop skills in recognizing strengths and weaknesses of various epidemiological study designs, describing sources of bias that can distort measures of effect/association, and designing case-control studies, cohort studies, and randomized clinical trials. The class will also explore additional study designs used less frequently, such as nested case-control studies and case-crossover studies. Students will gain experience in recognizing and evaluating the roles of bias, confounding, and interaction (effect modification) in data derived from epidemiological studies. Problem-solving exercises will focus on study designs and analysis. Written homework assignments and problem-oriented learning will occupy a central role in facilitating mastery of epidemiologic methods and issues.

Also offered as Epi 513. Prerequisite: Epi 612 and Bsta 525.

**Epi 614 - Epidemiology III (4)**

Will address the amount and types of data needed to establish and defend ideas of causation of community health problems. Will illustrate how data are most effectively translated into health agency policy, public testimony, and/or legislated regulation. Teaching will emphasize the problem-oriented seminar method.

Also offered as Epi 514.. Prerequisite: Epi 613 and Bsta 525..

**Epi 630 - Epidemiology Journal Club (1)**

This is an elective course for epidemiology track masters students. Doctoral students are required to register for at least two terms (one credit each) during the first two years of their program. This course is intended to extend students' understanding of the fields of epidemiology and public health research, and their ability to explore and critique research methods. In weekly sessions, the instructor, guest faculty, and students will prepare a peer-reviewed article for class discussion that demonstrates or involves innovative public health content or methods. A secondary goal of this class is to prepare students to perform peer-review themselves (e.g., for journals, study sections) by examples of this work from faculty.

**Epi 636 - Epidemiological Data Analysis & Interpretation (4)**

Students will apply epidemiologic and biostatistical principles to the analysis of National Health and Nutritional Examination Survey (NHANES) data. Hypotheses are formulated based on the NHANES variables and a brief literature review of the public health need for the research. Students work in pairs to plan, organize, and conduct analyses leading to final oral and written presentations of their findings. Class time allows for hands-on experience with data quality assessment, preparation of datasets and variables for analysis, and multivariable modeling. Emphasis is on planning and communicating analytic plans that reflect the causal models generated by students and allow for assessment of confounding and interaction (effect measure modification).

Also offered as Epi 536.. Prerequisite: Epi 613, Epi 614, Bsta 612, Bsta 613, and Bsta 515.

**Epi 640 - Research Proposal and Design (3)**

Provides an introduction to research design and proposal writing. It builds upon concepts of epidemiology and biostatistics to enable students to develop a study plan to conduct public health research that is efficient, effective, and ethical. Writing a research proposal is a skill necessary in the professional practice of public health. During this course, students will prepare a written proposal that includes a concise statement of the epidemiologic
research question, testable hypotheses, appropriate specific aims, and a plan of work.

Also offered as Epi 540 and may be taken only once for credit. Prerequisite: Epi 612.

**Epi 650 - Mentored Epidemiology Research (2-4)**

This course is based on moving the skill set of prior epidemiologic methods, research, and biostatistical courses into a deeper contemplation and synthesis across methods and theories in epidemiology.

**Epi 660 - Mentored Epidemiology Teaching (1)**

This course is intended to provide a guided, mentored teaching experience for doctoral students in Epidemiology. In addition to typical and course-specific teaching assistant (TA) duties that support the teaching faculty member/course instructor, PhD epidemiology graduates will be provided basic-level preparation for independent teaching. Each TA is expected to perform some or all of the following duties: 1. Prepare for and hold office hours for student enrolled in the course they have been assigned to, 2. Support online (Sakai) teaching website for the course, if needed for the course (students must complete a TA confidentiality form for these Sakai activities and submit to the OHSU Teaching and Learning Center). 3. Support the development and distribution of course materials for students and the instructor, 4. Support the evaluation of students' assigned work, including homework, quizzes and tests, term papers, small group activities, computer-lab assignments, etc. 5. Prepare and deliver one or more course sessions under the supervision of the faculty/course instructor mentor.

**Epi 668 - Infectious Disease Epidemiology (2)**

Provides an introduction to infectious epidemiology, and includes fundamental topics such as outbreak investigation, public health communicable disease surveillance and reporting, biological concepts of disease introduction, evolution and spread, and design of population-based studies to evaluate features of infectious diseases (e.g., risk factors, method of spread, clinical features, disease prevalence). Will also introduce some of the categories of communicable diseases and highlight some features of the major diseases within each category.

Also offered as Epi 568 and may be taken only once for credit. Prerequisite: Epi 512 and Bsta 512.

**Epi 676 - Chronic Disease Epidemiology (2)**

Gives students an understanding of the epidemiology of major chronic diseases in developed countries. It covers three aspects of chronic disease: 1) epidemiology methods used in their study, 2) epidemiologic findings and current status of epidemiologic research into various chronic diseases, and 3) the epidemiology of the major risk factors for chronic diseases. The course is based on presentations by researchers and public health practitioner experts on specific chronic disease topics.

Also offered as Epi 576 and may be taken only once for credit. Prerequisite: Epi 612.

**ESHH - Environmental Systems and Human Health**

Courses offered as part of the joint OHSU-PSU School of Public Health.

**ESHH 506 - Special Projects (1-12)**

(Credit to be arranged.)

**ESHH 511 - Concepts of Environmental Health (3)**

An intensive course designed to familiarize students with fundamentals of environmental health from a scientific and conceptual perspective. Topics are considered within multi-causal, ecological, adaptive systems, and risk-assessment frameworks. Includes consideration of biological, chemical, and physical agents in the environment, which influence public health and well-being. Recommended prerequisite: graduate standing.

Also offered as ESHH 611.

**ESHH 512 - Global & Planetary Health Concepts (3)**

Provides an introduction to Global and Planetary Health. It will focus on the factors that make public health a priority at regional and global scales. It will also address the underlying processes that determine public health in a range of regional settings.

Also offered as ESHH 612 for doctoral students and may be taken only once for credit.

**ESHH 519 - Environmental Health in a Changing World (3)**

Human health is profoundly affected by the environment in many complex ways. This complexity is further compounded by global climate changes currently taking place. The impacts both now and in the future are likely to include: increased frequency of extreme weather (heat waves, flooding, drought); degraded air and water quality; the spread and/or re-emergence of vector-borne diseases; changes in food safety and food security; and population
displacement or civil unrest. The severity of impacts and the affect on burden of disease depends on proactive public health policy and planning at local, national and global scales. This course will provide a basis for understanding why, how and when climate change becomes a public health concern and explore mitigation and adaptation strategies to improve human health and well-being in the future.

**ESHH 521 - Principles of Occupational Health (4)**

Occupational Health students will learn about the current Total Worker Health® approach to creating safe and healthful work environments. This perspective emphasizes the integration of traditional controls to protect workers from injury and occupational illness with protections and supports to advance well-being and health. Within this perspective the first priority is to identify workplace hazards and implement interventions to eliminate or control them. However, this expanded perspective also encourages workplace enhancements that foster worker health and well-being.

Also offered as ESHH 621.

**ESHH 529 - Environmental Toxicology & Risk Assessment (4)**

This course covers the toxicological aspects of chemicals in the environment as well as risk assessment. Methods for both human health and ecological risk assessment will be presented including hazard identification, exposure assessment, dose-response relationships, risk communication, and toxicity testing. While there are no prerequisites, a good foundation in chemistry and familiarity with environmental science are recommended.

**ESHH 530 - Environmental Health Chemistry (4)**

This course provides an overview of chemical processes that are important in environmental and occupational health. Applications of core chemical concepts are developed through case-studies involving issues of major importance to public health. Examples include disinfection of drinking water, biologically-derived toxins, exposure to heavy metals, use of agricultural chemicals, chemical additives in household products, indoor air quality, etc. Some college level chemistry background is desirable, but there are no specific prerequisites.

**ESHH 532 - Ecological Public Health ()**

The course provides an introduction to biological processes in environmental systems and the influence of human activities on these processes. Topics include ecology and evolution, population growth, natural resources, and environmental sustainability. In addition to fundamental knowledge in biology, students will demonstrate understanding of environmental inter-relationships and contemporary environmental issues.

**ESHH 611 - Concepts of Environmental Health (3)**

An intensive course designed to familiarize students with fundamentals of environmental health from a scientific and conceptual perspective. Topics are considered within multi-causal, ecological, adaptive systems, and risk-assessment frameworks. Includes consideration of biological, chemical, and physical agents in the environment, which influence public health and well-being. Recommended prerequisite: graduate standing.

Also offered as ESHH 511.

**ESHH 612 - Global & Planetary Health Concepts (3)**

Provides an introduction to Global and Planetary Health. It will focus on the factors that make public health a priority at regional and global scales. It will also address the underlying processes that determine public health in a range of regional settings.

Also offered as ESHH 512 for master's students and may be taken only once for credit.

**ESHH 621 - Principles of Occupational Health (4)**

Occupational Health students will learn about the current Total Worker Health® approach to creating safe and healthful work environments. This perspective emphasizes the integration of traditional controls to protect workers from injury and occupational illness with protections and supports to advance well-being and health. Within this perspective the first priority is to identify workplace hazards and implement interventions to eliminate or control them. However, this expanded perspective also encourages workplace enhancements that foster worker health and well-being.

Also offered as ESHH 521.

**ESM - Environmental Sci & Mgmt**

**ESM 100 - Portland’s Environment (4)**

Highlights aspects of Portland’s environment that make it a great place to learn. Four sections: 1) Great Things – Portland’s natural and social assets, 2) Challenges and human impacts, 3) Possible solutions...
- experiments in science and management, and 4) Engagement – Portland’s big advantage.

**ESM 101 - Environmental Sciences I (4)**

Introduction to the study of the environment and sustainability with a focus on natural processes. Topics will include physical processes and concepts related to air, water, and land as well as ecological processes and concepts including ecosystems, communities, biodiversity, population dynamics, agriculture, and conservation ecology. One two-hour laboratory. The laboratory projects will focus on urban streams, ecosystems of the Portland metropolitan region, and environmental impacts of land use.

Corequisite: ESM 101L.

**ESM 101L - Lab for Environmental Sciences I (0)**

Lab for ESM 101 Environmental Science.

Corequisite: ESM 101.

**ESM 102 - Environmental Sciences II (4)**

Introduction to the analytical study of the interaction between humans and the environment. This term will focus on issues of environmental degradation. Topics will include human population growth, pollution of the air and water, energy resource use, and social and economic basis for sustainability. One 2-hour laboratory. The laboratory projects will focus on impact of population growth, pollution, and resource conservation.

Corequisite: ESM 102L.

**ESM 102L - Lab for Environmental Sciences II (0)**

Lab for Environmental Sciences II

Corequisite: ESM 102.

**ESM 150 - Orientation to Environmental Sciences and Management (1)**

Self-paced online orientation that covers: virtual tour of PSU and ESM facilities, surveys of the two degrees, pre-requisite courses, UNST or Honors, Career Center, graduate programs, internships, creating a portfolio, student interviews, and steps to getting started.

**ESM 199 - Special Studies (1-9)**

See department for course description. (Credit to be arranged.)

**ESM 220 - Introduction to Environmental Systems (4)**

Introduction to the structure and function of terrestrial, aquatic, and atmospheric systems, including the human actions that affect them. Includes a lab section that introduces basic quantitative techniques for collecting and analyzing data from environmental systems; 2 lecture periods, one 3-hour lab.

Prerequisite: Math 111 (may be taken concurrently; if you take ALEKS math placement exam and receive a score of 60 or above, email the instructor to request this pre-requisite be waived). Corequisite: ESM 220L.

**ESM 220L - Introduction to Environmental Systems Lab (0)**

Lab for ESM 220 Introduction to Environmental Systems.

Corequisite: ESM 220.

**ESM 221 - Applied Environmental Studies: Problem Solving (4)**

Environmental problems solving, sampling, design for quantitative sampling, and measurement.

Prerequisite: ESM 220 or (ESM 101 and ESM 102); Math 111 (instructor will waive this prerequisite with an ALEKS score of >59). Corequisite: ESM 221L.

**ESM 221L - Applied Environmental Studies: Problem Solving Lab (0)**

Lab for Applied Environmental Studies: Problem Solving.

Corequisite: ESM 221.

**ESM 222 - Applied Environmental Studies: Policy Consideration (4)**

Introduction to environmental laws and the regulations promulgated under them. Includes an examination of the genesis of these laws (e.g., NEPA, Clean Air and Water Acts, RCRA, Endangered Species Act) and their history of compliance and violation. Recommended prerequisite: ESM 220 and 221.

**ESM 230 - Fundamentals of Environmental Chemistry I (4)**

Basic concepts and principles of chemistry as it applies to environmental problems. This will include the nature of matter and chemical reactions, water chemistry, water pollution, atmospheric chemistry, soil chemistry, toxicological chemistry and industrial ecology. Examples will be used that illustrate the
social and economic importance of environmental chemistry. This is the first course in a sequence of two: ESM 230 and ESM 231 and must be taken in sequence.

Corequisite: ESM 230R.

**ESM 230L - Lab for Environmental Chemistry I (0)**
Lab for Environmental Chemistry I.

**ESM 230R - Recitation for Environmental Chemistry I (0)**
Recitation for Environmental Chemistry I.
Corequisite: ESM 230.

**ESM 231 - Fundamentals of Environmental Chemistry II (4)**
Basic concepts and principles of chemistry as it applies to environmental problems. This will include, the nature of matter and chemical reactions, water chemistry, water pollution, atmospheric chemistry, soil chemistry, toxicological chemistry and industrial ecology. Examples will be used that illustrate the social and economic importance of environmental chemistry. This is the second course in a sequence of two: ESM 230 and ESM 231 and must be taken in sequence.
Prerequisite: ESM 230. Corequisite: ESM 231L.

**ESM 231L - Lab for ESM 231 (0)**
Lab for ESM 231.
Corequisite: ESM 231.

**ESM 315 - Environmental Sampling and Contaminant Analysis (4)**
Provides experience with environmental sampling techniques and the quantitative analysis of contaminants in water, soil and air. Explore the chemical and physical principles underlying the sources, transformation and fate of contaminants in the environment. One one-hour lecture and two three-hour labs per week.
Prerequisite: ESM 230 and ESM 231.

**ESM 320 - Environmental Systems I (4)**
Introduction to the structure and function of environmental systems with an emphasis on ecological processes and human impacts. Co-requisite: ESM 324.
Prerequisite: ESM 320, ESM 323. Corequisite: ESM 324.

**ESM 321 - Environmental Systems II (4)**
Overview of risk assessment applied to environmental problems, including the impact assessment process, application of cost-benefit analysis, hazard identification, risk characterization, risk assessment, and risk management. Co-requisite: ESM 325.
Prerequisite: ESM 320, ESM 321, ESM 323, ESM 324. Corequisite: ESM 325.

**ESM 323 - Environmental Systems Laboratory I (2)**
Laboratory work to accompany Environmental Systems I (ESM 320). One 4-hour laboratory period. Requires concurrent enrollment in ESM 320.
Corequisite: ESM 320.

**ESM 324 - Environmental Systems Laboratory II (2)**
Laboratory work to accompany Environmental Systems II (ESM 321). One 4-hour laboratory period. Requires concurrent enrollment in ESM 321.
Corequisite: ESM 321.

**ESM 325 - Environmental Risk Assessment Lab (2)**
Corequisite: ESM 322.

**ESM 330 - Environmental and Ecological Literacy (4)**
Introduces a broad range of thought about ecology and the environment, including supporters and critics such as Aldo Leopold, David Orr, Bjorn Lomborg, E.O. Wilson and Thomas Berry. Addresses the idea of ecological literacy as a key aspect in education and understanding the environment. Recommended prerequisites: ESM 220, 221, and 222.
**ESM 333 - Methods of Data Collection, Analysis, Representation, and Modeling for Environmental Managers (4)**

Overview and review of main techniques for collecting, modeling and analyzing both scientific and social data; key activities for environmental managers. Co-requisite: ESM 334.

Prerequisite: ESM 220, ESM 221, and ESM 222. Corequisite: ESM 334.

**ESM 334 - Methods of Data Collection, Analysis, Representation, and Modeling for Environmental Managers Lab (2)**

Lab accompanying the lecture class: ESM 333, provides practice and review of main techniques for collecting, modeling and analyzing both scientific and social data; key activities for environmental managers. Co-requisite: ESM 333.

Corequisite: ESM 333.

**ESM 335 - Introduction to Environmental Management (4)**

Course will focus on environmental project management. Survey of agencies and entities that currently do management and under what authority. Introduction to general theory of environmental management and strategies that are being used. Case studies of local management project and issues.

Prerequisite: ESM 222.

**ESM 340 - Research Methods in Environmental Science (4)**

Integrates quantitative skills into environmental research. Introduces research methods commonly used in environmental studies with emphasis on environmental study designs, data analyses, and data interpretations.

**ESM 342 - Field Methods (2)**

Presents crucial safety, field and research skills for environmental research. Presents different skill sets for different types of field work for example in lakes, wetlands, forests or marine environments. Students may count two sections of this class toward an Environmental Science or Environmental Studies major. (May be taken twice).

**ESM 343 - Environmental Problem Solving: Restoring Ecosystem Damage from Human Impacts (4)**

Inquiry based course that addresses many problems that can be addressed through environmental restoration. Analysis of potential solutions based on ecological principles and management efficacy. Projects will address site evaluation, tests for effectiveness, and design considerations.

Prerequisite: Sci 341U or Sci 342U. Corequisite: ESM 343L.

**ESM 343L - Lab for ESM 343 (0)**

Lab for ESM 343.

Corequisite: ESM 343.

**ESM 355U - Understanding Environmental Sustainability I (4)**

Emphasizing sustainability, study of the scientific and ecological principles that govern human interactions with the physical and biological systems of the earth. Topics will include ecosystem properties, earth system properties, human population dynamics, and the roles of technological and ethical decisions. Not intended for science majors.

**ESM 356U - Understanding Environmental Sustainability II (4)**

Introduction to the concepts and principles necessary to understand the complex relationship between humans and environmental sustainability. Topics will include natural resources issues with a focus on nature's services, the global crisis in water, biodiversity, and food; soil function, the fate of environmental toxins and public health, climate change, alternative energy, as well as ethics, governance, regulatory compliance, and community understanding. Not intended for science majors. Expected preparation: UnSt 224 or ESM 355.

**ESM 357U - Business Solutions for Environmental Problems (4)**

Environmental science perspectives and business perspectives on environmental issues, focusing on smaller scale problems amenable to entrepreneurial solutions. Contextualization and analysis of issues using approaches and tools from both disciplines in search of local, sustainable, cost and scale-effective approaches.

**ESM 399 - Special Studies (1-9)**

See department for course description. (Credit to be arranged.)
ESM 401 - Research (0-8)
Consent of instructor and program director. See department for course description. (Credit to be arranged.)

ESM 402 - Independent Study (1-12)
(Credit to be arranged.)

ESM 403 - Thesis (1-12)
(Credit to be arranged.)

ESM 404 - Cooperative Ed/Internship (0-12)
See department for course description. (Credit to be arranged.)

ESM 405 - Reading and Conference (0-9)
See department for course description. (Credit to be arranged.)

ESM 406 - Special Projects (1-12)
(Credits to be arranged.)

ESM 407 - Environmental Sciences Seminar (0-6)
Weekly seminar series involving student-led discussion of topical environmental issues. May be repeated for up to 3 credits.

ESM 410 - Selected Topics (1-12)
Consent of instructor. See department for course description. (Credit to be arranged.)

ESM 415 - Road Ecology (4)
Environmental impacts of roads and mitigation. Issues associated with road system construction, maintenance, and operation. Projects on the ecological effects of roads will bring real-world perspectives to the class, helping students understand current problems and research needs.
Also offered for graduate-level credit as ESM 515 and may be taken only once for credit. Prerequisite: any undergraduate environmental science course.

ESM 416 - Ecosystem Restoration (4)
Ecological theories and principles that guide restoration practices in a variety of ecosystems, including rivers, wetlands, forests, and prairies. Causes of ecosystem degradation, motivations for restoration, and factors that influence success in restoration. Interactions between science, philosophy, engineering, environmental management, policy, and politics in the dynamic world of ecosystem restoration.
Also offered for graduate-level credit as ESM 516 and may be taken only once for credit. Prerequisite: ESM 335 or Geog 345U or Bi 357 or ESM 321.

ESM 417 - Applied Watershed Restoration (4)
Fundamentals of applied watershed/stream restoration: hydrologic, hydraulic, geomorphic, and ecological principles and tools applicable to the assessment of watershed and reach-scale processes and evaluation of stream channel condition. Emphasis on the inter-related nature of physical processes and aquatic and riparian ecology at both the watershed and reach-scale.
Also offered for graduate-level credit as ESM 517 and may be taken only once for credit. Prerequisite: Upper-division standing.

ESM 418 - Landscape Ecology (4)
Examines the structure, function, and change of natural and human-modified communities at the scale between individual communities and regional biomes. Focuses on spatial patterns and processes as they relate to the patch mosaic of interacting ecological communities. Expected preparation: Geog 313 or Bi 357. Upper-division standing required. This is the same course as Geog 418 and may be taken only once for credit.
Also offered for graduate-level credit as ESM 518 and may be taken only once for credit. Cross-Listed as: Geog 418.

ESM 420 - Ecological Toxicology (4)
Effects of environmental contaminants at the individual, population, and ecosystem level. Topics will include toxicity test methods, environmental fate of contaminants, and the physiological and ecological effects of selected heavy metals, chlorinated organics, and pesticides.
Also offered for graduate-level credit as ESM 520 and may be taken only once for credit.

ESM 424 - Wetland Ecology (4)
Structure and function of wetland ecosystems, with an emphasis on the diversity of regional wetland systems. Topics also include wetland soils, plants,
and hydrologic setting and requirements for wetland delineation.

Also offered for graduate-level credit as ESM 524 and may be taken only once for credit.

**ESM 425 - Watershed Hydrology (4)**

Study of the movement and storage of water in watersheds, emphasizing physical processes. Includes systems analysis of watersheds, precipitation, snowmelt, infiltration, evapotranspiration, groundwater flow, streamflow generation, open channel flow, hydrograph analysis and an introduction to watershed hydrologic modeling. Expected preparation: Mth 252, Ph 201.

Also offered for graduate-level credit as ESM 525 and may be taken only once for credit.

**ESM 426 - Ecology of Streams and Rivers (4)**

Evaluation of streams and rivers from an ecosystem perspective, including stream development, biological communities, ecological processes, and methods of assessment as applied to evaluation of common environmental problems.

Also offered for graduate-level credit as ESM 526 and may be taken only once for credit.

**ESM 427 - Watershed Biogeochemistry (4)**

Study of the chemistry of watershed-based ecosystems, emphasizing physical and biological processes. Mechanisms of atmospheric input, rock weathering and soil development, physical and biological controls on the storage and flux of minerals, carbon, and nutrients in terrestrial ecosystems; and impacts of management on biogeochemical processes in watershed-based ecosystems. Expected preparation: Bi 253, Ch 221.

Also offered for graduate-level credit as ESM 527 and may be taken only once for credit.

**ESM 428 - Urban Ecology (4)**

Study of ecological processes in urban environments. Emphasis on responses of flora and fauna to changes in climate, hydrology, geomorphology, geochemistry, soils and available habitat in urban areas. Includes issues of species conservation, ecosystem management and sustainability in urban systems. Expected preparation: an undergraduate biology course or permission of instructor.

Also offered for graduate-level credit as ESM 528 and may be taken only once for credit.

**ESM 429 - Environmental Impact Assessment (4)**

Environmental assessments and impact assessment techniques; regulatory and technical requirements of impact assessment. The National Environmental Policy Act, its implementation, implications and uses.

Also offered for graduate-level credit as ESM 529 and may be taken only once for credit.

**ESM 433 - Natural Resource Economics (4)**

An examination of the economic concepts and theories for analyzing natural resource use and related environmental pollution, including the economics of sustainability. Discussion of renewable and nonrenewable natural resource issues in the Pacific Northwest and policy alternatives. This is the same course as Ec 433 and may be taken only once for credit. Expected preparation: Ec 201.

Also offered for graduate-level credit as ESM 533 and may be taken only once for credit. Cross-Listed as: Ec 433.

**ESM 434 - Business Environmental Management Economics (4)**

Examines the economic costs and benefits that affect the decisions of business firms to develop integrated environmental management systems. Analysis of policy options to foster business environmental management for public goods. Case studies of selected firms. This is the same course as Ec 434 and may be taken only once for credit. Expected preparation: Ec 201.

Also offered for graduate-level credit as ESM 534 and may be taken only once for credit. Cross-Listed as: Ec 434.

**ESM 435 - Natural Resource Policy and Management (4)**

The impact of natural resource policy and management on regional and federal levels. Case studies will focus on the complex settings, difficult socioeconomic contexts and charged political environments.

Also offered for graduate-level credit as ESM 535 and may be taken only once for credit. Prerequisite: ESM 335.

**ESM 436 - Environmental Institutions and Management (4)**

Fundamental concepts of environmental management with case studies illustrating current management issues regarding human-environment interactions. Participants will learn management theory and concepts and apply this knowledge through field work conducting institutional analysis and presenting a management plan for a local site.

Also offered for graduate-level credit as ESM 536 and may be taken only once for credit. Prerequisite: ESM 335.
ESM 440 - The Ecology & Management of Wildfire (4)

A field-based class offered jointly by the Departments of Environmental Science Management and Geography. This class focuses on the complex challenges of managing wildfire in integrated social and ecological systems (SESSs) and uses the western US as case study to focus on the biophysical and social science behind those challenges. The course adds field studies in NE Oregon to understand how integrated SESSs manage wildfire and wildfire risks in practice.

Also offered for graduate-level credit as ESM 540 and may be taken only once for credit. Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as Geog 440 and may be taken only once for credit.

ESM 443 - Global Environmental Economics (4)

An examination of the economic forces and theories to understand the causes of global environmental problems, and to evaluate policy options to remedy serious problems. Analyses of the economic effects of global environmental agreements and the environmental effects of trade and global commerce in developed and developing countries. This course is the same as Ec 443 and may be taken only once for credit.

Also offered for graduate-level credit as ESM 543 and may be taken only once for credit. Cross-Listed as: Ec 443.

ESM 444 - Forest Ecology (4)

Study of forested ecosystems, their biotic and abiotic drivers, and the theories and tools that we use to understand forest ecosystems and project how they will change. Forest ecology considers forest succession, carbon and nitrogen dynamics of forests, forest soils, climate and weather, water and energy balances, and disturbances.

Also offered for graduate-level credit as ESM 544 and may be taken only once for credit. Prerequisite: ESM 320 and ESM 321.

ESM 445 - Old-growth Forest Ecology (4)

Exploration of the ecological characteristics of west-side old-growth forests, including their outstanding biodiversity. Landscape level aspects of forest ecosystems, including the role of fire; plus the use of basic forestry measurements to contrast old-growth, second-growth, and plantation stands of trees. Emphasizing field study, this eight-day course is based at an off-campus location for easy access to forest ecosystems. Field site costs in addition to tuition. Expected preparation: upper-division or graduate standing required and an undergraduate sequence in biology.

Also offered for graduate-level credit as ESM 545 and may be taken only once for credit.

ESM 450 - Case Studies in Environmental Problem Solving (0-6)

Evaluation of selected cases of environmental problems, including field studies and project work with government and private agencies. Expected preparation: ESM 320, ESM 321, ESM 322.

ESM 451 - Project Management for Scientists (4)

Managing a science or environmental project is unique, requiring knowledge of the science discipline, project management, public participation and regulatory requirements. Topics include: defining project and tasks; understanding client or internal needs; establishing project organization, staffing, costs; public participation; satisfying regulatory requirements; adaptive management. Group work using case studies included.

Also offered for graduate-level credit as ESM 551 and may be taken only once for credit. Prerequisite: upper-division standing.

ESM 460 - Air Quality (4)

An overview of urban air quality issues facing cities in the US and globally. Examine effects of air pollution on public health and environment, as well as technologies and regulatory practices. Review pollution measurement and modeling techniques. This is the same course as CE 488 and may be taken only once for credit. Expected preparation: ESM 320.

Also offered for graduate-level credit as ESM 560 and may be taken only once for credit. Cross-Listed as: CE 488.

ESM 462 - Climate Change Impacts, Adaptations and Responses: Geosphere and Anthrosphere (4)

Examination of the basis for human-influenced global climate change, the interactions and feedbacks, the impact on urban and natural systems, and the management adaptation and solutions to these impacts.

Also offered for graduate-level credit as ESM 562 and may be taken only once for credit. Prerequisite: Senior or graduate standing in ESM.

ESM 463 - Water Quality Policy & Management (4)

Review and assessment the efficacy of water quality laws, regulations, and policies. Focus on the Water Quality Standards for the State of Oregon for
Also offered for graduate-level credit as ESM 563 and may be taken only once for credit. Prerequisite: ESM 335.

**ESM 464 - Climate Adaptation: Managing Environmental Risks and Vulnerabilities (4)**

Contribution to climate risk management will require an understanding of the fundamentals of adaptation planning, climate impacts, risk and vulnerability, and implementation. An adaptation-centered view focuses on the power of local actors to develop strategies that protect and facilitate human and environmental values under threat from global change.

Also offered for graduate-level credit as ESM 564 and may be taken only once for credit. Prerequisite: ESM 335 or equivalent.

**ESM 465 - Investigating Ecological and Social Issues in Urban Parks and Natural Areas (4)**

Examines ecological and social aspects of urban forests. Emphasizes response of native plants to physical and introduced species impacts from urbanization. Students will collect ecological and visit impact data in local parks, study issues pertaining to sustainability and management based on an understanding of short term and longer-term disturbances.

Also offered for graduate-level credit as ESM 565 and may be taken only once for credit. Prerequisite: Environmental studies or environmental science major or Bi 357.

**ESM 471 - Atmospheric Physics (4)**

Cycles of trace gases in the Earth’s atmosphere and their role in the environment. Emission, dispersal, and removal of natural and man-made trace constituents in the atmosphere that determine the Earth’s climate and stratospheric ozone layer. This is the same course as Ph 471 and may only be taken only once for credit. Recommended: introductory course in differential equations.

Also offered for graduate-level credit as ESM 571 and may be taken only once for credit. Prerequisite: one year each of calculus and calculus-based physics. Cross-Listed as: Ph 471.

**ESM 473 - Phytoplankton Ecology (4)**

Examination of photosynthesis, nutrient uptake, regulation and cell growth processes in the context of algal growth in natural waters. Expected preparation: Bi 211; ESM 321 or Bi 357.

Also offered for graduate-level credit as ESM 573 and may be taken only once for credit.

**ESM 474 - Fish Ecology and Conservation (4)**

This course provides a multidisciplinary focus on major ecological issues related to fish conservation, with a strong emphasis on grounding ecological concepts in real-life case studies. The course incorporates lectures and paper discussions related to fish conservation issues in the Pacific Northwest and beyond.

Also offered for graduate-level credit as ESM 574 and may be taken only once for credit. Prerequisite: ESM 221.

**ESM 475 - Limnology and Aquatic Ecology (4)**

Encompasses biological, physical, geological, and chemical aspects of freshwater environments. Overview of lake ecosystems, emphasizing fundamental interactions, processes, and ecology, as well as an appreciation of the impact of human activities on these waterbodies. A field trip is required. Expected preparation: Ch 223.

Also offered for graduate-level credit as ESM 575 and may be taken only once for credit. Prerequisite: ESM 321 or Bi 357. Corequisite: ESM 477.

**ESM 477 - Limnology Laboratory (2)**

Techniques in field and laboratory analysis of freshwater systems. Recommended pre- or corequisite: ESM 475/575.

Also offered for graduate-level credit as ESM 577 and may be taken only once for credit. Corequisite: ESM 475.

**ESM 478 - Aquatic Vascular Plants (4)**

Classification, biology, ecology, and management of aquatic vascular plants. Course will focus on freshwater systems and include a laboratory featuring field identification and laboratory experimentation. Expected preparation: Bi 357.

Also offered for graduate-level credit as ESM 578 and may be taken only once for credit.

**ESM 479 - Fate and Transport of Toxics in the Environment (4)**

Chemical, physical, and biological principles that govern the behavior of toxic materials such as heavy metals and synthetic organic compounds in the environment. Course emphasizes practical ways to represent chemical processes in models of pollutant behavior. Topics include: adsorption of pollutants on soils and sediments; transport across sediment-water and air-water interfaces; bioamplification of pollutants; multiphase fugacity models of organics; case studies of contaminated surface water, sediment
and groundwater. This course is the same as CE 479 and may be taken only once for credit. Expected preparation: senior or graduate standing.

Also offered for graduate-level credit as ESM 579 and may be taken only once for credit. Cross-Listed as: CE 479.

**ESM 480 - Coastal Marine Ecology (4)**

Also offered for graduate-level credit as ESM 580 and may be taken only once for credit.

**ESM 483 - Marine Conservation and Management (4)**

This course will be divided into three sections. We will begin by discussing the state of the oceans, and ecological differences between marine and terrestrial/aquatic systems. The second part of the course will discuss the major threats to ocean systems. The third part of the course will focus on solutions in terms of protected areas, management and policy strategies, and various aspects of the human dimension. Expected preparation: ESM 335.

Also offered for graduate-level credit as ESM 583 and may be taken only once for credit.

**ESM 485 - Ecology and Management of Bio-Invasions (4)**

Invasive, or nonindigenous, species present us with global ecological and economic problems and have been ranked as second only to habitat destruction as a threat to our natural areas and native species. These invasive species are a concern because they restructure ecosystems, affect the evolutionary trajectory of native species, lead to the extinction of species, and impact local industries. Expected preparation: ESM 321.

Also offered for graduate-level credit as ESM 585 and may be taken only once for credit.

**ESM 487 - Environmental Justice (4)**

Explores the foundations of environmental justice theory and how they apply to historical, current and emerging global issues. This course explores philosophies of justice and fairness as they relate to environmental ‘goods’ and ‘bads.’ We will explore a variety of case studies, touching on interrelated topics including food justice, climate and energy justice, water justice and infrastructure supply and demand, etc. This course blends sociological perspectives with natural resource management and policy implications. Expected preparation ESM 335 or Geog 345U.

Also offered for graduate-level credit as ESM 587 and may be taken only once for credit. Prerequisite: Upper-division standing.

**ESM 493 - Advanced Environmental Science Lab and Field Methods (2)**

Trains seniors and graduate students in skills that can be used in field and laboratory research. The specific application and topics will rotate from term to term allowing students to learn skills necessary to their own research but also to learn methods employed by other research groups in ESM.

Also offered for graduate-level credit as ESM 593 and may be taken only once for credit. Prerequisite: Senior or graduate standing.

**ESM 499 - Special Studies (1-8)**

See department for course description. Consent of instructor and program director. (Credit to be arranged.)

**ESM 501 - Research (1-9)**

See department for course description. Consent of instructor and program director. (Credit to be arranged.)

**ESM 502 - Independent Study (1-9)**

(Credit to be arranged.)

**ESM 503 - Thesis (1-12)**

All aspects of research and thesis writing for master's students. (Credit to be arranged.)

**ESM 504 - Cooperative Ed/Internships (1-9)**

See department for course description. (Credit to be arranged.)

**ESM 505 - Reading and Conference (1-9)**

See department for course description. (Credit to be arranged.)
ESM 506 - Special Projects (1-9)
See department for course description. (Credit to be arranged.)

ESM 507 - Seminar (1-6)
Weekly seminar series on topical environmental issues. May be repeated for up to 3 credits for M.S. or M.E.M students.

ESM 509 - Practicum (1-9)
See department for course description. (Credit to be arranged.)

ESM 510 - Selected Topics (1-12)
See department for course description. Consent of instructor. (Credit to be arranged.)

ESM 515 - Road Ecology (4)
Environmental impacts of roads and mitigation. Issues associated with road system construction, maintenance, and operation. Projects on the ecological effects of roads will bring real-world perspectives to the class, helping students understand current problems and research needs.

ESM 516 - Ecosystem Restoration (4)
Ecological theories and principles that guide restoration practices in a variety of ecosystems, including rivers, wetlands, forests, and prairies. Causes of ecosystem degradation, motivations for restoration, and factors that influence success in restoration. Interactions between science, philosophy, engineering, environmental management, policy, and politics in the dynamic world of ecosystem restoration.

ESM 518 - Landscape Ecology (4)
Examines the structure, function, and change of natural and human-modified communities at the scale between individual communities and regional biomes. Focuses on spatial patterns and processes as they relate to the patch mosaic of interacting ecological communities. Expected preparation: Geog 313 or Bi 357. Upper-division standing required. This is the same course as Geog 518 and may be taken only once for credit.

ESM 520 - Ecological Toxicology (4)
effects of environmental contaminants at the individual, population, and ecosystem level. Topics will include toxicity test methods, environmental fate of contaminants, and the physiological and ecological effects of selected heavy metals, chlorinated organics, and pesticides.

ESM 524 - Wetland Ecology (4)
Structure and function of wetland ecosystems, with an emphasis on the diversity of regional wetland systems. Topics also include wetland soils, plants, and hydrologic setting and requirements for wetland delineation.

ESM 525 - Watershed Hydrology (4)
Study of the movement and storage of water in watersheds, emphasizing physical processes. Includes systems analysis of watersheds, precipitation, snowmelt, infiltration, evapotranspiration, groundwater flow, streamflow generation, open channel flow, hydrograph analysis and an introduction to watershed hydrologic modeling. This is the same course as CE 565 and may be taken only once for credit.

ESM 526 - Ecology of Streams and Rivers (4)
Evaluation of streams and rivers from an ecosystem perspective, including stream development, biological communities, ecological processes, and methods of assessment as applied to evaluation of common environmental problems.
Also offered for undergraduate-level credit as ESM 426 and may be taken only once for credit.

**ESM 527 - Watershed Biogeochemistry (4)**

Study of the chemistry of watershed-based ecosystems, emphasizing physical and biological processes. Mechanisms of atmospheric input; rock weathering and soil development; physical and biological controls on the storage and flux of minerals, carbon, and nutrients in terrestrial ecosystems; and impacts of management on biogeochemical processes in watershed-based ecosystems. Also offered for undergraduate-level credit as ESM 427 and may be taken only once for credit.

**ESM 528 - Urban Ecology (4)**

Study of ecological processes in urban environments. Emphasis on responses of flora and fauna to changes in climate, hydrology, geomorphology, geochemistry, soils and available habitat in urban areas. Includes issues of species conservation, ecosystem management and sustainability in urban systems. Also offered for undergraduate-level credit as ESM 428 and may be taken only once for credit.

**ESM 529 - Environmental Impact Assessment (4)**

Environmental assessments and impact assessment techniques; regulatory and technical requirements of impact assessment. The National Environmental Policy Act, its implementation, implications and uses. Also offered for undergraduate-level credit as ESM 429 and may be taken only once for credit.

**ESM 533 - Natural Resource Economics (4)**

An examination of the economic concepts and theories for analyzing natural resource use and related environmental pollution, including the economics of sustainability. Discussion of renewable and nonrenewable natural resource issues in the Pacific Northwest and policy alternatives. This is the same course as Ec 533 and may be taken only once for credit. Also offered for undergraduate-level credit as ESM 433 and may be taken only once for credit. Expected preparation: Ec 201.

Also offered for undergraduate-level credit as ESM 434 and may be taken only once for credit. Cross-Listed as: Ec 534.

**ESM 535 - Natural Resource Policy and Management (4)**

The impact of natural resource policy and management on regional and federal levels. Case studies will focus on the complex settings, difficult socioeconomic contexts and charged political environments.

Also offered for undergraduate-level credit as ESM 435 and may be taken only once for credit. Prerequisite: ESM 335.

**ESM 536 - Environmental Institutions and Management (4)**

Fundamental concepts of environmental management with case studies illustrating current management issues regarding human environment interactions. Participants will learn management theory and concepts and apply this knowledge through fieldwork conducting institutional analysis and presenting a group management plan for a local site. Also offered for undergraduate-level credit as ESM 436 and may be taken only once for credit.

**ESM 540 - The Ecology and Management of Wildfire (4)**

A field-based class offered jointly by the Departments of Environmental Science Management and Geography. This class focuses on the complex challenges of managing wildfire in integrated social and ecological systems (SESs) and uses the western US as case study to focus on the biophysical and social science behind those challenges. The course adds field studies in NE Oregon to understand how integrated SESs manage wildfire and wildfire risks in practice.

Also offered for undergraduate-level credit as ESM 440 and may be taken only once for credit. Cross-Listed as: This is the same course as Geog 540 and may be taken only once for credit.

**ESM 543 - Global Environmental Economics (4)**

An examination of the economic forces and theories to understand the causes of global environmental problems, and to evaluate policy options to remedy serious problems. Analyses of the economic effects of global environmental agreements and the environmental effects of trade and global commerce in developed and developing countries. This course is the same as Ec 543 and may be taken only once for credit.
Also offered for undergraduate-level credit as ESM 443 and may be taken only once for credit. Cross-Listed as: Ec 543.

**ESM 544 - Forest Ecology (4)**

Study of forested ecosystems, their biotic and abiotic drivers, and the theories and tools that we use to understand forest ecosystems and project how they will change. Forest ecology considers forest succession, carbon and nitrogen dynamics of forests, forest soils, climate and weather, water and energy balances, and disturbances.

Also offered for undergraduate-level credit as ESM 444 and may be taken only once for credit.

**ESM 545 - Old-growth Forest Ecology (4)**

Exploration of the ecological characteristics of west-side old-growth forests, including their outstanding biodiversity. Landscape level aspects of forest ecosystems, including the role of fire; plus the use of basic forestry measurements to contrast old-growth, second-growth, and plantation stands of trees. Emphasizing field study, this eight-day course is based at an off-campus location for easy access to forest ecosystems. Field site costs in addition to tuition.

Also offered for undergraduate-level credit as ESM 445 and may be taken only once for credit.

**ESM 551 - Project Management for Scientists (4)**

Managing a science or environmental project is unique, requiring knowledge of the science discipline, project management, public participation and regulatory requirements. Topics include: defining project and tasks; understanding client or internal needs; establishing project organization, staffing, costs; public participation; satisfying regulatory requirements; adaptive management. Group work using case studies included.

Also offered for undergraduate-level credit as ESM 451 and may be taken only once for credit. Prerequisite: upper-division standing.

**ESM 552 - Environmental Regulation and Non-regulatory Approaches (3)**

Understanding environmental regulations and the interaction between governmental agencies and business is critical. Course provides basics of major environmental regulations, how local, state and the federal governments are responding to regulatory issues, and interaction with businesses through innovation and performance based approaches. Case studies and group work included.

**ESM 554 - Graduate Research Toolbox (4)**

Students will develop experimental design, research, grant writing, oral presentation, thesis preparation, peer review, library, and time management skills relevant to their graduate degree.

**ESM 555 - Science Communication (1)**

Students will outline the objectives involved in presenting scientific information to different audiences, including the role of the speaker, visual presentation of data, written and mixed media. This is the same course as ESR 655 and may be taken only once for credit.

Cross-Listed as: ESR 655.

**ESM 556 - Advanced Science Communication Skills (1)**

Students will explore more advanced topics on presentation and proposal preparation. All students will prepare a mocked up poster based on cognitive and graphic design principles. They will create an extended outline for a research proposal. Peers in class will critique posters and proposals. This is the same course as ESR 656 and may be taken only once for credit.

Prerequisite: G610 Writing Skills or ESM 555. Cross-Listed as: ESR 656.

**ESM 557 - Science, Media and the Public: Working with the Media to Create Effective Scientific Messages (1)**

Scientists need to explain their studies to the public through mass media. Topics include: audience, different media, the reporters’ process, editor’s view of science stories, and how inaccuracies get perpetuated. Students will evaluate a wide variety of mass media materials, interview practice, and guests’ description of various media. This is the same course as ESR 657 and may be taken only once for credit.

Cross-Listed as: ESR 657.

**ESM 560 - Air Quality (4)**

An overview of urban air quality issues facing cities in the US and globally. Examine effects of air pollution on public health and environment, as well as technologies and regulatory practices. Review pollution measurement and modeling techniques. This is the same course as CE 588 and may be taken only once for credit.

Also offered for undergraduate-level credit as ESM 460 and may be taken only once for credit. Cross-Listed as: CE 588.
**ESM 562 - Climate Change Impacts, Adaptations and Responses: Geosphere and Anthrosphere (4)**

Examination of the basis for human-influenced global climate change, the interactions and feedbacks, the impact on urban and natural systems, and the management adaptation and solutions to these impacts.

Also offered for undergraduate-level credit as ESM 462 and may be taken only once for credit.

**ESM 563 - Water Quality Policy & Management (4)**

Review and assessment the efficacy of water quality laws, regulations, and policies. Focus on the Water Quality Standards for the State of Oregon for temperature, bacteria, chemical toxins and nutrients. Role of science in decisions protecting and restoring rivers from water pollution.

Also offered for undergraduate-level credit as ESM 463 and may be taken only once for credit.

**ESM 564 - Climate Adaptation: Managing Environmental Risks and Vulnerabilities (4)**

Contribution to climate risk management will require an understanding of the fundamentals of adaptation planning, climate impacts, risk and vulnerability, and implementation. An adaptation-centered view focuses on the power of local actors to develop strategies that protect and facilitate human and environmental values under threat from global change.

Also offered for undergraduate-level credit as ESM 464 and may be taken only once for credit.

**ESM 565 - Investigating Ecological and Social Issues in Urban Parks and Natural Areas (4)**

Examines ecological and social aspects of urban forests. Emphasizes response of native plants to physical and introduced species impacts from urbanization. Students will collect ecological and visitor impact data in local parks, study issues pertaining to sustainability and management based on an understanding of short term and longer-term disturbances.

Also offered for undergraduate-level credit as ESM 465 and may be taken only once for credit.

**ESM 566 - Environmental Data Analysis (4)**

Application of probabilistic and statistical models to the description of environmental data with a focus on hydrology and water quality. Graphical and quantitative techniques of exploratory data analysis, selection and fitting of appropriate probability distributions, simple and multiple and multivariate regression and their applications to analysis and modeling, and detection of changes and trends in environmental time series. This is the same course as CE 566 and may be taken only once for credit.

Prerequisite: graduate standing and Stat 243 and 244 or Stat 460. Cross-Listed as: CE 566.

**ESM 567 - Multivariate Analysis of Environmental Data (4)**

Biological and environmental data are usually complex, consisting of many observations and variables. This course provides an overview of the main techniques of multivariate data analysis that are relevant and useful in ecology and environmental science. Emphasis is on ordination and cluster analysis.

Prerequisite: one college-level statistics course.

**ESM 570 - Methods for Informal Environmental Education (4)**

Overview of the purpose and scope of citizen science. Provides an educational framework for the range of possible citizen programs, methodology for planning and training participants, and methods of assessment of outcomes. Students will be expected to participate in practical experience working with one or more programs.

**ESM 571 - Atmospheric Physics (4)**

Cycles of trace gases in the Earth’s atmosphere and their role in the environment. Emission, dispersal, and removal of natural and man-made trace constituents in the atmosphere that determine the Earth’s climate and stratospheric ozone layer. This is the same course as Ph 571 and may only be taken only once for credit.

Also offered for undergraduate-level credit as ESM 471 and may be taken only once for credit.

**ESM 573 - Phytoplankton Ecology (4)**

Examination of photosynthesis, nutrient uptake, regulation and cell growth processes in the context of algal growth in natural waters.

Also offered for undergraduate-level credit as ESM 473 and may be taken only once for credit.

**ESM 574 - Fish Ecology and Conservation (4)**

This course provides a multidisciplinary focus on major ecological issues related to fish conservation, with a strong emphasis on grounding ecological concepts in real-life case studies. The course incorporates lectures and paper discussions related to fish conservation issues in the Pacific Northwest and beyond.
Also offered for undergraduate-level credit as ESM 474 and may be taken only once for credit.

**ESM 575 - Limnology and Aquatic Ecology (4)**
Encompasses biological, physical, geological, and chemical aspects of freshwater environments. Overview of lake ecosystems, emphasizing fundamental interactions, processes, and ecology, as well as an appreciation of the impact of human activities on these waterbodies. A field trip is required.

Also offered for undergraduate-level credit as ESM 475 and may be taken only once for credit. Corequisite: ESM 577.

**ESM 577 - Limnology Laboratory (2)**
Techniques in field and laboratory analysis of freshwater systems. Recommended pre- or corequisite: ESM 475/575.

Also offered for undergraduate-level credit as ESM 477 and may be taken only once for credit. Corequisite: ESM 575.

**ESM 578 - Aquatic Vascular Plants (4)**
Classification, biology, ecology, and management of aquatic vascular plants. Course will focus on freshwater systems and include a laboratory featuring field identification and laboratory experimentation.

Also offered for undergraduate-level credit as ESM 478 and may be taken only once for credit. Corequisite: ESM 578.

**ESM 579 - Fate and Transport of Toxics in the Environment (4)**
Chemical, physical, and biological principles that govern the behavior of toxic materials such as heavy metals and synthetic organic compounds in the environment. Course emphasizes practical ways to represent chemical processes in models of pollutant behavior. Topics include: adsorption of pollutants on soils and sediments; transport across sediment-water and air-water interfaces; biotransformation of pollutants; multiphase fugacity models of organics; case studies of contaminated surface water, sediment and groundwater. This course is the same as CE 579 and may be taken only once for credit. Expected preparation: senior or graduate standing.

Also offered for undergraduate-level credit as ESM 479 and may be taken only once for credit. Cross-Listed as: CE 579.

**ESM 580 - Coastal Marine Ecology (4)**
Introduces the relationships between marine species and their environment, intra- and inter-specific interactions, and factors structuring marine communities. Community structure and distribution presented in the context of both oceanography and coastal zone ecology. Marine conservation issues, including fisheries, addressed. A field trip required.

Also offered for undergraduate-level credit as ESM 480 and may be taken only once for credit.

**ESM 583 - Marine Conservation and Management (4)**
This course will be divided into three sections. We will begin by discussing the state of the oceans, and ecological differences between marine and terrestrial/aquatic systems. The second part of the course will discuss the major threats to ocean systems. The third part of the course will focus on solutions in terms of protected areas, management and policy strategies, and various aspects of the human dimension.

Also offered for undergraduate-level credit as ESM 483 and may be taken only once for credit.

**ESM 585 - Ecology and Management of Bio-Invasions (4)**
Invasive, or nonindigenous, species present us with global ecological and economic problems and have been ranked as second only to habitat destruction as a threat to our natural areas and native species. These invasive species are a concern because they restructure ecosystems, affect the evolutionary trajectory of native species, lead to the extinction of species, and impact local industries.

Also offered for undergraduate-level credit as ESM 485 and may be taken only once for credit.

**ESM 587 - Environmental Justice (4)**
Explores the foundations of environmental justice theory and how they apply to historical, current and emerging global issues. This course explores philosophies of justice and fairness as they relate to environmental ‘goods’ and ‘bads.’ We will explore a variety of case studies, touching on interrelated topics including food justice, climate and energy justice, water justice and infrastructure supply and demand, etc. This course blends sociological perspectives with natural resource management and policy implications. Expected preparation: ESM 335 or Geog 345U.

Also offered for undergraduate-level credit as ESM 487 and may be taken only once for credit.

**ESM 588 - Environmental Sustainability (4)**
Sustainability in natural and human-influenced ecosystems, with a focus on processes of regeneration, maturity, collapse and renewal. Topic areas include natural provisioning of ecosystem services, processes of change in ecological systems, interactions among ecological and social systems,
economic valuation of ecosystem services, and ecosystem management.

**ESM 590 - Ecosystem Services and Sustainability: Developing a Toolkit (1)**

Ecosystem services provide a conceptual framework for addressing ecological, social and economic sustainability. Students will learn to use an interdisciplinary toolbox of methods and techniques useful for assessing various aspects of ecosystem services. Students will develop a project proposal on a real-world application of ecosystem services assessments and valuation.

Also offered for credit as ESM 690 and may be taken only once for credit.

**ESM 592 - Foundations of Social-Ecological Systems (4)**

This theory and applications course acquaints students with key ecological, social, economic and philosophical theories underlying science and management of social-ecological systems. We explore a unifying conceptual model connecting biophysical and social parameters linked by ecosystem services, human perspectives, behaviors and institutional policies in coupled natural and human systems. This is the same course as ESR 692 and may be taken only once for credit.

Cross-Listed as: ESR 692.

**ESM 593 - Advanced Environmental Science Lab and Field Methods (2)**

Trains seniors and graduate students in skills that can be used in field and laboratory research. The specific application and topics will rotate from term to term allowing students to learn skills necessary to their own research but also to learn methods employed by other research groups in ESM.

Also offered for undergraduate-level credit as ESM 493 and may be taken only once for credit.

**Prerequisite:** Senior or graduate standing.

**ESM 599 - Special Studies (1-8)**

See department for course description. Consent of instructor and program director. (Credit to be arranged.)

**ESM 690 - Ecosystem Services and Sustainability: Developing a Toolkit (1)**

Ecosystem services provide a conceptual framework for addressing ecological, social and economic sustainability. Students will learn to use an interdisciplinary toolbox of methods and techniques useful for assessing various aspects of ecosystem services. Students will develop a project proposal on a real-world application of ecosystem services assessments and valuation.

Also offered for credit as ESM 590 and may be taken only once for credit.

**ESR - Environmental Sciences & Res**

**ESR 407 - Environmental Seminar (0-6)**

Weekly seminar series involving student-led discussion of topical environmental issues. May be repeated for up to 3 credits.

**ESR 507 - Seminar (1-6)**

Weekly seminar series on topical environmental issues. May be repeated for up to 3 credits.

**ESR 601 - Research (0-12)**

Research that is not normally part of the thesis.

**ESR 602 - Independent Study (1-9)**

(Credit to be arranged.)

**ESR 603 - Dissertation (1-12)**

All aspects of thesis including thesis research and writing the dissertation.

**ESR 604 - Cooperative Education/Internship (0-9)**

(Credit to be arranged.)

**ESR 605 - Reading and Conference (0-12)**

Scholarly examination of literature including discussion between student and professor.

**ESR 606 - Project (1-9)**

(Credit to be arranged.)

**ESR 607 - Seminar (1-9)**

Environmental Sciences Seminar. Consent of instructor. Pass/no pass only.
ESR 610 - Selected Topics (1-12)
(Credit to be arranged.)

ESR 630 - Introduction to Transdisciplinary Modes of Critical Inquiry and Science in Environmental Research (3)
This course draws on representatives from research groups in the School to present the many ways to formulate questions and different forms of science that are being actively used to address environmental problems. We will explore curiosity- and problem-based approaches from social, physical and biological sciences.
Prerequisite: PhD student or MS with permission of instructor.

ESR 655 - Science Communication (1)
Students will outline the objectives involved in presenting scientific information to different audiences, including the role of the speaker, visual presentation of data, written and mixed media. This is the same course as ESM 555 and may be taken only once for credit.
Cross-Listed as: ESM 555.

ESR 656 - Advanced Communication Skills for Doctoral Students (1)
Students will explore more advanced topics on presentation and proposal preparation. All students will prepare a mocked up poster based on cognitive and graphic design principles. They will create an extended outline for a research proposal. Peers in class will critique posters and proposals. This is the same course as ESM 556 and may be taken only once for credit.
Cross-Listed as: ESM 556.

ESR 657 - Science, Media and the Public: Working with the Media to Create Effective Scientific Messages (1)
Scientists need to explain their studies to the public through mass media. Topics include: audience, different media, the reporters’ process, editor’s view of science stories, and how inaccuracies get perpetuated. Students will evaluate a wide variety of mass media materials, interview practice, and guests’ description of various media. This is the same course as ESM 557 and may be taken only once for credit.
Cross-Listed as: ESM 557.

ESR 692 - Foundations of Social-Ecological Systems (4)
This theory and applications course acquaints students with key ecological, social, economic and philosophical theories underlying science and management of social-ecological systems. We explore a unifying conceptual model connecting biophysical and social parameters linked by ecosystems services, human perspectives, behaviors and institutional policies in coupled natural and human systems. This is the same course as ESM 592 and Soc 692 and may be taken only once for credit.
Cross-Listed as: ESM 592 and Soc 692.

ESR 699 - Special Studies (1-6)
(Credit to be arranged.)

ETM - Engineering Management

ETM 347U - Introduction to Product Design (4)
This course is geared to students interested in understanding products and their roles in our culture and lives, and experiencing some of what is involved in their design and production. Course will reflect a multidisciplinary approach and will enhance students’ teamwork experience, communication skills, and exposure to the various disciplines.
Expected preparation: Unst 222 (SINQ) before or concurrently.

ETM 356U - Introduction to Human-Centered Design (4)
HCD is an approach that puts human needs, capabilities, and behaviors first, then designs to accommodate them. This course will build on the principles of Design Thinking to further students’ knowledge and hands-on practice applied to the creation of products and services that enhance human experiences. Expected preparation: Unst 222 (SINQ) before or concurrently.

ETM 410 - Selected Studies (1-6)
(Credits to be arranged.)

ETM 501 - Research (1-9)
(Credit to be arranged.)

ETM 502 - Independent Study (1-9)
(Credit to be arranged.)
**ETM 503 - Thesis (1-9)**
(Credit to be arranged.)

**ETM 504 - Cooperative Education/Internship (1-9)**
(Credit to be arranged.)

**ETM 505 - Reading and Conference (1-6)**
(Credit to be arranged.)

**ETM 506 - Special Projects (1-9)**
(Credit to be arranged.)

**ETM 507 - Seminar (1-9)**
(Credit to be arranged.)

**ETM 509 - Practicum (1-9)**
(Credit to be arranged.)

**ETM 510 - Selected Topics (1-6)**
(Credit to be arranged.)

**ETM 511 - Technology Management Writing and Presentations (4)**

Students will learn to develop written deliverables and presentations that professional technology managers and leaders are called on to produce—reports, analyses, persuasive write-ups, announcements, presentations (prepared and impromptu), proposals and website content. Students will examine and critique examples of professional communications, as well as edit the works of others in the class. Emphasis on creativity, organization, voice, audience and objectives for the communications. Discussion topics also include professional writing standards—ethics, research and references, style considerations and requirements—as well as how to structure, organize and present academic writing.

Also offered as ETM 611 and may be taken only once for credit.

**ETM 518 - Ethical Issues in Technology Management (4)**

Designed to meet the needs of engineers who are or will be moving into greater responsibility for management as they advance in the profession. Emphasizes the theory of ethical behavior as it relates to real world applications faced regularly in the business world today.

Also offered as ETM 618 and may be taken only once for credit.

**ETM 519 - Human Side of Technology Management (4)**

Introduction to leadership and human resource management issues that technical managers are confronted with while managing their culturally diverse workforce of technicians, scientists and engineers.

Also offered as ETM 619 and may be taken only once for credit.

**ETM 520 - Management of Engineering and Technology (4)**

Study of fundamental concepts of engineering and technology management to provide the students with an in-depth understanding of the underlying principles of this discipline. Innovation process, technological change, motivation and leadership theories applicable to engineers and scientists, technological entrepreneurship, strategic management of technology and system interfaces in existing and emerging technologies are discussed. Ongoing engineering and technology management research is critically evaluated in classroom discussions. Case studies and team projects are included.

Also offered as ETM 620 and may be taken only once for credit.

**ETM 522 - Communication and Team Building (4)**

Developing high performance teams for engineering-and technology-driven companies; fundamental concepts that make an effective team; building a high-performance team; the keys to high performance; converting risks into assets; the power of commitment and discipline, and constructive communication; getting results through team dynamics, creative problem solving, and interactive exercises.

Also offered as ETM 622 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.
ETM 525 - Strategic Planning (4)
Critical issues in shaping the competitive strategy for the engineering- and technology-driven companies in a turbulent business environment; key steps and end results of the planning process; corporate mission; Key Result Areas (KRAs) and situational analysis including strengths, weaknesses, opportunities, and threats in KRAs. Identifying planning assumptions, critical issues, setting objectives, formulating strategy. Leadership, organizational culture, and structure to support the implementation of a strategic plans as well as the strategic control systems. Case studies, presentations, term projects, teamwork, and interactive exercises.
Also offered as ETM 625 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 526 - Strategic Management of Technology (4)
Analyses of the structure and competitive dynamics of technology-driven industries; resource- and knowledge-based frameworks for competitive advantage, which are applied to technology-driven industries; as well as a discussion of corporate, international and global strategies for technology-driven ventures.
Also offered as ETM 626 and may be taken only once for credit.

ETM 527 - Competitive Strategies in Technology Management (4)
Provides perspectives, theories and methods used to analyze, formulate and implement competitive strategies in technology intensive industries. Provides a historical perspective on the evolution of competitive strategy theory and techniques including their foundations with key concepts and issues from strategic management thought leaders and present examples of the application of those concepts in business situations. Covers frameworks and tools used for strategy analysis, development and implementation.
Also offered as ETM 627 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 530 - Decision Making (4)
Decision and value theory concepts are applied to technical and management decisions under uncertainty. Multi-criteria decisions are analyzed. Subjective, judgmental values are quantified for expert decisions and conflict resolution in strategic decisions involving technological alternatives. Hierarchical decision modeling approach is introduced. Individual and aggregate decisions are measured. Decision discrepancies and group disagreements are evaluated. Case studies are included in the course.
Also offered as ETM 630 and may be taken only once for credit.

ETM 531 - Technology Assessment & Acquisition (4)
Fundamental concepts of assessing technologies including evaluation attributes and methodologies, impacts and impact relationships, and technology diffusion from individual, organizational, technical and market perspectives. Case studies, professional and research articles, and guest speakers from local companies included.
Also offered as ETM 631 and may be taken only once for credit.

ETM 532 - Technology Forecasting (4)
Fundamental concepts of technology forecasting. Differences between ordinary forecasting and technology forecasting, objectives of technology forecasting, tools and methods and their applications, selection of the right forecasting methodology, planning for technology forecasting, identifying attributes for forecasting, and managing technology forecasting. Topics are discussed through case studies, professional and research articles, guest speakers from local companies, and recently published books.
Also offered as ETM 632 and may be taken only once for credit.

ETM 533 - Technology Transfer (4)
Fundamental concepts of transferring technologies. Topics include university, industry and government collaboration for technology development, transfer of technologies from labs into product groups, research and development consortia, and international technology transfer. Case studies, professional and research articles, and guest speakers from local companies included.
Also offered as ETM 633 and may be taken only once for credit.

ETM 534 - Technology Roadmapping (4)
Introduces Technology Roadmapping (TRM), which provides a structured approach for exploring and communicating the relationships between evolving and developing markets, products and technologies over time. Roadmaps allow technology developments to be integrated with business planning, and the impact of new technologies and market developments to be assessed. Roadmaps also seek to capture the environmental landscape, threats and opportunities.
for a particular group of stakeholders in a technology or application area.

Also offered as ETM 634 and may be taken only once for credit.

ETM 535 - Advanced Engineering Economics (4)
Economic evaluation of engineering and RD projects is covered from the engineering management viewpoint. Time value of money, tax considerations, break-even analysis, sensitivity analysis, project evaluations under uncertainty, risk sharing, capital budgeting, financial ratios, and cost estimating techniques are studied. A business simulation game is used throughout the course to gain a better understanding of financial decision making.

Also offered as ETM 635 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor, knowledge of probability/statistics.

ETM 536 - RDM: R&D Management (4)
Managerial aspects of Research and Development (RD) including special issues in managing research at national labs, university settings, and industry labs. Reviews evaluation methods and multi objective analysis used for R&D project selection.
Development analyzed across the following venues: Roadmap Development, Ecosystem Development, Technology Development, Prototype Development, Initiative Development. Focus on integration of research and development functions; project management challenges resulting from the uncertainty of R&D; and the difficulties in measuring ongoing RD outputs.

Also offered as ETM 636 and may be taken only once for credit.

ETM 537 - Benchmarking Using Data Envelopment Analysis (4)
This course focuses on data envelopment analysis, a powerful and flexible technique for quantitative benchmarking and productivity analysis. Applications and case studies from a wide range of areas including engineering, health care, education, financial services, new product development, technology forecasting, and non-profit organizations will be included.

Also offered as ETM 637 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor, linear programming.

ETM 538 - Decision Support Systems: Data Warehousing (4)
Critical issues in developing data warehouse for decision support systems. Examines when and why an organization needs a data warehouse for decision support systems; how to organize data in a data warehouse; complications in designing a data warehouse system; and identifying resources.

Also offered as ETM 638 and may be taken only once for credit.

ETM 540 - Operations Research (4)
Covers the use of operations research techniques in making engineering and technology management decisions. The primary emphasis is placed on applying and interpreting linear and integer programming. Problem formulations, mathematical model building, the basic principles behind the Simplex algorithm, and multiple objective linear optimization are included in the course. Post-optimality analysis is studied from the viewpoint of technology management. Other operations research techniques such as queuing models will also be covered. The course includes a term project involving an actual operations problem.

Also offered as ETM 640 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 543 - Front End Management for New Product Development (4)
Provides students with an understanding of the activities and challenges of managing the early stages of new product development, the so-called "fuzzy front-end". It covers concepts, methods and tools for bridging the gap between strategic planning and new product development, for identifying opportunities, for generating and selecting product ideas, for developing product concepts, and for selecting new product development projects.

Also offered as ETM 643 and may be taken only once for credit.

ETM 544 - Organizational Project Management (4)
Covers the strategic components which drive the integration of initiatives, goals and projects within an organization. It involves the three primary domains of Portfolio, Program and Project Management. These domains support the management of business units, functions or company divisions and need to be in alignment for the business organization to be effective in pursuit of its vision. Includes coverage of macro level project management topics such as project management maturity models and the micro level such as agile project management.

Also offered as ETM 644 and may be taken only once for credit.
ETM 545 - Project Management (4)
Critical issues in the management of engineering and high technology projects; analysis of time, cost, performance parameters from the organizational, people, and resource perspectives; project planning evaluation and selection, including project selection models; project and matrix organizations; project teams; scheduling and termination of projects. Case discussions and term project are included in the course.
Also offered as ETM 645 and may be taken only once for credit.

ETM 546 - Project Management Tools (4)
An in-depth study and review of the major problems and analytical techniques used in the planning and implementing of major industrial projects. Specific focus on three primary areas: (1) time management: network scheduling techniques, including CPM/PERT, Critical Chain, etc., (2) cost: earned value analysis, and (3) risk: management techniques such as Monte Carlo analysis. An emphasis is placed on the integration of the techniques in the areas. The contingency approach to designing a project management toolbox based on the three areas of time, cost, and risk management is included.
Also offered as ETM 646 and may be taken only once for credit. Prerequisite: ETM 545/645 or project management experience.

ETM 547 - New Product Development (4)
Examines complete product development process and key issues in new product development critical to developing profitable products in today's technology oriented companies. Topics include technology integration, disruptive technologies, concurrent engineering, and creating innovative environments. Review of cases and published articles addressing these issues. Students develop a plan for a new product including risk assessments in areas such as manufacturing, design, and testing.
Also offered as ETM 647 and may be taken only once for credit.

ETM 548 - Managing New Technology Introduction (4)
Management procedures and key underlying concepts for effective planning, development, and introduction into volume production utilizing new technology are covered. Emphasis will be on semiconductor technology and manufacturing but most principles and methodologies are generally applicable to both hardware and software.
Also offered as ETM 648 and may be taken only once for credit.

ETM 549 - Management of Technology Innovation (4)
Describes and explains phenomena pertaining to technological innovation. Focus on the interplay between engineering/technology and the economical, cultural, psychological, social and technical aspects of the engineering environment. Provides technology managers a toolkit to make engineering and technical innovations successful. Also covers how engineering and technology management enables technological innovation.
Also offered as ETM 649 and may be taken only once for credit.

ETM 550 - Manufacturing Systems Engineering (4)
Underlying concepts of manufacturing or production systems; product and process planning; job/flow shops; group technology, and flexible manufacturing cells.
Also offered as ETM 650 and may be taken only once for credit. Prerequisite: graduate standing.

ETM 551 - Manufacturing Systems Management (4)
Traditional and emerging techniques in manufacturing management; the evolution of concepts from EOQ to MRP and JIT including what has gone wrong with them. Other management level issues include aggregate production planning, enterprise requirements planning, and concurrent engineering.
Also offered as ETM 651 and may be taken only once for credit. Prerequisite: Background in manufacturing at the level of ETM 550/650 or equivalent, or consent of instructor.

ETM 553 - Manufacturing Systems Simulation (4)
Introduction of discrete simulation techniques for the modeling of random processes and probabilistic events in the simulation of manufacturing systems; concepts of systems modeling with emphasis on the use of an animated simulation package throughout the course.
Also offered as ETM 653 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor, basic knowledge of probability and statistics.

ETM 555 - Technology Marketing (4)
This course is designed to introduce students to the special issues faced by managers marketing technological products in markets characterized by rapid environmental change. Topics will include an examination of the marketing/engineering
ETM 556 - User-Centered Innovation (4)
Introduction to the various strengths and weaknesses of approaches to innovation. Focuses on a customer-driven methodology and introduces the increasingly prominent role of design in creating memorable experience, and emotional connection with a product and/or a company.
Also offered as ETM 656 and may be taken only once for credit.

ETM 558 - Engineering Financial Management (4)
Teaches key concepts of financial and cost management and their linkage to overall business strategies for nonfinancial managers. Emphasizes the educational needs and perspective of functional and project managers in engineering and research.
Prerequisite: graduate standing.

ETM 559 - Global Management of Technology (4)
Explores issues associated with the management of technology-driven industries in a global setting. Strategic planning and management of technological innovation and commercialization are explored in selected countries, using processes in the US as benchmarks. A specific objective of this course is to explore ways to manage the development of competitive products or services, using project teams focused on one or more countries.
Also offered as ETM 659 and may be taken only once for credit.

ETM 560 - Total Quality Management (4)
Critical principles and procedures of quality management in a competitive global environment; contemporary definitions of quality; quality in production/services; quality economics; quality philosophies; planning, organizing, and controlling for quality; human resource and improvement strategies and QC tools. Case studies, presentations, term projects, and teamwork.
Also offered as ETM 660 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 561 - Technology Entrepreneurship (4)
Examines how to start and grow a high technology company or high technology venture. Covers the complete venture creation process: key issues in high tech markets, startup finance, growth strategies and exit strategies. Guest lectures by practicing entrepreneurs, executives and financiers. Student teams create a technology startup business around technology that they develop, write a business plan and present their technology business idea to a financier.
Also offered as ETM 661 and may be taken only once for credit.

ETM 562 - New Venture Management (4)
Explores actual emerging technologies that are likely to impact or create technology-based industries in the next 1-5 years, and gives a framework for identifying, analyzing, acquiring, implementing and finally commercializing leading-edge technologies into new products or services.
Also offered as ETM 662 and may be taken only once for credit.

ETM 563 - Intrepreneurship in Technology (4)
The development of new products and services is fundamental to sustaining a long-term competitive advantage. The efforts of the individual or team of entrepreneurs who are responsible for this activity become even more complex when the activity must be carried out inside an existing on-going business. Explores a procedural framework, along with typical issues often encountered such as resources, timing, political conflicts, bureaucracy, and other obstacles that must be overcome to succeed in developing products within an existing company.
Also offered as ETM 663 and may be taken only once for credit. Prerequisite: Graduate standing. Expected preparation: ETM 555/655 and ETM 535/635.

ETM 565 - Research Methods for Engineering and Technology Management (4)
This course provides coverage of a range of techniques employed in technology management research and issues confronting new researchers. It is open to students enrolled in technology management research and issues confronting new researchers. It is open to students enrolled in graduate programs or considering Ph.D. programs both in ETM and from other departments. Statistical topics include a variety of statistical techniques including proper selection, use, and interpretation of parametric, nonparametric, and multivariate techniques. Additional topics covered include literature review methods and tools, hierarchy of research questions, survey design, research ethics, and visual display of quantitative
ETM 567 - Knowledge Management (4)
Introduction to some of the critical issues and debates in knowledge management. Stresses the human and business aspects of knowledge management. Taught from the perspective of the user of technical tools and methods.
Also offered as ETM 667 and may be taken only once for credit.

ETM 568 - Energy Technology Innovations (4)
Reviews management of technology and innovation in the energy sector. Specifically, focuses on the technology development highlighting the unique differences of the energy sector.
Also offered as ETM 668 and may be taken only once for credit. Prerequisite: graduate standing.

ETM 570 - Role of Government in Technology Management (4)
In their desire to grow their nation’s economies, governments often play an enormous role in fostering and regulating technology-related industries. Explores the connection between the GDP and its growth that is driven by technology and technology businesses.
Also offered as ETM 670 and may be taken only once for credit.

ETM 571 - Managing Emerging Technologies (4)
Explores 10 current emerging technologies that are likely to impact or create technology business industries in the next 5-10 years. Develops a framework for identifying, analyzing, implementing and finally commercializing leading-edge technologies into new products or services.
Also offered as ETM 671 and may be taken only once for credit.

ETM 573 - Management of Intellectual Capital (4)
Learn strategies that technology companies use to maximize profits through intellectual capital, with a focus on legally protected intellectual property. Understand that companies in different industries require different strategies. Learn how to research a company’s intellectual capital and prepare an appropriate intellectual capital management plan.
Also offered as ETM 673 and may be taken only once for credit.

ETM 575 - Science and Technology Policy (4)
Presents concepts and techniques for analyzing and formulating national science technology policy, explains the process of transforming scientific knowledge into technical knowledge to design innovative products and services, and highlights the organizational interactions of research in science and technology to create national technical capabilities for economic development.
Also offered as ETM 675 and may be taken only once for credit. Prerequisite: graduate standing.

ETM 589 - Capstone Project (4)
For a course description, please contact the department.

ETM 590 - Engineering and Technology Management Synthesis (4)
This is an alternate choice for the capstone course in the Master of Science in Engineering and Technology Management. It synthesizes the concepts and methodologies of engineering and technology management into an individual or group project. The research base for the project may come from many combination of the study areas covered in Engineering and Technology Management.
Prerequisite: Completion of at least seven courses in the MS ETM curriculum or permission of instructor.

ETM 601 - Research (1-12)
(Credit to be arranged.)

ETM 602 - Independent Study (1-4)
(Credit to be arranged.)

ETM 603 - Dissertation (1-12)
(Credit to be arranged.)

ETM 604 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

ETM 605 - Reading and Conference (1-9)
(Credit to be arranged.)
ETM 606 - Special Projects (1-6)  
(Credit to be arranged.)

ETM 607 - Seminar (1-9)  
(Credit to be arranged.)

ETM 610 - Selected Topics (1-9)  
(Credit to be arranged.)

ETM 611 - Technology Management Writing and Presentations (4)  
Students will learn to develop written deliverables and presentations that professional technology managers and leaders are called on to produce—reports, analyses, persuasive write-ups, announcements, presentations (prepared and impromptu), proposals and website content. Students will examine and critique examples of professional communications, as well as edit the works of others in the class. Emphasis on creativity, organization, voice, audience and objectives for the communications. Discussion topics also include professional writing standards—ethics, research and references, style considerations and requirements—as well as how to structure, organize and present academic writing.

Also offered as ETM 511 and may be taken only once for credit.

ETM 618 - Ethical Issues in Technology Management (4)  
Designed to meet the needs of engineers who are or will be moving into greater responsibility for management as they advance in the profession. Emphasizes the theory of ethical behavior as it relates to real world applications faced regularly in the business world today.

Also offered as ETM 518 and may be taken only once for credit.

ETM 619 - Human Side of Technology Management (4)  
Introduction to leadership and human resource management issues that technical managers are confronted with while managing their culturally diverse workforce of technicians, scientists and engineers.

Also offered as ETM 519 and may be taken only once for credit.

ETM 620 - Management of Engineering and Technology (4)  
Study of fundamental concepts of engineering and technology management to provide the students with an in-depth understanding of the underlying principles of this discipline. Innovation process, technological change, motivation and leadership theories applicable to engineers and scientists, technological entrepreneurship, strategic management of technology and system interfaces in existing and emerging technologies are discussed. Ongoing engineering and technology management research is critically evaluated in classroom discussions. Case studies and team projects are included.

Also offered as ETM 520 and may be taken only once for credit.

ETM 622 - Communication and Team Building (4)  
Developing high performance teams for engineering and technology-driven companies; fundamental concepts that make an effective team; building a high-performance team; the keys to high performance; converting risks into assets; the power of commitment and discipline, and constructive communication; getting results through team dynamics, creative problem solving, and interactive exercises.

Also offered as ETM 522 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 625 - Strategic Planning (4)  
Critical issues in shaping the competitive strategy for the engineering and technology-driven companies in a turbulent business environment; key steps and end results of the planning process; corporate mission; Key Result Areas (KRAs) and situational analysis including strengths, weaknesses, opportunities, and threats in KRAs. Identifying planning assumptions, critical issues, setting objectives, formulating strategy. Leadership, organizational culture, and structure to support the implementation of a strategic plan as well as the strategic control systems. Case studies, presentations, term projects, teamwork, and interactive exercises.

Also offered as ETM 525 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 626 - Strategic Management of Technology (4)  
Analyses of the structure and competitive dynamics of technology-driven industries; resource- and knowledge-based frameworks for competitive
advantage, which are applied to technology-driven industries; as well as a discussion of corporate, international and global strategies for technology-driven ventures.

Also offered as ETM 526 and may be taken only once for credit.

ETM 627 - Competitive Strategies in Technology Management (4)
Provides perspectives, theories and methods used to analyze, formulate and implement competitive strategies in technology intensive industries. Provides a historical perspective on the evolution of competitive strategy theory and techniques including their foundations with key concepts and issues from strategic management thought leaders and present examples of the application of those concepts in business situations. Covers frameworks and tools used for strategy analysis, development and implementation.

Also offered as ETM 527 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 630 - Decision Making (4)
Decision and value theory concepts are applied to technical and management decisions under uncertainty. Multi-criteria decisions are analyzed. Subjective, judgmental values are quantified for expert decisions and conflict resolution in strategic decisions involving technological alternatives. Hierarchical decision modeling approach is introduced. Individual and aggregate decisions are measured. Decision discrepancies and group disagreements are evaluated. Case studies are included in the course.

Also offered as ETM 530 and may be taken only once for credit.

ETM 631 - Technology Assessment & Acquisition (4)
Fundamental concepts of assessing technologies including evaluation attributes and methodologies, impacts and impact relationships, and technology diffusion from individual, organizational, technical and market perspectives. Case studies, professional and research articles, and guest speakers from local companies included.

Also offered as ETM 531 and may be taken only once for credit.

ETM 632 - Technology Forecasting (4)
Fundamental concepts of technology forecasting. Differences between ordinary forecasting and technology forecasting, objectives of technology forecasting, tools and methods and their applications, selection of the right forecasting methodology, planning for technology forecasting, identifying attributes for forecasting, and managing technology forecasting. Topics are discussed through case studies, professional and research articles, guest speakers from local companies, and recently published books.

Also offered as ETM 532 and may be taken only once for credit.

ETM 633 - Technology Transfer (4)
Fundamental concepts of transferring technologies. Topics include university, industry and government collaboration for technology development, transfer of technologies from labs into product groups, research and development consortia, and international technology transfer. Case studies, professional and research articles, and guest speakers from local companies included.

Also offered as ETM 533 and may be taken only once for credit.

ETM 634 - Technology Roadmapping (4)
Introduces Technology Roadmapping (TRM), which provides a structured approach for exploring and communicating the relationships between evolving and developing markets, products and technologies over time. Roadmaps allow technology developments to be integrated with business planning, and the impact of new technologies and market developments to be assessed. Roadmaps also seek to capture the environmental landscape, threats and opportunities for a particular group of stakeholders in a technology or application area.

Also offered as ETM 534 and may be taken only once for credit.

ETM 635 - Advanced Engineering Economics (4)
Economic evaluation of engineering and RD projects is covered from the engineering management viewpoint. Time value of money, tax considerations, break-even analysis, sensitivity analysis, project evaluations under uncertainty, risk sharing, capital budgeting, financial ratios, and cost estimating techniques are studied. A business simulation game is used throughout the course to gain a better understanding of financial decision making.

Also offered as ETM 535 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor, knowledge of probability/statistics.

ETM 636 - RDM: R&D Management (4)
Managerial aspects of Research and Development (RD) including special issues in managing research at national labs, university settings, and industry labs.
Reviews evaluation methods and multi objective analysis used for R&D project selection. Development analyzed across the following venues: Roadmap Development, Ecosystem Development, Platform Development, Product Development, Technology Development, Prototype Development, Initiative Development. Focus on integration of research and development functions; project management challenges resulting from the uncertain nature of R&D; and the difficulties in measuring ongoing RD outputs.

Also offered as ETM 536 and may be taken only once for credit.

**ETM 637 - Benchmarking Using Data Envelopment Analysis (4)**

This course focuses on data envelopment analysis, a powerful and flexible technique for quantitative benchmarking and productivity analysis. Applications and case studies from a wide range of areas including engineering, health care, education, financial services, new product development, technology forecasting, and non-profit organizations will be included.

Also offered as ETM 537 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor, linear programming.

**ETM 638 - Decision Support Systems: Data Warehousing (4)**

Critical issues in developing data warehouse for decision support systems. Examines when and why an organization needs a data warehouse for decision support systems; how to organize data in a data warehouse; complications in designing a data warehouse system; and identifying resources.

Also offered as ETM 538 and may be taken only once for credit.

**ETM 640 - Operations Research (4)**

Covers the use of operations research techniques in making engineering and technology management decisions. The primary emphasis is placed on applying and interpreting linear and integer programming. Problem formulations, mathematical model building, the basic principles behind the Simplex algorithm, and multiple objective linear optimization are included in the course. Post-optimality analysis is studied from the viewpoint of technology management. Other operations research techniques such as queuing models will also be covered. The course includes a term project involving an actual operations problem.

Also offered as ETM 540 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

**ETM 643 - Front End Management for New Product Development (4)**

Provides students with an understanding of the activities and challenges of managing the early stages of new product development, the so-called "fuzzy front-end". It covers concepts, methods and tools for bridging the gap between strategic planning and new product development, for identifying opportunities, for generating and selecting product ideas, for developing product concepts, and for selecting new product development projects.

Also offered as ETM 543 and may be taken only once for credit.

**ETM 644 - Organizational Project Management (4)**

Covers the strategic components which drive the integration of initiatives, goals and projects within an organization. It involves the three primary domains of Portfolio, Program and Project Management. These domains support the management of business units, functions or company divisions and need to be in alignment for the business organization to be effective in pursuit of its vision. Includes coverage of macro level project management topics such as project management maturity models and the micro level such as agile project management.

Also offered as ETM 544 and may be taken only once for credit.

**ETM 645 - Project Management (4)**

Critical issues in the management of engineering and high technology projects; analysis of time, cost, performance parameters from the organizational, people, and resource perspectives; project planning evaluation and selection, including project selection models; project and matrix organizations; project teams; scheduling and termination of projects. Case discussions and term project are included in the course.

Also offered as ETM 545 and may be taken only once for credit.

**ETM 646 - Project Management Tools (4)**

An in-depth study and review of the major problems and analytical techniques used in the planning and implementing of major industrial projects. Specific focus on three primary areas: (1) time management: network scheduling techniques, including CPM/PERT, Critical Chain, etc., (2) cost: earned value analysis, and (3) risk: management techniques such as Monte Carlo analysis. An emphasis is placed on the integration of the techniques in the areas. The contingency approach to designing a project management toolbox based on the three areas of time, cost, and risk management is included.
Also offered as ETM 546 and may be taken only once for credit. Prerequisite: ETM 545/645 or project management experience.

**ETM 647 - New Product Development (4)**
Examines complete product development process and key issues in new product development critical to developing profitable products in today's technology-oriented companies. Topics include technology integration, disruptive technologies, concurrent engineering, and creating innovative environments. Review of cases and published articles addressing these issues. Students develop a plan for a new product including risk assessments in areas such as manufacturing, design, and testing.

Also offered as ETM 547 and may be taken only once for credit.

**ETM 648 - Managing New Technology Introduction (4)**
Management procedures and key underlying concepts for effective planning, development, and introduction into volume production utilizing new technology are covered. Emphasis will be on semiconductor technology and manufacturing but most principles and methodologies are generally applicable to both hardware and software.

Also offered as ETM 548 and may be taken only once for credit.

**ETM 649 - Management of Technology Innovation (4)**
Describes and explains phenomena pertaining to technological innovation. Focus on the interplay between engineering/technology and the economical, cultural, psychological, social, and technical aspects of the engineering environment. Provides technology managers a toolkit to make engineering and technical innovations successful. Also covers how engineering and technology management enables technological innovation.

Also offered as ETM 549 and may be taken only once for credit.

**ETM 650 - Manufacturing Systems Engineering (4)**
Underlying concepts of manufacturing or production systems; product and process planning; job/flow shops; group technology, and flexible manufacturing cells.

Also offered as ETM 550 and may be taken only once for credit. Prerequisite: ETM 545/645 or project management experience.

**ETM 651 - Manufacturing Systems Management (4)**
Traditional and emerging techniques in manufacturing management; the evolution of concepts from EOQ to MRP and JIT including what has gone wrong with them. Other management level issues include aggregate production planning, enterprise requirements planning, and concurrent engineering.

Also offered as ETM 551 and may be taken only once for credit. Prerequisite: ETM 545/645 or consent of instructor.

**ETM 653 - Manufacturing Systems Simulation (4)**
Introduction of discrete simulation techniques for the modeling of random processes and probabilistic events in the simulation of manufacturing systems; concepts of systems modeling with emphasis on the use of an animated simulation package throughout the course.

Also offered as ETM 553 and may be taken only once for credit. Prerequisite: ETM 550/650 or equivalent, or consent of instructor.

**ETM 655 - Technology Marketing (4)**
This course is designed to introduce students to the special issues faced by managers marketing technological products in markets characterized by rapid environmental change. Topics will include an examination of the marketing/engineering/manufacturing interface, product innovation strategies, value-based pricing, buyer behavior and strategic selling, competitive market analysis and positioning, and distribution strategies. Emphasis is placed on strategies for marketing technology products in industrial markets. Also offered as ETM 555 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

**ETM 656 - User-Centered Innovation (4)**
Introduction to the various strengths and weaknesses of approaches to innovation. Focuses on a customer-driven methodology and introduces the increasingly prominent role of design in creating memorable experience, and emotional connection with a product and/or a company.

Also offered as ETM 556 and may be taken only once for credit.

**ETM 659 - Global Management of Technology (4)**
Explores issues associated with the management of technology-driven industries in a global setting.
Strategic planning and management of technological innovation and commercialization are explored in selected countries, using processes in the US as benchmarks. A specific objective of this course is to explore ways to manage the development of competitive products or services, using project teams focused on one or more countries.

Also offered as ETM 559 and may be taken only once for credit.

ETM 660 - Total Quality Management (4)

Critical principles and procedures of quality management in a competitive global environment; contemporary definitions of quality; quality in production/services; quality economics; quality philosophies; planning, organizing, and controlling for quality; human resource and improvement strategies and QC tools. Case studies, presentations, term projects, and teamwork.

Also offered as ETM 560 and may be taken only once for credit. Prerequisite: graduate standing or consent of instructor.

ETM 661 - Technology Entrepreneurship (4)

Examines how to start and grow a high technology company or high technology venture. Covers the complete venture creation process: key issues in high tech markets, startup finance, growth strategies and exit strategies. Guest lectures by practicing entrepreneurs, executives and financiers. Student teams create a technology startup business around technology that they develop, write a business plan and present their technology business idea to a financier.

Also offered as ETM 561 and may be taken only once for credit.

ETM 662 - New Venture Management (4)

Explores actual emerging technologies that are likely to impact or create technology-based industries in the next 1-5 years, and gives a framework for identifying, analyzing, acquiring, implementing and finally commercializing leading-edge technologies into new products or services.

Also offered as ETM 562 and may be taken only once for credit.

ETM 663 - Intrepreneurship in Technology (4)

The development of new products and services is fundamental to sustaining a long-term competitive advantage. The efforts of the individual or team of entrepreneurs who are responsible for this activity become even more complex when the activity must be carried out inside an existing on-going business. Explores a procedural framework, along with typical issues often encountered such as resources, timing, political conflicts, bureaucracy, and other obstacles that must be overcome to succeed in developing products within an existing company.

Also offered as ETM 563 and may be taken only once for credit. Prerequisite: Graduate standing. Expected preparation: ETM 555/655 and ETM 535/635.

ETM 665 - Research Methods for Engineering and Technology Management (4)

This course provides coverage of a range of techniques employed in technology management research and issues confronting new researchers. It is open to students enrolled in graduate programs or considering Ph.D. programs both in ETM and from other departments. Statistical topics include a variety of statistical techniques including proper selection, use, and interpretation of parametric, nonparametric, and multivariate techniques. Additional topics covered include literature review methods and tools, hierarchy of research questions, survey design, research ethics, and visual display of quantitative information.

Also offered as ETM 565 and may be taken only once for credit. Prerequisite: Probability and statistics or consent of instructor.

ETM 667 - Knowledge Management (4)

Introduction to some of the critical issues and debates in knowledge management. Stresses the human and business aspects of knowledge management. Taught from the perspective of the user of technical tools and methods.

Also offered as ETM 567 and may be taken only once for credit.

ETM 668 - Energy Technology Innovations (4)

Reviews management of technology and innovation in the energy sector. Specifically, focuses on the technology development highlighting the unique differences of the energy sector.

Also offered as ETM 568 and may be taken only once for credit. Prerequisite: graduate standing.

ETM 670 - Role of Government in Technology Management (4)

In their desire to grow their nation’s economies, governments often play an enormous role in fostering and regulating technology-related industries. Explores the connection between the GDP and its growth that is driven by technology and technology businesses.

Also offered as ETM 570 and may be taken only once for credit.
ETM 671 - Managing Emerging Technologies (4)
Explores 10 current emerging technologies that are likely to impact or create technology business industries in the next 5-10 years. Develops a framework for identifying, analyzing, implementing and finally commercializing leading-edge technologies into new products or services.
Also offered as ETM 571 and may be taken only once for credit.

ETM 673 - Management of Intellectual Capital (4)
Learn strategies that technology companies use to maximize profits through intellectual capital, with a focus on legally protected intellectual property. Understand that companies in different industries require different strategies. Learn how to research a company’s intellectual capital and prepare an appropriate intellectual capital management plan.
Also offered as ETM 573 and may be taken only once for credit.

ETM 675 - Science and Technology Policy (4)
Presents concepts and techniques for analyzing and formulating national science technology policy, explains the process of transforming scientific knowledge into technical knowledge to design innovative products and services, and highlights the organizational interactions of research in science and technology to create national technical capabilities for economic development.
Also offered as ETM 575 and may be taken only once for credit. Prerequisite: graduate standing.

FILM - Film

FILM 130 - Introduction to Digital Filmmaking for Non-Film Majors (4)
A video production course for non-film-majors seeking a basic introduction to digital filmmaking technology and the film production process. Introduces students to the basic uses of current digital film equipment: cameras, lighting kits, editing software, and on-set safety procedures. Offers a survey of media landscapes (fiction, non-fiction, commercial, and experimental forms), production disciplines (live-action, animation, game design, virtual reality, visual effects). There is no prerequisite for the course.

FILM 131 - Film Analysis (4)
An introductory course in film analysis with special emphasis on cinema as a dramatic art and concepts related to the formal analysis of film. Elements to be considered will include cinematography, performance, edited image, and sound. Selected films will be shown.

FILM 132 - Introduction to Digital Filmmaking (4)
A video production course for film majors seeking a basic introduction to digital filmmaking technology and the film production process. Introduces students to the basic uses of current digital film equipment: cameras, lighting kits, editing software, and on-set safety procedures. Offers a survey of media landscapes (fiction, non-fiction, commercial, and experimental forms), production disciplines (live-action, animation, game design, virtual reality, visual effects).
Prerequisite: FILM 131.

FILM 199 - Special Studies (1-12)
(Credit to be arranged.)

FILM 231 - Film Analysis II (4)
Builds upon the concepts related to the formal analysis of film to hone students' critical writing skills. This is a writing-intensive course (WIC).
Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade.

FILM 257 - Narrative Film Production I (4)
An introductory study of writing, technical, aesthetic and organizational principles of digital filmmaking in fictional narrative formats.
Prerequisite: FILM 131 and and FILM 132, in which you must earn a minimum C+ grade.

FILM 258 - Documentary Film Production I (4)
An introductory study of aesthetic, technical, and content-related principles of digital filmmaking in nonfiction, documentary formats.
Prerequisite: FILM 131 and and FILM 132, in which you must earn a minimum C+ grade.

FILM 280 - Classical Film Theory (4)
Introduces the significant trends of the first fifty years of Western film theory via primary and secondary source essays. Topics may include realism, authorship, conceptions of modernist representation, and Soviet montage.
Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade.

FILM 299 - Special Studies (1-4)
(Credit to be arranged.)
**FILM 331U - Understanding Movies (4)**
An intermediate course in film appreciation with special emphasis on cinema as a dramatic art. Elements to be considered will include cinematography, performance, edited image, and sound. Selected films will be shown. Recommended prerequisite: upper-division standing.

**FILM 358 - Narrative Film Production II (4)**
An intermediate study of writing, technical, aesthetic, and organizational principles of digital filmmaking in fictional narrative formats.
Prerequisite: FILM 257.

**FILM 359 - Narrative Film Production III (4)**
An advanced study of writing, technical, aesthetic, and organizational principles of digital filmmaking in fictional narrative formats.
Prerequisite: FILM 358.

**FILM 360 - Topics in Film Production (4)**
Focused study of a variety of specialized skills and/or genres related to digital film production. From term to term, topics might include: Visual Effects; Music Videos; Web Cinema; Advanced Directing; Producing. Course may be repeated for credit with different topics.
Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade; FILM 257 or FILM 258.

**FILM 361 - Documentary Film Production II (4)**
An intermediate study of aesthetic, technical, and content-related principles of digital filmmaking in nonfiction, documentary formats.
Prerequisite: FILM 258.

**FILM 362 - Documentary Film Production III (4)**
An advanced study of aesthetic, technical, and content-related principles of digital filmmaking in nonfiction, documentary formats.
Prerequisite: FILM 361.

**FILM 363 - Topics in Experimental Film and Media Production (4)**
Introduction to new scenarios for cinema and new reasons for deploying it in different spaces, particularly in public. In using various combinations of cameras, screens, projectors, participants, and spaces it challenges students to design and construct moving image-based works that address unique historical, spatial, and social situations and struggles in public and semi-public spaces. This course is repeatable for up to 12 credits.
Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade; FILM 257 or FILM 258.

**FILM 364 - Sound: Production and Design (4)**
Students will study and apply production and post-production sound techniques for fiction and non-fiction film and video applications. The technical aspects and aesthetic considerations of storytelling through sound in lectures, screenings, demonstrations, exercises, creative projects, and class critiques will be assessed. Topics include: principles of sound, production sound recording equipment, positioning microphones, audio software, sound mixing, effects editing, using music, editing dialogue, and careers in production and post-production audio.
Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade; FILM 257 or FILM 258.

**FILM 365 - Editing (4)**
Introduction to the fundamental theories of fiction and non-fiction editing techniques, technologies, and skills required to produce well-edited work. Topics include rhythm, continuity, style, space, and motion contextualized within global film practices. Learn how to use editing to shape and structure moving images and sound to invest them with intention, narrative and meaning.
Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade; FILM 257 or FILM 258.

**FILM 366 - Digital Cinematography (4)**
Students will study and apply camera and lighting techniques for fiction and non-fiction film and video applications. We will address the technical aspects and aesthetic considerations of visual storytelling through lectures, screenings, demonstrations, exercises, creative projects and class critiques. Topics include: pre-production visualization, methods for shooting coverage, principles of composition, employing 2D and 3D space, the moving camera, using available light, production lighting techniques, how focal length impacts the shot, controlling depth of field, and managing exposure.
Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade; FILM 257 or FILM 258.
**FI LM 370U - Topics in Film, Media, and Culture (4)**

Study of a variety of cultural and historical issues as they relate to film, television, and other media. From quarter to quarter topics might include: Hitchcock, Queer Cinema, The Cinema of John Carpenter, Contemporary Documentary, Film Noir 1940 to 1960, Graphic Novels.

**FI LM 374 - Topics in Screenwriting (4)**

Course in screenwriting involving short and long form screenplays, the analysis of narrative structure for the screen, and the practical application of screenwriting techniques. Course may be repeated for credit with different topics.

Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade.

**FI LM 381 - Film History I (4)**

A study of the evolution of film language from the silent era to the introduction of sound; how the influences of a broad range of cinematic art movements, including Expressionism, Impressionism, Surrealism and Poetic Realism, contributed to the classical Hollywood style. Also examines the artistic, economic and technological forces that led to the Hollywood studio system and the popularity of genres such as the western, the musical and the gangster film.

Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade. Sophomore standing recommended. Corequisite: FILM 381L.

**FI LM 381L - Lab for Film 381 (0)**

Lab for Film 381.

Corequisite: FILM 381.

**FI LM 382 - Film History II (4)**

A study of the major artistic, economic and technological trends of motion picture production during the post-war era; how directors such as Hitchcock and Welles were able find a unique expression within the parameters of the classical style and the commercial pressures of the studios. Explores how world cinema movements presented aesthetic and political challenges to the Hollywood model.

Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade. Sophomore standing recommended. Corequisite: FILM 382L.

**FI LM 382L - Lab for Film 382 (0)**

Lab for Film 382.

Corequisite: FILM 382.

**FI LM 383 - Film History III (4)**

A study of contemporary world film production from the struggles of an independent and avantgarde cinema to the CGI effects of today's blockbuster. Also examines how world cinema production has adapted to new digital technologies and the demands of a global market.

Prerequisite: FILM 131 and FILM 132, in which you must earn a minimum C+ grade. Sophomore standing recommended. Corequisite: FILM 383L.

**FI LM 383L - Lab for Film 383 (0)**

Lab for Film 383.

Corequisite: FILM 383.

**FI LM 384U - Topics in American Cinema and Culture (4)**

Examines topics within American film/culture, including studies of specific industry practices, artistic movements, and historical moments in American culture and cinema history.

**FI LM 399 - Special Studies (1-6)**

(Credit to be arranged.)

**FI LM 401 - Research (1-6)**

(Credit to be arranged.)

**FI LM 402 - Independent Study (1-12)**

(Credit to be arranged.)

**FI LM 404 - Cooperative Education/Internship (1-12)**

(Credit to be arranged.)

**FI LM 405 - Reading and Conference (1-6)**

(Credit to be arranged.)

**FI LM 406 - Project (1-6)**

(Credit to be arranged.)

**FI LM 407 - Seminar (1-6)**

(Credit to be arranged.)
FILM 408 - Workshop (1-6)  
(Credit to be arranged.)

FILM 409 - Practicum (1-12)  
(Credit to be arranged.)

FILM 410 - Selected Studies (1-6)  
(Credit to be arranged.)

FILM 450 - Portfolio and Professional Development (4)  
Requires students to investigate their interests, values, personality, and skills as the basis for discovery and communication of their personal brand as they begin their careers. Students will generate a branded digital portfolio of their work that includes marketing materials and work samples. Topics include: building a personal brand, designing a website, identifying areas of professional interest, assessing strengths, getting started on a career path, acquiring job search skills, interviewing, freelancing, and networking. This is an advanced production course.  
Prerequisite: Permission from the instructor is required to register.

FILM 451 - Advanced Production Workshop (4)  
Provides an intensive production experience for advanced students who apply acquired skills to the creation of a significant, sophisticated short film in a chosen genre. Students manage all aspects of production and generate marketing materials and a distribution plan for the finished film. In addition to producing their own work, students are required to crew on fellow classmates' projects and therefore exit the course with high quality assets to add to a reel or portfolio.  
Prerequisite: Either FILM 359 or FILM 362.

FILM 460 - Advanced Topics in Production (4)  
Advanced study of a variety of specialized skills and/or genres related to digital film production. From term to term, topics might include: Massive Media; Visual Effects; Music Videos; Web Cinema; Urban Media. Course may be repeated for credit with different topics.  
Prerequisite: Either FILM 362, FILM 359 or permission from the instructor.

FILM 480 - Contemporary Film Theory (4)  
A survey of film theory and criticism from the 1960s to the present day. Students are introduced to key concepts and major figures from Structuralism, Semiotics, Psychoanalysis, Feminism, and Narrative Theory.  
Prerequisite: FILM 131, FILM 132, FILM 280 and junior standing or consent of instructor.

FILM 484 - Anatomy of a Movie (4)  
Operates as a case study of one well known, critically acclaimed film, examining the industrial, technical, cultural, and artistic elements in the film's production, exhibition and reception. Topics include studio ideology and production strategies, the star system, and historic context and meaning of films, independent cinema practices.  
Prerequisite: FILM 131 and and FILM 132, in which you must earn a minimum C+ grade.

FILM 486 - Topics in Film and the Moving Image (4)  
Concentrated study of genre, structure and style of a particular period, topic and/or figure in film and the moving image; for example, '70s Film & TV Renaissance, Irish Cinema, and/or Robert Altman.  
Prerequisite: FILM 131 and and FILM 132, in which you must earn a minimum C+ grade.

FILM 487 - Topics in International Film and the Moving Image (4)  
Concentrated study of national cinema (non-US) or national cinema movement. Students will consider the cinema in relation to: national context and cinematic history; other national/transnational cinemas; and independence and nationalism, censorship, and political and artistic movements. Examples include Irish Cinema, Italian Neorealism, and New Wave Cinemas.  
Prerequisite: FILM 131 and and FILM 132, in which you must earn a minimum C+ grade.

FILM 501 - Research (1-12)  
(Credit to be arranged.)

FILM 504 - Internship (1-9)  
(Credit to be arranged.)

Fin - Finance

Fin 199 - Special Studies (1-4)  
(Credit to be arranged.)
**Fin 218 - Personal Finance (4)**

A survey of investments, budgets, real estate ownership, financial institutions, consumers' credit, social security, stock market, mutual funds, and estate planning from the individual's point of view. Optional pass/no pass.

**Fin 301U - Introduction to Investing (4)**

Investing is a means to help you meet specific financial goals, such as retirement, purchasing a house, or starting your own business. This class will introduce you to investing and help you understand the types of investment options available, their risks and returns, and how to create appropriate holistic investing strategies based on your investing goals. As part of a holistic strategy, the class will review such topics as tax-efficient options, 529 plans, and 401k plans. This class will also introduce a basic understanding of various investment options including, but not limited to, mutual funds, ETFs, stocks, bonds, and cash. This class will discuss the various approaches for acquiring these investments. This will include a view of the impact of behavioral economics on investing as well as how technology is changing investing.

**Fin 310U - Entrepreneurial Finance and Accounting (4)**

Introduction to the fundamental concepts of entrepreneurial finance and accounting. Covers the financial aspects of developing, financing, planning, managing, valuing and assessing new business ventures. Equips students with the quantitative, financial and accounting skills required to successfully develop, finance and manage a new venture.

**Fin 319 - Intermediate Financial Management (4)**

Second level course in financial management to provide more depth in the study of asset pricing, capital budgeting, capital structure, dividend policy, working capital management, growth through mergers, and leasing. Emphasis is on the development of problem-solving capabilities.

Prerequisite: BA 303.

**Fin 352 - Investments (4)**

Analytical study of the principles of investment in stocks, bonds, and other security instruments. Includes background study of financial markets and institutions; analysis of the investment characteristics, valuation, and market price behavior of bonds and stocks, and the choice of appropriate portfolios of these securities. Also included is the study of information and market efficiency, term structure and the determination of market interest rates, and security valuation.

Prerequisite: BA 303.

**Fin 399 - Special Studies (1-12)**

(Credit to be arranged.)

**Fin 401 - Research (1-8)**

(Credit to be arranged.)

Prerequisite: BA 303.

**Fin 404 - Internship (1-6)**

(Credits to be arranged.)

**Fin 405 - Reading and Conference (1-8)**

(Credit to be arranged.)

Prerequisite: BA 303.

**Fin 407 - Seminar (1-4)**

Student-selected problems in business operation and business management to be studied by the individual and discussed in group meetings under direction of academic staff. (Credit to be arranged.)

**Fin 409 - Practicum (1-12)**

(Credit to be arranged.) Field work involving the practice of professional activities away from campus.

Prerequisite: consent of instructor.

**Fin 410 - Selected Topics (1-4)**

(Credit to be arranged.) Consent of instructor.

**Fin 419 - Financial Data Analytics & Modeling (4)**

Applies analytical tools to analyze big data around financial issues faced by analysts, corporate managers, fund managers, and investors. Lectures and cases/projects reinforce concepts and provide the foundation to analyze real financial problems around such issues as estimating stock returns; stock risk; the effects of anti-takeover policies on corporate innovation; the influence of CSR ratings on firms’ market values; and the impacts of management compensation and board governance on firm performance.
Prerequisite: BA 303.

**Fin 431 - Financial Markets & Institutions (4)**
Introduces the operations, structure, and functions of financial markets and institutions and the important role they play in the financial decision-making process of a firm. Emphasis on financial markets and the aggregate economy, how these financial institutions measure and manage the unique risks to which they are exposed and the governing rules and regulations of financial markets and institutions that govern how risk is transferred.

Prerequisite: BA 303.

**Fin 439 - Real Estate Valuation I (4)**
Fundamentals of appraising real estate, focusing on valuation techniques for income-producing real estate assets. Analysis of income and expenses, net operating income, leveraged and unleveraged cash flows, debt coverage ratios, direct capitalization, multipliers, and discounted cash flows. Marketability analysis, highest and best use concepts, zoning, environmental issues, and the risks and rewards of real estate development are discussed.

Also offered for graduate-level credit as RE 539 and RE 539S and may be taken only once for credit. Prerequisite: BA 303 or USP 233.

**Fin 441 - Fundamentals of Derivative Securities (4)**
Options, futures, swaps, and other derivative securities. Principles of pricing; uses in speculation, hedging, and risk management, in both securities investment and corporate finance settings. Real options and option-like opportunities in business.

Prerequisite: Fin 319, Fin 352, Actg 381.

**Fin 449 - Valuation (4)**
Principles of valuation, including valuations both internal and external to the business entity. Financial planning, financial analysis, forecasting, and valuation. Students undertake and present a formal written valuation.

Prerequisite: Actg 381, Fin 319.

**Fin 456 - International Financial Management (4)**
Development and study of a framework for the financial decisions of multinational businesses; management of working capital, investment and financing decisions of a firm in an international environment; foreign exchange markets, exchange risk, and international diversification.

Also offered as graduate-level credit as Fin 556S and may be taken only once for credit. Prerequisite: Fin 319, Actg 381.

**Fin 465 - Finance Topics and Cases (4)**
Case studies of financial problems in business including working capital management, capital budgeting, and financing issues. Special topics covered will be at the discretion of the instructor.

Prerequisite: Actg 381, Fin 319 and 449.

**Fin 473 - Investment Analysis and Portfolio Management (4)**
A study of the application of both portfolio theory and fundamental valuation techniques in security investment decisions. Students in this course serve as portfolio managers to a real dollar portfolio, providing security and sector oversight to the portfolio. The implications of modern portfolio theory for portfolio management and in portfolio performance evaluation are emphasized. This is the first class in a strongly recommended two-course sequence. Offered fall, winter, and spring terms.

Also offered for graduate-level credit as Fin 573 and may be taken only once for credit. Prerequisite: Fin 352, Fin 449, and instructor approval.

**Fin 474 - Portfolio Management: Issues and Performance Assessment (2)**
This course is a continuation of Fin 573. Students will continue the responsibility of managing a real-dollar portfolio that was initiated in Fin 573. In addition, assessing and reporting on portfolio performance, and presenting a quarterly report to the investment community, will be an integral aspect of this course. This is the second course in a two-class course sequence. Offered winter, spring, and summer terms.

Also offered for graduate-level credit as Fin 574 and may be taken only once for credit. Prerequisite: Fin 473 for 474, Fin 573 for 574.

**Fin 501 - Research (1-8)**
(Credit to be arranged.)

**Fin 502 - Independent Study (1-12)**
(Credit to be arranged.)

**Fin 504 - Internship (1-8)**
(Credits to be arranged.)

**Fin 505 - Reading and Conference (1-8)**
(Credit to be arranged.)
Fin 507 - Seminar (1-6)
(Credit to be arranged.) Student-selected problems in business operation and business management to be studied by the individual and discussed in group meeting under direction of academic staff.

Fin 507S - Seminar (1-4)
(Credits to be arranged.)

Fin 509 - Practicum (1-9)
(Credit to be arranged.) Field work involving the practice of professional activities away from campus.
Prerequisite: consent of instructor.

Fin 510 - Selected Topics (1-4)
(Credit to be arranged.) Consent of instructor.

Fin 510S - Selected Studies (1-4)
(Credit to be arranged.)

Fin 513 - Financial Management (4)
Examines financial concepts and problem solving skills required to evaluate whether managerial decisions add value to the firm. Students will develop an understanding of financial implications of business decisions and a framework with which to evaluate their decisions. Ethical standards and long term value creation are integrated throughout the course.
Prerequisite: Actg 511.

Fin 515 - Economics and Sustainability of the Firm (2)
Introduction to the principle concepts behind managerial economics, with an emphasis on the economics that lead to sustainable value creation for projects, firms and nations. The focus is on microeconomics, or how individual- and firm-level decision-making can create (or destroy) value.

Fin 516 - Managerial Macroeconomics (2)
Introduction to key concepts of macroeconomics, including monetary and fiscal policies and the relationships between inflation, interest and unemployment rates. Building from economic theory fundamentals, the course also examines how economics is linked to ecosystems and the roles of business and government in fostering economic value creation and ecosystem stewardship.

Fin 517 - Corporate Governance (2)
Survey of the role of culture and corporate governance in maximizing the value of a business. How corporate boards are led, focusing on the role of the director, shareholder rights, executive compensation, and the challenge of balancing the needs of shareholders, managers, and other stakeholders.

Fin 521 - New Venture Finance (4)
Learn how early stage companies access capital for their new ventures, how investors evaluate potential investments, and considerations for structuring the financing.

Fin 525 - Finance Capstone Project (2)
Course provides an opportunity to apply business knowledge to a comprehensive finance problem. Student teams will research, develop an analysis and make recommendations to professional/faculty panel. The type of project will vary but topics may include valuation, risk management, capital budgeting or portfolio management.
Prerequisite: Fin 513 or Fin 551.

Fin 531 - Financial Institutions (2)
Introduces the role financial institutions play in financial markets, the structure of institutions and how they facilitate economic growth through the transfer of capital. The course then analyzes how institutions measure and manage the unique risks that they are exposed to through their ordinary operations.
Prerequisite: Fin 516 or concurrent enrollment.

Fin 535 - Financial Information Systems (2)
Study of financial information systems for operations and issues encountered by financial analysts. Topics may include ERP systems, database, model building, the use of information for forecasting, and other topics associated with the use of information systems to support financial analysis.

Fin 540S - Real Estate Valuation II (4)
Principles of valuation applied in the context of real estate investments. Financial strength analysis, cash flow estimation, determining the cost of capital, various discounted cash flow methods. Option
valuation and real options approaches. Applied to the valuation of Real Estate Investment Trusts and other real estate development entities.

Prerequisite: Fin 333, Fin 319.

**Fin 545 - Hedging and Risk Management (4)**

Futures, options, swaps, and other derivative instruments, their characteristics, their uses in financial risk management, and their effects in speculative situations; methodologies for valuation of derivatives. Exotic options, innovations in exotic derivatives and in the development and use of derivatives in corporate finance and investments. The rapid development of derivatives in domestic and international finance.

Prerequisite: Fin 513 or Fin 551.

**Fin 551 - Financial Management for Financial Analysts (4)**

Gateway course to the Master of Science in financial analysis. Examines the financial concepts and problem-solving skills required to evaluate whether managerial decisions add value to the firm. Students will develop an understanding of the financial implications of business decisions and a framework with which to evaluate their decisions. An integral part of this approach requires understanding how the different functional areas of a business interrelate and the supporting role that finance provides. Topics considered include cash flow analysis, risk determination, valuation, working capital management, and financing. Graduate credit cannot be earned for both Fin 513 and Fin 551.

Prerequisite: admission to the Master of Science in Finance program.

**Fin 552 - Investments (4)**

Analytical study of the principles of investment in stocks, bonds, and other security instruments. Includes background study of financial markets and institutions; analysis of the investment characteristics, valuation, and market price behavior of bonds, stocks, and derivative securities, and the choice of appropriate portfolios of these securities. Also included is the study of information and market efficiency, term structure and the determination of market interest rates, and security valuation.

Prerequisite: Fin 551 or Fin 513.

**Fin 552S - Investments (4)**

Analytical study of the principles of investment in stocks, bonds, and other security instruments. Includes background study of financial markets and institutions; analysis of the investment characteristics, valuation, and market price behavior of bonds, stocks, and derivative securities, and the choice of appropriate portfolios of these securities. Also included is the study of information and market efficiency, term structure and the determination of market interest rates, and security valuation.

Prerequisite: Fin 452, BA 303, Actg 381 is strongly recommended; Fin 552: Fin 551 or Fin 513.

**Fin 553 - Valuation and Analysis (4)**

Valuation and Analysis extends the financial accounting and corporate finance topics introduced in the core graduate accounting and finance courses, and uses these topics to further the understanding of how to value a business or investment. This is a practical and applied course that connects accounting and business analysis with finance issues into a systematic and process-driven approach for valuation of both public and private firms. The course uses a blend of lectures, discussions, cases, and projects to learn the valuation process. Topics covered include financial statement analysis, business strategy and forecasting, due diligence, discounted cash flow analysis, and public versus private firm issues.

Prerequisite: Fin 551 or Fin 513.

**Fin 554 - Alternative Investments (2)**

Introduction of alternative investments to traditional equity and fixed income securities. Students will learn about common types of alternative investments, valuation methods, unique risks and relation to traditional investments. Types of assets covered may include: real estate, private equity, venture capital, hedge funds, distressed securities and commodities.

Prerequisite: Fin 552 or approval of the instructor.

**Fin 555 - Applied Econometrics for Financial Analysis (4)**

Theory and application of empirical methods, including model development, experimental design, and statistical analysis, applied to issues in business, particularly the areas of accounting and finance. Construction and testing of hypotheses, analysis of variance, multiple regression, methods for dealing with problems in the distribution of data, time series, forecasting, and performance evaluation. Publicly available data will be obtained and used by students.

Prerequisite: Fin 551 or concurrent enrollment or Fin 513.

**Fin 556 - International Financial Management (4)**

Development and study of a framework for the financial decisions of multinational businesses; management of working capital, investment and financing decisions of a firm in an international environment; foreign exchange markets, exchange risk, and international diversification.
Prerequisite: BA 303, Actg 381 for Fin 456; Fin 551 or Fin 513 for Fin 556.

**Fin 556S - International Financial Management (4)**

Development and study of a framework for the financial decisions of multinational businesses; management of working capital, investment and financing decisions of a firm in an international environment; foreign exchange markets, exchange risk, and international diversification.

Also offered as undergraduate-level credit as Fin 456 and may be taken only once for credit. Prerequisite: BA 303 for Fin 456; 551 or Fin 513 for Fin 556.

**Fin 559S - Advanced Real Estate Valuation (3)**

Contact the department for a description of this class.

**Fin 562 - Intermediate Financial Management (4)**

Second-level course in financial management to provide more depth in the study of asset pricing, capital budgeting, capital structure, dividend policy, working capital management, growth through mergers, and leasing. Emphasis is placed on the further development of problem solving capabilities.

Prerequisite: Fin 551 or Fin 513.

**Fin 565 - Corporate Financial Strategies (4)**

This course extends the corporate finance topics introduced in the core graduate finance course and aims to deepen understanding of the strategic issues and techniques associated with financial decision making. The perspective is that of the CFO of a corporation but also considers other stakeholders.

Topics may include risk management, capital budgeting, financing decisions for established and entrepreneurial firms, special topics in firm valuation, working capital, and determination of the cost of capital. This course serves as background for other finance elective courses and builds skills in key financial principles. We emphasize economic underpinnings and application issues through extensive applied case analysis using spreadsheet and risk-based tools.

Prerequisite: Fin 551 or Fin 513.

**Fin 573 - Investment Analysis and Portfolio Management (4)**

A study of the application of both portfolio theory and fundamental valuation techniques in security investment decisions. Students in this course serve as portfolio managers to a real dollar portfolio, providing security and sector oversight to the portfolio. The implications of modern portfolio theory for portfolio management and in portfolio performance evaluation are emphasized. This is the first class in a strongly recommended two-course sequence. Offered fall, winter, and spring terms.

Also offered for undergraduate-level credit as Fin 473 and may be taken only once for credit. Prerequisite: Fin 573 for 573; Fin 551 or Fin 513 for Fin 573; recommended Fin 553 at least concurrently for Fin 573.

**Fin 574 - Portfolio Management: Issues and Performance Assessment (2)**

This course is a continuation of Fin 573. Students will continue the responsibility of managing a real-dollar portfolio that was initiated in Fin 573. In addition, assessing and reporting on portfolio performance, and presenting a quarterly report to the investment community, will be an integral aspect of this course. This is the second course in a two-class course sequence. Offered winter, spring, and summer terms.

Also offered for undergraduate-level credit as Fin 474 and may be taken only once for credit. Prerequisite: Fin 473 for 474, Fin 573 for 574.

**Fin 599 - Real Estate Finance and Investment (3)**

Application of finance and economic principles to analysis of real estate finance and investments. Emphasis on the development of problem solving capabilities through the use of computer application programs. Special attention is given to risk analysis, alternative mortgage instruments, hedging techniques, and the tax effects of real estate investment.

Prerequisite: Fin 551 or Fin 513 or USP 598 or equivalent. This course may only be taken once for credit.

FPA - Fine and Performing Arts

FPA 101 - Perspectives in the Arts (4)
This course is the foundational experience for the BA/BS in Arts Studies. The intention is to provide an introduction to fundamental methodologies and ways of thinking, that give students the tools to analyze and deconstruct works of art for meaning, function, success and value. The course will be composed of combinations of readings, activities and assignments, discussions, videos, slides and out of class performances, showings and exhibitions. Students will engage in the practice of making art as well as in exploring the relationships among the various art fields.

FPA 199 - Special Studies (1-8)
(Credit to be arranged.)

FPA 301 - Creative Thinking in the Arts (4)
Designed to introduce students to the theoretical context and practice of creative thinking. While affording freedom for discovery, this course will also offer a focused perspective to strengthen creative thinking, define personal process, construct effective strategies for collaboration, and develop a creative project. Each student works to identify, access and broaden individual creative abilities. Each session includes practical application of a variety of creative techniques, including artistic, expressive and interdisciplinary strategies; explorations in mind/body connection; sensory and visualization exercises; and activities which utilize multiple intelligences. Intellectual understanding emerges from both theory and historical context, but will be developed primarily through a regime of self-understanding and activity.

FPA 399 - Special Studies (1-8)
(Credit to be arranged.)

FPA 445 - Senior Project (4)
Focuses on the body of coursework undertaken in the BA/BS Arts Studies curriculum in an original creative work or comparable experience. This work may take the form of a performance, with the student as creator/producer and/or performer, or a written thesis, gallery exhibition, internship (including but not limited to teaching), media work, practicum, or some other acceptable format.

Fr - French

Fr 101 - First-Year French Term 1 (4)
An introduction to elementary French. Emphasis on listening comprehension and oral practice, including the elements of grammar, vocabulary building, and elementary readings. This is the first course in a sequence of three: Fr 101, Fr 102, and Fr 103.

Fr 102 - First-Year French Term 2 (4)
An introduction to elementary French. Emphasis on listening comprehension and oral practice, including the elements of grammar, vocabulary building, and elementary readings. This is the second course in a sequence of three: Fr 101, Fr 102, and Fr 103.

Fr 103 - First-Year French Term 3 (4)
An introduction to elementary French. Emphasis on listening comprehension and oral practice, including the elements of grammar, vocabulary building, and elementary readings. This is the third course in a sequence of three: Fr 101, Fr 102, and Fr 103.

Fr 105 - French Film (1)
Initiation to French culture and listening skills through short lectures in English and feature length film screenings in French (with English subtitles). Cannot be taken simultaneously with Fr 305.

Fr 150 - First-year French (Intensive) (6)
A two-term course covering the content of Fr 101, 102, 103.

Fr 151 - First-year French (Intensive) (6)
A two-term course covering the content of Fr 101, 102, 103.

Fr 199 - Special Studies (1-12)
(Credit to be arranged.)

Fr 201 - Second-Year French Term 1 (4)
Intensive review of basic materials introduced in First-Year French and further development of communication skills. This is the first course in a sequence of three: Fr 201, Fr 202, and Fr 203. Expected preparation: Fr 103.
Fr 202 - Second-Year French Term 2 (4)
Intensive review of basic materials introduced in First-Year French and further development of communication skills. This is the second course in a sequence of three: Fr 201, Fr 202, and Fr 203. Expected preparation: Fr 201.

Fr 203 - Second-Year French Term 3 (4)
Intensive review of basic materials introduced in First-Year French and further development of communication skills. This is the third course in a sequence of three: Fr 201, Fr 202, and Fr 203. Expected preparation: Fr 202.

Fr 299 - Special Studies (1-12)
(Credit to be arranged.)

Fr 301 - Third-Year French Term 1 (4)
Development of speaking, listening, reading and writing skills and a review of grammar through study of appropriate texts, conversation, activities, and written assignments. This is the first course in a sequence of three: Fr 301, Fr 302, and Fr 303. Expected preparation: Fr 203.

Fr 302 - Third-Year French Term 2 (4)
Development of speaking, listening, reading and writing skills and a review of grammar through study of appropriate texts, conversation, activities, and written assignments. This is the second course in a sequence of three: Fr 301, Fr 302, and Fr 303. Expected preparation: Fr 203.

Fr 303 - Third-Year French Term 3 (4)
Development of speaking, listening, reading and writing skills and a review of grammar through study of appropriate texts, conversation, activities, and written assignments. This is the third course in a sequence of three: Fr 301, Fr 302, and Fr 303. Expected preparation: Fr 203.

Fr 305 - Topics in French Film (4)
Focus on conversation and writing skills through the viewing and discussion of films. Topics may include: the history of French and Francophone cinema, the history of France through film. Expected preparation: Fr 203 and 4 hours of 300-level French.

Fr 320 - French for the Working World (4)
Intensive application of language for advanced everyday proficiency, career exploration, job seeking and development of an actual student-run company. Participants will practice and improve their language skills by using them to develop product ideas, conduct market research and sales campaigns, manage company finances and plan the future of the enterprise. Expected preparation: Fr 203 or equivalent proficiency.

Fr 325 - French Phonetics and Phonology (4)
Introduction to the sounds of French: their place and manner of articulation (phonetics) as well as how they pattern with respect to each other and as influenced by morphological and syntactic factors (phonology). Expected preparation: Fr 301 or Fr 302.

Fr 326 - French Conversation (4)
Developing speaking and listening skills in French. Some grammar review and readings to stimulate discussions.
Prerequisite: Fr 203.

Fr 330 - Topics in Culture and Civilization (4)
The development of French life, thought, and arts of different periods, from the Middle Ages to the 20th century: for example, Pre-Revolution, Revolution through 19th century, and contemporary. Expected preparation: Fr 203. 4 hours of 300-level French.

Fr 335U - 19th Century France (4)
French politics, society and their reflections in literature from the Revolution to the 3rd Republic (1789-1890s). Main themes: ancien regime, Revolution, French political instability, rise of the bourgeoisie, growth of working class, reflection of these themes in major literary works. Conducted in English. Expected preparation: Hst 103 or UnSt 226.

Fr 340 - Fundamentals of French Literary Studies (4)
Introduction to the study of French literature, its forms, genres, techniques, and themes, and to French literary criticism. Focus is on the practice of writing
literary commentary, analysis and criticism in
French. Recommended prior to or concurrently with
Fr 341U, Fr 342U, or Fr 343U. Expected preparation:
Fr 203; Fr 301 or Fr 302 strongly recommended.

Fr 341U - Literature and Culture of the Middle
Ages and Renaissance (4)
Focusing on cultural, political, and social realities,
this course introduces students to literature from
France from the Middle Ages and the Renaissance.
Readings include poetry, theater, and prose from
representative authors as well as secondary texts that
address authors, movements, and/or contexts. This
course can be taken individually. Expected
preparation: Fr 203; Fr 301 or Fr 302 strongly
recommended.

Fr 342U - Literature and Culture of the
Seventeenth- and Eighteenth-Centuries (4)
Focusing on cultural, political, and social realities,
this course introduces students to literature from
France from the seventeenth and eighteenth centuries.
Readings include theater, prose, and poetry from
representative authors as well as secondary texts that
address authors, movements, and/or contexts. This
course can be taken individually. Expected
preparation: Fr 203; Fr 301 or Fr 302 strongly
recommended.

Fr 343U - Literature and Culture 19th and 20th
(4)
Focusing on cultural, political, and social realities,
this course introduces students to literature from
France from the nineteenth and twentieth centuries.
Readings include poetry, theater, and prose from
representative authors as well as secondary texts that
address authors, movements, and/or contexts. This
course can be taken individually. Expected
preparation: Fr 203; Fr 301 or Fr 302 strongly
recommended.

Fr 344 - Literature and Cultures of the
Francophone World (4)
Focusing on cultural, political, and social realities,
this course introduces students to literature in French
from French-speaking areas outside of France.
Readings include poetry, theater, and prose from
representative authors as well as secondary texts that
address authors, movements, and/or contexts. This
course can be taken individually. Expected
preparation: Fr 203; Fr 301 or Fr 302 strongly
recommended.

Prerequisite: Fr 203.

Fr 399 - Special Studies (1-8)
(Credit to be arranged.)

Fr 401 - Research (1-6)
(Credit to be arranged.)

Fr 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Fr 405 - Reading and Conference (1-6)
(Credit to be arranged.)

Fr 407 - Seminar (1-6)
(Credit to be arranged.)

Fr 408 - Workshop (1-6)
(Credit to be arranged.)

Fr 409 - Practicum (1-12)
(Credit to be arranged.)

Fr 410 - Selected Topics (1-6)
(Credit to be arranged.)

Fr 411 - Advanced French (4)
In this course students study and analyze a variety of
documents (audio, video, texts, etc) on various topics
to better understand the intricacies of spoken and
written French. Great importance will be given to
stylistic and to creative and rigorous application of
grammatical principles in different situations and
genres.
Prerequisite: 8 credits of the Fr 301, Fr 302, Fr 303
sequence.

Fr 412 - Creative Writing in French (4)
Stylistic and grammatical elements of several written
genres will be analyzed in terms of why certain
linguistic devices are used in particular genres and
what effects they have on textual meaning. After
analyzing and gaining familiarity with these features,
students will create their own French texts.
Prerequisite: 8 credits of the Fr 301, Fr 302, Fr 303 sequence.

Fr 414 - Advanced French Grammar (4)
A systematic approach to the study of French grammar and syntax for majors and prospective teachers.
Also offered for graduate-level credit as Fr 514 and may be taken only once for credit. Prerequisite: Fr 303.

Fr 415 - Business French (4)
Advanced work in the language of business and economics. Recommended prerequisite: Fr 303.

Fr 417 - Translation (4)
Special problems of translating between French and English based on a variety of texts, both literary and non-literary. Expected preparation: Fr 303.
Also offered for graduate-level credit as Fr 517 and may be taken only once for credit.

Fr 419 - Medieval French Literature (4)
Selected works of Old French literature (reading in modern French translation). Expected preparation: at least 8 credits from Fr 341, Fr 342, Fr 343.
Also offered for graduate-level credit as Fr 519 and may be taken only once for credit.

Fr 420 - Renaissance French Literature (4)
Selected works of literature representative of the French Renaissance. Expected preparation: at least 8 credits from Fr 341, Fr 342, Fr 343.
Also offered for graduate-level credit as Fr 520 and may be taken only once for credit.

Fr 421 - Seventeenth-century French Literature (4)
Readings from major classical writers from the era of Louis XIV. Expected preparation: at least 8 credits from Fr 341, Fr 342, or Fr 343.
Also offered for graduate-level credit as Fr 521 and may be taken only once for credit.

Fr 423 - Eighteenth-century French Literature (4)
Reading, analysis and critique of the major works written in the Age of Enlightenment. Expected preparation: at least 8 credits from Fr 341, Fr 342, or Fr 343.
Also offered for graduate-level credit as Fr 523 and may be taken only once for credit.

Fr 427 - Nineteenth-century French Literature (4)
Selected works of prose, poetry, and drama from the 19th century writers. Expected preparation: at least 8 credits from Fr 341, Fr 342, or Fr 343.
Also offered for graduate-level credit as Fr 527 and may be taken only once for credit.

Fr 428 - Nineteenth-century French Literature (4)
Selected works of prose, poetry, and drama from the 19th century writers. Recommended prerequisites: at least 8 credits from Fr 341, Fr 342, or Fr 343.

Fr 433 - Twentieth-century French Literature (4)
Readings in poetry, drama, and prose. Expected preparation: at least 8 credits from Fr 341, Fr 342, or Fr 343.
Also offered for graduate-level credit as Fr 533 and may be taken only once for credit.

Fr 434 - Twentieth-century French Literature (4)
Readings in poetry, drama, and prose. Expected preparation: at least 8 credits from Fr 341, Fr 342, or Fr 343.

Fr 435 - Francophone Literature of the 20th Century (4)
Readings in 20th century literature of French expression from outside metropolitan France: i.e., Africa, Quebec, and the Caribbean. Expected preparation: at least 8 credits from Fr 341, Fr 342, or Fr 343.
Also offered for graduate-level credit as Fr 535 and may be taken only once for credit.

Fr 441U - Major Works In Translation (4)
Study of texts representative of major French authors, periods, themes or genres in translation: such topics as Classical drama, Realism, contemporary novel, Flaubert, and Camus. Readings, lectures, and discussions in English. Expected preparation: 4 credits of upper division literature.
Also offered for graduate-level credit as Fr 541 and may be taken only once for credit.

Fr 445 - Representations of War in French Cinema (4)
Explores representations of WWI, WWII and the Algerian War in French films. Combines methods of film analysis and historical inquiry to understand nuances of representations of everyday life during conflicts — methods and skills that students will learn and apply throughout the quarter. Taught in French.
Fr 490 - History of the French Language (4)
Study of the development of the French language in terms of phonological, morphological, and syntactical changes. Expected preparation: Fr 303.

Fr 494 - French Linguistics (4)
Introduction to the basic concepts of linguistics and their application to the French language. Emphasis on practical analysis of the sound and the grammatical systems. Brief survey of the historical development, followed by an analysis of the phonetics, phonemics, morphology, and syntax of modern French. Conducted in English. Recommended prerequisites: Fr 303, 325.

Fr 497 - Applied French Linguistics (4)
A practical application of linguistics to modern French. Emphasis on a contrastive analysis of the structures of French and English. Recommended prerequisites: Fr 303 and 4 credits of linguistics.

Fr 501 - Research (1-9)
(Credit to be arranged.)

Fr 503 - Thesis (1-9)
(Credit to be arranged.)

Fr 504 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

Fr 505 - Reading and Conference (1-6)
(Credit to be arranged.)

Fr 507 - Seminar (1-6)
(Credit to be arranged.)

Fr 508 - Workshop (1-6)
(Credit to be arranged.)

Fr 509 - Practicum (1-9)
(Credit to be arranged.)

Fr 510 - Selected Topics (1-6)
(Credit to be arranged.)

Fr 511 - Advanced French (4)
In this course students study and analyze a variety of documents (audio, video, texts, etc) on various topics to better understand the intricacies of spoken and written French. Great importance will be given to stylistic and to creative and rigorous application of grammatical principles in different situations and genres.

Fr 512 - Creative Writing in French (4)
Stylistic and grammatical elements of several written genres will be analyzed in terms of why certain linguistic devices are used in particular genres and what effects they have on textual meaning. After analyzing and gaining familiarity with these features, students will create their own French texts.

Fr 514 - Advanced French Grammar (4)
A systematic approach to the study of French grammar and syntax for majors and prospective teachers.

Fr 517 - Translation (4)
Special problems of translating between French and English based on a variety of texts, both literary and non-literary.

Fr 519 - Medieval French Literature (4)
Selected works of Old French literature (reading in modern French translation).

Fr 594 - French Linguistics (4)
Introduction to the basic concepts of linguistics and their application to the French language. Emphasis on practical analysis of the sound and the grammatical systems. Brief survey of the historical development, followed by an analysis of the phonetics, phonemics, morphology, and syntax of modern French. Conducted in English. Recommended prerequisites: Fr 303, 325.

Fr 597 - Applied French Linguistics (4)
A practical application of linguistics to modern French. Emphasis on a contrastive analysis of the structures of French and English. Recommended prerequisites: Fr 303 and 4 credits of linguistics.

G - Geology

G 199 - Special Studies (1-3)
See department for course description. (Credit to be arranged.)

G 200 - Field Studies (1)
Participation in field trip exercises to enhance the understanding of materials and processes taught in corresponding lower division geology courses. Field studies areas include: coast, mountains, Portland area, Eastern Oregon, etc. Lecture, field trip, and completion of workbook or research paper required. Maximum of one credit in each field studies area. Prerequisite: Previous or concurrent enrollment in the corresponding lower-division geology course.

G 201 - Dynamic Earth: Interior (3)
Explores the Earth’s structure and composition, why continents and oceans form, and how plate tectonics provide a unifying model to explain geological observations. Topics include the concept of deep time, the relationship between geology and topography, plate tectonics, volcanism, earthquakes, magnetism, rocks and minerals, mountain building, bas in formation. This is the first course in a sequence of two: G 201 and G 202. Corequisite: G 204.

G 202 - Dynamic Earth: Surface (3)
Explores how weather and climate alter the Earth’s surface and landscapes over time due to rock weathering, mountain building, the action of streams, glaciers, wind, and ocean waves and currents. Embedded in these topics is the discussion of human practices impacting the natural environment. This is the second course in a sequence of two: G 201 and G 202.

G 203 - Historical Geology (3)

G 204 - Geology Laboratory (1)
Laboratory work to accompany G 201 and 202, respectively, involving basic geologic principles and processes emphasizing rocks, minerals, topographic and geologic maps. One 2-hour laboratory period. Concurrent enrollment in G 201, 202, respectively, is required. Corequisite: G 201.

G 205 - Geology Laboratory (1)
Laboratory work to accompany G 201 and 202, respectively, involving basic geologic principles and processes emphasizing rocks, minerals, topographic and geologic maps. One 2-hour laboratory period. Concurrent enrollment in G 201, 202, respectively, is required. Corequisite: G 202.

G 206 - Historical Geology Lab (1)
Earth’s history as revealed through the rock and fossil record. Emphasis on the physical and biological changes exhibited through time. Lab exercises stress the studies of fossils. Concurrent enrollment in G 203 required. Corequisite: G 203.

G 207 - Computer Based Geology Laboratory (2)
Laboratory work to accompany G 202 involving the application of Microsoft Excel, Microsoft Access, and ArcView GIS to solve geoscience problems. One 3-hour laboratory period. Concurrent enrollment in G 202 is required. Corequisite: G 202.

G 301 - Geology for Engineers (3)
A study of the origin, interior, and crustal materials of the Earth: the natural processes which have built it up, deformed, and torn down the crust throughout geologic time: the environmental interrelationships
between man and geologic processes and resources stressing application to engineering. For majors in civil engineering.

**G 312 - Mineralogy (3)**
Description, classification, and genesis of minerals and their importance for understanding the make up of the Earth and planets, mineral resources, and industrial applications.
Prerequisite: CH 221. Corequisite: G 313.

**G 312L - Mineralogy Lab (0)**
Lab for G 312.

**G 313 - Methods in Mineralogy (2)**
Analytical and imaging methods to evaluate a range of physical and chemical properties of minerals such as morphological features, quantitative evaluations of chemical constituents, and determination of crystal structures used for mineral identification.
Prerequisite: one year of general chemistry. Corequisite: G 312.

**G 314 - Petrology (3)**
Origin, classification, and distribution of igneous, metamorphic, and sedimentary rocks. Composition of the Earth’s crust and mantle. Emphasis on rock type assemblages and their genesis occurring at major plate tectonic environments as represented by active/passive continental margins, rift zones, ocean basins and trenches, ocean islands, continent-continent collision belts, and stable cratons.

**G 314L - Lab for G 314 (0)**
Lab for G 314.
Corequisite: G 314.

**G 315 - Lithology and Petrography (2)**
Description of the physical characteristics of naturally occurring rocks in hand specimen and thin section under the petrographic microscope. Understanding textures and fabrics of rocks and what physical and chemical parameters control them such as crystallization and nucleation rate, compositional environment, stress field, and provenance characteristics.
Prerequisite: G 312, G 313. Corequisite: G 314.
Corequisite: G 314.

**G 318 - Processes in the Surface Environment (3)**
Physical processes occurring in the upper crust including tectonic provenances, weathering, mass transport, fluid-sediment transport, depositional environments, stratigraphic sequences, and intrastratal diagenesis.

**G 318L - Lab for G 318 (0)**
Lab for G 318.
Corequisite: G 318.

**G 319 - Processes in the Surface Environment: Methods (2)**
Introduction to methods of investigation of physical processes occurring in Earth’s upper crust. Topics include design and use of environmental sensors, landscape analysis using digital data sets, and scale model experiments.

**G 322 - Global Biogeochemical Cycles (5)**
A survey course in biogeochemistry from an earth history perspective. Study of the origin and evolution of Earth and its biogeochemical cycles; survey of the microbial and chemical reactions that occur within the atmosphere, lithosphere, hydrosphere and the biosphere; study of the mechanistic understanding of biogeochemical interactions to a large-scale, synthetic view of global biogeochemical cycles.
Three 65-minute lectures and one 2-hour laboratory.
Prerequisite: one year of chemistry. Corequisite: G 322L.

**G 322L - Lab for G 322 (0)**
Lab for G 322.
Corequisite: G 322.

**G 324 - Data Management and Analysis (5)**
Application of digital computers to problems in geology through familiarization with software and hardware for collecting, processing, analyzing, and presenting data. Topics covered include use of databases, spreadsheets, programming, analysis of data collected along a traverse, over a map area, and multivariate data. Applications to stratigraphic sections, chart recordings, sample locations, mapping, trend surfaces, and clustering. Three lectures and two 2-hour laboratories.
Prerequisite: Mth 252. Corequisite: G 324L.
G 324L - Lab for G 324 (0)
Lab for G 324.
Corequisite: G 324.

G 331L - Paleontology Lab (0)
(Credit to be arranged.)
Corequisite: G 331.

G 333 - Evolutionary Concepts (4)
Designed to provide background in evolutionary concepts and to address current issues in evolution as they are perceived and are being investigated by scientists in biology and geology. This is a combined lecture and discussion class and will include occasional guest lecturers presenting their research and views on various topics in evolution.

G 340U - Life of the Past (4)
Origin and development of plants, invertebrate and vertebrate animals on Earth, as interpreted from the study of fossils and the sedimentary rocks in which they occur. Includes plate tectonics and basic geologic principles.
Prerequisite: upper-division standing.

G 341U - Geology of the Oregon Country (4)
Origin and geologic history of Oregon. Focus on volcanic and surface processes as well as geologic hazards. Survey of fossils as environmental indicators.
Prerequisite: upper-division standing.

G 342U - Volcanoes and Earthquakes (4)
A study of volcanoes and earthquakes as they affect humans and the development of landscapes.
Prerequisite: upper-division standing.

G 344U - Geology and the National Parks (4)
Covers the geology that one finds in our national park system. Parks will be grouped by similar geology. Basic concepts of geology will first be covered in each group and then each park of the group discussed.
Prerequisite: upper-division standing.

G 345L - Lab for G 345U (0)
Lab for G 345.
Corequisite: G 345U.

G 345U - Life in the Universe (4)
Focus on issues surrounding the origin and evolution of life on Earth, the environmental conditions required for life elsewhere, and the potential for life on other planets and satellites in our solar system. Additional topics include the discovery, occurrence and habitability of extrasolar planets, and the philosophical and societal implications of searching for life beyond Earth.
Prerequisite: upper division standing. Two lectures, one 2-hour laboratory. Corequisite: G 345L.

G 346 - Exploring Mars (4)
On-line course centered on the ongoing exploration of Mars. Topics follow an exploration timeline and include Mars’ geology, climate, potential for life, and habitability. Recommended prerequisites: G 201.

G 351 - Introduction to Oceanography (4)
A survey course designed to give students a broad general background. Emphasis is on interrelationships of oceanography and other sciences. Useful for general studies, teachers and environmental science majors.
Prerequisite: upper division standing.

G 351U - Introduction to Oceanography (4)
A survey course designed to give students a broad general background. Emphasis is on interrelationships of oceanography and other sciences. Useful for general studies, teachers and environmental science majors.
Prerequisite: upper-division standing.

G 352U - Minerals in World Affairs (4)
The geologic origin and occurrence of metals, fuels, and industrial minerals and rocks; their geographic distribution and relative abundance or lack among nations; the rules and principles which influence their past, present, and future exploration, development, and use.
Prerequisite: Upper division standing.

G 353 - Natural History of Dinosaurs (4)
Dinosaurs, their evolution, classification, ecology and extinction in the context of changing environments. Study of the geologic record and tools used by geologists to determine geologic ages and sequences. Mechanisms of global change ranging from plate tectonics to asteroid impacts.
G 355 - Earth and Space Sciences for Elementary Educators (4)
A survey of Earth and Space Science concepts for students interested in elementary education. Designed around "three-dimensional learning" in the sciences: how to engage science content through science practice and recognition of science themes, as outlined in the Oregon Science Standards.
Prerequisite: upper division standing.

G 374 - Geomorphic Processes (4)
A study of landform processes at the earth's surface including the work of water, wind, and ice in erosion, transportation, and deposition on land and sea. The significance of geomorphic processes to human activities is included. A one to two-day weekend field trip is required. Three lectures and one 3-hour laboratory. No credit allowed if taken after G 318. May not be used as an elective for the B.S. in geology. This course is the same as Geog 320; course may be taken only once for credit.
Prerequisite: G202 or equivalent. Corequisite: G 374L. Cross-Listed as: Geog 320.

G 374L - Lab for G 374 (0)
Lab for G 374.
Corequisite: G374.

G 391L - Structural Geology Lab (0)
Lab for G 391.
Corequisite: G391.

G 392L - Stratigraphy and Sedimentation Lab (0)
Lab for G 392.
Corequisite: G392.

G 399 - Special Studies (0-6)
See department for course description. (Credit to be arranged.)

G 401 - Research (1-6)
See department for course description. (Credit to be arranged.)
Prerequisite: G405.

G 402 - Independent Study (1-12)
(Credit to be arranged.)

G 403 - Thesis (1-4)
See department for course description.

G 404 - Cooperative Education/Internship (1-12)
See department for course description. (Credit to be arranged.)

G 405 - Reading and Conference (1-6)
See department for course description. (Credit to be arranged.)

G 406 - Special Projects (1-9)
Credit to be arranged.

G 407 - Seminar (1-6)
See department for course description. (Credit to be arranged.)

G 410 - Selected Topics (0-6)
See department for course description. (Credit to be arranged.) Consent of instructor.

G 410L - Geophysics Lab (0)
Lab for G 420.
Corequisite: G 420.

G 410U - Selected Topics (4)
(Credit to be arranged.)

G 420 - Applied Geophysics (4)
Principles of geophysical measurement and interpretation; seismology, gravimetry, isostasy, geomagnetism, terrestrial electricity. Includes a survey of geophysical exploration techniques. Three lectures, one 2-hour lab.
Also offered for graduate-level credit as G 520 and may be taken only once for credit. Prerequisite: one year of general physics, one year of calculus. Corequisite: G420L.

G 420L - Applied Geophysics Lab (0)
Lab for G 420.
Corequisite: G420.
### G 423 - Statistics and Data Analysis in the Geosciences (4)

Application of digital computers to problems in geology. Topics covered are analysis of data collected along a traverse, over a map area, and multivariate data. Applications to stratigraphic sections, chart recordings, sample locations, mapping, trend surfaces, and clustering. Two lectures and two 2-hour laboratory.

Also offered for graduate-level credit as G 523 and may be taken only once for credit. Prerequisite: MTH 252.

**G 423L - Lab for G 423 (0)**

Lab for G 423.

### G 424 - Geographical Information Systems for the Natural Sciences (4)

Spatial data are input, analyzed, and displayed. Techniques covered include: data management, projections and reference datum, digitizing, raster and vector operations, spatial statistics. Class projects apply data management and analysis techniques to the natural sciences. Weekly professional quality lab reports are required. GIS tutorial followed by a gateway exam is used to demonstrate mastery of introductory material.

Also offered for graduate-level credit as G 524 and may be taken only once for credit. Prerequisite: Upper division standing in a physical or life science or mathematics program. Corequisite: G 424.

**G 424L - Lab for G 424 (0)**

### G 425 - Field GIS (4)

Acquisition, storage, and display of field-based data for the natural sciences. Geospatial data generated using field-based technologies (i.e. GPS) are converted into appropriate database structures (i.e. GIS) for analysis and reporting. Project design and implementation are developed in cooperation with the instructor. Integrated laboratory/field experience. Expected preparation: Stat 243 or G 324, 8 to 15 credits of lab based 200-level introductory courses in geology, biology, physics, chemistry, or environmental sciences.

Also offered for graduate-level credit as G 525 and may be taken only once for credit. Prerequisite: Upper division standing.

### G 426 - Numerical Modeling of Earth Systems (4)

Application of modeling software to chemical, biological and physical global systems. Introduction to numerical methods, such as finite-elements and finite-differences, for solving systems of equations that describe geological processes. Two lectures and one 3-hour laboratory.

Prerequisite: G 324. Corequisite: G 426L.

**G 426L - Lab for G 426 (0)**

### G 430 - Life of the Past (4)

Origin and development of plants, animals and man on earth, as interpreted from the study of fossils and the sedimentary rocks in which they occur. Includes integrated laboratory and field experience.

Prerequisite: upper division standing. Two lectures, one 2-hour laboratory (academic year) or field studies (summer).

**G 434 - Structural Geology and Tectonics (5)**

Study of origin, interpretation, and mapping of major and minor geologic structures and their relation to plate tectonics. Three lectures; two 2-hour laboratories; and required field study.

Prerequisite: (Ph 201 and Ph 202) or (Ph 211 and Ph 212), Mth 252, G 324. Corequisite: G 434L.

**G 434L - Structural Geology Lab (0)**

Lab for G 434. Corequisite: G 434.

### G 435 - Sedimentology and Stratigraphy (5)

Description, interpretation, and correlation (stratigraphy) of sedimentary rocks used to reconstruct paleo environments, infer sea-level changes, and understand a basin’s tectonic evolution. Two lectures, two 2-hour laboratories and required field study.

Prerequisite: G 318 and G 314. Corequisite: G 435L.

**G 435L - Lab for G 435 (0)**

### G 436 - Sensors and Instrumentation (4)

This course focuses on the construction and use of electronic instrumentation useful for Earth and Environmental Sciences. Expected preparation: Ph 202 or Ph 212. Some programming experience (e.g., G 324/G 326, G 523).
Also offered for graduate-level credit as G 536 and may be taken only once for credit. Prerequisite: Ph 201/Ph 202 or Ph 211/Ph 212.

G 437 - Analytical Methods (4)
Fundamentals, applications, and use of analytical methods in the analysis of earth materials. Analytical methods will include optical and X-ray methods and introduction to microthermometric analysis, differential thermal analysis, and granulometry. Two lectures; two 2-hour laboratory periods.
Prerequisite: G312, one year of general physics, radiation safety certification (acceptable as a corequisite). Corequisite: G437L.

G 437L - Analytical Methods Lab (0)
Lab for G 437.
Corequisite: G437.

G 438 - Scanning Electron Microscopy in the Sciences (4)
Theory and practice of scanning electron microscopy and elemental analysis, including beam interactions, signal detection, image and spectrum formation, sample preparation, and data analysis. Student teams pursue original research projects using natural or manufactured specimens provided by science faculty. Graduate students are encouraged to explore thesis-related projects.

Also offered for graduate-level credit as G 538 and may be taken only once for credit. Prerequisite: introductory course sequence in geology, biology, chemistry, physics, environmental science or engineering.

G 439 - Powder X-ray Diffraction (2)
Identifies and quantifies minerals using powder X-ray diffraction (XRD), including the nature and production of X-rays, basic X-ray crystallography, the principles and applications of X-ray diffraction, as well as certification for use of the X-ray diffractometer. Also includes an independent project to identify or quantify unknown minerals using the XRD.

Also offered for graduate-level credit as G 539 and may be taken only once for credit. Prerequisite: G 312 or one year of general chemistry.

G 440 - Volcanology (4)
Classification of volcanic rocks and volcanic stratigraphic units; eruptive mechanisms; modes of volcanic deposition; recognition, mapping, and correlation of volcanic units; and stratigraphic syntheses of volcanic terranes. Two 75-minute lectures, one 2-hour laboratory. Field trip is required.

Also offered for graduate-level credit as G 540 and may be taken only once for credit. Prerequisite: G 314. Corequisite: G 440L.

G 440L - Volcanology Lab (0)
Lab for G 440.
Corequisite: G 440.

G 442 - Igneous Petrogenesis (4)
Investigation into the origin and evolution of magmas and igneous rock suites using geochemical and petrographic methods, differentiation of the Earth through time, global element cycles driven by igneous processes. Two lectures; two 2-hour laboratory periods.

Also offered for graduate-level credit as G 542 and may be taken only once for credit. Prerequisite: G 314. Corequisite: G 442L.

G 442L - Igneous Petrogenesis Lab (0)
Lab for G 442.
Corequisite: G 442.

G 443 - Ground Water Geology (4)
Study of the physical and chemical properties of underground water; the physical properties of aquifers and their control and effect on the contained waters; water movement and the conservation and utilization of existing ground water bodies as well as development of new water bodies and rejuvenation of depleted and starved aquifers.

Also offered for graduate-level credit as G 543 and may be taken only once for credit. Prerequisite: (Ch 221 and Ch 222), (Ph 201 and Ph 202) or (Ph 211 and Ph 212), Mth 252.

G 444 - Well Dynamics (4)
Study of the interactions of water wells and an aquifer system, including all types of aquifer systems and pump tests to analyze those systems, well drilling and design, pump selection, and groundwater explorations.
Prerequisite: G 443.

G 445 - Geochemistry (4)
A survey of geochemistry. Emphasis on distribution of elements in the Earth, nuclear geochemistry and thermodynamics of geologic systems.

Also offered for graduate-level credit as G 545 and may be taken only once for credit. Prerequisite: G 314.
G 446 - Meteorites (4)
A course examining meteorites and the information they provide about the birth and evolution of the solar system. Topics include asteroids and asteroidal heat sources, the solar nebula, early solar system chronology, pre-solar grains, abiotic synthesis of organic matter, differentiation, impacts and collisional processes, and meteorites from Mars. Three lectures.
Also offered for graduate-level credit as G 546 and may be taken only once for credit. Prerequisite: G 201, Ch 221, Ch 222.

G 447 - Environmental Sediment Transport (4)
Study of sediment transport, bedforms, and depositional environment, with focus on quantitative methods of predicting rates of sediment yield, transport, and deposition in terrestrial and marine environments.
Also offered for graduate-level credit as G 547 and may be taken only once for credit. Prerequisite: ESR 220 or G 202 and Mth 251.

G 448 - Chemical Hydrogeology (4)
The study of low temperature aqueous groundwater geochemistry with emphasis on factors which change chemical composition of groundwater and factors which influence the transport of both inorganic and organic contaminants. Topics will include geochemistry of equilibrium reactions, mineral solubility, complexing, oxidation-reduction reactions, surface reactions and vadose zone processes. Two lectures, one 2-hour laboratory.
Also offered for graduate-level credit as G 548 and may be taken only once for credit. Prerequisite: Ch 221 and Ch 222. Corequisite: G 448L.

G 448L - Lab for G 448 (0)
Lab for G 448.
Corequisite: G 448.

G 450 - Earth and Space Sciences for Middle/High School Educators (4)
Survey of Earth and Space Science concepts for students interested in middle and high school education. Course is designed around "three-dimensional learning": how to engage content through practices and recognition of themes, following Oregon Science Standards.
Also offered for graduate-level credit as G 550 and may be taken only once for credit. Prerequisite: 24 credits of mathematics and/or science courses.

G 453 - Geology of the Pacific Northwest (4)
Survey of the topographic and geologic features of the Pacific Northwest, including mining history and focusing on the close relationship of the region as the leading edge of a moving continental plate.
Prerequisite: upper division standing.

G 454 - Cascade Volcanoes (1)
Field course in the study of one or more Cascade volcanoes-origin and development of volcano, eruptive mechanism, deposits, rock types, and hazards. Course may be repeated for different volcano studies. Offered summers. May be used to meet requirements for the B.A. in geology. May not be used to meet requirements for the B.S. in geology.
Also offered for graduate-level credit as G 554 and may be taken only once for credit. Prerequisite: upper division standing and one prior course from the following: G 201, G 202.

G 455 - Environmental Coastal Geomorphology (4)
Introduction to coastal processes, geomorphology, habitat, and development issues: emphasis on coastal shelf, beach, estuarine and dune systems. Includes the influence of sea-level, tides, waves, wind, and development pressures on these coastal systems.
Also offered for graduate-level credit as G 555 and may be taken only once for credit. Prerequisite: G 351U or G 318.

G 456 - Astrogeology (4)
Geology and astronomy are combined to explore the evolution of the Universe and the Solar System. Comparative geologic evolution of the planets is emphasized. A significant component of the course is hands-on geologic field investigations and astronomical observations (summer) or 2-hour laboratory (academic year).
Also offered for graduate-level credit as G 556 and may be taken only once for credit. Prerequisite: upper division standing. Corequisite: G 456L.

G 456L - Lab for G 456 (0)
Lab for G 456.
Corequisite: G 456.

G 458 - Astrobiology (4)
Astrobiology focuses on issues surrounding the origin and evolution of life on Earth, the environmental conditions required for life elsewhere, and the potential for life on other planets and satellites in our solar system. Additional topics include the discovery, occurrence, and habitability of
extrasolar planets, and the philosophical and societal implications of searching for life beyond earth.

Also offered for graduate-level credit as G 558 and may be taken only once for credit. Prerequisite: G 322 or upper division standing in life, environmental, or physical science.

G 459 - Quaternary Climate (4)
Study of the causes and consequences of climate change through the Quaternary. Topics include: an overview of climate system dynamics; the geologic record of Quaternary climate and its profound glacial to interglacial cycles; the use of that record to develop conceptual models of paleoclimatic interactions among land, ocean, atmosphere, and biosphere; and geologic changes during the Cenozoic (the last 65 million years) that set the stage for the Quaternary. Includes computer laboratory exercises using paleoclimate data.

Also offered for graduate-level credit as G 559 and may be taken only once for credit. Prerequisite: upper division standing in a physical or life science program. Corequisite: G 459L.

G 459L - Quaternary Climate Lab (0)
Lab for G 459.
Corequisite: G 459.

G 460 - Soil Geomorphology (4)
Effects of climate, vegetation, parent material, topography, and time on the development, weathering, classification, and chemistry of soils. Two 75-minute lectures and one 2-hour laboratory.

Also offered for graduate-level credit as G 560 and may be taken only once for credit. Prerequisite: G 201, 202, Ch 200- level (1 year).

G 460L - Soil Geomorphology Lab (0)
Lab for G 460.

G 461 - Environmental Geology (4)
Study of natural hazards and related land use planning (flooding, landslides, earthquakes, volcanic, coastal) waste disposal and pollution in the geological environment, water supply, mineral and energy resources, environmental law related to geology, medical geology, climatic change. Two 75-minute lectures and one 2-hour laboratory.

Also offered for graduate-level credit as G 561 and may be taken only once for credit. Prerequisite: general chemistry (1 year), G 201, 202. Corequisite: G 461L.

G 461L - Environmental Geology Lab (0)
Lab for G 461.
Corequisite: G 461.

G 462 - Hillslope Materials and Processes (4)
This class examines the physical, biological, and chemical processes that convert fresh bedrock into mobile regolith and transport materials on hillslopes. Topics include sediment budgets, hillslope hydrology, weathering, soil production and transport, mass movements, landslides, and landscape evolution.

Also offered for graduate-level credit as G 562 and may be taken only once for credit. Prerequisite: (G 318 or Geog 320 or ESM 320), and (Ph 201 or Ph 211 or EAS 211) and Mth 251. Corequisite: G 462L.

G 462L - Lab for G 462 (0)
Lab for G 462.
Corequisite: G 462.

G 464 - The Cryosphere (4)
Investigation of the global cryosphere—the regions on Earth’s surface where water is found in its solid form—in order to develop a systems understanding of ice in the Earth system. Emphasis is placed on modern systems and climate change. Lecture and lab. Lab work uses modern observational data and state-of-the-art climate simulation tools.

Prerequisite: upper-division or graduate standing.

G 464L - The Cryosphere Lab (0)
Lab for the Cryosphere.

G 465 - Glacial Geomorphology (4)
The investigation of the importance of glaciers to landscape modification and global environmental change via an understanding of their formation, structure, mass and energy exchange, and movement. Erosion and deposition processes will also be examined. This class adopts the process perspective whereby understanding the physical processes provides significant insight into the relative importance of the controlling mechanisms of change. Field trip is required.

Also offered for graduate-level credit as G 565 and may be taken only once for credit. Prerequisite: introductory geology, physical geography, or geomorphology course.

G 466 - Glaciology (4)
The physics of glaciers and the mathematical description, and the processes that cause glaciers and
ice sheets to change over time. Intended for students with interests in glaciers, geophysical fluid flows, or who wish to build their quantitative and computational skills. Includes computational laboratory exercises.

Also offered for graduate-level credit as G 566 and may be taken only once for credit. Prerequisite: one year of calculus and one year of physics.

Corequisite: G 466L.

G 466L - Lab for G 466 (0)
Lab for G 466.

Corequisite: G 466.

G 470 - Engineering Geology (4)
Applications of geological information to engineering problems: soil mechanics, rock mechanics, construction materials, groundwater and construction, instrumentation, exploration, terrain models, landslide analysis. Three hours of lecture and two hours of lab per week. Labs stress quantitative analysis. One day field trip explores landslides of the Portland area.

Also offered for graduate-level credit as G 570 and may be taken only once for credit. Prerequisite: G 202, Ph 203.

Corequisite: G 470.

G 470L - Lab for G 470 (0)
Lab for G 470.

Corequisite: G 470.

G 474L - Geomorphic Processes Lab (0)
Lab for G 474.

Corequisite: G 474.

G 475 - Introduction to Seismology and Site Evaluation (4)
Earthquakes and exploration seismology, the origin and occurrence of earthquakes, nature and propagation of seismic waves in the earth, earthquakes as a hazard to life and property. Uses of reflection and refraction exploration seismology, borehole velocity measurements, seismic remote sensing, and direct measurement techniques.

Earthquake hazard assessment including liquefaction, ground failure, and site amplification. Techniques for evaluating the susceptibility, potential, and severity of the hazards and other science and engineering applications. This course is the same as CE 443 and may be taken only once for credit.

Also offered for graduate-level credit as G 575 and may be taken only once for credit. Prerequisite: senior/graduate standing. Cross-Listed as: CE 443.

G 476 - Earthquake Geology (4)
Characterizes earthquakes from a geological perspective. Course content includes discussion of the earthquake process, and the application of a variety of tools (e.g. geomorphology, stratigraphy, structure, geophysics, and seismology) to evaluate the earthquake cycle. The course will cover sub-disciplines within earthquake geology and skills necessary to conduct a geological investigation of earthquakes. The class will evaluate the four tectonic environments; transform, extensional, subduction, and continental collision. Field trips required.

Also offered for graduate level credit as G 576 and may be taken only once for credit. Prerequisite: G 318. Corequisite: G 476L.

G 476L - Lab for G 476 (0)
Lab for G 476.

G 477 - Earthquake Accommodation and Design (4)
Effects of earthquake shaking in the design of buildings, pipelines, bridges, and dams. Incorporating the earthquake hazard assessment for a project in the design process. The goal of this course is to allow geologists, geotechnical engineers, structural engineers, and architects to see how their particular tasks are impacted by the earthquake effects. Types of analysis used to evaluate earthquake design requirements in the several disciplines including geology, geotechnical engineering, structural engineering, and architecture. This course is the same as CE 448 and may be taken only once for credit.

Also offered for graduate-level credit as G 577 and may be taken only once for credit. Prerequisite: G 475/575 or CE 443/543.

G 480 - Basin Analysis (4)
An integrated look at sedimentary basins and their formation. Sedimentary basins contain valuable resources (water, geothermal, fossil fuels) and record tectonic processes. Bas in geometries will be described through hands-on exercises using well log, potential fields, and seismic data. These will be used to constrain mountain building, paleoclimate, and mantle processes.

Also offered for graduate-level credit as G 580 and may be taken only once for credit. Prerequisite: G 435.

G 481 - Field Geology (4)
Geologic mapping in sedimentary and volcanic rocks or metamorphic and plutonic rocks during a summer field camp. A charge will be made for the expenses
of the field camp. Approximately 64 hours of field work in the summer.

Also offered for graduate-level credit as G 581 and may be taken only once for credit. Prerequisite: G 485.

G 484 - Field Geophysics (4)
Applications of geophysical techniques to solving a field problem. Methods applied may include gravity, resistivity, refraction ground penetrating radar, and magnetics. Includes at least one weekend in the field and production of a final report with data and conclusions.

Also offered for graduate-level credit as G 584 and may be taken only once for credit. Prerequisite: Ph 203 or Ph 213, Mth 261.

G 485 - Geologic Mapping (4)
Principles of geologic mapping, and data collection using optical surveying instruments, Global Positioning System, and aerial photographs, preparation of reports and maps. Two lectures and one 4-hour laboratory. One-week field exercise at end of term.

Prerequisite: G434 and G 435. Corequisite: G 485L.

G 485L - Lab for G 485 (0)
Lab for G 485.
Corequisite: G485.

G 491 - Physical Processes in Geology (4)
Application of mechanics to physical processes in geology, such as igneous intrusion, rock folding, debris flow, lava flow, groundwater, and glaciation.

Also offered for graduate-level credit as G 591 and may be taken only once for credit. Prerequisite: Mth 254, Ph 203.

G 492 - Topics in Geodynamics (4)
Special topics concerning the dynamics that govern earth processes such as fluid flows and plate motions, and related physical properties of Earth materials. Representative topics include ice sheet dynamics, glacier dynamics, and thermodynamic modes of earth systems. May be repeated for credit if topics are different. Two lectures and one 2-hour laboratory.

Prerequisite: Mth 254, Ph 213, and G 326.

G 499 - Special Studies (0-8)
(Credit to be arranged.)

G 501 - Research (1-9)
(Credit to be arranged.)
Also offered for undergraduate-level credit as G420 and may be taken only once for credit. Corequisite: G520L.

G520L - Applied Geophysics Lab (0)
Lab for G520.
Corequisite: G520.

G523 - Statistics and Data Analysis in the Geosciences (4)
Application of digital computers to problems in geology. Topics covered are analysis of data collected along a traverse, over a map area, and multivariate data. Applications to stratigraphic sections, chart recordings, sample locations, mapping, trend surfaces, and clustering. Two lectures and two 2-hour laboratory.

Also offered for undergraduate-level credit as G423 and may be taken only once for credit.

G523L - Lab for G523 (0)
Lab for G523.

G524 - Geographical Information Systems for the Natural Sciences (4)
Spatial data are input, analyzed, and displayed. Techniques covered include: data management, projections and reference datum, digitizing, raster and vector operations, spatial statistics. Class projects apply data management and analysis techniques to the natural sciences. Weekly professional quality lab reports are required. GIS tutorial followed by a gateway exam is used to demonstrate mastery of introductory material.

Also offered for undergraduate-level credit as G424 and may be taken only once for credit. Corequisite: G524L.

G524L - Lab for G524 (0)
Lab for G524.
Corequisite: G524.

G525 - Field GIS (4)
Acquisition, storage, and display of field-based data for the natural sciences. Geospatial data generated using field-based technologies (i.e. GPS) are converted into appropriate database structures (i.e. GIS) for analysis and reporting. Project design and implementation are developed in cooperation with the instructor. Integrated laboratory/field experience.

Also offered for undergraduate-level credit as G425 and may be taken only once for credit.

G536 - Sensors and Instrumentation (4)
This course focuses on the construction and use of electronic instrumentation useful for Earth and Environmental Sciences. Expected preparation: Ph202 or Ph212. Some programming experience (e.g., G324/G326, G523).

Also offered for undergraduate-level credit as G436 and may be taken only once for credit.

G537 - Analytical Methods (4)
Fundamentals, applications, and use of analytical methods in the analysis of earth materials. Analytical methods will include optical and X-ray methods and introduction to microthermometric analysis, differential thermal analysis, and granulometry. Two lectures; two 2-hour laboratory periods.

Prerequisite: G312, one year of general physics, radiation safety certification (acceptable as a corequisite). Corequisite: G537L.

G537L - Analytical Methods Lab (0)
Lab for G537.
Corequisite: G537.

G538 - Scanning Electron Microscopy in the Sciences (4)
Theory and practice of scanning electron microscopy and elemental analysis, including beam interactions, signal detection, image and spectrum formation, sample preparation, and data analysis. Student teams pursue original research projects using natural or manufactured specimens provided by science faculty. Graduate students are encouraged to explore thesis-related projects.

Also offered for undergraduate-level credit as G438 and may be taken only once for credit. Prerequisite: introductory course sequence in geology, biology, chemistry, physics, environmental science or engineering.

G539 - Powder X-ray Diffraction (2)
Identifies and quantifies minerals using powder X-ray diffraction (XRD), includes the nature and production of X-rays, basic X-ray crystallography, the principles and applications of X-ray diffraction, as well as certification for use of the X-ray diffractometer. Also includes an independent project to identify or quantify unknown minerals using the XRD.

Also offered for undergraduate-level credit as G439 and may be taken only once for credit.
G 540 - Volcanology (4)
Classification of volcanic rocks and volcanic stratigraphic units; eruptive mechanisms; modes of volcanic deposition; recognition, mapping, and correlation of volcanic units; and stratigraphic syntheses of volcanic terranes. Two 75-minute lectures, one 2-hour laboratory. Field trip is required.
Also offered for undergraduate-level credit as G440 and may be taken only once for credit. Corequisite: G 540L.

G 540L - Volcanology Lab (0)
Lab for G 540.
Corequisite: G 540.

G 542 - Igneous Petrogenesis (4)
Investigation into the origin and evolution of magmas and igneous rock suites using geochemical and petrographic methods, differentiation of the Earth through time, global element cycles driven by igneous processes. Two lectures; two 2-hour laboratory periods.
Also offered for undergraduate-level credit as G442 and may be taken only once for credit. Corequisite: G 542L.

G 542L - Igneous Petrogenesis Lab (0)
Lab for G 542.
Corequisite: G 542.

G 543 - Ground Water Geology (4)
Study of the physical and chemical properties of underground water; the physical properties of aquifers and their control and effect on the contained waters; water movement and the conservation and utilization of existing ground water bodies as well as development of new water bodies and rejuvenation of depleted and starved aquifers.
Also offered for undergraduate-level credit as G443 and may be taken only once for credit.

G 544 - Well Dynamics (4)
Study of the interactions of water wells and an aquifer system, including all types of aquifer systems and pump tests to analyze those systems, well drilling and design, pump selection, and groundwater explorations.
Prerequisite: G443.

G 545 - Geochemistry (4)
A survey of geochemistry. Emphasis on distribution of elements in the Earth, nuclear geochemistry and thermodynamics of geologic systems.
Also offered for undergraduate-level credit as G445 and may be taken only once for credit.

G 546 - Meteorites (4)
A course examining meteorites and the information they provide about the birth and evolution of the solar system. Topics include asteroids and asteroidal heat sources, the solar nebula, early solar system chronology, pre-solar grains, abiogenic synthesis of organic matter, differentiation, impacts and collisional processes, and meteorites from Mars. Three lectures.
Also offered for undergraduate-level credit as G446 and may be taken only once for credit.

G 547 - Environmental Sediment Transport (4)
Study of sediment transport, bedforms, and depositional environment, with focus on quantitative methods of predicting rates of sediment yield, transport, and deposition in terrestrial and marine environments.
Also offered for undergraduate-level credit as G447 and may be taken only once for credit.

G 548 - Chemical Hydrogeology (4)
The study of low temperature aqueous groundwater geochemistry with emphasis on factors which change chemical composition of groundwater and factors which influence the transport of both inorganic and organic contaminants. Topics will include geochemistry of equilibrium reactions, mineral solubility, complexing, oxidation-reduction reactions, surface reactions and vadose zone processes. Two lectures, one 2-hour laboratory.
Also offered for undergraduate-level credit as G448 and may be taken only once for credit. Corequisite: G 548L.

G 548L - Lab for G 548 (0)
Lab for G 548.
Corequisite: G 548.

G 550 - Earth and Space Sciences for Middle/High School Educators (4)
Survey of Earth and Space Science concepts for students interested in middle and high school education. Course is designed around “three-dimensional learning”: how to engage content through practices and recognition of themes, following Oregon Science Standards.
Also offered for undergraduate-level credit as G450 and may be taken only once for credit.
G 554 - Cascade Volcanoes (1)
Field course in the study of one or more Cascade volcanoes-origin and development of volcano, eruptive mechanism, deposits, rock types, and hazards. Course may be repeated for different volcano studies. Offered summers. May be used to meet requirements for the B.A. in geology. May not be used to meet requirements for the B.S. in geology.
Also offered for undergraduate-level credit as G 454 and may be taken only once for credit.

G 555 - Environmental Coastal Geomorphology (4)
Introduction to coastal processes, geomorphology, habitat, and development issues: emphasis on coastal shelf, beach, estuarine and dune systems. Includes the influence of sea-level, tides, waves, wind, and development pressures on these coastal systems.
Also offered for undergraduate-level credit as G 455 and may be taken only once for credit.

G 556 - Astrogeology (4)
Geology and astronomy are combined to explore the evolution of the Universe and the Solar System. Comparative geologic evolution of the planets is emphasized. A significant component of the course is hands-on geologic field investigations and astronomical observations (summer) or 2-hour laboratory (academic year).
Also offered for undergraduate-level credit as G 456 and may be taken only once for credit. Corequisite: G 556L.

G 556L - Lab for G 556 (0)
Lab for G 556.
Corequisite: G 556.

G 558 - Astrobiology (4)
Astrobiology focuses on issues surrounding the origin and evolution of life on Earth, the environmental conditions required for life elsewhere, and the potential for life on other planets and satellites in our solar system. Additional topics include the discovery, occurrence, and habitability of extrasolar planets, and the philosophical and societal implications of searching for life beyond earth.
Also offered for undergraduate-level credit as G 458 and may be taken only once for credit.

G 559 - Quaternary Climate (4)
Study of the causes and consequences of climate change through the Quaternary. Topics include: an overview of climate system dynamics; the geologic record of Quaternary climate and its profound glacial to interglacial cycles; the use of that record to develop conceptual models of paleoclimate interactions among land, ocean, atmosphere, and biosphere; and geologic changes during the Cenozoic (the last 65 million years) that set the stage for the Quaternary. Includes computer laboratory exercises using paleoclimate data.
Also offered for undergraduate-level credit as G 459 and may be taken only once for credit. Corequisite: G 559L.

G 559L - Quaternary Climate Lab (0)
Lab for G 559.
Corequisite: G 559.

G 560 - Soil Geomorphology (4)
Effects of climate, vegetation, parent material, topography, and time on the development, weathering, classification, and chemistry of soils. Two 75-minute lectures and one 2-hour laboratory.
Also offered for undergraduate-level credit as G 460 and may be taken only once for credit.

G 560L - Soil Geomorphology Lab (0)
Lab for G 560.

G 561 - Environmental Geology (4)
Study of natural hazards and related land use planning (flooding, landslides, earthquakes, volcanic, coastal) waste disposal and pollution in the geological environment, water supply, mineral and energy resources, environmental law related to geology, medical geology, climate change. Two 75-minute lectures and one 2-hour laboratory.
Also offered for undergraduate-level credit as G 461 and may be taken only once for credit. Corequisite: G 561L.

G 561L - Environmental Geology Lab (0)
Lab for G 561.
Corequisite: G 561.

G 562 - Hillslope Materials and Processes (4)
This class examines the physical, biological, and chemical processes that convert fresh bedrock into mobile regolith and transport materials on hillslopes. Topics include sediment budgets, hillslope hydrology, weathering, soil production and transport, mass movements, landslides, and landscape evolution.
Also offered for undergraduate-level credit as G 462 and may only be taken once for credit. Corequisite: G 562L.
G 562L - Lab for G 562
Lab for G 562.
Corequisite: G 562.

G 564 - The Cryosphere (4)
Investigation of the global cryosphere—the regions on Earth’s surface where water is found in its solid form—in order to develop a systems understanding of ice in the Earth system. Emphasis is placed on modern systems and climate change. Lecture and lab. Lab work uses modern observational data and state-of-the-art climate simulation tools.
Prerequisite: upper-division or graduate standing.
G 564L - The Cryosphere Lab (0)
Lab for the Cryosphere.

G 565 - Glacial Geomorphology (4)
The investigation of the importance of glaciers to landscape modification and global environmental change via an understanding of their formation, structure, mass and energy exchange, and movement. Erosion and deposition processes will also be examined. This class adopts the process perspective whereby understanding the physical processes provides significant insight into the relative importance of the controlling mechanisms of change. Field trip is required.
Also offered for undergraduate-level credit as G 465 and may be taken only once for credit.
G 566 - Glaciology (4)
The physics of glacier ice and its mathematical description, and the processes that cause glaciers and ice sheets to change over time. Intended for students with interests in glaciers, geophysical fluid flows, or who wish to build their quantitative and computational skills. Includes computational laboratory exercises.
Also offered for undergraduate-level credit as G 466 and may be taken only once for credit. Corequisite: G 566L.
G 566L - Lab for G 566 (0)
Lab for G 566.
Corequisite: G 566.

G 570 - Engineering Geology (4)
Applications of geological information to engineering problems: soil mechanics, rock mechanics, construction materials, groundwater and construction, instrumentation, exploration, terrain models, landslide analysis. Three hours of lecture and two hours of lab per week. Labs stress quantitative analysis. One day field trip explores landslides of the Portland area.
Also offered for undergraduate-level credit as G 470 and may be taken only once for credit. Corequisite: G 570L.
G 570L - Lab for G 570 (0)
Lab for G 570.
Corequisite: G 570.

G 571 - Advanced Engineering Geology (4)
Strength and stability of earth materials, resources, and land use, exploration and instrumentation, professional practices.
Also offered for credit as 671 and may be taken only once for credit.
G 571L - Lab for G 571 (0)
Lab for G 571.

G 574L - Geomorphic Processes Lab (0)
Lab for G 574.
Corequisite: G 574.

G 575 - Introduction to Seismology and Site Evaluation (4)
Earthquakes and exploration seismology, the origin and occurrence of earthquakes, nature and propagation of seismic waves in the earth, earthquakes as a hazard to life and property. Uses of reflection and refraction exploration seismology, borehole velocity measurements, seismic remote sensing, and direct measurement techniques. Earthquake hazard assessment including liquefaction, ground failure, and site amplification. Techniques for evaluating the susceptibility, potential, and severity of the hazards and other science and engineering applications. This course is the same as CE 543 and may be taken only once for credit.
Also offered for undergraduate-level credit as G 475 and may be taken only once for credit. Prerequisite: senior/graduate standing. Cross-Listed as: CE 543.

G 576 - Earthquake Geology (4)
Characterizes earthquakes from a geological perspective. Course content includes discussion of the earthquake process, and the application of a variety of tools (e.g. geomorphology, stratigraphy, structure, geophysics, and seismology) to evaluate the earthquake cycle. The course will cover subdisciplines within earthquake geology and skills necessary to conduct a geological investigation of
earthquakes. The class will evaluate the four tectonic environments; transform, extensional, subduction, and continental collision. Field trips required. Also offered for undergraduate level credit as G 476 and may be taken only once for credit. Prerequisite: Graduate standing. Corequisite: G 576L.

**G 576L - Lab for G 576 (0)**

Lab for G 576.

**G 577 - Earthquake Accommodation and Design (4)**

Effects of earthquake shaking in the design of buildings, pipelines, bridges, and dams. Incorporating the earthquake hazard assessment for a project in the design process. The goal of this course is to allow geologists, geotechnical engineers, structural engineers, and architects to see how their particular tasks are impacted by the earthquake effects. Types of analysis used to evaluate earthquake design requirements in the several disciplines including geology, geotechnical engineering, structural engineering, and architecture. This is the same course as CE 548 and may be taken only once for credit. Also offered for undergraduate-level credit as G 477 and may be taken only once for credit. Prerequisite: G 475/G 575 or CE 443/CE 543.

**G 580 - Basin Analysis (4)**

An integrated look at sedimentary basins and their formation. Sedimentary basins contain valuable resources (water, geothermal, fossil fuels) and record tectonic processes. Basin geometries will be described through hands-on exercises using well log, potential fields, and seismic data. These will be used to constrain mountain building, paleoclimate, and mantle processes. Also offered for undergraduate-level credit as G 480 and may be taken only once for credit.

**G 581 - Field Geology (4)**

Geologic mapping in sedimentary and volcanic rocks or metamorphic and plutonic rocks during a summer field camp. A charge will be made for the expenses of the field camp. Approximately 64 hours of field work in the summer. Also offered for undergraduate-level credit as G 481 and may be taken only once for credit. Prerequisite: G 485.

**G 584 - Field Geophysics (4)**

Applications of geophysical techniques to solving a field problem. Methods applied may include gravity, resistivity, refraction ground penetrating radar, and magnetics. Includes at least one weekend in the field and production of a final report with data and conclusions. Also offered for undergraduate-level credit as G 484 and may be taken only once for credit.

**G 591 - Physical Processes in Geology (4)**

Application of mechanics to physical processes in geology, such as igneous intrusion, rock folding, debris flow, lava flow, groundwater, and glaciation. Also offered for undergraduate-level credit as G 491 and may be taken only once for credit.

**G 592 - Methods in Quaternary Stratigraphy (4)**

Analysis of the methods used and their applications in physical stratigraphy including seismic, sequence, geochemical, paleomagnetic, well log, and topics in Quaternary process stratigraphy. Also offered for credit as G 692 and may be taken only once for credit. Prerequisite: G 434.

**G 595 - Topics in Geomechanics (4)**

Topics chosen from finite strain, rock fracture, and rock folding. May be repeated if topics are different. Also offered for credit as G 695. Prerequisite: G 491/591, Mth 254, Ph 203.

**G 601 - Research (1-12)**

See department for course description. (Credit to be arranged.)

**G 602 - Independent Study (1-6)**

See department for course description. (Credit to be arranged.) Pass/no pass only.

**G 603 - Dissertation (1-12)**

See department for course description. (Credit to be arranged.)

**G 604 - Cooperative Education/Internship (1-9)**

See department for course description. (Credit to be arranged.)

**G 605 - Reading and Conference (1-9)**

See department for course description. (Credit to be arranged.)
G 606 - Special Problems/Projects (1-9)
See department for course description. (Credit to be arranged.)

G 607 - Seminar (1-9)
See department for course description. (Credit to be arranged.)

G 609 - Practicum (1-9)
(Credit to be arranged.)

G 610 - Selected Topics (1-9)
See department for course description. (Credit to be arranged.)

G 610L - Special Topics Lab (0)
Lab for G 610.

G 612 - Topics in Igneous Petrology (4)
Topics in the origin and formation of igneous rock masses; their derivation, evolution, chemistry, structure, and modes of emplacement. Advanced techniques in analysis and examination. May be repeated if topics are different. Two lectures and one 2-hour laboratory.
Prerequisite: G 542.

G 618 - Clay Mineralogy (4)
Clay structure and classification, clay mineral analyses including X-ray identification and differential thermal analysis, mixed-layer clays, clay-water systems, clay-clay organic reactions, engineering properties related to clay materials, geological occurrence of clays. Major emphasis on engineering problems related to clays and the field occurrence of clays.
Prerequisite: Radiation safety certification.

G 619 - Topics in Geochemistry (4)
Topics in the application of geochemistry to solve geological problems. Advanced techniques in analysis and examination. Two lectures and one 2-hour laboratory. May be repeated if topics are different.
Prerequisite: G 545.

G 650 - Research Methods I - Reading (4)
The goal of this course is to build your research skills around obtaining, using, and communicating scientific information. This course will help you to use scientific literature, understand the development of scientific argument, and communicate research ideas through writing and presentation.
Prerequisite: Graduate standing.

G 651 - Research Methods II - Writing (4)
Scientific writing involves understanding the components of a well-written product as well as the strategies for planning and maintaining good writing practice. The explicit goal of this course is to make significant progress on your writing. To meet explicit writing goal relevant to your course of study, students will work to develop and reflect on personal writing strategies, review the components of effective scientific writing, and create and evaluate scientific writing relative to best practices.
Prerequisite: Graduate standing.

G 671 - Advanced Engineering Geology (4)
Strength and stability of earth materials, resources, and land use, exploration and instrumentation, professional practices.
Also offered for credit as 571 and may be taken only once for credit. Prerequisite: G 470.

G 692 - Methods in Quaternary Stratigraphy (4)
Analysis of the methods used and their applications in physical stratigraphy including seismic, sequence, geochemical, paleomagnetic, well log, and topics in Quaternary process stratigraphy.
Also offered for credit as G 592 and may be taken only once for credit. Prerequisite: G 434.

G 695 - Topics in Geomechanics (4)
Topics chosen from finite strain, rock fracture, and rock folding. May be repeated if topics are different.
Also offered for credit as G 595. Prerequisite: G 491/591, Mth 254, Ph 203.

Geog - Geography

Geog 199 - Special Studies (1-6)
See department for course description. (Credit to be arranged.)

Geog 210 - Physical Geography (4)
An introduction to the physical elements of geography and the environment in which people live. The focus is on natural processes that create physical
diversity on the earth. Major topics are weather and climate, vegetation and soils, landforms, ecosystems, their distribution and significance.

Corequisite: Geog 210L.

**Geog 210L - Lab for Geog 210 (0)**
Lab for Geog 210.

Corequisite: Geog 210.

**Geog 230 - Environment and Society: Global Perspectives (4)**
An introduction to the ways in which humans, acting through social constraints and structures, have lived in and modified their environment. The spatial patterns produced from human activities (such as population growth, transportation systems, urban structure, economic development, resource use and management, and the evolution of political patterns) are considered in a global context. Case studies from several world regions illustrate the processes by which humans modify their world to create distinctive cultural landscapes.

**Geog 299 - Special Studies (1-4)**
(Credit to be arranged.)

**Geog 310U - Climate and Water Resources (4)**
An inquiry-based examination of the principal controls on climate and hydrology, with emphasis on processes and interactions; students will do fieldwork, data analysis, and laboratory work. Recommended prerequisite: Natural Science Inquiry. Also listed as Sci 333; course may be taken only once for credit.
Cross-Listed as: Sci 333U.

**Geog 311U - Climatology (4)**
A study of the physical processes which comprise the climatic system, from the global scale to the local scale. Particular attention is given to the nature of climatic variability, its causes, and its implications for human activity. Recommended prerequisite: Geog 210.

**Geog 312U - Climate Variability and Change (4)**
Provides an understanding of how and why climate varies and changes over space and time. Climate variability is explored across a range of scales from ice ages to monsoon circulations. Examines the scientific basis for anthropogenic climate change and how it differs from natural climate variability.

Students will learn by analyzing climate data, performing experiments with climate models, and researching how climate variability and change impact everyday life. Includes laboratory and/or fieldwork.

Cross-Listed as: Also offered as Sci 334U and may be taken only once for credit.

**Geog 313U - Biogeography (4)**
This course examines current and historical distributions of organisms as explained by environmental and biological factors. The goal of the course is to improve student understanding of how multiple factors such as soil properties, natural selection, climate change, and human activities shape the geography of organisms at local to global scales. Recommended prerequisite: Geog 210.

**Geog 314U - Severe Weather (4)**
Examination of severe and hazardous weather processes such as hurricanes, tornadoes, and thunderstorms. Evaluation of the human-environment interaction of severe weather and the potential consequences of global climate change on the intensity and location of severe weather phenomena. Recommended prerequisite: Geog 210.

**Geog 320 - Geomorphic Processes (4)**
Study of landform processes at the earth's surface including the work of water, wind, and ice in erosion, transportation, and deposition on land and sea. The significance of geomorphic processes to human activities is included. A one- to two-day weekend field trip is required. Three lectures; one 3-hour lab. This course is the same as G 374; course may be taken only once for credit. Expected preparation: Geog 210 and Mth 111.
Corequisite: Geog 320L. Cross-Listed as: G 374.

**Geog 320L - Geomorphic Processes Lab (0)**
Lab for Geog 320.
Corequisite: Geog 320.

**Geog 321 - Mt. Hood (4)**
Examines the physical and cultural systems that shape Mt. Hood and investigates some of the issues that arise when a mostly wild mountain abuts an urban area. Class involves lecture, discussion, research, and field trips.
**Geog 322U - Alpine Environments (4)**
Examines the geocology of high elevation environments in tropical, mid-latitude, and high altitude regions with a special emphasis on the alpine environment of the Pacific Northwest. The primary objective is to promote understanding of the features and processes found in alpine areas including their susceptibility to human alteration. Topics include an examination of high elevation weather and climate, geomorphology, soils, and vegetation. Recommended prerequisite: Geog 210.

**Geog 331U - Geography of Globalization (4)**
An introduction to theories and concepts related to global economic activities within agriculture, manufacturing, service and information industries. The course focuses on global processes and linkages between local and global economies. Includes geographic distributions, areal interaction among urban and regional economies, the processes of regional economic development, and international economic linkages. Recommended prerequisite: upper-division standing.

**Geog 332U - Urban Geography (4)**
Introduction to the geographical factors affecting the development of the modern city. Topics include urban systems and the location of cities; residential, commercial, and industrial structure; social and physical characteristics of cities; the built environment; the urban economy; and planning the urban environment. Recommended prerequisite: upper-division standing.

**Geog 333U - Weather (4)**
Introductory course in the atmospheric environment providing a comprehensive understanding of atmospheric structure and the changes over time that result in the weather we experience. Topics include atmospheric moisture (fog, rain, clouds), atmospheric stability and cloud development, air pressure and winds, air masses and fronts, and hurricanes and tornados. This course is the same as Ph 333; course may be taken only once for credit. Recommended: upper-division standing or Geog 210.
Cross-Listed as: Ph 333U.

**Geog 340U - Global Water Issues and Sustainability (4)**
Examines the availability and quality of freshwater resources around the world. Includes the global water cycle, human use and modifications of global water systems, effects of climate change on global freshwater, water policy in international rivers, and sustainable water resource management. Focuses on case studies in major international rivers.

**Geog 345U - Resource Management (4)**
Survey of natural resources, their occurrence, and their management. Primary focus will be on the United States, with case studies from other countries and regions. Recommended prerequisite: upper division standing.

**Geog 346U - World Population and Food Supply (4)**
An introduction to the dynamics of the current national and international problems associated with rapid population growth, unemployment, major population migrations, shortages of food and other critical commodities, and the present and potential adjustments to these situations. Recommended prerequisite: upper division standing.

**Geog 347U - Environmental Issues and Action (4)**
Examines environmentalism as a phenomenon reflecting cultural appraisals of nature and society's relationship to it. Explores the history and ideology of the environmental movement, and investigates the contemporary structure, concerns, effects, critiques, and directions of environmentalism. Recommended prerequisite: upper division standing.

**Geog 348U - Cultural and Political Ecology (4)**
Introduction to geographic perspectives on cultural and political ecology. Investigates cultural adaptation and environmental change from an ecological perspective, focusing on biomes, cultural adaptations within them and the political structures that influence cultural adaptations. Particular attention to traditional societies and the impacts of development. Recommended prerequisite: upper-division standing.

**Geog 349U - Mountain Geography (4)**
Investigates mountain environments as distinctive biophysical and cultural realms. Surveys the human occupation and use of mountainous areas of Eurasia, Africa, the Pacific, and the Americas, and explores highland-lowland interactions in selected cases. Topics include cultural adaptation, mountain resource management and policy, and developments and its impacts in highland environments.
Geog 350U - Geography of World Affairs (4)
Examines the major world trouble spots in light of long-standing political-geographical rivalries, including ethnic group rivalries, economic disparities, and conflicting historical claims. Particular emphasis will be placed on political organization of territory, nationalism, boundary conflicts, colonialism, and, where relevant, metropolitan political fragmentation. Recommended prerequisite: upper division standing.

Geog 351U - Pacific Northwest (4)
Study of the Pacific Northwest as a region of the United States. Overview of the region and its relationship to other parts of the world will be followed by an analysis of the physical environment, natural resources, agriculture, manufacturing, transportation, population, and urban development. Special attention will be paid to theoretical developments in contemporary regional geography issues. Recommended prerequisite: upper division standing.

Geog 352U - The Himalaya and Tibet (4)
Survey of the physical and cultural landscapes of the Himalaya-Hindukush and the Tibetan Plateau. It investigates not only the places and peoples within it but also ideas about it and their influence on its history and present situation.

Geog 353U - Pacific Rim (4)
Provides a comprehensive look at the events and people shaping the last 150 years of Asia-Pacific history and relates them to Pacific Basin relationships today. Reveals how, from the 19th century onward, modern nations have emerged from the rich and varied cultures and society of Pacific Asia. Particular emphasis is placed on political and economic geography of East Asia in relation to contemporary American and Japanese interests in the region. Recommended prerequisite: upper division standing.

Geog 354U - Europe (4)
Focuses on the changing economic and political geography of Europe, post World War II, and the adjustments to changing world conditions. Analysis of the geographic conditions of individual countries. Examines their population, urban and rural settlements, physical geography, agriculture, and industry. Recommended prerequisite: upper division standing.

Geog 360U - Latin America (4)
Analysis of changing landscapes and lifeways in Latin America. The focus is on physical, cultural, and economic forces that have interacted to create a distinctive world region. Particular attention is given to the impact of large scale issues such as global climate change, trade, the environment, and the debt crisis on the lands and lives of everyday people in the region. Recommended prerequisite: upper division standing.

Geog 361U - Geography of sub-Saharan Africa (4)
A survey course on the physical and human geography of the continent of Africa, focusing on the variability of the physical landscape, including geomorphology, vegetation, and climate and on the patterns and implications of cultural diversity. Examines links between natural resources, economic development, and environmental management on location, national and regional scales. Case studies from various countries and regions will be used.

Geog 364U - The Middle East (4)
A survey of the physical and cultural landscapes of southwestern Asia and North Africa, emphasizing the interaction of environmental factors and dynamic economic and political forces in the region as a whole. Problems common to the nations of the region are examined, including the difficulties of political cohesion, urbanization, and ecological impacts of tradition and contemporary land-use practices. Recommended prerequisite: upper division standing.

Geog 366U - Historical Geography of North America (4)
Survey of the evolving geography of North America during the last four centuries; the formation and growth of regions from the initial period of European exploration and colonization to the present. Topic include the acquisition of geographical knowledge; cultural transfer and acculturation; westward expansion; resource exploitation; regional and national integration; and landscape change. Recommended prerequisite: upper division standing.

Geog 368U - United States and Canada (4)
Survey of the contemporary regional geography of the United States and Canada including physical environments, cultural landscapes, and economic activities. Topics will include the development of
distinctive regions; the changing spatial relationships between the location of resources and population; urban/rural disparities; and national and regional roles in the global economy. Recommended prerequisite: upper division standing.

Geog 375U - Maps, Culture and Society (4)
Explores mapping as a way of understanding human geography. We discuss how maps are embedded in social context, and how they shape the places and spaces in which we live. Topics include historical, cultural, and contemporary usage of maps, the power of maps and critical cartography, participatory mapping and mental maps, and changing mapping technologies.

Geog 380L - Lab for Geog 380 (0)
Lab for Geog 380.
Corequisite: Geog 380U.

Geog 380U - Maps and Geographic Information (4)
Examines maps as communicative tools, analytical devices, and cultural artifacts. Fundamental concepts such as scale, projection, coordinate systems, are reviewed and applied to higher level measurement and analytical methods with thematic and topographic maps. The data requirements and information content of maps are considered with respect to emerging digital geo-spatial technology.
Corequisite: Geog 380L.

Geog 397 - Visualization of Spatial Data (4)
The use of graphic modes for visualizing data as a fundamental tool in geography and other disciplines. Topics include graphic types, bar charts, line graphs, pie graphs, time series, flow charts, organizational charts, scales of measurement, data transformations, and index numbers. Special emphasis on elements of graphic design and design choices in spreadsheets.
Prerequisite: upper-division standing.

Geog 399 - Special Studies (1-6)
See department for course description. (Credit to be arranged.)

Geog 399U - Special Studies (1-4)
(Credit to be arranged.)

Geog 401 - Research (0-6)
See department for course description. (Credit to be arranged.) Consent of instructor.

Geog 403 - Thesis (1-6)
See department for course description. (Credit to be arranged.) Consent of instructor.

Geog 404 - Cooperative Education/Internship (0-12)
See department for course description. (Credit to be arranged.) Pass/no pass only. Consent of instructor.

Geog 405 - Reading and Conference (0-6)
See department for course description. (Credit to be arranged.) Consent of instructor.

Geog 407 - Seminar (0-6)
See department for course description. (Credit to be arranged.)

Geog 409 - Practicum (0-12)
See department for course description. (Credit to be arranged.) Pass/no pass only. Consent of instructor.

Geog 410 - Selected Topics (0-6)
See department for course description. (Credit to be arranged.)

Geog 412 - Global Climate Change Science and Socio-environmental Impact Assessment (4)
Examination of the physical processes of climate change at multiple scales. Evaluation of the potential impacts of climate change on ecosystem, water, human health in urban and non-urban environments. Understanding of integrated models for climate change impact assessment.
Also offered for graduate-level credit as Geog 512 and may be taken only once for credit. Prerequisite: Senior or graduate standing in Geography.

Geog 413 - Disturbance Biogeography of Pacific Northwest (4)
Disturbances are important natural components of all ecosystems, including those in the Pacific Northwest.
Disturbances also present risks to human society, yet these are difficult to assess, prevent and predict. This course will serve as an introduction to disturbance ecology in terrestrial ecosystems in the PNW (i.e. from theory to human modifications of nature), including volcanoes, insect outbreaks, wildfires, landslides, earthquakes, and floods among others. The course includes at least one mandatory day field trip.

Also offered for graduate-level credit as Geog 513 and may be taken only once for credit. Prerequisite: Geog 210; Geog 313 or Bi 351 or Geog 313U.

**Geog 414 - Hydrology (4)**

A detailed analysis of the physical processes of the hydrologic cycle, emphasizing an applied approach for the purposes of resource management and environmental analysis: precipitation, runoff processes, evapotranspiration, soil water, flooding and floodplain utilization, and techniques of hydrologic data analysis. Expected preparation: Geog 210 and Stat 243 and Stat 244.

Also offered for graduate-level credit as Geog 514 and may be taken only once for credit.

**Geog 415 - Soils and Land Use (4)**

The origin, development and distribution of soils and the significance of soil to man. Examines the importance of soil to landforms, vegetation, and ecological development. Major emphasis is given to land use potentials and limitations on various kinds of soils with focus on urban and agricultural settings. There are two half-day field trips. Expected preparation: Geog 210.

Also offered for graduate-level credit as Geog 515 and may be taken only once for credit.

**Geog 418 - Landscape Ecology (4)**

Examines the structure, function, and change of natural and human-modified communities at the scale between individual communities and regional biomes. Focuses on spatial patterns and processes as they relate to the patch mosaic of interacting ecological communities. This is the same course as ESM 418 and may be taken only once for credit. Expected preparation: Geog 313 or Bi 357. Upper-division standing required.

Also offered for graduate-level credit as Geog 518 and may be taken only once for credit. Cross-Listed as: ESM 418.

**Geog 420 - Field Methods in Physical Geography (4)**

Introduces students to field methods in physical geography. The goal is to familiarize the student with field techniques including research and sampling design, field measurements and mapping, data analysis and report writing and the use of field equipment. Field and lab exercises will focus on the examination of natural patterns and processes and those resulting from human activity. Techniques involving vegetation sampling, soil description, microclimatic conditions, and geomorphologic processes will be covered. Expected preparation: eight hours of upper division physical geography or graduate standing.

Also offered for graduate-level credit as Geog 520 and may be taken only once for credit.

**Geog 425 - Field Methods in Human Geography (4)**

Field observation, description, and analysis in human geography. Students explore landscapes in Portland metropolitan region through a series of exercises including sampling techniques, field mapping, and photography supplemented by data collection from census records, tax records, historic maps and photographs, and published accounts about places. Expected preparation: 8 credits of upper division or regional geography or graduate standing.

Also offered for graduate-level credit as Geog 525 and may be taken only once for credit.

**Geog 430 - Cultural Geography (4)**

Explores cultural geography as a subfield of the discipline. Examines the major organizing concepts of cultural geography --cultural ecology, region, landscape, symbolism. Focus is on how these concepts are used in cultural geography, the evolution of research in each area, how the use and application of the concepts have changed over time, current theoretical developments, and how this subfield of geography fits into the discipline. Includes field work project. Expected preparation: Geog 230.

Also offered for graduate-level credit as Geog 530 and may be taken only once for credit.

**Geog 432 - Urban Landscapes (4)**

Analysis of the contemporary built environment of metropolitan areas; social, cultural, political, and economic forces that have given cities their form and image; historical processes of urban development; and messages and meanings of our surroundings. Focuses on common urban landscapes as well as designed spaces. In individual and group projects, students analyze the interrelationships of land use, residential density, street patterns, homes and yards, and open spaces in the Portland metropolitan area. Expected preparation: Geog 332.

Also offered for graduate-level credit as Geog 532 and may be taken only once for credit.
**Geog 440 - The Ecology & Management of Wildfire (4)**

A field-based class offered jointly by the Departments of Environmental Science, Management, and Geography. This class focuses on the complex challenges of managing wildfire in integrated social and ecological systems (SESs) and uses the western US as a case study to focus on the biophysical and social science behind those challenges. The course adds field studies in NE Oregon to understand how integrated SESs manage wildfire and wildfire risks in practice.

Also offered for graduate-level credit as Geog 540 and may be taken only once for credit. Prerequisite: Upper-division standing. Corequisite: None. Cross-Listed as: This is the same course as ESM 440 and may be taken only once for credit.

**Geog 442 - Sustainable Cities (4)**

Examines efforts to create sustainable cities in the United States, drawing on ideas from around the world. Explores complexities of balancing social justice with environmental health and economic vitality. Topics include urban ecology and green city initiatives, new ideas in designing the built environment, growth management and land use planning, community-based efforts to improve quality of life, and challenges of globalization for local economies. Includes fieldwork project, half-day field trips, and community-based learning option. Expected preparation: Geog 332 or Geog 432; USP 311 or USP 313.

Also offered for graduate-level credit as Geog 542 and may be taken only once for credit.

**Geog 445 - Resource Management Topics (4)**

Focuses on advanced topics in administration and management of natural resources. Reviews historical issues and today's struggles for a sustainable approach in the development of natural resource policy. Emphasis will vary, e.g., water resources, energy resources, public lands. Course may be repeated once for a total of 8 credits with different topics.

Also offered as graduate-level credit as Geog 545 and may be taken only once for credit. Prerequisite: upper-division standing.

**Geog 446 - Water Resource Management (4)**

Analysis of the distribution, use, and management of water resources, emphasizing the systems of water rights, legislation, and regulations which govern water resources. Issues of water development and water quality are examined. Focus is on U.S. water resources, with case studies from other countries and regions. Examples are drawn from local, regional, and international water resource management schemes. Expected preparation: upper-division standing.

Also offered for graduate-level credit as Geog 546 and may be taken only once for credit.

**Geog 447 - Urban Streams (4)**

Investigates issues associated with human dimensions of streams in the urban environment. Topics include the role of streams in the built environment, human modifications of stream systems and their consequences (e.g., disappearing streams, channelization), and local community responses to restore and protect urban streams. Case studies are drawn from national and international streams as well as local streams in the Portland metropolitan area. Expected preparation: Geog 345 or Geog 347 or Geog 432.

Also offered for graduate-level credit as Geog 547 and may be taken only once for credit.

**Geog 448 - The Urban Forest (4)**

Examination of issues related to trees in the urban environment. Topics will include the values and roles of urban trees, species identification, site selection, spatial structure of the urban forest, management and regulation of urban trees, and techniques for evaluating the health of the urban forest and public and governmental efforts to promote urban trees. Expected preparation: one or more of Geog 313, Geog 413, Geog 415, Geog 432, Bi 357.

Also offered for graduate-level credit as Geog 548 and may be taken only once for credit.

**Geog 449 - Geography of Food (4)**

This class explores the geography of food: food production, distribution, preparation, and consumption; food politics, markets, urban and commercial farming; food movements, connections of cuisines and regions, and foods and farming in the Pacific Northwest.

Also offered as graduate-level credit as Geog 549 and may be taken only once for credit. Prerequisite: Upper-division or graduate standing.

**Geog 462 - Sense of Place (4)**

Places are created by people, infused with meaning, and tied to personal experience. This course explores meaning in landscapes and identity in places, regions, and localities. It looks at places through three frameworks: place description and depiction (in media images, popular narratives, scholarly writings, photography, and art); the meanings and messages of places; and our personal experience and connections to places. Topics include: the distinctiveness of places, bioregional influences, personal memory and
place, creating meaning in places, global-local tensions, territoriality, and contested places.

Also offered for graduate-level credit as Geog 562 and may be taken only once for credit.

Geog 465 - Tuscany: Sustainability in City and Country (4)

Explores historic and contemporary connections between city and country in Tuscany within a framework of environmental, social, and economic sustainability. Topics include rural land use, sustainable agriculture and forestry, food production and food networks, agritourism, landscape stewardship, urban design, and alternative energy production. Examines international transferability of sustainability concepts. Expected preparation: junior/senior or graduate class standing; relevant experience; permission of instructor.

Also offered for graduate-level credit as Geog 565 and may be taken only once for credit.

Geog 467 - Community Resilience in Coupled Socio-Ecological Systems (4)

Examines community vulnerability, adaptation, and resilience to environmental risks and hazards in the coupled human and natural systems from a geographical and spatial science perspective. Focuses on US and international case studies in major urban areas to investigate the questions of “why, when, for whom, and how” of community resilience across scales.

Also offered for graduate-level credit as Geog 567 and may be taken only once for credit. Prerequisite: Geog 230.

Geog 472 - Critical GIS (2)

Explores the connections between GIS and the society it represents and serves, and the hidden implications embedded within GIS technology. Investigates whether GIS can be developed to reflect more complex perceptions of space and place that are not based on traditional mapping forms. Topics also include the implications of ongoing technological change, the democratization of mapping, and the ethics of GIS practice as well as the accessibility of GIS data and tools to all.

Also offered for graduate-level credit as Geog 572 and may be taken only once for credit. Prerequisite: Geog 488 or equivalent.

Geog 475 - Digital Compilation and Database Design (4)

Class in applied geographic information systems featuring the project development of new digital geospatial data. Students learn to digitize existing map documents, design information databases to be used with these data, and employ a standardized documentation format to describe the database.

Also offered for graduate-level credit as Geog 575 and may be taken only once for credit. Prerequisite: Geog 488/588, prior or concurrent enrollment in Geog 492/592.

Geog 476 - 3D Terrain Analysis & Visualization (2)

Introduction to the theory and methods of the analysis and visualization of 3D digital elevation data. Topics include GIS terrain data models, terrain surface analysis, watershed delineation, and 3D visualization. Computer lab included.

Also offered for graduate-level credit as Geog 576 and may be taken only once for credit. Prerequisite: Upper-division standing.

Geog 477 - Photogrammetry and LiDAR (2)

Introduction to the generation, compilation, and applications of digital elevation data derived from photogrammetry and LiDAR. Topics include UAS, digital photogrammetry, structure from motion, and LiDAR data processing. Computer lab included.

Also offered for graduate-level credit as Geog 577 and may be taken only once for credit. Prerequisite: Upper-division standing.

Geog 480 - Remote Sensing and Image Analysis (4)

Visual interpretation and measurement from remotely sensed imagery used for mapping and spatial data development. Analysis of air photo pattern recognition and scale distortions. Examination of various satellite imaging platforms and product characteristics.

Also offered for graduate-level credit as Geog 580 and may be taken only once for credit. Prerequisite: Geog 380U.

Geog 481 - Digital Image Analysis I: Introduction (4)

Interpretation and measurement from digital satellite imagery used for interpretation of the earth's surface. Analysis will be largely based on the application of computer technology to imagery. The emphasis will be on natural landforms and vegetative cover. Expected preparation: Geog 480.

Also offered for graduate-level credit as Geog 581 and may be taken only once for credit.

Geog 482 - Digital Image Analysis II: Advanced Remote Sensing (4)

Advanced topics in digital remote sensing including image classification methods for geographic
information extraction, digital change detection methods for measuring land use/land cover change, and advanced algorithms for digital image analysis. Includes computer exercises in classification and change detection using leading image processing software packages.

Also offered for graduate-level credit as Geog 582 and may be taken only once for credit. Prerequisite: Geog 481.

**Geog 484 - Cartographic Applications of GIS (4)**

Provides a general introduction to GIS by focusing on the mapmaking capabilities of GIS software. Topics include basic cartographic principles of visual communication and representation, how to turn geographic datasets into effective maps both for print and the web, and how to critique maps.

Also offered for graduate-level credit as Geog 584 and may be taken only once for credit. Prerequisite: Geog 380U.

**Geog 485 - Map Design and Production (4)**

Introduction to the planning and execution of a map, with special emphasis on the arrangement of its graphic elements. Students will use cartographic and illustration software in the compilation, design and production of maps.

Also offered as graduate-level credit as Geog 585 and may be taken only once for credit. Prerequisite: Geog 380U and Geog 484 or Geog 488 or USP 591.

**Geog 488 - Geographic Information Systems I: Introduction (4)**

Introduces the general principles and application of Geographic Information Systems (GIS). Topics include geographic data models, the nature of geographic data, databases, data collection, mapmaking, and spatial analysis techniques. Students will use GIS software to complete a series of computer lab exercises that demonstrate a variety of approaches to the analysis and display of spatial data. Students enrolling in this class also must register for a computer lab section. This is the same course as USP 591 and may be taken only once for credit.

Also offered for graduate-level credit as Geog 588 and may be taken only once for credit. Prerequisite: Geog 380U or equivalent experience. Corequisite: Geog 488L. Cross-Listed as: USP 591.

**Geog 488L - GIS Lab (0)**

Lab for G 488.

**Geog 489 - Building a GIS Database with GPS (4)**

Develops knowledge and skills necessary to use the global positioning systems (GPS) to collect, process, and use geographic data. GPS theory and techniques through field survey experiences. Collect and integrate spatial and nonspatial data within an integrated geographic information system (GIS) framework.

Also offered for graduate-level credit as Geog 589 and may be taken only once for credit. Prerequisite: Geog 488.

**Geog 490 - GIS Programming (4)**

Introduction to GIS programming languages for customizing applications and streamlining spatial analysis. Topics include GIS software environment, programming syntax and styles, interface customization, GIS routines and functions, and basic algorithms. Programming lab included.

Also offered for graduate-level credit as Geog 590 and may be taken only once for credit. Prerequisite: Geog 488.

**Geog 492 - Geographic Information Systems II: Advanced GIS (4)**

Analysis and applications of geographic information systems concepts and technology to land planning and management issues. The multipurpose land information systems concept is used as an organizing device for spatial registration of data layers to achieve data sharing and compatibility among functions. User needs assessment and systems design provides the basis for systems procurement, implementation, and use. Students enrolling in this class also must register for a computer lab section. This is the same course as USP 592 and may be taken only once for credit.

Also offered for graduate-level credit as Geog 592 and may be taken only once for credit. Prerequisite: Geog 488 or USP 591L. Corequisite: Geog 492L. Cross-Listed as: USP 592.

**Geog 492L - GIS II Lab (0)**

Lab for G 492.

**Geog 494 - GIS for Water Resources (4)**

Applications of Geographic Information Systems (GIS) in hydrology and water resource management. Topics include hydrologic networks, watershed characterization by GIS, river channel modeling with GIS, GIS modeling and visualization of hydrographic data, time-series water resource data representation and analysis in GIS, and issues in the applications of
Also offered for graduate-level credit as Geog 594 and may be taken only once for credit.

Geog 495 - Maps, Models, and GIS (4)
Analysis and display of spatial data, emphasizing environmental questions within the framework of the raster data model. Topics include an introduction to general systems theory, the nature of models, cartographic model development, model implementation procedures, map algebra, vector/raster data conversion, guidelines for symbol usage, and the incorporation of digital remote sensing data into map models. Expected preparation: Geog 485.
Also offered for graduate-level credit as Geog 595 and may be taken only once for credit. Prerequisite: Geog 380U.

Geog 496 - Introduction to Spatial Quantitative Analysis (4)
Introductory course on quantitative geographic inquiry. Focus on fundamental techniques for the analysis of spatial and non-spatial data as applied to geographic problem scenarios. Topics include the nature of data, descriptive statistics, data exploration, distributions, sampling, and statistical inference. Expected preparation: 12 hours of coursework in geography.
Also offered for graduate-level credit as Geog 596 and may be taken only once for credit.

Geog 497 - Advanced Spatial Quantitative Analysis (4)
Introduction to the principles of inferential spatial statistics. Topics include point pattern analysis, spatial autocorrelation, spatial interpolation, and multivariate spatial data analysis.
Also offered for graduate-level credit as Geog 597 and may be taken only once for credit. Prerequisite: Stat 243 or Geog 496.

Geog 501 - Research (0-9)
See department for course description. (Credit to be arranged.) Consent of instructor.

Geog 502 - Independent Study (1-9)
(Credit to be arranged.)

Geog 503 - Thesis (0-9)
See department for course description. (Credit to be arranged.) Consent of instructor.

Geog 504 - Cooperative Education/Internship (0-9)
See department for course description. Consent of instructor. (Credit to be arranged.)

Geog 505 - Reading and Conference (0-6)
See department for course description. (Credit to be arranged.) Consent of instructor.

Geog 506 - Special Projects (1-12)
(Credit to be arranged.)

Geog 507 - Seminar (0-6)
See department for course description. (Credit to be arranged.)

Geog 509 - Practicum (0-12)
See department for course description. (Credit to be arranged.) Consent of instructor.

Geog 510 - Selected Topics (0-6)
See department for course description. (Credit to be arranged.)

Geog 512 - Global Climate Change Science and Socio-environmental Impact Assessment (4)
Examination of the physical processes of climate change at multiple scales. Evaluation of the potential impacts of climate change on ecosystem, water, human health in urban and non-urban environments. Understanding of integrated models for climate change impact assessment.
Also offered for undergraduate-level credit as Geog 412 and may be taken only once for credit.

Geog 513 - Disturbance Biogeography of Pacific Northwest (4)
Disturbances are important natural components of all ecosystems, including those in the Pacific Northwest. Disturbances also present risks to human society, yet these are difficult to assess, prevent and predict. This
course will serve as an introduction to disturbance ecology in terrestrial ecosystems in the PNW (i.e. from theory to human modifications of nature), including volcanoes, insect outbreaks, wildfires, landslides, earthquakes, and floods among others. The course includes at least one mandatory day field trip. Expected preparation: Geog 210, Geog 313 or Bio 357.

Also offered for undergraduate-level credit as Geog 413 and may be taken only once for credit.

**Geog 514 - Hydrology (4)**

A detailed analysis of the physical processes of the hydrologic cycle, emphasizing an applied approach for the purposes of resource management and environmental analysis: precipitation, runoff processes, evapotranspiration, soil water, flooding and floodplain utilization, and techniques of hydrologic data analysis.

Also offered for undergraduate-level credit as Geog 414 and may be taken only once for credit.

**Geog 515 - Soils and Land Use (4)**

The origin, development and distribution of soils and the significance of soil to man. Examines the importance of soil to landforms, vegetation, and ecological development. Major emphasis is given to land use potentials and limitations on various kinds of soils with focus on urban and agricultural settings. There are two half-day field trips.

Also offered for undergraduate-level credit as Geog 415 and may be taken only once for credit.

**Geog 518 - Landscape Ecology (4)**

Examines the structure, function, and change of natural and human-modified communities at the scale between individual communities and regional biomes. Focuses on spatial patterns and processes as they relate to the patch mosaic of interacting ecological communities. This is the same course as ESM 518 and may be taken only once for credit.

Also offered for undergraduate-level credit as Geog 418 and may be taken only once for credit. Cross-Listed as: ESM 518.

**Geog 520 - Field Methods in Physical Geography (4)**

Introduces students to field methods in physical geography. The goal is to familiarize the student with field techniques including research and sampling design, field measurements and mapping, data analysis and report writing and the use of field equipment. Field and lab exercises will focus on the examination of natural patterns and processes and those resulting from human activity. Techniques involving vegetation sampling, soil description, microclimatic conditions, and geomorphologic processes will be covered.

Also offered for undergraduate-level credit as Geog 420 and may be taken only once for credit.

**Geog 521 - Geographic Thought (4)**

Geography as a professional field. The first half of the course deals with the history of geographic thought and literature. The second half focuses on the role of geography among the arts and sciences and on more recent developments in the field. Required of all graduate students in geography.

**Geog 522 - Research Design (4)**

A guided program for preparing graduate research papers and theses in geography. Attention is given to formulating topics, developing hypotheses, determining researchability, acquiring and analyzing data, developing conclusions, and organizing and writing reports. Required of all graduate students in geography.

**Geog 523 - Geographic Research and Applications (1)**

Applications of theory and method in geography through discussion of faculty research; relates theoretical underpinnings of the discipline to faculty research agendas, broadens perspectives on geographical research questions. Required of all geography graduate students.

**Geog 525 - Field Methods in Human Geography (4)**

Field observation, description, and analysis in human geography. Students explore landscapes in Portland metropolitan region through a series of exercises including sampling techniques, field mapping, and photography supplemented by data collection from census records, tax records, historic maps and photographs, and published accounts about places.

Also offered for undergraduate-level credit as Geog 425 and may be taken only once for credit.

**Geog 530 - Cultural Geography (4)**

Explores cultural geography as a subfield of the discipline. Examines the major organizing concepts of cultural geography—cultural ecology, region, landscape, symbolism. Focus is on how these concepts are used in cultural geography, the evolution of research in each area, how the use and application of the concepts have changed over time, current theoretical developments, and how this
subfield of geography fits into the discipline. Includes field work project.
Also offered for undergraduate-level credit as Geog 430 and may be taken only once for credit.

**Geog 532 - Urban Landscapes (4)**
Analysis of the contemporary built environment of metropolitan areas; social, cultural, political, and economic forces that have given cities their form and image; historical processes of urban development; and messages and meanings of our surroundings. Focuses on common urban landscapes as well as designed spaces. In individual and group projects, students analyze the interrelationships of land use, residential density, street patterns, homes and yards, and open spaces in the Portland metropolitan area. Also offered for undergraduate-level credit as Geog 432 and may be taken only once for credit.

**Geog 540 - The Ecology and Management of Wildfire (4)**
A field-based class offered jointly by the Departments of Environmental Science Management and Geography. This class focuses on the complex challenges of managing wildfire in integrated social and ecological systems (SESs) and uses the western US as case study to focus on the biophysical and social science behind those challenges. The course adds field studies in NE Oregon to understand how integrated SESs manage wildfire and wildfire risks in practice. Also offered for undergraduate-level credit as GEOG 440 and may be taken only once for credit. Cross-Listed as: This is the same course as ESM 540 and may be taken only once for credit.

**Geog 542 - Sustainable Cities (4)**
Examines efforts to create sustainable cities in the United States, drawing on ideas from around the world. Explores complexities of balancing social justice with environmental health and economic vitality. Topics include urban ecology and green city initiatives, new ideas in designing the built environment, growth management and land use planning, community-based efforts to improve quality of life, and challenges of globalization for local economies. Includes fieldwork project, half-day field trips, and community based learning option. Also offered for undergraduate-level credit as Geog 442 and may be taken only once for credit.

**Geog 545 - Resource Management Topics (4)**
Focuses on advanced topics in administration and management of natural resources. Reviews historical issues and today’s struggles for a sustainable approach in the development of natural resource policy. Emphasis will vary, e.g. water resources, energy resources, public lands. Course may be repeated once for a total of 8 credits with different topics. Also offered as undergraduate-level credit as Geog 445 and may be taken only once for credit.

**Geog 546 - Water Resource Management (4)**
Analysis of the distribution, use and management of water resources, emphasizing the systems of water rights, legislation, and regulations which govern water resources. Issues of water development and water quality are examined. Focus is on U.S. water resource, with case studies from other countries and regions. Examples are drawn from local, regional, and international water resource management schemes. Also offered for undergraduate-level credit as Geog 446 and may be taken only once for credit.

**Geog 547 - Urban Streams (4)**
Investigates issues associated with human dimensions of streams in the urban environment. Topics include the role of streams in the built environment, human modifications of stream systems and their consequences (e.g., disappearing streams, channelization), and local community responses to restore and protect urban streams. Case studies are drawn from national and international streams as well as local streams in the Portland metropolitan area. Also offered for undergraduate-level credit as Geog 447 and may be taken only once for credit.

**Geog 548 - The Urban Forest (4)**
Examination of issues related to trees in the urban environment. Topics will include the values and roles of urban trees, species identification, site selection, spatial structure of the urban forest, management and regulation of urban trees, and techniques for evaluating the health of the urban forest and public and governmental efforts to promote urban trees. Also offered for undergraduate-level credit as Geog 448 and may be taken only once for credit.

**Geog 549 - Geography of Food (4)**
This class explores the geography of food: food production, distribution, preparation, and consumption; food politics, markets, urban and commercial farming; food movements, connections of cuisines and regions, and foods and farming in the Pacific Northwest. Also offered as undergraduate-level credit as Geog 449 and may be taken only once for credit.
Geog 562 - Sense of Place (4)

Places are created by people, infused with meaning, and tied to personal experience. This course explores meaning in landscapes and identity in places, regions, and localities. It looks at places through three frameworks: place description and depiction (in media images, popular narratives, scholarly writings, photography, and art); the meanings and messages of places; and our personal experience and connections to places. Topics include: the distinctiveness of places, bioregional influences, personal memory and place, creating meaning in places, global-local tensions, territoriality, and contested places.

Also offered for undergraduate-level credit as Geog 462 and may be taken only once for credit..

Geog 565 - Tuscany: Sustainability in City and Country (4)

Explores historic and contemporary connections between city and country in Tuscany within a framework of environmental, social, and economic sustainability. Topics include rural land use, sustainable agriculture and forestry, food production and food networks, agritourism, landscape stewardship, urban design, and alternative energy production. Examines international transferability of sustainability concepts.

Also offered for undergraduate-level credit as Geog 465 and may be taken only once for credit..

Geog 567 - Community Resilience in Coupled Socio-Ecological Systems (4)

Examines community vulnerability, adaptation, and resilience to environmental risks and hazards in the coupled human and natural systems from a geographical and spatial science perspective. Focuses on US and international case studies in major urban areas to investigate the questions of “why, when, for whom, and how” of community resilience across scales.

Also offered for undergraduate-level credit as Geog 467 and may be taken only once for credit. Cross-Listed as: This course is the same as EMCR 567 and may be taken only once for credit.

Geog 572 - Critical GIS (2)

Explores the connections between GIS and the society it represents and serves, and the hidden implications embedded within GIS technology. Investigates whether GIS can be developed to reflect more complex perceptions of space and place that are not based on traditional mapping forms. Topics also include the implications of ongoing technological change, the democratization of mapping, and the ethics of GIS practice as well as the accessibility of GIS data and tools to all.

Also offered for undergraduate-level credit as Geog 472 and may be taken only once for credit. Prerequisite: Geog 588 or equivalent.

Geog 574 - Methods and Models in Socio-Ecological Systems (4)

Evaluates changing socioecological systems in a holistic way, drawing multiple disciplines, including ecology, economics, engineering, and geographical and spatial sciences. Introduces methods and models from multiple disciplines to analyze socioecological systems across biophysical, social, economic, and cultural contexts. Provides an interdisciplinary foundation for evaluating socioecological systems. Expected preparation: 12 hours of coursework in upper-level social and physical sciences.

Also offered as Geog 674 and may be taken only once for credit.

Geog 575 - Digital Compilation and Database Design (4)

Class in applied geographic information systems featuring the project development of new digital geo-spatial data. Students learn to digitize existing map documents, design information databases to be used with these data, and employ a standardized documentation format to describe the database.

Also offered for undergraduate-level credit as Geog 475 and may be taken only once for credit. Prerequisite: Geog 488/588, prior or concurrent enrollment in Geog 492/592.

Geog 576 - 3D Terrain Analysis & Visualization (2)

Introduction to the theory and methods of the analysis and visualization of 3D digital elevation data. Topics include GIS terrain data models, terrain surface analysis, watershed delineation, and 3D visualization. Computer lab included.

Also offered for undergraduate-level credit as Geog 476 and may be taken only once for credit. Prerequisite: Geog 588.

Geog 577 - Photogrammetry and LiDAR (2)

Introduction to the generation, compilation, and applications of digital elevation data derived from photogrammetry and LiDAR. Topics include UAS, digital photogrammetry, structure from motion, and LiDAR data processing. Computer lab included.

Also offered for undergraduate-level credit as Geog 477 and may be taken only once for credit. Prerequisite: Geog 588.
Geog 580 - Remote Sensing and Image Analysis (4)
Visual interpretation and measurement from remotely sensed imagery used for mapping and spatial data development. Analysis of air photo pattern recognition and scale distortions. Examination of various satellite imaging platforms and product characteristics.
Also offered for undergraduate-level credit as Geog 480 and may be taken only once for credit.

Geog 581 - Digital Image Analysis I: Introduction (4)
Interpretation and measurement from digital satellite imagery used for interpretation of the earth’s surface. Analysis will be largely based on the application of computer technology to imagery. The emphasis will be on natural landforms and vegetative cover.
Also offered for undergraduate-level credit as Geog 481 and may be taken only once for credit.

Geog 582 - Digital Image Analysis II: Advanced Remote Sensing (4)
Advanced topics in digital remote sensing including image classification methods for geographic information extraction, digital change detection methods for measuring land use/land cover change, and advanced algorithms for digital image analysis. Includes computer exercises in classification and change detection using leading image processing software packages.
Also offered for undergraduate-level credit as Geog 482 and may be taken only once for credit.
Prerequisite: Geog 481/581.

Geog 584 - Cartographic Applications of GIS (4)
Provides a general introduction to GIS by focusing on the mapmaking capabilities of GIS software. Topics include basic cartographic principles of visual communication and representation, how to turn geographic datasets into effective maps both for print and the web, and how to critique maps.
Also offered for undergraduate-level credit as Geog 484 and may be taken only once for credit.

Geog 585 - Map Design and Production (4)
Introduction to the planning and execution of a map, with special emphasis on the arrangement of its graphic elements. Students will use cartographic and illustration software in the compilation, design and production of maps.
Also offered as undergraduate-level credit as Geog 485 and may be taken only once for credit.

Geog 588 - Geographic Information Systems I: Introduction (4)
Introduces the general principles and application of Geographic Information Systems (GIS). Topics include geographic data models, the nature of geographic data, databases, data collection, mapmaking, and spatial analysis techniques. Students will use GIS software to complete a series of computer lab exercises that demonstrate a variety of approaches to the analysis and display of spatial data. Students enrolling in this class also must register for a computer lab section. This is the same course as USP 591 and may be taken only once for credit.
Also offered for undergraduate-level credit as Geog 488 and may be taken only once for credit.
Corequisite: Geog 588L. Cross-Listed as: USP 591.

Geog 588L - GIS Lab (0)
Lab for G 588.

Geog 589 - Building a GIS Database with GPS (4)
Develops knowledge and skills necessary to use the global positioning systems (GPS) to collect, process, and use geographic data. GPS theory and techniques through field survey experiences. Collect and integrate spatial and nonspatial data within an integrated geographic information system (GIS) framework.
Also offered for undergraduate-level credit as Geog 489 and may be taken only once for credit.
Prerequisite: Geog 488/588.

Geog 590 - GIS Programming (4)
Introduction to GIS programming languages for customizing applications and streamlining spatial analysis. Topics include GIS software environment, programming syntax and styles, interface customization, GIS routines and functions, and basic algorithms. Programming lab included.
Also offered for undergraduate-level credit as Geog 490 and may be taken only once for credit.
Prerequisite: Geog 488/588.

Geog 591 - Professionalism in GIS (2)
Students meet in a seminar format to learn from each other, from faculty members, from community partners, and from other experts and practitioners in the field of Geographic Information System. Presentations, dialogue, and case exploration will offer learning about current issues and practices in the GIS industry. Topics will include the GIS body of knowledge, trends in the field, community activities,
professionalization, GIS ethics, and the many practical dimensions of GIS as a career path.

Prerequisite: Geog 588.

**Geog 592 - Geographic Information Systems II: Advanced GIS (4)**

Analysis and applications of geographic information systems concepts and technology to land planning and management issues. The multipurpose land information systems concept is used as an organizing device for spatial registration of data layers to achieve data sharing and compatibility among functions. User needs assessment and systems design provides the basis for systems procurement, implementation, and use. Students enrolling in this class also must register for a computer lab section. This is the same course as USP 592 and may be taken only once for credit.

Also offered for undergraduate-level credit as Geog 492 and may be taken only once for credit.

Prerequisite: Geog 488/588 or USP 591. Corequisite: Geog 592L. Cross-Listed as: USP 592.

**Geog 592L - GIS II Lab (0)**

Lab for G 592.

**Geog 594 - GIS for Water Resources (4)**

Applications of Geographic Information Systems (GIS) in hydrology and water resource management. Topics include hydrologic networks, watershed characterization by GIS, river channel modeling with GIS, GIS modeling and visualization of hydrographic data, time-series water resource data representation and analysis in GIS, and issues in the applications of GIS for watershed management.

Also offered for undergraduate-level credit as Geog 494 and may be taken only once for credit.

**Geog 595 - Maps, Models, and GIS (4)**

Analysis and display of spatial data, emphasizing environmental questions within the framework of the raster data model. Topics include an introduction to general systems theory, the nature of models, cartographic model development, model implementation procedures, map algebra, vector/raster data conversion, guidelines for symbol usage, and the incorporation of digital remote sensing data into map models. Expected preparation Geog 485/585.

Also offered for undergraduate-level credit as Geog 495 and may be taken only once for credit.

**Geog 596 - Introduction to Spatial Quantitative Analysis (4)**

Introductory course on quantitative geographic inquiry. Focus on fundamental techniques for the analysis of spatial and non-spatial data as applied to geographic problem scenarios. Topics include the nature of data, descriptive statistics, data exploration, distributions, sampling, and statistical inference. Expected preparation: 12 hours of coursework in geography.

Also offered for undergraduate-level credit as Geog 496 and may be taken only once for credit.

**Geog 597 - Advanced Spatial Quantitative Analysis (4)**

Introduction to the principles of inferential spatial statistics. Topics include point pattern analysis, spatial autocorrelation, spatial interpolation, and multivariate spatial data analysis.

Also offered for undergraduate-level credit as Geog 497 and may be taken only once for credit.

Prerequisite: Stat 243 or Geog 496.

**Geog 601 - Research (0-12)**

See department for course description. (Credit to be arranged.)

**Geog 603 - Dissertation (0-12)**

See department for course description. (Credit to be arranged.)

**Geog 605 - Reading and Conference (0-8)**

See department for course description. (Credit to be arranged.)

**Geog 607 - Seminar (0-12)**

See department for course description. (Credit to be arranged.)

**Geog 674 - Methods and Models in Socio-ecological Systems (4)**

Evaluates changing socioecological systems in a holistic way, drawing multiple disciplines, including ecology, economics, engineering, and geographical and spatial sciences. Introduces methods and models from multiple disciplines to analyze socioecological systems across biophysical, social, economic, and cultural contexts. Provides an interdisciplinary foundation for evaluating socioecological systems.
Expected preparation: 12 hours of coursework in upper-level social and physical sciences. Also offered as Geog 574 and may be taken only once for credit.

**Ger - Germanic Languages**

**Ger 101 - First-Year German Term 1 (4)**
Beginning German. Emphasis on communication skills: listening, speaking, reading, writing. This is the first course in a sequence of three: Ger 101, Ger 102, and Ger 103.

**Ger 102 - First-Year German Term 2 (4)**
Beginning German. Emphasis on communication skills: listening, speaking, reading, writing. This is the second course in a sequence of three: Ger 101, Ger 102, and Ger 103.

**Ger 103 - First-Year German Term 3 (4)**
Beginning German. Emphasis on communication skills: listening, speaking, reading, writing. This is the third course in a sequence of three: Ger 101, Ger 102, and Ger 103.

**Ger 150 - First-year German (Intensive) (6)**
A two-term course covering the content of Ger 102, 102, 103.

**Ger 151 - First-year German (Intensive) (6)**
A two-term course covering the content of Ger 102, 102, 103.

**Ger 199 - Special Studies (0-6)**
(Credit to be arranged.)

**Ger 201 - Second-Year German Term 1 (4)**
Intensive review of basics introduced in first year courses and further development of communication skills. This is the first course in a sequence of three: Ger 201, Ger 202, and Ger 203. Expected preparation: Ger 103.

**Ger 202 - Second-Year German Term 2 (4)**
Intensive review of basics introduced in first year courses and further development of communication skills. This is the second course in a sequence of three: Ger 201, Ger 202, and Ger 203. Expected preparation: Ger 103.

**Ger 203 - Second-Year German Term 3 (4)**
Intensive review of basics introduced in first year courses and further development of communication skills. This is the third course in a sequence of three: Ger 201, Ger 202, and Ger 203. Expected preparation: Ger 103.

**Ger 299 - Special Studies (1-12)**
(Credit to be arranged.)

**Ger 301 - Third-Year German Term 1 (4)**
Continued development of speaking, listening, reading and writing skills through study of appropriate texts, conversation, activities, and written assignments. This is the first course in a sequence of three: Ger 301, Ger 302, and Ger 303. Expected preparation: Ger 203.

**Ger 302 - Third-Year German Term 2 (4)**
Continued development of speaking, listening, reading and writing skills through study of appropriate texts, conversation, activities, and written assignments. This is the second course in a sequence of three: Ger 301, Ger 302, and Ger 303. Expected preparation: Ger 203.

**Ger 303 - Third-Year German Term 3 (4)**
Continued development of speaking, listening, reading and writing skills through study of appropriate texts, conversation, activities, and written assignments. This is the third course in a sequence of three: Ger 301, Ger 302, and Ger 303. Expected preparation: Ger 203.

**Ger 320 - German for the Working World (4)**
Intensive application of language for advanced everyday proficiency, career exploration, and employment. Exploration of German-speaking companies: business practices, corporate structure, human resources, product development, marketing, finance, law, cultural aspects. Development of skills in different modes of communication as appropriate in business settings. Hands-on development of
simulated or actual student-run companies. Expected preparation: Ger 203.

Ger 325 - German Phonetics and Phonology (4)
Introduction to the sounds of German: their place and manner of articulation (phonetics) as well as how they pattern with respect to each other and as influenced by morphological and syntactic factors (phonology). Conducted in English. Expected preparation: Ger 203.

Ger 330 - Topics in Culture and Civilization (4)
Study of the historical development of life, thought, and the arts in German-speaking lands in times and places such as the Middle Ages, 19th-century Vienna, 20th-century Berlin, the Weimar period, the present, or in fields such as film. Expected preparation: Ger 203.

Ger 340 - Fundamentals of German Literary Studies (4)
An introduction to the study of German literature. Lectures and discussion on German prosody, genres, fundamentals of literary analysis and criticism. Expected preparation: Ger 203.

Ger 341U - Introduction to German Literature (4)
Readings from representative German authors from the Middle Ages to the present. This is the first course in a sequence of two: Ger 341 and Ger 342. Expected preparation: Ger 203.

Ger 342 - Introduction to German Literature (4)
Readings from representative German authors from the Middle Ages to the present. This is the second course in a sequence of two: Ger 341 and Ger 342. Expected preparation: Ger 203.

Ger 399 - Special Studies (1-12)
(Credit to be arranged.)

Ger 401 - Research (1-9)
(Credit to be arranged.)

Ger 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Ger 405 - Reading and Conference (1-12)
(Credit to be arranged.)

Ger 407 - Seminar (1-12)
(Credit to be arranged.)

Ger 408 - Workshop (1-12)
(Credit to be arranged.)

Ger 409 - Practicum (1-12)
(Credit to be arranged.)

Ger 410 - Selected Topics (1-12)
(Credit to be arranged.)

Ger 410U - Selected Topics (4)
(Credit to be arranged.)

Ger 411 - Advanced German (4)
Special features of German; selected writing and reading assignments, discussion. This is the first course in a sequence of two: Ger 411 and Ger 412. Expected preparation: Ger 302. Also offered for graduate-level credit as Ger 511 and may be taken only once for credit.

Ger 412 - Advanced German (4)
Special features of German; selected writing and reading assignments, discussion. This is the second course in a sequence of two: Ger 411 and Ger 412. Expected preparation: Ger 302. Also offered for graduate-level credit as Ger 512 and may be taken only once for credit.

Ger 414 - Advanced German Grammar (4)
Structural review of German morphology and syntax. Expected preparation: Ger 302. Also offered for graduate-level credit as Ger 514 and may be taken only once for credit.
Ger 415 - Business German (4)

Ger 420 - German for the Working World (Advanced) (4)
Intensive application of language for upper-level advanced proficiency, career exploration, and employment. Exploration of German-speaking companies: business practices, corporate structure, human resources, product development, marketing, finance, law, cultural aspects. Development of skills in different modes of communication as appropriate in business settings. Hands-on development of simulated or actual student-run companies. Prerequisite: Ger 301 or equivalent whether taken previously or concurrently.

Ger 421 - German Short Prose (4)
Study of the German Novelle and other shorter prose of the 19th and 20th centuries. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342. Also offered for graduate-level credit as Ger 521 and may be taken only once for credit.

Ger 422 - 18th Century German Literature (4)
Study of the poetry, drama, and prose of the German Enlightenment and the Sturm und Drang. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342.

Ger 427 - The Age of Goethe (4)
Study of German poetry, drama, and prose from the Sturm und Drang and Classicism to the beginning of Romanticism. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342. Also offered for graduate-level credit as Ger 527 and may be taken only once for credit.

Ger 428 - German Romanticism (4)
Study of the literature, art, and aesthetic theories of late 18th and 19th century Germany. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342. Also offered for graduate-level credit as Ger 528 and may be taken only once for credit.

Ger 429 - German Realism and Naturalism (4)
Study of the poetry, drama, and prose of the second half of the 19th century. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342. Also offered for graduate-level credit as Ger 529 and may be taken only once for credit.

Ger 433 - German Literature of the 20th Century (4)
Readings in modern poetry, drama, and prose. Ger 433/533: from the turn of the century to the end of World War II; Ger 434/534: from the post-war years to the present. This is the first course in a sequence of two: Ger 433 and Ger 434. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342. Also offered for graduate-level credit as Ger 533 and may be taken only once for credit.

Ger 434 - German Literature of the 20th Century (4)
Readings in modern poetry, drama, and prose. Ger 433/533: from the turn of the century to the end of World War II; Ger 434/534: from the post-war years to the present. This is the second course in a sequence of two: Ger 433 and Ger 434. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342. Also offered for graduate-level credit as Ger 534 and may be taken only once for credit.

Ger 441U - Major Works in Translation (4)
Study of selections from masterpieces of German literature in translation, such as Goethe, the Weimar period, German Intellectual History, Ancient Myth in German Literature. Readings, lectures, and discussions in English. Expected preparation: 4 credits of upper division literature. Also offered for graduate-level credit as Ger 541 and may be taken only once for credit.

Ger 442U - Medieval Works in Translation (4)
Study of texts from the German Middle Ages. Readings, lectures, and discussions in English. Recommended prerequisite: 4 credits of upper division literature. Also offered for graduate-level credit as Ger 542 and may be taken only once for credit.

Ger 484 - German Stylistics (4)
A study of the stylistic aspects of fictional and nonfictional writings within the context of the cultural and philosophical history of modern Germany. Also offered for graduate-level credit as Ger 584 and may be taken only once for credit.

Ger 490 - History of the German Language (4)
A general historical survey showing the development of German grammar, word formation, vocabulary, and syntax with reference to the history of other
Germanic languages. Conducted in English. Recommended prerequisite: Ger 302.

**Ger 494 - German Linguistics (4)**
Introduction to the basic concepts in linguistics and their application to German. Review of sound system; focus on morphology and syntax. Conducted in English. Expected preparation: Ger 302.
Also offered for graduate-level credit as Ger 594 and may be taken only once for credit.

**Ger 497 - Applied German Linguistics (4)**
A practical application of linguistic method to modern German. Emphasis on contrastive analysis of German and English. Expected preparation: Ger 302 and 4 credits in linguistics.
Also offered for graduate-level credit as Ger 597 and may be taken only once for credit.

**Ger 501 - Research (1-9)**
(Credit to be arranged.)

**Ger 503 - Thesis (1-9)**
(Credit to be arranged.)

**Ger 504 - Cooperative Education/Internship (1-12)**
(Credit to be arranged.)

**Ger 505 - Reading and Conference (1-12)**
(Credit to be arranged.)

**Ger 507 - Seminar (1-12)**
(Credit to be arranged.)

**Ger 508 - Workshop (1-12)**
(Credit to be arranged.)

**Ger 509 - Practicum (1-12)**
(Credit to be arranged.)

**Ger 510 - Selected Topics (1-12)**
(Credit to be arranged.)

**Ger 511 - Advanced German (4)**
Special features of German; selected writing and reading assignments, discussion. This is the first course in a sequence of two: Ger 511 and Ger 512.
Also offered for undergraduate-level credit as Ger 411 and may be taken only once for credit.

**Ger 512 - Advanced German (4)**
Special features of German; selected writing and reading assignments, discussion. This is the second course in a sequence of two: Ger 511 and Ger 512.
Also offered for undergraduate-level credit as Ger 412 and may be taken only once for credit.

**Ger 514 - Advanced German Grammar (4)**
Structural review of German morphology and syntax. Also offered for undergraduate-level credit as Ger 414 and may be taken only once for credit.

**Ger 521 - German Short Prose (4)**
Study of the German Novelle and other shorter prose of the 19th and 20th centuries.
Also offered for undergraduate-level credit as Ger 421 and may be taken only once for credit.

**Ger 522 - 18th Century German Literature (4)**
Study of the poetry, drama, and prose of the German Enlightenment and the Sturm und Drang. Expected preparation: at least 8 credits from Ger 340, Ger 341, or Ger 342.

**Ger 527 - The Age of Goethe (4)**
Study of German poetry, drama, and prose from the Sturm und Drang and Classicism to the beginning of Romanticism.
Also offered for undergraduate-level credit as Ger 427 and may be taken only once for credit.

**Ger 528 - German Romanticism (4)**
Study of the literature, art, and aesthetic theories of late 18th and 19th century Germany.
Also offered for undergraduate-level credit as Ger 428 and may be taken only once for credit.

**Ger 529 - German Realism and Naturalism (4)**
Study of the poetry, drama, and prose of the second half of the 19th century.
Also offered for undergraduate-level credit as Ger 429 and may be taken only once for credit.
Ger 533 - German Literature of the 20th Century (4)
Readings in modern poetry, drama, and prose. Ger 433/533: from the turn of the century to the end of World War II; Ger 434/534: from the post-war years to the present. This is the first course in a sequence of two: Ger 533 and Ger 534.
Also offered for undergraduate-level credit as Ger 433 and may be taken only once for credit.

Ger 534 - German Literature of the 20th Century (4)
Readings in modern poetry, drama, and prose. Ger 433/533: from the turn of the century to the end of World War II; Ger 434/534: from the post-war years to the present. This is the second course in a sequence of two: Ger 533 and Ger 534.
Also offered for undergraduate-level credit as Ger 434 and may be taken only once for credit.

Ger 541 - Major Works in Translation (4)
Study of selections from masterpieces of German literature in translation, such as Goethe, the Weimar period, German Intellectual History, Ancient Myth in German Literature. Readings, lectures, and discussions in English.
Also offered for undergraduate-level credit as Ger 441 and may be taken only once for credit.

Ger 542 - Medieval Works In Translation (4)
Study of texts from the German Middle Ages. Readings, lectures, and discussions in English. Recommended prerequisite: 4 credits of upper division literature.

Ger 551 - German Poetry (4)
Study of German lyric poetry. Analysis of form and content.

Ger 552 - German Drama (4)
Critical study of representative works of German drama.

Ger 553 - German Prose (4)
Study of representative works of German prose fiction.

Ger 554 - Middle High German (4)
Linguistic and literary study of representative Middle High German texts. Conducted in English, readings in German. Recommended prerequisite: Ger 302.

Ger 584 - German Stylistics (4)
A study of the stylistic aspects of fictional and nonfictional writings within the context of the cultural and philosophical history of modern Germany.
Also offered for undergraduate-level credit as Ger 484 and may be taken only once for credit.

Ger 590 - History of the German Language (4)
A general historical survey showing the development of German grammar, word formation, vocabulary, and syntax with reference to the history of other Germanic languages. Conducted in English. Recommended prerequisite: Ger 302.

Ger 594 - German Linguistics (4)
Introduction to the basic concepts in linguistics and their application to German. Review of sound system; focus on morphology and syntax. Conducted in English.
Also offered for undergraduate-level credit as Ger 494 and may be taken only once for credit.

Ger 597 - Applied German Linguistics (4)
A practical application of linguistic method to modern German. Emphasis on contrastive analysis of German and English.
Also offered for undergraduate-level credit as Ger 497 and may be taken only once for credit.

Grk - Greek
The Ancient Greek language courses are currently inactive and the department is not planning to offer them this year.

Grk 101 - First-Year Ancient Greek Term 1 (4)
An introduction to ancient Greek. The course will provide a survey of ancient Greek grammar and syntax, as well as vocabulary building and elementary readings. This is the first course in a sequence of three: Grk 101, Grk 102, and Grk 103.
Grk 102 - First-Year Ancient Greek Term 2 (4)
An introduction to ancient Greek. The course will provide a survey of ancient Greek grammar and syntax, as well as vocabulary building and elementary readings. This is the second course in a sequence of three: Grk 101, Grk 102, and Grk 103.

Grk 103 - First-Year Ancient Greek Term 3 (4)
An introduction to ancient Greek. The course will provide a survey of ancient Greek grammar and syntax, as well as vocabulary building and elementary readings. This is the third course in a sequence of three: Grk 101, Grk 102, and Grk 103.

Grk 199 - Special Studies (1-8)
(Credit to be arranged.)

Grk 201 - Second-Year Ancient Greek Term 1 (4)
Course provides a review of grammar in the context of selected readings from archaic and classical authors. This is the first course in a sequence of three: Grk 201, Grk 202, and Grk 203. Recommended prerequisite: Grk 103.

Grk 202 - Second-Year Ancient Greek Term 2 (4)
Course provides a review of grammar in the context of selected readings from archaic and classical authors. This is the second course in a sequence of three: Grk 201, Grk 202, and Grk 203. Recommended prerequisite: Grk 103.

Grk 203 - Second-Year Ancient Greek Term 3 (4)
Course provides a review of grammar in the context of selected readings from archaic and classical authors. This is the third course in a sequence of three: Grk 201, Grk 202, and Grk 203. Recommended prerequisite: Grk 103.

Grk 299 - Special Studies (1-12)
(Credit to be arranged.)

Grk 330U - Ancient Epic: Glory and Memory (4)
Explores the Homeric epics, how they framed the values and limits of human achievement for the ancient Greeks, their influence on the development of other genres of Greek literature such as tragedy and comedy, and their enduring legacy in Roman literature. Conducted in English.

Grk 332U - Gods and Mortals: Harnessing the Divine (4)
A survey of how the ancient Greeks sought to procure divine aid for communal or private benefit through rituals and practices, such as prayers, sacrifices, mystery cults, and curse tablets, and the influence on later Roman religion. A full spectrum of practices will be considered, as revealed in literary, inscriptive, artistic, and archaeological evidence. Conducted in English.

Grk 333U - Women in Ancient Greece (4)
Course on the role of women in ancient Greece as daughters, wives, concubines, mothers, heiresses, writers, priestesses, and participants in religious rituals and festivals. Conducted in English.

Grk 335U - Tragedy, Fate, and Fragility (4)
A study of Greek tragedy and the underlying worldview of vulnerability, loss, and fraught choices often made under the yoke of necessity, primarily through the works of Sophocles and Euripides. Course will consider how the Greeks (and later Romans) articulated the fragility of human happiness, and the various strategies devised to cope with this seemingly unavoidable aspect of human existence. Conducted in English.

Grk 336U - Ancient Laughter: Ridicule and the Absurd (4)
A survey of ancient comedy, satire, invective, and epigram, primarily in Greek literature but also as appropriated and adapted by the Romans. The course considers the myriad mechanisms by which laughter was elicited and the functions to which humor was put, along with the underlying cultural values in its varied contexts. Taught in English.

Grk 399 - Special Studies (1-6)
(Credit to be arranged.)

GRN-Gender Race and Nations
GRN 406 - Special Projects (1-12)
(Credit to be arranged.)
GRN 422 - Critical Perspectives on Quantitative Analysis (4)

Uses critical Indigenous, decolonizing, feminist and anti-racist lenses to evaluate quantitative research applications, including development of research questions; study designs; appropriate use of statistical and other quantitative methods; audience and dissemination of quantitative findings.

Interdisciplinary and intersectional focus and applications. Note: Not a methods course; does not teach statistical or quantitative methods.

Also offered for graduate-level credit as GRN 522 and may be taken only once for credit. Prerequisite: Familiarity and experience with basic statistical and quantitative data and methods; permission of instructor required. Cross-Listed as: This is the same course as WS 422 and may be taken only once for credit.

GRN 502 - Independent Study (1-9)
(Credit to be arranged.)

GRN 505 - Reading and Conference (1-9)
(Credit to be arranged.)

GRN 506 - Projects (1-9)
(Credit to be arranged.)

GRN 507 - Seminar (1-9)
(Credit to be arranged.)

509 509 - Practicum (1-9)
(Credit to be arranged.)

GRN 510 - Selected Studies (1-9)
(Credit to be arranged.)

GRN 515 - Constructions of Power and Knowledge: Gender, Race, and Nations (4)

Course critically analyzes how the concepts of gender, race, culture, class, sexuality, and nation are invested with power and inequality. Examines the politics of the production of knowledge in personal lived experiences; institutions; cultural, economic and geopolitical structures; and literary, visual and multimedia representations.

GRN 520 - Critical and Decolonizing Research Methodologies (4)

This interdisciplinary and multidisciplinary graduate course will provide an overview of critical and decolonizing research methodologies focused on relations of race, gender, nations, and sexuality, with attention to other dimensions of difference and power. Emphasis will be on novel approaches to research as an avenue for social justice.

GRN 522 - Critical Perspectives on Quantitative Analysis (4)

Uses critical Indigenous, decolonizing, feminist and anti-racist lenses to evaluate quantitative research applications, including development of research questions; study designs; appropriate use of statistical and other quantitative methods; audience and dissemination of quantitative findings.

Interdisciplinary and intersectional focus and applications. Note: Not a methods course; does not teach statistical or quantitative methods.

Also offered for undergraduate-level credit as GRN 422 and may be taken only once for credit. Prerequisite: Familiarity and experience with basic statistical and quantitative data and methods. Cross-Listed as: This is the same course as WS 522 and may be taken only once for credit.

GRN 530 - Social Justice Pedagogy (4)

Focus on contemporary radical pedagogical theories and practices. Students will analyze, experience and develop their own social justice pedagogies. Students will examine radical theories of education and co-create practical strategies with the intention of building towards social transformation.

GRN 550 - Seminar in Gender, Race, and Nations (4)

In-depth study of varying topics related to gender, race, and nations from an interdisciplinary and intersectional approach. Focus is on rethinking and challenging foundational western, heteropatriarchal, colonialist, heteronormative, and white supremacist ways of understanding the topical focus related to the reproduction and production of social relations, domination and resistance.
GSCM - Global Supply Chain Management

GSCM 310 - Introduction to Supply Chain Management of Food and Beverage Systems (4)
This survey course covers food and beverage supply chain management from production of raw materials through to consumers. Food supply chain managers must address food safety, climate change, diminishing resources, stakeholder values, waste management, sourcing, logistics, and multiple operational changes. The course includes economic, social and environmental perspectives.

GSCM 401 - Research (1-12)
(Credit to be arranged.)

GSCM 404 - Cooperative Education/Internship (1-6)
(Credit to be arranged.)

GSCM 406 - Special Projects (1-12)
(Credit to be arranged.)

GSCM 410 - Selected Studies (1-8)
(Credit to be arranged.)

GSCM 412 - Introduction to Enterprise Resource Planning Systems (4)
Introduction to and overview of Enterprise Resource Planning (ERP) systems, their function in business, the major modules, and data structures with an emphasis on supply chain and accounting issues.
Prerequisite: BA 339.

GSCM 430 - Decision Making Using Enterprise Systems and Data Analytics (4)
An introduction and overview to enterprise resource planning (ERP) systems, their function in business, some major transactions, and data structures that support managing a supply chain. Students will also gain experience with data analytics and visualization tools.
Prerequisite: BA 339 and BA 325; must be admitted into the school of business.

GSCM 429 - Global transportation and Logistics management (4)
Overview of global logistics including transportation, warehouse location and layout, inventory policies, distribution operations, information systems, and import tariffs.
Prerequisite: BA 301, BA 303, and BA 339.

GSCM 432 - Craft Beverage Operations Management (4)
An overview of the craft brewery business from grower to glass. Covers processes and associated costs for making and selling craft beverages from raw materials to production, distribution, and retail environments. Students will complete a basic business plan.
Also offered for graduate-level credit as GSCM 532 and GSCM 532S and may be taken only once for credit. Prerequisite: BA 339.

GSCM 439 - Global Sourcing and Negotiation (4)
Deals with developing sound policies and procedures in managing the supply chain. Topics include supplier selection and evaluation, competitive bidding, contract development and administration, value analysis, and standardization. In addition, basic negotiation topics are covered.
Prerequisite: BA 301, BA 303, and BA 339.

GSCM 440 - Governmental Procurement (4)
Introduction to theories and practices of governmental procurement. Major aspects of purchasing within public agencies in the United States with special emphasis on the Oregon statutes and administrative rules. Differences between public and private purchasing processes. Federal purchasing processes.
Prerequisite: BA 339.

GSCM 450 - Project Management (4)
Develops a basic understanding of principles and tools of project management. Covering the phases and activities of projects, as well as the management tools used to create project plans, management, including the impacts of organizational strategy, structure and culture on the development and execution of projects.
Prerequisite: BA 339.

GSCM 451 - Business Forecasting (4)
Focuses on the use of various forecasting tools to aid in making managerial decisions. Examination of the various forecasting models and methods in a core activity. Understanding the abilities of the forecasting
tools will be examined. Students will analyze data using many of the tools and assess and evaluate the validity of each.

Prerequisite: BA 339.

**GSCM 454 - Supply and Logistics Negotiations (4)**

This course covers global supply chain topics including risk management, collaboration, strategy development and sustainability.

Prerequisite: GSCM 429 or GSCM 439.

**GSCM 458 - Purchasing and Logistics within the Food Industry (4)**

Explores the rapid transition of food industry operations through an in-depth look at food commodity production, processing, storage, and transportation; facility location and transportation network design; role of wholesalers and distributors in the food supply chain; food safety; food industry consolidation and globalization; supply chain compression; ECR and demand forecasting; and e-commerce and the food industry.

Also offered for graduate-level credit as GSCM 558 and GSCM 558S and may be taken only once for credit. Prerequisite: BA 339.

**GSCM 459 - Production Planning and Control (4)**

Intermediate and short range production planning and scheduling. Topics will include aggregate planning, materials requirement planning, scheduling and just-in-time.

Also offered for graduate-level credit as GSCM 559 and GSCM 559S and may be taken only once for credit. Prerequisite: BA 339.

**GSCM 469 - Lean Management (4)**

This course covers the foundation and the basic principles of lean and lean thinking to improve an organization’s performance by eliminating waste. Students will learn the concepts and the tools of Lean which include 5S, Standard work, TPM, Kanban, Poka Yoke, SMED, Value Stream Mapping.

Also offered for graduate-level credit as GSCM 569 and may be taken only once for credit. Prerequisite: BA 339.

**GSCM 479 - Global Supply Chain Strategy and Sustainability Management (4)**

This course covers global supply chain topics including risk management, collaboration, strategy development and sustainability.

Prerequisite: GSCM 429 and GSCM 439.

**GSCM 501 - Research (1-9)**

(Credit to be arranged.)

**GSCM 502 - Independent Study (1-9)**

(Credit to be arranged.)

**GSCM 504 - Cooperative Education/Internship (1-9)**

(Credit to be arranged.)

**GSCM 505 - Reading & Conference (1-12)**

(Credit to be arranged.)

**GSCM 506 - Special Projects (1-9)**

(Credit to be arranged.)

**GSCM 507 - Seminar (1-6)**

(Credit to be arranged.)

**GSCM 509 - Practicum (1-9)**

(Credit to be arranged.)

**GSCM 510 - Special Topics (1-8)**

(Credit to be arranged.)

**GSCM 511 - Principles of Strategic Global Sourcing (4)**

Overview of planning strategies and tactical execution for sustainable operational sourcing in a global environment. Topics to be reviewed include: locating and qualifying international suppliers, the strategies regarding outsourcing/off-shoring, supplier operational metrics and strategies, establishing and maintaining relationships, e-procurement, new product introduction, and quality systems with selected suppliers.

**GSCM 512 - Global Managerial and Cost Accounting (4)**

The course covers global managerial cost accounting issues, and focuses on the use of accounting information within the multinational firm. In addition, the course will consider financial models
used in analyzing the economic viability of new products and services. Students will also be exposed to activity based costing, standards and variance analysis, and inventory valuation.

GSCM 513 - Principles of Strategic Global Logistics (4)
This course deals with the development of strategies supply chain management involving the transfer of goods and services across national boundaries. Included are studies of inventory and warehouse planning and control and the principles of transportation. Managing logistics in an international environment will be the primary focus, with special attention given to air, rail, truck, and sea transportation.

GSCM 514 - Reverse Logistics and Closed Loop Supply Chain (4)
The increasing globalization of suppliers and customers has increased concern with the issues of sustainable and responsible management across global supply chains. In this course students will explore the main risks, opportunities and practices we now see in global supply chain management from both conceptual and practical perspectives on sustainable practice. Students in this course will engage in applied studies and learn from academics and practitioners about the current challenges in this critical business arena.

GSCM 515 - Global Case Studies in Supply Chain Management (4)
The final course in the Supply and Logistics Specialization integrates all of the concepts contained within the previous three classes. Global Supply and Logistics planning and strategy development is the primary focus. This is a case study based course where each week students are expected to analyze and prepare supply and logistics cases in an international setting. Emphasis is on developing analytical and problem-solving skills and generating the quantitative and qualitative information necessary to make superior managerial decisions.

GSCM 516 - Global Supply Chain Forecasting and Production Planning (4)
The objective of this course is to familiarize students with the major tools used for manufacturing planning and control. To this end, we will perform an in-depth analysis of integrated operations management systems with emphasis on operations planning and control, material requirements planning, master scheduling, forecasting, capacity planning, just-in-time and related topics. These tools will be covered with more detail than previous SCM courses and we will examine how the various components fit together to form a complete system.

GSCM 517 - Supply Chain International Field Study (4)
Economic globalization can provide enormous strategic benefits (risks) by coordinating operations located in different countries. Today’s producers must coordinate international material flow, produce in multiple countries, and deliver new products to customers at ever increasing speed and on-time. This course will provide students with an "on the ground" opportunity to explore the challenges in globalized operations strategies.

GSCM 518 - Global Supply Chain Project Management (4)
This course emphasizes how to implement a project within the time, cost, scope, and quality success criteria that influence supply chain strategies. The spectrum of project management in supply chain includes the participation in new product development, sourcing of supply, the transformation process, logistics, and planning for the return of materials after the life cycle is complete.

GSCM 519 - Global Supply Chain Negotiations (4)
The purpose of this course is to analyze the negotiation challenges faced by the global supply chain professional. Thus the content is focused on contract negotiation, Uniform Commercial Code, UN Convention on Contracts, and e-procurement. The course will encourage development of these skills experientially by emphasizing relationships and a total cost perspective.

GSCM 520 - Global Supply Chain Strategy (2)
In this course students develop the ability to conceptualize, design, and implement supply chains aligned with product, market, and customer characteristics. Students assess how internet technologies, dynamic markets, and globalization are impacting supply chain strategies and practices, including: logistics, inventory and risk management, procurement and supply contracting, product and process design, and revenue channels.
GSCM 521 - Global Information, Systems and Data Analytics (4)

The premise of this course is that supply chain management must understand and assess the information resources and technologies that underpin the life cycle of goods and services. Information is generated at each stage of the supply chain and crucial to the performance is where and how to store, analyze and act upon its insights.

GSCM 522 - Global Leadership and Ethics in Supply Chain Management (2)

This course provides students with a solid understanding of the concepts linking leadership to global and social systems, international organizational development, and the connection between leadership, systems, and global supply chains. Global leadership is studied from four perspectives: the virtual team leading across borders and organizations, ethical and cultural ramifications of leadership, and the ethical traits of global leaders and followership, and your own value system and its place within a global supply chain organization.

GSCM 525 - Supply Chain Capstone Consulting Experience (4)

The course provides students the opportunity to have a significant, hands-on experience that builds upon the foundation of the core of the GSCM program. Students, operating as part of a consulting team, work closely with a client to help solve a supply chain oriented business problem. The scope of the project is 600 hours of research as a group on the behalf of the client.

GSCM 532 - Craft Beverage Operations Management (4)

An overview of the craft brewery business from grower to glass. Covers processes and associated costs for making and selling craft beverages from raw materials to production, distribution, and retail environments. Students will complete a basic business plan.

Also offered for undergraduate-level credit as GSCM 432 and may be taken only once for credit. Prerequisite: BA 339. Cross-Listed as: This is the same course as GSCM 532 and may be taken only once for credit.

GSCM 532S - Craft Beverage Operations Management (4)

An overview of the craft brewery business from grower to glass. Covers processes and associated costs for making and selling craft beverages from raw materials to production, distribution, and retail environments. Students will complete a basic business plan.

Also offered for undergraduate-level credit as GSCM 432 and may be taken only once for credit. Prerequisite: BA 339. Cross-Listed as: This is the same course as GSCM 532 and may be taken only once for credit.

GSCM 558 - Purchasing and Logistics within the Food Industry (4)

Explores the rapid transition of food industry operations through an in-depth look at food commodity production, processing, storage, and transportation; facility location and transportation network design; role of wholesalers and distributors in the food supply chain; food safety; food industry consolidation and globalization; supply chain compression; ECR and demand forecasting; and e-commerce and the food industry.

Also offered for undergraduate-level credit as GSCM 458 and may be taken only once for credit. Cross-Listed as: This is the same course as GSCM 558 and may be taken only once for credit.

GSCM 558S - Purchasing and Logistics within the Food Industry (4)

Explores the rapid transition of food industry operations through an in-depth look at food commodity production, processing, storage, and transportation; facility location and transportation network design; role of wholesalers and distributors in the food supply chain; food safety; food industry consolidation and globalization; supply chain compression; ECR and demand forecasting; and e-commerce and the food industry.

Also offered for undergraduate-level credit as GSCM 458 and may be taken only once for credit. Cross-Listed as: This is the same course as GSCM 558 and may be taken only once for credit.

GSCM 559 - Production Planning and Control (4)

Intermediate and short range production planning and scheduling. Topics will include aggregate planning, materials requirement planning, scheduling and just-in-time.

Also offered for undergraduate-level credit as GSCM 459 and may be taken only once for credit. Cross-Listed as: This is the same course as GSCM 559 and may be taken only once for credit.
GSCM 559S - Production Planning and Control (4)
Intermediate and short range production planning and scheduling. Topics will include aggregate planning, materials requirement planning, scheduling and just-in-time.
Also offered for undergraduate-level credit as GSCM 459 and may be taken only once for credit.
Prerequisite: BA 339. Cross-Listed as: This is the same course as GSCM 559 and may be taken only once for credit.

GSCM 560 - Supply Chain Modeling & Simulation (4)
Introduces a variety of modeling and simulation techniques and can be used to explore a number of topics in supply chain management.
Prerequisite: Admission into the program.

GSCM 569 - Lean Management (4)
This course covers the foundation and the basic principles of lean and lean thinking to improve an organization’s performance by eliminating waste. Students will learn the concepts and the tools of Lean which include 5S, Standard work, TPM, Kanban, Poka Yoke, SMED, Value Stream Mapping.
Also offered for undergraduate-level credit as GSCM 469 and may be taken only once for credit.
Prerequisite: BA 339. Cross-Listed as: This is the same course as GSCM 569S and may be taken only once for credit.

GSCM 569S - Lean Management (4)
This course covers the foundation and the basic principles of lean and lean thinking to improve an organization’s performance by eliminating waste. Students will learn the concepts and the tools of Lean which include 5S, Standard work, TPM, Kanban, Poka Yoke, SMED, Value Stream Mapping.
Also offered for undergraduate-level credit as GSCM 469 and may be taken only once for credit.
Prerequisite: BA 339. Cross-Listed as: This is the same course as GSCM 569 and may be taken only once for credit.

GSCM 571 - Business Analytics I (4)
Introduce students to key analytics methods dealing with statistics, probability, and forecasting.
Prerequisite: Admitted into the program.

GSCM 572 - Business Analytics II (4)
Focus on the use of mathematical programming and optimization methods to support decision-making related to supply chain management.
Prerequisite: Admission into the program.

GSCM 573 - New Product Introduction and Innovation (4)
Apply supply chain management thinking into new product design and innovation process.
Prerequisite: Admission into the program.

Heb - Hebrew

Heb 101 - First-Year Modern Hebrew Term 1 (4)
Introduction to modern Hebrew; emphasis on basic grammar, syntax, noun and verb formation, listening and reading comprehension, translation, writing, and speaking. For nonnative speakers of Hebrew only. This is the first course in a sequence of three: Heb 101, Heb 102, Heb 103.

Heb 201 - Second-Year Modern Hebrew Term 1 (4)
Continued study of grammar and syntax, reading intermediate literary texts, translation, conversation, writing, and speaking. Recommended prerequisite: Heb 103. For non-native speakers of Hebrew only. This is the first course in a sequence of three: Heb 201, Heb 202, Heb 203.
writing, and speaking. Recommended prerequisite: Heb 103. For non-native speakers of Hebrew only. This is the second course in a sequence of three: Heb 201, Heb 202, Heb 203.

**Heb 203 - Second-Year Modern Hebrew Term 3 (4)**
Continued study of grammar and syntax, reading intermediate literary texts, translation, conversation, writing, and speaking. Recommended prerequisite: Heb 103. For non-native speakers of Hebrew only. This is the third course in a sequence of three: Heb 201, Heb 202, Heb 203.

**Heb 299 - Special Studies (1-12)**
(Credit to be arranged.)

**Heb 301 - Third-Year Modern Hebrew Term 1 (4)**
301 emphasizes essays, short stories, and selected poems. 302 emphasizes modern media Hebrew. Translation and writing. Recommended prerequisite: Heb 203. For non-native speakers of Hebrew only. This is the first course in a sequence of two: Heb 301, Heb 302.

**Heb 302 - Third-Year Modern Hebrew Term 2 (4)**
301 emphasizes essays, short stories, and selected poems. 302 emphasizes modern media Hebrew. Translation and writing. Recommended prerequisite: Heb 203. For non-native speakers of Hebrew only. This is the second course in a sequence of two: Heb 301, Heb 302.

**Heb 303 - Third-Year Modern Hebrew Term 3 (4)**
Intermediate to advanced Modern Hebrew. Intensive grammar review and listening comprehension. Extensive oral and written practice.
Prerequisite: Heb 302.

**Heb 344 - Israel through Graphic Novels (4)**
Discusses central themes in contemporary Israel as they are represented in Israeli graphic novels and graphic novels written about Israel in the 2000s and 2010s.

**Heb 361 - Israel through Film (4)**
Discusses the history and culture of Israel as it is represented in Israeli cinema from 1931 up through the 2010s.

**Heb 399 - Special Studies (1-6)**
(Credit to be arranged.)

**Heb 401 - Research (1-6)**
(Credit to be arranged.)

**Heb 404 - Cooperative Education/Internship (1-12)**
(Credit to be arranged.)

**Hon - University Honors Program**

**Hon 101 - The Global City (5)**
This year-long sequence introduces ways to think critically about the urban environment and the interdependence between the city and the global world. It begins the study of representations and perceptions of the city, the city in historical context, and the processes that shape the city’s geopolitical manifestations. This is the first course in a sequence of three: Hon 101, Hon 102, and Hon 103.
Prerequisite: admission to Honors Program.

**Hon 102 - The Global City (5)**
This year-long sequence introduces ways to think critically about the urban environment and the interdependence between the city and the global world. It begins the study of representations and perceptions of the city, the city in historical context, and the processes that shape the city’s geopolitical manifestations. This is the second course in a sequence of three: Hon 101, Hon 102, and Hon 103.
Prerequisite: admission to Honors Program.

**Hon 103 - The Global City (5)**
This year-long sequence introduces ways to think critically about the urban environment and the interdependence between the city and the global world. It begins the study of representations and perceptions of the city, the city in historical context,
and the processes that shape the city’s geopolitical manifestations. This is the third course in a sequence of three: Hon 101, Hon 102, and Hon 103.

Prerequisite: admission to Honors Program.

**Hon 199 - Studies I-VI (1-6)**
Studies I-III comprise 15 credits (12 hours lecture, 3 hours recitation): Studies IV-VI comprise 12 credits (lecture only, no recitation).

**Hon 201 - Urban Social Systems: Methods in the Social Sciences (4)**
In tandem with Hon 202 and Hon 203, this course emphasizes undergraduate research, with the city of Portland serving as archive, stage, and laboratory. Students explore the concepts and systems by which cities operate through the application of primarily qualitative social science methodologies, such as ethnography and spatial/geographic analysis.

Prerequisite: admission to Honors Program.

**Hon 202 - Reading Urban Cultural Systems: Methods in the Humanities (4)**
In tandem with Hon 201 and Hon 203 this course examines the urban surround, this time through the lens of the humanities, by careful examination of artifacts, texts, and cultural institutions.

Prerequisite: admission to Honors Program.

**Hon 203 - Urban Ecological Systems: Methods in the Sciences (4)**
In tandem with Hon 201 and Hon 202, this course emphasizes undergraduate research, with the city of Portland serving as archive, stage, and laboratory. Students explore the concepts and ecological systems by which cities operate through the application of primarily quantitative science methodologies.

Prerequisite: admission to Honors Program.

**Hon 399 - Special Studies (1-4)**
(Credit to be arranged.)

**Hon 401 - Research (0-15)**
(Credit to be arranged.)

**Hon 403 - Thesis (1-12)**
(Credit to be arranged.)

**Hon 404 - Cooperative Ed/Internship (1-12)**
(Credit to be arranged.)

**Hon 405 - Reading and Conference (0-12)**
(Credit to be arranged.)

**Hon 407 - Seminar (1-6)**
Consent of instructor. Reading and discussion of an area to be chosen by instructor, with a seminar paper required.

**Hon 410 - Selected Studies (1-6)**
(Credit to be arranged.)

**HSMP - Health Systems Management and Policy**

**HSMP 502 - Independent Study (1-12)**
(Credit to be arranged.)

**HSMP 504 - Cooperative Ed/Internship (1-9)**
(Credit to be arranged.)

**HSMP 505 - Reading and Conference (1-9)**
(Credit to be arranged.)

**HSMP 507 - Seminar (1-9)**
(Credit to be arranged.)

**HSMP 509 - Practicum (1-9)**
(Credit to be arranged.)

Cross-Listed as: PAH 509.

**HSMP 510 - Selected Studies (1-6)**
(Credit to be arranged.)

**HSMP 541 - Organizational Behavior in Health Service Organizations (3)**
This course provides an overview of organizational theory and behavior in health services organizations. The emphasis is on developing an understanding of the factors and forces that influence the structures,
behaviors and operations of various organizations that deliver health and related services. This understanding will be developed through consideration of organizations, their environments, and the roles of individuals working in management.

HSMP 542 - Marketing in Health Services Organizations (3)
This course provides students with concrete tools and knowledge about marketing concepts and processes in health services and develops competencies for application of marketing principles for a range of health services organizations. Concepts of messaging are also addressed as a component of the marketing strategy.

HSMP 543 - Culture and Health Care (3)
The course is designed to provide an examination of health delivery and outcomes and the influence of culture. Using readings in conjunction with interactive learning, students consider various cultures and their interactions with the health care system. Knowledge of the tools, techniques, and applications of cultural assessment and cultural competency will be achieved. This course is open to admitted students in the graduate programs in the Division of Public Administration and other appropriate graduate programs. This is the same course as PAH 543 and may be taken only once for credit.

Cross-Listed as: PAH 543.

HSMP 544 - Leadership and Governance in Health Services (3)
Class explores principles and practices of leadership and governance in a variety of health and human services organizations. Theories of leadership and models of governance are studied, and explored through case studies of local health and human services leaders and their governance relationships. Students also conduct self-assessments of present and future leadership practice and potential.
Prerequisite: HSMP 541, HSMP 571, and HSMP 574.

HSMP 570 - Health Administration (3)
An examination of issues related to the administration of health care systems. Topics include: changing patterns of health care, budget and financial management techniques, and political influences on health administration. This is the same course as PAH 570 and may be taken only once for credit.
Cross-Listed as: PAH 570.

HSMP 571 - Health Policy (3)
Centers on an investigation of the public policy process as it affects the health care field. Specific health care policies and programs are used to explore the characteristics of the health care policy process and the factors involved in the formulation, implementation, and evaluation of health care policies and programs. Recommended corequisite: HSMP 574.

Also offered as HSMP 671 and may be taken only once for credit.

HSMP 572 - Health Politics (3)
This course is designed to survey the inter-workings of health care legislation. By examining the nuts and bolts of health law development, a better understanding of health policy development within the context of the political system can be realized. Health legislation is examined in terms of historical analysis and the legislative process, including the role of interest groups, the use of information in the political system, the role of bureaucracy, and the budget process. Recommended corequisite: HSMP 574.

HSMP 573 - Values and Ethics in Health (3)
This course addresses issues and questions regarding values and ethics in health, with particular attention to public health practice and health policy and management. It provides students with opportunities to consider issues in health and social services that challenge values and pose ethical issues, and assists students in addressing these issues in the context of both personal and organizational values and beliefs. Specific course content includes, but is not limited to, ethical issues such as reproductive issues, emerging diseases, product liability, pharmaceutical controls, advertising, occupational and environmental issues, and research dilemmas.

Also offered as HSMP 673 and may be taken only once for credit. Prerequisite: Completion of at least 30 credits of the graduate program.

HSMP 574 - Health Systems Organization (3)
This course introduces basic concepts and issues in the organization, financing, and delivery of health services. The emphasis is on the systemic aspects of health services production and delivery which address the health needs of populations with respect to death, disease, disability, discomfort, and dissatisfaction. Students will examine the inter-relationships of system structures, subsystems, and processes, as well as their interactions with the larger social, cultural, economic and political environments in which they exist. The focus is on the United
States, with international comparisons used to illustrate similarities and differences.

Also offered as HSMP 674 and may be taken only once for credit.

**HSMP 575 - Advanced Health Policy (3)**

This course enables students to deepen their understanding of local, regional, national and international health policies and policy issues with specific reference to the underlying dynamics of the policy process. Understanding the process and nature of policy choices will be emphasized – who, what, how and why of explicit and implicit decisions and choices that lead to the ultimate policy. Students will develop an understanding of how health policy can be successfully developed and sustainably implemented.

Also offered as HSMP 675 and may be taken only once for credit. Prerequisite: HSMP 571.

**HSMP 576 - Strategic Management of Health Care Organizations (3)**

This course enables students to define health services delivery problems and issues, collect and analyze relevant information, and articulate solutions to strategic management issues. Course content emphasizes organizational strategic planning tools and processes, including directional strategies, internal and external environmental assessments, strategy formulation, implementation, and evaluation. Students will demonstrate ability to integrate knowledge and skills developed across the curriculum by conducting focused case analyses and a situational assessment of a health organization.

Prerequisite: HSMP 541, HSMP 574.

**HSMP 577 - Health Care Law and Regulation (3)**

Course intended to be an introduction to the American legal system and the laws that affect public health and health care. Initially, course focuses on public legal relationships between governments and individuals, and proceeds to review private legal relationships between individuals or organizations. Reviews the source of laws affecting health care, the basics of constitutional law, the right to privacy, state and federal regulation of health care, and negligence in health care. Wraps up with an introduction to cutting edge health care issues such as health care fraud and abuse compliance and medical record privacy.

Also offered as HSMP 677 and may be taken only once for credit. Prerequisite: HSMP 571, HSMP 574.

**HSMP 578 - Performance Improvement in Health Services (3)**

This course introduces students to organizational performance improvement and illustrates applications in health services delivery. Course content draws upon literature regarding industrial quality improvement, organizational performance assessment, patient safety, and health services improvement. Students will learn to apply improvement science to redesign systems and processes to achieve performance improvement in various kinds of health services delivery organizations. Students will apply this knowledge to personal, organizational and systems level improvement projects.

Prerequisite: HSMP 541, HSMP 574.

**HSMP 579 - Health Information Technology and Systems Management (3)**

Advances in information technology are driving fundamental changes throughout health care and transforming the health care industry. Students will gain an understanding how to manage and use health information technology systems. The course will identify the various types of health care information systems, and assess the key issues confronting the management of such systems, including business needs, the relationship between organizational needs and technology capabilities, and the management and control of IT resources in a variety of health-related organizational settings.

Prerequisite: HSMP 574.

**HSMP 580 - Health Services Human Resources Management (3)**

Overview of human resources within the context of health care organizations. Focus on the practical application of human resources management principles in the work setting through discussion of situations common in health care environments. Elements of the situation evaluated from the health care employee and health care manager perspectives. Examples of techniques, forms, and tools will be discussed.

Prerequisite: HSMP 574, HSMP 541.

**HSMP 581 - Population Health: Policy and Practice Implications (3)**

Introduction to concepts of population health as they relate to policy and practice. In addition to exploring various meanings of the term “population health”, the course considers three primary drivers of population health: long-term demographic trends (e.g., population aging, immigration, fertility); social and economic policies (including health policy); and characteristics of the healthcare system.
emphasis is placed on translating knowledge into effective policies and practice to address population health.

Also offered as HSMP 681 and may be taken only once for credit.

**HSMP 582 - Oregon Health Policy: Lessons for State and National Health Reform (3)**
Reviews Oregon’s nationally recognized health reforms and examine the lessons learned for the development and implementation of health policy at the national, state and local levels. Fundamental to the course will be exploring the many issues around employing public policy to address problems around access, cost, financing and quality in health care. This will be a seminar style course with an opportunity for students to meet with and learn from experts.
Expected preparation: HSMP 571 Health Policy.
Also offered as HSMP 682 for doctoral students.

**HSMP 583 - Economics of Health Systems & Policy (3)**
Health policy has a fundamental transactional nature. Economics provides a broad theoretical framework that seeks to assess and understand transactional relationships. Thus, economics has particular value as a means to diagnose the transactional problems that underpin health system dynamics and provide frameworks for proposed solutions. This course applies economic theory to assess problems in health systems and propose solutions, as well as critique existing policy and develop sound policy alternatives.
Also offered as HSMP 683 for doctoral students.
Prerequisite: Successful completion of HSMP 586 with an earned "B-" minimum passing grade.

**HSMP 584 - Social Policy and Public Health (3)**
Examines how social policies influence health, with particular attention to health equity and disparities. Students will develop skills necessary to assess the empirical evidence for, and health implications of social policies in the areas of education, agriculture/nutrition, social welfare/income transfer, employment/labor, housing/built environment, transportation, civil rights, and other policy domains.
Also offered for graduate-level credit as HSMP 684 and may be taken only once for credit.

**HSMP 586 - Introduction to Health Economics (3)**
Focuses on defining and measuring the performance of the health care sector, defining and explaining microeconomic concepts, and evaluating various policy initiatives to improve efficiency, equity, and technological progress in health care. Specific topics include description of the health care industry, production of health, measurement of health care price changes, theory of demand for health care, theory of production and cost, measurement of inputs and outputs, cost-benefit and cost-effectiveness analysis, and structure and functioning of markets. In addition, the role of government in a private economy in dealing with market failure is discussed, especially as it relates to the goal of assuring universal access to health care. Does not require any specific preparation in economics or mathematics, although graphical presentation of economic concepts is emphasized.
Recommended corequisite: HSMP 574.
Also offered as HSMP 686 and may be taken only once for credit.

**HSMP 587 - Financial Management of Health Services (3)**
Focuses on the analysis and administration of resources in the health care field. Among the specific topics included in this course are financial statements, budgeting, cash flow, costing, capital decision making, sources of capital and operating funds, depreciation and government reimbursement schemes, and human resources planning and management.
Prerequisite: HSMP 574. Recommended corequisite: HSMP 586.

**HSMP 588 - Program Evaluation and Management In Health Services (3)**
Introduces the theory and practice of program evaluation in the health services system. Includes multiple methods and uses of evaluation from the perspectives of managers, health professionals, and health services researchers, with an emphasis on the utilization of evaluation findings in program planning and management in health services. Course learning will be synthesized through a community-based learning experience involving working with a community partner to develop an evaluation framework and methodology for an existing or proposed health program.

**HSMP 589 - Research Design in Health Services (3)**
Provides an introduction to traditional methods of designing and conducting health services research. It is intended that at the completion of the course students will understand multiple approaches to health services research, be able to be both participants in and consumers of the research process, and will be competent in conducting critical appraisals of the health services literature and in writing research proposals.
Also offered as HSMP 689 and may be taken only once for credit. Prerequisite: Bsta 525.
HSMP 590 - Global Health Program Evaluation & Management (3)

Program evaluation is a field of study and practice that is applicable across areas and disciplines. This course provides students with the theoretical and practical bases for the trans-discipline of program evaluation. The course emphasizes evaluation in the context of global health programs. Students will develop basic skills in a variety of approaches to evaluation, including techniques that are particularly suitable for evaluating global health programs.

HSMP 603 - Dissertation (1-9)
Credits to be arranged.

HSMP 605 - Reading and Conference (1-9)
(Credit to be arranged.)

HSMP 607 - Doctoral Seminar in Health Systems and Policy (1-9)
Doctoral seminar in health systems and policy.

HSMP 610 - Selected Studies (1-9)
(Credit to be arranged.)

HSMP 642 - Organizational Theory and Health Systems (3)
Students in this course will develop an understanding of the organizational theory domain and enhance their ability to frame research within that domain in the context of health systems. The course emphasizes both substance and skill development, drawing on insights from the fields of economics, anthropology, political science and systems science to explore the structure and functions of organizations, the interaction of organizations and their environment, and the behavior of individuals within organizations. Understanding organizational theory, research, actions and outcomes is fundamental.

HSMP 660 - Contemporary Research in Health Systems and Policy (3)
Doctoral seminar covering current topics in health systems and policy research providing doctoral students in the Health Systems and Policy Ph.D. program an opportunity to develop multi-disciplinary perspectives on current issues in their area of research.

HSMP 671 - Health Policy (3)
Centers on an investigation of the public policy process as it affects the health care field. Specific health care policies and programs are used to explore the characteristics of the health care policy process and the factors involved in the formulation, implementation, and evaluation of health care policies and programs. Recommended corequisite: HSMP 574.

Also offered as HSMP 571 and may be taken only once for credit.

HSMP 673 - Values and Ethics in Health (3)
This course addresses issues and questions regarding values and ethics in health, with particular attention to public health practice and health policy and management. It provides students with opportunities to consider issues in health and social services that challenge values and pose ethical issues, and assists students in addressing these issues in the context of both personal and organizational values and beliefs. Specific course content includes, but is not limited to, ethical issues such as reproductive issues, emerging diseases, product liability, pharmaceutical controls, advertising, occupational and environmental issues, and research dilemmas.

HSMP 674 - Health Systems Organization (3)
This course introduces basic concepts and issues in the organization, financing, and delivery of health services. The emphasis is on the systemic aspects of health services production and delivery which address the health needs of populations with respect to death, disease, disability, discomfort, and dissatisfaction. Students will examine the inter-relationships of system structures, subsystems, and processes, as well as their interactions with the larger social, cultural, economic and political environments in which they exist. The focus is on the United States, with international comparisons used to illustrate similarities and differences.

Also offered as HSMP 574 and may be taken only once for credit.

HSMP 675 - Advanced Health Policy (3)
This course enables students to deepen their understanding of local, regional, national and international health policies and policy issues with specific reference to the underlying dynamics of the policy process. Understanding the process and nature of policy choices will be emphasized— who, what, how and why of explicit and implicit decisions and choices that lead to the ultimate policy. Students will
develop an understanding of how health policy can be successfully developed and sustainably implemented.

Also offered for graduate-level credit as HSMP 575 and may be taken only once for credit. Prerequisite: Completion of HSMP 571 or HSMP 671 or equivalent.

HSMP 677 - Health Care Law and Regulation (3)
Course intended to be an introduction to the American legal system and the laws that affect public health and health care. Initially, course focuses on public legal relationships between governments and individuals, and proceeds to review private legal relationships between individuals or organizations. Reviews the source of laws affecting health care, the basics of constitutional law, the right to privacy, state and federal regulation of health care, and negligence in health care. Wraps up with an introduction to cutting edge health care issues such as health care fraud and abuse compliance and medical record privacy.

Also offered as HSMP 577 and may be taken only once for credit. Prerequisite: HSMP 571, HSMP 574.

HSMP 681 - Population Health: Policy and Practice Implications (3)
Introduction to concepts of population health as they related to policy and practice. In addition to exploring various meanings of the term “population health”, the course considers three primary drivers of population health: long-term demographic trends (e.g., population aging, immigration, fertility); social and economic policies (including health policy); and characteristics of the healthcare system. Special emphasis is placed on translating knowledge into effective policies and practice to address population health.

Also offered for graduate-level credit as HSMP 581 and may be taken only once for credit.

HSMP 682 - Oregon Health Policy: Lessons for State and National Health Reform (3)
Reviews Oregon’s nationally recognized health reforms and examine the lessons learned for the development and implementation of health policy at the national, state and local levels. Fundamental to the course will be exploring the many issues around employing public policy to address problems around access, cost, financing and quality in health care. This will be a seminar style course with an opportunity for students to meet with and learn from experts. Expected preparation: HSMP 671 Health Policy.

Also offered for graduate-level credit as HSMP 582.

HSMP 683 - Economics of Health Systems & Policy (3)
Health policy has a fundamental transactional nature. Economics provides a broad theoretical framework that seeks to assess and understand transactional relationships. Thus, economics has particular value as a means to diagnose the transactional problems that underpin health system dynamics and provide frameworks for proposed solutions. This course applies economic theory to assess problems in health systems and propose solutions, as well as critique existing policy and develop sound policy alternatives.

Also offered for graduate-level credit as HSMP 583.

HSMP 684 - Social Policy and Public Health (3)
Examines how social policies influence health, with particular attention to health equity and disparities. Students will develop skills necessary to assess the empirical evidence for, and health implications of social policies in the areas of education, agriculture/nutrition, social welfare/income transfer, employment/labor, housing/built environment, transportation, civil rights, and other policy domains.

Also offered for graduate-level credit as HSMP 584 and may be taken only once for credit.

HSMP 686 - Introduction to Health Economics (3)
Focuses on defining and measuring the performance of the health care sector, defining and explaining microeconomic concepts, and evaluating various policy initiatives to improve efficiency, equity, and technological progress in health care. Specific topics include description of the health care industry, production of health, measurement of health care price changes, theory of demand for health care, theory of production and cost, measurement of inputs and outputs, cost-benefit and cost-effectiveness analysis, and structure and functioning of markets. In addition, the role of government in a private economy in dealing with market failure is discussed, especially as it relates to the goal of assuring universal access to health care. Does not require any specific preparation in economics or mathematics, although graphical presentation of economic concepts is emphasized. Recommended corequisite: HSMP 574.

Also offered as HSMP 586 and may be taken only once for credit.

HSMP 689 - Research Design in Health Services (3)
Provides an introduction to traditional methods of designing and conducting health services research. It is intended that at the completion of the course students will understand multiple approaches to health services research, be able to be both participants in and consumers of the research process,
and will be competent in conducting critical appraisals of the health services literature and in writing research proposals.

Also offered as HSMP 589 and may be taken only once for credit.

**HSMP 699 - Special Studies (1-6)**

(Credit to be arranged.)

**Hst - History**

**Hst 101 - History of Western Civilizations (4)**

Survey of the origins and development of Western civilizations from antiquity to the present. Hst 101: Antiquity to Renaissance; Hst 102: Late Medieval to Enlightenment; Hst 103: Enlightenment to present. This is the first course in a sequence of three: Hst 101, Hst 102, and Hst 103.

**Hst 102 - History of Western Civilizations (4)**

Survey of the origins and development of Western civilizations from antiquity to the present. Hst 101: Antiquity to Renaissance; Hst 102: Late Medieval to Enlightenment; Hst 103: Enlightenment to present. This is the second course in a sequence of three: Hst 101, Hst 102, and Hst 103.

**Hst 103 - History of Western Civilizations (4)**

Survey of the origins and development of Western civilizations from antiquity to the present. Hst 101: Antiquity to Renaissance; Hst 102: Late Medieval to Enlightenment; Hst 103: Enlightenment to present. This is the third course in a sequence of three: Hst 101, Hst 102, and Hst 103.

**Hst 104 - Introduction to World History (4)**

A survey of world history from earliest times to the present, combining both chronological and thematic approaches. Hst 104: Origins to 1000 CE; Hst 105: 1000-1600 CE; Hst 106: 1500-present. This is the first course in a sequence of three: Hst 104, Hst 105, and Hst 106.

**Hst 106 - Introduction to World History (4)**

A survey of world history from earliest times to the present, combining both chronological and thematic approaches. Hst 104: Origins to 1000 CE; Hst 105: 1000-1600 CE; Hst 106: 1500-present. This is the second course in a sequence of three: Hst 104, Hst 105, and Hst 106.

**Hst 199 - Special Studies (0-12)**

See department for course description. (Credit to be arranged.)

**Hst 201 - History of the United States (4)**

**Hst 202 - History of the United States (4)**

**Hst 203 - History of the United States (4)**

**Hst 210 - The Ancient World (4)**

An introductory survey into the political, social, economic, and cultural history of the Ancient World, concentrating mainly on the Ancient Near East, Greece, and Rome.

**Hst 280 - World War I: Global Perspectives (4)**

A global view of one of the modern world’s formative moments: the First World War. Examines its cultural, political, economic and social history to understand the war’s trajectory and consequences across the globe.
Hst 927 - History through Film (4)
Introduction to selected topics of modern history through the viewing and analysis of important documentaries and feature films. The subject matter will vary from term to term.

Hst 300 - Historical Imagination (4)
The how and why of the historian's craft: (1) an introduction to the basics of research and writing; (2) an examination of historical writing, its relationship to the time and place of its origin, and the emergence of the ideas, consciousness, and canons of scholarship which shaped it. This course serves as an introduction to the study of history at the upper division level and is recommended for students beginning their junior year.

Hst 309U - The Roman Republic (4)
A study of the political, social, economic, and cultural history of the Roman world between the 8th and 1st centuries BCE.

Hst 310U - The Roman Empire (4)
A study of the political, social, economic, and cultural history of the Roman world between the 1st century BCE and the 4th century CE.

Hst 311 - Introduction to the New Testament (4)
We will study the diverse writings of the New Testament as products of their original historical, social, and religious contexts. We will ask how these ancient writings came to be written, collected and preserved and how they served to interpret and respond to the life situations of the earliest Christians. This course may be repeated once for credit.
Cross-Listed as: This is the same course as JSt 311.

Hst 312U - African History Before 1800 (4)
An upper division course designed to survey the history of the African continent from earliest times to the period of the Atlantic slave trade. Using a lecture/discussion format, the course will examine the impact of trade, technology, and ecology on the transformation of African societies before 1800. This is the same course as BST 305U and may be taken only once for credit. Expected preparation: Upper-division standing.
Cross-Listed as: BST 305U.

Hst 313U - African History Since 1800 (4)
An upper division course designed to survey the history of the African continent from 1800 to the present, with emphasis on the era of the Atlantic slave trade, colonial period, independence, and post independence. This is the same course as BST 306U and may be taken only once for credit. Expected preparation: Hst 312 or upper division standing.
Cross-Listed as: BST 306U.

Hst 314U - Ancient Near East and Egypt (4)
Covers the Stone Age to the death of Alexander the Great in 323 BC, from Afghanistan to Egypt. Topics include the agricultural revolution, the origin of cities and ancient empires, Gilgamesh, the Bible, and the Persians.

Hst 315U - History of Ancient Greece (4)
A survey of the social, political, economic, and cultural history of the Greeks and their neighbors. From earliest beginnings through the Hellenistic age.

Hst 316U - Roman History (4)
A study of the social, political, economic, and cultural history of the Mediterranean region between 753 BCE and the fall of Rome.

Hst 317U - Jewish History from Antiquity to the Medieval Period (4)
Introduces students to the Jewish historical experience from its Biblical origins through the end of the first millennium CE primarily by means of close readings of primary sources. Describes the diverse forms of Jewish life under Persian, Greco-Roman, Early Christian and Muslim rule and examines the boundaries of pre-modern Jewish cultural and religious identity. This is the same course as JSt 317 and may be taken only once for credit.
Cross-Listed as: JSt 317U.

Hst 318U - Jewish History from the Medieval Period to the Present (4)
Survey of Jewish history from the year 1000 to the present, covering major developments in Jewish society and culture in the medieval Islamic and Christian realms, early modern Europe and the Middle East, and the modern world. Topics include religious thought, communal and political structures, and Jewish/non-Jewish relations. This is the same
course as JSt 318 and may be taken only once for credit.

Cross-Listed as: JSt 318U.

**Hst 319U - Rabbinic Culture in the Roman World (4)**

Introduction to history and literature of the rabbinic movement in Roman Palestine, 70 CE-500 CE. Origins of the rabbis, their role in society, genres of rabbinic literature (Mishnah, Talmud, Midrash), rabbinic law and theology and rabbinic attitudes towards the urban culture of the Roman Near East. This is the same course as JSt 319 and may be taken only once for credit.

Cross-Listed as: JSt 319U.

**Hst 320U - East Asian Civilizations (4)**

Origins and development of East Asian civilizations from the earliest human cultures to around 1300. Focus on interactions between Chinese influences and indigenous traditions in Japan, Korea, and Vietnam; Confucianism, Buddhism, and other religious traditions; social organization, economies, and political institutions; cultural, artistic, and literary traditions.

**Hst 321U - Early Modern East Asia, 1300-1800 (4)**

East Asia from the era of the Mongol conquests through European contacts, encompassing the Yuan, Ming, and Qing dynasties in China, Choson Korea, and the Ashikaga through Tokugawa periods in Japan.

**Hst 322U - Modern East Asia (4)**

History of East Asia from around 1800, beginning with the Opium Wars in China and the Meiji Restoration in Japan, through postwar state and society in Japan and the People’s Republic of China. Some attention to Korea, Vietnam, and Taiwan. Emphasis on concepts of imperialism, Westernization, modernization, and revolution.

**Hst 323 - Modern Korea (4)**

Korea’s modern history is as complex as any national history, with colonization from 1905-1945 followed by the political division of the Korean nation that, after a terrible civil war that played out in the context of the Cold War, left two states competing for the legitimacy to rule over Korea.

**Hst 324 - United States Civil Rights Movements (4)**

Examines the rise of the Black Power and the Chicano movements of the 1960s and 1970s in comparative perspective, as well as the American Indian, Women’s Liberation, LGBTQ, and Asian American Movements. Topics include racial and ethnic cultural nationalism, self-determination, discrimination, police/state violence, community control, and cross-racial/cross-ethnic organizing. These social movements are set within a global context framed by the Vietnam War, Anti-Colonialism, Feminism, “Third World” student activism, state/police violence, and the counterculture of the 1960s.

Cross-Listed as: ChLa 325.

**Hst 325 - Chicano/a History, 1492-1900 (4)**

Mexican American/Chicano/a history from the Conquest of the Americas to 1900 with an emphasis on empire, civil rights, identity, culture, sexuality, and war. This is the same course as ChLa 325 and may be taken only once for credit.

Cross-Listed as: ChLa 325.

**Hst 326U - Chicano/a History, 1900-Present (4)**

Mexican American/Chicano/a history from 1900 to the present with an emphasis on migration, ethnicity, labor, civil rights, identity, and culture. This is the same course as ChLa 326U and may be taken only once for credit.

Cross-Listed as: ChLa 326U.

**Hst 327U - U.S. History 1890-1932 (4)**

A survey of political, social, cultural, and economic history covering Populism and the Crisis of the 1890s, the Purity Crusade, Corporate and Anticorporate Progressive Reform, World War I, the League of Nations and Red Scare of 1919-20, the New Era and Cultural Conflicts of the 1920s, and the 1929 stock market crash. In doing so, the class addresses the presidencies of William McKinley, Theodore Roosevelt, William Howard Taft, Woodrow Wilson, Warren G. Harding, Calvin Coolidge, and Herbert Hoover.

**Hst 328U - U.S. History, 1932-1960 (4)**

A survey of political, social, cultural, and economic history covering the Great Depression of the 1930s, Noninterventionist Sentiment and World War II, Cold War Domestic and International Anti-Communism, and the Early Civil Rights Movement. In doing so, the class addresses Franklin D.
Roosevelt's New Deal and the presidencies of Harry Truman and Dwight D. Eisenhower.

Hst 329U- U.S. History, 1960-Present (4)
A survey of political, social, cultural, and economic history covering the Cold War and Vietnam, Sixties Civil Rights and Radical Activism, Watergate, the Rise of Populist Conservatism, the Emergence of the Global Economy, and Political Polarization. In doing so, the class addresses the presidencies of John F. Kennedy, Lyndon B. Johnson, Richard Nixon, Jimmy Carter, Ronald Reagan, George H. W. Bush, Bill Clinton, and their successors.

Hst 330U- Native Americans of Eastern North America (4)
Examines the origins of the Eastern Woodlands societies, surveys their culture around the time of European colonization, and considers how that culture changed in response to the arrival of Europeans to the North American continent. Traces the development of the major Native American nations of the region and explores how those nations responded to the policy of the United States in the 19th and 20th centuries.

Hst 331U- Native Americans of Western North America (4)
Explores the history of peoples native to Western North America in the American Southwest and Pacific Coast regions, and in British Columbia. Covers the period from precontact to the present and considers the responses from native nations to the re-peopling of the West as well as examining U.S. and Canadian federal policy.

Hst 333U- Food and Power in US History (4)
Course uses the topic of food to better understand the history of American culture, environments, social relations, technology, territorial expansion, immigration, gender relations, agribusiness, and international politics. Topics move chronologically from the colonial period through the twenty-first century.

Hst 334U- History of Canada (4)
Survey of the social, economic, and political history of Canada from the sixteenth century to the present. Topics include colonialism, First Nations peoples, evolution of government, Canadian-U.S. relations.

Hst 335U- Race and Ethnicity in U.S. History (4)
This course studies the history, meaning and construction of racial and ethnic identities in the U.S. from European colonialism to present. It engages the ways in which social practices, science, economics, cultural images, and local and federal laws worked to attach meaning to the ideologies of racial and ethnic identities.

Hst 337U- History of American Cities (4)
Traces the evolution of urban centers from the colonial period to the present. Focuses on the developing system of cities, on growth within cities, and on the expansion of public responsibility for the welfare of urban residents. Particular attention is given to the industrial and modern eras.

Hst 338U- Oregon History (4)
Explores the political and social history of the area most of us call home: Oregon Country, Oregon Territory, and the state of Oregon. Through lectures, readings, film, and discussion we will examine the connections between the local, national, and international as they pertain to this place. Topics considered include Oregon as Indian Country, Black Exclusion laws, the natural resource economy, the Tom McCall era, and Rajneeshees as new pioneers.

Hst 339U- The Environment and History (4)
Introduction to the global history of human interactions with the environment from antiquity to the present, with a special focus on the history of political, social, cultural, and economic forces that have produced modern relationships to nature. Designed as an introductory course for students of all majors.

Hst 340U- Women and Gender in America to 1848 (4)
Surveys the history of women in the middle North American continent to 1848. It highlights the experiences of and relationships among women of diverse origins, especially Native women, African women, and European women. Key themes include family, kinship, and sex-gender systems; colonialism and slavery; religious life; politics and the law; nation-building and the rise of modern citizenship.
Hst 341U - Women and Gender in the United States 1848-1920 (4)
Explores the diverse experiences of women in the United States between 1848 and 1920. Key themes include slavery, emancipation, and Reconstruction; colonialism and resistance; women’s rights and social reform; education and wage labor; immigration/migration; and Victorianism and sexual modernism.

Hst 342U - Women and Gender in the U.S. 1920 to the Present (4)
Surveys women’s lives and gender change in recent U.S. history. Among our themes will be women in politics, the work force, and social movements as well as changes in family life, gender identities, and sexuality. Women’s roles in globalization, the media, and popular culture will figure throughout.

Hst 343U - American Family History (4)
Examines the history of the many types of the families in what is now the United States from the period of colonial settlement in the 1500s to the present day. Course utilizes primary source texts and recent scholarship on the family to understand not only the complexity and diversity of families, but also the varied impacts of historical change on the structures, meanings, and adaptations of families. Special focus on understanding the formation and changing nature of gender norms, family strategies, race, class, immigration, and ethnicity.

Hst 344U - Culture, Religion, Politics: Jews and Judaisms in America Since World War Two (4)
Surveys significant religious, cultural, and political developments in American Jewry since the end of World War Two. Topics include the impact of the war and the Holocaust; liberalism, radicalism, and neoconservatism; suburbia; the counterculture; the fading of immigrant memory; Jewish feminism; the orthodox revival; relations with African-Americans and other minority groups; and the relationship between American Jewry and the State of Israel.

Hst 345U - Colonial America, 1607-1756 (4)
Survey of British North America from the planting of the English colonies to the eve of the Seven Years’ War. Topics include relations between Europeans and Native Americans, women’s status and roles, religious ferment, constitutional development, and the colonial economy.

Hst 346U - The American Revolution, 1756-1800 (4)
Survey of the American Revolution from its origins to the Early Republic. Topics include the pre-Revolutionary crises, the War of Independence, the Confederation, and the framing of the Constitution.

Hst 347U - Antebellum America, 1800-1850 (4)
Survey of the history of the United States from 1800 to 1850. Topics include the War of 1812, U.S. territorial expansion, Jacksonian democracy, Indian removal, reform movements, the transportation revolution, and the development of the market economy.

Hst 348U - Slavery, the American Civil War, and Reconstruction, 1850-1877 (4)
Survey of the history of slavery in the United States. Topics include the political, social, and economic circumstances that helped bring on the American Civil war, as well as the military history of the war, the consequences of the conflict, and the reconstruction of the Union.

Hst 349U - United States Indian Policy (4)
Examines the history of the United States government’s policy toward the Indigenous nations of North America. In particular, considers the Indian policies of the European colonial powers, the federal government’s creation and implementation of policies regarding Indigenous polities, the conflicts and relationships between Native nations and the state and federal governments, the origin of the Indigenous sovereignty movement, and the construction of Native rights by the state and federal courts of the United States.

Hst 350U - English History from 1066 to 1660 (4)
Designed to survey the history of England from the conquest in 1066 through the English Civil Wars and the ensuing period when England was without its monarchy in the mid-seventeenth century. Using a lecture/discussion format, explores significant events and developments in the governance, society, economy, and religion of England during this period.
Hst 351U - English History from 1660 to the Present (4)
Designed to survey the history of England from the restoration of the monarchy in 1660 to the present time. Using a lecture/discussion format, explores significant events and developments in the governance, society, economy, and religion of England during this period.

Hst 352U - European Women's History to 1700 (4)
An upper-division course designed to survey the history of women and the changing social construction of gender in Europe from c. 1000 to c. 1700. Explores the impact of social, intellectual, economic, and political changes, as well as significant events such as the Black Death and recurring religious change.

Hst 354U - Early Medieval Europe: 300-1100 (4)
A survey of political, cultural, intellectual, religious, social, and economic aspects of Western Europe and the Mediterranean, including the decline of Roman imperial might in Europe, the spread of Christianity, the Islamic, Viking, and Byzantine spheres, the rise and decline of the Carolingian Empire, the roles of women and gender, and the growth of feudal society around the year 1000.

Hst 355U - Late Medieval Europe, 1100-1450 (4)
Examines the late Middle Ages through primary sources emphasizing cultural, social, political, and intellectual transformations. Subjects include the twelfth-century cultural "renaissance," the emergence of European states and the papal monarchy, the rise of religious dissent and persecution of minorities, the transformation of medieval spirituality, the Crusades, European expansion and external encounters, growth of cities and the university, and the late medieval bubonic plague pandemic.

Hst 356U - Renaissance and Reformation Europe, 1400-1600 (4)
Surveys the cultural, social, intellectual and political aspects of the European Renaissance and Reformation. Emphasizes reading and analysis of contemporary source materials. Subjects include: the growth of urban culture and civic humanism in Italy, the rediscovery of classical literature and philosophy, court life and mores, the Catholic and Protestant reformation, witch-hunts and religious violence, and European exploration and exploitation of the Atlantic.

Hst 357U - Europe from Reformation to Revolutions (4)
Major developments in European social, political, economic, cultural, and intellectual history from the late 16th through the mid-19th centuries.

Hst 358U - Europe from National Unification to European Union (4)
Major events (World Wars I and II), socio-political movements (communism, fascism, Nazism), people, and themes in European history from the mid-19th century to the present.

Hst 359U - Early Modern France (4)
A survey of the history of France during the Reformation, the Age of Absolutism, and the Enlightenment, 1515-1778.

Hst 360U - The French Revolution and Napoleon (4)
A survey of the history of France during the Revolution and Napoleonic era, 1778-1815.

Hst 361U - Modern France & the World since 1815 (4)
Examines the France and its role in the world from 1815 to present, including revolutions, restorations, empire, world wars and national identity.

Hst 362U - Amazon Rain Forest (4)
Examines different ways in which the Amazon has been perceived through time. This course is the same as Intl 362; course may only be taken once for credit. Cross-Listed as: Intl 362U.

Hst 363U - History of the British Empire (4)
Surveys four centuries of the expansion and decline of the British Empire. Emphasis on the military, political and economic history of imperialism, the comparative study of colonial territories, and the emergence of post-colonial societies.
Hst 364U - Modern Brazil (4)
Examine such topics as slavery, abolition, messianism, banditry, the Amazon, race, military rule, and democratization in the making of modern Brazil. This course is the same as Intl 364 and may only be taken once for credit.

Hst 365U - History of Latin America, 4000 BCE-1810 (4)
A survey from pre-Columbian times ending with Latin American independence (4000 B.C.E. to 1810). Topics include: Paths across oceans, domesticating corn, potatoes, grains, animals; Olmecs, Maya, Toltecs, Teotihuacan, Purepecha, Mexico, Chimu, Incas, 1st peoples Brazilian basin; the Encounters; colonial mining economy; rise of Latin American consciousness, slavery, racial construction, Native American resistances; Catholic syncretism; Bourbon and Pombal reforms; Caribbean uniqueness; Haitian revolution; Portuguese Empire out of Brazil; Napoleon; rejection of Spanish political reforms, independences.

Hst 366U - History of Latin America, 1820-Present (4)
Course examines: Independence, search for autonomous political purpose, European economic penetration, Hispanismo, colonialism and slavery, U.S. imperial outreach, regional revolutions, armies and nation building, the model of “development”, import substitution, Japanese emigration, artistic revolutions, indigenism, world wars, Cold War, liberation theology, music, food, autonomous resistance, role of labor, satisfying western needs (tourism, stimulants, individual and labor exploitation), mega cities, missing the computer age, NAFTA vs. Chinese manufacturing, failing states, neo-authoritarianism, Covid-19.

Hst 368 - Brazil and Mexico in the 20th Century (4)
A comparative history of these rising powers of Latin America, including economic, diplomatic and cultural history, and the history of revolution, popular protest, spirituality and the visual arts.

Hst 369U - Women in World History (4)
Explores the history of women from "prehistory" to the modern era. Themes include work, marriage, empire, and slavery. Through primary and secondary sources, students will examine gender as a social construct in the human past and as a critical category of analysis in the present.

Hst 370 - Eurotopia: Creating & Contesting the European Union (4)
Examine the intellectual, political, and economic challenges to forging European unity, and the paradox that twentieth-century Europe witnessed the triumph of the nation-state at the same time that they developed supranational agencies to contain it.

Hst 375U - History of Kievan and Muscovite Russia, 800s-1700 (4)
Explores Kievan Rus and Muscovite Russia. Emphasis on political change, social conflicts, and identity formation through the appanage period. Mongol rule, the rise of Muscovy, and territorial expansion.

Hst 376U - History of Imperial Russia, 1700-1917 (4)
Studies the Russian Empire from its founding to the Russian Revolution of 1917. Emphasis on attempts at reform, and on political and cultural identity formation of various social groups and nationalities of the empire.

Hst 377U - History of the Soviet Union and Post-Soviet Russia (4)
Studies the Soviet Union from its founding in 1917 to the early post-Soviet period. Emphasis on socialism as theory and policy, and on political and cultural identity formation of various social groups and nationalities of the Soviet Union.

Hst 378U - Pagans, Christians and Jews (4)
Discusses the development and interaction of Roman paganism, Christianity and Judaism during the period of Late Antiquity. Topics include education, philosophy, asceticism, ritual, religious law, the image of the holy man and the phenomenon of religious polemic in the Later Roman Empire (c. 250-600 CE). This is the same course as Jst 378U and may be taken only once for credit.

Cross-Listed as: Jst 378U.

Hst 379U - History of Zionism (4)
Zionism's ideology and practice in context of Jewish and European history. Includes society and culture
Zionism created under the British mandate of Palestine, roots of the Arab-Jewish conflict in this context, and impact on Jewish life and politics in Eastern and Central Europe and the United States. This is the same course as JST 379U and can only be taken once for credit.

Cross-Listed as: JST 379U.

**HST 380U - The Holocaust (4)**

An introduction to the Nazi-planned and -executed genocide of European Jewry known as the Holocaust. Topics include the German and European contexts for the rise of Nazism; antisemitism and its links to Nazi ideology and policy; European Jewry in the interwar period; the "Final Solution"; resistance and "bystanders." This is the same course as JST 380U and may be taken only once for credit.

Cross-Listed as: JST 380U.

**HST 381U - Kabbalah: The Jewish Mystical Tradition (4)**

Surveys the origins and development of the Jewish mystical tradition set against the context of Jewish religious, social, and intellectual history. Topics include mystical visions in ancient Jewish texts, medieval Kabbalah and the Zohar, the Sabbatean messianic movement, Hasidism, and contemporary uses of Kabbalah. This is the same course as JST 381U and may be taken only once for credit.

Cross-Listed as: JST 381U.

**HST 382U - Palestine and Israel (4)**

A critical review of the 19th and 20th century social, cultural, economic and political factors behind the formation of two modern Middle Eastern nations, Palestine and Israel. Recommended prerequisite: upper division standing.

**HST 383U - Modern Iraq and Syria (4)**

A survey course examining the modern history of Iraq and Syria from the late nineteenth century to the present day, with the goal of providing historical context for contemporary political, cultural, economic, and military conditions in both states.

**HST 384U - Ottoman World (4)**

An overview of Balkan and Middle Eastern history from late-medieval to early modern times (c. 14th-18th centuries). Major themes include the rise of the Ottoman Empire, the Ottomans and the early modern world (c. 1500-1800), evolution of the Ottoman state, law and religion, economy and society, and popular culture and lifestyle.

**HST 385U - Late Imperial Middle East, 1700-1914 (4)**

Survey of the social, political, economic, and cultural history of the Middle East from the 18th century till the outbreak of World War I. Coverage of key themes such as imperialism, political reform, sectarianism, constitutionalism, and revolution.

**HST 386U - Middle East in the Twentieth Century (4)**

Overview of the Middle East since World War I. Discussion of colonialism and nationalism, emergence of mass society, economic development, birth of the Arab-Israeli conflict, Cold War, oil, and the rise of political Islam.

**HST 387U - History of Modern Science (4)**

Examines the interplay between science as a system of knowledge and science as the institutions by which that knowledge is produced. Through reading, lectures, independent research, and discussion, the course explores how science has affected and been affected by political, social, and cultural developments. Primary focus is Europe and America from the 16th century to the present, but global perspectives will also be considered.

**HST 390U - Topics in World History (4)**

Provides an overview of a particular period and/or theme in world history. Students will focus on major trends and/or connections related to the specific topic. Coverage will be global in breadth. Acceptable for the World History minor.

**HST 399 - Special Studies (1-12)**

See department for course description. (Credit to be arranged.)

**HST 401 - Research (0-6)**

See department for course description. (Credit to be arranged.) Consent of instructor.

**HST 403 - Honors Thesis (1-4)**

(Credit to be arranged.)
**Hst 404 - Public History Internship (1-12)**

Intensive, on-the-job internships with public agencies, private businesses, non-profit firms, and other groups in public history work. Each internship is by special arrangement and terms. Expected preparation: Hst 496/596, or consent of instructor.

Also offered for graduate-level credit as Hst 504.

**Hst 405 - Reading and Conference (0-9)**

(Credit to be arranged.)

**Hst 407 - Seminar (1-8)**

Study and application of the techniques of historical research and writing.

Also offered for graduate-level credit as Hst 507.

Prerequisite: Hst 300 and Hst 405 or consent of the instructor.

**Hst 410 - Selected Topics (1-6)**

See department for course description. (Credit to be arranged)

**Hst 411 - Public History Lab (4)**

Lab course will focus on a specific sub-field in Public History. Working professionals will instruct students in the latest techniques used in public history work. One lab course is required for graduate students taking the public history track in the M.A. in history.

Prerequisite: Hst 496/596.

**Hst 412 - Topics in African History and Culture (4)**

An in-depth exploration of selected topics in African cultural history. Special attention will be given to thematic issues of broad application to the understanding of cultural interaction, continuity, and change. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for graduate-level credit as Hst 512.

Prerequisite: Upper-division standing.

**Hst 413 - Topics in Transnationalism (4)**

Examines human activities, institutional structures, and social movements that cross national boundaries. Topics include migration, diaspora, and activism, as well as flow of ideas, goods, and technologies among people or regions not defined primarily by the nation-state. Frameworks for study include border zones, deterritorialized nations or peoples, and global citizenship.

Also offered for graduate-level credit as Hst 513.

Prerequisite: Upper-division standing.

**Hst 415 - Topics in Greek History (4)**

An advanced look at specific topics in Greek history from the Bronze Age to the death of Cleopatra. Topics will include social, political, economic, intellectual, and religious history. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for graduate-level credit as Hst 515.

Prerequisite: Upper-division standing.

**Hst 416 - Topics in Roman History (4)**

An advanced look at specific topics in Roman history from the Etruscans to the Dark Ages. Topics will include social, political, economic, and intellectual history. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for graduate-level credit as Hst 516.

Prerequisite: Upper-division standing.

**Hst 420 - Topics in Early Modern Japanese History (4)**

Selected themes in Tokugawa (1600-1850) history, including rural life and urbanization, merchants and commerce, political thought and institutions, women and family life, neo-Confucianism, religious beliefs and practices, popular culture, arts, and literature. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for graduate-level credit as Hst 520.

Prerequisite: Upper-division standing.

**Hst 421 - Topics in Modern Japanese History (4)**

Selected themes in modern Japanese history, including the construction of the nation-state, modernization, Japan's drive to great power status, Japan's emergence as an imperialist power, state-society relations, and modernity outside Europe. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for graduate-level credit as Hst 521.

Prerequisite: Upper-division standing.

**Hst 422 - Topics in Postwar Japanese History, 1945-present (4)**

Selected themes in postwar Japanese history, including the Occupation reforms (1945-52) and Japan's place in the Cold War system, the so-called "economic miracle," the development of a mass consumer culture, and U.S.-Japan relations.
Hst 423 - Topics in Chinese Social History (4)
This course will examine institutions and themes relating to the family, urban and rural life, education and the like-in Chinese social history. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for graduate-level credit as Hst 522.
Prerequisite: Upper-division standing.

Hst 424 - Topics in Chinese Thought and Religion (4)
Study of selected topics in intellectual and cultural history related to Confucianism, Buddhism, Daoism, and other philosophical and religious constructs. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for graduate-level credit as Hst 523.
Prerequisite: Upper-division standing.

Hst 425 - Modern China (4)
History of China from decline of imperial system through century of revolution that culminated in founding of People's Republic of China in 1949. Post-1949 focus on critical periods and issues in state-society relations, economic and political reform, and cultural changes, including global posture and relations with the West.
Also offered for graduate-level credit as Hst 525.
Prerequisite: Upper-division standing.

Hst 427 - Topics in the History of Science (4)
An in-depth investigation of a selected theme in the history of science and its cultural, social, or political relations. The subject matter will vary from term to term; topics include: science and religion, science under Nazism, science and Modernism, Darwinism and social Darwinism, Scientific Revolution, and changing physical world pictures. Some previous study in history is recommended; a background in science is welcome, but not required or expected. (Maximum number of credits is 12; 4 credits each for three courses with different topics.) Expected preparation: Upper-division standing.
Also offered for graduate-level credit as Hst 527.

Hst 429 - Topics in U.S. Cultural History (4)
A lecture course that explores selected topics in modern U.S. political culture and cultural expression.
Hst 434 - U.S. Social and Intellectual History, 1865-present (4)
Examines social and intellectual history of the United States from 1865 to the present. Includes discussion of race, class, religion and philosophy, ideology and politics, community, region, and labor.
Also offered for graduate-level credit as Hst 534 and may be taken only once for credit. Prerequisite: Upper-division standing.

Hst 438 - American Economic History: the First Century (4)
Also offered for graduate-level credit as Hst 538 and may be taken only once for credit.

Hst 439 - American Economic History: the 20th Century (4)
Also offered for graduate-level credit as Hst 539 and may be taken only once for credit.

Hst 440 - American Environmental History (4)
A survey of North American history that explores the relationships between ideas of nature, transformations of the environment, and the effect of the environment on humans. Topics include colonialism; links between ecological change and race, class, and gender relations; the role of science/technology; agriculture, industrialization, and urbanization; and environmentalism.
Also offered for graduate-level credit as Hst 540 and may be taken only once for credit. Prerequisite: Upper-division standing.

Hst 442 - Race, Class and Gender in the American West (4)
Examines the trans-Mississippi West as a cultural meeting ground and explores the racial, class, and gender implications of new migrations to the region. Particular attention will be placed on the arid West and human responses to landscape. Expected preparation: Hst 201, 202 or upper-division standing.
Also offered for graduate-level credit as Hst 542 and may be taken only once for credit.

Hst 444 - History of the Pacific Northwest (4)
The social, cultural, economic, and political aspects of the development of civilization in Oregon and Washington. The history of the region is related to national and international contexts. Expected preparation: Hst 201, 202.
Also offered for graduate-level credit as Hst 544 and may be taken only once for credit.

Hst 445 - History of Portland (4)
The historical growth of Portland and its metropolitan region, with major attention given to the 20th century. Emphasis is placed upon the process of urbanization and the consequences of the past decisions and actions as they relate to recent developments. Expected preparation: Upper-division standing.
Also offered for graduate-level credit as Hst 545 and may be taken only once for credit.

Hst 446 - Civil Rights and the Law: The History of Equal Protection (4)
An exploration of the history of the 14th Amendment Equal Protection Clause's impact on the civil rights of Women, African Americans, Mexican Americans, and others.
Prerequisite: upper-division standing.

Hst 447 - U.S. Constitutional History: Foundations (4)
Examines the intellectual origins, creation, and ratification of the American Constitution and the early efforts of the U.S. Supreme Court to construe that document.
Also offered for graduate-level credit as Hst 547 and may be taken only once for credit. Prerequisite: Upper-division standing.

Hst 448 - U.S. Constitution: Nineteenth Century (4)
Examines the U.S. Supreme Court's role in the construction of modern America; includes discussion of the Court's decisions on federalism, slavery, presidential war powers, reconstruction and civil rights, and industrialization.
Also offered for graduate-level credit as Hst 548 and may be taken only once for credit. Prerequisite: Upper-division standing.

**Hst 449 - U.S. Constitution: Twentieth Century (4)**
Examines how the U.S. Supreme Court’s decisions in the twentieth century impacted the national economy, federalism, and the civil rights and civil liberties of American citizens.
Also offered for graduate-level credit as Hst 549 and may be taken only once for credit. Prerequisite: Upper-division standing.

**Hst 450 - Medieval England (4)**
Examines political, religious, social, and economic aspects of the history of England from approximately 800 to the end of the 14th century. Expected preparation: Upper-division standing or permission of instructor.
Also offered for graduate-level credit as Hst 550 and may be taken only once for credit.

**Hst 451 - Early Modern England (4)**
Examines political, religious, social, and economic aspects of the history of England from the 15th through the 17th centuries. Expected preparation: Upper-division standing.
Also offered for graduate-level credit as Hst 551 and may be taken only once for credit.

**Hst 452 - Topics in the History of European Women (4)**
Examines selected aspects of the history of European women, focusing on one or more specific regions, topics, and/or time frames. Possible topics include aspects of the history of women and religion, women and work, women accessing power, and gender and religious identity. Maximum number of credits is 12; 4 credits each for three courses with different topics. Expected preparation: upper-division standing.
Also offered for graduate-level credit as Hst 552.

**Hst 453 - The Medieval City: Communities of Conflict and Consensus (4)**
Emphasizes the social and cultural history of the medieval city from ca. 300-1500. Proceeding chronologically and thematically, explores how contemporaries imagined cities and urban life; the formation of civic consciousness and identity in feudal Europe; the commercial revolution and its cultural consequences; family and domestic life; the experience of marginalized elements; the construction, regulation, and function of urban space; and the role of spectacle, ceremony, and ritual, all as means to assess how the urban community mediated conflict and sought elusive consensus. Expected preparation: Hst 101, 354, or 355 or upper-division standing.
Also offered for graduate-level credit as Hst 553 and may be taken only once for credit.

**Hst 454 - Topics in Medieval History (4)**
Examines selected topics in the social, cultural, and/or religious history of the European Middle Ages, spanning the period from roughly 300-1450 C.E. Topics will vary, but may include the study of sanctity and society, religious dissent and reformation of the church, holy war and crusade, regional and national political histories, cross-cultural studies, and other subjects. (Maximum number of credits is 12; 4 credits each for three courses with different topics.) Expected preparation: Hst 101, 354, or 355 or upper-division standing.
Also offered for graduate-level credit as Hst 554.

**Hst 455 - Topics in Renaissance History (4)**
Identifies and examines those special aspects of Western European civilization that mature roughly between 1300 and 1550 and that begin to set it apart from the medieval era. Not a survey of life during a period of time but a study of selected phenomena. Topics include the revival of antique (above all Latin and Greek) letters and attitudes, types of Humanism, new education ideals, secular outlook, the functions of Renaissance patrons, political theory and the growth of the "early modern state," Neoplatonism, and the spread of the Renaissance from Italy to Northern Europe. (Maximum number of credits is 12; 4 credits each for three courses with different topics.) Expected preparation: Upper-division standing.
Also offered for graduate-level credit as Hst 555.

**Hst 456 - Religious Change in Sixteenth Century Europe (4)**
Examines the causes, characteristics, and consequences of the revolutionary changes in European Christianity that occurred during the 16th century: changes that are generally labeled "The Reformation." Expected preparation: Upper-division standing.
Also offered for graduate-level credit as Hst 556 and may be taken only once for credit.

**Hst 457 - Topics in Early Modern Europe (4)**
Examines selected topics in the social, cultural, political and/or economic history of Europe in the early modern period (roughly 1515-1815). Topics will vary, but may include European financial history, the crisis of the seventeenth century, popular revolt, the royal state, and other topics. May be taken a second time for credit (maximum 8 credits) with a

Also offered for graduate-level credit as Hst 557.

**Hst 458 - Modern Germany (4)**

Examines aspects of the development of German political, social, and cultural life during the 19th and 20th centuries. Expected preparation: Hst 103, Hst 358.

Also offered for graduate-level credit as Hst 558 and may be taken only once for credit.

**Hst 459 - Topics in Modern European History (4)**

Examines a selected theme related to the history of modern Europe from (primarily) the 19th through the 20th centuries. Topics will vary, whether focusing internationally or on a single European nation, but will include the definition of Europe; dictatorship and sovereignty; nationalism and identity; society and the state; the experience of modern violence; trials and justice; world wars; comparative fascism; social and political transition, and war and society. May be taken a second time for credit (maximum 8 credits) with a different topic. Expected preparation: Hst 103 or 358; upper division standing.

Also offered for graduate-level credit as Hst 559.

**Hst 460 - Topics in European Intellectual History (4)**

Examines a selected theme in the development of European thought in its social context; format includes lecture and the analysis and discussion of primary texts. May be taken a second time for credit (maximum 8 credits) with a different topic. Expected preparation: Upper-division standing.

Also offered for graduate-level credit as Hst 560 and may be taken only once for credit.

**Hst 461 - Topics in Jewish History (4)**

Examines select aspects of Jewish history, focusing on one or more specific regions, periods, events, or concerns. Possible topics include: medieval and early modern Jewish history, ancient Israelite or rabbinic history and culture, Sephardic Jewry, history of Russian Jewry, and gender and Jewish history. Maximum number of credits is 12; 4 credits each for three courses with different topics. Expected preparation: upper division standing.

Also offered for graduate-level credit as Hst 561.

**Hst 464 - Indians of the Pacific Northwest (4)**

Examines the history of peoples native to the Pacific Northwest with a special emphasis on natural resource allocation and the relationships between federal, state, and tribal governments in the 19th and 20th centuries. Expected preparation: Hst 201, Hst 202 or Hst 338U.

Also offered for graduate-level credit as Hst 564 and may be taken only once for credit.

**Hst 465 - Twentieth Century Latin America (4)**

Course examines: Positivism, Mexican Revolution, World War I, import substitution, comparison of Argentina, Mexico, Brazil and Peru in the 1920s, the Depression in Latin America, Nazi threats, U.S. Latin American cooperation WWII, the Cold War, Cuba as watershed, Alliance for Progress, Liberation theology, Soviet, Cuban, Chinese, Trotskyite rivalries, Dirty wars, Central American revolutions, implosion of Mexican development model, democracy, rise of digital worlds, stimulants, tourism, Nafta, U.S. disregard.

Also offered for graduate-level credit as Hst 565 and may be taken only once for credit. Prerequisite: Upper-division standing.

**Hst 468 - History of Mexico I: 4000 BCE-1821 (4)**

Study of Mexico's beginnings from pre-Columbian times through the colonial period. The origins of Mexican culture, society, economy, and political institutions will be examined in the context of Hispanic and indigenous contributions.

Also offered for graduate-level credit as Hst 568 and may be taken only once for credit. Prerequisite: Upper-division standing.

**Hst 469 - History of Mexico II: 1810-1876 (4)**

Study of Mexico's history from the revolutions for independence until 1876. Emphasis on the development of constitutional government, the era of reform, foreign interventions, and the restoration of the republic.

Also offered for graduate-level credit as Hst 569 and may be taken only once for credit. Prerequisite: Upper-division standing.

**Hst 470 - History of Mexico III: 1876-Present (4)**

Mexico's emergence as a modern nation during the Porfirian dictatorship. The 20th century revolutionary upheaval and consolidation.

Also offered for graduate-level credit as Hst 570 and may be taken only once for credit. Prerequisite: Upper-division standing.

**Hst 477 - Topics in Russian-Soviet History (4)**

Studies selected themes on the political, social, and cultural aspects of the Imperial, Soviet, and/or post-Soviet experience. Investigates the politics, controversies, and social imaginaries of the period and theme under study through primary sources and
hast 478 - Topics in Russian Cultural-Intellectual History (4)

Studies selected cultural and intellectual trends in Imperial, Soviet, and/or post-Soviet Russia. Investigates themes related to modernity and mass culture, such as the formation of the intelligentsia, revolutionary ideologies, and/or Soviet Marxism, through the analysis of primary sources and historiographical debates. Maximum number of credits is 12; 4 credits each for three courses with different topics.

Also offered for graduate-level credit as Hst 578..
Prerequisite: Upper division standing.

hast 484 - Topics in Middle Eastern History (4)

Explores such transnational topics in the history of the Middle East as Islam and modernity, the Middle East and the world economy, the Middle East and orientalism. Maximum number of credits is 12; 4 credits each for three courses with different topics.

Expected preparation: upper-division standing.

Also offered for graduate-level credit as Hst 584.

hast 486 - Modern Turkey (4)

A study of the formation and evolution of the Turkish Republic. Coverage runs from the late-Ottoman legacy (19th century) to an overview of the republican period (since 1923). Discussion of authoritarianism and democratization, religion and secularism, nationalism and minorities, migration and urbanization, and relations with Europe and America.

Expected preparation: upper-division standing.

Also offered for graduate-level credit as Hst 586 and may be taken only once for credit.

hast 488 - Modern Arabia (4)

A survey of the history of the Arabian Peninsula in the 19th and 20th centuries. Emphasis will be on socio-economic and governmental institutional change with discussion of changing cultural values. The role of the British and Ottoman empires, Islamic reformism, oil, and the emergence of nation states (Saudi Arabia, Yemen, Oman, and the Gulf States).

Expected preparation: upper-division standing.

Also offered for graduate-level credit as Hst 588 and may be taken only once for credit.

hast 490 - Comparative World History (4)

Comparative examination of important themes in world history. Both the themes and regional focus vary each term, and themes may be drawn from any time period. Maximum number of credits is 12; 4 credits each for three courses with different topics.

Also offered for graduate-level credit as Hst 590.
Prerequisite: Upper-division standing.

hast 491 - Reading Seminar (4)

Provides students with an overview of the scholarship in a specific historical field. The course requires students to read, review, and discuss the significant books and articles in the field. This course is the prerequisite for Hst 492 Research Seminar.

Also offered for graduate-level credit as Hst 591.

hast 492 - Research Seminar (4)

Students will produce a research paper on a specific historical topic.

Also offered for graduate-level credit as Hst 592.

hast 493 - Introduction to Public History (4)

Introduction to the field of public history with special emphasis on research methods, procedures, and work in the practice of public history, from archival management to historic preservation and museum studies.

Also offered for graduate-level credit as Hst 593 and may be taken only once for credit.
Prerequisite: Upper-division standing.

hast 494 - Public History Seminar (4)

Engages students in advanced investigation of special topics in public history work, including archives, oral history, project design, digital history, and others. Seminars feature technical readings, group work, peer evaluation, and written projects.

Also offered for graduate-level credit as Hst 594.
Prerequisite: Upper-division standing.

hast 495 - Public History Lab (4)

Lab course will focus on a specific sub-field in Public History. Working professionals will instruct students in latest techniques used in public history work.

Also offered for graduate-level credit as Hst 595.

hast 496 - Introduction to Public History (4)

An introduction to the field of public history with special emphasis on the research methods, procedures, and work in the practice of public history, from archival management to historic preservation and museum studies. Taught in cooperation with the professional staff of the Oregon Historical Society. This course is a prerequisite for Hst 404/504, Public History Internships.
**Hst 497 - Film and History (4)**

The study of selected topics of modern history through the viewing and analysis of important documentaries and feature films. Emphasis is on the application of techniques of historical source criticism to the varied information preserved and transmitted in cinematographic form. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.) Expected preparation: upper division standing.

Also offered for graduate-level credit as Hst 597.

**Hst 500 - Introduction to the Master's Program in History (4)**

An introduction to the professional study of history and to the writing of the master's thesis. Intended for new or recently entering graduate students in history.

**Hst 501 - Research (0-9)**

See department for course description. (Credit to be arranged.) Consent of instructor.

**Hst 502 - Independent Study (1-9)**

(Credit to be arranged.)

**Hst 503 - Thesis (0-9)**

See department for course description. (Credit to be arranged.)

**Hst 504 - Public History Internship (1-12)**

Intensive, on-the-job internships with public agencies, private businesses, non-profit firms, and other groups in public history work. Each internship is by special arrangement and terms.

Also offered for undergraduate-level credit as Hst 404.

**Hst 505 - Reading and Conference (0-8)**

(Credit to be arranged.)

**Hst 506 - Problems/Projects (1-6)**

(Credit to be arranged.)

**Hst 507 - Seminar (1-6)**

Study and application of the techniques of historical research and writing.

Also offered for undergraduate-level credit as Hst 407.

**Hst 510 - Selected Topics (1-6)**

See department for course description. (Credit to be arranged)

**Hst 511 - Public History Lab (4)**

Lab course will focus on a specific sub-field in Public History. Working professionals will instruct students in the latest techniques used in public history work. One lab course is required for graduate students taking the public history track in the M.A. in history.

Prerequisite: Hst 496 or Hst 596.

**Hst 512 - Topics in African History and Culture (4)**

An in-depth exploration of selected topics in African cultural history. Special attention will be given to thematic issues of broad application to the understanding of cultural interaction, continuity, and change. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for undergraduate-level credit as Hst 412.

**Hst 513 - Topics in Transnationalism (4)**

Examines human activities, institutional structures, and social movements that cross national boundaries. Topics include migration, diaspora, and activism, as well as flow of ideas, goods, and technologies among people or regions not defined primarily by the nation-state. Frameworks for study include border zones, deterritorialized nations or peoples, and global citizenship.

Also offered for undergraduate-level credit as Hst 413.

**Hst 514 - Graduate Research Colloquium (1)**

Provides an opportunity for graduate students in history to engage in presentation and discussion of each other’s work under faculty guidance and to gain exposure to current developments in historical scholarship through presentations of faculty research. May be repeated for credit; however, only a maximum of three credits may be applied to graduate degree requirements. Expected preparation: matriculation in graduate program in History.
Hst 515 - Topics in Greek History (4)
An advanced look at specific topics in Greek history from the Bronze Age to the death of Cleopatra. Topics will include social, political, economic, intellectual, and religious history. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 415.

Hst 516 - Topics in Roman History (4)
An advanced look at specific topics in Roman history from the Etruscans to the Dark Ages. Topics will include social, political, economic, and intellectual history. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 416.

Hst 520 - Topics in Early Modern Japanese History (4)
Selected themes in Tokugawa (1600-1850) history, including rural life and urbanization, merchants and commerce, political thought and institutions, women and family life, neo-Confucianism, religious beliefs and practices, popular culture, arts, and literature. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 420.

Hst 521 - Topics in Modern Japanese History (4)
Selected themes in modern Japanese history, including the construction of the nation-state, modernization, Japan's drive to great power status, Japan's emergence as an imperialist power, state-society relations, and modernity outside Europe. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 421.

Hst 522 - Topics in Postwar Japanese History, 1945-present (4)
Selected themes in postwar Japanese history, including the Occupation reforms (1945-52) and Japan's place in the Cold War system, the so-called "economic miracle," the development of a mass consumer culture, and U.S.-Japan relations. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 422.

Hst 523 - Topics in Chinese Social History (4)
This course will examine institutions and themes-relating to the family, urban and rural life, education and the like-in Chinese social history. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 423.

Hst 524 - Topics in Chinese Thought and Religion (4)
Study of selected topics in intellectual and cultural history related to Confucianism, Buddhism, Daoism, and other philosophical and religious constructs. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 424.

Hst 525 - Modern China (4)
History of China from decline of imperial system through century of revolution that culminated in founding of People's Republic of China in 1949. Post-1949 focus on critical periods and issues in state-society relations, economic and political reform, and cultural changes, including global posture and relations with the West. Also offered for undergraduate-level credit as Hst 425.

Hst 527 - Topics in the History of Science (4)
An in-depth investigation of a selected theme in the history of science and its cultural, social, or political relations. The subject matter will vary from term to term; topics include: science and religion, science under Nazism, science and Modernism, Darwinism and social Darwinism, Scientific Revolution, and changing physical world pictures. Some previous study in history is recommended; a background in science is welcome, but not required or expected. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)
Also offered for undergraduate-level credit as Hst 427.

Hst 529 - Topics in U. S. Cultural History (4)
A lecture course that explores selected topics in modern U.S. political culture and cultural expression. Maximum number of credits is 12; 4 credits each for three courses with different topics.
Hst 530 - Roots of American Culture (4)
Relation of cultural attitudes and values to the American historical experience from 1600-1860. Topics include the European legacy; Puritanism; race, class, and ethnicity; American Enlightenment and Revolution; Cultural Nationalism; Industrial Ethnicity and Pastoralism; Jacksonian Democracy; Manifest Destiny and Native Americans; Slavery and African American Culture; Evangelicalism, Reform, Abolitionism, and Feminism.

Also offered for undergraduate-level credit as Hst 429.

Hst 531 - Rise of American Corporate Culture (4)
Relation of cultural attitudes and values to the American historical experience from 1860-1945. Topics include Civil War and Reconstruction; Incorporation, Labor Reform, and Utopian Thought; Populism; Progressive Reform; Two Cultures of the 1920s; Depression Realism and Radicalism; World War II and the Judeo-Christian Consensus.

Also offered for undergraduate-level credit as Hst 430 and may be taken only once for credit.

Hst 532 - Recent U.S. Political Culture (4)
Relation of cultural attitudes and values to the American historical experience from 1945 to the present. Topics include Anti-Communist, Nationalist, and Anticorporate Insurgence in the 1950s; Antiwar, Racial, Counterculture, and Feminist Ferment in the Protest Era; New Age and Postmodernist Thought; Populist Conservatism and Traditional Values, 1980-present.

Also offered for undergraduate-level credit as Hst 431 and may be taken only once for credit.

Hst 533 - American Social and Intellectual History, 1600-1865 (4)
Examines early history of American social and intellectual history, including issues of race, class, religion and philosophy, ideology and politics, community, region, and labor.

Also offered for undergraduate-level credit as Hst 432 and may be taken only once for credit.

Hst 534 - U.S. Social and Intellectual History, 1865-present (4)
Examines social and intellectual history of the United States from 1865 to the present. Includes discussion of race, class, religion and philosophy, ideology and politics, community, region, and labor.

Also offered for undergraduate-level credit as Hst 433 and may be taken only once for credit.

Hst 538 - American Economic History: the First Century (4)
The economic background of the War of Independence and the seeds of the Civil War. Industrialization, urbanization, and development of the frontier. Rise of big business and organized labor. Laissez-faire, federalism, and the gradual emergence of the national government in economic policy. Changes in foreign trade and in the international position of the U.S.

Also offered for undergraduate-level credit as Hst 438 and may be taken only once for credit.

Hst 539 - American Economic History: the 20th Century (4)

Also offered for undergraduate-level credit as Hst 439 and may be taken only once for credit.

Hst 540 - American Environmental History (4)
A survey of North American history that explores the relationships between ideas of nature, transformations of the environment, and the effect of the environment on humans. Topics include colonialism; links between ecological change and race, class, and gender relations; the role of science/technology; agriculture, industrialization, and urbanization; and environmentalism.

Also offered for undergraduate-level credit as Hst 440 and may be taken only once for credit.

Hst 542 - Race, Class and Gender in the American West (4)
Examines the trans-Mississippi West as a cultural meeting ground and explores the racial, class, and gender implications of new migrations to the region. Particular attention will be placed on the arid West and human responses to landscape.

Also offered for undergraduate-level credit as Hst 442 and may be taken only once for credit.

Hst 543 - The American West: A Political and Economic History (4)
Focuses on the major political and economic changes in the trans-Mississippi West, from the 17th century
to the late 20th century, with special attention to the increasing power and influence of the federal government and corporate institutions after 1870. Recommended prerequisite: upper division standing.

**Hst 544 - History of the Pacific Northwest (4)**
The social, cultural, economic, and political aspects of the development of civilization in Oregon and Washington. The history of the region is related to national and international contexts.
Also offered for undergraduate-level credit as Hst 444 and may be taken only once for credit.

**Hst 545 - History of Portland (4)**
The historical growth of Portland and its metropolitan region, with major attention given to the 20th century. Emphasis is placed upon the process of urbanization and the consequences of the past decisions and actions as they relate to recent developments.
Also offered for undergraduate-level credit as Hst 445 and may be taken only once for credit.

**Hst 546 - Civil Rights and the Law: The History of Equal Protection (4)**
An exploration of the history of the 14th Amendment Equal Protection Clause’s impact on the civil rights of Women, African Americans, Mexican Americans, and others.
Prerequisite: upper-division standing.

**Hst 547 - U.S Constitutional History: Foundations (4)**
Examines the intellectual origins, creation, and ratification of the American Constitution and the early efforts of the U.S. Supreme Court to construe that document.
Also offered for undergraduate-level credit as Hst 447 and may be taken only once for credit.

**Hst 548 - U.S. Constitution: Nineteenth Century (4)**
Examines the U.S. Supreme Court’s role in the construction of modern America; includes discussion of the Court’s decisions on federalism, slavery, presidential war powers, Reconstruction and civil rights, and industrialization.
Also offered for undergraduate-level credit as Hst 448 and may be taken only once for credit.

**Hst 549 - U.S. Constitution: Twentieth Century (4)**
Examines how the U.S. Supreme Court’s decisions in the twentieth century impacted the national economy, federalism, and the civil rights and civil liberties of American citizens.
Also offered for undergraduate-level credit as Hst 449 and may be taken only once for credit.

**Hst 550 - Medieval England (4)**
Examines political, religious, social, and economic aspects of the history of England from approximately 800 to the end of the 14th century.
Also offered for undergraduate-level credit as Hst 450 and may be taken only once for credit.

**Hst 551 - Early Modern England (4)**
Examines political, religious, social, and economic aspects of the history of England from the 15th through the 17th centuries.
Also offered for undergraduate-level credit as Hst 451 and may be taken only once for credit.

**Hst 552 - Topics in the History of European Women (4)**
Examines selected aspects of the history of European women, focusing on one or more specific regions, topics, and/or time frames. Possible topics include aspects of the history of women and religion, women and work, women accessing power, and gender and religious identity. Maximum number of credits is 12; 4 credits each for three courses with different topics.
Also offered for undergraduate-level credit as Hst 452.

**Hst 553 - The Medieval City: Communities of Conflict and Consensus (4)**
Emphasizes the social and cultural history of the medieval city from ca. 300-1500. Proceeding chronologically and thematically, explores how contemporaries imagined cities and urban life; the formation of civic consciousness and identity in feudal Europe; the commercial revolution and its cultural consequences; family and domestic life; the experience of marginalized elements; the construction, regulation, and function of urban space; and the role of spectacle, ceremony, and ritual, all as means to assess how the urban community mediated conflict and sought elusive consensus.
Also offered for undergraduate-level credit as Hst 453 and may be taken only once for credit.

**Hst 554 - Topics in Medieval History (4)**
Examines selected topics in the social, cultural, and/or religious history of the European Middle Ages, spanning the period from roughly 300-1450 C.E.
Topics will vary, but may include the study of sanctity and society, religious dissent and reformation of the church, holy war and crusade, regional and
national political histories, cross-cultural studies, and other subjects. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for undergraduate-level credit as Hist 454.

**Hist 555 - Topics in Renaissance History (4)**

Identifies and examines those special aspects of Western European civilization that mature roughly between 1300 and 1550 and that begin to set it apart from the medieval era. Not a survey of life during a period of time but a study of selected phenomena. Topics include the revival of antique (above all Latin and Greek) letters and attitudes, types of Humanism, new education ideals, secular outlook, the functions of Renaissance patrons, political theory and the growth of the "early modern state," Neoplatonism, and the spread of the Renaissance from Italy to Northern Europe. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Also offered for undergraduate-level credit as Hist 455.

**Hist 556 - Religious Change in Sixteenth Century Europe (4)**

Examines the causes, characteristics, and consequences of the revolutionary changes in European Christianity that occurred during the 16th century: changes that are generally labeled "The Reformation."

**Hist 557 - Topics in Early Modern Europe (4)**

Examines selected topics in the social, cultural, political and/or economic history of Europe in the early modern period (roughly 1515-1815). Topics will vary, but may include European financial history, the crisis of the seventeenth century, popular revolt, the royal state, and other topics. May be taken a second time for credit (maximum 8 credits) with a different topic.

Also offered for undergraduate-level credit as Hist 457.

**Hist 558 - Modern Germany (4)**

Examines aspects of the development of German political, social, and cultural life during the 19th and 20th centuries. Topics will vary, whether focusing internationally or on a single European nation, but will include the definition of Europe; dictatorship and sovereignty; nationalism and identity; society and the state; the experience of modern violence; trials and justice; world wars; comparative fascism; social and political transition, and war and society. May be taken a second time for credit (maximum 8 credits) with a different topic. Expected preparation: Graduate standing.

Also offered for undergraduate-level credit as Hist 458 and may be taken only once for credit.

**Hist 559 - Topics in Modern European History (4)**

Examines a selected theme related to the history of modern Europe from (primarily) the 19th through the 20th centuries. Topics will vary, whether focusing internationally or on a single European nation, but will include the definition of Europe; dictatorship and sovereignty; nationalism and identity; society and the state; the experience of modern violence; trials and justice; world wars; comparative fascism; social and political transition, and war and society. May be taken a second time for credit (maximum 8 credits) with a different topic. Expected preparation: Graduate standing.

Also offered for undergraduate-level credit as Hist 459.

**Hist 560 - Topics in European Intellectual History (4)**

Examines a selected theme in the development of European thought in its social context; format includes lecture and the analysis and discussion of primary texts. May be taken a second time for credit (maximum 8 credits) with a different topic. Expected preparation: graduate standing for 560.

Also offered for undergraduate-level credit as Hist 460 and may be taken only once for credit.

**Hist 561 - Topics in Jewish History (4)**

Examines select aspects of Jewish history, focusing on one or more specific regions, periods, events, or concerns. Possible topics include: medieval and early modern Jewish history, ancient Israelite or rabbinic history and culture, Sephardic Jewry, history of Russian Jewry, and gender and Jewish history.

Maximum number of credits is 12; 4 credits each for three courses with different topics.

Also offered for undergraduate-level credit as Hist 461.

**Hist 564 - Indians of the Pacific Northwest (4)**

Explores the history of peoples native to the Pacific Northwest with a special emphasis on natural resource allocation and the relationships between federal, state, and tribal governments in the 19th and 20th centuries.

Also offered for undergraduate-level credit as Hist 464 and may be taken only once for credit.

**Hist 565 - Twentieth Century Latin America (4)**

Course examines: Positivism, Mexican Revolution, World War I, import substitution, comparison of Argentina, Mexico, Brazil and Peru in the 1920s, the Depression in Latin America, Nazi threats, U.S. Latin American cooperation WWII, the Cold War, Cuba as watershed, Alliance for Progress, Liberation theology, Soviet, Cuban, Chinese, Trotskyite rivalries, Dirty wars, Central American revolutions, implosion of Mexican development model,
Hst 568 - History of Mexico I: 4000 BCE-1821 (4)
Study of Mexico's beginnings from pre-Columbian times through the colonial period. The origins of Mexican culture, society, economy, and political institutions will be examined in the context of Hispanic and indigenous contributions.
Also offered for undergraduate-level credit as Hst 465 and may be taken only once for credit.

Hst 569 - History of Mexico II: 1810-1876 (4)
Study of Mexico's history from the revolutions for independence until 1876. Emphasis will be placed upon the development of constitutional government, the era of reform, foreign interventions, and the restoration of the republic.
Also offered for undergraduate-level credit as Hst 468 and may be taken only once for credit.

Hst 570 - History of Mexico III: 1876-Present (4)
Mexico's emergence as a modern nation during the Porfriean dictatorship. The 20th century revolutionary upheaval and consolidation.
Also offered for undergraduate-level credit as Hst 469 and may be taken only once for credit.

Hst 577 - Topics in Russian-Soviet History (4)
Studies selected themes on the political, social, and cultural aspects of the Imperial, Soviet, and/or post-Soviet experience. Investigates the politics, controversies, and social imaginaries of the period and theme under study through primary sources and historiographical debates. Maximum number of credits is 12; 4 credits each for three courses with different topics.
Also offered for undergraduate-level credit as Hst 478.

Hst 578 - Topics in Russian Cultural-Intellectual History (4)
Studies selected cultural and intellectual trends in Imperial, Soviet, and/or post-Soviet Russia. Investigates themes related to modernity and mass culture, such as the formation of the intelligentsia, revolutionary ideologies, and/or Soviet Marxism, through the analysis of primary sources and historiographical debates. Maximum number of credits is 12; 4 credits each for three courses with different topics.

Hst 584 - Topics in Middle Eastern History (4)
Explores such transnational topics in the history of the Middle East as Islam and modernity, the Middle East and the world economy, the Middle East and orientalism. Maximum number of credits is 12; 4 credits each for three courses with different topics.

Hst 586 - Modern Turkey (4)
A study of the formation and evolution of the Turkish Republic. Coverage runs from the late-Ottoman legacy (19th century) to an overview of the republican period (since 1923). Discussion of authoritarianism and democratization, religion and secularism, nationalism and minorities, migration and urbanization, and relations with Europe and America.
Also offered for undergraduate-level credit as Hst 486 and may be taken only once for credit.

Hst 588 - Modern Arabia (4)
A survey of the history of the Arabian Peninsula in the 19th and 20th centuries. Emphasis will be on socio-economic and governmental institutional change with discussion of changing cultural values. The role of the British and Ottoman empires, Islamic reformism, oil, and the emergence of nation states (Saudi Arabia, Yemen, Oman, and the Gulf States).
Also offered for undergraduate-level credit as Hst 488 and may be taken only once for credit.

Hst 590 - Comparative World History (4)
Comparative examination of important themes in world history. Both the themes and regional focus vary each term, and themes may be drawn from any time period. Maximum number of credits is 12; 4 credits each for three courses with different topics. Graduate credit requires a substantial research paper.
Also offered for undergraduate-level credit as Hst 490.

Hst 591 - Reading Seminar (4)
Provides students with an overview of the scholarship in a specific historical field. The course requires students to read, review, and discuss the significant books and articles in the field. This course is the prerequisite for Hst 592 Research Seminar.
Also offered for undergraduate-level credit as Hst 491. Prerequisite: Graduate standing.
Hst 592 - Research Seminar (4)
Students will produce a research paper on a specific historical topic.
Also offered for undergraduate-level credit as Hst 492.

Hst 593 - Introduction to Public History (4)
Introduction to the field of public history with special emphasis on research methods, procedures, and work in the practice of public history, from archival management to historic preservation and museum studies.
Also offered for undergraduate-level credit as Hst 493 and may be taken only once for credit.

Hst 594 - Public History Seminar (4)
Engages students in advanced investigation of special topics in public history work, including archives, oral history, project design, digital history, and others. Seminars feature technical readings, group work, peer evaluation, and written projects. Required for graduate students taking the public history track option as Hst 594.
Also offered for undergraduate-level credit as Hst 494.

Hst 595 - Public History Lab (4)
Lab course will focus on a specific sub-field in Public History. Working professionals will instruct students in latest techniques used in public history work.
Also offered for undergraduate-level credit as Hst 495.

Hst 596 - Introduction to Public History (4)
An introduction to the field of public history with special emphasis on the research methods, procedures, and work in the practice of public history, from archival management to historic preservation and museum studies. Taught in cooperation with the professional staff of the Oregon Historical Society. This course is a prerequisite for Hst 404/504, Public History Internships.

Hst 597 - Film and History (4)
The study of selected topics of modern history through the viewing and analysis of important documentaries and feature films. Emphasis is on the application of techniques of historical source criticism to the varied information preserved and transmitted in cinematographic form. The subject matter will vary from term to term. (Maximum number of credits is 12; 4 credits each for three courses with different topics.)

Intl 195 - Colloquium (1)
Lectures by PSU and visiting scholars on major world issues.

Intl 199 - Special Studies (1-9)
(Credit to be arranged.)

Intl 201 - Introduction to International Studies (4)
A survey of the main concepts, analytical tools, fields of study, global problems, and cross-cultural perspectives that comprise international studies.

Intl 211 - Introduction to African Studies (0-4)
In-depth interdisciplinary or topical study of one of the regional foci in the International Studies degree program.
**Intl 216 - Introduction to Asian Studies (0-4)**
In-depth interdisciplinary or topical study of one of the regional foci in the International Studies degree program.

**Intl 226 - Introduction to European Studies (4)**
In-depth interdisciplinary or topical study of one of the regional foci in the International Studies degree program.
Corequisite: Intl 226B.

**Intl 240 - Introduction to Latin American Studies (0-4)**
In-depth interdisciplinary or topical study of one of the regional foci in the International Studies degree program.

**Intl 247 - Introduction to Middle Eastern Studies (0-4)**
In-depth interdisciplinary or topical study of one of the regional foci in the International Studies degree program.

**Intl 296 - The United States and the World (4)**
Interdisciplinary study and analysis of the role of the United States in world affairs with emphasis on the twentieth and twenty-first century, relations between the U.S. and the Third World, the era of the Cold War, American globalism, diplomatic, economic, and geopolitical issues.

**Intl 299 - Special Studies (1-6)**
(Credit to be arranged.)

**Intl 317U - Topics in Asian Thought (4)**
Study of the religious and ethical traditions of Asia including, but not limited to, Buddhism, Confucianism, Hinduism, and Islam, their social and cultural importance, and their ties to political thought and history.

**Intl 321U - Asia: Globalization and Identity (4)**
Examines how Asian societies define the meaning of globalization vis-a-vis themselves and each other.

**Intl 323U - Asia: Tradition and Innovation (4)**
Examines how Asian societies employ the meanings of "tradition" and "innovation" to define themselves and view each other. The course looks at tradition and innovation in Asia by drawing on interdisciplinary and multidisciplinary knowledge sources.

**Intl 331U - Women in the Middle East (4)**
Aims to explore the role and status of women in the contemporary Middle East with respect to institutions such as the family, law, education, work, and politics --areas which intersect and overlap with broader cultural questions about women and their place in tradition, modernity, nation-building, Islam, and the West. This course is the same as WS 331U and may only be taken once for credit.
Cross-Listed as: WS 331U.

**Intl 332U - Islamic Social Movements (4)**
An overview of recent Islamic social movements. Examines the roots and development of Islamic movements in, among others, Muslim-populated societies in the context of Social Movement Theory and globalization. Particular attention is given to the rise of Islamic socio-political movements from their position as a local and regional force to a global social movement.

**Intl 341U - Environment and Development in Latin America (4)**
Examines the interrelationships between environment and development in Latin America from an interdisciplinary perspective. Explores issues of sustainable development including agriculture, deforestation, trade, urbanization, ecotourism, and migration.

**Intl 342U - Globalization and Conflict in Latin America (4)**
Examines issues of globalization and its impacts on regional conflict in contemporary Latin America. Topics include political systems, trade, poverty, inequality and human rights.

**Intl 343U - Commodity Chains in Latin America: From Silver to Cocaine (4)**
Explores the politics, economy, culture and environment of Latin America from the point of view of export commodities. Tracing commodity chains,
from silver and cocaine to bananas and soy, the course shows how these chains connect places to the world economy, and the ramifications of economic dependence.

**Intl 349U - Gender and International Development (4)**

Examines how the material benefits of globalization and development projects are not shared equally across gender(s). Evaluates how development theory and practice address poverty, health, environment, sexuality, population, domestic/paid work. Also examines the emergence of civil society; patterns of violence and political participation globally. This is the same course as WS 349U and may be taken only once for credit.

Cross-Listed as: WS 349U.

**Intl 350U - The City in Europe (4)**

Focus on modern urban life since the eighteenth century and various responses to industrialization, state power, modernity, and globalization. The city provides a lens into debates on imperialism, nationalism, and cosmopolitanism. Through case studies, literature, and film, the course explores cities’ roles in shaping European identity and citizenship.

**Intl 360U - Bollywood: Communicating Contemporary South Asia through Cinema (4)**

Bollywood encompasses media industries in India and South Asia that produce entertainment for worldwide consumption. We examine transnational Indian Cinema emphasizing: Globalization and the politics of transnational film production, distribution, and reception. Local-regional-global dynamics. The construction and negotiation of gender, family, nation, religion/communalism, and emerging filmic genres. Filmic representation and diasporic identities.

**Intl 362U - Amazon Rain Forest (4)**

Examines different ways in which the Amazon has been perceived through time. This course is the same as Hst 362U; course may only be taken once for credit.

Cross-Listed as: Hst 362U.

**Intl 364U - Modern Brazil (4)**

Examines such topics as slavery, abolition, messianism, banditry, the Amazon, race, military rule, and democratization in the making of modern Brazil. This course is the same as Hst 364. May only be taken once for credit.

**Intl 365U - Digital Globalization (4)**

Explores how digital globalization has impacted all aspects of global society. Examines three main areas: digital culture and the individual; the sharing economy and innovation; and security issues, particularly questions of privacy and surveillance.

**Intl 366U - Cyberwar & Espionage (4)**

Examination of the use of cyberwarfare and espionage in International Affairs as well as the ethical issues entailed by these activities, and how these may be viewed differently by states, organizations and individuals. Also examines the theoretical foundations that underpin foreign policy debates related to cyberconflict and spying.

**Intl 367U - The Global Drug Trade (4)**

Explores the nature of the global drug trade, and its impact on the environment, nation-states, economies, populations, and international relations. Also examines different perspectives to understanding the drug trade, such as the global health approach to drugs, and the arguments for legalization. Students will also examine how drugs have been securitized as an issue, and the pros and cons of this approach. This class will place the drug trade in the context of other major global issues, such as how the drug trade fuels migration.

**Intl 372U - Post-colonial Studies of Africa (4)**

Study of the social, political, and economic dimensions of imperialism in twentieth century Africa from the perspective of post-colonial studies. This is the same course as BSt 372U and may be taken only once for credit.

Cross-Listed as: BSt 372U.

**Intl 375U - Global Migration (4)**

Exploration of the relationship between globalization and labor migration, with an emphasis on understanding migration patterns at local and global scales, location of the migrant within the global political economy, and the differential experiences of migrants around the world.
Intl 380U - Globalization, Representation and Difference in Media and Film (4)
Culture Industries such as television, film, social/digital media, community-based media, local press are global in reach and influence. We use international cultural artifacts to understand how globalization impacts the representation of difference commoditization of culture.

Intl 391U - Media and International Relations (4)
Examines the role of media (traditional and new media), historical and contemporary, in the conduct of international relations and in the reporting and representations of national and international politics and cultures.

Intl 395 - Colloquium (1)
Lectures by PSU and visiting scholars on major world issues.

Intl 397 - Theory and Policy in International Development (4)
Explores the concept of international development, its theoretical evolution and application in developing nations. Utilizes a historical approach starting with colonialism and ending with topics of contemporary salience such as trade, financial liberalization and sustainability.
Prerequisite: Intl 201 and Intl 296.

Intl 399 - Special Studies (0-12)
(Credit to be arranged.)

Intl 401 - Research (1-12)
(Credit to be arranged.)

Intl 402 - Independent Study (1-8)
(Credit to be arranged.)

Intl 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Intl 405 - Reading and Conference (1-12)
(Credit to be arranged.)

Intl 407 - Seminar (4)
Reading and discussion about an interdisciplinary topic in international affairs. Restricted to upper-division students with an International Studies major or minor.
Prerequisite: Intl 397 or Intl 415.

Intl 410 - Selected Topics (1-12)
(Credit to be arranged.)

Intl 415 - Global Studies Theories (4)
Exploration of key theories of global, social, and cultural processes including positivism, liberalism, and Marxism through multiple approaches including non-Western and comparative perspectives.
Prerequisite: Intl 201 and Intl 296.

Intl 445 - Cities and Third World Development (3)
Critical survey of historical, economic, cultural, political, and urban aspects of Third World development, starting with the colonial era. Includes historical patterns of integration of the Third World with the emerging world market system. Covers development theories and problems of the post-independence period, focusing on urban issues and policy alternatives. This is the same course as USP 445 and may be taken only once for credit.
Prerequisite: Upper-division standing. Cross-Listed as: USP 445.

Intl 452 - The European Union (4)
Focuses on how the EU has evolved since its beginnings in the 1950s, on its present-day organization and functions, and on how the member countries interact in making EU policies for jointly regulating their internal economies and societies as well as how the EU members also try to manage their relations with the rest of the world. This course is the same as PS 452; course may only be taken once for credit.
Cross-Listed as: PS 452.

Intl 460 - Political Development in Modern Turkey (4)
Designed to provide students with an in-depth study of political development literature with a focus on modern Turkey. Examines how a modern Turkish republic emerged from the ashes of the Ottoman Empire and evaluates stages of political development during the first, second, and third republic. Finally, assesses the implications of Turkey’s new geopolitics (post Cold War) on Turkish political and economic development from a global perspective.
Also offered for graduate-level credit as Intl 560 and may be taken only once for credit. Cross-Listed as: This course is the same as PS 460 and may only be taken once for credit.

**Intl 461 - Politics of Economic Reform in Modern Turkey (4)**

This course is designed to provide students with an in-depth study of political development literature with a focus on modern Turkey. We will examine how modern Turkish republic emerged from the ashes of the Ottoman Empire and evaluate stages of economic development during the first, second, and third republic. Finally, we will assess the implications of Turkey's new geopolitics (since the end of the Cold War) on Turkish economic development in a global perspective. This course is cross-listed as PS 461 and may be taken only once for credit.

Also offered for graduate-level credit as Intl 561 and may be taken only once for credit. Cross-Listed as: PS 461.

**Intl 470 - Intercultural Leadership and Change (4)**

Prepares students for citizenship, leadership, scholarship, and research in a changing and globalized world. Culled perspectives from extant intercultural scholarship. Develops analytical tools to reflect upon politically created differences in race, religion, class and gender in cosmopolitan societies.

Prerequisite: Upper-division standing.

**Intl 471 - Understanding the International Experience (4)**

Examination of communication-based dimensions of an international or intercultural experience, including teaching English to speakers of other languages. Development of strategies and activities required to meet the challenges of teaching, working, or doing research in an international/intercultural setting. All linguistics students must register for Ling 471/Ling 571 which includes a zero-credit lab. This is the same course as Ling 471 and may only be taken once for credit.

Prerequisite: upper-division or postbac academic standing. Cross-Listed as: Ling 471.

**Intl 490 - Global Sustainable Development (4)**

An examination of key concepts of sustainable development, policies associated with sustainable development in developing nations, and the power relations inherent to these policies. The subject matter is approached from an interdisciplinary perspective. Recommended prerequisites: Intl 397.

**Intl 501 - Research (1-9)**

(Credit to be arranged.)

**Intl 504 - Cooperative Education/Internship (1-9)**

(Credit to be arranged.)

**Intl 505 - Reading and Conference (1-9)**

(Credit to be arranged.)

**Intl 507 - Seminar (1-6)**

(Credit to be arranged.)

**Intl 510 - Selected Topics (1-6)**

(Credit to be arranged.)

**Intl 560 - Political Development in Modern Turkey (4)**

Designed to provide students with an in-depth study of political development literature with a focus on modern Turkey. Examines how a modern Turkish republic emerged from the ashes of the Ottoman Empire and evaluates stages of political development during the first, second, and third republic. Finally, assesses the implications of Turkey's new geopolitics (post Cold War) on Turkish political and economic development from a global perspective.

Also offered for undergraduate-level credit as Intl 460 and may be taken only once for credit. Cross-Listed as: This course is the same as PS 560 and may only be taken once for credit.

**Intl 561 - Politics of Economic Reform in Modern Turkey (4)**

This course is designed to provide students with an in-depth study of political development literature with a focus on modern Turkey. We will examine how modern Turkish republic emerged from the ashes of the Ottoman Empire and evaluate stages of economic development during the first, second, and third republic. Finally, we will assess the implications of Turkey's new geopolitics (since the end of the Cold War) on Turkish economic development in a global perspective. This course is cross-listed as PS 561 and may be taken only once for credit.

Also offered for undergraduate-level credit as Intl 461 and may be taken only once for credit. Cross-Listed as: PS 561.
ISQA - Info Systems & Quant Analysis

ISQA 111 - Fundamental Computer Concepts (2)
The fundamental concepts of Electronic Data Processing; the impact of EDP on the firm, and the fundamental concepts of computer use including programming and applications. Provides a general vocabulary and understanding of the capabilities of the computer in business. (One hour of lecture and two hours of recitation.)

ISQA 360 - Computer Programming for Business Applications (4)
Introduction to the fundamental programming theories and concepts necessary to create software applications that address the information needs of an organization. Introduces business students to the object-oriented design, implementation, and testing of event-driven programs. Topics include class definition, methods, data types, control structures, and file-based interactive input/output. Provides an overview of the industry proven software-development principles, and outlines the contribution that business professionals make to the program-development process.
Prerequisite: BA 325, CS 106.

ISQA 399 - Special Studies (1-6)
(Credit to be arranged.)

ISQA 405 - Reading and Conference (1-6)
(Credit to be arranged.)
Prerequisite: consent of instructor.

ISQA 430 - Industrial Transportation and Freight (4)
Develops an understanding of various modes of transportation, primarily focused on business applications and the movement of freight. Operational characteristics of the modes are evaluated, freight rate derivation and analyses are understood, and organizational evaluations of transportation strategies are studied. Transportation contract forms are analyzed and transportation risks are evaluated.
Prerequisite: BA 339.

ISQA 431 - Transportation Regulation (4)
Evolution of transportation law in the U.S., including examination of case law as precedent. Designed for those planning careers in transportation, logistics or supply chain management.

ISQA 449 - Process Control and Improvement (4)
Study of the principles of quality management including statistical quality control, total quality management, and the quality tools especially as they apply to supply and logistics processes.
Prerequisite: BA 339.

ISQA 501 - Research (1-8)
(Credit to be arranged.)

ISQA 504 - Cooperative Education/Internship (1-6)
(Credit to be arranged.)

ISQA 507 - Seminar (1-6)
(Credit to be arranged.)

ISQA 510 - Selected Topics (1-12)
(Credit to be arranged.)

ISQA 510S - Selected Topics (4)
(Credit to be arranged.)

ISQA 511 - Sustainable Operations Management (4)
Introduction to the concepts and analytic methods that are useful in understanding the management of a firm's operations and supply chain. The aim of the course is to (1) familiarize students with the basic language, concepts, insights and tools of operations and supply chain management, (2) demonstrate principles and methods for integrating sustainability into an organization using concepts such as the Toyota Production System, cradle-to-cradle principles, green procurement, and life cycle analysis, and (3) explore the relationship between sustainable supply chains and local and global economies in terms of environmental impact and social contribution.

ISt - Interdisciplin St
ISt 199 - Special Studies (1-5)
(Credit to be arranged.)
**ISt 299 - Special Studies (0-6)**  
(Credit to be arranged.)

**ISt 399 - Special Studies (1-12)**  
(Credit to be arranged.) For Extended Studies and Summer Session only.

**ISt 404 - Cooperative Education/Internship (1-9)**  
(Credit to be arranged.)

**ISt 410 - Selected Studies (1-8)**  
(Credit to be arranged.)

**ISt 499 - Special Studies (0-6)**  
(Credit to be arranged.)

**ISt 501 - Research (1-6)**  
(Credit to be arranged.)

**ISt 503 - Thesis (1-12)**  
(Credit to be arranged.)

**ISt 505 - Reading and Conference (1-8)**  
(Credit to be arranged.)

**ISt 506 - Special Projects (1-6)**  
(Credit to be arranged.)

**ISt 510 - Selected Studies (1-8)**  
(Credit to be arranged.)

**ISt 520 - Introduction to Foresight and Futures Practice (4)**  
Introduces futures thinking and the related social science anchored practice of foresight. Includes a history and evolution of futures practice in the private and public sector. As an emerging social science and growing presence in emerging government and private sector practice, futures thinking and work acknowledges deep acceleration in change, disruption and related volatility, power relations, uncertainty, complexity and ambiguity and a need for navigation skills to succeed in “post-normal” times.

**ISt 521 - Applying Foresight Frameworks and Building Futures Practice (4)**  
Advanced class to deepen student understanding and knowledge futures thinking and the related skills of applied and ethical foresight to real world interdisciplinary challenges. Includes an overview of settings and methods where foresight is currently being practiced in both the public and private sectors, and profiles of futurists who lead these processes. Focuses on methods which democratize and diversify the future.  
Prerequisite: ISt 520.

**ISt 522 - Integrative Futures Practice (2)**  
Advanced class to integrate the coursework student has taken for his/her/their Foresight Practice Certificate. After taking the two required and elective courses related to student area of interest, this class provides students the opportunity to integrate his/her/their learning regarding futures knowledge and foresight practice. Acquisition and presentation of strategies to democratize co-creation of shared futures, acknowledge/address bias and patterns of inequity will be prioritized, culminating in a practice portfolio.  
Prerequisite: ISt 520, ISt 521, and required electives.

**ISt 610 - Selected Studies (1-4)**  
(Credit to be arranged.)

**ISt 650 - Diversity/Equity Science and Math Ed I (4)**  
See department for a description of this course.

**ISt 699 - Special Studies (1-6)**  
(Credit to be arranged.)

**It - Italian**

**It 101 - First-Year Italian Term 1 (4)**  
An introduction to elementary Italian. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, and elementary readings. This is the first course in a sequence of three: It 101, It 102, and It 103.
It 102 - First-Year Italian Term 2 (4)
An introduction to elementary Italian. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, and elementary readings. This is the second course in a sequence of three: It 101, It 102, and It 103.

It 103 - First-Year Italian Term 3 (4)
An introduction to elementary Italian. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, and elementary readings. This is the third course in a sequence of three: It 101, It 102, and It 103.

It 199 - Special Studies (1-12)
(Credit to be arranged.)

It 201 - Second-Year Italian Term 1 (4)
Intensive review of basic materials introduced in first-year program and further development of communication skills. This is the first course in a sequence of three: It 201, It 202, and It 203. Recommended prerequisite: It 103.

It 202 - Second-Year Italian Term 2 (4)
Intensive review of basic materials introduced in first-year program and further development of communication skills. This is the second course in a sequence of three: It 201, It 202, and It 203. Recommended prerequisite: It 103.

It 203 - Second-Year Italian Term 3 (4)
Intensive review of basic materials introduced in first-year program and further development of communication skills. This is the third course in a sequence of three: It 201, It 202, and It 203. Recommended prerequisite: It 103.

It 299 - Special Studies (1-12)
(Credit to be arranged.)

It 301 - Third-Year Italian Term 1 (4)
Composition and conversation at the intermediate level. This is the first course in a sequence of three: It 301, It 302, and It 303. Recommended prerequisite: It 203.

It 302 - Third-Year Italian Term 2 (4)
Composition and conversation at the intermediate level. This is the second course in a sequence of three: It 301, It 302, and It 303. Recommended prerequisite: It 203.

It 303 - Third-Year Italian Term 3 (4)
Composition and conversation at the intermediate level. This is the third course in a sequence of three: It 301, It 302, and It 303. Recommended prerequisites: It 301, 302.

It 330 - Italian Culture and Civilization (4)
Surveys major trends and development in Italian culture and civilization from its origins to the present. Includes historical, political, social, artistic and intellectual perspectives. Taught in English.

It 344U - Italian Literary and Cultural Movements (4)
Thematic study of Italian and Italian-related literary movements and works within the world context, with emphases on feminism, war, dictatorship, resistance, and social practice. To be taken at any time during the third year of study.
Prerequisite: It 203 or equivalent.

It 390 - History of Italian Language (4)
Introduction to the history of the Italian language, from late 800 AD to 1900. Introduction to the most representative documents that shaped the Italian Language and to the differences between the various Italian dialects. Focus on the importance of the work by Dante Alighieri, Francesco Petrarca and Giovanni Boccaccio, Renaissance authors and major linguistics theories of 1800. Taught in Italian. Expected preparation: It 203.

It 399 - Special Studies (1-9)
(Credit to be arranged.)

It 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)
ITP 409 - Practicum (1-12)
(Credit to be arranged.)

ITP 410 - Selected Topics (1-9)
(Credit to be arranged.)

ITP - Initial Teacher Preparation
ITP 402 - Independent Study (1-12)
(Credit to be arranged.)

ITP 407 - Seminar (1-12)
(Credit to be arranged.)

ITP 409 - Practicum (1-12)
(Credit to be arranged.)

ITP 410 - Selected Studies (1-12)
(Credit to be arranged.)

ITP 411 - Classroom Management for Student Success (1-3)
Theories, principles, and practices of classroom management for middle and high school teachers. Topics include community, relationships, communication, cultural responsiveness, organizational procedures, classroom routines, problem-solving, decision-making and responding to disruptions. Course emphasizes creating positive learning environments for students from diverse backgrounds in multicultural classrooms.

Also offered for graduate-level credit as ITP 511 and may be taken only once for credit. Prerequisite: admission to the Bilingual Teacher Pathway Program, Graduate Teacher Education Program, or Secondary Dual Educator Program.

ITP 412 - Learning and the Learner (1-3)
Candidates identify themselves as learners, recognize the learning needs of their students, understand the learning theories relevant to educational practice, and identify the most useful elements of learning theories to inform their developing educational philosophy. Identify effective strategies and learning environments to maximize content and process outcomes for diverse students.

Also offered for graduate-level credit as ITP 512 and may be taken only once for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program and others with instructor approval.

ITP 413 - Technology as a Tool for Learning (3)
Use of digital tools to enhance teacher productivity and professional development and for planning, instruction, and assessment of student learning. Employ technology to foster information literacy and digital citizenship. Engage diverse learners in inquiry, communication and collaboration, creation, visual design, and production of media.

Also offered for graduate-level credit as ITP 513 and may be taken only once for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program and others with instructor approval.

ITP 414 - Educating for Equity and Social Justice (3)
Explore issues of identity, linguistics, race, ethnicity, sexual orientation, gender, social class, ability, and other forms of diversity. Teacher candidates gain an understanding of how culture influences educational processes, as well as their role and responsibility in creating socially just and equitable classrooms/schools, where all students and families are valued.

Also offered for graduate-level credit as ITP 514 and may be taken only once for credit. Prerequisite: Admission into the Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program and others with instructor approval.

ITP 421 - Secondary Art Methods (2-4)
Issues and methods in selecting and organizing materials for instruction in middle level/high art education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 521 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

ITP 422 - Secondary English Language Arts Methods (2-4)
Issues and methods in selecting and organizing materials for instruction in middle level/high school
language arts education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 522 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

**ITP 423 - Secondary Health and Physical Education Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle and high school health and K-12 physical education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 523 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Master of Education degree program and admission into Teacher Education Program.

**ITP 424 - Secondary Mathematics Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level and high mathematics education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 524 and may be taken fall, winter, and spring terms for credit.

**ITP 425 - Secondary Music Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level/high music education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 525 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

**ITP 426 - Secondary Science Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level/high school science education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 526 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

**ITP 427 - Secondary Social Studies Methods (2-4)**

Issues and methods in selecting and organizing materials including digital resources for instruction in middle and high school social studies education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 527 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

**ITP 428 - Secondary World Languages Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level and high school world languages. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for graduate-level credit as ITP 528 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.

**ITP 442 - Integrated Elementary Science Methods (2)**

Emphasis on effective methods and practices for developing integrated, interdisciplinary units of instruction. Explore approaches to teaching science at the elementary grades and integrating science content and processes with content and processes from other content areas (e.g., literacy, mathematics, the arts).

Also offered for graduate-level credit as ITP 542 and may be taken only once for credit. Prerequisite: Admission to Elementary Graduate Teacher
WELCOME TO PORTLAND STATE UNIVERSITY

Education Program or Bilingual Teacher Pathway Program.

**ITP 452 - Reflective Practitioner (1-3)**
Perspectives and techniques for formal and informal analysis, information gathering, decision making, value judgments about educational practice.
Also offered for graduate-level credit as ITP 552 and may be taken for credit in winter and spring terms.
Prerequisite: admission to the teacher education program.

**ITP 502 - Independent Study (1-12)**
(Credit to be arranged.)

**ITP 504 - Cooperative Ed/Internship (1-9)**
(Credit to be arranged.)

**ITP 505 - Reading and Conference (1-9)**
(Credit to be arranged.)

**ITP 506 - Special Projects (1-6)**
(Credit to be arranged.)

**ITP 507 - Seminar (1-9)**
(Credit to be arranged.)

**ITP 508 - Workshop (1-8)**
(Credit to be arranged.)

**ITP 509 - Practicum (1-12)**
(Credit to be arranged.)

**ITP 510 - Special Topics (1-15)**
(Credit to be arranged.)

**ITP 511 - Classroom Management for Student Success (1-3)**
Theories, principles, and practices of classroom management for middle and high school teachers. Topics include community, relationships, communication, cultural responsiveness, organizational procedures, classroom routines, problem-solving, decision making and responding to disruptions. Course emphasizes creating positive learning environments for students from diverse backgrounds in multicultural classrooms.
Also offered for undergraduate-level credit as ITP 411 and may be taken only once for credit.
Prerequisite: admission to the Bilingual Teacher Pathway Program, Graduate Teacher Education Program, or Secondary Dual Educator Program.

**ITP 512 - Learning and the Learner (1-3)**
Candidates identify themselves as learners, recognize the learning needs of their students, understand the learning theories relevant to educational practice, and identify the most useful elements of learning theories to inform their developing educational philosophy.
Identify effective strategies and learning environments to maximize content and process outcomes for diverse students.
Also offered for undergraduate-level credit as ITP 411 and may be taken only once for credit.
Prerequisite: admission to a teacher education program.

**ITP 513 - Technology as a Tool for Learning (3)**
Use of digital tools to enhance teacher productivity and professional development and for planning, instruction, and assessment of student learning.
Employ technology to foster information literacy and digital citizenship. Engage diverse learners in inquiry, communication and collaboration, creation, visual design, and production of media.
Also offered for undergraduate-level credit as ITP 413 and may be taken only once for credit.
Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program and others with instructor approval.

**ITP 514 - Educating for Equity and Social Justice (3)**
Explore issues of identity, linguistics, race, ethnicity, sexual orientation, gender, social class, ability, and other forms of diversity. Teacher candidates gain an understanding of how culture influences educational processes, as well as their role and responsibility in creating socially just and equitable classrooms/schools, where all students and families are valued.
Also offered for undergraduate-level credit as ITP 414 and may be taken only once for credit.
Prerequisite: Admission into the Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program and others with instructor approval.
ITP 515 - Foundations of Culturally and Linguistically Responsive Practice at the Secondary Level (3)

This course will equip secondary teacher candidates with knowledge and skills to facilitate instruction for English Language Learners (ELLs). Candidates learn the developmental progress of acquiring English for ELLs, and the role/responsibility of the teacher to create a positive climate and utilize instructional strategies that are culturally and linguistically responsive.

Prerequisite: Admission into the Secondary Graduate Teacher Education Program, Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) program, and others with instructor approval.

ITP 516 - Engaging Young Adolescent Learners (3)

Approaches for effectively educating young adolescents (10 to 15 year olds) in middle grades schools. Emphasizes identity formation, developmental responsiveness, motivation and engagement, culturally relevant practice, instructional strategies, and authentic learning opportunities. Examines educational policy and current trends in secondary school reform. Also addresses transitions occurring between school levels.

Prerequisite: Admission to the Graduate Teacher Education Program, Master’s in Curriculum and Instruction, and others with instructor approval.

ITP 517 - Engaging Adolescent Learners (3)

Approaches for effectively educating adolescent learners. Includes student motivation and engagement, instructional strategies, developmentally responsive approaches, culturally responsive practice, and authentic learning opportunities. Examines educational policy in middle grades schools (K-8, 6-8) and high schools (9-12) and current trends of high school/middle school reform.

Prerequisite: Admission to the Secondary Graduate Teacher Education Program, Masters in Curriculum and Instruction, and others with instructor approval.

ITP 518 - Assessment for Learning (2)

Concentrated study of key terminology around assessment and the application of multiple assessment methods to engage learners in their own growth, to monitor learner progress, and to guide instructional decision-making. Course includes strategies and procedures to collect, interpret and act on assessment data. Expected preparation: Admission into the Secondary Graduate Teacher Education Program.

ITP 520 - Literacies in the Disciplines (3)

Course designed to help educators guide their students in acquiring skills needed for adequate reading, thinking, writing, and study in content areas. Emphasis on the functional teaching of reading and writing, the design and preparation of materials to use with textbooks in all school subjects.

Prerequisite: admission to a teacher education program.

ITP 521 - Secondary Art Methods (2-4)

Issues and methods in selecting and organizing materials for instruction in middle level/high art education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for undergraduate-level credit as ITP 421 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

ITP 522 - Secondary English Language Arts Methods (2-4)

Issues and methods in selecting and organizing materials for instruction in middle level/high school language arts education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for undergraduate-level credit as ITP 422 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

ITP 523 - Secondary Health and Physical Education Methods (2-4)

Issues and methods in selecting and organizing materials for instruction in middle and high school health and K-12 physical education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.
Also offered for undergraduate-level credit as ITP 423 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Master of Education degree program and admission into Teacher Education Program.

**ITP 524 - Secondary Mathematics Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level and high mathematics education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for undergraduate-level credit as ITP 424 and may be taken fall, winter, and spring terms for credit.

**ITP 525 - Secondary Music Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level/high music education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for undergraduate-level credit as ITP 425 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

**ITP 526 - Secondary Science Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level/high school science education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for undergraduate-level credit as ITP 426 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into a graduate teacher preparation program.

**ITP 527 - Secondary Social Studies Methods (2-4)**

Issues and methods in selecting and organizing materials including digital resources for instruction in middle level and high school social studies education. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for undergraduate-level credit as ITP 427 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission into the Secondary Graduate Teacher Education Program (GTEP), Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) Program.

**ITP 528 - Secondary World Languages Methods (2-4)**

Issues and methods in selecting and organizing materials for instruction in middle level and high school world languages. Examines a variety of professional resources available to support learning. Introduces research-based instructional practices and lesson/unit planning. Situates teaching, learning, and assessment within the context of state and national standards.

Also offered for undergraduate-level credit as ITP 428 and may be taken fall, winter, and spring terms for credit. Prerequisite: Admission to the Bilingual Teacher Pathway Program.

**ITP 529 - Professional Seminar -Secondary (1)**

A companion seminar during Student Teaching I in a middle or high school to support teacher candidates in developing, clarifying, and applying attitudes and beliefs about quality educational practices through professional collaborative reflection. Prerequisite: Admission to the Secondary Graduate Teacher Education Program.

**ITP 530 - Student Teaching I, Middle/High School (8)**

Teacher candidates will collaborate and independently plan, teach, assess, and reflect under the guidance of their Cooperating Teacher and University Supervisor. In addition, teacher candidates will participate in related professional activities at their placement school. Candidates will engage in ongoing inquiry and connection between theory and practice. Prerequisite: Admission to the teacher education program; successful completion of Initial Field Experience.

**ITP 531 - Student Teaching II, Middle/High School (13)**

Teacher candidates will collaborate and independently plan, teach, assess, and reflect under the guidance of their Cooperating Teacher and University Supervisor. In addition, teacher candidates will participate in related professional activities at their placement school. Candidates will engage in
ongoing inquiry and connection between theory and practice.

Prerequisite: Admission to the teacher education program and ITP 530.

**ITP 532 - Student Teaching I, Art/Music/PEK-12**

Teacher candidates will collaborate and independently plan, teach, assess, and reflect under the guidance of their Cooperating Teacher and University Supervisor. In addition, teacher candidates will participate in related professional activities at their placement school. Candidates will engage in ongoing inquiry and connection between theory and practice.

Prerequisite: Admission to the teacher education program; successful completion of Initial Field Experience.

**ITP 533 - Student Teaching II: Art/Music/PEK-12**

Teacher candidates will collaborate and independently plan, teach, assess, and reflect under the guidance of their Cooperating Teacher and University Supervisor. In addition, teacher candidates will participate in related professional activities at their placement school. Candidates will engage in ongoing inquiry and connection between theory and practice.

Prerequisite: Admission to a secondary teacher education program and ITP 532.

**ITP 534 - Foundations of Culturally and Linguistically Responsive Practice at the Elementary Level**

This course will equip elementary teacher candidates with knowledge and skills to organize instruction for English Language Learners (ELL). Candidates learn the developmental progress of acquiring English for ELL students, and the role/responsibility of teacher to create a positive climate and utilize instructional strategies that are culturally and linguistically responsive.

Prerequisite: Admission into the Elementary Graduate Teacher Education Program. Prerequisites: Admission into the Elementary Graduate Teacher Education Program, Secondary Dual Endorsement Program (SDEP), or the Bilingual Teacher Pathway (BTP) program, and others with instructor approval.

**ITP 535 - Cultivating Responsive Elementary Classrooms**

This three-part course explores approaches to designing the social, physical, and instructional environment of a classroom in a way that is responsive to students and supports learning. Summer and fall terms involve face-to-face sessions addressing classroom climate and culturally responsive practices. Winter term involves online discussion of differentiation and planning.

Prerequisite: Admission to Elementary Graduate Teacher Education Program.

**ITP 536 - Learning and Development**

Prospective elementary educators will understand and apply principles of human learning and development. The psychology of learning in a school setting includes both individual and group generalizations. This course will explore the roles of teacher as facilitator of learning and decision maker to best meet learners’ needs.

Prerequisite: Admission to Elementary Graduate Teacher Education Program.

**ITP 537 - Instructional Design and Assessment**

This yearlong course explores the theoretical frameworks and practical strategies that assist novice teachers in planning effective classroom curricula, assessments and instruction, while focusing on the developmental and learning needs of learners.

Prerequisite: Admission to the Graduate Teacher Education Program (GTEP).

**ITP 538 - Integrated Methods**

Emphasizes inquiry processes in the various content areas, and place-based, project based approaches to teaching and learning in grades PreK-8. Design integrated units of study that focus on social studies, art, music, and movement.

Also offered for undergraduate-level credit as ITP 438 and may be taken only once for credit.

Prerequisite: Admission to a teacher education program.

**ITP 539 - Elementary Mathematics Methods**

Emphasizes meaningful understanding of elementary-level mathematics content. Situates teaching, learning, and assessment within the context of state and national standards as well as research proven practices. Focuses on strategies for developing competence with teaching through problem solving and teaching students in a developmentally appropriate, culturally responsive manner.

Prerequisite: Admission to the Graduate Teacher Education Program.
ITP 540 - Foundations of Literacy (4)
An introduction to literacy processes. Address teaching practices specifically for elementary learners in grades PK-3. Examine emergent and early reading processes, how to assess them, and how to support their development in classrooms. Literacy development characteristics and teaching approaches for students who are culturally and linguistically diverse are addressed explicitly in the course.
Prerequisite: Admission to the Graduate Teacher Education Program (GTEP).

ITP 541 - Literacies in the Elementary Classroom (4)
Emphasis on the methods and theories surrounding teaching and learning literacy in grades 3-8. Literacy development characteristics and teaching approaches for diverse learners are addressed, as well as the integration of literacy across content areas.
Prerequisite: admission to Elementary Graduate Teacher Education Program.

ITP 542 - Integrated Elementary Science Methods (2)
Emphasis on effective methods and practices for developing integrated, interdisciplinary units of instruction. Explore approaches to teaching science at the elementary grades and integrating science content and processes with content and processes from other content areas (e.g., literacy, mathematics, the arts).
Also offered for undergraduate-level credit as ITP 442 and may be taken only once for credit.
Prerequisite: Admission to Elementary Graduate Teacher Education Program or Bilingual Teacher Pathway Program.

ITP 543 - Professional Collaboration in Elementary Education (1-3)
This course over four terms facilitates collaborative professional learning centered on improvement of field-based practices to support learners. Candidates will engage in systematic observation and examination of one's own practice and engage in a cycle of inquiry to systematically study their teaching and/or learning within their clinical experience. In addition, students design and implement their capstone project.
Prerequisite: Must be admitted into a teacher education program.

ITP 545 - Student Teaching I, Early Childhood (1-4)
Observation, collaborative and independent planning, teaching, assessment, and reflection under the guidance of the Cooperating Teacher and University Supervisor; related professional activities. Ongoing inquiry and connection of theory and practice, including methods coursework.
Prerequisite: Admission to the teacher education program.

ITP 546 - Student Teaching II, Early Childhood (6-9)
Observation and teaching under direction of classroom teacher and University supervisor. Direct responsibility for learning activities, developing skills in techniques of teaching and classroom management; related professional activities. Weekly seminar.
Prerequisite: admission to the teacher education program.

ITP 547 - Student Teaching III, Early Childhood (12)
Observation, collaborative and independent planning, teaching, assessment, and reflection under the guidance of the Cooperating Teacher and University Supervisor; related professional activities. Ongoing inquiry and connection of theory and practice, including methods coursework. Completion of the second unit of study. Seminar meetings and program events.
Prerequisite: admission to the Elementary Graduate Teacher Education Program.

ITP 548 - Student Teaching I, Elementary (1-4)
Observation, collaborative and independent planning, teaching, assessment, and reflection under the guidance of the Cooperating Teacher and University Supervisor; related professional activities. Ongoing inquiry and connection of theory and practice, including methods coursework.
Prerequisite: Admission to the teacher education program.

ITP 549 - Student Teaching II, Elementary (6-9)
Observation, collaborative and independent planning, teaching, assessment, and reflection under the guidance of the Cooperating Teacher and University Supervisor; related professional activities. Ongoing inquiry and connection of theory and practice, including methods coursework. Completion of the first unit of study.
Prerequisite: Admission to the teacher education program.

ITP 550 - Student Teaching III, Elementary (12)
Observation, collaborative and independent planning, teaching, assessment, and reflection under the guidance of the Cooperating Teacher and University
Supervisor; related professional activities. Ongoing inquiry and connection of theory and practice, including methods coursework. Completion of the second unit of study. Seminar meetings and program events.

Prerequisite: admission to Elementary Graduate Teacher Education Program.

**ITP 551 - Research and Classroom Inquiry (1-4)**
Principles of teacher action research. Involves systematic observation and examination of one’s own practice. Develop stance toward critical reflection through an inquiry cycle of gathering and analyzing classroom data. Identify area of focus about an aspect of teaching and/or learning to systematically study during clinical experience.

Prerequisite: Admission to the teacher education program.

**ITP 552 - Reflective Practitioner (1-3)**
Perspectives and techniques for formal and informal analysis, information gathering, decision making, value judgments about educational practice.

Also offered for undergraduate-level credit as ITP 452 and may be taken for credit in winter and spring terms. Prerequisite: admission to the teacher education program.

**ITP 580 - Student Teaching I in Inclusive ML/HS (6)**
Observation, collaborative and independent planning, teaching, assessment, and reflection under the guidance of the Cooperating Teacher and University Supervisor; related professional activities. Ongoing inquiry and connection of theory and practice, including methods coursework. Completion of the first unit of study. Seminar meetings and program events.

Prerequisite: Admission to the Secondary Dual Educator Preparation Program.

**ITP 581 - Student Teaching II in Inclusive ML/HS (12)**
Observation, collaborative and independent planning, teaching, assessment, and reflection under the guidance of the Cooperating Teacher and University Supervisor; related professional activities. Ongoing inquiry and connection of theory and practice, including methods coursework. Completion of the second unit of study. Seminar meetings and program events.

Prerequisite: Admission to the Secondary Dual Educator Preparation Program.

**Jpn - Japanese**

**Jpn 101 - First-Year Japanese Term 1 (5)**
An introduction to the Japanese language with emphasis on listening comprehension, speaking, grammatical patterns, the syllabaries, and characters in elementary reading and writing. This is the first course in a sequence of three: Jpn 101, Jpn 102, and Jpn 103.

**Jpn 101L - Lab for Japanese 101 (0)**
Lab for Japanese 101.
Corequisite: Jpn 101.

**Jpn 102 - First-Year Japanese Term 2 (5)**
An introduction to the Japanese language with emphasis on listening comprehension, speaking, grammatical patterns, the syllabaries, and characters in elementary reading and writing. This is the second course in a sequence of three: Jpn 101, Jpn 102, and Jpn 103.

**Jpn 102L - Lab for Japanese 102 (0)**
Lab for Japanese 102.
Corequisite: Jpn 102.

**Jpn 103 - First-Year Japanese Term 3 (5)**
An introduction to the Japanese language with emphasis on listening comprehension, speaking, grammatical patterns, the syllabaries, and characters in elementary reading and writing. This is the third course in a sequence of three: Jpn 101, Jpn 102, and Jpn 103.

**Jpn 103L - Lab for Japanese 103 (0)**
Lab for Japanese 103.
Corequisite: Jpn 103.

**Jpn 150 - First-Year Japanese (Intensive) (7)**
A two-term course covering the content of Jpn 101, 102, 103.

**Jpn 151 - First-Year Japanese (Intensive) (8)**
A two-term course covering the content of Jpn 101, 102, 103.

**Jpn 199 - Special Studies (1-8)**
(Credit to be arranged.)
Jpn 201 - Second-Year Japanese Term 1 (5)
Continued work in the Japanese language with emphasis on listening comprehension, speaking, grammatical patterns, the syllabaries, and characters in elementary reading and writing. This is the first course in a sequence of three: Jpn 201, Jpn 202, and Jpn 203.
Prerequisite: Jpn 103.
Jpn 201L - Lab for Japanese 201 (0)
Lab for Japanese 201.

Jpn 202 - Second-Year Japanese Term 2 (5)
Continued work in the Japanese language with emphasis on listening comprehension, speaking, grammatical patterns, the syllabaries, and characters in elementary reading and writing. This is the second course in a sequence of three: Jpn 201, Jpn 202, and Jpn 203. Expected preparation: Jpn 203.
Jpn 202L - Lab for Japanese 202 (0)
Corequisite: Jpn 202.

Jpn 203 - Second-Year Japanese Term 3 (5)
Continued work in the Japanese language with emphasis on listening comprehension, speaking, grammatical patterns, the syllabaries, and characters in elementary reading and writing. This is the third course in a sequence of three: Jpn 201, Jpn 202, and Jpn 203. Expected preparation: Jpn 203.
Jpn 203L - Lab for Japanese 203 (0)
Lab for Japanese 203.
Corequisite: Jpn 203.

Jpn 299 - Special Studies (1-12)
(Credit to be arranged.)

Jpn 301 - Third-Year Japanese: Speaking and Listening Term 1 (4)
Continued work in the Japanese language with emphasis on listening and speaking skills in a variety of contexts. Students enrolled in this course are encouraged to sign up for Jpn 301, 304 concurrently. This is the first course in a sequence of two: Jpn 301, and Jpn 302. Expected preparation: Jpn 203.

Jpn 302 - Third-Year Japanese: Speaking and Listening Term 2 (4)
Continued work in the Japanese language with emphasis on listening and speaking skills in a variety of contexts. Students enrolled in this course are encouraged to sign up for Jpn 302, 305 concurrently. This is the second course in a sequence of two: Jpn 301 and Jpn 302. Expected preparation: Jpn 203.

Jpn 304 - Third-Year Japanese: Reading and Writing Term 1 (4)
Continued work in the Japanese language with emphasis on reading and writing skills in different kinds of texts. Students enrolled in this course are encouraged to sign up for Jpn 304 and Jpn 305. Expected preparation: Jpn 203.

Jpn 305 - Third-Year Japanese: Reading and Writing Term 2 (4)
Continued work in the Japanese language with emphasis on reading and writing skills in different kinds of texts. Students enrolled in this course are encouraged to sign up for Jpn 302, 305 concurrently. This is the second course in a sequence of two: Jpn 304 and Jpn 305. Expected preparation: Jpn 203.

Jpn 314 - Beginning Japanese Grammar (2)
A systematic approach to the study of Japanese grammar for transfer students, majors, and teachers. This is the first course in a sequence of two: Jpn 314 and Jpn 315.

Jpn 315 - Intermediate Japanese Grammar (2)
A systematic approach to the study of Japanese grammar for transfer students, majors, and teachers. This is the second course in a sequence of two: Jpn 314 and Jpn 315.

Jpn 325 - Japanese Phonetics and Phonology (4)
Introduction to the sounds of Japanese: their place and manner of articulation (phonetics) as well as how they pattern with respect to each other and as influenced by morphological and syntactic factors (phonology). Expected preparation: Jpn 203.
Jpn 332U - Japanese Religion through Literature and Performance (4)

A survey of important articulations of religion in premodern and modern Japanese literature, drama, film and comic books. Students explore the interplay of religion (Buddhism, Shinto and more) in canonical works of literary and performative culture.

Prerequisite: 8 cr of literature. Prerequisite: 8 credits of literature.

Jpn 341U - Topics in Japanese Literature (In Translation) (4)

Introductory survey of Japanese literature from its beginnings to the present, including such works as The Man'yoshu, The Tale of Genji, plays by Zeami and Chikamatsu, Basho's haiku, and masterpieces of modern fiction. Jpn 341 focuses on classical and medieval literature; Jpn 342 focuses on Tokugawa and modern literature. Conducted in English. This is the first course in a sequence of three: Jpn 341, Jpn 342, and Jpn 343. Recommended prerequisite: 8 credits of literature.

Jpn 342U - Topics in Japanese Literature (In Translation) (4)

Introductory survey of Japanese literature from its beginnings to the present, including such works as The Man'yoshu, The Tale of Genji, plays by Zeami and Chikamatsu, Basho's haiku, and masterpieces of modern fiction. Jpn 341 focuses on classical and medieval literature; Jpn 342 focuses on Tokugawa and modern literature. Conducted in English. This is the second course in a sequence of three: Jpn 341, Jpn 342, and Jpn 343. Recommended prerequisite: 8 credits of literature.

Jpn 343 - Topics in Japanese Literature (In Translation) (4)

Introductory survey of Japanese literature from its beginnings to the present, including such works as The Man'yoshu, The Tale of Genji, plays by Zeami and Chikamatsu, Basho's haiku, and masterpieces of modern fiction. Jpn 341 focuses on classical and medieval literature; Jpn 342 focuses on Tokugawa and modern literature. Conducted in English. This is the third course in a sequence of three: Jpn 341, Jpn 342, and Jpn 343.

Jpn 344U - Japanese Literature in Translation: Manga, Japanese Graphic Novels (4)

Readings of the manga are followed by discussion of the artistic style, questions about Japanese society, and each novel's place in the history of the genre. Readings/discussions are in English. Expected preparation: 8 credits of literature.

Jpn 345U - Manga Now! (4)

Readings of new, critically acclaimed Japanese comic books and analysis of recent writings about the graphic-novel form. Readings of the manga are followed by a discussion of the artistic style, questions about Japanese society, and what kind of new developments are happening in the genre. Readings and discussions are in English. Expected preparation: Jpn 344.

Jpn 361U - Japanese Literature Through Film (4)

Readings of masterpieces of Japanese literature and viewing of feature films based on them. Viewings are followed by discussion of the social, historical, and artistic significance of the works. Readings and discussions are in English, and films have English subtitles.

Jpn 399 - Special Studies (1-12)

(Credit to be arranged.)

Jpn 403 - Thesis (1-4)

(Credit to be arranged.)

Jpn 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

Jpn 405 - Reading and Conference (1-8)

(Credit to be arranged.)

Jpn 407 - Seminar (1-6)

(Credit to be arranged.)

Jpn 408 - Workshop (1-8)

(Credit to be arranged.)
Jpn 409 - Practicum (1-12)
(Credit to be arranged.)

Jpn 410 - Selected Topics (1-12)
(Credit to be arranged.)

Jpn 411 - Advanced Japanese (4)
Development of oral communication, reading, and writing skills with complex patterns in informal and formal situations. This is the first course in a sequence of two: Jpn 411 and Jpn 412. Expected preparation: Jpn 302, Jpn 305.
Also offered for graduate-level credit as Jpn 511 and may be taken only once for credit.

Jpn 412 - Advanced Japanese (4)
Development of oral communication, reading, and writing skills with complex patterns in informal and formal situations. This is the second course in a sequence of two: Jpn 411 and Jpn 412. Expected preparation: Jpn 302, Jpn 305.
Also offered for graduate-level credit as Jpn 512 and may be taken only once for credit.

Jpn 413 - Advanced Japanese: Japanese for the Real World (4)
Development of Japanese language skills necessary in work settings and for practical use. Completion of Jpn 302 and Jpn 305 or equivalent proficiency level is expected.
Also offered for graduate-level credit as Jpn 513 and may be taken only once for credit. Prerequisite: Jpn 411 or 412; Jpn 302 with permission of instructor.

Jpn 414 - Advanced Japanese Grammar (4)
A systematic approach to the study of Japanese grammar for advanced students and majors, and for teachers. Expected preparation: Jpn 302 or Jpn 315.
Also offered for graduate-level credit as Jpn 514 and may be taken only once for credit.

Jpn 420 - Readings in Japanese Literature (4)
Reading, analysis, translation, and discussion of representative literary texts. Jpn 420/520 will focus on pre-modern literature, Jpn 421/521 on literature from the Meiji Period to the present. Conducted primarily in Japanese. This is the first course in a sequence of two: Jpn 420 and Jpn 421. Expected preparation: Jpn 302, Jpn 305.
Also offered for graduate-level credit as Jpn 520 and may be taken only once for credit.

Jpn 421 - Readings in Japanese Literature (4)
Reading, analysis, translation, and discussion of representative literary texts. Jpn 420/520 will focus on pre-modern literature, Jpn 421/521 on literature from the Meiji Period to the present. Conducted primarily in Japanese. This is the second course in a sequence of two: Jpn 420 and Jpn 421. Expected preparation: Jpn 302, Jpn 305.
Also offered for graduate-level credit as Jpn 521 and may be taken only once for credit.

Jpn 422 - Traditional Japanese Drama (4)
An introduction to the classical forms of no kyogen, bunraku and kabuki. Students read plays and view videos of plays in performance, analyzing them in their historical, social, and performance contexts. Students have the option of performing short dances of plays in a class recital. Conducted in English.
Also offered for graduate-level credit as Jpn 522 and may be taken only once for credit.

Jpn 423 - Introduction to Modern Japanese Poetry (4)
An introduction to modern Japanese poetry including new forms (shi) and modern variations on traditional forms (tanka, haiku). Students read poems in Japanese, analyze syntax, learn genre requirements, and understand the history of modern Japanese poetry.
Also offered for graduate-level credit as Jpn 523 and may be taken only once for credit. Prerequisite: Jpn 411 or 412; Jpn 302 with permission of instructor.

Jpn 424 - Contemporary Japanese Poetry and Pop Culture (4)
An introduction to contemporary Japanese pop culture including free verse, traditional tanka, song lyrics, and comic books (manga). Students read verse in Japanese, analyze syntax, learn genre requirements, and understand the history of modern Japanese poetry and songs; students analyze sequential-art narratives to understand multiple aspects of Japanese pop culture.
Also offered for graduate-level credit as Jpn 524 and may be taken only once for credit. Prerequisite: Jpn 411 or Jpn 412.

Jpn 477 - Teaching Japanese As a Foreign Language (4)
Principles of instructional methods in teaching Japanese to speakers of languages whose orthography is not Kanji-based. Readings in language pedagogy, particularly the pedagogy of non-Indo-European languages. Students are required to teach and observe classes in an approved Japanese program. This is the

Also offered for graduate-level credit as Jpn 577 and may be taken only once for credit.

**Jpn 478 - Teaching Japanese As a Foreign Language (4)**

Principles of instructional methods in teaching Japanese to speakers of languages whose orthography is not Kanji-based. Readings in language pedagogy, particularly the pedagogy of non-Indo-European languages. Students are required to teach and observe classes in an approved Japanese program. This is the second course in a sequence of two: Jpn 477 and Jpn 478. Expected preparation: Ling 390, Jpn 303.

Also offered for graduate-level credit as Jpn 578 and may be taken only once for credit.

**Jpn 494 - Japanese Sociolinguistics (4)**

Study of the key concepts that characterize Japanese language and culture, along with empirical analysis of Japanese communication style. Expected preparation: Jpn 302.

Also offered for graduate-level credit as Jpn 594 and may be taken only once for credit.

**Jpn 501 - Research (1-8)**

(Credit to be arranged.)

**Jpn 502 - Independent Study (1-4)**

(Credit to be arranged.)

**Jpn 503 - Thesis (1-12)**

(Credit to be arranged.)

(Credit to be arranged.)

**Jpn 509 - Practicum (1-12)**

(Credit to be arranged.)

**Jpn 510 - Selected Topics (1-12)**

(Credit to be arranged.)

**Jpn 511 - Advanced Japanese (4)**

Development of oral communication, reading, and writing skills with complex patterns in informal and formal situations. This is the first course in a sequence of two: Jpn 511 and Jpn 512.

Also offered for undergraduate-level credit as Jpn 411 and may be taken only once for credit.

**Jpn 512 - Advanced Japanese (4)**

Development of oral communication, reading, and writing skills with complex patterns in informal and formal situations. This is the second course in a sequence of two: Jpn 511 and Jpn 512.

Also offered for undergraduate-level credit as Jpn 412 and may be taken only once for credit.

**Jpn 513 - Advanced Japanese: Japanese for the Real World (4)**

Development of Japanese language skills necessary in work-settings and for practical use. Completion of Jpn 302 and Jpn 305 or equivalent proficiency level is expected.

Also offered for undergraduate-level credit as Jpn 413 and may be taken only once for credit.

Prerequisite: Jpn 302 and Jpn 305 or equivalent proficiency.

**Jpn 514 - Advanced Japanese Grammar (4)**

A systematic approach to the study of Japanese grammar for advanced students and majors, and for teachers.

Also offered for undergraduate-level credit as Jpn 414 and may be taken only once for credit.

**Jpn 520 - Readings in Japanese Literature (4)**

Reading, analysis, translation, and discussion of representative literary texts. Jpn 420/520 will focus on pre-modern literature, Jpn 421/521 on literature from the Meiji Period to the present. Conducted primarily in Japanese. This is the first course in a sequence of two: Jpn 520 and Jpn 521.

Also offered for undergraduate-level credit as Jpn 420 and may be taken only once for credit.
Jpn 521 - Readings in Japanese Literature (4)
Reading, analysis, translation, and discussion of representative literary texts. Jpn 420/520 will focus on pre-modern literature, Jpn 421/521 on literature from the Meiji Period to the present. Conducted primarily in Japanese. This is the second course in a sequence of two: Jpn 520 and Jpn 521.
Also offered for undergraduate-level credit as Jpn 421 and may be taken only once for credit.

Jpn 522 - Traditional Japanese Drama (4)
An introduction to the classical forms of no kyogen, bunraku and kabuki. Students read plays and view videos of plays in performance, analyzing them in their historical, social, and performance contexts. Students have the option of performing short dances of plays in a class recital. Conducted in English.
Also offered for undergraduate-level credit as Jpn 422 and may be taken only once for credit.

Jpn 523 - Introduction to Modern Japanese Poetry (4)
An introduction to modern Japanese poetry including new forms (shi) and modern variations on traditional forms (tanka, haiku). Students read poems in Japanese, analyze syntax, learn genre requirements, and understand the history of modern Japanese poetry.
Also offered for undergraduate-level credit as Jpn 423 and may be taken only once for credit.
Prerequisite: Jpn 411, Jpn 412, or Jpn 413 or graduate standing.

Jpn 524 - Contemporary Japanese Poetry and Pop Culture (4)
An introduction to contemporary Japanese pop culture including free verse, traditional tanka, song lyrics, and comic books (manga). Students read verse in Japanese, analyze syntax, learn genre requirements, and understand the history of modern Japanese poetry and songs; students analyze sequential-art narratives to understand multiple aspects of Japanese pop culture.
Also offered for undergraduate-level credit as Jpn 424 and may be taken only once for credit.
Prerequisite: Graduate standing.

Jpn 552 - Japanese Language and Linguistics (4)
Comparative study of intellectual approaches to Japanese language and its analysis, including native (kokugo) theories, American structuralism, modern linguistics, and critical theory. Emphasis will vary from year to year.

Jpn 553 - Critical Approaches to Japanese Language and Literature (4)
Comparative study of intellectual approaches and research of Japanese language or literature, with an emphasis on secondary texts (research). Topics will vary from year to year.
Prerequisite: WLL 560 and 4th-year Japanese reading ability and one additional linguistics or literature course.

Jpn 577 - Teaching Japanese As a Foreign Language (4)
Principles of instructional methods in teaching Japanese to speakers of languages whose orthography is not Kanji-based. Readings in language pedagogy, particularly the pedagogy of non-Indo-European languages. Students are required to teach and observe classes in an approved Japanese program. This is the first course in a sequence of two: Jpn 577 and Jpn 578.
Also offered for undergraduate-level credit as Jpn 477 and may be taken only once for credit.

Jpn 578 - Teaching Japanese As a Foreign Language (4)
Principles of instructional methods in teaching Japanese to speakers of languages whose orthography is not Kanji-based. Readings in language pedagogy, particularly the pedagogy of non-Indo-European languages. Students are required to teach and observe classes in an approved Japanese program. This is the second course in a sequence of two: Jpn 577 and Jpn 578.
Also offered for undergraduate-level credit as Jpn 478 and may be taken only once for credit.

Jpn 594 - Japanese Sociolinguistics (4)
Study of the key concepts that characterize Japanese language and culture, along with empirical analysis of Japanese communication style.
Also offered for undergraduate-level credit as Jpn 494 and may be taken only once for credit.
JSt - Judaic Studies

JSt 201 - Introduction to Judaism (4)
Traces the development of Judaism as a religious system and civilization from the biblical period through the middle ages and into the modern era. Describes the practices and beliefs of Judaism as a lived religion primarily through the investigation of primary sources.

JSt 299 - Special Studies (1-4)
(Credit to be arranged.)

JSt 311 - Introduction to the New Testament (4)
We will study the diverse writings of the New Testament as products of their original historical, social, and religious contexts. We will ask how these ancient writings came to be written, collected and preserved and how they served to interpret and respond to the life situations of the earliest Christians. This course may be repeated once for credit.

Cross-Listed as: This is the same course as Hst 311.

JSt 317U - Jewish History from Antiquity to the Medieval Period (4)
Introduces students to the Jewish historical experience from its Biblical origins through the end of the first millennium CE primarily by means of close readings of primary sources. Describes the diverse forms of Jewish life under Persian, Greco-Roman, Early Christian and Muslim rule and examines the boundaries of pre-modern Jewish cultural and religious identity. This is the same course as Hst 317U and may be taken only once for credit.

Cross-Listed as: Hst 317U.

JSt 318U - Jewish History from the Medieval Period to the Present (4)
Survey of Jewish history from the year 1000 to the present, covering major developments in Jewish society and culture in the medieval Islamic and Christian realms, early modern Europe and the Middle East, and the modern world. Topics include religious thought, communal and political structures, and Jewish/non-Jewish relations. This is the same course as Hst 318U and may be taken only once for credit.

Cross-Listed as: Hst 318U.

JSt 319U - Rabbinic Culture in the Roman World (4)
Introduction to history and literature of the rabbinic movement in Roman Palestine, 70 CE-500 CE. Origins of the rabbis, their role in society, genres of rabbinic literature (Mishnah, Talmud, Midrash), rabbinic law and theology and rabbinic attitudes towards the urban culture of the Roman Near East. This is the same course as Hst 319U and may be taken only once for credit.

Cross-Listed as: Hst 319U.

JSt 324U - Historical Introduction to the Hebrew Bible/Old Testament (4)

JSt 325U - Retelling the Bible (4)
Discusses how the Bible was read in antiquity. Surveys the genres of early Jewish Biblical interpretation, including inter-Biblical interpretation, rewritten Bible, translation, allegory, allusion. Sources include the Apocrypha and Pseudepigrapha, the Dead Sea Scrolls, Greco-Jewish literature and Rabbinic Midrash

JSt 333U - Israeli Culture and Society (4)
Investigates the foundation and development of an Israeli national culture and its role in shaping contemporary Israeli society. Explores how history, politics, gender, religion, and ethnicity operate in the public arena. Key topics include myth and memory, public and state events, music and dance, theater and architecture. No prerequisites required.

JSt 335U - Sex, Love, and Gender in Israel (4)
Examines intersections of gender and nationalism; the role of masculinity; conceptions of femininity, sex, love, and motherhood; and the impact of gender on the Arab-Israeli conflict. Investigates the history and experiences of a diverse array of women in Israel, including Jewish women, Israeli Arab and Palestinian women, and foreign workers.

JSt 378U - Pagans, Christians and Jews (4)
Discusses the development and interaction of Roman paganism, Christianity and Judaism during the period
of Late Antiquity. Topics will include education, philosophy, asceticism, ritual, religious law, the image of the holy man and the phenomenon of religious polemic in the Later Roman Empire (c. 250-600 CE). This is the same course as Hst 378U and may be taken only once for credit.

Cross-Listed as: Hst 378U.

JSt 379U - History of Zionism (4)

Zionism as ideology and practice in context of Jewish and European history. Includes society and culture, Zionism created under the British mandate of Palestine, roots of the Arab-Jewish conflict in this context, and impact on Jewish life and politics in Eastern and Central Europe and the United States. This is the same course as Hst 379U and may be taken only once for credit.

Cross-Listed as: Hst 379U.

JSt 380U - The Holocaust (4)

An introduction to the Nazi-planned and -executed genocide of European Jewry known as the Holocaust. Topics include the German and European contexts for the rise of Nazism; antisemitism and its links to Nazi ideology and policy; European Jewry in the interwar period; the "Final Solution"; resistance and collaboration. This is the same course as Hst 380U and may be taken only once for credit.

Cross-Listed as: Hst 380U.

JSt 381U - Kabbalah: The Jewish Mystical Tradition (4)

Surveys the origins and development of the Jewish mystical tradition set against the context of Jewish religious, social, and intellectual history. Topics include mystical visions in ancient Jewish texts, medieval Kabbalah and the Zohar, the Sabbatean messianic movement, Hasidism, and contemporary uses of Kabbalah. This is the same course as Hst 381U and may be taken only once for credit.

Cross-Listed as: Hst 381U.

JSt 388U - History of Modern Israel (4)

Surveys the evolution of modern Israel, exploring social, political, cultural, and intellectual developments from 1880 to the present. Topics include the emergence of the Zionist movement; political, cultural, and social developments before and after 1948; the Arab-Israeli conflict; and the social framework of Israeli society.

JSt 399 - Special Studies (1-4)

(Credit to be arranged.)

JSt 401 - Research (0-6)

(Credit to be arranged.)

JSt 402 - Independent Study (1-12)

(Credit to be arranged.)

JSt 404 - Cooperative Ed/Internship (1-12)

(Credit to be arranged.)

JSt 405 - Reading and Conference (0-6)

(Credit to be arranged.)

JSt 407 - Seminar (1-4)

(Credit to be arranged.)

JSt 407H - (1 - 4)

JSt 409 - Practicum (1-8)

(Credit to be arranged.)

JSt 410 - Special Topics (1-4)

(Credit to be arranged.)

JSt 430 - Messiahs and Messianism (4)

Messianic ideas in Judaism and other religions. Can focus on specific messiah figures and movements, comparative messianisms, historical and conceptual development of messianic idea, and/or modern manifestations. Repeatable once with departmental approval.

Prerequisite: 8 upper division credits in Judaic Studies, or related courses with permission of instructor.

JSt 431 - The Arts and the Jewish Experience (4)

Examines the connection between Jewish culture and the visual, literary, and/or performing arts. Investigates the diversity of Jewish experience, the formation of Jewish identity, and the interpretation of Jewish arts through lectures, workshops with artists, and attendance of events such as films, exhibits, readings, and/or performances.
JSt 435 - Jewish and Israeli Dance History (4)
Examine the development of Jewish and Israeli dance in the twentieth century. Exploring social and concert dance forms, topics include the development of Israeli folk dance; works of American Jewish choreographers such as Fiddler on the Roof; the Batsheva Dance Company, Ethiopian and Yemenite Jewish dance companies in Israel.
Prerequisite: upper-division standing.

Kor - Korean

Kor 101 - First-Year Korean Term 1 (5)
An introduction to the Korean language with emphasis on listening comprehension, speaking, elementary reading and writing, and grammatical patterns. This is the first course in a sequence of three: Kor 101, Kor 102, and Kor 103.

Kor 101H - 1st Year Korean Heritage ()
An introduction to the Korean language with emphasis on listening comprehension, speaking, elementary reading and writing, and grammatical patterns.

Kor 102 - First-Year Korean Term 2 (5)
An introduction to the Korean language with emphasis on listening comprehension, speaking, elementary reading and writing, and grammatical patterns. This is the second course in a sequence of three: Kor 101, Kor 102, and Kor 103.

Kor 102H - 1st Year Korean Heritage ()
An introduction to the Korean language with emphasis on listening comprehension, speaking, elementary reading and writing, and grammatical patterns.

Kor 103 - First-Year Korean Term 3 (5)
An introduction to the Korean language with emphasis on listening comprehension, speaking, elementary reading and writing, and grammatical patterns. This is the third course in a sequence of three: Kor 101, Kor 102, and Kor 103.

Kor 103H - 1st Year Korean Heritage ()
An introduction to the Korean language with emphasis on listening comprehension, speaking, elementary reading and writing, and grammatical patterns.

Kor 199 - Special Studies (1-12)
(Credit to be arranged.)

Kor 201 - Second-Year Korean Term 1 (5)
Continued work in the Korean language with emphasis on listening comprehension, speaking, reading and writing, and grammatical patterns. This is the first course in a sequence of three: Kor 201, Kor 202, and Kor 203. Recommended prerequisite: Kor 103.

Kor 201H - 2nd Year Korean Heritage ()
Continued work in the Korean language with emphasis on listening comprehension, speaking, reading and writing, and grammatical patterns.

Kor 202 - Second-Year Korean Term 2 (5)
Continued work in the Korean language with emphasis on listening comprehension, speaking, reading and writing, and grammatical patterns. This is the second course in a sequence of three: Kor 201, Kor 202, and Kor 203. Recommended prerequisite: Kor 103.

Kor 202H - 2nd Year Korean Heritage ()
Continued work in the Korean language with emphasis on listening comprehension, speaking, reading and writing, and grammatical patterns.

Kor 203 - Second-Year Korean Term 3 (5)
Continued work in the Korean language with emphasis on listening comprehension, speaking, reading and writing, and grammatical patterns. This is the third course in a sequence of three: Kor 201, Kor 202, and Kor 203. Recommended prerequisite: Kor 103.
**Kor 203H - 2nd Year Korean Heritage (0)**
Continued work in the Korean language with emphasis on listening comprehension, speaking, reading and writing, and grammatical patterns.

**Kor 299 - Special Studies (1-12)**
(Credit to be arranged.)

**Kor 301 - Third-Year Korean Term 1 (4)**
Continued work in the Korean language in a widening variety of contexts. 301 emphasizes listening and speaking skills; 302 reading, writing, and vocabulary development. This is the first course in a sequence of two: Kor 301 and Kor 302. Recommended prerequisite: Kor 203.

**Kor 302 - Third-Year Korean Term 2 (4)**
Continued work in the Korean language in a widening variety of contexts. 301 emphasizes listening and speaking skills; 302 reading, writing, and vocabulary development. This is the second course in a sequence of two: Kor 301 and Kor 302. Recommended prerequisite: Kor 203.

**Kor 330U - Topics in Korean Culture and Civilization (4)**
A multimedia survey of development and trends of Korean culture in modern Korea. Examines various forms of its culture—including rituals, traditions, art, music, cinema, entertainment, mass media, food, and the Internet—and studies their implications in social, political, historical, and economical contexts. Conducted in English.

**Kor 361 - Korean Culture & Society Through Film (4)**
Introduces salient elements of traditional and contemporary Korea by means of watching and discussing selected Korean movies that offer rich cultural and historical contexts. Examines how the creators of the movies interpret and represent them in their work. Taught in English.

**Kor 399U - Special Studies (4)**
(Credit to be arranged.)

**Kor 404 - Cooperative Education/Internship (1-12)**
(Credit to be arranged.)

**Kor 409 - Practicum (1-6)**
(Credit to be arranged.)

**Kor 410 - Selected Topics (1-12)**
(Credit to be arranged.)

**Lat - Latin**

**Lat 101 - First-Year Latin Term 1 (4)**
An introduction to elementary Latin. Emphasis on the elements of grammar, vocabulary building, and elementary readings. This is the first course in a sequence of three: Lat 101, Lat 102, and Lat 103.

**Lat 102 - First-Year Latin Term 2 (4)**
An introduction to elementary Latin. Emphasis on the elements of grammar, vocabulary building, and elementary readings. This is the second course in a sequence of three: Lat 101, Lat 102, and Lat 103.

**Lat 103 - First-Year Latin Term 3 (4)**
An introduction to elementary Latin. Emphasis on the elements of grammar, vocabulary building, and elementary readings. This is the third course in a sequence of three: Lat 101, Lat 102, and Lat 103.

**Lat 199 - Special Studies (1-12)**
(Credit to be arranged.)

**Lat 201 - Second-Year Latin Term 1 (4)**
Intensive review of basic materials introduced in first-year program and further development of reading skills. This is the first course in a sequence of three: Lat 201, Lat 202, and Lat 203. Expected preparation: Lat 103.
Lat 202 - Second-Year Latin Term 2 (4)
Intensive review of basic materials introduced in first-year program and further development of reading skills. This is the second course in a sequence of three: Lat 201, Lat 202, and Lat 203. Expected preparation: Lat 103.

Lat 203 - Second-Year Latin Term 3 (4)
Intensive review of basic materials introduced in first-year program and further development of reading skills. This is the third course in a sequence of three: Lat 201, Lat 202, and Lat 203. Expected preparation: Lat 103.

Lat 299 - Special Studies (1-12)
(Credit to be arranged.)

Lat 301 - Third-year Latin: Authors of Republican Rome (4)
Close reading of one text, prose or poetry, with special attention on syntax, style, and cultural milieu. Some Latin composition modelled on author possible. This is the first course in a sequence of three: Lat 301, Lat 302, and Lat 303. Expected preparation: Lat 203. Repeatable with change of text.

Lat 302 - Third-year Latin: Authors of Imperial Rome (4)
Close reading of one text, prose or poetry, with special attention on syntax, style, and cultural milieu. Some Latin composition modelled on author possible. This is the second course in a sequence of three: Lat 301, Lat 302, and Lat 303. Expected preparation: Lat 301. Repeatable with change of text.

Lat 303 - Third-year Latin: Post-classical Authors (4)
Close reading of one text, or series of texts, prose or poetry, with special attention on syntax, style, and cultural milieu. Some paleographic work with digitized manuscripts. This is the third course in a sequence of three: Lat 301, Lat 302, and Lat 303. Expected preparation: Lat 302. Repeatable with change of text.

Lat 330U - Roman Culture (4)
A survey of daily life in ancient Rome, including Roman families, religious practices, entertainment, political life, arts and architecture. Conducted in English.

Lat 341U - Roman Literature in Translation (4)
A survey of Roman literature from the Republic through the Empire, including readings in Virgil, Plautus, Ovid, Cicero, and Catullus. Conducted in English.

Lat 399 - Special Studies (1-6)
(Credit to be arranged.)

Lat 401 - Research (1-6)
(Credit to be arranged.)

Lat 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Lat 407 - Seminar (1-6)
(Credit to be arranged.)

Lat 409 - Practicum (1-12)
(Credit to be arranged.)

Lat 410 - Selected Topics (1-6)
(Credit to be arranged.)

Lib - Library

Lib 181 - Use of the Library (3)
Initial training in the effective use of the University library and resources, such as the card catalog, reference materials, and electronic resources, including the on-line catalog, CDROM databases, and Internet.

Lib 199 - Special Studies (1-8)
Credit to be arranged.

Lib 299 - Special Studies (1-8)
Credit to be arranged.
Lib 399 - Special Studies (1-8)
Credit to be arranged.

Lib 401 - Research (1-6)
(Credit to be arranged.)

Lib 402 - Independent Study (1-12)
(Credit to be arranged.)

Lib 403 - Thesis (1-6)
(Credit to be arranged.)

Lib 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Lib 405 - Reading and Conference (1-6)
(Credit to be arranged.)

Lib 406 - Special Problems (1-6)
(Credit to be arranged.)

Lib 407 - Seminar (1-6)
(Credit to be arranged.)

Lib 408 - Workshop (1-6)
(Credit to be arranged.)

Lib 409 - Practicum (1-12)
(Credit to be arranged.)

Lib 410 - Experimental Course (1-6)
(Credit to be arranged.)

Lib 428 - Children's Literature, K-5 (3)
Materials grades K-5. Traditional genres such as picture books, traditional tales, modern realism, romance, adventure, mystery, historical fiction, science fiction, fantasy, biography, poetry, and nonfiction. Study of literature that illustrates cultural diversity. Resources for selection; awards and honors.
Also offered for graduate-level credit as Lib 528 and may be taken only once for credit. Prerequisite: junior standing.

Lib 429 - Young Adult Literature (3)
Analyze young adult literature (YAL) and study trends and styles in YAL. Discuss fictional and informational texts, digital, and online resources, graphic novels, and other materials featuring authors and illustrators who dominate the YAL landscape.
Also offered for graduate-level credit as Lib 529 and may be taken only once for credit.

Lib 432 - Multicultural Literature K-12 (3)
An introduction to contemporary multicultural literature, fiction and nonfiction, for use with early childhood, elementary, middle school and high school students. Emphasis is on the selection, evaluation, and utilization of literature in the classroom and library media center.
Also offered for graduate-level credit as Lib 532 and may be taken only once for credit.

Lib 433 - Global Literature: K-12 (3)
A survey of global literature for use with students in elementary, middle, or high school classrooms. A major focus will be on selecting reading materials and using them in the library and classroom.
Also offered for graduate-level credit as Lib 533 and may be taken only once for credit.

Lib 501 - Research (1-9)
(Credit to be arranged.)

Lib 502 - Independent Study (1-12)
(Credit to be arranged.)

Lib 503 - Thesis (1-9)
(Credit to be arranged.)

Lib 504 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Lib 505 - Reading and Conference (1-6)
(Credit to be arranged.)
Lib 506 - Special Problems (1-6)
(Credit to be arranged.)

Lib 507 - Seminar (1-6)
(Credit to be arranged.)

Lib 508 - Workshop (1-6)
(Credit to be arranged.)

Lib 509 - Practicum (1-9)
(Credit to be arranged.)

Lib 510 - Experimental Course (1-6)
(Credit to be arranged.)

Lib 528 - Children's Literature, K-5 (3)
Materials grades K-5. Traditional genres such as picture books, traditional tales, modern realism, romance, adventure, mystery, historical fiction, science fiction, fantasy, biography, poetry, and nonfiction. Study of literature that illustrates cultural diversity. Resources for selection; awards and honors.
Also offered for undergraduate-level credit as Lib 428 and may be taken only once for credit.

Lib 529 - Young Adult Literature (3)
Analyze young adult literature (YAL) and study trends and styles in YAL. Discuss fictional and informational texts, digital, and online resources, graphic novels, and other materials featuring authors and illustrators who dominate the YAL landscape.
Also offered for undergraduate-level credit as Lib 429 and may be taken only once for credit.

Lib 530 - Literature Promotion Programs, K-12 (3)
A study of techniques for promoting literature in elementary and secondary schools: author/illustrator studies, reading books aloud, storytelling, booktalks, reading promotion programs, and incorporating literature throughout the curriculum.
Prerequisite: Lib 428/528.

Lib 532 - Multicultural Literature K-12 (3)
An introduction to contemporary multicultural literature, fiction and nonfiction, for use with early childhood, elementary, middle school and high school students. Emphasis is on the selection, evaluation, and utilization of literature in the classroom and library media center.
Also offered for undergraduate-level credit as Lib 432 and may be taken only once for credit.

Lib 533 - Global Literature: K-12 (3)
A survey of global literature for use with students in elementary, middle, or high school classrooms. A major focus will be on selecting reading materials and using them in the library and classroom.
Also offered for undergraduate-level credit as Lib 433 and may be taken only once for credit.

Lib 534 - Administration of the School Library (3)
Study of the school library and its integral role in the instructional program of the school and the school library media movement. Focus on the leadership role of the school librarian, management of personnel, program budgeting, facility planning, role of state and national standards in planning, evaluation, and development; other administrative areas. Field activities included.
Prerequisite: Lib 528.

Lib 536 - Instructional Design and Technology for Schools & Libraries (3)
Study the use of instructional media for K-12 including instructional design and criteria for quality print and non-print media. Learn graphic techniques and uses of computers and technology in production of instructional media. Research current practices in library and classroom instruction and communication.

Lib 541 - Reference and Information Systems and Services (3)
An analysis of reference services and procedures. Study of print, nonprint, and electronic database reference sources to include bibliographic tools, indexes, encyclopedias, ready references, biographical tools, geographical tools, dictionaries, government documents, and specialized materials. Research in reference services and technological delivery systems.
Prerequisite: Lib 428/528.
Lib 542 - Collection Development and Evaluation (3)
Principles and practice of evaluation, selection, and acquisition of all types of materials included in a school library collection. Selection and collection development policies and procedures. Study of professional evaluation and selection sources. Field activities included.
Prerequisite: Lib 428 or Lib 528.

Lib 547 - School Library Instructional Programs, K-12 (3)
A study of the K-12 information skills program, including the development of a scope and sequence, effective teaching strategies, specific skills instruction, correlation and integration with the classroom curriculum, and organization and development of a teaching program in the school library media center.
Prerequisite: Lib 528.

Lib 548 - Cataloging and Organization of School Library Collections (3)
Principles of organization of school library collections. Basic cataloging procedures for print, nonprint, and electronic forms of media using standard cataloging and classification codes. Application of online cataloging databases.
Prerequisite: Lib 428/528.

Lib 554 - Student Teaching I (6)
Beginning student teaching in a library media center under the direction of a supervising library media teaching and university supervisor. Observation and participation in teaching, administrative and other responsibilities of a library media specialist. Opportunities for involvement in student learning activities, development of teaching skills, basic skills in management and discipline of students.
Prerequisite: admission to the program and approved application.

Lib 555 - Student Teaching II (15)
Ten weeks of full-time student teaching in a school library media center under the supervision of a library media teacher and university supervisor. Participation in a full range of teaching, administrative, and other responsibilities of a library media specialist. Direct responsibilities for student learning activities, development of teaching skills, creating a climate conducive for learning, management and discipline of students, and related professional activities. Weekly seminar.
Prerequisite: admission to the program and approved application.

Lib 561 - School Library Practicum: Elementary (3)
A planned experience consisting of practical application of the full range of roles and responsibilities of the School Librarian in an elementary school library under the direction of a supervising elementary school library teacher and a University supervisor.
Prerequisite: admission to the Educational Media Endorsement Program.

Lib 562 - School Library Practicum: Secondary (3)
A planned experience consisting of practical application of the full range of roles and responsibilities of the School Librarian in a secondary school library under the direction of a supervising secondary school library teacher and a University supervisor.
Prerequisite: admission to the School Library Endorsement Program.

Lib 573 - Advanced Methods and Procedures in School Library/Media Centers (3)
A study of the school library/media center as a teaching agency. Designed to focus on the teaching role of the school librarian/media specialist in presenting concepts, principles, content, and techniques to students and teachers. Emphasis placed on instruction in library and research skills; reading, viewing and listening guidance; in-service for school personnel; and problems involved in performing effectively as a teacher. Observation of library/media centers required.
Prerequisite: Educational Media Endorsement or consent of instructor.

Lib 574 - Research Strategies for Library Media Specialists (3)
Advanced reference materials available in school and academic libraries, including computer databases and network resources.
Prerequisite: Educational Media Endorsement or consent of instructor.

Lib 575 - Directed Field Experience (3)
Planned contact for school library media specialists with professional librarians and/or media specialists in public, academic, special libraries, information centers, and other library or media-related settings. Directed field work and visitations to various libraries and information centers will be the emphasis.
Seminar meetings on campus deal with topics related to the field experience as well as intensive study of related advanced issues such as automation, personnel, and management.

**Prerequisite:** Educational Media Endorsement or consent of instructor.

**Lib 576 - Planning and Evaluation of Library Media Programs (3)**

Analysis of media center programs and planning techniques; study and application of media center evaluation instruments; analysis and development of library media center programs.

**Prerequisite:** Educational Media Endorsement or consent of instructor.

**Lib 587 - Video Production (3)**

Study and practice video production techniques, including storyboarding, camera techniques, editing, and preparing video for various educational settings. Design activities that engage students in digital video production and produce videos for library or classroom use.

**Lib 588 - 21st Century Technologies for Educators (3)**

Analyze the role of computers and advanced technology in the library media center and classroom. Focus on new and emerging technologies to enhance classroom instruction for all learners. Develop curricula that effectively use media and technology to engage and support students.

**Lib 589 - Creative Photography in Education (3)**

A study of photographic processes to include photography without a camera, basic animation techniques, and darkroom techniques. Analysis of completed photographs in terms of composition, style, and technique will also be studied. All techniques will be related to classroom instruction in the elementary and secondary schools.

**Prerequisite:** Lib 536 or consent of instructor.

**Lib 592 - Contemporary Children's and Young Adult Literature (3)**

An analysis and study of contemporary children's and young adult literature. A study of trends and styles in modern literature. Includes picture books, fiction, and nonfiction. Contemporary authors and illustrators featured.

**Prerequisite:** Lib 428/528 or equivalent.

**Lib 601 - Research (1-9)**

(Credit to be arranged.)

**Lib 602 - Independent Study (1-9)**

(Credit to be arranged.)

**Lib 603 - Dissertation (1-9)**

(Credit to be arranged.)

**Lib 604 - Cooperative Education/Internship (1-9)**

(Credit to be arranged.)

**Lib 605 - Reading and Conference (1-9)**

(Credit to be arranged.)

**Lib 606 - Special Problems (1-9)**

(Credit to be arranged.)

**Lib 607 - Seminar (1-9)**

(Credit to be arranged.)

**Lib 608 - Workshop (1-9)**

(Credit to be arranged.)

**Lib 609 - Practicum (1-9)**

(Credit to be arranged.)

**Lib 610 - Selected Topics (1-9)**

(Credit to be arranged.)

**Lib 801 - Research (0-9)**

(Credit to be arranged.)

**Lib 802 - Independent Study (0-9)**

(Credit to be arranged.)

**Lib 804 - Cooperative Education/Internship (0-9)**

(Credit to be arranged.)
Lib 805 - Reading and Conference (0-9)
(Credit to be arranged.)

Lib 806 - Special Problems (0-9)
(Credit to be arranged.)

Lib 807 - Seminar (0-9)
(Credit to be arranged.)

Lib 808 - Workshop (0-9)
(Credit to be arranged.)

Lib 809 - Practicum (0-9)
(Credit to be arranged.)

Lib 810 - Experimental Course (0-9)
(Credit to be arranged.)

Ling - Applied Linguistics

Ling 101 - Pre-Entry Program Grammar/Writing (8)
An introduction to form, meaning and use of simple present and past verb tenses; conjunctions; subject, object, possessive, and demonstrative pronouns. Students will learn to identify parts of speech and sentences; question/answer formation; write beginning level paragraphs; understand and use the basic rules for capitalization, punctuation and spelling; practice good penmanship.

Ling 104 - Pre-Entry Program Reading (6)
An introduction to basic reading skills including phonics, basic comprehension, fluency, sequence, word analysis; finding the topic. Introduction to basic dictionary skills and extensive reading. Emphasis on building vocabulary and decoding strategies to aid in fluency and reading for basic understanding.

Ling 106 - Pre-Entry Program Speaking/Listening (4)
An introduction to basic listening and speaking skills. Practice with listening to conversations and interviews; asking/answering questions; making positive and negative statements in the present tenses; describing people, places, things and activities; giving personal information, expressing wants, needs and likes. Emphasis is on pro-nunciation and understanding and being understood in simple conversational situations.

Ling 111 - Grammar/Writing Level 1 (8)
Continued focus on sentence structure and developing basic single paragraphs (descriptive and narrative rhetorical styles) with topic, supporting, and concluding sentences. Introduction to compound and complex sentences. A continued focus on simple present and past verbs, and an introduction to form, meaning, and use of progressive and future tense, including statement and question forms; contractions; time expressions; modals; count/noncount nouns; pronouns; adjective and noun complements; demonstratives; and prepositions.

Ling 114 - Reading Level 1 (4)
Continued focus on basic reading skills, as well as introduction to skimming and scanning, differentiating main ideas from supporting details and examples, identifying common prefixes and suffixes, discerning meaning from context, and matching pronouns to their referents. Dictionary exercises used to practice alphabetical order, syllabification, and word stress. Continued emphasis on building vocabulary and honing skills through reading short, adapted materials.

Ling 115 - Writing Workshop for Non-native Writers (4)
Designed for writers whose first language is not English to develop their skills and confidence in writing for college. Focuses on the rhetorical structures of American College-level academic writing including essay structure, summaries, responses, and research writing. In addition, students work on grammar and sentence structure problems which occur more often in non-native writing and do peer editing and self-editing. Understanding complex assignments, synthesizing ideas, and strategies for test taking are also addressed.

Ling 116 - Speaking/Listening Level 1 (4)
Continued emphasis is on developing confidence, comprehensibility, and skills in basic social interactions, including participating in conversations, asking for information, and providing personal
information. Practice questions, statements, and negatives in present, past, and future tenses; identify common reductions, stress, and intonation patterns; use vocabulary related to academic and everyday life; give narrative and descriptive individual presentations.

**Ling 121 - Grammar/Writing Level 2 (low-intermediate) (8)**

Focus on paragraph development and introduction to process, comparison/contrast, and classification writing as rhetorical styles; use of logical connectors; outlining ideas for essay organization; and formatting rules. Emphasis on expanding single paragraph essays into longer essays. Expanded utilization of modal auxiliaries and introduction to present perfect tense, gerunds and infinitives, passive voice, real conditional, comparative and superlative adjectives, and adverbs.

**Ling 124 - Reading Level 2 (low-intermediate) (4)**

Focus, in both fiction and non-fiction texts, on improving comprehension skills; locating and understanding main ideas, supporting details, and signal words; inferring meaning; and increasing reading speed. Improve dictionary skills and expand academic vocabulary knowledge including meaning, parts of speech, affixes, and word forms.

**Ling 126 - Speaking/Listening Level 2 (low-intermediate) (4)**

Identify meaningful information from short lectures and conversations; practice with question forms in present, past, future, and present perfect tenses; conduct interviews; plan and deliver short oral presentations. Continued improvement of pronunciation skills, including stress, intonation, and reductions.

**Ling 131 - Grammar/Writing Level 3 (intermediate) (8)**

Introduction to cause/effect and argumentation as rhetorical styles; practice narrowing a topic, developing more effective introductions and conclusions; use of transitions to subordinate/coordinate ideas. Emphasis on essay writing. Expanded use of gerunds and infinitives, modal auxiliaries, and adverbial clauses. Introduction to past perfect and future perfect tenses, subordinate clauses, parallel structure, and relative clauses.

**Ling 134 - Reading Level 3 (intermediate) (4)**

Focus on developing critical reading skills in expanded works of fiction and non-fiction; introduction to rhetorical patterns, distinguishing fact from opinion, determining author’s purpose, paraphrasing and summarizing points, and identifying elements of fiction. Expansion and use of academic vocabulary.

**Ling 136 - Speaking/Listening Level 3 (intermediate) (4)**

Emphasis on taking organized notes using symbols and abbreviations, understanding main ideas and examples, and identifying lecture cues from academic lectures. Improve skills needed for focused small group discussions, impromptu speaking, and individual and group presentations using information gathered from interviews.

**Ling 142 - Advanced English Grammar for Non-native Speakers (4)**

Focus on grammar concepts that are essential for effective academic writing. Students will apply these concepts in written activities and begin to learn self-editing techniques. Students should have a basic foundation in English grammar including the English verb tense system and simple, compound and complex sentence structures.

**Ling 143 - Guided Research Writing for Non-native Speakers (4)**

Students produce academic research papers using sources provided by the instructor. Skills include developing ideas for writing, using transitional elements, paraphrasing and documenting sources, and developing effective thesis statements, introductions and conclusions. Analysis and synthesis of information from sources for use in writing. Students must have a basic foundation in academic writing in order to enroll in this course.

**Ling 144 - Academic Reading for Non-native Speakers (4)**

Students improve ability to read academic texts quickly and effectively. Concepts taught include considering the author’s point of view and purpose in understanding a reading, developing strategies for answering essay questions under time constraints and learning how to paraphrase, summarize and respond.
to readings. Students will also build their academic vocabulary during the term. Students should have a basic foundation in academic reading in order to enroll in the course.

**Ling 147 - Understanding Academic Lectures (4)**
Students prepare for the demands of understanding academic lectures in university contexts. Focus is on developing skills and strategies to increase effective lecture listening, note-taking, and retrieval and application of information.

**Ling 151 - Grammar Level 5 (Advanced) (3)**
A quick review and expansion of perfective verb forms, subordination/coordination of structures, and conditionals; an introduction to subjunctive, fronting and inversion of structures. Emphasis is on usage, particularly in editing, academic writing and oral presentations.

**Ling 152 - Grammar and Editing for Academic Writing for Non-native Speakers (4)**
Students identify and integrate the grammatical structures that can cause difficulty in writing for non-native speakers. These structures include conditionals, prepositions, and subordination, among others. Students will focus on using grammar effectively in self-editing of academic writing. Students must have a strong foundation in English grammar in order to enroll in this course.

**Ling 153 - Independent Research Writing for Non-native Speakers (4)**
Students write a research paper based on a topic of their choosing. Focus on critical thinking skills, finding appropriate sources through library and internet searches, and synthesis of ideas from sources into a well developed, clearly organized and accurately documented paper. Students taking the course should have experience writing basic source-based essays with a thesis and documentation.

**Ling 154 - Advanced Academic Reading for Non-native Speakers (4)**
Students expand ability to efficiently and effectively read academic texts. Students lead group discussions on academic articles and continue building on academic vocabulary. Summary and response writing focuses on using critical thinking skills. Students should have a strong foundation in academic reading in order to enroll in the course.

**Ling 155 - Discussion Skills for Non-native Speakers (4)**
Focus on communication skills within the context of small group settings. Development of effective group collaboration and communication strategies including oral expression, active listening, discussion roles, and cultural competency. Students practice skills through participation in group projects.

**Ling 156 - Public Speaking for Non-native Speakers (4)**
Students learn techniques for developing and delivering both impromptu and prepared speeches. Emphasis will be given to developing strategies to reduce nervousness, organize ideas, produce grammatically accurate language and improve pronunciation and overall oral quality.

**Ling 157 - Language Proficiency Test Preparation (4)**
This course prepares students to take IELTS, TOEFL iBT, or the Institutional TOEFL. Students select and set goals to achieve their desired test score. Students follow a flexible, personalized study plan to improve weaknesses while enhancing overall performance. Students make use of multiple learning tools available in the IELP Learning Center, consult with trained testing tutors, and work closely with the instructor.

**Ling 160 - Skills Enhancement (1-12)**
A variety of classes aimed at learning English in a variety of manners, ie. English through Drama, Pronunciation, Vocabulary Building, just to name a few. Course selection varies on a quarterly basis.

**Ling 161 - Pathways Introduction Seminar (2)**
Supports students’ personal growth and academic transition from ESL course work to university course work. Students learn about university resources, policies, procedures, and expectations governing their degree study. Students engage in individualized academic activities and planning by making informed decisions and creating a one-year academic plan.
Prerequisite: (Ling 131, Ling 134, and Ling 136) or placement into Ling 142, Ling 143, Ling 144, Ling 147 or higher.

**Ling 172 - Pathways Intermediate Seminar (2)**
Supports students in level 5 IELP classes as they take their first academic courses at PSU. The course focuses on transferring academic skills used in language-learning classrooms to content-specific academic classrooms. The work that students are doing in their IELP and PSU courses are the basis of most classroom activities. Students evaluate and update their academic plans in consultation with their academic advisor in their major, strengthening their connection to their academic departments.

Prerequisite: Ling 142, Ling 143, Ling 144, Ling 147, and Ling 171.

**Ling 173 - Pathways Final Seminar (2)**
Concludes students' preparation for full-time academic study in their next term. The focus of this course is academic literacy and goal development. Students link academic course work, co-curricular and extra-curricular opportunities, and career development as part of independently directing their academic planning.

Prerequisite: Ling 142, Ling 143, Ling 144, Ling 147, and Ling 171.

**Ling 182 - Social Media: Interacting Online (4)**
Students develop computer communication skills by examining and researching the social aspect of the Internet. Explore and examine the use of social media and its importance in society. Participate in weekly online discussions and create individual blogs.

**Ling 183 - Community Reporting (4)**
Students explore American culture at PSU and in the Portland community by creating a class newsletter. Focus on interviewing and reporting techniques, writing and revising articles, and developing proofreading and editing skills. Students select articles and design the layout.

**Ling 184 - Cultural Themes in Reading (4)**
Students develop reading skills, cultural knowledge, and communicative ability by reading and discussing authentic, unabridged texts. Improve critical thinking and discussion skills through writing and answering questions, paraphrasing and relating ideas, and delivering presentations. Cultural themes rotate each term.

**Ling 185 - Practically Speaking: Conversational English (4)**
Students improve conversational fluency by learning strategies for oral communication and focusing on common words and phrases used in spoken American English. Learn about the cultural knowledge required to navigate everyday interactions. Improve pronunciation and practice speaking in authentic situations.

**Ling 186 - Communication through Volunteering (4)**
This course provides community and classroom opportunities for the development of oral communication skills, critical thinking, and intercultural competence. Experience Portland culture and practice communication strategies through group projects with PSU students, elementary schools, and other community partners.

**Ling 187 - Multimedia Listening (4)**
Students expand their listening skills and increase their familiarity with American culture through a wide variety of sources such as music, movies, TV shows, Internet videos, radio programs, extended conversations, and live entertainment. Cultural themes rotate each term.

**Ling 199 - Special Studies (0-12)**
See department for course description. (Credit to be arranged.)

**Ling 232 - Language and Society (4)**
General introduction to what languages are like, how they are used and how they vary, focusing on how language interacts with society and culture. Some questions that will be addressed include: Why doesn't everyone speak the same language? Do men and women talk differently? What is the relationship between endangered species and endangered languages? How does language influence our thoughts or behaviors?

**Ling 233 - Language and Mind (4)**
General introduction to what languages are like, how they are used, and how they vary, focusing on how language is learned and produced. Some questions that will be addressed include: Is language innate? Is it unique to humans? How is language related to
thought or to culture? How is language represented in
the brain? How is language acquired in different
cultures and different circumstances?

**Ling 299 - Special Studies (1-4)**
See department for course description. (Credit to be arranged.)

**Ling 301 - Introduction to Native American Languages (4)**
General introduction to the linguistic and cultural background of endangered native languages of North America. Topics include structure of native languages; relationship of language to other aspects of culture such as worldview, social organization, and story telling; history of language change and current tribal projects to revitalize native languages.

**Ling 332U - "Do I talk wrong?" Language Myths in the USA (4)**
The nature of language and language myths to show how opinion and unexamined biases about language develop into language ideologies and, subsequently, shape language policy and US American culture.

**Ling 334U - “You have the right to remain silent.”: Language and the Law (4)**
Linguistic theory and practices used to provide evidence for the justice system.

**Ling 390 - Introduction to Linguistics (4)**
A general introduction to the study of linguistics, including a basic survey of phonology, morphology, syntax, and semantics, brief overview of other topics such as language acquisition and language in social contexts, a brief sketch placing English in historical perspective, and a preliminary examination of principles in modern language study.

**Ling 391 - Introduction to Applied Linguistics (4)**
Survey of topics not covered in detail in Ling 390 including language acquisition, historical linguistics and discourse analysis. Different theoretical perspectives relevant for applied linguistics are introduced and students develop their analytic skills with a special focus on the effective and discipline-appropriate reporting of these analyses.
Prerequisite: Ling 390.

**Ling 392 - Structure of the English Language (4)**
A study of basic English grammar with an emphasis on describing grammatical forms and their functions in communication. Expected preparation or co-requisite: Ling 390.

**Ling 399 - Special Studies (1-8)**
See department for course description. (Credit to be arranged.)

**Ling 401 - Research (1-6)**
See department for course description. (Credit to be arranged.)

**Ling 402 - Independent Study (1-12)**
(Credit to be arranged.)

**Ling 403 - Honor Thesis (1-4)**
(Credit to be arranged.)

**Ling 404 - Cooperative Education/Internship (1-12)**
See department for course description. (Credit to be arranged.)

**Ling 405 - Reading and Conference (1-6)**
See department for course description. (Credit to be arranged.)

**Ling 406 - Special Projects (1-6)**
(Credit to be arranged.)

**Ling 407 - Seminar (1-6)**
The Senior Seminar, draws together the Applied Linguistics major's various strands and exploits the undergraduate student's linguistic knowledge to explore substantive issues in the field. The course content will vary from quarter to quarter and has included such topics as "Orality and Literacy", "Critical Linguistics", and "Language in Cyberspace". In addition, students will be guided in preparing résumés and CVs for graduate school or jobs. Those students planning on going to graduate school are advised to take the course in Fall Quarter.
Prerequisite: 24 Ling credits at the 400-level or senior standing or with instructor's permission.

Ling 408 - Workshop (1-6)
See department for course description. (Credit to be arranged.)

Ling 409 - Practicum (1-12)
See department for course description. (Credit to be arranged.)

Ling 410 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

Ling 411 - Syntax (4)
Introduction to modern grammatical theory, its methods, and findings. Presents patterns of argumentation, models, and basic results of research.
Also offered for graduate-level credit as Ling 511 and may be taken only once for credit. Prerequisite: Ling 390 and one other course in linguistics.

Ling 412 - Phonology (4)
How sounds pattern and how they are used in the world's languages, how those patterns should be represented, and what theories have been advanced to explain those patterns. Some historical background to the sub-discipline and some training in linguistic analysis and argumentation.
Also offered for graduate-level credit as Ling 512 and may be taken only once for credit. Prerequisite: Ling 390 and Ling 415/Ling 515.TESOL program.

Ling 414 - Linguistic Pragmatics (4)
A study of current theories of language use, particularly contextual and functional aspects of communication. Strongly recommended: Ling 391.
Also offered for graduate-level credit as Ling 514 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 415 - Linguistic Phonetics (4)
Introduces the sounds of the world's languages with a concentration on English. Practical exercises designed to develop skills in production, discrimination, and phonetic transcription. Applications to speech technology and speech pathology.

Also offered for graduate-level credit as Ling 515 and may be taken only once for credit. Prerequisite: Ling 390 or concurrent enrollment.

Ling 416 - Discourse Analysis (4)
The examination of forms and functions in discourse. Using several analytic procedures for understanding how conversation works, especially as applied to language learning and teaching. Strongly recommended: Ling 391, Ling 392.
Also offered for graduate-level credit as Ling 516 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 417 - Endangered Languages (4)
How and why languages are endangered in the Pacific Northwest and elsewhere in the world. Environmental factors, globalization, and colonization will be evaluated for the roles they have played. Consideration is also given to how dying languages can be maintained or "awakened" (revitalized).
Also offered for graduate-level credit as Ling 517 and may be taken only once for credit.

Ling 418 - Linguistic Morphology (4)
The study of words and word structure. Focuses on analyzing word formation across languages. Examines the relationship between morphology, syntax and phonology, the theoretical assumptions that underlie morphological analysis, and some applications of morphological analysis. Strongly recommended: Ling 392.
Also offered for graduate-level credit as Ling 518 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 419 - Language Typology (4)
Studies and classifies languages according to their structural features. Introduces (structural) linguistics and studies structures across languages. Prepares students for more theoretical and analytical courses in the department. Strongly recommended: Ling 391, Ling 392.
Also offered for graduate-level credit as Ling 519 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 420 - Historical and Comparative Linguistics (4)
Study of language relationships and language change. Topics include the genetic classification of languages, language and prehistory, methods of historical reconstruction, and language contact. Strongly recommended: Ling 392. Recommended: Ling 391.
Ling 431 - Language, Identity, and Culture (4)
Provides a systematic overview of theories and practices concerning the relationship of language, culture, and identity (personal and cultural). It will address common misconceptions about language and culture, and promote an understanding of the affective nature of language. Students will develop skills in analyzing information and data about culture and language, including variation in language use and thematic analysis of interview data. This course will focus on adult educational settings, domestic and global.

Also offered for graduate-level credit as Ling 531 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 432 - Sociolinguistics (4)
Examines the role of language in society and how social factors can influence language. The social issues around language including language policy and language ideology. Strongly recommended: Ling 391.

Also offered for graduate-level credit as Ling 532 and may be taken only once for credit. Prerequisite: Sophomore-standing.

Ling 433 - Psycholinguistics (4)

Also offered for graduate-level credit as Ling 533 and may be taken only once for credit. Prerequisite: Ling 390 or (Psy 200 and Psy 204).

Ling 435 - Theories and Practice in Applied Linguistics (4)
An examination of current areas of applied linguistics research focusing on original research and building upon concepts presented in Ling 390 and Ling 391.

Also offered for graduate-level credit as Ling 535 and may be taken only once for credit. Prerequisite: Ling 390 and Ling 391.

Ling 437 - First Language Acquisition (4)
Introduction to main aspects of first language acquisition in childhood, from infancy to the early school years. Examines comprehension and production of the structural and social aspects of language. Includes discussion of language acquisition theories from linguistic, psycholinguistic and sociolinguistic perspectives. Research project based on collection and analysis of child language data required. Strongly recommended: Ling 391.

Also offered for graduate-level credit as Ling 537 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 438 - Second Language Acquisition (4)
Introduction to main aspects of second language acquisition from sociolinguistic and psycholinguistic perspectives. Examines comprehension and production, stages in acquisition, cognitive processes, linguistic environment, individual variables, relationship between first and second language. Research project based on collection and analysis of language-learner language.

Also offered for graduate-level credit as Ling 538 and may be taken only once for credit. Prerequisite: Sophomore-standing.

Ling 439 - Language Assessment (4)
Theoretical background and practical considerations in the conduct of language assessment. Students will explore traditional, quantitative methods as well as alternative, qualitative methods for systematically gathering information to inform decisions about individual language ability.

Also offered for graduate-level credit as Ling 539 and may be taken only once for credit. Prerequisite: Ling 390; Ling 477.

Ling 445 - Linguistics and Cognitive Science (4)
Presents current developments in linguistic theory, and in psychological theories of perception, cognition, and information processing (with special focus on language processing). Examines the fusion of linguistic and psychological theories into the rapidly growing field of cognitive science. Strongly recommended: Ling 391.

Also offered for graduate-level credit as Ling 545 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 453 - Graduate Preparation: Research and Writing for Non-Native Speakers (4)
Students refine their academic writing skills through research and citation. The course also focuses on recognizing and producing vocabulary and grammar appropriate to graduate-level writing.

Prerequisite: upper-division standing and IELP program approval.

Ling 454 - Graduate Preparation: Reading Strategies for Non-Native Speakers (4)
In this hybrid course, students explore readings in their individual disciplines and develop a portfolio of
academic skills and strategies to prepare for graduate-level reading. Students utilize technology to organize and manage readings, cite sources, and expand academic vocabulary.

Prerequisite: upper-division standing and IELP program approval.

**Ling 456 - Graduate Preparation: Oral Communication for Non-Native Speakers (4)**

Students prepare for the demands of graduate-level coursework by activating their skills through public speaking and group discussion. Emphasis is also on expanding interpersonal language skills and cross-cultural skills in an academic environment.

Prerequisite: upper-division standing and IELP program approval.

**Ling 457 - Writing Workshop for Multilingual Graduate Students (2)**

The Graduate Writing Workshop is a 2-credit course designed to support multilingual graduate students with their existing writing projects. Students should have an existing writing project or regular written assignments that they wish to receive guidance on. Through seminar-style discussions and peer workshops, students will develop a critical awareness of their own writing needs and the conventions of American academic writing.

Prerequisite: Graduate student standing.

**Ling 470 - Grammar for TESOL (4)**

A study of how to teach difficult grammatical structures in English, how to resolve problems and questions that frequently arise in the ESL classroom, and how to adapt and supplement ESL grammar tests.

Also offered for graduate-level credit as Ling 570 and may be taken only once for credit. Prerequisite: Ling 392 or Ling 492 or departmental grammar test.

**Ling 471 - Understanding the International Experience (4)**

Examination of communication-based dimensions of an international or intercultural experience, including teaching English to speakers of other languages. Development of strategies and activities required to meet the challenges of teaching, working, or doing research in an international/intercultural setting. All linguistics students must register for Ling 471/571, however, this is the same course as Intl 471. May be taken concurrently with Ling 390.

Also offered for graduate-level credit as Ling 571 and this course may be taken only once for credit. Prerequisite: upper-division or postbac academic standing. Cross-Listed as: Intl 471.

**Ling 472 - Teaching Pronunciation (4)**

This is a practical, hands-on course in which students apply phonetics and phonology in the context of language education. While the focus is on teaching English pronunciation, the course includes general theory and applications that are useful for students planning to teach pronunciation of other languages (e.g., Spanish, Chinese).

Also offered for graduate-level credit as Ling 572 and may be taken only once for credit. Prerequisite: Ling 390.

**Ling 473 - Computer Assisted Language Learning (4)**

Introduction to the use of computers in language learning. Examines the research of the field to inform practical considerations for task design and evaluation.

Also offered for graduate-level credit as Ling 573 and may be taken only once for credit. Prerequisite: Ling 477.

**Ling 475 - Curriculum Design and Materials Development in TESOL (4)**

Principles of curriculum design and instructional materials development in teaching English to speakers of other languages. Students work in teams to assess needs, design syllabus, develop lessons and materials, plan evaluation for English language program. Covers structural, notional and communicative, task-based, and content-based syllabus. Expected preparation: Ling 478 or teaching experience.

Also offered for graduate-level credit as Ling 575 and may be taken only once for credit. Prerequisite: Ling 390; Ling 477 or instructor's approval.

**Ling 477 - TESOL Methods I (4)**

Introduction to the methods of corpus linguistics, a type of computer-assisted linguistic analysis, as used in applied linguistics and TESOL. Includes weekly computer lab sessions conducting corpus linguistics work. Expected preparation is Ling 392.

Also offered for graduate-level credit as Ling 576 and may be taken only once for credit. Prerequisite: Upper division standing.

**Ling 477 - TESOL Methods II (4)**

The first in a two-course sequence on classroom teaching focused on theoretical and practical perspectives on classroom teaching and learning. Ling 477 and Ling 478 must be taken in sequence.
Also offered for graduate-level credit as Ling 577 and may be taken only once for credit. Prerequisite: Sophomore-standing.

Ling 478 - TESOL Methods II (4)
The second in a two-course sequence on classroom teaching. TESOL Methods II uses classroom observation and practice teaching as a basis to study theoretical and practical perspectives on classroom teaching and learning. Significant out-of-class time for group work, classroom observation and practice teaching is required. After completing TESOL Methods II, students will have completed many of the hours and assignments needed for their portfolio.

Also offered for graduate-level credit as Ling 578 and may be taken only once for credit. Prerequisite: Ling 477/Ling 577.

Ling 480 - Bilingualism (4)
Survey of issues involved with bilingualism throughout the world. Explores the linguistic, sociolinguistic, and psycholinguistic aspects of simultaneous and subsequent acquisition of one or more languages. Includes perspectives of individual and societal bilingualism, and examines issues involved with bilingual language use, language processing, education, language planning, and language and identity. Strongly recommended: Ling 391.

Also offered for graduate-level credit as Ling 580 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 481 - World Englishes (4)
Explores the role of English as a world language. Using film, audio tapes, and English language newspapers from around the world, students will become familiar with such Englishes as Malaysian English, Indian English, Nigerian English, and Filipino English. Strongly recommended: Ling 391.

Also offered for graduate-level credit as Ling 581 and may be taken only once for credit. Prerequisite: Ling 232 or Ling 390.

Ling 482 - Pidgins and Creoles (4)
Introduces students to the language varieties arising in contact situations. Concentration on African and New World creoles (and African American Vernacular English). Considers the formation of pidgins and creoles in terms of both first and second language acquisition. Looks at the social factors involved in their creation. Strongly recommended: Ling 391, Ling 392.

Also offered for graduate-level credit as Ling 582 and may be taken only once for credit. Prerequisite: Ling 390.

Ling 490 - History of the English Language (4)
A survey in which the development of English phonology, morphology, vocabulary, and syntax is studied through the application of modern linguistic criteria and methodology. Expected preparation: Ling 390.

Also offered for graduate-level credit as Ling 590 and may be taken only once for credit.

Ling 501 - Research (1-9)
See department for course description. (Credit to be arranged.)

Ling 502 - Independent Study (1-9)
(Credit to be arranged.)

Ling 503 - Thesis (1-9)
See department for course description. (Credit to be arranged.)

Ling 504 - Cooperative Education/Internship (1-9)
See department for course description. (Credit to be arranged.)

Ling 505 - Reading and Conference (1-6)
See department for course description. (Credit to be arranged.)

Ling 506 - Special Projects (1-9)
See department for course description. (Credit to be arranged.)

Ling 507 - Seminar (1-6)
See department for course description. (Credit to be arranged.)

Ling 508 - Workshop (1-6)
See department for course description. (Credit to be arranged.)

Ling 509 - Practicum (1-9)
See department for course description. (Credit to be arranged.)
Ling 510 - Selected Topics (1-6)
See department for course description. (Credit to be arranged.)

Ling 511 - Syntax (4)
Introduction to modern grammatical theory, its methods, and findings. Presents patterns of argumentation, models, and basic results of research.
Also offered for undergraduate-level credit as Ling 411 and may be taken only once for credit.
Prerequisite: Ling 521 or (Ling 390 and Ling 392).

Ling 512 - Phonology (4)
How sounds pattern and how they are used in the world's languages, how those patterns should be represented, and what theories have been advanced to explain those patterns. Some historical background to the subdiscipline and some training in linguistic analysis and argumentation.
Also offered for undergraduate-level credit as Ling 412 and may be taken only once for credit.
Prerequisite: Ling 513 or (Ling 390 and Ling 415).

Ling 513 - Applied Phonetics and Phonology (4)
Introduces students to the applications of phonetics and phonology to the teaching of English and other real-world problems. Students will learn how to describe the sound system of English, represent its phonology with basic formalisms, and compare this system to that of other languages. This knowledge will enable students to diagnose and remediate problems learners might have with the sound system of English.

Ling 514 - Linguistic Pragmatics (4)
A study of current theories of language use, particularly contextual and functional aspects of communication.
Also offered for undergraduate-level credit as Ling 414 and may be taken only once for credit.
Prerequisite: Ling 521 or Ling 390.

Ling 515 - Linguistic Phonetics (4)
Introduces the sounds of the world's languages with a concentration on English. Practical exercises designed to develop skills in production, discrimination, and phonetic transcription. Applications to speech technology and speech pathology.
Also offered for undergraduate-level credit as Ling 415 and may be taken only once for credit.
Prerequisite: Ling 513 or Ling 390.

Ling 516 - Discourse Analysis (4)
The examination of forms and functions in discourse. Using several analytic procedures for understanding how conversation works, especially as applied to language learning and teaching.
Also offered for undergraduate-level credit as Ling 416 and may be taken only once for credit.
Prerequisite: Ling 521 or Ling 390.

Ling 517 - Endangered Languages (4)
How and why languages are endangered in the Pacific Northwest and elsewhere in the world. Environmental factors, globalization, and colonization will be evaluated for the roles they have played. Consideration is also given to how dying languages can be maintained or "awakened" (revitalized).
Also offered for undergraduate-level credit as Ling 417 and may be taken only once for credit.

Ling 518 - Linguistic Morphology (4)
The study of words and word structure. Focuses on analyzing word formation across languages. Examines the relationship between morphology, syntax and phonology, the theoretical assumptions that underlie morphological analysis, and some applications of morphological analysis.
Also offered for undergraduate-level credit as Ling 418 and may be taken only once for credit.
Prerequisite: (Ling 513 and Ling 521) or Ling 390.

Ling 519 - Language Typology (4)
Studies and classifies languages according to their structural features. Introduces (structural) linguistics and studies structures across languages. Prepares students for more theoretical and analytical courses in the department.
Also offered for undergraduate-level credit as Ling 419 and may be taken only once for credit.
Prerequisite: Ling 513 or Ling 521 or Ling 390.

Ling 520 - Historical and Comparative Linguistics (4)
Study of language relationships and language change. Topics include the genetic classification of languages, language and prehistory, methods of historical reconstruction, and language contact.
Also offered for undergraduate-level credit as Ling 420 and may be taken only once for credit.
Prerequisite: Ling 390 or Ling 513 or Ling 521.
Ling 521 - Applied English Grammar (4)

Offers graduate students a foundation in grammar terminology and skills for conducting and writing up analyses of language data to be applied in both research and teaching. The course examines patterns of language use across different registers of English and how other languages differ from English in encoding similar information. It also builds awareness of world varieties of English. Students will also become familiar with commonly used databases for conducting language research.

Ling 531 - Language, Identity, and Culture (4)

Provides a systematic overview of theories and practices concerning the relationship of language, culture, and identity (personal and cultural). It will address common misconceptions about language and culture, and promote an understanding of the affective nature of language. Students will develop skills in analyzing information and data about culture and language, including variation in language use and thematic analysis of interview data. This course will focus on adult educational settings, domestic and global.

Also offered for undergraduate-level credit as Ling 431 and may be taken only once for credit.

Ling 532 - Sociolinguistics (4)

Examines the role of language in society and how social factors can influence language. The social issues around language including language policy and language ideology. Expected preparation: Ling 521 or Ling 513.

Also offered for undergraduate-level credit as Ling 432 and may be taken only once for credit.

Ling 533 - Psycholinguistics (4)

A survey of psycholinguistics and the psychology of language, focusing on the general question of the relation between human language and human beings.

Also offered for undergraduate-level credit as Ling 433 and may be taken only once for credit.

Prerequisite: Ling 390.

Ling 535 - Theories and Practice in Applied Linguistics (4)

An examination of current areas of applied linguistics research focusing on original research and building upon concepts presented in Ling 390 and Ling 391. Expected preparation: Ling 513 or Ling 521 or Ling 531.

Also offered for undergraduate-level credit as Ling 435 and may be taken only once for credit.

Ling 537 - First Language Acquisition (4)

Introduction to main aspects of first language acquisition in childhood, from infancy to the early school years. Examines comprehension and production of the structural and social aspects of language. Includes discussion of language acquisition theories from linguistic, psycholinguistic and sociolinguistic perspectives. Research project based on collection and analysis of child language data required.

Also offered for undergraduate-level credit as Ling 437 and may be taken only once for credit.

Prerequisite: Ling 513.

Ling 538 - Second Language Acquisition (4)

Introduction to main aspects of second language acquisition from sociolinguistic and psycholinguistic perspectives. Examines comprehension and production, stages in acquisition, cognitive processes, linguistic environment, individual variables, relationship between first and second language. Research project based on collection and analysis of language-learner language. Expected preparation: Ling 521 or 517.

Also offered for undergraduate-level credit as Ling 438 and may be taken only once for credit.

Prerequisite: Ling 521 or Ling 513.

Ling 539 - Language Assessment (4)

Theoretical background and practical considerations in the conduct of language assessment. Students will explore traditional, quantitative methods as well as alternative, qualitative methods for systematically gathering information to inform decisions about individual language ability.

Also offered for undergraduate-level credit as Ling 439 and may be taken only once for credit.

Prerequisite: Ling 577.

Ling 545 - Linguistics and Cognitive Science (4)

Presents current developments in linguistic theory, and in psychological theories of perception, cognition, and information processing (with special focus on language processing). Examines the fusion of linguistic and psychological theories into the rapidly growing field of cognitive science.

Also offered for undergraduate-level credit as Ling 445 and may be taken only once for credit.

Prerequisite: Ling 521 or Ling 513 or background in Psychology.

Ling 559 - Introduction to Graduate Study in Applied Linguistics (2)

Serves as an introduction to graduate study in applied linguistics with an emphasis on critical reading,
writing, and research skills needed for success in the MA.

**Ling 560 - Research Design for Applied Linguistics (2)**

Presents the major designs for research in applied linguistics. Introduces basic quantitative and qualitative methodological concepts. Provides a basis to critically read research literature in TESOL and applied linguistics. Students write a preliminary review of the literature and research question(s) for their M.A. thesis proposal.

Prerequisite: admission to the M.A. TESOL program and at least 16 credits in applied linguistics.

**Ling 561 - Research Methodology for Applied Linguistics (2)**

Second course in a two-course sequence required for M.A. TESOL students, focusing on data collection and analysis. Builds upon introduction to methods in Ling 560. Students work with data, using both quantitative and qualitative techniques. Students write a preliminary draft of the methods section for their M.A. thesis proposal.

Prerequisite: Ling 560 (no concurrent enrollment allowed).

**Ling 565 - Research in Language Teaching and Applied Linguistics (4)**

Introduces students to the basics of reading and writing about research in TESOL. It will develop the metalanguage necessary for discussing and critically evaluating research articles, skills for synthesizing research articles, and identifying and evaluating research methodologies. Students will also practice skills for proactively searching out information to better understand research so they can continue to be critical consumers of research as they enter the teaching profession.

Prerequisite: Graduate standing and 12 credits of Applied Linguistics at the 500-level including Ling 521.

**Ling 566 - Culminating Workshop for TESOL and Applied Linguistics (4)**

Workshop for students in the MA TESOL program. As part of this course, students will develop a portfolio that contains revised work from previous courses (both language analysis and pedagogical), prepare a short public presentation, develop job application materials, and synthesize and reflect on what they have learned in the program.

Prerequisite: Graduate-standing and completion of at least 36 credits in the MA TESOL program.

**Ling 570 - Grammar for TESOL (4)**

A study of how to teach difficult grammatical structures in English, how to resolve problems and questions that frequently arise in the ESL classroom, and how to adapt and supplement ESL grammar tests.

Also offered for undergraduate-level credit as Ling 470 and may be taken only once for credit.

Prerequisite: Ling 392 or Ling 521 or consent of instructor.

**Ling 571 - Understanding the International Experience (4)**

Examination of communication-based dimensions of an international or intercultural experience, including teaching English to speakers of other languages. Development of strategies and activities required to meet the challenges of teaching, working, or doing research in an international/intercultural setting. All linguistics students must register for Ling 471/Ling 571, however, this is the same course as Intl 471 and BST 471.

Also offered for undergraduate-level credit as Ling 471 and this course may be taken only once for credit.

**Ling 572 - Teaching Pronunciation (4)**

This is a practical, hands-on course in which students apply phonetics and phonology in the context of language education. While the focus is on teaching English pronunciation, the course includes general theory and applications that are useful for students planning to teach pronunciation of other languages (e.g., Spanish, Chinese).

Also offered for undergraduate-level credit as Ling 472 and may be taken only once for credit.

Prerequisite: Ling 390 or Ling 513 or consent of instructor.

**Ling 573 - Computer Assisted Language Learning (4)**

Introduction to the use of computers in language learning. Examines the research of the field to inform practical considerations for task design and evaluation.

Also offered for undergraduate-level credit as Ling 473 and may be taken only once for credit.

Prerequisite: Ling 477/577.

**Ling 575 - Curriculum Design and Materials Development in TESOL (4)**

Principles of curriculum design and instructional materials development in teaching English to speakers of other languages. Students work in teams to assess needs, design syllabus, develop lessons and materials, plan evaluation for English language learning.
program. Covers structural, notional and communicative, task-based, and content based syllabus. Recommended: Ling 478 or teaching experience.

Also offered for undergraduate-level credit as Ling 475 and may be taken only once for credit. Prerequisite: Ling 390; Ling 477 or instructor's approval.

**Ling 576 - Corpus Linguistics (4)**
Introduction to the methods of corpus linguistics, a type of computer-assisted linguistic analysis, as used in applied linguistics and TESOL. Includes weekly computer lab sessions conducting corpus linguistics work. Expected preparation is Ling 392 or Ling 521.

Also offered for undergraduate-level credit as Ling 476 and may be taken only once for credit.

**Ling 577 - TESOL Methods I (4)**
The first in a two-course sequence on classroom teaching focused on theoretical and practical perspectives on classroom teaching and learning. Ling 577 and Ling 578 must be taken in sequence.

Also offered for undergraduate-level credit as Ling 477 and may be taken only once for credit.

**Ling 578 - TESOL Methods II (4)**
The second in a two-course sequence on classroom teaching. TESOL Methods II uses classroom observation and practice teaching as a basis to study theoretical and practical perspectives on classroom teaching and learning. Significant out-of-class time for group work, classroom observation and practice teaching is required. After Completing TESOL Methods II, students will have completed many of the hours and assignments needed for their portfolio.

Also offered for undergraduate-level credit as Ling 478 and may be taken only once for credit.

**Ling 580 - Bilingualism (4)**
Survey of issues involved with bilingualism throughout the world. Explores the linguistic, sociolinguistic, and psycholinguistic aspects of simultaneous and subsequent acquisition of one or more languages. Includes perspectives of individual and societal bilingualism, and examines issues involved with bilingual language use, language processing, education, language planning, and language and identity. Expected preparation is Ling 513 or Ling 521.

Also offered for undergraduate-level credit as Ling 480 and may be taken only once for credit.

**Ling 581 - World Englishes (4)**
Explores the role of English as a world language. Using film, audio tapes, and English language newspapers from around the world, students will become familiar with such Englishes as Malaysian English, Indian English, Nigerian English, and Filipino English.

Also offered for undergraduate-level credit as Ling 481 and may be taken only once for credit. Prerequisite: Ling 232 or Ling 390 or Ling 513 or Ling 521.

**Ling 582 - Pidgins and Creoles (4)**
Introduces students to the language varieties arising in contact situations. Concentration on African and New World creoles (and African American Vernacular English). Considers the formation of pidgins and creoles in terms of both first and second language acquisition. Looks at the social factors involved in their creation.

Also offered for undergraduate-level credit as Ling 482 and may be taken only once for credit. Prerequisite: Ling 390 or Ling 513 or Ling 521.

**Ling 590 - History of the English Language (4)**
A survey in which the development of English phonology, morphology, vocabulary, and syntax is studied through the application of modern linguistic criteria and methodology. Expected preparation is Ling 521 or Ling 392.

Also offered for undergraduate-level credit as Ling 490 and may be taken only once for credit. Prerequisite: Ling 513 or Ling 390.

**ME - Mechanical Engineering**

**ME 120 - An Introduction to Engineering (3)**
An introduction to the skills, modern tools, teamwork, design methodology and professional practices of mechanical engineers. Students learn to analyze, fabricate and troubleshoot electromechanical systems. Students are introduced to computer programming and solid modeling. Written and oral communication is required complete assignments and class projects.

Prerequisite: Mth 251 (concurrent enrollment allowed) or Mth 252.

**ME 121 - Introduction to Systems and Control (3)**
An introduction to sensors and control of electromechanical systems. Students assemble an electromechanical system and program a microcontroller to sense the system state and maintain system equilibrium. Students build on the skills developed in ME 120. Written and oral
communication is required to complete assignments and class projects.

Prerequisite: ME 120 with a grade of C or better.

**ME 122 - Introduction to Design (3)**

An introduction to statics, dynamics, mechanical systems and the design process. Students learn to incorporate economic, social and environmental factors in the design of mechanical devices. Written and oral communication is required to complete assignments and a major class project.

Prerequisite: ME 121 with a grade of C or better.

**ME 199 - Special Studies (1-3)**

(Credit to be arranged.) Consent of instructor.

**ME 213 - Properties of Materials (4)**

Basic properties, behavior, and survey of engineering and industrial applications of metals, polymers, ceramics, and composites.

Prerequisite: Ch 221. Lecture and laboratory.

Corequisite: ME 213L.

**ME 213L - Properties of Materials Lab (0)**

Lab for Properties of Materials.

Corequisite: ME 213.

**ME 240 - Survey of Manufacturing Processes (2)**

Survey of manufacturing processes, including casting, forming, machining, joining, and nontraditional processes. Emphasis on process capabilities and limitations and design for manufacturability. Also includes topics in product design, material selection, and process planning.

Prerequisite: ME 213.

Corequisite: ME 240L.

**ME 240L - Survey of Manufacturing Processes Lab (0)**

Lab for ME 240.

Corequisite: ME 240.

**ME 250 - Geometric Modeling (2)**

Geometric modeling of parts and assemblies using a commercial solid modeling system. Topics include principles of parametric geometry construction and modeling for design intent. Course covers part/assembly constructions for machine design including creation of drawings and dimensioning techniques. Other topics include sheetmetal parts modeling, standard library parts, and presentation methods.

Corequisite: ME 250L.

**ME 250L - Lab for ME 250 (0)**

Lab for ME 250.

Corequisite: ME 250.

**ME 299 - Special Studies (1-4)**

(Credit to be arranged.) Consent of instructor.

**ME 304U - Energy and Society (4)**

Study of the energy problem: a complex societal problem which has a major technical component. Designed to help nonscience majors understand the technical side of the energy problem as well as the multidisciplinary effects of technical decisions on the social, political, and economic framework. Examination of energy requirements and usage, energy resources, methods for producing energy, environmental and economic implications of energy production, energy conservation, and energy policies. Power production techniques utilizing coal, nuclear, solar, wind, geothermal, and other energy sources will be studied.

Prerequisite: upper-division standing.

**ME 313 - Analysis of Mechanical Components (4)**

Stress and deflection analysis of structural components including review of stress and strain; curved beams; pressure vessels, impact loading, stability, and energy methods. Failure theory of mechanical components under static and fatigue loads will also be discussed.

Prerequisite: ME 213 (concurrent enrollment allowed), EAS 215, Mth 261.

**ME 314 - Analysis and Design of Machine Elements (4)**

Analysis and design of machine elements and systems, covering failure theories, fatigue, fasteners, welds, gears, springs, bearings, introduction to stochastic design. Topics will be synthesized in a design project.

Prerequisite: ME 313.

**ME 320 - Fluid Mechanics (4)**

Properties of fluids; hydrostatics; fluid dynamics, Bernoulli’s Equation; conservation of mass, energy, and momentum; differential analysis; and dimensional analysis. Lecture and laboratory. Corequisite: ME 320L.

Prerequisite: EAS 215, Mth 256.

Corequisite: ME 320L.

**ME 320L - Fluid Mechanics Lab (0)**

Lab for ME 320 Fluid Mechanics.
Corequisite: ME 320.

**ME 321 - Engineering Thermodynamics I (4)**
Study of energy sources and utilization; First and Second Laws of thermodynamics; closed and control volume systems; thermodynamic processes and cycles; thermodynamic properties; heat power systems;
Prerequisite: Ph 223, Mth 252.

**ME 322 - Applied Fluid Mechanics and Thermodynamics (4)**
Internal flow, external flow, and compressible flow. Lift and drag. Turbomachinery, combustion, and psychrometry.
Prerequisite: ME 320, ME 321.

**ME 323 - Heat Transfer (4)**
Fundamentals of engineering heat transfer with design applications; steady-state and transient analysis of conduction in one and two dimensions; concepts of convection, forced convection, internal and external flows, natural convection, and heat exchanger design; study of radiation concepts and radiation exchange between surfaces.
Prerequisite: Mth 256, Mth 261, ME 320, ME 321.

**ME 350 - Programming and Numerical Methods (2)**
Introduction to programming. Topics include: MATLAB programming; variables, arrays, logical expressions, and loops; structured programming with m-files, input and output control; introduction to engineering applications of numerical computing.
Prerequisite: EAS 101 or ME 121, Mth 261.

**ME 351 - Vibrations and System Dynamics (4)**
An introduction to vibrations and system dynamics for single and multiple degree-of-freedom linear systems. The course includes: free and forced vibrations; resonance; modeling of mechanical and electrical systems; Laplace transformations; and dynamic system response in the time and frequency domains. Computer analysis and solution techniques will be utilized.
Prerequisite: EAS 215, Mth 256, Mth 261, ECE 241, ME 350.

**ME 370 - Mechanical Engineering Profession (2)**
Presentation of a variety of specialties and career options for the graduates of the BSME program. Includes exposure to topics related to effective and responsible practice of mechanical engineering. Topics include: engineering ethics, intellectual property, business norms and practices, life-long learning, the relationship of engineering to society, and an awareness of contemporary local and global issues. Expected preparation: junior standing.

**ME 399 - Special Studies (1-8)**
(Credit to be arranged.)

**ME 401 - Research (1-6)**
(Credit to be arranged.) Consent of instructor.

**ME 402 - Independent Study (1-12)**
(Credit to be arranged.)

**ME 403 - Honors Thesis (1-4)**
(Credit to be arranged.) Consent of instructor.

**ME 404 - Cooperative Education/Internship (1-12)**
(Credit to be arranged.) Consent of instructor.

**ME 405 - Reading and Conference (1-6)**
(Credit to be arranged.) Consent of instructor.

**ME 406 - Special Projects (1-6)**
(Credit to be arranged.) Consent of instructor.

**ME 407 - Seminar (1-6)**
(Credit to be arranged.) Consent of instructor.

**ME 410 - Selected Topics (1-6)**
(Credit to be arranged.) Consent of instructor.

**ME 411 - Engineering Measurement and Instrumentation Systems (4)**
Principles and applications of measurement methods and instrumentation techniques, as used in various engineering disciplines, are studied. Examination of
general measurement concepts and instrumentation characteristics. Specific devices for measuring such parameters as displacement, force, strain, pressure, flow, temperature, motion, time, and frequency are discussed. Testing and verification of theory, design, and laboratory evaluation of mechanical components and systems are also made. Lecture and laboratory.

Also offered for graduate-level credit as ME 511 and may be taken only once for credit. Prerequisite: ECE 221, senior standing in engineering. Corequisite: ME 411L.

ME 411L - Engineering Measurement and Instrumentation Systems Lab (0)
Corequisite: ME 411.

ME 413 - Engineering Material Science (4)
Study of materials with emphasis on solids; effect of microstructure and macrostructure on properties; equilibrium and non-equilibrium multiphase systems; effects of mechanical and thermal stresses, electromagnetic fields, irradiation, and chemical environments, surface and related phenomena; examples from metallic, ceramic, polymeric, and composite materials.

Also offered for graduate-level credit as ME 513 and may be taken only once for credit. Prerequisite: ME 213.

ME 415 - Advanced Topics in Energy Conversion (4)
Topics chosen for relevancy to current technological practice concerned with energy conversion. Examples include cogeneration, combined cycles, gas power plants in the Northwest, wood waste utilization, advanced engine design and combustion systems, and energy conversion systems pollution control. Each offering of this course will focus on a different single selected topic.

Also offered for graduate-level credit as ME 515.

ME 420 - Thermal Systems Design (4)

Also offered for graduate-level credit as ME 520 and may be taken only once for credit. Prerequisite: ME 320, ME 323.

ME 421 - Heating, Ventilating, and Air Conditioning Design Fundamentals (4)
Fundamental principles and methods of controlling living space environments; design of heating, ventilating, air conditioning, and refrigeration systems for residential, commercial, and industrial purposes. Topics include: moist air properties (psychrometrics), air conditioning processes, indoor air quality (comfort and health), heat transmission in building structures, solar radiation, space heating and cooling load analysis, energy calculations, and air conditioning systems and equipment.

Also offered for graduate-level credit as ME 521 and may be taken only once for credit. Prerequisite: ME 323.

ME 422 - Building Energy Use Modeling (4)
Analysis of annual energy use of residential and commercial buildings. Emphasis on computer simulation techniques for analysis of building energy use and study of energy-efficient building design. Topics include: heat loss and gain in buildings, heating and cooling load calculations, energy use analysis, daylighting in commercial buildings, energy efficiency, green building technologies, and modeling for energy code compliance. Project in design/simulation.

Also offered for graduate-level credit as ME 522 and may be taken only once for credit.

ME 423 - Fundamentals of Building Science (4)
Introduction to the fundamental concepts of building science. Buildings as a system, including interactions among subsystems such as heating and cooling, ventilation, the thermal envelope, air leakage, and occupants. Building energy efficiency. Performance of heating, cooling, and ventilating systems. Indoor air quality and other health and safety issues, including assessing and resolving moisture problems. Applications of common and cutting-edge building science measurement and monitoring tools. The class will include one lecture and one lab session each week. Some/all of the lecture portion of the course may be delivered online through course-management software. Group projects may involve laboratory measurement, field monitoring, and/or computer simulation.

Also offered for graduate-level credit as ME 523 and may be taken only once for credit. Prerequisite: ME 323 or graduate standing in engineering or architecture.

ME 424 - HVAC System Design and Controls (4)
Design of HVAC equipment, integration of systems, and design of controls for buildings. Application of HVAC fundamentals. Subjects include building,
block and zone load estimates; air/hydronic systems
design; refrigeration; air handling units; cooling and
heating plants; basic control concepts; sensors and
actuators; pneumatic, electronic, and digital controls;
HVAC subsystem and controls; complete HVAC
systems and controls.

Also offered for graduate-level credit as ME 524 and
may be taken only once for credit. Prerequisite: ME
421/521 and ME 351.

ME 425 - Advanced Topics in Building Science (4)
Indoor environmental quality and sustainable built
environments. Material balance principles applied to
fate and transport of pollutants in urban and indoor
environments; approaches for quantifying and
characterizing sources, transport, transformation, and
control of indoor air pollutants; energy conservation
and indoor air pollution; quantifying human
exposures to air pollutants. Course includes assembly
of building science sensors on Arduino platform,
calibration, and collection and analysis of primary
data. Familiarity with differential equations and
intro-level chemistry and fluid mechanics is
recommended.

Also offered for graduate-level credit as ME 525 and
may be taken only once for credit.

ME 426 - Solar Engineering (4)
Overview of solar energy and its applications. Solar
resources, solar economics, collector technology,
solar thermal systems, power generation, industrial
applications, thermal storage, photovoltaics, and
design of systems for effective utilization of solar
energy.

Also offered for graduate-level credit as ME 526 and
may be taken only once for credit.

ME 427 - Phase Transformations and Kinetics in
Materials (4)
Designed to facilitate understanding of the
thermodynamic forces driving material phase
transformations and the role that strain energy and
interfacial energy play in producing or modifying
these forces. Also explores microstructure, a
fundamental topic of study for students in material
and mechanical engineering fields.

Also offered for graduate-level credit as ME 527 and
may be taken only once for credit.

ME 428 - Scanning Electron Microscopy for
Materials and Device Characterization (4)
The study of the design concepts and applications of
scanning electron microscopy (SEM) and
spectroscopy. Topics include electron optical
principles, specimen preparation, and SEM imaging
and interpretation. The spectroscopy of microanalysis
covers qualitative and quantitative chemical analysis
of materials. The lectures and lab sessions are
integrated to enhance students’ learning experience.

Also offered for graduate-level credit as ME 528 and
may be taken only once for credit. Prerequisite: One
year of general engineering or physics or instructor
approval. Corequisite: ME 428L.

ME 428L - Scanning Electron Microscopy for
Materials and Device Characterization Lab (0)
Lab for ME 428.

Corequisite: ME 428.

ME 429 - Transmission Electron Microscopy and
Chemical Analysis of Materials (4)
Introduction to the theoretical concepts and practical
applications of transmission electron microscopy
(TEM) and spectroscopy for materials
characterization. The chemical analysis techniques
include energy dispersive X-ray spectroscopy and
electron energy loss spectroscopy. The lab provides
hands-on experiences for students to operate the
state-of-the-art TEM and the attached analytical
accessories.

Also offered for graduate-level credit as ME 529 and
may be taken only once for credit. Prerequisite: One
year of general engineering or physics. Corequisite:
ME 429L.

ME 429L - Transmission Electron Microscopy
and Chemical Analysis of Materials Lab (0)
Corequisite: ME 429.

ME 437 - Mechanical Systems Design (4)
Objective of this course is to integrate various
analysis methods in the context of design projects
with realistic constraints. Emphasis is on defining
problems, identifying solution methods, and
synthesizing solutions while considering production
and economic factors. Teamwork, communication
skills, and ability to learn independently is highly
emphasized.

Also offered for graduate-level credit as ME 537 and
may be taken only once for credit. Prerequisite: ME
240, ME 351, ME 314.

ME 438 - Fundamentals of MEMS and
Microsystems (4)
The underlying principles of physics, mechanics and
materials science as they apply to MEMS will be
covered and coupled closely with the basic and
applied aspects of microsystems engineering. Case
studies involving the design, operation, fabrication
and packaging of MEMS devices will be presented throughout the class.

Also offered for graduate-level credit as ME 538 and may be taken only once for credit. Prerequisite: senior or graduate standing.

**ME 443 - Advanced Engineering Thermodynamics (4)**

Thermodynamics of physical and chemical systems with engineering applications; basic thermodynamic relationships; advanced techniques for their use; systems of variable composition; heat effects for reacting systems; equations of state, phase, and chemical equilibria for ideal and nonideal systems. To include one or more of several special topics: chemical kinetics; reactor analysis fundamentals; second law analysis of thermodynamic systems; introduction to statistical thermodynamics; advanced energy conversion systems.

Also offered for graduate-level credit as ME 543 and may be taken only once for credit. Prerequisite: ME 321.

**ME 445 - Advanced Topics in Thermal and Fluid Sciences (4)**

Course topics are chosen for relevancy to current technological practice concerned with thermal and fluid sciences. Each offering of this course focuses on a specific area and is not a survey. Examples include thermal management of electronic equipment and theoretical fluid mechanics.

Also offered for graduate-level credit as ME 545 and may be taken only once for credit. Prerequisite: ME 322 and ME 323.

**ME 446 - Compressible Flow (4)**

Prerequisite: ME 322, EAS 361.

**ME 447 - Transfer and Rate Processes (4)**

An advanced treatment of heat, mass, and momentum transfer. Development of the conservation laws, transport laws, transport properties, and basic analytic solutions. Applications to heat transfer equipment, catalytic reactors, drying processes.

Also offered for graduate-level credit as ME 547 and may be taken only once for credit. Prerequisite: ME 323, ME 320, senior or graduate standing.

**ME 448 - Applied Computational Fluid Dynamics (4)**

Computational fluid dynamics (CFD) is presented as a design tool for analyzing flow and heat transfer. Algorithms implemented in commercial CFD packages are reviewed. Training in use of a commercial code is provided. Case studies reinforce fundamental understanding of flow and heat transfer, and highlight the implementation-specific aspects of commercial codes. An independent project is required.

Also offered for graduate-level credit as ME 548 and may be taken only once for credit. Prerequisite: ME 322 and ME 323.

**ME 449 - Thermal Management Measurement (4)**

Provides a survey of laboratory-based techniques used to diagnose electronic cooling problems, and to obtain design data for developing thermal management solutions. Provides significant practical experience: students design and build their own experiments; they take and analyze their own data. Measurements are made with handheld instruments, bench-top instruments, and with computer controlled data acquisition systems. Data reduction techniques involving centering (removal of bias error) and uncertainty analysis are used extensively. Lecture and laboratory.

Also offered for graduate-level credit as ME 549 and may be taken only once for credit. Prerequisite: ME 323, 411.

**ME 450 - Solid Modeling (4)**

Emphasis is on solid model construction methods using state-of-the-art solid modeling software. Topics include use of parametric geometry, construction and modification of solids, building and animating assemblies, working in groups, building sheet metal parts, drafting, and the presentation of the fundamentals of solids modeling including representation and manipulation of wireframes, surfaces, and solids. Lecture and laboratory.

Also offered for graduate-level credit as ME 550 and may be taken only once for credit. Prerequisite: senior or graduate standing in engineering or a closely related field. Corequisite: ME 450L.

**ME 450L - Lab for ME 450 (0)**

Lab for ME 450. Corequisite: ME 450.

**ME 452 - Control Engineering I (4)**

Introductory controls class offered to upper-division mechanical engineering undergraduates and graduate students. Includes classical theory as applied to linear
systems with topics: mathematical modeling of control systems; transfer functions and block diagrams; transient response; stability; root-locus method; frequency response method; and control system design techniques. Computer analysis and solution techniques will be utilized.

Also offered for graduate-level credit as ME 552 and may be taken only once for credit. Prerequisite: upper-division ME undergraduate or graduate student; Mth 256; ECE 221; ME 351.

**ME 453 - Control Engineering II (4)**

Continuous control system design and applications using transfer function and state variable approaches. Introduction to digital control system design, including: transfer function and state space formulation, and time and frequency domain analysis techniques. Computer analysis and solution techniques will be utilized.

Also offered for graduate-level credit as ME 553 and may be taken only once for credit. Prerequisite: ME 452/552.

**ME 454 - Controls Engineering Laboratory (4)**

Design, construction and implementation of continuous controllers using analog devices. Experimental identification of the dynamic properties of mechanical systems. Digital controllers introduced, implemented and compared with the corresponding continuous controllers. Expected preparation: ME 453/553.

Also offered for graduate-level credit as ME 554 and may be taken only once for credit. Prerequisite: ME 452/552.

**ME 455 - Finite Element Modeling and Analysis (4)**

The finite element method as related to the solution of mechanical design problems including thermal stress analysis. Various element formulations will be discussed, and existing commercial codes will be used to demonstrate modeling and analysis techniques.

Also offered for graduate-level credit as ME 555 and may be taken only once for credit. Prerequisite: ME 455: ME 314; for ME 555: graduate standing in engineering.

**ME 456 - Mechatronics (4)**

Students will gain an understanding of mechatronic (mechanical-electrical) systems and apply this knowledge directly in hands-on lab experiments. They will build circuits, collect sensor data, use a microcontroller, and control a motor. The format of the course will be one lecture and one lab per week.

Also offered for graduate-level credit as ME 556 and may be taken only once for credit. Prerequisite: ME 351.

**ME 457 - Introduction to Robotics (4)**

Robot kinematics dynamics and control; basic components of robots: controllers, power supplies and end effectors; industrial applications of robots using peripheral devices, sensors, and vision.

Also offered for graduate-level credit as ME 557 and may be taken only once for credit. Prerequisite: ME 351.

**ME 458 - Principles Of CNC Machining (4)**

A study of principles of machining, tool path generation and analytic geometry, part design and programming, integration of CAD/CAM software, structure and control of CNC machines, and introduction to computer-integrated manufacturing. Lecture and laboratory.

Also offered for graduate-level credit as ME 558 and may be taken only once for credit. Prerequisite: ME 241 and senior standing in mechanical engineering.

**ME 460 - Control of Mechanical Systems using Microcontrollers Laboratory (4)**

Basic interfacing and programming of microcontrollers for controls applications is introduced. Microcontrollers are interfaced with various external devices and sensors using A/D, D/A, and the SPI bus. Control of a motor driven mechanical device is implemented. A student selected final project involving the control of a physical system is required.

Also offered for graduate-level credit as ME 560 and may be taken only once for credit. Prerequisite: ME 453/553 and ME 454/554 (concurrent enrollment with ME 460/560 allowed).

**ME 461 - Buildings and health: Indoor air quality (4)**

We spend 90% of our time inside buildings and much of our exposure to air pollution occurs indoors. Students develop mass-balance models of pollutant fate, transport, and transformation for indoor spaces including parameterizing indoor sources (emissions), indoor-outdoor transport (ventilation), transformation (removal and chemical reactions), and control strategies for indoor air pollutants. Students solve developed models with analytical and numerical methods. Students use mass-balance models to inform assessment of human exposure to air pollution and infectious disease transmission.

Also offered for graduate-level credit as ME 561 and may be taken only once for credit. Prerequisite: ME 320 or equivalent.
ME 463 - Advanced Topics in Control Engineering (4)
Mathematical foundations and applications of various advanced topics in control engineering for both continuous- and discrete-time systems.
Also offered for graduate-level credit as ME 563 and may be taken only once for credit. Prerequisite: ME 453/553.

ME 465 - Advanced Finite Element Applications (4)
This course builds on the knowledge of introductory finite element modeling and analysis course to provide students with advanced working knowledge to tackle real world problems. Advanced element types such as Plate and Shell as well as Gap and Contact will be discussed. Advanced modeling and analysis topics include nonlinearity in stress analysis (including geometric and material nonlinearity), Buckling, Gap/Contact analysis, forced vibration and frequency response, advanced thermal/structural interactions, and mixed element modeling.
Also offered for graduate-level credit as ME 565 and may be taken only once for credit. Prerequisite: ME 455 or equivalent.

ME 471 - Process Measurement and Control (4)
Introduction to process control hardware, software, and interfacing. Lecture topics include: number systems, hardware concepts, data movement, programming, and interfacing. Lab exercises involve the use of microcomputers interfaced and programmed for various control and data acquisition applications. Lecture and laboratory.
Also offered for graduate-level credit as ME 571 and may be taken only once for credit. Prerequisite: ME 411/511; ECE 201, ECE 221.

ME 474 - Rapid Prototyping, 3D Printing, and Additive Manufacturing (4)
Focus on rapid prototyping during an engineering design cycle to provide a comprehensive understanding of the methods, physical processes, resulting part attributes, and applications for the most common 3D printing technologies used by engineers. Both direct and indirect manufacturing processes are covered as well as some exposure to rapid manufacturing. Other topics include processing, part quality and metrology, 3D scanning, mesh manipulation and repair, and mechatronics review.
Also offered for graduate-level credit as 574 and may be taken only once for credit. Prerequisite: Upper-division standing.

ME 475 - Joining Processes and Design (4)
Course covers manual and robotic welding, brazing, and soldering processes as well as rapid and economical cutting methods. Welding design with steel, stainless steel, and aluminum to provide economy, strength, and crack resistance is emphasized. Heat flow calculations in welding; preheat and crack preventing calculations are used. Welding codes are covered. Prerequisite: ME 240.

ME 476 - Materials Failure Analysis (4)
Fundamental mechanisms related to failure of metal and alloys used in engineering structures. Mechanisms include: ductile and brittle fracture, fatigue, corrosion fatigue, wear, liquid erosion, stress corrosion, hydrogen-assisted cracking, elevated temperature failures, and many others. Analytical tools used to identify types of failures including: optical metallography, scanning electron microscopy, secondary ion mass spectroscopy, electron probe microanalysis, X-ray photoelectron spectroscopy, Auger electron spectroscopy, and others. Ductile, brittle, intergranular, cleavage, quasi-cleavage, and microvoid coalescence modes of fracture are discussed. Failures in weldments, brazed and soldered joints, castings, bearings, boilers, forgings, pipelines, bridge components, gears, springs, wear components, tools, and dies.
Also offered for graduate-level credit as ME 576 and may be taken only once for credit. Prerequisite: ME 314.

ME 477 - Introduction to Semiconductor Manufacturing (4)
Introduction to semiconductor manufacturing technologies and its engineering field. Technologies studied include silicon wafer manufacturing, thermal processes, photolithography, ion implantation, etch, dielectric thin films, metallization, chemical mechanical polishing, assembly, sorting, and testing. Topics cover industry overview, technology trends and common engineering practices. The topics chosen are aligned with real fabrication facilities and are suitable for engineering and science students who want to be process, manufacturing, or equipment engineers in the semiconductor industry.
Also offered for graduate-level credit as ME 577 and may be taken only once for credit. Prerequisite: Senior or graduate standing in engineering.

ME 478 - Introduction to Electronic Packaging (4)
This course provides a foundation on mechanical and materials aspects of electronic packaging as well as an understanding of the fundamental mechanical principles used in the design of electronic packages,
boards, sub-systems, and systems with focus on their integration. Topics include design, properties, materials, interconnections, assembly processes, performance of various packaging systems, thermal management, failure mechanisms and reliability.

Also offered for graduate-level credit as ME 578 and may be taken only once for credit. Prerequisite: ME 313 or equivalent.

**ME 481 - Mechanical Tolerancing (4)**

Presents the principles of dimensioning and tolerancing standards including syntax, meaning, verification methods, and relation to design requirements. Topics include statistical techniques for tolerance analysis, standards of surface roughness, limits and fits, and hardware and software products. A term project on a mechanical part product intended for manufacturing is required.

Also offered for graduate-level credit as ME 581 and may be taken only once for credit. Prerequisite: ME 240, ME 491 concurrently.

**ME 488 - Design of Experiments (4)**

Presents the methods of planning the data collection scheme in industrial experimentation. Topics to be covered are methods of statistical inference, randomization, blocking, empirical and mechanistic model building using factorial, fractional factorial designs, and least squares methods.

Prerequisite: Senior standing in mechanical engineering.

**ME 491 - Design Process (2)**

Design methodologies will be discussed as a framework for solving broadly defined technology problems. Interdisciplinary organizational principles will be presented as tools in the design process and as a foundation for the subsequent project course. Lectures, weekly and term case studies.

Prerequisite: ME 240, ME 314, ME 322, ME 351, WR 327.

**ME 492 - Conceptual Design Project (4)**

Application of design methodology to original projects performed by groups of 3 to 5 students under faculty and industrial adviser. Design process will encompass engineering analysis and broader factors such as group organization, interdisciplinary interaction, and communication. The problem definition to alternative selection phases will be emphasized. Lectures, group, and class presentations.

Prerequisite: ME 491.

**ME 493 - Detailed Design Project (4)**

Application of design methodology to original projects begun in ME 492. The alternative selection to implementation phases will be emphasized. Lectures, group and class presentations.

Prerequisite: ME 492.

**ME 501 - Research (1-9)**

(Credit to be arranged.) Consent of instructor.

**ME 502 - Independent Study (1-9)**

(Credit to be arranged.)

**ME 503 - Thesis (1-9)**

(Credit to be arranged.) Consent of instructor.

**ME 504 - Cooperative Education/Internship (1-9)**

(Credit to be arranged.) Consent of instructor.

**ME 505 - Reading and Conference (1-6)**

(Credit to be arranged.) Consent of instructor.

**ME 506 - Special Projects (1-9)**

(Credit to be arranged.) Consent of instructor.

**ME 507 - Seminar (1-6)**

(Credit to be arranged.) Consent of instructor.

**ME 510 - Selected Topics (1-6)**

(Credit to be arranged.) Consent of instructor.

**ME 510L - Special Topics Lab (0)**

Special topics lab. Please contact department for more information.

Corequisite: ME 510.

**ME 511 - Engineering Measurement and Instrumentation Systems (4)**

Principles and applications of measurement methods and instrumentation techniques, as used in various engineering disciplines, are studied. Examination of general measurement concepts and instrumentation characteristics. Specific devices for measuring such
parameters as displacement, force, strain, pressure, flow, temperature, motion, time, and frequency are discussed. Testing and verification of theory, design, and laboratory evaluation of mechanical components and systems are also made. Lecture and laboratory.

Also offered for undergraduate-level credit as ME 411 and may be taken only once for credit.

Prerequisite: senior standing in engineering.

Corequisite: ME 511L.

ME 511L - Engineering Measurement and Instrumentation Systems Lab (0)
Lab for Engineering Measurement and Instrumentation Systems.
Corequisite: ME 511.

ME 512 - Advanced Vibrations (4)
Vibration analysis of single and multiple degree of freedom systems. Topics include: (1) modeling of linear systems using matrix methods; (2) modal analysis; (3) general forcing and Fourier series methods; (4) random and self excited vibrations; (5) nonlinear vibrations.

Also offered as ME 612 and may be taken only once for credit.

ME 513 - Engineering Material Science (4)
Study of materials with emphasis on solids; effect of microstructure and macrostructure on properties; equilibrium and non-equilibrium multiphase systems; effects of mechanical and thermal stresses, electromagnetic fields, irradiation, and chemical environments, surface and related phenomena; examples from metallic, ceramic, polymeric, and composite materials.

Also offered for undergraduate-level credit as ME 413 and may be taken only once for credit.

ME 515 - Advanced Topics in Energy Conversion (4)
Topics chosen for relevancy to current technological practice concerned with energy conversion. Examples include cogeneration, combined cycles, gas power plants in the Northwest, wood waste utilization, advanced engine design and combustion systems, and energy conversion systems pollution control. Each offering of this course will focus on a different single selected topic.

Also offered for undergraduate-level credit as ME 415.

ME 519 - Development Engineering (4)
Reviews some of the origins of poverty and the current conditions of people in developing countries, and offers some engineering driven solutions being pursued around the world. The course hopes to empower students to play an active role in international poverty reduction.

ME 520 - Thermal Systems Design (4)

Also offered for undergraduate-level credit as ME 420 and may be taken only once for credit.

ME 521 - Heating, Ventilating, and Air Conditioning Design Fundamentals (4)
Fundamental principles and methods of controlling living space environments; design of heating, ventilating, air conditioning, and refrigeration systems for residential, commercial, and industrial purposes. Topics include: moist air properties (psychometrics), air conditioning processes, indoor air quality (comfort and health), heat transmission in building structures, solar radiation, space heating and cooling load analysis, energy calculations, and air conditioning systems and equipment.

Also offered for undergraduate-level credit as ME 421 and may be taken only once for credit.

ME 522 - Building Energy Use Modeling (4)
Analysis of annual energy use of residential and commercial buildings. Emphasis on computer simulation techniques for analysis of building energy use and study of energy-efficient building design. Topics include: heat loss and gain in buildings, heating and cooling load calculations, energy use analysis, daylighting in commercial buildings, energy efficiency, green building technologies, and modeling for energy code compliance. Project in design/simulation.

Also offered for undergraduate-level credit as ME 422 and may be taken only once for credit.

ME 523 - Fundamentals of Building Science (4)
Introduction to the fundamental concepts of building science. Buildings as a system, including interactions among subsystems such as heating and cooling, ventilation, the thermal envelope, air leakage, and occupants. Building energy efficiency. Performance of heating, cooling, and ventilating systems. Indoor air quality and other health and safety issues, including assessing and resolving moisture problems. Applications of common and cutting-edge building science measurement and monitoring tools. The class
will include one lecture and one lab session each week. Some/all of the lecture portion of the course may be delivered online through course-management software. Group projects may involve laboratory measurement, field monitoring, and/or computer simulation.

Also offered for undergraduate-level credit as ME 423 and may be taken only once for credit. Prerequisite: graduate standing in engineering or architecture.

**ME 524 - HVAC System Design and Controls (4)**
Design of HVAC equipment, integration of systems, and design of controls for buildings. Application of HVAC fundamentals. Subjects include: building, block and zone load estimates; air/hydronic systems design; refrigeration; air handling units; cooling and heating plants; basic control concepts; sensors and actuators; pneumatic, electronic, and digital controls; HVAC subsystems and controls; complete HVAC systems and controls.

Also offered for undergraduate-level credit as ME 424 and may be taken only once for credit. Prerequisite: ME 421/521 and ME 351.

**ME 525 - Advanced Topics in Building Science (4)**
Indoor environmental quality and sustainable built environments. Material balance principles applied to fate and transport of pollutants in urban and indoor environments; approaches for quantifying and characterizing sources, transport, transformation, and control of indoor air pollutants; energy conservation and indoor air pollution; quantifying human exposures to air pollutants. Course includes assembly of building science sensors on Arduino platform, calibration, and collection and analysis of primary data. Familiarity with differential equations and intro-level chemistry and fluid mechanics is recommended.

Also offered for undergraduate-level credit as ME 425 and may be taken only once for credit. Corequisite: ME 421/521 and ME 351.

**ME 526 - Solar Engineering (4)**
Overview of solar energy and its applications. Solar resources, solar economics, collector technology, solar thermal systems, power generation, industrial applications, thermal storage, photovoltaics, and design of systems for effective utilization of solar energy.

Also offered for undergraduate-level credit as ME 426 and may be taken only once for credit.

**ME 527 - Phase Transformations and Kinetics in Materials (4)**
Designed to facilitate understanding of the thermodynamic forces driving material phase transformations and the role that strain energy and interfacial energy play in producing or modifying these forces. Also explores microstructure, a fundamental topic of study for students in material and mechanical engineering fields.

Also offered for undergraduate-level credit as ME 427 and may be taken only once for credit. Prerequisite: Senior or graduate standing in Engineering.

**ME 528 - Scanning Electron Microscopy for Materials and Device Characterization (4)**
The study of the design concepts and applications of scanning electron microscopy (SEM) and spectroscopy. Topics include electron optical principles, specimen preparation, and SEM imaging and interpretation. The spectroscopy of microanalysis covers qualitative and quantitative chemical analysis of materials. The lectures and lab sessions are integrated to enhance students' learning experience.

Also offered for undergraduate-level credit as ME 428 and may be taken only once for credit. Corequisite: ME 528L.

**ME 528L - (0)**
Corequisite: ME 528.

**ME 529 - Transmission Electron Microscopy and Chemical Analysis of Materials (4)**
Introduction to the theoretical concepts and practical applications of transmission electron microscopy (TEM) and spectroscopy for materials characterization. The chemical analysis techniques include energy dispersive X-ray spectroscopy and electron energy loss spectroscopy. The lab provides hands-on experiences for students to operate the state-of-the-art TEM and the attached analytical accessories.

Also offered for undergraduate-level credit as ME 429 and may be taken only once for credit. Corequisite: ME 529L.

**ME 529L - (0)**
Corequisite: ME 529.

**ME 530 - Solid Mechanics (4)**
This course provides the knowledge of mechanics, physics, and mathematics that concerns the behavior of solids under external actions including external forces, applied displacements, temperature changes, moisture diffusion, etc. Topics include kinematics of deformation and motion, Lagrangian strain tensor, Cauchy stress tensor, elasticity and plasticity.
Also offered as ME 630 and may be taken only once for credit. Prerequisite: undergraduate mechanics and engineering mathematics; ME 313 or equivalent.

**ME 532 - Turbomachinery (4)**
Application of thermodynamics and fluid mechanics principles to the analysis and design of various types of turbomachinery, including pumps, fans, compressors, and turbines. An advanced unified treatment is presented. Theory, operation, performance, use, and selection of turbomachines are discussed.
Prerequisite: ME 322, 331.

**ME 537 - Mechanical Systems Design (4)**
Objective of this course is to integrate various analysis methods in the context of design projects with realistic constraints. Emphasis is on defining problems, identifying solution methods, and synthesizing solutions while considering production and economic factors. Teamwork, communication skills, and ability to learn independently is highly emphasized.
Also offered for undergraduate-level credit as ME 437 and may be taken only once for credit.

**ME 538 - Fundamentals of MEMS and Microsystems (4)**
The underlying principles of physics, mechanics and materials science as they apply to MEMS will be covered and coupled closely with the basic and applied aspects of microsystems engineering. Case studies involving the design, operation, fabrication and packaging of MEMS devices will be presented throughout the class.
Also offered for undergraduate-level credit as ME 438 and may be taken only once for credit. Prerequisite: senior or graduate standing.

**ME 541 - Advanced Fluid Mechanics (4)**
Partial differential equations governing the conservation of mass, momentum, and energy of Newtonian fluids are derived. Dimensional analysis is used to simplify the governing equations and in particular justify the assumption of incompressible flow. Exact solution of the Navier-Stokes equations are presented. Boundary layer approximations to the governing equations are derived, and both exact and integral solutions are obtained.
Also offered as ME 641 and may be taken only once for credit.

**ME 542 - Advanced Heat Transfer (4)**
Advanced treatment of the principles of conductive and convective heat transfer. Analytic and numerical solutions of heat conduction problems. Laminar and turbulent convective heat transfer.
Also offered as ME 642 and may be taken only once for credit.

**ME 543 - Advanced Engineering Thermodynamics (4)**
Thermodynamics of physical and chemical systems with engineering applications; basic thermodynamic relationships; advanced techniques for their use; systems of variable composition; heat effects for reacting systems; equations of state, phase, and chemical equilibria for ideal and nonideal systems. To include one or more of several special topics: chemical kinetics; reactor analysis fundamentals; second law analysis of thermodynamic systems; introduction to statistical thermodynamics; advanced energy conversion systems.
Also offered for undergraduate-level credit as ME 443 and may be taken only once for credit. Prerequisite: ME 321.

**ME 544 - Microgravity & Capillary Fluid Mechanics I (4)**
Liquid-gas flows behave significantly different in the near absence of gravity. Such flows are dominated by surface tension, i.e. capillary forces. The principles of capillary phenomena and applied capillary fluidics are reviewed from empirical, theoretical, and numerical perspectives: concepts of surface tension, wetting, and geometry. Simplified analyses are pursued to model spontaneous flows exploited in microfluidic engineering systems on earth and macrofluidic systems aboard spacecraft. Exposure to literature, lab demonstrations, numerics, and drop tower experimentation.
Also offered as ME 644 and may be taken only once for credit. Prerequisite: ME 541 (may be taken concurrently) and ME 551.

**ME 545 - Advanced Topics in Thermal and Fluid Sciences (4)**
Course topics are chosen for relevancy to current technological practice concerned with thermal and fluid sciences. Each offering of this course focuses on a specific area and is not a survey. Examples include thermal management of electronic equipment and theoretical fluid mechanics.
Also offered for undergraduate-level credit as ME 445 and may be taken only once for credit.

**ME 546 - Scaling and Asymptotic Analysis (4)**
Scaling and Asymptotic and/or perturbation methods for the systematic simplification of complex problems in engineering analysis are introduced. The techniques learned will find direct application in
system modeling, data reduction, and guidance of complex experimentation and/or testing and 3-D computer model benchmarking. Applied mathematical techniques focus on, but are not at all limited to, thermal-fluids sciences.

Also offered as ME 646. Prerequisite: ME 551.

**ME 547 - Transfer and Rate Processes (4)**

An advanced treatment of heat, mass, and momentum transfer. Development of the conservation laws, transport laws, transport properties, and basic analytic solutions. Applications to heat transfer equipment, catalytic reactors, drying processes.

Also offered for undergraduate-level credit as ME 447 and may be taken only once for credit. Prerequisite: graduate standing.

**ME 548 - Applied Computational Fluid Dynamics (4)**

Computational fluid dynamics (CFD) is presented as a design tool for analyzing flow and heat transfer. Algorithms implemented in commercial CFD packages are reviewed. Training in use of a commercial code is provided. Case studies reinforce fundamental understanding of flow and heat transfer, and highlight the implementation-specific aspects of commercial codes. An independent project is required.

Also offered for undergraduate-level credit as ME 448 and may be taken only once for credit. Prerequisite: ME 541/ME 641.

**ME 549 - Thermal Management Measurement (4)**

Provides a survey of laboratory-based techniques used to diagnose electronic cooling problems, and to obtain design data for developing thermal management solutions. Provides significant practical experience: students design and build their own experiments; they take and analyze their own data. Measurements are made with handheld instruments, bench-top instruments, and with computer controlled data acquisition systems. Data reduction techniques involving centering (removal of bias error) and uncertainty analysis are used extensively. Lecture and laboratory.

Also offered for undergraduate-level credit as ME 449 and may be taken only once for credit. Prerequisite: ME 323, ME 411.

**ME 550 - Solid Modeling (4)**

Emphasis is on solid model construction methods using state-of-the-art solid modeling software. Topics include use of parametric geometry, construction and modification of solids, building and animating assemblies, working in groups, building sheet metal parts, drafting, and the presentation of the fundamentals of solids modeling including representation and manipulation of wireframes, surfaces, and solids. Lecture and laboratory.

Also offered for undergraduate-level credit as ME 450 and may be taken only once for credit. Prerequisite: senior or graduate standing in engineering or a closely related field. Corequisite: ME 550L.

**ME 550L - Lab for ME 550 (0)**

Lab for ME 550.

Corequisite: ME 550.

**ME 551 - Engineering Analysis (4)**

Application of mathematical techniques to the solution of controls, dynamics, mechanical, and transport phenomena problems. Emphasis given to modeling, physical interpretation, and normalization. Topics include modeling, linear systems, partial differential equations, and complex variables.

Also offered as ME 651 and may be taken only once for credit. Prerequisite: graduate standing.

**ME 552 - Control Engineering I (4)**

Introductory controls class offered to upper-division mechanical engineering undergraduates and graduate students. Includes classical theory as applied to linear systems with topics: mathematical modeling of control systems; transfer functions and block diagrams; transient response; stability; root-locus method; frequency response method; and control system design techniques. Computer analysis and solution techniques will be utilized.

Also offered for undergraduate-level credit as ME 452 and may be taken only once for credit. Prerequisite: upper-division ME undergraduate or graduate student; Mth 256; ECE 221; ME 351.

**ME 553 - Control Engineering II (4)**

Continuous control system design and applications using transfer function and state variable approaches. Introduction to digital control system design, including: transfer function and state space formulation, and time and frequency domain analysis techniques. Computer analysis and solution techniques will be utilized.

Also offered for undergraduate-level credit as ME 453 and may be taken only once for credit. Prerequisite: ME 452/552.

**ME 554 - Controls Engineering Laboratory (4)**

Design, construction and implementation of continuous controllers using analog devices. Experimental identification of the dynamic properties of mechanical systems. Digital controllers
introduced, implemented and compared with the corresponding continuous controllers. Expected preparation: ME 453/553.

Also offered for undergraduate-level credit as ME 454 and may be taken only once for credit. Prerequisite: ME 452/552.

**ME 555 - Finite Element Modeling and Analysis** (4)
The finite element method as related to the solution of mechanical design problems including thermal stress analysis. Various element formulations will be discussed, and existing commercial codes will be used to demonstrate modeling and analysis techniques.

Also offered for undergraduate-level credit as ME 455 and may be taken only once for credit. Prerequisite: ME 555: graduate standing in engineering.

**ME 556 - Mechatronics** (4)
Students will gain an understanding of mechatronic (mechanical-electrical) systems and apply this knowledge directly in hands-on lab experiments. They will build circuits, collect sensor data, use a microcontroller, and control a motor. The format of the course will be one lecture and one lab per week.

Also offered for undergraduate-level credit as ME 456 and may be taken only once for credit.

**ME 557 - Introduction to Robotics** (4)
Robot kinematics dynamics and control; basic components of robots: controllers, power supplies and end effectors; industrial applications of robots using peripheral devices, sensors, and vision.

Also offered for undergraduate-level credit as ME 457 and may be taken only once for credit.

**ME 558 - Principles Of CNC Machining** (4)
A study of principles of machining, tool path generation and analytic geometry, part design and programming, integration of CAD/CAM software, structure and control of CNC machines, and introduction to computer-integrated-manufacturing. Lecture and laboratory.

Also offered for undergraduate-level credit as ME 458 and may be taken only once for credit.

**ME 560 - Control of Mechanical Systems using Microcontrollers Laboratory** (4)
Basic interfacing and programming of microcontrollers for controls applications is introduced. Microcontrollers are interfaced with various external devices and sensors using A/D, D/A, and the SPI bus. Control of a motor driven mechanical device is implemented. A student selected final project involving the control of a physical system is required.

Also offered for undergraduate-level credit as ME 460 and may be taken only once for credit. Prerequisite: ME 453/553 and ME 454/554 (concurrent enrollment with ME 460/560 allowed).

**ME 561 - Buildings and health: Indoor air quality** (4)
We spend 90% of our time inside buildings and much of our exposure to air pollution occurs indoors. Students develop mass-balance models of pollutant fate, transport, and transformation for indoor spaces including parameterizing indoor sources (emissions), indoor-outdoor transport (ventilation), transformation (removal and chemical reactions), and control strategies for indoor air pollutants. Students solve developed models with analytical and numerical methods. Students use mass-balance models to inform assessment of human exposure to air pollution and infectious disease transmission.

Also offered for undergraduate-level credit as ME 461 and may be taken only once for credit. Prerequisite: ME 320 or equivalent.

**ME 562 - Engineering Numerical Methods** (4)
Numerical methods applied to engineering problems. Coverage includes interpolation, integration, root solving, solution of boundary value and initial value problems, solution of linear systems. Programming will include Fortran or C, MATLAB and Maple.

Prerequisite: ME 352.

**ME 563 - Advanced Topics in Control Engineering** (4)
Mathematical foundations and applications of various advanced topics in control engineering for both continuous- and discrete-time systems.

Also offered for undergraduate-level credit as ME 463 and may be taken only once for credit. Prerequisite: ME 453/553.

**ME 564 - Microgravity & Capillary Fluid Mechanics II** (4)
Advanced principles of capillary phenomena and applied capillary fluidics are pursued by empirical, theoretical, and numerical methods. Novel/publishable research projects are undertaken as teams or as individuals that exploit the unique experimental contributions of a 'low-gravity' drop tower to produce large length scale phenomena rarely observed in a terrestrial-gravity environment. Special applications are made to engineering systems aboard spacecraft.
ME 565 - Advanced Finite Element Applications (4)

This course builds on the knowledge of introductory finite element modeling and analysis course to provide students with advanced working knowledge to tackle real world problems. Advanced element types such as Plate and Shell as well as Gap and Contact will be discussed. Advanced modeling and analysis topics include nonlinearity in stress analysis (including geometric and material nonlinearity), Buckling, Gap/Contact analysis, forced vibration and frequency response, advanced thermal/structural interactions, and mixed element modeling.

Also offered for undergraduate-level credit as ME 465 and may be taken only once for credit. Prerequisite: ME 555 or equivalent.

ME 571 - Process Measurement and Control (4)

Introduction to process control hardware, software, and interfacing. Lecture topics include: number systems, hardware concepts, data movement, programming, and interfacing. Lab exercises involve the use of microcomputers interfaced and programmed for various control and data acquisition applications. Lecture and laboratory.

Also offered for undergraduate-level credit as ME 471 and may be taken only once for credit. Prerequisite: ME 411/511; ECE 201, ECE 221.

ME 574 - Rapid Prototyping, 3D Printing, and Additive Manufacturing (4)

Focus on rapid prototyping during an engineering design cycle to provide a comprehensive understanding of the methods, physical processes, resulting part attributes, and applications for the most common 3D printing technologies used by engineers. Both direct and indirect manufacturing processes are covered as well as some exposure to rapid manufacturing. Other topics include processing, part quality and metrology, 3D scanning, mesh manipulation and repair, and mechatronics review.

Also offered for undergraduate-level credit as ME 474 and may be taken only once for credit.

ME 576 - Materials Failure Analysis (4)

Fundamental mechanisms related to failure of metal and alloys used in engineering structures. Mechanisms include: ductile and brittle fracture, fatigue, corrosion fatigue, wear, liquid erosion, stress corrosion, hydrogen-assisted cracking, elevated temperature failures, and many others. Analytical tools used to identify types of failures including: optical metalography, scanning electron microscopy, secondary ion mass spectroscopy, electron probe microanalysis, X-ray photoelectron spectroscopy, Auger electron spectroscopy, and others. Ductile, brittle, intergranular, cleavage, quasi-cleavage, and microvoid coalescence modes of fracture are discussed. Failures in weldments, brazed and soldered joints, castings, bearings, boilers, forgings, pipelines, bridge components, gears, springs, wear components, tools, and dies.

Also offered for undergraduate-level credit as ME 476 and may be taken only once for credit. Prerequisite: ME 314.

ME 577 - Introduction to Semiconductor Manufacturing (4)

Introduction to semiconductor manufacturing technologies and its engineering field. Technologies studied include silicon wafer manufacturing, thermal processes, photolithography, ion implantation, etch, dielectric thin films, metallization, chemical mechanical polishing, assembly, sorting, and testing. Topics cover industry overview, technology trends and common engineering practices. The topics chosen are aligned with real fabrication facilities and are suitable for engineering and science students who want to be process, manufacturing, or equipment engineers in the semiconductor industry.

Also offered for undergraduate-level credit as ME 477 and may be taken only once for credit.

ME 578 - Introduction to Electronic Packaging (4)

This course provides a foundation on mechanical and materials aspects of electronic packaging as well as an understanding of the fundamental mechanical principles used in the design of electronic packages, boards, sub-systems, and systems with focus on their integration. Topics include design, properties, materials, interconnections, assembly processes, performance of various packaging systems, thermal management, failure mechanisms and reliability.

Also offered for undergraduate-level credit as ME 478 and may be taken only once for credit.

ME 580 - Boundary Layers (4)

Presents boundary layers from a laminar and turbulent perspective. Derivation of the boundary layer equations of motion is carried out. Order of magnitude analysis and similarity solutions are discussed. Specific cases of these flows are considered.

Also offered as ME 680. Prerequisite: ME 541 or equivalent.
ME 581 - Mechanical Tolerancing (4)

Presents the principles of current dimensioning and tolerancing standards including their syntax, meaning, methods of verification, and their relation to design requirements. Statistical techniques for tolerance analysis and synthesis relevant to various assembly and fit requirements. Other topics include standards of surface roughness, limits and fits, and relevant hardware and software products. A term project on a mechanical part product intended for manufacturing is required.

Also offered for undergraduate-level credit as ME 481 and may be taken only once for credit.

Prerequisite: ME 241, ME 491 concurrently.

ME 588 - Design of Industrial Experiments (4)

Presents the statistical basis of industrial experimentation used in process and design improvement. Topics include model building, randomized and blocked designs, Latin squares, analysis of variance, factorial designs, fractional factorial designs, time series analysis, and evolutionary operations.

Prerequisite: Stat 451 CM.

ME 596 - Design Optimization (4)

Application of Numerical Optimization techniques to engineering design process. Mathematical theory of optimization and application problems in structural and machine component design will be discussed. The course involves computer-aided design optimization projects.

Prerequisite: graduate standing in engineering.

ME 601 - Research (1-9)

(Credit to be arranged.) Consent of instructor.

ME 603 - Dissertation (1-9)

(Credit to be arranged.) Consent of instructor.

ME 604 - Cooperative Education/Internship (1-9)

(Credit to be arranged.) Consent of instructor.

ME 605 - Reading and Conference (1-9)

(Credit to be arranged.) Consent of instructor.

ME 606 - Special Projects (1-9)

(Credit to be arranged.) Consent of instructor.

ME 607 - Seminar (1-9)

(Credit to be arranged.) Consent of instructor.

ME 610 - Selected Topics (1-9)

(Credit to be arranged.) Consent of instructor.

ME 612 - Advanced Vibrations (4)

Vibration analysis of single and multiple degree of freedoms systems. Topics include: (1) modeling of linear systems using matrix methods; (2) modal analysis; (3) general forcing and Fourier series methods; (4) random and self excited vibrations; (5) nonlinear vibrations.

Also offered as ME 512 and may be taken only once for credit.

ME 630 - Solid Mechanics (4)

This course provides the knowledge of mechanics, physics, and mathematics that concerns the behavior of solids under external actions including external forces, applied displacements, temperature changes, moisture diffusion, etc. Topics include kinematics of deformation and motion, Lagrangian strain tensor, Cauchy stress tensor, elasticity and plasticity.

Also offered as ME 530 and may be taken only once for credit.

ME 632 - Turbomachinery (4)

Application of thermodynamics and fluid mechanics principles to the analysis and design of various types of turbomachinery, including pumps, fans, compressors, and turbines. An advanced unified treatment is presented. Theory, operation, performance, use, and selection of turbomachines are discussed.

Prerequisite: ME 322, 331.

ME 641 - Advanced Fluid Mechanics (4)

Partial differential equations governing the conservation of mass, momentum, and energy of Newtonian fluids are derived. Dimensional analysis is used to simplify the governing equations and in particular justify the assumption of incompressible flow. Exact solution of the Navier-Stokes equations are presented. Boundary layer approximations to the governing equations are derived, and both exact and integral solutions are obtained.

Also offered as ME 541 and may be taken only once for credit.
ME 642 - Advanced Heat Transfer (4)
Advanced treatment of the principles of conductive and convective heat transfer. Analytic and numerical solutions of heat conduction problems. Laminar and turbulent convective heat transfer.
Also offered as ME 542 and may be taken only once for credit.

ME 644 - Microgravity & Capillary Fluid Mechanics I (4)
Liquid-gas flows behave significantly different in the near absence of gravity. Such flows are dominated by surface tension, i.e. capillary forces. The principles of capillary phenomena and applied capillary fluidics are reviewed from empirical, theoretical, and numerical perspectives: concepts of surface tension, wetting, and geometry. Simplified analyses are pursued to model spontaneous flows exploited in microfluidic engineering systems on earth and macrofluidic systems aboard spacecraft. Exposure to literature, lab demonstrations, numerics, and drop tower experimentation.
Also offered for graduate credit as ME 544 and may be taken only once for credit. Prerequisite: ME 641 (may be taken concurrently) and ME 651.

ME 646 - Scaling and Asymptotic Analysis (4)
Scaling and Asymptotic and/or perturbation methods for the systematic simplification of complex problems in engineering analysis are introduced. The techniques learned will find direct application in system modeling, data reduction, and guidance of complex experimentation and/or testing and 3-D computer model benchmarking. Applied mathematical techniques focus on, but are not at all limited to, thermal-fluids sciences.
Also offered for graduate-level credit as ME 546 and may be taken only once for credit. Prerequisite: ME 551.

ME 651 - Engineering Analysis (4)
Application of mathematical techniques to the solution of controls, dynamics, mechanical, and transport phenomena problems. Emphasis given to modeling, physical interpretation, and normalization. Topics include modeling, linear systems, partial differential equations, and complex variables.
Also offered as ME 551 and may be taken only once for credit. Prerequisite: graduate standing.

ME 654 - Integrated Computer-aided Design (4)
Presents several design analysis computer programs in an integrated fashion. Topics include geometric modeling, motion simulation, and finite element analysis. Emphasizes the understanding of the fundamentals, proper use of programs, and interpretation of results.
Prerequisite: EAS 215, ME 314.

ME 662 - Engineering Numerical Methods (4)
Numerical methods applied to engineering problems. Coverage includes interpolation, integration, root solving, solution of boundary value and initial value problems, solution of linear systems. Programming will include Fortran or C, MATLAB and Maple.
Prerequisite: ME 352.

ME 664 - Microgravity & Capillary Fluid Mechanics II (4)
Advanced principles of capillary phenomena and applied capillary fluidics are pursued by empirical, theoretical, and numerical methods. Novel/publishable research projects are undertaken as teams or as individuals that exploit the unique experimental contributions of a ‘low-gravity’ drop tower to produce large length scale phenomena rarely observed in a terrestrial-gravity environment. Special applications are made to engineering systems aboard spacecraft.
Also offered as ME 564 and may be taken only once for credit. Prerequisite: ME 644.

ME 680 - Boundary Layers (4)
Presents boundary layers from a laminar and turbulent perspective. Derivation of the boundary layer equations of motion is carried out. Order of magnitude analysis and similarity solutions are discussed. Specific cases of these flows are considered.
Also offered as ME 580. Prerequisite: ME 641 or equivalent.

ME 688 - Design of Industrial Experiments (4)
Presents the statistical basis of industrial experimentation used in process and design improvement. Topics include model building, randomized and blocked designs, Latin squares, analysis of variance, factorial designs, fractional factorial designs, time series analysis, and evolutionary operations.
Prerequisite: Stat 451 CM.

ME 696 - Design Optimization (4)
Application of Numerical Optimization techniques to engineering design process. Mathematical theory of optimization and application problems in structural and machine component design will be discussed. The course involves computer-aided design optimization projects.
Prerequisite: graduate standing in engineering.

**Mgmt - Management**

**Mgmt 100 - How to Succeed in Business School (1)**
Overview of campus and SBA resources, introduction to personal finance, group work and SBA student groups designed to give students an opportunity for major exploration within the SBA.

**Mgmt 199 - Special Studies (1-6)**
(Credit to be arranged.)

**Mgmt 200 - Business School Basics: How to Get the Most out of the SBA (2)**
This course is designed to enhance student success in the School of Business at Portland State University. The course will focus on tools specifically designed to help students survey appropriate career and academic choices, learn more about campus resources, and focus on skills specific to success in the university environment.

**Mgmt 299 - Special Studies (1-4)**
(Credit to be arranged.)

**Mgmt 310 - Entrepreneurship for Sustainable Development (4)**
Examines the key concepts of environmental and social entrepreneurship with sustainable development goals (SDGs) as their guiding mission. We will use the SDGs as the foundational elements to consider how non-profits, social enterprises, and other companies attempt to address the goals through their various activities. Through these cases, we examine the assumptions behind economic growth, production and consumption, as well as the resulting economic models, power dynamics, opportunities and challenges. This course may be repeated once for credit.

**Mgmt 351 - Human Resource Management (4)**
Studies the human resource management functions performed by the human resource manager as well as by the line executive or supervisor. Uses contemporary approaches and problems to analyze the entire process of performance management, including human resource planning/job design, selection and staffing, training and development, compensation, performance appraisal, and employee and labor relations. Also examines legal questions which affect human resource management.

Prerequisite: BA 302. Preference on the waiting list will be given to HRM-option students.

**Mgmt 398U - Managing the Innovation Process (4)**
Experience innovation leadership via hands-on development of prototypes. Goals of this course are: to shift from the idea of resource and social compromise to a generative, innovative value creation that considers long-term goals for sustainable profitability and to train students in cross-functional innovation process leadership.

**Mgmt 399 - Special Studies (1-6)**
(Credit to be arranged.)

**Mgmt 399U - Special Studies (4)**
(Credit to be arranged.)

**Mgmt 401 - Research (1-6)**
(Credit to be arranged.)

**Mgmt 402 - Independent Study (1-12)**
(Credit to be arranged.)

**Mgmt 404 - Internship (1-6)**
(Credit to be arranged.)

**Mgmt 405 - Reading and Conference (0-6)**
(Credit to be arranged.) Consent of instructor.

**Mgmt 407 - Seminar (1-6)**
(Credit to be arranged.) Student-selected problems in business operation and management to be studied by the individual and discussed in group meeting under direction of academic staff.

**Mgmt 407U - Seminar (4)**
(Credit to be arranged.)
Mgmt 409 - Practicum (1-12)
(Credit to be arranged.)

Mgmt 410 - Selected Topics (0-6)
(Credit to be arranged.)

Mgmt 421 - Design Thinking for Social Innovation (4)
Design Thinking is an iterative process used to create and refine products, services, or solutions to improve the human experience. Students will learn how these principles are used for social and environmental innovation by applying course assignments to their own idea for a new social venture (nonprofit, social enterprise, or sustainable business), or to an existing social venture of their choice.

Also offered for graduate-level credit as Mgmt 521 and Mgmt 521S, and may be taken only once for credit. Prerequisite: Sophomore standing or higher, competitive PSU or transfer GPA (3.0 or higher with consideration made for special circumstances), and satisfactory completion of short application.

Mgmt 422 - Money Matters for Social Innovation (4)
Developing an effective financial model is essential for any social venture, whether a nonprofit, social enterprise, or sustainable business. Apply lean startup and customer development methodologies, develop a revenue model, explore nonprofit and business legal entities, and create financial forecasts. Students will apply course assignments to their own idea for a new social venture, or to an existing social venture of their choice.

Also offered for graduate-level credit as Mgmt 522S and may be taken only once for credit. Prerequisite: Sophomore standing or higher, competitive PSU or transfer GPA (3.0 or higher with consideration made for special circumstances), and satisfactory completion of short application.

Mgmt 423 - Storytelling and Impact Measurement for Social Innovation (4)
Mastery of storytelling and impact measurement is a key element for successful social innovation. Learn and utilize effective personal and organizational storytelling skills, and develop a plan for measuring and reporting the social and environmental impacts of an organization. Students will apply course assignments to their own idea for a new social venture (nonprofit, social enterprise, or sustainable business), or to an existing social venture of their choice.

Also offered for graduate-level credit as Mgmt 523S, and may be taken only once for credit. Prerequisite: Sophomore standing or higher, competitive PSU or transfer GPA (3.0 or higher with consideration made for special circumstances), and completion of short application.

Mgmt 428 - Team Processes (4)
Designed to provide the student with a working understanding, and practical skills, related to operating effectively in team settings. The influence of member personality and attributes on teamwork, motivating team members, developing effective team processes, and constructive conflict management and team communication are some of the issues that may be addressed. Also focuses on the development and use of a variety of teams prevalent in contemporary organizations and some of the challenges faced in using these teams in an optimal fashion.

Prerequisite: BA 302.

Mgmt 432 - Multifamily Property Management (4)
Gives students an overview of multifamily property management, including operations, maintenance, management and leasing of various types of apartment communities. The course will cover fundamental components of the human resources function for apartment communities, an overview of accounting and budgeting skills needed to meet a property owners' goals, fair housing laws, key components of a maintenance plan, and fundamental marketing tools and analysis for multifamily properties.

Also offered for graduate-level credit as RE 532 and may be taken only once for credit. Prerequisite: BA 332U.

Mgmt 433 - Commercial Property and Asset Management (4)
Explores management of different classes of commercial real estate including office, retail, and industrial as well as management of a portfolio of real estate assets. Students will gain an understanding of the following areas of commercial property and asset management: financial/budgeting, facility, management, and legal. Discussions will cover leasing strategies and ways to enhance building value. Students will learn how to reposition an asset to increase its value and how to best use technology to manage assets.

Also offered for graduate-level credit as RE 533 and may be taken only once for credit. Prerequisite: BA 332U.
Mgmt 441 - Collective Bargaining and Labor Negotiations (4)
Workshop giving students hands-on experience negotiating individual and group contracts. Students will learn how to manage the employment relationship within a union environment, studying: the legal environment of unions; negotiations theory and practice; and grievance resolution procedures. Students will devote significant time in class to negotiating individual and group contracts, and will have ample opportunity to receive feedback to improve their skills.
Prerequisite: BA 302.

Mgmt 442 - Human Resources Information Systems & People Analytics (4)
Fundamental HR information system (HRIS) and people analytics concepts and best practices. Designed for Human Resources Management and Management majors. Topics include: HRIS management, development, and implementation; data analysis and visualization; data security and privacy; and data-related ethical and legal issues.
Also offered for graduate-level credit as Mgmt 542 and may be taken only once for credit. Prerequisite: Mgmt 351.

Mgmt 445 - Organizational Design and Change (4)
Study of organizations from a macro perspective. Emphasis will be on the implications of dynamic environments, innovation, and technology for organizational structure, design, and processes. Management of change from a multilevel perspective will also be addressed.
Prerequisite: BA 302.

Mgmt 446 - Principles of International Management (4)
Study of the managerial functions and problems related to international business activity. The focus of this course is on the management of foreign trade, direct investments, and international operations. In addition, the political, economic, and cultural environments of international business are examined from the perspective of management. Comparative management is also treated through the study of other management systems.
Also offered for graduate-level credit as Mgmt 546 and may be taken only once for credit. Prerequisite: BA 302.

Mgmt 447 - The Power of Soul and Spirit in Business (4)
Seminar devoted to exploring what soul and spirit means in the context of today's workplace; its current relevance to business; strategies for injecting more soul and spirit into working environments; and methods for developing sensitivity and appreciation for this dynamic approach to being in the business world. Topics to be explored include methods for building community in the workplace; strategies for developing one's inner life; methods for fueling creativity; approaches to bringing one's whole self to work; and examining new methods of leadership.
Also offered for graduate-level credit as Mgmt 547S and may be taken only once for credit. Prerequisite: BA 302.

Mgmt 461 - Reward Systems and Performance Management (4)
Study of reward system practices that aid in motivation, employee development, and productivity improvement to meet organization goals. Shows how job analysis data forms the information base for both compensation and performance appraisal processes. Includes an analytic study of traditional and evolving methods of compensation management, and relates this and performance appraisal processes to the broad performance management framework.
Also offered for graduate-level credit as Mgmt 561 and Mgmt 561S and may be taken only once for credit. Prerequisite: Mgmt 351. Preference on waiting list will be given to HRM-option students.

Mgmt 464 - Contemporary Leadership Issues (4)
Investigation of the ideas of what constitutes "effective leadership" as organizations enter the 21st century. Various aspects of the new leadership paradigm are addressed. Students will develop an awareness of their personal leadership profile and capabilities and the issues they will face as leaders in tomorrow's organizations.
Prerequisite: BA 302.

Mgmt 471 - Staffing and Employee Selection (4)
The staffing process includes the acquisition, selection, and placement of employees to achieve the strategic human resource goals of the organization. Topics covered include staffing strategies, human resource planning, legal issues, recruitment methods, selection techniques (e.g., biographical information, interviewing, ability tests, work samples, assessment centers), selection validation, and utility analysis.
Also offered for graduate-level credit as Mgmt 571 and Mgmt 571S and may be taken only once for credit. Prerequisite: Prior completion of Mgmt 351. Preference on waiting list will be given to HRM-option students.
Mgmt 481 - Entrepreneurship (4)
This course focuses on the entrepreneurial practices and tools for development of a start-up company, for intrapreneurial efforts in growing business, and also directing a personal career path. Topics include innovation, idea generation, evaluation, financial analysis, feasibility, business planning development and competition.
Prerequisite: admission to SBA.

Mgmt 485 - Career Management and Digital Portfolio (2)
Integrates learning from across the business program and offers a redaction process for the student digital portfolio. The result is a portfolio ready for external consumption. Course content includes reflection on university learning, personal branding, theory of work and career and a personalized review of course and program goals. Co-requisite: BA 495.
Prerequisite: BA 301, BA 302, BA 303, BA 311, BA 325, BA 339, and BA 385. Corequisite: BA 495.

Mgmt 491 - Training and Development (4)
Training and development highlights the organization's commitment to its employees. The course looks at training needs analysis; the nature, types and methods of training; career stages, paths, planning; retraining outdated workers; outplacement, evaluation of training effectiveness; long-term development programs; and processes of organization development.
Also offered for graduate-level credit as Mgmt 591 and Mgmt 591S and may be taken only once for credit. Prerequisite: Prior completion of Mgmt 351. Preference on waiting list will be given to HRM-option students.

Mgmt 493 - Human Resource Strategy (4)
This is the final course in the Human Resource Management sequence. Uses case analysis, outside speakers, and a comprehensive project to provide an in-depth, analytical study of human resource management and the tasks of the modern human resource executive. Focuses on transforming the HRM function for the modern corporation. Emphasizes the strategic aspect of HRM while studying executive-level decision making in all aspects of HRM. Preference on waiting list will be given to HRM-option students.
Prerequisite: Mgmt 351, Mgmt 461, Mgmt 471.

Mgmt 501 - Research (1-9)
(Credit to be arranged.)

Mgmt 503 - Thesis (1-9)
(Credit to be arranged.)

Mgmt 504 - Internship (1-9)
(Credit to be arranged.)

Mgmt 505 - Reading and Conference (1-12)
(Credit to be arranged.) Consent of instructor.

Mgmt 506 - Special Projects (1-12)
(Credit to be arranged.)

Mgmt 507 - Seminar (1-6)
(Credit to be arranged.) Student-selected problems in business operation and management to be studied by the individual and discussed in group meeting under direction of academic staff.

Mgmt 507S - Seminar (0-8)
(Credit to be arranged.)

Mgmt 509 - Practicum (1-9)
(Credit to be arranged.)

Mgmt 509S - Practicum: Small Business Concepts II (1-8)
(Credit to be arranged.)

Mgmt 510 - Selected Topics (1-9)
(Credit to be arranged.)

Mgmt 510S - Selected Topics (1-8)
(Credit to be arranged.)

Mgmt 511 - Foundations of Strategy (2)
To survive and thrive in the global economy, organizations rely on leaders to analyze the competitive landscape, cultivate essential capabilities, and implement effective business models. These are the key contributors to a successful strategy. This course imparts the
analytical skills and tools necessary for leaders to assess the external environment and develop the internal capabilities required for devising and implementing strategies that will contribute to sustained competitive advantage.

Mgmt 512 - Organizational Management (4)
Course participants explore organizational behavior, leadership, and human resource factors that contribute to long-term value creation for the organization. Leadership emphasizes the creation and maintenance of relationships with key internal stakeholders as part of building organizational effectiveness, social responsibility, and environmental stewardship into organizational systems. Organizations are studied from three perspectives: the individual, the work team, and the organizational system. Topics include motivation, performance assessment, creative problem solving and organizational learning, compensation, staffing, employee development, and organizational design and change.

Mgmt 513 - Law Ethics and Stewardship (4)
The course is designed to provide students with an understanding of how political, social, legal, regulatory, and environmental issues impact business organizations within a global context. Topics covered include legal issues and compliance environments, business ethics, corporate social responsibility, and the public policy process. Students gain an understanding of the relationships between values, ethics, and legal and public policy environments, are able to aspire to high ethical standards, and build long-term stewardship of financial, societal, and natural resources into an organization’s strategy and operations.

Mgmt 514 - Integrated Strategy (2)
This course provides an integrative, capstone experience focused on strategy development and implementation in international and domestic organizations. Case analysis and advanced analytical frameworks are used to develop the skills and judgment necessary to provide strategic direction to organizations. Both business-level and corporate-level strategy development will be undertaken leading students to solidify their strategic mindset, which will be applicable across a broad range of organizations.
Prerequisite: Mgmt 511 and Fin 513.

Mgmt 515 - Information Systems and Technology in Organizations (4)
Course participants explore information, systems, and technology from a managerial responsibility perspective. This focus reflects prevailing industry expectations that business people be involved in decision-making and management related to information resources and enabling technologies. To this end, we consider strategic and operational initiatives in such areas as information management and analytics, information-technology governance, IT portfolio management, package and service selection, project management and system implementation, inter-organizational partnerships and sourcing, and ethical concerns related to technology design and information use. Managerial responsibility for social and environmental impacts associated with the management of information, systems, and technology are explored.

Mgmt 516 - Project Management (2)
Consideration of the various methods, techniques, and software tools of project management.

Mgmt 517 - Negotiations for Managers (2)
Designed to provide a competitive advantage in negotiation in the context of a work environment where positive ongoing relationships are essential. It explores the major theories and concepts of the field, giving students the chance to practice deal making and conflict resolution through participation in negotiation exercises.

Mgmt 518 - Digital Transformation of Business (4)
In every industry, the adoption of digital technology is creating new opportunities and disrupting existing business models. This trend is compelling business leaders to examine how to re-invent their products, processes and strategies to stay competitive. Students will learn a systematic framework for assessing the opportunities and threats and formulating digital transformation strategies to respond effectively.

Mgmt 519 - Digital Transformation: Security, Privacy & Ethics (4)
Students will learn about the technologies, frameworks, and guidelines necessary for effective implementation of digital transformation initiatives in any industry. Students will become familiar with various technologies required to digitally transform
business functions and frameworks for managing cybersecurity and privacy. The course concludes with a review of ethics in the digital economy. Students will study various case studies and get hands-on exposure to some of the digital technologies covered in the course.

**Mgmt 520 - Leading Organizational Change During Digital Transformation (4)**

Students will learn a flexible framework for understanding and leading organizational change during dynamic digital transformation initiatives, gaining insights into how to adapt this framework to their own unique work environments and career aspirations. This will lead to an increased ability to formulate strategic recommendations and propose alternative actions for designing digital transformation journeys. A leadership development plan will prepare students to adapt organizational culture to take advantage of digital transformation.

**Mgmt 521 - Design Thinking for Social Innovation (4)**

Design Thinking is an iterative process used to create and refine products, services, or solutions to improve the human experience. Students will learn how these principles are used for social and environmental innovation by applying course assignments to their own idea for a new social venture (nonprofit, social enterprise, or sustainable business), or to an existing social venture of their choice.

Also offered for undergraduate-level credit as Mgmt 421 and may be taken only once for credit.. Cross-Listed as: This is the same course as Mgmt 521 and may be taken only once for credit..

**Mgmt 521S - Design Thinking for Social Innovation (4)**

Design Thinking is an iterative process used to create and refine products, services, or solutions to improve the human experience. Students will learn how these principles are used for social and environmental innovation by applying course assignments to their own idea for a new social venture (nonprofit, social enterprise, or sustainable business), or to an existing social venture of their choice.

Also offered for undergraduate-level credit as Mgmt 421 and may be taken only once for credit.. Cross-Listed as: This is the same course as Mgmt 521S and may be taken only once for credit..

**Mgmt 522S - Money Matters for Social Innovation (4)**

Developing an effective financial model is essential for any social venture, whether a nonprofit, social enterprise, or sustainable business. Apply lean startup and customer development methodologies, develop a revenue model, explore nonprofit and business legal entities, and create financial forecasts. Students will apply course assignments to their own idea for a new social venture, or to an existing social venture of their choice.

Also offered for undergraduate-level credit as Mgmt 422 and may be taken only once for credit..

**Mgmt 523S - Storytelling and Impact Measurement for Social Innovation (4)**

Mastery of storytelling and impact measurement is a key element for successful social innovation. Learn and utilize effective personal and organizational storytelling skills, and develop a plan for measuring and reporting the social and environmental impacts of an organization. Students will apply course assignments to their own idea for a new social venture (nonprofit, social enterprise, or sustainable business), or to an existing social venture of their choice.

Also offered for undergraduate-level credit as Mgmt 423 and may be taken only once for credit..

**Mgmt 531 - The Entrepreneurial Mindset (4)**

The global economy requires an entrepreneurial mindset. Working on their own idea or with a local entrepreneur, students will: assess their appetite for entrepreneurship; create a venture proposal to effectively attract stakeholders: employees, partners, investors, and customers; understand venture types and their lifecycles to evaluate entrepreneurship as a career option.

**Mgmt 533 - Alliances and Acquisitions (4)**

Strategic alliances have become an essential element in growing a business. This course studies various types of alliances such as acquisitions, joint ventures and licensing. Covers best practices and unsuccessful practices. Case study analysis and use of current events will illustrate these practices. Pays particular attention to value creation.

Prerequisite: MBA or MSFA admission..

**Mgmt 540 - HR Analytics Rapid Evidence Assessments (2)**

Learn the skills necessary to leverage existing research and evidence in order to produce key HR questions and answers. Topics covered include
framing appropriate questions, choosing research sources, conducting rapid evidence assessments, and understanding how to complete a critically appraised topic (CAT).

**Mgmt 541 - Introduction to HR Analytics (4)**

Introduction to the foundations of human resource (HR) analytics. Topics include theory and practice regarding HR information systems, psychological theory, descriptive, predictive, and prescriptive analytics, ethics, legal issues, data privacy/security, and visualizations. Students will engage in case analyses and reflections, and introductory data-management and analytics exercises.

**Mgmt 542 - HR Analytics Tools and Applications (4)**

This course exposes students to HR analytic tools and applications. Students will learn how to analyze data to answer key questions. The course continues the focus on information systems, ethics, and visualizations, with an emphasis on communicating findings. Hands-on exercises and analyses bring to life course topics.

**Mgmt 543 - HR Metrics and Analytics in Daily Operations (2)**

Organizations vary regarding the extent to which they leverage HR metrics and analytics in daily operations. This course focuses on a variety of contemporary applications. Assigned readings and exercises inform students about the advantages and disadvantages of different applications, and how to develop effective HR metrics and analytics.

**Mgmt 544 - Technology Management (4)**

Course takes a systematic approach to managing technology and innovation. Addresses issues of technology and competition, technology infrastructure, technology strategy, research and development, the roles of invention, innovation, research and development, product development, and other critical technology related topics. Coverage will also be given to issues related to product development as well as IT strategy and in-depth examination of the current technologies of the day.

**Mgmt 545 - Managing Innovation Performance (4)**

Examines the non-technical, human side to the challenges of technological innovation management. Course topics include technical professional performance and productivity, high performing technical teams, managerial effectiveness, innovative work cultures, and organizational practices and policies that promote technological innovation and new product development. Practical applications of course concepts to actual work situations are emphasized.

**Mgmt 546 - Principles of International Management (4)**

Covers the major challenges of managing internationally, including political risk assessment, international strategy, structuring and controlling the multinational enterprise, international negotiations, and international human resource management. Course is targeted both toward managers who work abroad as well as those dealing with international business from the home country.

Also offered for undergraduate-level credit as Mgmt 446 and may be taken only once for credit.

**Mgmt 547S - The Power of Soul and Spirit in Business (4)**

Seminar devoted to exploring what soul and spirit means in the context of today's workplace; its current relevance to business; strategies for injecting more soul and spirit into working environments; and methods for developing sensitivity and appreciation for this dynamic approach to being in the business world. Topics to be explored include methods for building community in the workplace; strategies for developing one's inner life; methods for fueling creativity; approaches to bringing one's whole self to work; and examining new methods of leadership.

Also offered for undergraduate-level credit as Mgmt 447 and may be taken only once for credit. Prerequisite: Mgmt 512.

**Mgmt 548 - Special Topics in HR Analytics (2)**

Selected topics in HR analytics for human resources professionals. Potential topics include Storytelling with Data for HR, HR Data Visualizations, Addressing Evidence-Based HR Questions, HR Metrics, Recruitment and Selection, Training, Performance Management, Reward Systems, and Workforce Planning and Mobility.
Mgmt 551 - Managing Human Resources (4)
How do managers help their subordinates achieve great and sustainable performances? In the 21st century, the employment contract has undergone significant changes, with both the workforce and the organization being vastly different from their predecessors. Focuses on the daily strategies of generalists as they lead their subordinates to high long-term productivity. Studies all aspects of the employee life cycle from selection through separation, including employee development, reward systems, performance management, and employee relations. Emphasis on problem solving for practicing managers.
Prerequisite: Mgmt 512.

Mgmt 552 - HR Analytics Capstone (4)
Continuation of the HR Analytics Tools and Applications course. It delves deeply into HR analytics, taking students from a beginner to an intermediate level of proficiency in key HR analytical tools and strategies. Emphasis is placed on integrating data analytic approaches culminating in a term-long project.

Mgmt 553 - HR Data Visualization and Storytelling (2)
Focuses on the importance of communicating data analytics findings to different audiences in a proficient, convincing, and compelling manner. The art of storytelling with data will focus on assembling key data analytics findings, creating data visualizations, and communicating the information to different stakeholders.

Mgmt 554 - Negotiation and Conflict Resolution (3)
Examines negotiation as a sometimes rational, sometimes irrational social process used for resolving conflict. Studies the interdependence between parties which causes the conflict; focuses on effective and ineffective negotiating tactics between these competing groups. Explores the use of impartial third parties to facilitate negotiations. Practical applications include labor management relationships, purchase agreements, organizational goal setting, etc.
Prerequisite: Mgmt 512.

Mgmt 554S - Negotiation and Conflict Resolution (3)
Examines negotiation as a sometimes rational, sometimes irrational social process used for resolving conflict. Studies the interdependence between parties which causes the conflict; focuses on effective and ineffective negotiating tactics between these competing groups. Explores the use of impartial third parties to facilitate negotiations. Practical applications include labor management relationships, purchase agreements, organizational goal setting, etc.
Prerequisite: Mgmt 512.

Mgmt 555 - Management of Organizational Change Negotiation and Conflict Resolution (3)
A seminar focused on the concepts, theories, and practice of managing organizational change and development. Class discussion will center on an examination of the history and assumptions of organizational development and change, the action research model and other foundations, plus a variety of organization intervention techniques. Special issues such as ethics in client-consultant relationships will be integrated into class activities.
Prerequisite: Mgmt 512.

Mgmt 556 - Organizational Politics and Power (4)
Incorporates theoretical and practical aspects of success in organizations. Topics may include how to acquire, maintain, and use power; how to deal with superiors and subordinates; techniques for more quickly rising on the organizational ladder; misuses of power; developing effective relationships; ethical power use.
Prerequisite: Mgmt 512.

Mgmt 561 - Reward Systems and Performance Management (4)
Study of reward system practices that aid in motivation, employee development, and productivity improvement to meet organization goals. Shows how job analysis data forms the information base for both compensation and performance appraisal processes. Includes an analytic study of traditional and evolving methods of compensation management, and relates this and performance appraisal processes to the broad performance management framework.
Also offered for undergraduate-level credit as Mgmt 461 and may be taken only once for credit.
Prerequisite: Prior completion of or concurrent registration in Mgmt 512. Preference on waiting list will be given to HRM-option students. Cross-Listed as: This is the same course as Mgmt 561S and may be taken only once for credit.

Mgmt 561S - Reward Systems and Performance Management (4)
Study of reward system practices that aid in motivation, employee development, and productivity improvement to meet organization goals. Shows how job analysis data forms the information base for both
compensation and performance appraisal processes. Includes an analytic study of traditional and evolving methods of compensation management and relates this and performance appraisal processes to the broad performance management framework.

Also offered for undergraduate-level credit as Mgmt 461 and may be taken only once for credit.

Prerequisite: Prior completion of or concurrent registration in Mgmt 512. Preference on waiting list will be given to HRM-option students. Cross-Listed as: This is the same course as Mgmt 561 and may be taken only once for credit.

Mgmt 562 - Business Strategy Capstone (4)

An integrative, capstone study of strategy formulation and implementation in international and domestic business enterprises. Case analysis and other appropriate methodologies are used to develop the skills and judgment necessary to provide overall direction to the organization. Special emphasis will be placed on how to successfully match competitive strategy with effective implementation policies.

Prerequisite: Fin 551 or 561.

Mgmt 571 - Staffing and Employee Selection (4)

The staffing process includes the acquisition, selection, and placement of employees to achieve the strategic human resource goals of the organization. Topics covered include staffing strategies, human resource planning, legal issues, recruitment methods, selection techniques (e.g., biographical information, interviewing, ability tests, work samples, assessment centers), selection validation, and utility analysis.

Also offered for undergraduate-level credit as Mgmt 471 and may be taken only once for credit.

Prerequisite: Prior completion of or concurrent registration in Mgmt 512. Preference on waiting list will be given to HRM-option students. Cross-Listed as: This is the same course as Mgmt 571S and may be taken only once for credit.

Mgmt 571S - Staffing and Employee Selection (4)

The staffing process includes the acquisition, selection, and placement of employees to achieve the strategic human resource goals of the organization. Topics covered include staffing strategies, human resource planning, legal issues, recruitment methods, selection techniques (e.g., biographical information, interviewing, ability tests, work samples, assessment centers), selection validation, and utility analysis.

Also offered for undergraduate-level credit as Mgmt 471 and may be taken only once for credit.

Prerequisite: Prior completion of or concurrent registration in Mgmt 512. Preference on waiting list will be given to HRM-option students. Cross-Listed as: This is the same course as Mgmt 571 and may be taken only once for credit.

Mgmt 591 - Training and Development (4)

Training and development highlights the organization's commitment to its employees. The course looks at training needs analysis; the nature, types and methods of training; career stages, paths, planning; retraining outdated workers; outplacement, evaluation of training effectiveness; long-term development programs; and processes of organization development.

Also offered for undergraduate-level credit as Mgmt 491 and may be taken only once for credit.

Prerequisite: Prior completion of or concurrent registration in Mgmt 512. Preference on waiting list will be given to HRM-option students. Cross-Listed as: This is the same course as Mgmt 591S and may be taken only once for credit.

Mgmt 591S - Training and Development (4)

Training and development highlights the organization's commitment to its employees. The course looks at training needs analysis; the nature, types and methods of training; career stages, paths, planning; retraining outdated workers; outplacement, evaluation of training effectiveness; long-term development programs; and processes of organization development.

Also offered for undergraduate-level credit as Mgmt 491 and may be taken only once for credit.

Prerequisite: Prior completion of or concurrent registration in Mgmt 512. Preference on waiting list will be given to HRM-option students. Cross-Listed as: This is the same course as Mgmt 591 and may be taken only once for credit.

Mgmt 601 - Research (1-9)

(Credit to be arranged.)

Mgmt 607 - Seminar (1-9)

(Credit to be arranged.)

Mgmt 694 - Methods and Models in Ecosystem Services (4)

Evaluates changing ecosystem services in a holistic way, drawing multiple disciplines, including ecology, economics, engineering, and geographical and spatial sciences. Introduces methods and models from multiple disciplines to analyze ecosystem services across biophysical, social, economic, and cultural contexts. Provides an interdisciplinary foundation for evaluating ecosystem services.
WELCOME TO PORTLAND STATE UNIVERSITY | 957

Mgmt 698 - Ecosystem Services Valuation: An Integrated Assessment (4)
Explore environmental, social and economic theories of valuation, quantitative and qualitative methods for incorporating the values into ecosystem service management decisions, novel approaches for integrating each type of values into comprehensive measures, and applications through interdisciplinary team projects. This is the same course as Ec 698; may only be taken once for credit.
Prerequisite: ESR 692, Soc 694 and Geog 696 or instructor’s permission. Cross-Listed as: Ec 698.

MIM - Master of Intl Mgt
MIM 501 - Research (1-9)
(Credit to be arranged.)

MIM 502 - Independent Study (1-4)
(Credit to be arranged.)

MIM 504 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

MIM 505 - Reading and Conference (1-8)
(Credit to be arranged.)

MIM 506 - Special Project (1-6)
(Credit to be arranged.)

MIM 507 - Age of Pacific Seminar Series (1-9)
Special topics either under the sponsorship of the Age of the Pacific Series or an elective course addressing contemporary business issues in international business.

MIM 508 - Workshop (1-9)
(Credit to be arranged.)

MIM 509 - Practicum (1-9)
(Credit to be arranged.)

MIM 510 - Age of Pacific Seminar Series (1-4)
Special topics either under the sponsorship of the Age of the Pacific Series or an elective course addressing contemporary business issues in international business.

MIM 512 - Global Leadership and Ethics (2)
This course provides students with a solid understanding of the concepts linking leadership to global and social systems, international organizational development, and the connection between leadership and systems. Global leadership is studied from three perspectives: the virtual team leading across borders and organizations, ethical and cultural ramifications of leadership and followership, and to emphasize leadership’s impact on the social, environmental and economic context in which they operate.

MIM 513 - Pacific Rim Economies, Trade, and Financial Markets (3)
The course surveys current economic trends among the Pacific Rim economies, focusing on the challenges facing both developed and developing countries. Areas of focus include the principles of international trade, balance of payments, environmental impacts of policies, financial institutions and markets which all effect business between the Pacific Rim and the United States.

MIM 514 - Global Managerial and Cost Accounting (2)
The course covers global managerial and cost accounting issues; it also focuses on the use of accounting information within the multinational firm. In addition, the course will consider financial models used in analyzing the economic viability of new products and services. Students will also be exposed to activity based costing, standards and variance analysis, and inventory valuation.

MIM 515 - Global Contemporary Marketing (4)
The global/international marketing strategies and operations of multinational corporations (MNCs) are studied through assessment of international markets, marketing environments, and various aspects of global marketing strategies and marketing management.
MIM 516 - Contemporary Pacific Rim and World Affairs (4)
This course offers a broad sweep of the history, politics, economics, and foreign relations of the Asia Pacific Rim countries to enhance understanding of current business attitudes and systems across the region. Linking historical events with contemporary issues, the course will help predict how the region will shape the global business community into the future.

MIM 517 - Accounting for Global Enterprises (4)
Study of international accounting issues crucial for effective interpretation and understanding of international business. Goal of the course is to build a framework that can be used to analyze and understand financial reports used by multinational corporations (MNCs). Special managerial and control problems of MNCs, including performance evaluation, transfer pricing, and taxation will also be addressed.

MIM 521 - Sustainability Metrics in Business (4)
Helps students develop an understanding of how the measurement of a global company's environmental and social performance contributes to business goals and strategies. Students examine how different global companies measure and report on their environmental and social performance, and how their different approaches link to business practices.

MIM 522 - Global Communications (2)
Focus on a crucial global business leadership skill: the ability to inform and persuade across cultures through speaking, writing, and listening. Topics include reading, internalizing fundamental concepts, discussing communication challenges, and practicing communication skills. The course will use a workshop format focused on experiential and collaborative learning.

MIM 524 - Global Sourcing and Supply (4)
This class is an overview of planning strategies and tactical execution for sustainable operational sourcing in a global environment. Topics to be reviewed include: locating and qualifying international suppliers, the strategies regarding outsourcing/off-shoring, supplier operational metrics and strategies, establishing and maintaining relationships, e-procurement, new product introduction, and quality systems with selected suppliers.

MIM 527 - Intercultural Competence and Communications I (1)
Study of the process of communication, its various components, and how cultural, sociocultural, psychocultural, and environmental influences affect the outcome, including the role of non-verbal communication. Analysis of successful adaptation to new cultures, including developing a communication competence in a new culture and dealing with conflict. While the principles of cross cultural communication and adaptation are generic to all cultures, two cultural environments, China and Japan, will be studied in depth, to develop cultural self-awareness. This is the first course in a sequence of two: MIM 527 and MIM 528.

MIM 528 - Intercultural Competence and Communications II (1)
Study of the process of communication, its various components, and how cultural, sociocultural, psychocultural, and environmental influences affect the outcome, including the role of non-verbal communication. Analysis of successful adaptation to new cultures, including developing a communication competence in a new culture and dealing with conflict. While the principles of cross cultural communication and adaptation are generic to all cultures, two cultural environments, China and Japan, will be studied in depth, to develop cultural self-awareness. This is the second course in a sequence of two: MIM 527 and MIM 528.

MIM 531 - Product Design and Stewardship for Sustainable Enterprises (4)
Takes the view that to maximize a company's competitive advantage, managers need to know how to identify opportunities to initiate changes in the firm's value chains that reduce waste and generate value. Addresses the principles of industrial ecology, environmental management systems, product stewardship and life cycle analysis, eco-efficiency and design for the environment. Case studies will be used to explore the practical challenges and opportunities to implementation of product design and stewardship activities.

MIM 534 - Global Logistics Management (4)
Includes studies of inventory and warehouse planning and control and the principles of transportation. Managing logistics in an international environment will be the primary focus, with special attention given
topics such as liner conferences and air freight will be included.

MIM 535 - Global Marketing Research and Innovation (3)
This course concentrates on how to manage an innovation process, from new opportunity identification to market introduction, with emphasis on integrating appropriate market input at each step. Students will understand how to approach the identification of new opportunities, the rapid evaluation/prioritization of these opportunities, and management of the development and introduction processes.

MIM 541 - Global Social Innovation and Entrepreneurship (4)
This introductory course will apply the concepts of social entrepreneurship and social enterprise as a for-profit or a not-for-profit business model. It examines a range of ownership and market orientations and the role of stakeholder engagement. Students will examine social intrapreneurships within established companies and conduct real world research projects with social entrepreneurs. Working with a client company, they will investigate a pressing business problem and provide recommendations; alternatively, students will develop a mini business plan for a new social venture and acquire techniques and roadmaps for identifying, analyzing and developing opportunities for market-based solutions to social problems.

MIM 544 - Integrated Global Supply and Logistics Management (4)
Final course in the specialization in global supply chain management. Integrates all of the concepts contained within the previous three classes. Global supply and logistics planning and strategy development is the primary emphasis. Case course where each week students will be expected to analyze and prepare a supply and logistics case in an international setting. Emphasis on developing analytical and problem-solving skills and on generating the quantitative information necessary to make superior managerial decisions.

MIM 545 - Global Selling (4)
Focuses on helping students develop an understanding of Asian company purchasing practices and buyer behavior, and linking that understanding to the development of effective selling skills in a business-to-business environment and an understanding of effective sales management strategies and activities. The integration of sales automation technology and e-business will be discussed.

MIM 551 - Managing and Leading International Non-Governmental Organizations (4)
Introduction to international non-governmental organizations and the contributions they make to the larger society. Develops an overall understanding of the relationship of strategic international NGO management and program effectiveness. Step-by-step development of a strategic plan that flows logically from the mission of the organization, the external environment, and organizational goals and objectives. Studies strategic planning, grant development, project development, execution and evaluation, marketing, financial management and law as it pertains to international NGOs. Prerequisite: MIM 511.

MIM 558 - Global Comparative Operations Management (4)
The changing international environment in global operations will be reviewed through: comparative study of process selection, facilities design, operations planning and control, supply logistics, process best practices, technology management, international sustainable supply chains and customers, quality management, and performance measurement. The importance of operations involvement from new product introduction to the sustainable end of a product lifecycle will be emphasized.

MIM 561 - International Community Policy, Leadership and Decision-Making (4)
Focuses on the principles and strategies of community and economic development in relation to participatory role appraisal, livelihood strategies and assessments, and community leadership and decision making. How to identify the interrelationships and influence of human behavior, natural resources and economic circumstances. Also focuses particularly on economically-disadvantaged international communities. Methods of engagement between international non-governmental organizations, corporations, and communities to further their respective and mutual objectives are addressed. Recommended prerequisite: MIM 511.
MIM 564 - Global Human Resource Management (4)
Examines the management of human resources in the international firm, including motivating and leading employees in multi-cultural contexts. Course begins with an analysis of the human resource management philosophies and approaches to industrial and employee relations in representative countries. Integration of human resource management systems in international firms, including the creation of global corporate culture, HR support for organizational learning and approaches to human resource management transfer across borders, are also studied. Also examines the nature of successful cross-cultural teams and principles of leading change in multinational firms.

MIM 568 - Managing Information Technology Globally (2)
Explores the crucial roles that executives, managers, and business professionals play in selecting, sourcing, designing, and implementing information technologies, and in managing the business processes that produce value from those investments. Positions these issues in the context of the particular challenges that arise in managing information technology across international boundaries and in global firms.

MIM 571 - Global Strategic Cost Management (4)
Takes the perspective that global managers should use multiple approaches to developing and using accounting information for global companies. Special emphasis placed on understanding traditional cost systems, activity-based costing systems, cost management in global supply chains and determining the cost of quality. Relies heavily on the examination of actual global company situations.
Prerequisite: MIM 574.

MIM 572 - Global Business Valuation (4)
Focuses on financial analysis of the performance of the global business or parts of the global business such as product or projects. Tools and techniques of financial statement analysis from the perspective of chief financial and accounting officers, investors and creditors; development of models for determining and forecasting the profitability and financial position of the global firm. Business valuation techniques, emphasizing cash flow projections. Some issues in costs and risk management. Theoretical principles and practical approaches of valuation of a global business or business interest, including valuation strategies for specific purposes such as mergers, acquisitions, and corporate restructuring, multi-SBU and international operations.
Prerequisite: MIM 574.

MIM 573 - Cases in International Corporate Financial Management (4)
This final course in the MIM International Corporate Finance Specialization integrates concepts, tools and knowledge gained from the previous specialization coursework. Case analyses are used to enhance analytical and quantitative skills applied to real-world situations. All case work focuses on companies having international operations, with particular emphasis on the Asia-Pacific region.
Prerequisite: MIM 574, MIM 571, and MIM 572.

MIM 574 - International Corporate Finance and Investment (4)
Focus on investment and financing decisions of firms operating in more than one nation. Topics include international risk and value analysis, cross-border capital budgeting and capital acquisitions, financing mix, working capital management of multinationals, foreign exchange risk and exposure management, estimating cost of capital international investment, international capital markets, and sources of financing.
Prerequisite: MIM 513, 517.

MIM 575 - Marketing in Asia and the Pacific Rim (4)
Study of marketing strategies and practices in Asian and other Pacific Rim countries. Markets, marketing environments, and marketing practices in selected Asian countries are analyzed. Planning, and managing marketing strategies and operations are also included.
Prerequisite: MIM 515, 516, 523, 547.

MIM 577 - International Business Negotiations (3)
Examination of the theory and techniques of negotiation, influencing, and dispute resolution for forging mutually profitable business relationships, enhancing team cohesion, and establishing sustainable international partnerships. The course makes extensive use of negotiation role plays, out-of-class exercises, and panels by experienced negotiators.

MIM 579 - Asia Field Study (4)
Students travel to Asia to visit companies, meet with business executives, and learn more about business within the context of these cultures. This trip provides an opportunity to immerse in the culture and
WELCOME TO PORTLAND STATE UNIVERSITY

lifestyle of different Asian countries, while learning about global business.

**MIM 589 - Global Business Strategy (4)**
The course will analyze business strategy as both a long-term plan and the translation of that plan into sustainable operational results. This course will examine how strategic decision-making can integrate social responsibility into a global business strategic plan. The course will focus on: the Pacific Rim, US and EU.

**MIM 700 - MIM Prerequisite (1-8)**
(Credit to be arranged.)

**Mktg - Marketing**

**Mktg 199 - Special Studies (1-3)**
(Credit to be arranged.)

**Mktg 338U - Professional Selling (4)**
An overview of personal selling as an element of the marketing function for both industrial and retail professional sales with an emphasis on the sales process including prospecting, approaching, presenting, negotiating, closing and follow-up. Topics include sales careers, sales strategies and tactics, buyer behavior as part of individual and group purchase processes, establishing and building customer relationships and the role of selling in the marketing effort. In addition to formal theoretical coursework, students practice sales skills in role plays, presentations and other exercises requiring practical application of selling theory.

**Mktg 340U - Advertising (4)**
An introductory course designed to provide an overview of marketing communications, plus an understanding of fundamental advertising issues and strategies. Course focuses on concepts, principles, processes, terminology, trends, and techniques which shape this constantly changing field including the impact of technology on message delivery.

**Mktg 341 - Public Relations (4)**
Principles of public relations in contemporary America, with emphasis on the role of public relations in business.

**Mktg 363 - Consumer Behavior and Customer Satisfaction (4)**
Explores the determinants of consumer and business buying behavior. Applications of behavioral concepts to marketing strategy are emphasized along with how to measure, retain, and enhance customer satisfaction while developing long-term relationships. The use of technology and databases in understanding the marketplace is explored.
Prerequisite: BA 311; six credits in psychology, sociology, or anthropology in any combination recommended.

**Mktg 373 - Merchandising Management (4)**
This course focuses on the specific strategies and tactics used by retail, wholesale, and manufacturing industry professionals to forecast, plan, execute, and achieve sales, inventory, turnover, gross margin, and profit objectives. Hands-on practice will build real-world skills and insight and course will include contributions from industry professionals.
Prerequisite: BA 311.

**Mktg 375 - Retailing (4)**
Focuses on the retail distribution of food and consumer goods to consumers with emphasis on the dynamic nature of the retail environment and how changes in consumer demographics, new technology, new competitive forms, and the Internet are revolutionizing the retail industry. Topics include: Staffing, management and retail operations, category management, web marketing, merchandising, and promotion.
Prerequisite: BA 311.

**Mktg 376 - International Business (4)**
International business concepts and practices relating to international trade are presented at a survey level. Current global issues related to international trade and actual international problems are identified along with the basic concepts related to international finance, management, and marketing practices.

**Mktg 399 - Special Studies (1-6)**
(Credit to be arranged.)

**Mktg 401 - Research (1-12)**
(Credit to be arranged.)
Mktg 404 - Internship (1-6)
(Credit to be arranged.)

Mktg 405 - Reading and Conference (0-6)
(Credit to be arranged.) Consent of instructor.

Mktg 407 - Seminar (1-6)
(Credit to be arranged.) Student-selected problems in business operation and business management to be studied by the individual and discussed in group meeting under direction of academic staff.

Mktg 409 - Practicum (1-12)
(Credit to be arranged.) Field work involving the practice of professional activities away from campus.
Prerequisite: consent of instructor.

Mktg 410 - Selected Topics (1-8)
(Credit to be arranged.)

Mktg 435 - Consumer Package Goods Marketing (4)
Examines marketing distribution systems used by food and consumer package goods (CPG) companies. Emphasis on describing CPG industry value chains and how business environmental factors impact the creation, delivery, and capture of customer value by different industry participants. Examines the marketing relationships between manufacturers, wholesalers, brokers, retailers, and consumers.
Topics include ECR, category management, Efficient Replenishment, retail trends in buyer behavior, e-commerce, new product introductions, Efficient Promotion, trade relations, industry alliances, competitive trends, channel roles and conflicts, and globalization.
Also offered for graduate-level credit as Mktg 535 and Mktg 535S and may be taken only once for credit. Prerequisite: BA 311.

Mktg 437 - Product Management in the Athletic and Outdoor Industry (4)
Provides insight into the product planning process for apparel, footwear, and hard goods in the athletic and outdoor industry. Provides an overview and hands on group project experience of ideating, creating, producing, merchandising, marketing and delivering a product to market.
Also offered for graduate-level credit as Mktg 537 and Mktg 537S and may be taken only once for credit. Prerequisite: BA 311.

Mktg 436 - Competitive Dynamics in the Athletic and Outdoor Industry (4)
Understand the distinctive challenges and insights of the athletic and outdoor industry. Examine the unique business practices of both manufacturers and retailers in this industry. Study such issues as brand management, customer service, supply chain management, innovation, and sustainability in the athletic and outdoor industry.
Also offered for graduate-level credit as Mktg 536 and Mktg 536S and may be taken only once for credit. Prerequisite: BA 311.

Mktg 438 - Product Management in the Athletic and Outdoor Industry (4)
Provides insight into the product planning process for apparel, footwear, and hard goods in the athletic and outdoor industry. Provides an overview and hands on group project experience of ideating, creating, producing, merchandising, marketing and delivering a product to market.
Also offered for graduate-level credit as Mktg 537 and Mktg 537S and may be taken only once for credit. Prerequisite: BA 311.

Mktg 440 - Practicum: FIR NW Student Ad Agency (4)
FIR NW is a student-run advertising agency within the School of Business that offers experience in development and execution of advertising, brand and communication strategy to solve business problems faced by community-based businesses and organizations. Requirements: Application and acceptance plus a minimum of 2 and a maximum of 3 terms in FIR NW. Open to students outside the business school. Two terms of MKTG440: FIR NW waives MKTG443.
Prerequisite: Students must apply and be accepted into the program. Application involves submitting a resume and cover letter, and an interview with instructor.

Mktg 441 - Media Strategy (4)
Examines the advertising media process as an outgrowth of marketing and advertising objectives. Focuses on strategic issues, quantitative decision making, and media planning and negotiating techniques. This course is data intensive and analytical, with attention given to the Internet, local, and non-traditional mediums, as well as dominant national measured media.
Prerequisite: Mktg 340U.

Mktg 444 - Creative Strategy (4)
Course puts into practice the theories, principles, and techniques of the advertising business loosely known as "creative." Course material will focus on the strategy behind advertising messages, techniques for writing and designing advertisements, and the unique requirements of different types of creative messages. Also includes creative considerations for specific media including those driven by technology.
Prerequisite: Mktg 340U.
Mktg 443 - Advertising Campaigns (4)
Emphasis is on the development of total advertising campaign from a marketing perspective. Integrates elements of the advertising process such as setting objectives, selection of target markets, budget development, media selection, message creation, production, development of presentation and recap documents and the staging of a major promotional event using both traditional and emerging advertising media as available.
Prerequisite: Mktg 340U, Mktg 441, and Mktg 442.

Mktg 444 - Advertising Account Management (4)
Course for college seniors who aspire to a career in advertising agencies as account managers as well as students who aspire to a career in advertising media or advertising creative positions working with account managers. Course will cover contemporary topics in account service, client relations, skill building, and career planning. Course format is intended to be highly interactive, with numerous guest lectures from ad executives, case problems, written assignments, reading assignments, agency visitations, and at least one project.
Prerequisite: Mktg 340U.

Mktg 445 - National Student Advertising Competition (2)
A three-term, advanced learning course which is part of a national competition and is offered in conjunction with the American Advertising Federation. Participants will form a traditional advertising agency and develop a national campaign for a national brand company. Campaign development focuses on research, creative strategy, the media plan, ad production, integration of promotional and interactive components, presentation, and budgeting. This is the first course in a sequence of three: Mktg 445, Mktg 446 and Mktg 447.
Prerequisite: Mktg 340U, Mktg 441, and Mktg 442.

Mktg 446 - National Student Advertising Competition (4)
A three-term, advanced learning course which is part of a national competition and is offered in conjunction with the American Advertising Federation. Participants will form a traditional advertising agency and develop a national campaign for a national brand company. Campaign development focuses on research, creative strategy, the media plan, ad production, integration of promotional and interactive components, presentation, and budgeting. This is the second course in a sequence of three: Mktg 445, Mktg 446 and Mktg 447.
Prerequisite: Mktg 340U, Mktg 441, and Mktg 442.

Mktg 447 - National Student Advertising Competition (2)
A three-term, advanced learning course which is part of a national competition and is offered in conjunction with the American Advertising Federation. Participants will form a traditional advertising agency and develop a national campaign for a national brand company. Campaign development focuses on research, creative strategy, the media plan, ad production, integration of promotional and interactive components, presentation, and budgeting. This is the third course in a sequence of three: Mktg 445, Mktg 446 and Mktg 447.
Prerequisite: Mktg 340U, Mktg 441, and Mktg 442.

Mktg 448 - Digital Media Planning and Analytics (4)
This course will dive deeply into the specific strategies and skills required to use digital media as part of an Integrated Marketing Communications (IMC) plan. The emphasis is on the fundamentals of web analytics as a tool for optimizing digital marketing strategies and marketing ROI. Web analytic tracking from various social media platforms is used to assess online customer behavior (i.e. website traffic, click-through rates, conversion rates), to evaluate multi-digital channel performance, and to serve as the basis for assessing cost of customer acquisition and marketing ROI across channels and between communication campaigns.
Prerequisite: BA 311.

Mktg 449 - Portfolio Workshop (2)
Three-day weekend intensive designed to stretch students' ability to quickly assess business problems, gather research and prepare creative communication strategy for presentation to clients. Students work for real clients, who judge presentation one week after faculty critique. Helps build student portfolio work.
Prerequisite: BA 311 and Mktg 340U.

Mktg 450 - Product Innovation and Management (4)
Product innovation is at the core of the marketing process. The Internet has changed the rules of product development by erasing competitive barriers and emphasizing rapid development cycles. The class will focus on identifying new product opportunities, rapid innovation procedures, the management of the development process, and alignment with e-marketing strategy.
Prerequisite: BA 311.
Mktg 452 - Business-to-Business Marketing (3)
Management of the marketing activities of enterprises serving business-to-business markets. The course includes industry and competitor analysis, the fundamentals of competitive advantage and the role of product, price, distribution, and promotion in the creation of competitive market strategies.
Prerequisite: BA 311.

Mktg 455 - Technology Marketing (4)
Survey of Internet-based marketing strategies with special focus on the Web in business-to-business and business-to-consumer situations. The course encompasses the strategic market planning and implementation processes as applied to e-business including identifying and analyzing e-market opportunities, data warehousing/mining, developing e-products, creating the customer interface, e-pricing, e-branding, and e-positioning strategies. Additional emphasis is on creating and leveraging a strategic Web presence with portals, partnerships, community building, and permission-based marketing.
Also offered for graduate-level credit as Mktg 555 and may be taken only once for credit. Prerequisite: BA 311.

Mktg 460 - Marketing Research (4)
Studies the planning, data collection, analysis, and reporting issues relating to marketing research. Key issues include defining information needs, sampling, using conventional methods and information technology to obtain primary and secondary data, instrument design, statistical data analysis, interpretation and reporting of data.
Prerequisite: BA 311.

Mktg 461 - eMarketing (4)
Examines important marketing issues in a business world that is being transformed by widespread adoption of the Internet and related technologies. Topics include customer relationship management, effects of Internet on product-related issues (such as branding and new product development), pricing, distribution, and promotion, security, and privacy concerns.
Also offered for graduate-level credit as Mktg 561 and Mktg 561S and may be taken only once for credit. Prerequisite: BA 311.

Mktg 462 - Marketing Analytics (4)
Designed to introduce fundamental marketing analytic concepts and best practices to support operational, organizational, and marketing decision making. Analytic tools applied to secondary data which includes consumer spending patterns (i.e. dollars spent, frequency of purchase and products/services purchased), market data (i.e. data captured at the point of sale), and/or individual data in response to marketing offers online (i.e. email or web advertisements) or in-store. This course will emphasize the analysis and modeling of customer information as a means of building and managing customer relationships and developing marketing strategy.
Also offered for graduate-level credit as Mktg 562S and may be taken only once for credit. Prerequisite: BA 311 and BA 325.

Mktg 463 - Service Innovation (4)
This course is focused on the issues that confront marketing managers as they address the development of innovative services and service-oriented marketing strategies. It will cover new service design and development, standards, strategy, delivery, and service management with special attention to the technology-enablement of service business models.
Prerequisite: BA 311.

Mktg 464 - Marketing Strategy and Management (4)
Capstone marketing course that focuses on the development of the marketing plan. The emphasis is on integrating the major areas of marketing management including customer identification, industry analysis, product and communication strategies, distribution, pricing, and control in an e-business environment.
Prerequisite: BA 311 and Mktg 460.

Mktg 466 - Principles of International Marketing (4)
Differences between domestic and international marketing are examined. A market-oriented conceptual foundation relating international channels of distribution, financing, documentation, transportation organizing, and staffing is presented.
Prerequisite: BA 311.

Mktg 467 - Sales Management (4)
Survey of the sales management function with attention to sales force selection, allocation of sales effort, motivation and reward of sales force, sales automation tools, and the integration of sales with e-business strategy.
Prerequisite: BA 311.

Mktg 501 - Research (1-9)
(Credit to be arranged.)
Mktg 503 - Thesis (1-9)
(Credit to be arranged.)

Mktg 504 - Internship (1-9)
(Credit to be arranged.)

Mktg 505 - Reading and Conference (1-6)
(Credit to be arranged.) Consent of instructor.

Mktg 507 - Seminar (1-6)

Mktg 507S - Seminar (1-6)

Mktg 509 - Practicum (1-9)
(Credit to be arranged.) Field work involving the practice of professional activities away from campus. Prerequisite: consent of instructor.

Mktg 510 - Selected Topics (1-8)
(Credit to be arranged.)

Mktg 510S - Selected Studies (1-8)
Credits to be arranged.

Mktg 512 - Marketing Strategy (4)
Entrepreneurial, medium- and large-size organizations are considered in terms of how they develop and implement a marketing strategy. Topics include the role of marketing in a competitive environment, market segmentation, selection of target markets, development of product, pricing, packaging and distribution strategies, as well as social and ‘green’ marketing strategies.

Mktg 513 - Pioneering Innovation (4)
This course provides students with an understanding of the innovation process and its relationship to creating and managing organizations that can be sustained in the global economy. Consideration of the customer and the customer/firm interface is emphasized. Additionally the course will include methods for fostering the creative process.

Mktg 514 - Selling and Sales Leadership (4)
Students will study selling as a key component of an organization's overall marketing effort. Specific topics will include the sales process, the crucial role of the sales leader, the relationship of sales and marketing, working with channel partners and key issues in recruiting, training, motivating and compensating a sales force. We will focus on business-to-business selling but much of what we learn could be applied to a business-to-business-to-consumer sales environment.

Mktg 514 - Selling and Sales Leadership (4)
This course provides students with an understanding of the innovation process and its relationship to creating and managing organizations that can be sustained in the global economy. Consideration of the customer and the customer/firm interface is emphasized. Additionally the course will include methods for fostering the creative process.

Mktg 534 - Advertising and Brand Management (4)
Explores how marketing communications support strategic brand management in a changing media and consumer landscape. Examines changes in technology, consumer behavior and brand significance and their effects on the advertising industry. Course emphasizes strategic thinking and creativity, and helps prepare students to effectively contribute to brand building within a firm.

Mktg 535 - Consumer Package Goods Marketing (4)
Examines marketing distribution systems used by food and consumer package goods (CPG) companies. Emphasis on describing CPG industry value chains and how business environmental factors impact the creation, delivery, and capture of customer value by different industry participants. Examines the marketing relationships between manufacturers, wholesalers, brokers, retailers, and consumers. Topics include ECR, category management, Efficient Replenishment, retail trends in buyer behavior, e-commerce, new product introductions, Efficient Promotion, trade relations, industry alliances, competitive trends, channel roles and conflicts, and globalization.

Also offered for undergraduate-level credit as Mktg 435 and may be taken only once for credit. Cross-Listed as: This is the same course as Mktg 535S and may be taken only once for credit.
Mktg 535S - Consumer Package Goods Marketing (4)
Examine the marketing distribution systems used by food and consumer package goods (CPG) companies. Emphasis is on describing CPG industry value chains and how business environmental factors impact the creation, delivery, and capture of customer value by different industry participants. Examines the marketing relationships between manufacturers, wholesalers, brokers, retailers, and consumers. Topics include ECR, category management, Efficient Replenishment, retail trends in buyer behavior, e-commerce, new product introductions, Efficient Promotion, trade relations, industry alliances, competitive trends, channel roles and conflicts, and globalization.
Also offered for undergraduate-level credit as Mktg 435 and may be taken only once for credit. Prerequisite: BA 311 or 339. Cross-listed as: This is the same course as Mktg 535S and may be taken only once for credit.

Mktg 536 - Athletic and Outdoor Marketing (4)
Understand the distinctive challenges and insights of the athletic and outdoor industry. Examine the unique business practices of both manufacturers and retailers in this industry. Study such issues as brand management, customer service, supply chain management, innovation, and sustainability in the athletic and outdoor industry.
Also offered for undergraduate-level credit as Mktg 436 and may be taken only once for credit. Prerequisite: BA 311. Cross-listed as: This is the same course as Mktg 536 and may be taken only once for credit.

Mktg 536S - Athletic and Outdoor Marketing (4)
Understand the distinctive challenges and insights of the active and outdoor industry. Examine the unique business practices of both manufacturers and retailers in this industry. Study such issues as brand management, customer service, supply chain management, innovation, and sustainability in the athletic and outdoor industry.
Also offered for undergraduate-level credit as Mktg 436 and may be taken only once for credit. Prerequisite: BA 311. Cross-listed as: This is the same course as Mktg 536S and may be taken only once for credit.

Mktg 537 - Product Management in the Athletic and Outdoor Industry (4)
Provides insight into the product planning process for apparel, footwear, and hard goods in the athletic and outdoor industry. Provides an overview and hands on project experience of ideating, creating, producing, merchandising, marketing and delivering a product to market.
Also offered for undergraduate-level credit as Mktg 437 and may be taken only once for credit. Prerequisite: BA 311. Cross-listed as: This is the same course as Mktg 537 and may be taken only once for credit.

Mktg 546 - Buyer Behavior and Communication (4)
Study of determinants and influences on purchasing behavior emphasizing contributions from behavioral sciences. Course explores application of competitive and technological influences on buyers behavior and marketing strategy. Emphasis on marketing communication and promotion.

Mktg 547 - Distribution Strategies (3)
Examines the fundamental and emerging trends in distribution activities of business enterprises. Course analyzes the competitive advantage(s) associated with distribution strategies. Explores trends in channel design, the changing role of participants, channel relationships, and channel communications.

Mktg 548 - New Products Management (4)
Reviews the product innovation management process. Major topics include opportunity identification, concept generation, project evaluation, design and development, product launch strategies, and product management. Special consideration will be given to aligning product development with technology-driven, high-growth market opportunities.

Mktg 551 - Managing Marketing Information (3)
Study of the uses and implementation of tools, methods, processes, and systems for managing marketing information. Emphasis will be placed on the determination of information needs for marketing.
decisions, the methods, processes, and systems for effective and efficient management of marketing information, as well as the new marketing approaches and tools that utilize information technology for marketing products and services.

**Mktg 552 - eServices Marketing (4)**
Focuses on understanding the distinction between service versus product marketing with an emphasis on assessing, designing, and managing on-line service offerings. eService relationships will be examined within a customer loyalty framework that considers customer value, switching costs, and online relational bonds as key drivers of loyalty.

**Mktg 555 - Technology Marketing (4)**
Designed to introduce students to the special issues faced by managers marketing technology products in markets characterized by rapid change. Topics include identification of market opportunities, market segmentation, positioning, product innovation, customer value creation, managing the customer interface, and new approaches to distribution. Emphasis will be on strategies for marketing technology products in an e-business environment.

Also offered for undergraduate-level credit as Mktg 455 and may be taken only once for credit.

**Mktg 560 - Research for Marketing Decisions (4)**
Designed to study the methods of gathering primary and secondary information for business decisions. Also designed to study how to become a good information user. Emphasizes the planning, design, and implementation of quantitative and qualitative research projects to obtain information from internal and external business environments. Considers the evaluation and appropriate use of information, information sources and research services.

Prerequisite: ISQA 511.

**Mktg 561 - eMarketing (4)**
Examines important marketing issues in a business world that is being transformed by widespread adoption of the Internet and related technologies. Topics include customer relationship management, effects of Internet on product-related issues (such as branding and new product development), pricing, distribution, and promotion, security, and privacy concerns.

Also offered for undergraduate-level credit as Mktg 461 and may be taken only once for credit.

Prerequisite: BA 311. Cross-Listed as: This is the same course as Mktg 561 and may be taken only once for credit.

**Mktg 561S - eMarketing (4)**
Examines important marketing issues in a business world that is being transformed by widespread adoption of the Internet and related technologies. Topics include customer relationship management, effects of Internet on product-related issues (such as branding and new product development), pricing, distribution, and promotion, security, and privacy concerns.

Also offered for undergraduate-level credit as Mktg 461 and may be taken only once for credit.

Prerequisite: BA 311. Cross-Listed as: This is the same course as Mktg 561 and may be taken only once for credit.

**Mktg 562S - Marketing Analytics (4)**
Designed to introduce fundamental marketing analytics concepts and best practices to support operational, organizational, and marketing decision making. Analytic tools applied to secondary data which includes consumer spending patterns (i.e. dollars spent, frequency of purchase and products/services purchased), market data (i.e. data captured at the point of sale), and/or individual data in response to marketing offers online (i.e. email or web advertisements) or instore. This course will emphasize the analysis and modeling of customer information as a means of building and managing customer relationships and developing marketing strategy.

Also offered for undergraduate-level credit as Mktg 462 and may be taken only once for credit.

Prerequisite: Mktg 512.

**Mktg 566 - Global Marketing Management (4)**
Examines and provides a framework for study of the global marketing environment as well as the management of global marketing enterprises and global marketing practices. Encompasses the preparation for global competition, assessment of environmental forces, and strategic and operational planning for marketing in the global environment. Also examines the management of international, multinational and global marketing enterprises and their marketing activities.

**Mktg 567 - Sales Force Management (3)**
Involves a detailed study of the sales management function. Issues to be addressed include designing the sales force, setting objectives, developing strategy, recruiting, evaluating, compensating, and controlling the program. Special attention is given to integrating the sales force with e-business strategy.
Mktg 601 - Research (1-9)
(Credit to be arranged.)

Mktg 607 - Seminar (1-9)
(Credit to be arranged.)

MSE - Materials Science Engineering
MSE 501 - Research (1-9)
(Credit to be arranged.)

MSE 503 - Thesis (1-12)
(Credit to be arranged.)

MSE 504 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

MSE 505 - Reading and Conference (1-6)
(Credit to be arranged.)

MSE 506 - Special Projects (1-12)
(Credit to be arranged.)

MSE 507 - Seminar (1-4)
(Credit to be arranged.)

MSE 510 - Special Topics (1-4)
(Credit to be arranged.)

MSE 513 - Engineering Design for Materials Scientists (4)
Application of engineering design principles to materials problems: problem definition, design methodology, design philosophy, and practice. Introduction to fundamentals of machine design, mechanical models, mechanical systems. Required course for materials science and engineering students without an engineering background.
Prerequisite: graduate standing.

MSE 515 - Material Testing Methods (4)
Discussion and application of techniques for materials scientists including image analysis, thermal-physical analyses, fracture, and weldability testing. Lecture and laboratory.
Prerequisite: graduate standing.

MSE 547 - Diffusion (4)
The mathematics, physics, and applications of diffusion theory in materials science. Topics include carburization, nitriding, and sensitization of metals; oxidation and ion implant in semiconductors, and polymer diffusion.
Prerequisite: Mth 261, EAS 213, graduate standing.

MS - Military Science
MS 111 - Basic Leadership Skills (1)
Teaches basic leadership skills based on military training doctrine. Students will be introduced to BE-KNOW-DO method of leadership and learn how to apply it to small group leadership situations.

MS 112 - Roles of the Army (1)
A study of the Total Army it’s concepts and role in society. Examines missions, organization, personnel, and history of the Regular Army, National Guard and Reserves.

MS 113 - Adventure Training (1)
The examination and practical application of Basic Rifle Marksmanship, rappelling, mountain climbing, and basic first aid. An optional once a month field trip is offered for more extensive experience.

MS 121 - Leadership Lab (0)
Provides practical experience in selected military skills and drill and ceremonies. Permits the exercise and evaluation of leadership skills in a controlled situation. Taken in conjunction with MS classes.

MS 122 - Basic Leadership Lab (1)
Contact department for a description of this course.

MS 123 - Basic Leadership Lab (1)
Contact department for a description of this course.
MS 131 - Army Physical Fitness Training (1)
The course is designed to introduce students to the basics of physical fitness training as designed by the Army. An Army Master Physical Fitness Instructor instructs it. Participants will train to pass (score of 180 or above) the Army Physical Fitness Test, which is a combination of push-ups, sit-ups, and a 2-mile run.

MS 132 - Basic Physical Fitness (1)
Contact department for a description of this course.

MS 133 - Basic Physical Fitness (1)
Contact department for a description of this course.

MS 180 - Personal Physical Fitness (1)
Contact department for a description of this course.

MS 190 - Conduct-Pers Physical Fitness (1)
Contact department for a description of this course.

MS 199 - Special Studies (1-4)
(Credit to be arranged.)

MS 211 - Land Navigation (2)
Teaches basic topographic map reading skills and land navigation using a lensatic compass and terrain association. Includes practical exercises.

MS 212 - Leadership and Management (2)
Introduction to fundamental leadership and management including problem analysis, decision-making, planning, management control, and interpersonal skills. Topics such as professional ethics, team development, and oral communication skills.

MS 213 - Basic Military Skills (2)
The course teaches basic military skills in first aid, wireless communication, land navigation, weapons systems, and small group leadership techniques.

MS 215 - Fundamentals of Military Science (3)
Contact department for a description of this course.

MS 216 - Basic Military Science (6)
Contact department for a description of this course.

MS 221 - Leadership Lab (1)
Contact department for a description of this course.

MS 222 - Basic Leadership Lab (1)
Contact department for a description of this course.

MS 223 - Basic Leadership Lab (1)
Contact department for a description of this course.

MS 231 - Basic Physical Fitness (1)
Contact department for a description of this course.

MS 232 - Basic Physical Fitness (1)
Contact department for a description of this course.

MS 233 - Basic Physical Fitness (1)
Contact department for a description of this course.

MS 240 - OCS Phase I - Summer (2)
Contact department for a description of this course.

MS 299 - Special Studies (1-4)
(Credits to be arranged.)

MS 309 - Introduction to American Military History (3)
Covers the American Army’s history from its birth in 1775 to the eve of World War I.

MS 310 - American Military History (3)
The course builds on the introduction to American Military History covering World War I to the Global War on Terror. Recommended prerequisite MS 309.
**MS 311 - Military Leadership (3)**
This course studies Army Command and Control along with small unit leadership fundamentals. The Junior Officer’s role and responsibilities in the leadership process are fully examined.

**MS 312 - Military Operations (3)**
The course studies the principles of war and the employment of military forces in accordance with U.S. Army doctrine, organization, equipment, and training.

**MS 313 - Small-Unit Tactics (3)**
The course studies the fundamentals, techniques, and procedures of light infantry squad and platoon tactics. Develops leadership skills in planning, organizing, and conducting small unit operations.

**MS 314 - Advanced Summer Program (0)**
Contact department for a description of this course.

**MS 321 - Advanced Leadership Lab (1)**
Contact department for a description of this course.

**MS 322 - Advanced Leadership Lab (1)**
Contact department for a description of this course.

**MS 323 - Leadership Lab (1)**
Contact department for a description of this course.

**MS 331 - Advanced Physical Fitness (1)**
Contact department for a description of this course.

**MS 332 - Advanced Physical Fitness (1)**
Contact department for a description of this course.

**MS 333 - Advanced Physical Fitness (1)**
Contact department for a description of this course.

**MS 399 - Special Studies (1-4)**
(Credits to be arranged.)

**MS 405 - Reading and Conference (1-6)**
(Credits to be arranged.)

**MS 406 - Special Problems Special Projects (1-4)**
(Credits to be arranged.)

**MS 409 - Practical Field Experiences (1-6)**
This course covers the summer practical experiences at either the Leadership Training Course (LTC) or Leadership Development and Assessment Course (LDAC).

**MS 411 - Army Training Management (4)**
The course studies both the Army’s training philosophy and its training system. The class focuses on the Junior Officer’s role and responsibilities in the process of battle planning, establishment of unit training programs, and execution of military instruction.

**MS 412 - Military Law and Administration (4)**
The course focuses on Military Justice, Army Personnel Management, and Army Logistics and Supply. Students study the Junior Officer’s role and responsibilities in military law enforcement, officer and enlisted personnel management, resource management, and service and support.

**MS 413 - Personal Affairs and Career Development (3)**
An in-depth examination of the Second Lieutenant on the Total Army and preparation for officer commissioning in the Army National Guard, Reserves or Active Duty. This course will help provide students with the critical information on various topics such as; officer specialty selection, unit assignments, promotion and mobilization, career planning and professional development.

**MS 421 - Advanced Leadership Lab (1)**
Contact department for a description of this course.
MS 422 - Advanced Leadership Lab (1)
Contact department for a description of this course.

MS 423 - Advanced Leadership Lab (1)
Contact department for a description of this course.

MS 431 - Advanced Physical Fitness (1)
Contact department for a description of this course.

MS 432 - Advanced Physical Fitness (1)
Contact department for a description of this course.

MS 433 - Advanced Physical Fitness (1)
Contact department for a description of this course.

MS 499 - Special Studies (1-4)
(Credits to be arranged.)

MTax - Taxation
MTax 502 - Independent Study (1-12)
(Credit to be arranged.)

MTax 510 - Selected Topics (1-6)
(Credit to be arranged.)

MTax 525 - Tax Research and Writing (4)
Tax research methods applicable to and written
communication forms common in professional tax
practice; use of professional online taxresearch tools;
legal and professional rules governing tax
practitioners.

MTax 526 - Tax Accounting Methods and Periods
(4)
Determination of taxable year; assignment of items of
gross income, deduction and credit to the proper
taxable year, including coverage of cash, accrual, and
installment methods of accounting; changing of
taxable year and accounting method; interest, below-
market interest, and original issue discount; claim of
right and taxbenefit rules.

MTax 527 - Corporate Taxation I (4)
Taxation of corporate operations, including 1551 and
1561; transactions between corporations and their
shareholders, including transfers to corporations,
dividends and other nonliquidating distributions;
corporate liquidations.

MTax 528 - Corporate Taxation II (4)
Continuation of MTax527, including S corps;
judicial doctrines such as substance over form,
business purpose, step transactions and 7701(o);
corporate reorganizations, acquisitions, divisions and
liquidations of subsidiary corporations; carryover of
tax attributes; consolidated returns; alternative
minimum tax; penalty taxes and anti-abuse
provisions.
Prerequisite: MTax527.

MTax 529 - Federal Tax Procedure (2)
Reporting requirements; audits; appeals function;
assessment procedures; tax litigation, particularly in
the U.S. Tax Court; collections and spousal relief;
penalties.
Prerequisite: Admission to the Master of Taxation or
the Graduate Certificate in Taxation program.

MTax 530 - Taxation of Property Transactions (2)
The legal concept of property and income tax
consequences resulting from sales, exchanges, and
other dispositions of property; determination of
adjusted basis, depreciation deductions and other cost
recovery methods; gain or loss realized and
recognized on disposition; applicable tax rates;
selected nonrecognition events.
Prerequisite: Required second course in program.
Corequisite: Can be taken concurrently with MTax
525.

MTax 531 - Pass-through Entities I (4)
Taxation of partnerships and other entities electing to
be taxed under Subchapter K, such as LLCs;
capitalization; determination of taxable income,
allocation of taxitems; loss limitations; distributions;
754 elections; recourse and nonrecourse liabilities;
disposition of interests; dissolution.

MTax 532 - Pass-through Entities II (2)
Continuation of MTax531, including anti-abuse
rules, self-employment tax, at-risk and passive loss
limitations, “hot assets,” transactions between owners
and entity; distributions to retiring and deceased owners.

Prerequisite: MTax 531.

**MTax 533 - Financial Accounting for Income Taxes (4)**

Financial accounting and reporting standards for the effects of income taxes from corporate activities according to ASC 740, including computation of tax expense or benefit, temporary differences, computation of deferred tax assets and liabilities, valuation allowances, presentation and disclosure, and accounting for uncertainty, and other topics.

Prerequisite: MTax 527.

**MTax 535 - State and Local Taxation (4)**

Overview of taxes imposed at state and local level; taxes imposed on corporations and pass-through entities, conformity to the Internal Revenue Code, methods of reporting; allocation and apportionment; nexus; sales and use taxes; business and nonbusiness income; property taxes; exemptions; tax credits and incentives.

**MTax 536 - International Taxation (4)**

Introduction to U.S. taxation of U.S. firms, citizens, and residents with foreign source income, and U.S. taxation of foreign firms and individuals doing business within the United States.

**MTax 537 - Tax Case Capstone (3)**

Provides students with an opportunity to work on complex tax issues. Students work in teams, coached by experienced tax professionals, to develop solutions which will be deliverable to a hypothetical client both in written memo and oral presentation format. Deliverables will be evaluated by a panel of judges.

Prerequisite: MTax 528 and MTax 532. Corequisite: MTax 528 and MTax 532.

**MTax 538 - Taxation of Real Estate Transactions (2)**

Overview of participants and professional services often involved in real estate transactions; basic sales structures, deeds, titles, financing arrangements, closings; remedies and foreclosure; federal tax provisions applicable to both residential and commercial transactions, including non-recognition provisions; credits, such as low-income housing and rehabilitation credits.

Prerequisite: MTax 530 and admission to the Master of Taxation or the Graduate Certificate in Taxation program.

**MTax 539 - Taxation of Estates, Gifts, and Trusts (4)**

Federal estate, gift and generation-skipping tax laws; history and purposes; included assets; valuation; credits and deductions allowed; income taxation of trusts, estates and beneficiaries.

**MTax 540 - Practicum/Internship (4)**

Tax internship or practicum in a public accounting firm or entity tax department; provides opportunity to apply program content to real-world environments, gain appreciation of work expectations and demands, and relate field experiences to master’s coursework.

Prerequisite: MTax 527 and MTax 531.

**MTax 544 - Professional Practices Seminar (2)**

Provides students an in-depth look at the business of tax, the requirements of a successful tax career, and some niche tax practice opportunities through live and interactive access to leading regional tax professionals speaking about their careers and areas of expertise.

**Mth - Mathematical Sciences**

**Mth 095 - Intermediate Algebra (4)**

Topics include problem solving, linear equations, systems of equations, polynomials and factoring techniques, rational expressions, radicals and exponents, quadratic equations. Credit for enrollment (eligibility) but not toward graduation; satisfies no University or general education requirements.

Prerequisite: Completion of Mth 070 with a grade of C- or above within the last year, or passing the necessary level on the mathematics placement test within the last year (see the Math Department website at pdx.edu/math for additional information).

**Mth 105 - Excursions in Mathematics (4)**

Exploration of a variety of modern mathematical topics. Topics may include the mathematics of voting systems, graphs and networks, symmetry in art and nature, population growth, fractals, probability. Intended for students without a strong algebra/calculus background, but with a desire to explore some interesting mathematics.

Prerequisite: Completion of Mth 95 with a grade of C- or above within the last year, or passing at the necessary level on the mathematics placement test
within the last year (see Math Department webpage at mth.pdx.edu for information).

**Mth 111 - Introductory College Mathematics I (4)**
Introduction to functions, basic properties, graphs and inverse functions. Study of polynomial, rational, exponential, and logarithmic functions. This is the first course in a sequence of two: Mth 111 and Mth 112, which must be taken in sequence.

Prerequisite: Completion of Mth 095 with a grade of C- or above within the last year, or passing at the necessary level on the mathematics placement test within the last year (https://www.pdx.edu/mth/placement).

**Mth 112 - Introductory College Mathematics II (4)**
Introduction to trigonometric functions, basic properties, graphs, and inverse functions. Includes introduction to vectors, parametric equations, and polar coordinates. This is the second course in a sequence of two: Mth 111 and Mth 112, which must be taken in sequence.

Prerequisite: Completion of Mth 111 with a grade of C- or above within the last year, or passing at the necessary level on the mathematics placement test within the last year (https://www.pdx.edu/mth/placement).

**Mth 191 - Mathematics Tutoring (3)**
Training in one-to-one and small-group tutoring over a wide range of mathematical topics. Mth 191: tutoring in arithmetic and other non-university courses. Mth 192: tutoring in freshman-level mathematics. Mth 193: tutoring in sophomore junior-and senior-level mathematics. Required field work consists of providing tutoring service in the community or University. This is the first course in a sequence of three: Mth 191, Mth 192, and Mth 193. Recommended prerequisite: consent of instructor.

**Mth 192 - Mathematics Tutoring (3)**
Training in one-to-one and small-group tutoring over a wide range of mathematical topics. Mth 191: tutoring in arithmetic and other non-university courses. Mth 192: tutoring in freshman-level mathematics. Mth 193: tutoring in sophomore junior-and senior-level mathematics. Required field work consists of providing tutoring service in the community or University. This is the second course in a sequence of three: Mth 191, Mth 192, and Mth 193. Recommended prerequisite: consent of instructor.

**Mth 193 - Mathematics Tutoring (3)**
Training in one-to-one and small-group tutoring over a wide range of mathematical topics. Mth 191: tutoring in arithmetic and other non-university courses. Mth 192: tutoring in freshman-level mathematics. Mth 193: tutoring in sophomore junior-and senior-level mathematics. Required field work consists of providing tutoring service in the community or University. This is the third course in a sequence of three: Mth 191, Mth 192, and Mth 193. Recommended prerequisite: consent of instructor.

**Mth 199 - Special Studies (1-4)**
(Credit to be arranged.)

**Mth 211 - Foundations Of Elementary Mathematics I (4)**
A constructivist approach to fundamental ideas of mathematics for prospective K-8 teachers. Topics include numeration, operations, number theory, and problem solving. This is the first course in a sequence of three: Mth 211, Mth 212, and Mth 213.

Prerequisite: Completion of Mth 95 with a grade of C- or above within the last year, or passing at the necessary level on the mathematics placement test within the last year (see Math Department webpage at mth.pdx.edu for information).

**Mth 212 - Foundations Of Elementary Mathematics II (4)**
A constructivist approach to fundamental ideas of mathematics for prospective K-8 teachers. Topics include rational numbers, probability, and statistics. This is the second course in a sequence of three: Mth 211, Mth 212, and Mth 213.

Prerequisite: Mth 211.

**Mth 213 - Foundations Of Elementary Mathematics III (4)**
A constructivist approach to fundamental ideas of mathematics for prospective K-8 teachers. Topics include algebra, geometry, and measurement. This is the third course in a sequence of three: Mth 211, Mth 212, and Mth 213.

Prerequisite: Mth 211.

**Mth 231 - Data Science Seminar (2)**
Introduction to data science presented in the form of lectures by the instructor as well as guest lectures from local industry experts illustrating the potential of data science in terms of success stories in various application areas of science, engineering, medicine.
and finance. The presented examples will describe the kind of mathematical, statistical, and computer science skills needed for a data scientist to be successful in their future career.

Prerequisite: Completion of Mth 111 with a grade of C- or above within the last year, or passing at the necessary level on the mathematics placement test within the last year (https://www.pdx.edu/math/placement).

**Mth 251 - Calculus I (4)**
Differential calculus of functions of a single variable, including limits, the definition and computation of the derivative, and applications of the derivative. This is the first course in a sequence of three: Mth 251, Mth 252, and Mth 253, which must be taken in sequence.

Prerequisite: Completion of Mth 112 with a grade of C- or above within the last year, or passing at the necessary level on the mathematics placement test within the last year (see Math Department webpage at math.pdx.edu for information).

**Mth 251R - Recitation Mth 251 (0)**
Recitation for Mth 251.

**Mth 252 - Calculus II (4)**
Integral calculus of functions of a single variable, including the Fundamental Theorem of Calculus, numerical integration and applications. This is the second course in a sequence of three: Mth 251, Mth 252, and Mth 253, which must be taken in sequence.

Prerequisite: Mth 251.

**Mth 253 - Calculus III (4)**
Introduction to differential equations, infinite series, parametric equations, polar coordinates, and conic sections. This is the third course in a sequence of three: Mth 251, Mth 252, and Mth 253, which must be taken in sequence.

Prerequisite: Mth 252.

**Mth 254 - Calculus IV (4)**
An introduction to differential and integral calculus of functions of several variables, including vector geometry, the calculus of vector valued functions, and applications.

Prerequisite: Mth 253 or (Mth 252 and Mth 261).

**Mth 255 - Calculus V (4)**
Further study of multiple integrals, line and surface integrals, Green’s theorem, Stokes’ theorem, the divergence theorem, and applications.

Prerequisite: Mth 253.

**Mth 256 - Applied Ordinary Differential Equations (4)**
Solution techniques in ordinary differential equations; applications.

Prerequisite: Mth 252, Mth 261.

**Mth 261 - Introduction to Linear Algebra (4)**
Systems of linear equations, linear transformations, matrix algebra, vector spaces, and determinants.

Prerequisite: Mth 251.

**Mth 261R - Recitation for Mth 261 (0)**
Recitation for Mth 261.

**Mth 271 - Mathematical Computing (4)**

Prerequisite: Mth 253, Mth 261.

**Mth 299 - Special Studies (1-4)**
(Credit to be arranged.)

**Mth 300 - Introduction to Mathematical Reasoning (4)**
Fundamental abstract concepts common to all branches of mathematics, including first order predicate calculus, sets and functions, and elements from group theory and the foundations of analysis. Special emphasis is placed on the ability to understand and construct rigorous proofs.

Prerequisite: Mth 253, Mth 261.

**Mth 311 - Introduction to Mathematical Analysis I (4)**
A rigorous treatment of the concepts of analysis. Properties of the real numbers. Sequences. Functions of a real variable: limits, continuity, and differentiability. This is the first course in a sequence of two: Mth 311, Mth 312 and must be taken in sequence.

Prerequisite: Mth 253.
Mth 312 - Introduction to Mathematical Analysis II (4)
A rigorous treatment of the concepts of analysis. Integration on the real line. Series of real numbers. Series of functions. Uniform convergence. Power series. This is the second course in a sequence of two: Mth 311, Mth 312 and must be taken in sequence.
Prerequisite: Mth 311.

Mth 313 - Advanced Multivariate Calculus (4)
Differential and integral calculus of functions of several variables, the inverse and implicit function theorems, vector field theory, line and surface integrals, Green's, Stokes', and Gauss' theorems.
Prerequisite: Mth 254 and Mth 312.

Mth 322 - Applied Partial Differential Equations (4)
Introduction to equations of mathematical physics, in particular, linear and nonlinear advection equation, wave equation, initial and boundary value problems, method of characteristics, separation of variables.
Prerequisite: Mth 256.

Mth 324 - Vector Analysis (4)
Modern vector methods with applications for students of mathematics, physics, and engineering.
Prerequisite: Mth 254.

Mth 338 - Modern College Geometry (4)
Topics in Euclidean and non-Euclidean geometry.
Prerequisite: Mth 252, Mth 261.

Mth 343 - Applied Linear Algebra (4)
Topics in matrix algebra, determinants, systems of linear equations, eigenvalues, eigenvectors, and linear transformations. Selected applications from science, engineering, computer science, and business.
Prerequisite: Mth 252, Mth 261.

Mth 344 - Introduction to Group Theory and Applications (4)
Groups, homomorphisms, factor groups. Selected applications from geometry, combinatorics, computer science, chemistry.
Prerequisite: Mth 252, Mth 261.

Mth 345 - Introduction to Ring and Field Theory (4)
Topics in rings, integral domains, fields, ordered fields, polynomial rings. The development of the real number system.
Prerequisite: Mth 344.

Mth 346 - Number Theory (4)
A presentation of the properties of numbers as found in the theory of divisibility, congruence, diophantine equations, continued fractions, and algebraic numbers.
Prerequisite: Mth 252, Mth 261.

Mth 356 - Discrete Mathematics (4)
Topics in discrete mathematics, including propositional logic, sets, relations, inverse functions, divisibility, induction, recurrences, inclusion-exclusion, permutations, combinations, graphs, graph coloring, and applications. Expected preparation: MTH 261.
Prerequisite: Mth 253.

Mth 371 - Large-Scale Data Algorithms (4)
Relations, graphs and sparse matrices as tools for representing large-scale data. Graph Laplacian and modularity matrices. Spectral clustering, weighted graph matching, and modularity optimization. Gradient descent methods accelerated by coarse models for solving large-scale systems of equations.
Prerequisite: Mth 343 and (Mth 271 or CS 161).

Mth 399 - Special Studies (1-6)
(Credit to be arranged.)

Mth 399U - Special Studies (4)
(Credit to be arranged.)

Mth 401 - Research (1-6)
(Credit to be arranged.) Consent of instructor.

Mth 402 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Mth 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

Mth 405 - Reading and Conference (1-6)
(Credit to be arranged.) Consent of instructor.

Mth 407 - Seminar (1-6)
(Credit to be arranged.) Consent of instructor.
Mth 410 - Selected Topics (1-6)
(Credit to be arranged.) Consent of instructor.

Mth 411 - Introduction to Real Analysis I (3)
Analysis on metric spaces, Baire Category, Contraction Mapping, and Stone-Weierstrass theorems. This is the first course in a sequence of three: Mth 411, Mth 412 and Mth 413 which must be taken in sequence.

Also offered for graduate-level credit as Mth 511 and may be taken only once for credit. Prerequisite: Mth 312.

Mth 412 - Introduction to Real Analysis II (3)
Lebesgue measure and integration theory, functions of bounded variation, absolutely continuous functions. This is the second course in a sequence of three: Mth 411, Mth 412 and Mth 413 which must be taken in sequence.

Also offered for graduate-level credit as Mth 512 and may be taken only once for credit. Prerequisite: Mth 411.

Mth 413 - Introduction to Real Analysis III (3)
Banach and Hilbert spaces, bases and duality in Hilbert spaces, linear operators on Banach spaces, introduction to Fourier series. This is the third course in a sequence of three: Mth 411, Mth 412 and Mth 413 which must be taken in sequence.

Also offered for graduate-level credit as Mth 513 and may be taken only once for credit. Prerequisite: Mth 412.

Mth 420 - Introduction to Complexity Theory (3)
An introduction to theoretical computer science. Includes a study of models of computation, complexity classes, Cook's theorem, polynomial and nonpolynomial classes, discrete problems. Prerequisite: Mth 344.

Mth 421 - Theory of Ordinary Differential Equations I (3)
Vector fields and phase flows in the plane. Linear systems. Existence, uniqueness, and continuity theorems for systems. Additional topics. This is the first course in a sequence of three: Mth 421, Mth 422, and Mth 423 which must be taken in sequence.

Also offered for graduate-level credit as Mth 521 and may be taken only once for credit. Prerequisite: Mth 256 and Mth 312.

Mth 422 - Theory of Ordinary Differential Equations II (3)
Nonlinear systems, Equilibria and local stability. Gradient and Hamiltonian systems. Poincare maps and limit sets. Applications and additional topics. This is the second course in a sequence of three: Mth 421, Mth 422, and Mth 423 which must be taken in sequence.

Also offered for graduate-level credit as Mth 522 and may be taken only once for credit. Prerequisite: Mth 421.

Mth 423 - Theory of Ordinary Differential Equations III (3)
The two-body problem. The Lorenz system. Homoclinic bifurcations. Chaotic attractors. Horseshoes. Symbolic dynamics and the shift map. Discrete dynamics. Additional topics. This is the third course in a sequence of three: Mth 421, Mth 422, and Mth 423 which must be taken in sequence.

Also offered for graduate-level credit as Mth 523 and may be taken only once for credit. Prerequisite: Mth 422.

Mth 424 - Elementary Differential Geometry I (3)
Differential geometry of curves and surfaces: parametrizations, global properties of curves, surfaces of dimension three, examples, first and second fundamental form, curvature, geodesics. This is the first course in a sequence of two: Mth 424 and Mth 425 which must be taken in sequence.

Also offered for graduate-level credit as Mth 524 and may be taken only once for credit. Prerequisite: Either Mth 421 or both Mth 254 and Mth 256.

Mth 425 - Elementary Differential Geometry II (3)
Surfaces of constant curvature, the Gauss-Bonnet theorem; spherical and hyperbolic geometry, elementary Riemannian geometry applications from mechanics and field theory. This is the second course in a sequence of two: Mth 424 and Mth 425 which must be taken in sequence.

Also offered for graduate-level credit as Mth 525 and may be taken only once for credit. Prerequisite: Mth 424.

Mth 427 - Partial Differential Equations I (3)
Solution techniques, qualitative analysis and applications: separation of variables, eigenfunction expansion, Fourier series solutions, Sturm-Liouville problems. This is the first course in a sequence of two: Mth 427 and Mth 428 which must be taken in sequence. Prior knowledge of PDEs (Mth 322) is recommended, but not required.
Mth 428 - Partial Differential Equations II (3)
Higher dimensional equations, heat conduction in a disk, vibrating membrane, spherical problems, Bessel and Legendre functions, Green’s functions, Fredholm alternative. Infinite domain problems, Fourier transforms solutions, finite difference methods. This is the second course in a sequence of two: Mth 427 and Mth 428 which must be taken in sequence.

Also offered for graduate-level credit as Mth 528 and may be taken only once for credit. Prerequisite: Mth 427.

Mth 430 - Topics in Mathematical Modeling (3)
Basic introduction to mathematical model building starting with prototype, model purpose definition, and model validation. Models will be chosen from life, the physical and social sciences. Applications chosen from differential equations, linear programming, group theory, probability or other fields. With approval, this course may be repeated for credit.

Also offered for graduate-level credit as Mth 530. Prerequisite: Consent of instructor and either Mth 256 or Mth 421/Mth 521.

Mth 431 - Topics in Geometry I (3)
Topics selected from projective geometry, non-Euclidean geometry, algebraic geometry, convexity, differential geometry, foundations of geometry, combinatorial topology. This is the first course in a sequence of three: Mth 431, Mth 432, and Mth 433; with departmental approval, this sequence may be repeated for credit.

Also offered for graduate-level credit as Mth 531. Prerequisite: Mth 311, Mth 338, or Mth 344.

Mth 432 - Topics in Geometry II (3)
Topics selected from projective geometry, non-Euclidean geometry, algebraic geometry, convexity, differential geometry, foundations of geometry, combinatorial topology. This is the second course in a sequence of three: Mth 431, Mth 432, and Mth 433; with departmental approval, this sequence may be repeated for credit.

Also offered for graduate-level credit as Mth 532. Prerequisite: Mth 311, Mth 338, or Mth 344.

Mth 433 - Topics in Geometry III (3)
Topics selected from projective geometry, non-Euclidean geometry, algebraic geometry, convexity, differential geometry, foundations of geometry, combinatorial topology. This is the third course in a sequence of three: Mth 431, Mth 432, and Mth 433; with departmental approval, this sequence may be repeated for credit.

Also offered for graduate-level credit as Mth 533. Prerequisite: Mth 311, Mth 338, or Mth 344.

Mth 434 - Set Theory and Topology I (3)
DeMorgan’s Laws, partially ordered and well-ordered sets, Cardinal and ordinal numbers. The axiom of choice and equivalent formulations. Additional topics. This is the first course in a sequence of three: Mth 434, Mth 435, and Mth 436 which must be taken in sequence.

Also offered for graduate-level credit as Mth 534 and may be taken only once for credit. Prerequisite: Mth 311.

Mth 435 - Set Theory and Topology II (3)
Introduction to general topology with the notions of interior, closure, topological space, continuity, and homeomorphism. Construction techniques and properties of point-set topology, especially connectedness, compactness, and separation. This is the second course in a sequence of three: Mth 434, Mth 435, and Mth 436 which must be taken in sequence.

Also offered for graduate-level credit as Mth 535 and may be taken only once for credit. Prerequisite: Mth 434.

Mth 436 - Set Theory and Topology III (3)
Covering spaces, fundamental group. Additional topics. This is the third course in a sequence of three: Mth 434, Mth 435, and Mth 436 which must be taken in sequence.

Also offered for graduate-level credit as Mth 536 and may be taken only once for credit. Prerequisite: Mth 435.

Mth 441 - Introduction to Abstract Algebra I (3)
Group theory and homomorphism theorems. This is the first course in a sequence of three: Mth 441, Mth 442, and Mth 443 which must be taken in sequence.

Also offered for graduate-level credit as Mth 541 and may be taken only once for credit. Prerequisite: Mth 441.

Mth 442 - Introduction to Abstract Algebra II (3)
The theory of rings, modules, and fields. This is the second course in a sequence of three: Mth 441, Mth 442, and Mth 443 which must be taken in sequence.

Also offered for graduate-level credit as Mth 542 and may be taken only once for credit. Prerequisite: Mth 441.
Mth 443 - Introduction to Abstract Algebra III (3)
Topics may include: advanced theory of groups, rings, and fields, as well as linear algebra or Galois theory. This is the third course in a sequence of three: Mth 441, Mth 442, and Mth 443 which must be taken in sequence.
Also offered for graduate-level credit as Mth 543 and may be taken only once for credit. Prerequisite: Mth 442.

Mth 444 - Advanced Linear/Multilinear Algebra I (3)
Vector spaces, linear transformations, matrices, products, quotients, and duals of vector spaces. Minimal and characteristic polynomials, canonical forms. This is the first course in a sequence of two: Mth 444 and Mth 445 which must be taken in sequence.
Also offered for graduate-level credit as Mth 544. Prerequisite: Mth 344.

Mth 445 - Advanced Linear/Multilinear Algebra II (3)
Multilinear maps, tensor products, exterior algebra. Finite dimensional spectral theory. This is the second course in a sequence of two: Mth 444 and Mth 445 which must be taken in sequence.
Also offered for graduate-level credit as Mth 545 and may be taken only once for credit. Prerequisite: Mth 444.

Mth 449 - Topics in Advanced Number Theory (3)
A study of advanced topics selected from the areas of algebraic or analytic theory. With departmental approval, this course may be repeated for credit.
Also offered for graduate-level credit as Mth 549 and may be taken only once for credit. Prerequisite: Mth 346.

Mth 451 - Numerical Calculus I(3)
Also offered for graduate-level credit as Mth 551 and may be taken only once for credit. Prerequisite: knowledge of a programming language such as MATLAB or C/C++, Mth 253 and Mth 261.

Mth 452 - Numerical Calculus II (3)
Also offered for graduate-level credit as Mth 552 and may be taken only once for credit. Prerequisite: knowledge of a programming language such as MATLAB or C/C++, Mth 253 and Mth 261.

Mth 453 - Numerical Calculus III (3)
Also offered for graduate-level credit as Mth 553 and may be taken only once for credit. Prerequisite: knowledge of a programming language such as MATLAB or C/C++, Mth 253 and Mth 261.

Mth 456 - Topics in Combinatorics (3)
Selected topics from: permutations, combinations, partitions, generating functions, inclusion/exclusion, recursion, Polya counting, block designs, orthogonal polynomials, and error-correcting codes. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 556. Prerequisite: Mth 356 or CS 251.

Mth 457 - The Mathematical Theory of Games I (3)
Introduction to mathematical game theory and game theoretic analysis. Topics include: combinatorial and strategic games, Perfect Competition, Zermelo's Algorithm, Payoffs, cooperative and non-cooperative games, bargaining, mixed strategies, and Nash Equilibria. Selected applications to economics, biology, computer science, and political science. This is the first course in a sequence of two: Mth 457 and Mth 458 which must be taken in sequence.
Also offered for graduate-level credit as Mth 557 and may be taken only once for credit. Prerequisite: Mth 261 and/or Stat 243.
**Mth 458 - The Mathematical Theory of Games II (3)**

Introduction to mathematical game theory and game theoretic analysis. Topics include: Dilemma, search, and differential games. Repeated games and finite automata. Common knowledge, complete and incomplete information, behavioral and evolutionary stable strategies, assessment equilibria. Selected applications to economics, biology, computer science, and political science. This is the second course in a sequence of two: Mth 457 and Mth 458 which must be taken in sequence.

Also offered for graduate-level credit as Mth 558 and may be taken only once for credit. Prerequisite: Mth 457.

**Mth 461 - Graph Theory I (3)**

Topics in graph theory, including connectivity, matchings, graph algorithms, network flows, isomorphisms, Eulerian graphs, spanning trees, decompositions, shortest paths, colorings of graphs, and selected applications. This is the first course in a sequence of two: Mth 461 and Mth 462 which must be taken in sequence.

Also offered for graduate-level credit as Mth 561 and may be taken only once for credit. Prerequisite: Mth 261, Mth 356.

**Mth 462 - Graph Theory II (3)**

Topics in graph theory, including graph matrices, Hamiltonian graphs, the matrix-tree theorem, planarity and embeddings, Kuratowski's theorem, matroids, and selected applications. This is the second course in a sequence of two: Mth 461 and Mth 462 which must be taken in sequence.

Also offered for graduate-level credit as Mth 562 and may be taken only once for credit. Prerequisite: Mth 461.

**Mth 464 - Numerical Optimization I (3)**

Fundamentals of unconstrained optimization, necessary and sufficient conditions, overview of numerical algorithms, rate of convergence, line search and trust-region methods. Gradient descent, conjugate gradient, Newton and quasi-Newton methods, nonlinear least-squares problems, Gauss-Newton and Levenberg-Marquardt methods, practical applications. This is the first course in a sequence of two: Mth 464 and Mth 465. Expected preparation: knowledge of a high-level programming language such as MATLAB, Python, R, or C/C++.

Also offered for graduate-level credit as Mth 564 and may be taken only once for credit. Prerequisite: Mth 254 and Mth 261.

**Mth 465 - Numerical Optimization II (3)**

Theory of constrained optimization, equality and inequality constraints, Lagrange multipliers, Karush-Kuhn-Tucker (KKT) optimality conditions, penalty methods, quadratic and sequential quadratic programming, applications. This is the second course in a sequence of two: Mth 464/564 and Mth 465/565 which must be taken in sequence.

Also offered for graduate-level credit as Mth 565 and may be taken only once for credit. Prerequisite: Mth 464.

**Mth 470 - Complex Analysis and Boundary Value Problems I (3)**

Fundamental concepts of complex analysis. Cauchy's theorem. Analytic functions. Power and Laurent series. Residue Theorem. This is the first course in a sequence of three: Mth 470, Mth 471, and Mth 472 which must be taken in sequence.

Also offered for graduate-level credit as Mth 570 and may be taken only once for credit. Prerequisite: Mth 254 and either Mth 256 or Mth 421.

**Mth 471 - Complex Analysis and Boundary Value Problems II (3)**

Fundamental concepts of complex analysis. Calculus of residues and applications. Conformal mappings. Zero-Pole theorem. Infinite products. This is the second course in a sequence of three: Mth 470, Mth 471, and Mth 472 which must be taken in sequence.

Also offered for graduate-level credit as Mth 571 and may be taken only once for credit. Prerequisite: Mth 470.

**Mth 472 - Complex Analysis and Boundary Value Problems III (3)**

Partial differential equations and boundary value problems using Fourier series. This is the third course in a sequence of three: Mth 470, Mth 471, and Mth 472 which must be taken in sequence.

Also offered for graduate-level credit as Mth 572 and may be taken only once for credit. Prerequisite: Mth 471.

**Mth 477 - Mathematical Control Theory I (3)**

Mathematical foundations of linear time invariant control systems. Controllability, observability, stabilizability, feedback. Applications. This is the first course in a sequence of two: Mth 477 and Mth 478, which must be taken in sequence. Expected preparation: Mth 253, Mth 254.

Also offered for graduate-level credit as Mth 577 and may be taken only once for credit. Prerequisite: Mth 256.
Mth 478 - Mathematical Control Theory II (3)
Elements of the calculus of variations and optimal control. Dynamic programming. Pontryagin maximum principle. Applications. This is the second course in a sequence of two: Mth 477 and Mth 478 which must be taken in sequence.
Also offered for graduate-level credit as Mth 578 and may be taken only once for credit.. Prerequisite: Mth 477..

Mth 481 - Topics in Probability for Mathematics Teachers (3)
Selected topics in probability for mathematics teachers. Topics may include origins and development of probability theory, counting theory, laws of probability, conditional probability, independence, odds, standard discrete and continuous probability distributions, expected values, moment generating functions, and numerous computer simulations. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 581.. Prerequisite: Stat 244 and two upper-division courses approved for math major credit or Stat 452 or Stat 462.

Mth 482 - Topics in Statistics for Mathematics Teachers (3)
Selected topics in statistics for mathematics teachers. Potential topics include descriptive statistics (measures of center, variability, skewness, etc.), inferential statistics (one and two population problems), Central Limit Theorem, modeling and simulation techniques, and research design techniques. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 582.. Prerequisite: Stat 244 and two upper-division courses approved for math major credit or Stat 452 or Stat 462.

Mth 483 - Topics in Geometry for Mathematics Teachers (3)
Selected topics in geometry for mathematics teachers. Potential topics include inductive and deductive reasoning, analytic and metric geometry, isometry and symmetry, and hyperbolic, spherical and/or taxicab geometry. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 583.. Prerequisite: Mth 338.

Mth 484 - Topics in Algebra for Mathematics Teachers (3)
Selected topics in algebra for mathematics teachers. Potential topics may include algebraic structures (groups, rings, fields, vector spaces), equivalence, function, operation, well-defined-ness, equation solving, algorithms, and proving using geometric, symbolic, and verbal representation systems. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 584.. Prerequisite: Mth 344.

Mth 485 - Topics in Analysis for Mathematics Teachers (3)
Selected topics in analysis for mathematics teachers. Potential topics include functions, limits, continuity, derivatives, integration, completeness, covariation, sequences and series, differential equations, complex analysis, and topology. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 585.. Prerequisite: Mth 311.

Mth 486 - Topics in The History of Mathematics (3)
Selected topics in the historical development of mathematics. With departmental approval, this course may be repeated for credit.
Also offered for graduate-level credit as Mth 586.. Prerequisite: at least two upper-division courses approved for major credit..

Mth 487 - Topics in Discrete Mathematics for Mathematics Teachers (3)
Selected topics in discrete mathematics for teachers. Potential topics include set theory, logic, elementary probability theory, relations, recursions, algorithms, counting theory, permutations, finance mathematics, combinations, graph theory, algorithms, logic, and number theory. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 587.. Prerequisite: Mth 356.

Mth 488 - Topics in Computing for Mathematics Teachers (3)
Selected topics and tools for mathematical computing for mathematics teachers. As an example, a simple but powerful set of programming and graphical tools in ‘C’ may be introduced and used to explore a wide range of mathematical topics including statistics, probability, trigonometry, analytic geometry, calculus and modeling. With departmental approval may be repeated for credit.
Also offered for graduate-level credit as Mth 588.. Prerequisite: (Mth 271 or CS 161) and Mth 344.

Mth 491 - Experimental Probability and Statistics for Middle School Teachers (4)
A study of probability and statistics through laboratory experiments, simulations, and applications, with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for graduate-level credit as Mth 591 and may be taken only once for credit.. Prerequisite: Mth 112, Mth 212, Mth 213..

Mth 493 - Geometry for Middle School Teachers (4)
Selected topics from informal geometry, both two- and three-dimensional, with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for graduate-level credit as Mth 593 and may be taken only once for credit.. Prerequisite: Mth 112, Mth 212, Mth 213..

Mth 494 - Arithmetic and Algebraic Structures for Middle School Teachers (4)
The study of the real number system and its subsystems will lead to the introduction of more general algebraic structures and their applications, with focus on problem solving. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for graduate-level credit as Mth 594 and may be taken only once for credit.. Prerequisite: Mth 112, Mth 212, Mth 213..

Mth 495 - Historical Topics in Mathematics for Middle School Teachers (4)
A survey of the historical development of topics in mathematics from ancient to modern times, with special emphasis on topics in arithmetic, algebra and informal geometry, and with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for graduate-level credit as Mth 595 and may be taken only once for credit.. Prerequisite: Mth 112, Mth 212, Mth 213..

Mth 496 - Concepts of Calculus for Middle School Teachers (4)
An introduction to the limit concept and its role in defining the derivative, the integral and infinite series. Applications to middle school mathematics, with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for graduate-level credit as Mth 596 and may be taken only once for credit.. Prerequisite: Mth 112, Mth 212, Mth 213..

Mth 497 - Mathematics in the Middle School Classroom (4)
A survey of mathematics taught in the middle school grades, with focus on both content and pedagogical recommendations of the National Council of Teachers of Mathematics, and with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in mathematics for middle school teachers.

Also offered for graduate-level credit as Mth 597 and may be taken only once for credit.. Prerequisite: Mth 112, Mth 212, Mth 213..

Mth 501 - Research (1-9)
(Credit to be arranged.) Consent of instructor.

Mth 503 - Thesis (1-9)
(Credit to be arranged.)

Mth 504 - Cooperative Education/Internship (1-9)
(Credit to be arranged.)

Mth 505 - Reading and Conference (1-4)
(Credit to be arranged.) Consent of instructor.

Mth 507 - Seminar (1-6)
(Credit to be arranged.) Consent of instructor.

Mth 509 - Practicum (1-9)
(Credit to be arranged.)
Mth 510 - Selected Topics (1-6)
(Credit to be arranged.) Consent of instructor.

Mth 511 - Introduction to Real Analysis I (3)
Analysis on metric spaces, Baire Category, Contraction Mapping, and Stone-Weierstrass theorems. This is the first course in a sequence of three: Mth 511, Mth 512 and Mth 513 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 411 and may be taken only once for credit.
Prerequisite: Mth 312.

Mth 512 - Introduction to Real Analysis II (3)
Lebesgue measure and integration theory, functions of bounded variation, absolutely continuous functions. This is the second course in a sequence of three: Mth 511, Mth 512 and Mth 513 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 412 and may be taken only once for credit.
Prerequisite: Mth 511.

Mth 513 - Introduction to Real Analysis III (3)
Banach and Hilbert spaces, bases and duality in Hilbert spaces, linear operators on Banach spaces, introduction to Fourier series. This is the third course in a sequence of three: Mth 511, Mth 512 and Mth 513 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 413 and may be taken only once for credit.
Prerequisite: Mth 512.

Mth 521 - Theory of Ordinary Differential Equations I (3)
Vector fields and phase flows in the plane. Linear systems. Existence, uniqueness, and continuity theorems for systems. Additional topics. This is the first course in a sequence of three: Mth 521, Mth 522, and Mth 523 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 421 and may be taken only once for credit.
Prerequisite: Mth 256 and Mth 312.

Mth 522 - Theory of Ordinary Differential Equations II (3)
Nonlinear systems. Equilibria and local stability. Gradient and Hamiltonian systems. Poincare maps and limit sets. Applications and additional topics. This is the second course in a sequence of three: Mth 521, Mth 522, and Mth 523 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 422 and may be taken only once for credit.
Prerequisite: Mth 521.

Mth 523 - Theory of Ordinary Differential Equations III (3)
The two-body problem. The Lorenz system. Homoclinic bifurcations. Chaotic attractors. Horseshoes. Symbolic dynamics and the shift map. Discrete dynamics. Additional topics. This is the third course in a sequence of three: Mth 521, Mth 522, and Mth 523 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 423 and may be taken only once for credit.
Prerequisite: Mth 522.

Mth 524 - Elementary Differential Geometry I (3)
Differential geometry of curves and surfaces: parametrizations, global properties of curves, surfaces of dimension three, examples, first and second fundamental form, curvature, geodesics. This is the first course in a sequence of two: Mth 524 and Mth 525 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 424 and may be taken only once for credit.
Prerequisite: Either Mth 521 or both Mth 254 and Mth 256.

Mth 525 - Elementary Differential Geometry II (3)
Surfaces of constant curvature, the Gauss-Bonnet theorem; spherical and hyperbolic geometry, elementary Riemannian geometry applications from mechanics and field theory. This is the second course in a sequence of two: Mth 524 and Mth 525 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 425 and may be taken only once for credit.
Prerequisite: Mth 524.

Mth 527 - Partial Differential Equations I (3)
Solution techniques, qualitative analysis and applications: separation of variables, eigenfunction expansion, Fourier series solutions, Sturm-Liouville problems. This is the first course in a sequence of two: Mth 527 and Mth 528 which must be taken in sequence. Prior knowledge of PDEs (Mth 322) is recommended, but not required.
Also offered for undergraduate-level credit as Mth 427 and may be taken only once for credit.
Prerequisite: Mth 256, Mth 253, Mth 254.

Mth 528 - Partial Differential Equations II (3)
Higher dimensional equations, heat conduction in a disk, vibrating membrane, spherical problems, Bessel and Legendre functions, Green’s functions, Fredholm alternative. Infinite domain problems, Fourier
transforms solutions, finite difference methods. This is the second course in a sequence of two: Mth 527 and Mth 528 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 428 and may be taken only once for credit.

Prerequisite: Mth 527.

Mth 530 - Topics in Mathematical Modeling (3)

Basic introduction to mathematical model building starting with prototype, model purpose definition, and model validation. Models will be chosen from life, the physical and social sciences. Applications chosen from differential equations, linear programming, group theory, probability or other fields. With approval, this course may be repeated for credit.

Also offered for undergraduate-level credit as Mth 430.

Prerequisite: Consent of instructor and either Mth 256 or Mth 421/Mth 521.

Mth 531 - Topics in Geometry I (3)

Topics selected from projective geometry, non-Euclidean geometry, algebraic geometry, convexity, differential geometry, foundations of geometry, combinatorial topology. This is the first course in a sequence of three: Mth 531, Mth 532, and Mth 533; with departmental approval, this sequence may be repeated for credit.

Also offered for undergraduate-level credit as Mth 431.

Prerequisite: Mth 311, Mth 338, or Mth 344.

Mth 532 - Topics in Geometry II (3)

Topics selected from projective geometry, non-Euclidean geometry, algebraic geometry, convexity, differential geometry, foundations of geometry, combinatorial topology. This is the second course in a sequence of three: Mth 531, Mth 532, and Mth 533; with departmental approval, this sequence may be repeated for credit.

Also offered for undergraduate-level credit as Mth 432.

Prerequisite: Mth 311, Mth 338, or Mth 344.

Mth 533 - Topics in Geometry III (3)

Topics selected from projective geometry, non-Euclidean geometry, algebraic geometry, convexity, differential geometry, foundations of geometry, combinatorial topology. This is the third course in a sequence of three: Mth 531, Mth 532, and Mth 533; with departmental approval, this sequence may be repeated for credit.

Also offered for undergraduate-level credit as Mth 433.

Prerequisite: Mth 311, Mth 338, or Mth 344.

Mth 534 - Set Theory and Topology I (3)

De Morgan’s Laws, partially ordered and well-ordered sets, Cardinal and ordinal numbers. The axiom of choice and equivalent formulations. Additional topics. This is the first course in a sequence of three: Mth 534, Mth 535, and Mth 536 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 434 and may be taken only once for credit.

Prerequisite: Mth 311.

Mth 535 - Set Theory and Topology II (3)

Introduction to general topology with the notions of interior, closure, topological space, continuity, and homeomorphism. Construction techniques and properties of point-set topology, especially connectedness, compactness, and separation. This is the second course in a sequence of three: Mth 534, Mth 535, and Mth 536 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 435 and may be taken only once for credit.

Prerequisite: Mth 534.

Mth 536 - Set Theory and Topology III (3)

Covering spaces, fundamental group. Additional topics. This is the third course in a sequence of three: Mth 534, Mth 535, and Mth 536 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 436 and may be taken only once for credit.

Prerequisite: Mth 535.

Mth 541 - Introduction to Abstract Algebra I (3)

Group theory and homomorphism theorems. This is the first course in a sequence of three: Mth 541, Mth 542, and Mth 543 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 441 and may be taken only once for credit.

Prerequisite: Mth 344.

Mth 542 - Introduction to Abstract Algebra II (3)

The theory of rings, modules, and fields. This is the second course in a sequence of three: Mth 541, Mth 542, and Mth 543 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 442 and may be taken only once for credit.

Prerequisite: Mth 541.

Mth 543 - Introduction to Abstract Algebra III (3)

Topics may include: advanced theory of groups, rings, and fields, as well as linear algebra or Galois theory. This is the third course in a sequence of three:
Mth 541, Mth 542, and Mth 543 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 443 and may be taken only once for credit. Prerequisite: Mth 542.

Mth 544 - Advanced Linear/Multilinear Algebra I (3)
Vector spaces, linear transformations, matrices, products, quotients, and duals of vector spaces. Minimal and characteristic polynomials, canonical forms. This is the first course in a sequence of two: Mth 544 and Mth 545 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 444. Prerequisite: Mth 344.

Mth 545 - Advanced Linear/Multilinear Algebra II (3)
Multilinear maps, tensor products, exterior algebra. Finite dimensional spectral theory. This is the second course in a sequence of two: Mth 544 and Mth 545 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 445. Prerequisite: Mth 544.

Mth 549 - Topics in Advanced Number Theory (3)
A study of advanced topics selected from the areas of algebraic or analytic theory. With departmental approval, this course may be repeated for credit.

Also offered for undergraduate-level credit as Mth 449 and may be taken only once for credit. Prerequisite: Mth 346.

Mth 551 - Numerical Calculus I (3)

Also offered for undergraduate-level credit as Mth 451 and may be taken only once for credit. Prerequisite: knowledge of a programming language such as MATLAB or C/C++, Mth 253 and Mth 261.

Mth 552 - Numerical Calculus II (3)

Also offered for undergraduate-level credit as Mth 452 and may be taken only once for credit. Prerequisite: knowledge of a programming language such as MATLAB or C/C++, Mth 253 and Mth 261.

Mth 556 - Topics in Combinatorics (3)
Selected topics from: permutations, combinations, partitions, generating functions, inclusion/exclusion, recursion, Polya counting, block designs, orthogonal polynomials, and error-correcting codes. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 456. Prerequisite: Mth 356 or CS 251.

Mth 557 - The Mathematical Theory of Games I (3)
Introduction to mathematical game theory and game theoretic analysis. Topics include: combinatorial and strategic games, Perfect Competition, Zermelo's Algorithm, Payoffs, cooperative and non-cooperative games, bargaining, mixed strategies, and Nash Equilibria. Selected applications to economics, biology, computer science, and political science. This is the first course in a sequence of two: Mth 557 and Mth 558 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 457 and may be taken only once for credit. Prerequisite: Mth 261 and/or Stat 243.

Mth 558 - The Mathematical Theory of Games II (3)
Introduction to mathematical game theory and game theoretic analysis. Topics include: Dilemma, search, and differential games. Repeated games and finite automata. Common knowledge, complete and incomplete information, behavioral and evolutionary stable strategies, assessment equilibria. Selected applications to economics, biology, computer science, and political science. This is the second
course in a sequence of two: Mth 557 and Mth 558 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 458 and may be taken only once for credit. Prerequisite: Mth 557.

**Mth 561 - Graph Theory I (3)**
Topics in graph theory, including connectivity, matchings, graph algorithms, network flows, isomorphisms, Eulerian graphs, spanning trees, decompositions, shortest paths, colorings of graphs, and selected applications. This is the first course in a sequence of two: Mth 561 and Mth 562 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 461 and may be taken only once for credit. Prerequisite: Mth 261, Mth 356.

**Mth 562 - Graph Theory II (3)**
Topics in graph theory, including graph matrices, Hamiltonian graphs, the matrix-tree theorem, planarity and embeddings, Kuratowski's theorem, matroids, and selected applications. This is the second course in a sequence of two: Mth 561 and Mth 562 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 462 and may be taken only once for credit. Prerequisite: Mth 561.

**Mth 564 - Numerical Optimization I (3)**
Fundamentals of unconstrained optimization, necessary and sufficient conditions, overview of numerical algorithms, rate of convergence, line search and trust-region methods. Gradient descent, conjugate gradient, Newton and quasi-Newton methods, nonlinear least-squares problems, Gauss-Newton and Levenberg-Marquardt methods, practical applications. This is the first course in a sequence of two: Mth 564 and Mth 565. Expected preparation: knowledge of a high-level programming language such as MATLAB, Python, R, or C/C++.

Also offered for undergraduate-level credit as Mth 464 and may be taken only once for credit. Prerequisite: Mth 254 and Mth 261.

**Mth 565 - Numerical Optimization II (3)**
Theory of constrained optimization, equality and inequality constraints, Lagrange multipliers, Karush-Kuhn-Tucker (KKT) optimality conditions, penalty methods, quadratic and sequential quadratic programming, applications. This is the second course in a sequence of two: Mth 464/564 and Mth 465/565 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 465 and may be taken only once for credit. Prerequisite: Mth 564.

**Mth 570 - Complex Analysis and Boundary Value Problems I (3)**
Fundamental concepts of complex analysis. Cauchy's theorem. Analytic functions. Power and Laurent series. Residue Theorem. This is the first course in a sequence of three: Mth 570, Mth 571, and Mth 572 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 470 and may be taken only once for credit. Prerequisite: Mth 254 and either Mth 256 or Mth 421/Mth 521.

**Mth 571 - Complex Analysis and Boundary Value Problems II (3)**
Fundamental concepts of complex analysis. Calculus of residues and applications. Conformal mappings. Zero-Pole theorem. Infinite products. This is the second course in a sequence of three: Mth 570, Mth 571, and Mth 572 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 471 and may be taken only once for credit. Prerequisite: Mth 570.

**Mth 572 - Complex Analysis and Boundary Value Problems III (3)**
Partial differential equations and boundary value problems using Fourier series. This is the third course in a sequence of three: Mth 570, Mth 571, and Mth 572 which must be taken in sequence.

Also offered for undergraduate-level credit as Mth 472 and may be taken only once for credit. Prerequisite: Mth 571.

**Mth 577 - Mathematical Control Theory I (3)**
Mathematical foundations of linear time invariant control systems. Controllability, observability, stabilizability, feedback. Applications. This is the first course in a sequence of two: Mth 577 and Mth 578 which must be taken in sequence. Expected preparation: Mth 253, Mth 254.

Also offered for undergraduate-level credit as Mth 477 and may be taken only once for credit. Prerequisite: Mth 256.

**Mth 578 - Mathematical Control Theory II (3)**
Elements of the calculus of variations and optimal control. Dynamic programming. Pontryagin maximum principle. Applications. This is the second course in a sequence of two: Mth 577 and Mth 578 which must be taken in sequence.
Also offered for undergraduate-level credit as Mth 478 and may be taken only once for credit. Prerequisite: Mth 577.

Mth 581 - Topics in Probability for Mathematics Teachers (2-3)
Selected topics in probability for mathematics teachers. Topics may include origins and development of probability theory, counting theory, laws of probability, conditional probability, independence, odds, standard discrete and continuous probability distributions, expected values, moment generating functions, and numerous computer simulations. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 481. Prerequisite: Stat 244 and two upper-division courses approved for math major credit or Stat 452 or Stat 462.

Mth 582 - Topics in Statistics for Mathematics Teachers (2-3)
Selected topics in statistics for mathematics teachers. Potential topics include descriptive statistics (measures of center, variability, skewness, etc.), inferential statistics (one and two population problems), Central Limit Theorem, modeling and simulation techniques, and research design techniques. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 482. Prerequisite: Stat 244 and two upper-division courses approved for math major credit or Stat 452 or Stat 462.

Mth 583 - Topics in Geometry for Mathematics Teachers (2-3)
Selected topics in geometry for mathematics teachers. Potential topics include inductive and deductive reasoning, analytic and metric geometry, isometry and symmetry, and hyperbolic, spherical and/or taxicab geometry. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 483. Prerequisite: Mth 338.

Mth 584 - Topics in Algebra for Mathematics Teachers (2-3)
Selected topics in algebra for mathematics teachers. Potential topics may include algebraic structures (groups, rings, fields, vector spaces), equivalence, function, operation, well-defined-ness, equation solving, algorithms, and proving using geometric, symbolic, and verbal representation systems. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 484. Prerequisite: Mth 344.

Mth 585 - Topics in Analysis for Mathematics Teachers (2-3)
Selected topics in analysis for mathematics teachers. Potential topics include functions, limits, continuity, derivatives, integration, completeness, covariation, sequences and series, differential equations, complex analysis, and topology. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 485. Prerequisite: Mth 311.

Mth 586 - Topics in The History of Mathematics (2-3)
Selected topics in the historical development of mathematics. With departmental approval, this course may be repeated for credit.

Also offered for undergraduate-level credit as Mth 486. Prerequisite: at least two upper-division courses approved for major credit.

Mth 587 - Topics in Discrete Mathematics for Mathematics Teachers (2-3)
Selected topics in discrete mathematics for teachers. Potential topics include set theory, logic, elementary probability theory, relations, recursions, algorithms, counting theory, permutations, finance mathematics, combinations, graph theory, algorithms, logic, and number theory. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 487. Prerequisite: Mth 356.

Mth 588 - Topics in Computing for Mathematics Teachers (1-3)
Selected topics and tools for mathematical computing for mathematics teachers. As an example, a simple but powerful set of programming and graphical tools in ‘C’ may be introduced and used to explore a wide range of mathematical topics including statistics, probability, trigonometry, analytic geometry, calculus and modeling. With departmental approval may be repeated for credit.

Also offered for undergraduate-level credit as Mth 488. Prerequisite: Mth 271 or CS 161 and Mth 344.

Mth 589 - Topics in Mathematical Exposition and Curriculum Development (3)
Selected topics in mathematics exposition and curriculum development. Potential topics may include specific mathematical topics (such as algebra, geometry, or statistics) or cross cutting topics (such as ethnomathematics or history of mathematics).
Also offered for undergraduate-level credit as Mth 491.

**MTH 591 - Experimental Probability and Statistics for Middle School Teachers (4)**

A study of probability and statistics through laboratory experiments, simulations, and applications, with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for undergraduate-level credit as Mth 491 and may be taken only once for credit. Prerequisite: Mth 112, Mth 212, Mth 213.

**MTH 593 - Geometry for Middle School Teachers (4)**

Selected topics from informal geometry, both two- and three-dimensional, with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for undergraduate-level credit as Mth 493 and may be taken only once for credit. Prerequisite: Mth 112, Mth 212, Mth 213.

**MTH 594 - Arithmetic and Algebraic Structures for Middle School Teachers (4)**

The study of the real number system and its subsystems will lead to the introduction of more general algebraic structures and their applications, with focus on problem solving. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for undergraduate-level credit as Mth 494 and may be taken only once for credit. Prerequisite: Mth 112, Mth 212, Mth 213.

**MTH 595 - Historical Topics in Mathematics for Middle School Teachers (4)**

A survey of the historical development of topics in mathematics from ancient to modern times, with special emphasis on topics in arithmetic, algebra and informal geometry, and with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for undergraduate-level credit as Mth 495 and may be taken only once for credit. Prerequisite: Mth 112, Mth 212, Mth 213.

**MTH 596 - Concepts of Calculus for Middle School Teachers (4)**

An introduction to the limit concept and its role in defining the derivative, the integral and infinite series. Applications to middle school mathematics, with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in middle school mathematics.

Also offered for undergraduate-level credit as Mth 496 and may be taken only once for credit. Prerequisite: Mth 112, Mth 212, Mth 213.

**MTH 597 - Mathematics in the Middle School Classroom (4)**

A survey of mathematics taught in the middle school grades, with focus on both content and pedagogical recommendations of the National Council of Teachers of Mathematics, and with integration of problem solving and technology. Not approved for major credit. Available for graduate credit toward the graduate certificate program in mathematics for middle school teachers.

Also offered for undergraduate-level credit as Mth 497 and may be taken only once for credit. Prerequisite: Mth 112, Mth 212, Mth 213.

**MTH 601 - Research (1-9)**

(Credit to be arranged.)

**MTH 603 - Dissertation (1-9)**

(Credit to be arranged.)

**MTH 604 - Cooperative Education/Internship (1-9)**

(Credit to be arranged.)

**MTH 605 - Reading and Conference (1-9)**

(Credit to be arranged.)

**MTH 606 - Special Projects (1-12)**

(Credit to be arranged.)

**MTH 607 - Seminar (1-9)**

(Credit to be arranged.)
Mth 609 - Practicum()
(Credit to be arranged.)

Mth 610 - Selected Topics (1-9)
(Credit to be arranged.)

Mth 611 - Theory of Functions of a Real Variable I (3)

Mth 612 - Theory of Functions of a Real Variable II (3)

Mth 613 - Theory of Functions of a Real Variable III (3)

Mth 614 - Modern Analysis I (3)
Topics from nonlinear analysis, harmonic analysis, analytic functions, ordered vector spaces, analysis on Lie groups, and operator theory. This is the first course in a sequence of three: Mth 614, Mth 615, and Mth 616. Expected preparation: Mth 412/Mth 512.

Mth 615 - Modern Analysis II (3)
Topics from nonlinear analysis, harmonic analysis, analytic functions, ordered vector spaces, analysis on Lie groups, and operator theory. This is the second course in a sequence of three: Mth 614, Mth 615, and Mth 616. Expected preparation: Mth 412/Mth 512.

Mth 616 - Modern Analysis III (3)
Topics from nonlinear analysis, harmonic analysis, analytic functions, ordered vector spaces, analysis on Lie groups, and operator theory. This is the third course in a sequence of three: Mth 614, Mth 615, and Mth 616. Expected preparation: Mth 412/Mth 512.

Mth 617 - Functional Analysis I (3)
Hilbert and Banach spaces, the Hahn-Banach, open mapping, and closed graph theorems. Compact, self-adjoint, normal, and Fredholm operators. Locally convex spaces, weak topologies, duality. Banach and C*-algebras, spectral theory. This is the first course in a sequence of three: Mth 617, Mth 618, and Mth 619 which must be taken in sequence. Expected preparation: Mth 412/Mth 512.

Mth 618 - Functional Analysis II (3)
Hilbert and Banach spaces, the Hahn-Banach, open mapping, and closed graph theorems. Compact, self-adjoint, normal, and Fredholm operators. Locally convex spaces, weak topologies, duality. Banach and C*-algebras, spectral theory. This is the second course in a sequence of three: Mth 617, Mth 618, and Mth 619 which must be taken in sequence. Expected preparation: Mth 412/Mth 512.

Mth 619 - Functional Analysis III (3)
Hilbert and Banach spaces, the Hahn-Banach, open mapping, and closed graph theorems. Compact, self-adjoint, normal, and Fredholm operators. Locally convex spaces, weak topologies, duality. Banach and C*-algebras, spectral theory. This is the third course in a sequence of three: Mth 617, Mth 618, and Mth 619 which must be taken in sequence. Recommended prerequisite: Mth 412/Mth 512.

Mth 621 - Advanced Differential Equations I (3)
Advanced theory of dynamical systems and partial differential equations including the basics of partial differential equations, boundary value problems for elliptic equations, the Cauchy problem, and parabolic equations. Topics selected from Hamiltonian systems, waves and shocks, variational methods, control theory. This is the first course in a sequence of three: Mth 621, Mth 622, and Mth 623. Expected preparation: Mth 423/Mth 523 or Mth 472/Mth 572.
Mth 622 - Advanced Differential Equations II (3)
Advanced theory of dynamical systems and partial differential equations including the basics of partial differential equations, boundary value problems for elliptic equations, the Cauchy problem, and parabolic equations. Topics selected from Hamiltonian systems, waves and shocks, variational methods, control theory. This is the second course in a sequence of three: Mth 621, Mth 622, and Mth 623. Expected preparation: Mth 423/Mth 523 or Mth 472/Mth 572.

Mth 623 - Advanced Differential Equations III (3)
Advanced theory of dynamical systems and partial differential equations including the basics of partial differential equations, boundary value problems for elliptic equations, the Cauchy problem, and parabolic equations. Topics selected from Hamiltonian systems, waves and shocks, variational methods, control theory. This is the third course in a sequence of three: Mth 621, Mth 622, and Mth 623. Expected preparation: Mth 423/Mth 523 or Mth 472/Mth 572.

Mth 624 - Advanced Differential Geometry I (3)
Topics selected from differentiable manifolds, differential forms, DeRham cohomology, Lie groups, fibre bundles, the Riemannian metric, affine and Riemannian connections, parallel translations, holonomy, geodesics, curvature, isometric embeddings and hypersurfaces, the Second Fundamental Form, complete Riemannian manifolds and the Hopf-Rinow theorem, spaces of constant curvature, variations of arc length, and the Morse Index theorem. This is the first course in a sequence of three: Mth 624, Mth 625, and Mth 626. Expected preparation: Mth 425/Mth 525.

Mth 625 - Advanced Differential Geometry II (3)
Topics selected from differentiable manifolds, differential forms, DeRham cohomology, Lie groups, fibre bundles, the Riemannian metric, affine and Riemannian connections, parallel translations, holonomy, geodesics, curvature, isometric embeddings and hypersurfaces, the Second Fundamental Form, complete Riemannian manifolds and the Hopf-Rinow theorem, spaces of constant curvature, variations of arc length, and the Morse Index theorem. This is the second course in a sequence of three: Mth 624, Mth 625, and Mth 626. Expected preparation: Mth 425/Mth 525.

Mth 626 - Advanced Differential Geometry III (3)
Topics selected from differentiable manifolds, differential forms, DeRham cohomology, Lie groups, fibre bundles, the Riemannian metric, affine and Riemannian connections, parallel translations, holonomy, geodesics, curvature, isometric embeddings and hypersurfaces, the Second Fundamental Form, complete Riemannian manifolds and the Hopf-Rinow theorem, spaces of constant curvature, variations of arc length, and the Morse Index theorem. This is the third course in a sequence of three: Mth 624, Mth 625, and Mth 626. Expected preparation: Mth 425/Mth 525.

Mth 634 - Algebraic Topology I (3)
Topics from singular and simplicial homology and cohomology theories, fundamental group and covering spaces, CW complexes and elements of homotopy theory, algebraic theory of manifolds, introduction to differential topology and vector bundles, applications. This is the first course in a sequence of three: Mth 634, Mth 635, and Mth 636 which must be taken in sequence. Recommended prerequisites: Mth 435/Mth 535 and Mth 444/Mth 544.

Mth 635 - Algebraic Topology II (3)
Topics from singular and simplicial homology and cohomology theories, fundamental group and covering spaces, CW complexes and elements of homotopy theory, algebraic theory of manifolds, introduction to differential topology and vector bundles, applications. This is the second course in a sequence of three: Mth 634, Mth 635, and Mth 636 which must be taken in sequence. Expected preparation: Mth 435/Mth 535 and Mth 444/Mth 544.

Mth 636 - Algebraic Topology III (3)
Topics from singular and simplicial homology and cohomology theories, fundamental group and covering spaces, CW complexes and elements of homotopy theory, algebraic theory of manifolds, introduction to differential topology and vector bundles, applications. This is the third course in a sequence of three: Mth 634, Mth 635, and Mth 636 which must be taken in sequence. Expected preparation: Mth 435/Mth 535 and Mth 444/Mth 544.

Mth 637 - Geometric Topology I (3)
Topics from geometric and piecewise linear topology, knots and 3-manifolds and gauge theories,
geometric structures and geometrization of manifolds, applications to differential topology, vector bundles and to mathematical physics. This is the first course in a sequence of three: Mth 637 Mth 638, and Mth 639. Expected preparation: Mth 436/Mth 536.

**Mth 638 - Geometric Topology II (3)**
Topics from geometric and piecewise linear topology, knots and 3-manifolds and gauge theories, geometric structures and geometrization of manifolds, applications to differential topology, vector bundles and to mathematical physics. This is the second course in a sequence of three: Mth 637 Mth 638, and Mth 639. Expected preparation: Mth 436/Mth 536.

**Mth 639 - Geometric Topology III (3)**
Topics from geometric and piecewise linear topology, knots and 3-manifolds and gauge theories, geometric structures and geometrization of manifolds, applications to differential topology, vector bundles and to mathematical physics. This is the third course in a sequence of three: Mth 637 Mth 638, and Mth 639. Expected preparation: Mth 436/Mth 536.

**Mth 641 - Modern Algebra I (3)**
Topics from groups, semigroups, rings, fields, algebras, and homological algebra. This is the first course in a sequence of three: Mth 641, Mth 642, and Mth 643. Expected preparation: Mth 443/Mth 543 or both Mth 442/Mth 542 and Mth 445/Mth 545.

**Mth 642 - Modern Algebra II (3)**
Topics from groups, semigroups, rings, fields, algebras, and homological algebra. This is the second course in a sequence of three: Mth 641, Mth 642, and Mth 643. Expected preparation: Mth 443/Mth 543 or both Mth 442/Mth 542 and Mth 445/Mth 545.

**Mth 643 - Modern Algebra III (3)**
Topics from groups, semigroups, rings, fields, algebras, and homological algebra. This is the third course in a sequence of three: Mth 641, Mth 642, and Mth 643. Expected preparation: Mth 443/Mth 543 or both Mth 442/Mth 542 and Mth 445/Mth 545.

**Mth 651 - Advanced Numerical Analysis I (3)**
An advanced study of numerical methods with emphasis on theory, economy of computation, and the solution of pathological problems. Topics will typically be chosen from: evaluation of functions, roots of equations, quadrature, ordinary and partial differential equations, integral equations, eigenvalues, construction of approximating functions, orthonormalizing codes, and treatment of singularities. This is the first course in a sequence of three: Mth 651, Mth 652, and Mth 653 which must be taken in sequence. Expected preparation: Mth 453/Mth 553.

**Mth 652 - Advanced Numerical Analysis II (3)**
An advanced study of numerical methods with emphasis on theory, economy of computation, and the solution of pathological problems. Topics will typically be chosen from: evaluation of functions, roots of equations, quadrature, ordinary and partial differential equations, integral equations, eigenvalues, construction of approximating functions, orthonormalizing codes, and treatment of singularities. This is the second course in a sequence of three: Mth 651, Mth 652, and Mth 653 which must be taken in sequence. Expected preparation: Mth 453/Mth 553.

**Mth 653 - Advanced Numerical Analysis III (3)**
An advanced study of numerical methods with emphasis on theory, economy of computation, and the solution of pathological problems. Topics will typically be chosen from: evaluation of functions, roots of equations, quadrature, ordinary and partial differential equations, integral equations, eigenvalues, construction of approximating functions, orthonormalizing codes, and treatment of singularities. This is the third course in a sequence of three: Mth 651, Mth 652, and Mth 653 which must be taken in sequence. Expected preparation: Mth 453/Mth 553.

**Mth 661 - Algebraic Graph Theory I (3)**
Topics selected from algebraic and spectral graph theory, including automorphism groups, transitivity, primitivity, homomorphisms, generalized polygons, designs, projective planes, cores, fractional colorings and cliques, spectral decomposition, eigenvalue interlacing, strongly-regular and distance-regular graphs, line graphs, root systems, graph laplacians, graph polynomials, and graph-theoretic link invariants. This is the first course in a sequence of three: Mth 661, Mth 662, and Mth 663 which must be taken in sequence.
Prerequisite: Mth 462 or Mth 562.
Mth 662 - Algebraic Graph Theory II (3)

Topics selected from algebraic and spectral graph theory, including automorphism groups, transitivity, primitivity, homomorphisms, generalized polygons, designs, projective planes, cores, fractional colorings and cliques, spectral decomposition, eigenvalue interlacing, strongly-regular and distance-regular graphs, line graphs, root systems, graph laplacians, graph polynomials, and graph-theoretic link invariants. This is the second course in a sequence of three: Mth 661, Mth 662, and Mth 663 which must be taken in sequence.

Prerequisite: Mth 462 or Mth 562.

Mth 663 - Algebraic Graph Theory III (3)

Topics selected from algebraic and spectral graph theory, including automorphism groups, transitivity, primitivity, homomorphisms, generalized polygons, designs, projective planes, cores, fractional colorings and cliques, spectral decomposition, eigenvalue interlacing, strongly-regular and distance-regular graphs, line graphs, root systems, graph laplacians, graph polynomials, and graph-theoretic link invariants. This is the third course in a sequence of three: Mth 661, Mth 662, and Mth 663 which must be taken in sequence.

Prerequisite: Mth 462 or Mth 562.

Mth 667 - Stochastic Processes and Probability Theory I (3)

Mth 668 - Stochastic Processes and Probability Theory II (3)

Mth 669 - Stochastic Processes and Probability Theory III (3)

Mth 690 - Introduction to Research in Mathematics Education (3)

Topics in the history of mathematics education including an examination of the current research trends in mathematics education.

Mth 691 - Curriculum in Mathematics Education (3)

An analysis of curriculum development and assessment efforts in mathematics education both past and present.

Mth 692 - Research Methodology and Design (3)

An examination of quantitative and qualitative research methodologies and their applications to the design of research in mathematics education.

Mth 693 - Research on the Learning of Mathematics (3)

An analysis of the mathematics education research on the learning of mathematics, including topics from K-16 mathematics.

Mth 694 - Research on the Teaching of Mathematics (3)

An analysis of the research on the teaching of mathematics, including issues from levels K-16.

Mth 695 - Topics in Research in Mathematics Education (3)

A special topics seminar devoted to exploring particular issues in more depth.
Mth 801 - Research (1-12)  
(Credit to be arranged.)

Mth 802 - Independent Study (1-12)  
(Credit to be arranged.)

Mth 804 - Cooperative Education/Internship (1-12)  
(Credit to be arranged.)

Mth 805 - Reading and Conference (1-12)  
(Credit to be arranged.)

Mth 806 - Special Problems/Projects (1-12)  
(Credit to be arranged.)

Mth 807 - Seminar (1-12)  
(Credit to be arranged.)

Mth 808 - Workshop (0-12)  
(Credit to be arranged.)

Mth 809 - Practicum (1-12)  
(Credit to be arranged.)

Mth 810 - Selected Topics (1-12)  
(Credit to be arranged.)

MuEd - Music Education  
MuEd 045 - Music Education Degree Entry Portfolio (0)  
All students applying to the Music Education degree program will complete and submit a portfolio detailing interest and abilities needed to become a successful K-12 Music educator. Will serve as a prerequisite for all MuEd 400-level courses.

MuEd 328 - Introduction to Music Education (2)  
Overview of the music education profession, with emphasis on the various levels, genres, options, and requirements of the field. Concurrent enrollment in an appropriate practicum (Mus 409) required.  
Prerequisite: Mus 111, 112, 113.

MuEd 332 - String Techniques (1)  
Study of the stringed instrument family for students in the teacher education program. Special emphasis will be given to the teaching of these instruments to groups of young and/or inexperienced students.

MuEd 333 - Guitar Techniques (1)  
Study of the guitar and the methods and materials used to teach guitar to young and/or inexperienced students. Required for students in the Music Education Program.

MuEd 334 - Vocal Techniques K-12 (1)  
Study of vocal techniques for students in the teacher education program. Special emphasis will be given to teaching voice to groups of young and/or inexperienced students from childhood through high school.

MuEd 335 - Percussion Techniques (1)  
Study of the percussion instruments of orchestra and band for students in the teacher education program. Special emphasis will be given to the teaching of these instruments to groups of young and/or inexperienced students.

MuEd 336 - Flute and Double Reeds (1)  
Study of how to teach and play flute and double reeds (bassoon and oboe) for students enrolled in the teacher education program.

MuEd 337 - Clarinet and Saxophone (1)  
Study of how to teach and play clarinet and saxophone for students enrolled in the teacher education program.

MuEd 338 - High Brass Techniques (1)  
Study of how to teach and play trumpet and horn for students enrolled in the teacher education program.
MuEd 339 - Low Brass Techniques (1)
Study of how to teach and play trombone, euphonium and tuba for students enrolled in the teacher education program.

MuEd 340 - Wind Instrument Techniques (3)
For students in the Choral/General Music Education track. Techniques of brass and woodwind instruments for groups of young students with special emphasis on resources, beginning techniques, and appropriate literature.

MuEd 341 - Jazz Techniques (1)
Study of techniques used in the teaching of middle and high school instrumental jazz music. Includes rehearsal techniques, basic arranging, swing concepts, rhythm section concepts, and improvisation.
Prerequisite: instructor approval.

MuEd 399 - Special Studies (1-6)
(Credits to be arranged.)

MuEd 408 - Workshop (1-6)
(Credit to be arranged.)

MuEd 409 - Practicum (1-12)
(Credit to be arranged.)

MuEd 420 - Choral Literature and Rehearsal Techniques I (3)
Students will learn the essentials of rehearsing large choral groups from grades 5-8 and requisite materials and techniques for starting and building a middle school choral program. This is the first course in a sequence of two: MuEd 420 and MuEd 421.
Also offered for graduate-level credit as MuEd 520 and may be taken only once for credit. Prerequisite: MuEd 045, Mus 322, MuEd 328, MuEd 334.

MuEd 422 - Instrumental Literature and Rehearsal Techniques I (3)
Study of the literature and rehearsal techniques for teaching instrumental music in grades 5-8 primarily. Student will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and administration of a middle school instrumental program are the core areas of study.
Also offered for graduate-level credit as MuEd 522 and may be taken only once for credit. Prerequisite: MuEd 045, Mus 321, MuEd 328, MuEd 335, MuEd 336, and MuEd 337.

MuEd 423 - Instrumental Literature and Rehearsal Techniques II (3)
Study of the literature and rehearsal techniques for teaching instrumental music in grades 9-12, primarily. Students will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and administration of a high school instrumental program are the core areas of study.
Also offered for graduate-level credit as MuEd 523 and may be taken only once for credit. Prerequisite: MuEd 045, Mus 321, MuEd 328, MuEd 335, MuEd 336, MuEd 337, MuEd 421, and MuEd 521.

MuEd 480 - Kodály Training: Level I (5)
A two-week intensive introduction to the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, and choir classes within the course.
Also offered for graduate-level credit as MuEd 580 and may be taken only once for credit. Prerequisite: junior standing.

MuEd 481 - Kodály Training: Level II (5)
A two-week continuation of the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir classes within the course.
Also offered for graduate-level credit as MuEd 581 and may be taken only once for credit. Prerequisite: MuEd 480 or MuEd 580 or other Kodály Level 1 coursework.
**MuEd 482 - Kodály Training: Level III (5)**
The third course in the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir classes within the course.
Also offered for graduate-level credit as MuEd 582 and may be taken only once for credit. Prerequisite: MuEd 481 or MuEd 581 or other Kodály Level II coursework.

**MuEd 484 - Music with Children (3)**
Methods and materials for teaching general music classes in the elementary school. Designed for the music specialist; required of all students who seek a basic teaching certificate in music. It is presupposed that all students have performing and theoretical skills and at least one year of music history.
Concurrent enrollment in an appropriate practicum (Mus 409) required.
Also offered for graduate-level credit as MuEd 584 and may be taken only once for credit. Prerequisite: MuEd 045 and MuEd 328.

**MuEd 508 - Workshop (1-9)**
(Credit to be arranged.)

**MuEd 520 - Choral Literature and Rehearsal Techniques I (3)**
Students will learn the essentials of rehearsing large choral groups from grades 5-8 and requisite materials and techniques for starting and building a middle school choral program. This is the first course in a sequence of two: MuEd 520 and MuEd 521.
Also offered for undergraduate-level credit as MuEd 420 and may be taken only once for credit. Prerequisite: MuEd 045, Mus 322, MuEd 328, MuEd 334.

**MuEd 521 - Choral Literature and Rehearsal Techniques II (3)**
Students will learn the essentials of rehearsing large choral groups from grades 9-12 and requisite materials and techniques for starting and building a high school choral program. This is the second course in a sequence of two: MuEd 520 and MuEd 521.
Also offered for undergraduate-level credit as MuEd 421 and may be taken only once for credit. Prerequisite: MuEd 045, Mus 322, MuEd 328, MuEd 334.

**MuEd 522 - Instrumental Literature and Rehearsal Techniques I (3)**
Study of the literature and rehearsal techniques for teaching instrumental music in grades 5-8 primarily. Student will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and administration of a middle school instrumental program are the core areas of study.
Also offered for undergraduate-level credit as MuEd 422 and may be taken only once for credit. Prerequisite: Mus 321, MuEd 328, MuEd 335, MuEd 336, MuEd 337.

**MuEd 523 - Instrumental Literature and Rehearsal Techniques II (3)**
Study of the literature and rehearsal techniques for teaching instrumental music in grades 9-12, primarily. Student will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and administration of a high school instrumental program are the core areas of study.
Also offered for undergraduate-level credit as MuEd 423 and may be taken only once for credit. Prerequisite: Mus 321, MuEd 328, MuEd 335, MuEd 336, MuEd 337, MuEd 422 or MuEd 522.

**MuEd 530 - Managing the Music Classroom (2)**
Focus on classroom management techniques specific to music classrooms in k-12 schools, both large ensembles and general music courses. Students will research and problem-solve challenges in these unique classes.

**MuEd 580 - Kodály Training: Level I (5)**
A two-week intensive introduction to the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, and choir classes within the course.
Also offered for undergraduate-level credit as MuEd 480 and may be taken only once for credit. Prerequisite: junior standing.

**MuEd 581 - Kodály Training: Level II (5)**
A two-week continuation of the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir classes within the course.
Also offered for undergraduate-level credit as MuEd 481 and may be taken only once for credit.
**Prerequisite:** MuEd 480 or MuEd 580 or other Kodály Level I coursework.

**MuEd 582 - Kodály Training: Level III (5)**
The third course in the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir classes within the course.

Also offered for undergraduate-level credit as MuEd 482 and may be taken only once for credit. Prerequisite: MuEd 481 or MuEd 581 or other Kodály Level II coursework.

**MuEd 583 - Kodály Training: Level IV (5)**
The final course in the Kodály approach and its applications in the field of Music Education. Students will prepare a DVD of their teaching and present their projects/DVs for evaluation as well as participate in pedagogy, folk music, musicianship, materials, conducting, and choir classes within the course.

Prerequisite: MuEd 482/582 or other Kodály Level III coursework.

**MuEd 584 - Music with Children (3)**
Methods and materials for teaching general music classes in the elementary school. Designed for the music specialist; required of all students who seek a basic teaching certificate in music. It is presupposed that all students have performing and theoretical skills and at least one year of music history. Concurrent enrollment in an appropriate practicum (Mus 409) required.

Also offered for undergraduate-level credit as MuEd 484 and may be taken only once for credit. Prerequisite: upper-division standing in music.

**Mup - Applied Music**

**Mup 190 - Applied Music (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor.

**Mup 190A - Applied Music: Trombone (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

**Mup 190B - Applied Music: Bass (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor.

**Mup 190C - Applied Music: Cello (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

**Mup 190D - Applied Music: Percussion (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

**Mup 190E - Applied Music: Early Instruments (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 197.

**Mup 190F - Applied Music: French Horn (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

**Mup 190G - Applied Music: Guitar (1-4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

**Mup 190H - Applied Music: Harpsichord/Organ (1 - 4)**
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Mup 190I - Applied Music: Flute (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190J - Applied Music: Jazz Studies (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 198.

Mup 190K - Applied Music: Clarinet (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190L - Applied Music: Bassoon (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190M - Applied Music: Composition (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 185.

Mup 190N - Applied Music: Non-Western (1-2)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor.

Mup 190O - Applied Music: Oboe (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190P - Applied Music: Piano (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 197.

Mup 190Q - Applied Music: Harp (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 197.

Mup 190S - Applied Music: Violin (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

Mup 190T - Applied Music: Trumpet (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190U - Applied Music: Trombone (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190V - Applied Music: Voice (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 197.

Mup 190W - Applied Music: Tuba (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190X - Applied Music: Euphonium (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.
Mup 190Y - Applied Music: Viola (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

Mup 190Z - Applied Music: Saxophone (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

Mup 290 - Applied Music (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition.

Mup 290A - Applied Music: Trombone (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 195.

Mup 290B - Applied Music: Bass (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition.

Mup 290C - Applied Music: Cello (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 196.

Mup 290D - Applied Music: Percussion (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 195.

Mup 290E - Applied Music: Early Instruments (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 197.

Mup 290F - Applied Music: French Horn (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 195.

Mup 290G - Applied Music: Guitar (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 196.

Mup 290H - Applied Music: Harpsichord/Organ (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition.

Mup 290I - Applied Music: Flute (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 195.

Mup 290J - Applied Music: Jazz Studies (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 198.

Mup 290K - Applied Music: Clarinet (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 195.

Mup 290L - Applied Music: Bassoon (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 195.

Mup 290M - Applied Music: Composition (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 185.

Mup 290O - Applied Music: Oboe (1-4)
Sophomore year. Continuation of Mup 190. Maximum: 12 credits.
Prerequisite: Mup 190 and audition. Corequisite: Mus 195.
**MUP 290P - Applied Music: Piano (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 197.

**MUP 290Q - Applied Music: Harp (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 197.

**MUP 290S - Applied Music: Violin (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 196.

**MUP 290T - Applied Music: Trumpet (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

**MUP 290U - Applied Music: Trombone (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 196.

**MUP 290V - Applied Music: Voice (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

**MUP 290W - Applied Music: Tuba (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 197.

**MUP 290X - Applied Music: Euphonium (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

**MUP 290Y - Applied Music: Viola (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 196.

**MUP 290Z - Applied Music: Saxophone (1-4)**
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

**MUP 390 - Applied Music (1-4)**
Prerequisite: MUP 290 and upper division examination.

**MUP 390A - Applied Music: Trombone (1-4)**
Prerequisite: MUP 290 and upper division examination. Corequisite: Mus 395.

**MUP 390B - Applied Music: Bass (1-4)**
Prerequisite: MUP 290 and upper division examination.

**MUP 390C - Applied Music: Cello (1-4)**
Prerequisite: MUP 290 and upper division examination. Corequisite: Mus 396.

**MUP 390D - Applied Music: Percussion (1-4)**
Prerequisite: MUP 290 and upper division examination. Corequisite: Mus 395.

**MUP 390E - Applied Music: Early Instruments (1-4)**
Prerequisite: MUP 290 and upper division examination. Corequisite: Mus 397.

**MUP 390F - Applied Music: French Horn (1-4)**
Prerequisite: MUP 290 and upper division examination. Corequisite: Mus 395.
Mup 390G - Applied Music: Guitar (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 397.

Mup 390Q - Applied Music: Harp (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 396.

Mup 390H - Applied Music: Harpsichord/Organ (1 - 4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Mup 390J - Applied Music: Jazz Studies (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 398.

Mup 390K - Applied Music: Clarinet (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390L - Applied Music: Bassoon (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390O - Applied Music: Oboe (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390T - Applied Music: Trumpet (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390U - Applied Music: Trombone (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390V - Applied Music: Voice (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 397.

Mup 390W - Applied Music: Tuba (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 397.

Mup 390X - Applied Music: Euphonium (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390Y - Applied Music: Viola (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 396.

Mup 390M - Applied Music: Composition (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination.
Mup 390Z - Applied Music: Saxophone (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 490 - Applied Music (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition.

Mup 490A - Applied Music: Trombone (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490B - Applied Music: Bass (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition.

Mup 490C - Applied Music: Cello (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 396.

Mup 490D - Applied Music: Percussion (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490E - Applied Music: Early Instruments (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 397.

Mup 490F - Applied Music: French Horn (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490G - Applied Music: Guitar (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 396.

Mup 490H - Applied Music: Harpsichord/Organ (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Mup 490I - Applied Music: Flute (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490J - Applied Music: Jazz Studies (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 398.

Mup 490K - Applied Music: Clarinet (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490L - Applied Music: Bassoon (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490M - Applied Music: Composition (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition.

Mup 490O - Applied Music: Oboe (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490P - Applied Music: Piano (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 397.

Mup 490Q - Applied Music: Harp (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 397.
Mup 490S - Applied Music: Violin (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 396.

Mup 490T - Applied Music: Trumpet (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 395.

Mup 490U - Applied Music: Trombone (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 395.

Mup 490V - Applied Music: Voice (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 397.

Mup 490W - Applied Music: Tuba (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 395.

Mup 490X - Applied Music: Euphonium (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 395.

Mup 490Y - Applied Music: Viola (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 396.

Mup 490Z - Applied Music: Saxophone (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.
Prerequisite: Mup 390 and audition. Corequisite: Mus 395.

Mup 491 - Applied Music in Secondary Area (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.

Also offered for graduate-level credit as Mup 591 and may be taken only once for credit.

Mup 491B - Applied Music in Secondary Area: Baritone (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.

Mup 491C - Applied Music in Secondary Area: Cello/Bass (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.

Mup 491D - Applied Music in Secondary Area: Percussion (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.

Mup 491F - Applied Music in Secondary Area: French Horn (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.

Mup 491G - Applied Music in Secondary Area: Guitar (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.
Map 491H - Applied Music in Secondary Area: Harpsichord/Organ (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491I - Applied Music in Secondary Area: Flute (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491J - Applied Music in Secondary Area: Jazz Studies (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491K - Applied Music in Secondary Area: Clarinet (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491L - Applied Music in Secondary Area: Bassoon (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491O - Applied Music in Secondary Area: Oboe (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491P - Applied Music in Secondary Area: Piano (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491S - Applied Music in Secondary Area: Violin (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491T - Applied Music in Secondary Area: Trumpet (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491U - Applied Music in Secondary Area: Trombone/Tuba (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Map 491V - Applied Music in Secondary Area: Voice (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the
student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

**Mup 491Y** - **Applied Music in Secondary Area:** Viola (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

**Mup 491Z** - **Applied Music in Secondary Area:** Saxophone (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

**Mup 590** - **Applied Music** (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, conducting, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590A** - **Applied Music:** Trombone (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590B** - **Applied Music:** Bass (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590C** - **Applied Music:** Cello/Bass (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590D** - **Applied Music:** Percussion (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590E** - **Applied Music:** Early Instruments (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590F** - **Applied Music:** French Horn (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590G** - **Applied Music:** Guitar (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590H** - **Applied Music:** Harpsichord/Organ (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

**Mup 590I** - **Applied Music:** Flute (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590J** - **Applied Music:** Jazz Studies (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590K** - **Applied Music:** Clarinet (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

**Mup 590L** - **Applied Music:** Bassoon (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.
Mup 590M - Applied Music: Composition (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590O - Applied Music: Oboe (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590P - Applied Music: Piano (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590Q - Applied Music: Harp (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590S - Applied Music: Violin (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590T - Applied Music: Trumpet (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590U - Applied Music: Trombone (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590V - Applied Music: Voice (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590W - Applied Music: Tuba (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Mup 590X - Applied Music: Euphonium (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590Y - Applied Music: Viola (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 590Z - Applied Music: Saxophone (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

Mup 591 - Applied Music in Secondary Area (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.
Also offered for undergraduate-level credit as Mup 491 and may be taken only once for credit.

Mup 591A - Applied Music in Secondary Area: Trombone (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.

Mup 591B - Applied Music in Secondary Area: Baritone (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.

Mup 591C - Applied Music in Secondary Area: Cello/Bass (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591D - Applied Music in Secondary Area:
Percussion (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591F - Applied Music in Secondary Area:
French Horn (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591G - Applied Music in Secondary Area:
Guitar (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591H - Applied Music in Secondary Area:
Harpsichord/Organ (1 - 2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591I - Applied Music in Secondary Area:
Flute (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591J - Applied Music in Secondary Area:
Jazz Studies (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591K - Applied Music in Secondary Area:
Clarinet (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591L - Applied Music in Secondary Area:
Bassoon (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591O - Applied Music in Secondary Area:
Oboe (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.

Mup 591P - Applied Music in Secondary Area:
Piano (1-2)
Private instruction in voice, keyboard, guitar, and
orchestral or band instruments, not to include the
student's major performance area in order to extend
the performance skills of the music specialist in the
public schools. Graduate students not passing MuP
590 audition will be assigned MuP 591.
Mus 591S - Applied Music in Secondary Area: Violin (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Mus 591T - Applied Music in Secondary Area: Trumpet (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Mus 591U - Applied Music in Secondary Area: Trombone/Tuba (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Mus 591V - Applied Music in Secondary Area: Voice (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Mus 591Y - Applied Music in Secondary Area: Viola (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Mus 591Z - Applied Music in Secondary Area: Saxophone (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Mus - Music

Mus 047 - Final Project (0)
All Bachelor of Arts and Bachelor of Science degree candidates must complete a final project consisting of one of the following: (1) a half recital, (2) a performance project, (3) regular performances on area recitals.

Mus 056 - Graduate Music History Entrance Exam (0)
The Graduate Entrance Examination in history is a diagnostic test designed to assess entering graduate students' knowledge of music history as presented in traditional undergraduate history sequences. Students are expected to have a basic knowledge of genres, composers, compositions, and musical styles from the Middle Ages through the Twentieth Century. The examination will include questions, listening examples and score excerpts from all musical periods. Students who do not pass the exam will be required to take and pass Mus 529 Graduate History Review, before registering for any advanced graduate music history courses. The exam is given in June and September of each year. Contact the School of Music & Theater for more information about specific times.

Mus 057 - Graduate Music Theory Entrance Exam (0)
The Graduate Entrance Examination in theory is a diagnostic test designed to assess entering graduate students' knowledge of music theory as presented in traditional undergraduate theory sequences. Students are expected to have a basic knowledge of aural dictation, analysis and Seventeenth Century voice leading. The examination will include harmonic analysis from the Baroque through Romantic periods. Students who do not pass the exam will be required to take and pass Mus 512 Graduate Theory Review, before registering for any advanced graduate music theory courses. The exam is given in June and September of each year. Contact the School of Music & Theater for more information about specific times.
Mus 101 - Contemporary Music Theory I (4)
Music theory relevant to contemporary musical styles. Explores notation, pitch, rhythm, meter, tonality, intervals, chords, lead sheet notation, and diatonic harmony. Includes basic ear training, sight singing, and rhythmic skills. Requires no previous musical experience. This is the first course in a sequence of three: Mus 101, Mus 102, and Mus 103 and must be taken in sequence.

Mus 102 - Contemporary Music Theory II (4)
Music theory relevant to contemporary musical styles. Explores harmonic function, roman numeral analysis, 12-bar blues, non-chord tones, asymmetrical meter, and modes. Includes basic ear training, sight singing, and rhythmic skills. This is the second course in a sequence of three: Mus 101, Mus 102, and Mus 103 and must be taken in sequence.
Prerequisite: Mus 101 or permission of instructor.

Mus 103 - Contemporary Music Theory III (4)
Music theory relevant to contemporary musical styles. Explores chromatic harmony, chord extensions, and song forms through analysis, composition, and improvisation. Includes basic ear training, sight singing, and rhythmic skills. This is the third course in a sequence of three: Mus 101, Mus 102, and Mus 103 and must be taken in sequence.
Prerequisite: Mus 102 or permission of instructor.

Mus 105 - Introduction to Music Theory (3)
Preparatory level of music theory introducing main terms and concepts: music notation, meter, beat, rhythm, intervals, circle of fifths, key signatures, major and minor scales, triads and dominant seventh chord, and their implementation in blues form and popular song. No previous musical knowledge required. Complements Practical Musicianship.

Mus 106 - Aural Skills (3)
Designed to train the student to aurally recognize meters, rhythms, intervals, triads and seventh chords. Students learn to sing melodies on sight as well as develop strategies for composing and harmonizing melodies for instrumental or vocal accompaniment.

Mus 111 - Music Theory I (3)
Provides a thorough ground-work in the melodic, harmonic, and rhythmic elements of music with written exercises and analysis based on the styles of Bach, Haydn, Mozart, Beethoven, and other 17th and 18th century composers. Registration in the appropriate Sight-Singing/Ear Training course is required. An entrance placement examination will be given. Basic Keyboard Skills is recommended for music majors and minors. This is the first course in a sequence of three: Mus 111, Mus 112, and Mus 113.

Mus 112 - Music Theory II (3)
Provides a thorough ground-work in the melodic, harmonic, and rhythmic elements of music with written exercises and analysis based on the styles of Bach, Haydn, Mozart, Beethoven, and other 17th and 18th century composers. Registration in the appropriate Sight-Singing/Ear Training course is required. An entrance placement examination will be given. Basic Keyboard Skills is recommended for music majors and minors. This is the second course in a sequence of three: Mus 111, Mus 112, and Mus 113.

Mus 113 - Music Theory III (3)
Provides a thorough ground-work in the melodic, harmonic, and rhythmic elements of music with written exercises and analysis based on the styles of Bach, Haydn, Mozart, Beethoven, and other 17th and 18th century composers. Registration in the appropriate Sight-Singing/Ear Training course is required. An entrance placement examination will be given. Basic Keyboard Skills is recommended for music majors and minors. This is the third course in a sequence of three: Mus 111, Mus 112, and Mus 113.

Mus 114 - Sight Singing/Ear Training I (1)
Studies to develop the ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory I course is required. This is the first course in a sequence of three: Mus 114, Mus 115, Mus 116.

Mus 115 - Sight Singing/Ear Training II (1)
Studies to develop the ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the second course in a sequence of three: Mus 114, Mus 115, Mus 116.

Mus 116 - Sight Singing/Ear Training III (1)
Studies to develop the ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course
is required. This is the third course in a sequence of three: Mus 114, Mus 115, Mus 116.

**Mus 125 - Guitar Workshop (2)**
A workshop for discussion and applications of guitar related topics. Topics to include technique, sight-reading, transcribing. Audition may be required. This is the first course in a sequence of three: Mus 125, Mus 126, and Mus 127.

**Mus 126 - Guitar Workshop (2)**
A workshop for discussion and applications of guitar related topics. Topics to include technique, sight-reading, transcribing. Audition may be required. This is the second course in a sequence of three: Mus 125, Mus 126, and Mus 127.

**Mus 127 - Guitar Workshop (2)**
A workshop for discussion and applications of guitar related topics. Topics to include technique, sight-reading, transcribing. Audition may be required. This is the third course in a sequence of three: Mus 125, Mus 126, and Mus 127.

**Mus 128 - Recording Live Sound (4)**
Provides students with the skills necessary to set-up and operate professional sound reinforcement equipment. Guides students through the ins and outs of sound system components, setups, mixing and troubleshooting, as well as principles and concepts fundamental to live sound reinforcement. Provides video tutorials with hands-on demonstrations providing tips and techniques used in real live sound situations from indoor venues to outdoor stages.

**Mus 129 - Desktop Music Production (4)**
Provides students with the necessary skills and techniques to produce CD quality music using modern music technology. Students will learn to record and edit audio from a variety of sources, processing and effects, MIDI and Podcasting.

**Mus 145 - Music Technology Lab (1)**
Introduction to the practical skills of navigating a recording studio, live recording set-up, and amplified music context. Basic music and audio production skills are presented. Some peripheral issues, including acoustics, software and hardware operation, mixing and archiving, session management are addressed. This is a repeatable, required course in the PSU Sonic Arts and Music Production program.

**Mus 174 - Introduction to Music Technology (3)**
A hands-on introduction to the basic concepts, equipment, and software involved in modern music production. Covers introduction to MIDI sequencing, analog and digital audio, and basic studio techniques.

**Mus 174 - Yoga, Relaxation and Flexibility for Musicians (1)**
A course for musicians that incorporates gentle stretching, mild postures, breathing and relaxation techniques. Class participants will be guided through activities drawn from the disciplines of yoga, Tai Chi, and general flexibility and relaxation exercises. There are no prerequisites for this class. Equipment required: yoga mat and strap. Optional equipment: yoga block.

**Mus 187 - Performance Attendance (0)**
The student is expected to attend a minimum of eight live performances approved by the School of Music & Theater for each term registered. It is expected that students will register for Performance Attendance concurrently with registration for Applied Music.

**Mus 189 - Repertoire Study (1)**
Study and performance of selected repertoire. Available only to students enrolled in large ensemble, chamber music or applied music.
Prerequisite: consent of instructor.

**Mus 191 - Group Lessons for Beginners I: Piano, Guitar or Voice (2)**
Class instruction in instruments or voice. Offerings include piano, guitar, and voice. Music majors in Mus 193 Class Piano should be enrolled in Mus 046 concurrently. This is the first course in a sequence of three: Mus 191, Mus 192, and Mus 193.

**Mus 192 - Group Lessons for Beginners II: Piano, Guitar or Voice (2)**
Class instruction in instruments or voice. Offerings include piano, guitar, and voice. Music majors in Mus 193 Class Piano should be enrolled in Mus 046
concurrently. This is the second course in a sequence of three: Mus 191, Mus 192, and Mus 193.

Mus 193 - Group Lessons for Beginners III: Piano, Guitar or Voice (2)
Class instruction in instruments or voice. Offerings include piano, guitar, and voice. Music majors in Mus 193 Class Piano should be enrolled in Mus 046 concurrently. This is the third course in a sequence of three: Mus 191, Mus 192, and Mus 193.

Mus 194 - Chamber Music (1)
Instruction in the art of small ensemble performance; the established repertory of string, wind, keyboard, or vocal chamber music. Maximum: 6 credits. Audition may be requested.
Prerequisite: consent of instructor.

Mus 195 - Band (1)
Maximum: 6 credits. Audition may be requested.

Mus 196 - Orchestra (1)
Maximum: 6 credits. Audition may be requested.

Mus 197 - Chorus (1)
Maximum: 6 credits. Audition may be requested.

Mus 198 - Jazz Lab Band (1)
Performance of jazz literature in a big band setting. Maximum: 6 credits. Audition may be requested.

Mus 199 - Special Studies (1-4)
(Credit to be arranged.)

Mus 200 - Musical Instruments (4)
Study of the conventional classification, history, construction, and the use of instruments in classical, folk, and popular music. Instruments are explored in terms of: manner of producing sound, tuning and transposing, technical capabilities, virtuosity, and compatibility with other instruments/vocal parts as demonstrated in the literature. Develops aural recognition of each instrument.

Mus 201 - Introduction to Music (4)
Designed for non-majors. Course involves lectures, reading, and listening. Course may emphasize music of different world cultures. Successively the course deals with elements of music and small forms (201), and large forms of music and categories of musical literature (202). This is the first course in a sequence of two: Mus 201 and Mus 202.

Mus 202 - Introduction to Music (4)
Designed for non-majors. Course involves lectures, reading, and listening. Course may emphasize music of different world cultures. Successively the course deals with elements of music and small forms (201), and large forms of music and categories of musical literature (202). This is the second course in a sequence of two: Mus 201 and Mus 202.

Mus 203 - Music in the Western World (4)
Designed for music majors and others with the ability to read music. Introduction to the great composers and their compositions within a historical framework.

Mus 204 - Body Mapping for Musicians (2)
Anatomical information about the body in movement for musicians. Topics include sensory awareness, inclusive awareness, standing and sitting at balance, skeletal anatomy of the arms and legs, the structures and movements of breathing, hearing loss prevention, and performance anxiety.
Prerequisite: At least one year of experience as a singer or instrumentalist.

Mus 205 - Listening I (1)
Online listening survey of the major works within various musical traditions, including Western art music, Jazz, American music, and World music. This is the first course in a sequence of two: Mus 205 and Mus 206.

Mus 206 - Listening II (1)
Online listening survey of the major works within various musical traditions, including Western art music, Jazz, American music, and World music. This is the second course in a sequence of two: Mus 205 and Mus 206.
Mus 211 - Music Theory IV (3)
Continuation of the study of harmony. Introduction to harmonic counterpoint. Composition in small forms in various 18th, 19th, and 20th century idioms. Registration in the appropriate Sight-Singing/Ear Training course is required. This is the first course in a sequence of three: Mus 211, Mus 212, and Mus 213.
Prerequisite: Mus 046, Mus 113, and Mus 116.

Mus 212 - Music Theory V (3)
Continuation of the study of harmony. Introduction to harmonic counterpoint. Composition in small forms in various 18th, 19th, and 20th century idioms. Registration in the appropriate Sight-Singing/Ear Training course is required. This is the second course in a sequence of three: Mus 211, Mus 212, and Mus 213.
Prerequisite: Mus 046, Mus 113, and Mus 116.

Mus 213 - Music Theory VI (3)
Continuation of the study of harmony. Introduction to harmonic counterpoint. Composition in small forms in various 18th, 19th, and 20th century idioms. Registration in the appropriate Sight-Singing/Ear Training course is required. This is the third course in a sequence of three: Mus 211, Mus 212, and Mus 213.
Prerequisite: Mus 046, Mus 113, and Mus 116.

Mus 214 - Sight Singing/Ear Training IV (1)
Continuation of the study of sight-singing and ear training at an advanced level. Ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the first course in a sequence of three: Mus 214, Mus 215, and Mus 216.
Prerequisite: Mus 113 and Mus 116.

Mus 215 - Sight Singing/Ear Training V (1)
Continuation of the study of sight-singing and ear training at an advanced level. Ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the second course in a sequence of three: Mus 214, Mus 215, and Mus 216.
Prerequisite: Mus 113 and Mus 116.

Mus 216 - Sight Singing/Ear Training VI (1)
Continuation of the study of sight-singing and ear training at an advanced level. Ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the third course in a sequence of three: Mus 214, Mus 215, and Mus 216.
Prerequisite: Mus 113 and Mus 116.

Mus 224 - Wellness for Musicians (2)
Designed to introduce students to a wide range of health-related topics including diet, exercise, sleep, meditation, stress management and injury prevention. Lectures, lab activities, and guest speakers will all be utilized. Students will learn how to improve their health and well-being.

Mus 228 - Sound Design (4)
Up-to-date introduction to the art of sound synthesis and sampling with special emphasis on today's technology and the evolving market place. Comprehensive overview of specific techniques for creating new sounds, capturing and manipulating existing sounds and application.

Mus 229 - Recording Theory (4)
Up-to-date introduction to the art of audio recording with special emphasis on today's technology and the evolving marketplace. Comprehensive overview of microphones, specific techniques for recording drums, individual instruments and vocals. Considerations for Home studio development are discussed including DAW selection and acoustic conditioning.

Mus 231 - Survey of Popular Music Since 1950 (4)
Informs students of musical, historical and social aspects of American popular music since 1950. Genres explored include rhythm and blues, country and western, rock and roll, punk, heavy metal and hip-hop.

Mus 232 - Music and Style (4)
Focus on analysis of the inner workings of the nine selected compositions that marked the development of musical form and overall period style. Study of fugue, character piece, symphony, chamber forms, opera, and musical, and program and absolute music. Each week brings one significant piece.

Mus 233 - Music Notation (4)
Provides students with thorough study in the principles of music notation, providing a comprehensive overview of specific techniques for
creating music manuscripts that are not only correct in terms of notation, but legibly written and clearly communicating the composers’ intentions.

**Mus 236 - Wind and Percussion Instruments (1)**
A study of the wind and percussion instruments of the orchestra and band for students in the teacher education program.

**Mus 240 - Composition I (2)**
The course involves the study of 20th century composition techniques. Students will compose chamber works using techniques studied in the class. This is the first course in a sequence of three: Mus 240, Mus 241, and Mus 242 which must be taken in sequence.

Prerequisite: Mus 113 and Mus 116.

**Mus 241 - Composition II (2)**
The course involves the study of 20th century composition techniques. Students will compose chamber works using techniques studied in the class. This is the second course in a sequence of three: Mus 240, Mus 241, and Mus 242 which must be taken in sequence.

Prerequisite: Mus 113 and Mus 116.

**Mus 242 - Composition III (2)**
The course involves the study of 20th century composition techniques. Students will compose chamber works using techniques studied in the class. This is the third course in a sequence of three: Mus 240, Mus 241, and Mus 242 which must be taken in sequence.

Prerequisite: Mus 113 and Mus 116.

**Mus 245 - SAMP I: Audio Recording (3)**
Thorough study of digital audio recording and the signal chain from theoretical, technical, and practical perspectives. Students will learn the practical skills of an audio technician through live recording of sounds, musical instruments, and human voices. Topics include digital audio theory, microphone properties, applications, and ideal placements; and tools and techniques used to acquire robust and clear documentation of sound.

**Mus 246 - SAMP II: Studio Techniques (3)**
Foundational study of the concepts and techniques used in commercial music production. This class will introduce multi-track digital audio recording, editing, mixing and signal processing. Topics will include MIDI music making with virtual instrument plug-ins, synthesis and sampling technologies.

Prerequisite: Mus 245.

**Mus 247 - SAMP III: Studio Production (3)**
Recording and producing song-length musical products. Utilizing a series of increasingly complex assignments, students will work through the music production process from inception to distribution. The course includes an examination of the commercial music production business.

Prerequisite: Mus 246.

**Mus 260 - History of Rock Music (4)**
Traces the history and development of a popular music style in the United States, Great Britain, and other parts of the world. Includes other types of popular music in the twentieth century. This is the first course in a sequence of two: Mus 260 and Mus 261.

**Mus 261 - History of Rock Music (4)**
Traces the history and development of a popular music style in the United States, Great Britain, and other parts of the world. Includes other types of popular music in the twentieth century. This is the second course in a sequence of two: Mus 260 and Mus 261.

**Mus 271 - Jazz Improvisation I (2)**
Introduces the fundamentals of jazz improvisation. Beginning jazz skills include scales, song forms, melodic patterns, and repertoire development. Instructor approval required. This is the first course in a sequence of three: Mus 271, Mus 272, and Mus 273.

**Mus 272 - Jazz Improvisation II (2)**
Introduces the fundamentals of jazz improvisation. Beginning jazz skills include scales, song forms, melodic patterns, and repertoire development. Instructor approval required. This is the second course in a sequence of three: Mus 271, Mus 272, and Mus 273.

**Mus 273 - Jazz Improvisation III (2)**
Introduces the fundamentals of jazz improvisation. Beginning jazz skills include scales, song forms, melodic patterns, and repertoire development.
Instructor approval required. This is the third course in a sequence of three: Mus 271, Mus 272, and Mus 273.

**Mus 274 - Introduction to World Music (4)**
Provides an insight into the abundance of trends called World Music. Explains what is considered world music and what is not. With a very broad approach, material samples every corner of the world through representative traditions, performing styles and instruments of different nations.

**Mus 291 - Advanced Class Piano I (2)**
Advanced class instruction developing functional piano skills. Activities include performing scales, chords, and progressions in all keys. Students develop harmonization, sight reading, and improvisation skills. They perform simple piano pieces and accompaniments. Assessment by the instructor determines whether students are admitted, or should take basic Class Piano first. This is the first course in a sequence of three: Mus 291, Mus 292, and Mus 293.

**Mus 292 - Advanced Class Piano II (2)**
Advanced class instruction developing functional piano skills. Activities include performing scales, chords, and progressions in all keys. Students develop harmonization, sight reading, and improvisation skills. They perform simple piano pieces and accompaniments. Assessment by the instructor determines whether students are admitted, or should take basic Class Piano first. This is the second course in a sequence of three: Mus 291, Mus 292, and Mus 293.

**Mus 293 - Advanced Class Piano III (2)**
Advanced class instruction developing functional piano skills. Activities include performing scales, chords, and progressions in all keys. Students develop harmonization, sight reading, and improvisation skills. They perform simple piano pieces and accompaniments. Assessment by the instructor determines whether students are admitted, or should take basic Class Piano first. This is the third course in a sequence of three: Mus 291, Mus 292, and Mus 293.

**Mus 301U - Survey of Music Literature I: Medieval to Classical Era (4)**
For non-majors or majors; the study music history by examining the literature of particular time periods. Mus 301U: Music from the Medieval to Classical Era; Mus 302U: Music from the Romantic to Modern Era. This is the first course in a sequence of two: Mus 301U and Mus 302U.

**Mus 302U - Survey of Music Literature II: Romantic to Modern Era (4)**
For non-majors or majors; the study music history by examining the literature of particular time periods. Mus 301U: Music from the Medieval to Classical Era; Mus 302U: Music from the Romantic to Modern Era. This is the second course in a sequence of two: Mus 301U and Mus 302U.

**Mus 304 - Music History: Medieval, Renaissance, and Baroque (4)**
Intensive analytical study of the history of music in the Medieval, Renaissance, and Baroque Periods (Mus 304), Classical and Romantic Periods (Mus 305) and 20th Century Period (Mus 306). This is the first course in a sequence of three: Mus 304, Mus 305, and Mus 306. Prerequisite: Mus 205 and Mus 206.

**Mus 305 - Music History: Classical and Romantic (4)**
Intensive analytical study of the history of music in the Medieval, Renaissance, and Baroque Periods (Mus 304), Classical and Romantic Periods (Mus 305) and 20th Century Period (Mus 306). This is the second course in a sequence of three: Mus 304, Mus 305, and Mus 306. Prerequisite: Mus 205 and Mus 206.

**Mus 306 - Music History: 20th Century (4)**
Intensive analytical study of the history of music in the Medieval, Renaissance, and Baroque Periods (Mus 304), Classical and Romantic Periods (Mus 305) and 20th Century Period (Mus 306). This is the third course in a sequence of three: Mus 304, Mus 305, and Mus 306. Prerequisite: Mus 205 and Mus 206.

**Mus 311 - Formal Analysis (3)**
Thorough study of formal analysis, including phrases and periods, variations, two- and three-part song forms, developed ternary forms, sonata, rondo, and the concerto.
**Mus 312 - Orchestration (3)**
Fundamentals of arranging music for instrumental ensembles. Emphasis on basic principles of orchestration and their practical applications.
Prerequisite: Mus 213.

**Mus 313 - Counterpoint (3)**
Intensive study of polyphonic music. Analysis and application in writing contrapuntal exercises using two, three, and four voices. Prerequisite: Mus 213.

**Mus 320 - Fundamentals of Conducting (2)**
The basic principles of conducting as they apply to both instrumental and vocal ensembles. Basic baton technique and beat patterns. Development of an independent use of the hands. Fundamentals of score reading, both instrumental and vocal.
Prerequisite: Mus 213.

**Mus 321 - Instrumental Conducting (2)**
The principles of conducting and training instrumental organizations.
Prerequisite: Mus 320.

**Mus 322 - Choral Conducting (2)**
The principles of conducting and training choral organizations.
Prerequisite: Mus 320.

**Mus 325 - Guitar Workshop (2)**
A workshop for discussion and applications of guitar related topics. Topics to include technique, sight-reading, transcribing. Audition may be required.

**Mus 326 - Guitar Workshop (2)**
A workshop for discussion and applications of guitar related topics. Topics to include technique, sight-reading, transcribing. Audition may be required.

**Mus 327 - Guitar Workshop (2)**
A workshop for discussion and applications of guitar related topics. Topics to include technique, sight-reading, transcribing. Audition may be required.

**Mus 344 - Sonic Arts and Music Production Laptop Ensemble (1)**
An ensemble of humans, laptops, controllers, and speakers. Ensemble members both compose and perform in the ensemble, exploring computer-mediated instrument design, sound synthesis, programming, live interactive performance, and incorporation of visual media. Explorations culminate in public performance. May be repeated for up to a maximum of six credits.
Prerequisite: Mus 247 or permission of instructor.

**Mus 345 - SAMP IV: Acoustics for Musicians (3)**
Study of acoustics as it pertains to the performing musician, audio recording technician, and sound artist. Topics include sound wave production, propagation and dissipation; practical use of the decibel scale; spectral qualities of sounds; psychoacoustics; and acoustic treatment considerations for recording studios and performance spaces.
Prerequisite: Mus 247.

**Mus 346 - SAMP V: Music with Visual Media (3)**
Examines music and sound design created to support the visual image. Topics include film scoring technology and technique, creating and editing dialogue and sound effects, working with animation, interfacing with film editors, and the film and video audio post-production business.
Prerequisite: Mus 247 and Mus 345.

**Mus 347 - SAMPVI: Integrated Sound Arts (3)**
Incorporates recording techniques, studio production, visual media, sound design, electronic composition, and live interactive performance. Introduces new contexts including iOS, cloud-based music collaboration, DIY electronic instrument building, and live interactive installations using sensor-based technology. Students complete creative projects in collaboration with community partners in the arts or business world.
Prerequisite: Mus 346 or permission of instructor.

**Mus 351 - Accompanying (2)**
Theoretical and practical study of the art of accompanying vocal and instrumental solos and performing duo-sonatas. This course is repeatable up to 6 times for credit.

**Mus 355U - Jazz History (4)**
Examines the development of jazz from its African and European roots and its origins in New Orleans to
its florescence in Chicago and New York. Covers period from about 1900 to 1960. Focuses on important musicians and major musical styles.

**Mus 356U - Jazz And American Culture: How History Shaped Our Music, Then and Now (4)**
Examines jazz and its development in the context of American history. Jazz, pre-jazz, contemporary practice, and related sub-genres will be explored through listening and analysis. The cultural context from which the music emerged will be dissected and discussed. Covers period from the mid-1800s to today.

**Mus 360U - The Guitar: its History and Music (4)**
This course is designed to explore the origins of the guitar by examining its history, repertoire and performers. The course will look at all aspects of the guitar's history from the related ancient Sumerian stringed instruments to the modern-day electric guitar.

Traces the history and development of a popular music style in the United States, Great Britain, and other parts of the world from 1950 to 1970. Includes other types of popular music in the twentieth century. This is the first course in a sequence of two: Mus 361 and Mus 362.

Traces the history and development of a popular music style in the United States, Great Britain, and other parts of the world since 1970. Includes other types of popular music in the twentieth century. This is the second course in a sequence of two: Mus 361 and Mus 362.

**Mus 363U - The Music of the Beatles (4)**
Study of the development of the Beatles’ music from the late 1950’s through the early 1970’s. Students will gain a deeper understanding of the music through elementary musical analysis of form, harmony, and recording studio techniques. The cultural context from which their music emerged and their significant influence on popular culture will be examined.

**Mus 364U - Modern Music Technology (4)**
An in-depth examination of digital technologies used for creating and distributing music, and the social impact of these technologies.

**Mus 365U - Film Music (4)**
An aesthetic, historical, commercial, and technical examination of the role of music and sound design within the art of film.

**Mus 366U - New Orleans: Jazz and Culture in the Storyville Era (4)**
