Growth in Oregon, 1990 to 1998

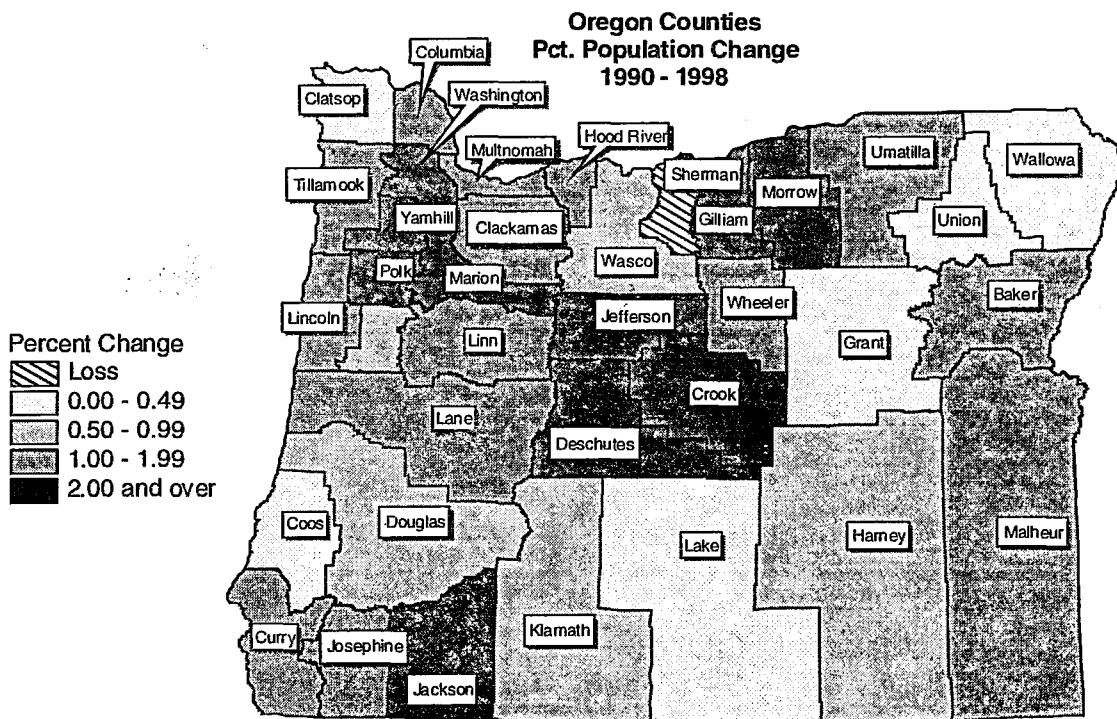

Oregon's population grew at an average annual rate of 1.81 percent during the 1990 to 1998 period. The total population increased by 425,000 during the eight-year period, reaching a population of 3,267,550 on July 1, 1998. Current annual rates of growth are above the U.S. national average of 1.04 percent.

Most of the way through the 1990s, the Oregon counties experiencing the fastest average growth rates are located along the I-5 corridor and in central Oregon. The I-5 counties include the area in the Willamette Valley and several areas in southern Oregon. The central Oregon counties are located along the eastern flank of the Cascades.

growth has been occurring in Central Oregon, centered on Bend. This area has derived strong growth from in-migration.

Why Oregon's Population is Growing

Natural increase (birth minus deaths) has added an annual average of about 16,000 persons to Oregon's population. Natural increase accounts for about 30 percent of Oregon's current overall population growth. Net migration (people moving into the state minus people leaving the state) accounts for the remaining population growth, adding about 35,800

Almost all of the localities in these rapidly growing area are included in the Portland, Salem, Eugene-Springfield metropolitan areas. The exceptions -- Deschutes and Jefferson counties -- may well become metropolitan areas after the 2000 census enumeration.

The few rapidly growing localities located outside the I-5 corridor are special cases. Fairly rapid population

people to the state's population each year in the 1990s.

Migration has been the most variable component of population change for the past several decades. Migration reflects population movements associated with economic opportunities in Oregon, taking into account conditions especially in neighboring states. Some movements into and out of Oregon -- for

students and for retired persons, for example -- reflect non-economic factors as well.

Oregon's pattern of net migration has been associated with contractions and expansions of the state's economy. During peak growth periods, such as during the mid-1990s, annual migration rates were more than triple the gains due to natural increase. As migration slows, natural increase contributes a greater portion of annual population growth.

Metropolitan Growth

While many people both inside and outside Oregon retain the image of the state as a place of coastal beaches, mountain forests, and high desert plains, the state's population is mainly urban and has been for some time. In 1998, about 66 percent of Oregon's residents lived in cities and towns; in fact, over 2.3 million live in metropolitan counties.

state as a whole. The Eugene-Springfield metropolitan area has been growing at slower rate than the state average.

Nor do localities within metropolitan areas experience equal levels of growth. All cities and towns in metropolitan areas have been growing in the 1990s, but there is wide variation in growth rates.

For many years, the localities outside the central cities of metropolitan areas were the fastest-growing localities, and most of them still have above average annual growth rates. A substantial number of these older localities, however, have now grown to a size that they have become major urban areas. With more economic development moving to these localities, residential growth has been moving out to further towns in metropolitan areas. This trend is especially evident in the metropolitan Portland area, where growth rates for Canby, Oregon City, and Wilsonville

Average Annual Growth Rates 1990-98 by for Oregon's Metropolitan Areas

Higher growth rates occur mainly in metropolitan counties, which taken together have had average annual growth rates of 2.0 percent since 1990, compared to 1.5 percent for nonmetropolitan counties and 1.8 percent for the state as a whole.

However, not all metropolitan areas are growing at equal rates. Portland, Medford-Ashland, and Salem metropolitan areas have been growing faster than the

in Clackamas County; Beaverton, Forest Grove, Hillsboro, Tigard, and Tualatin in Washington County; and McMinnville and Newberg in Yamhill County well outstrip those for Portland. Evidence of the trend is found in all Oregon metropolitan areas: Keizer, Central Point, and Florence are all examples of localities that are growing more rapidly than the central cities of their metropolitan areas.

Net Migration's Contribution to Growth

During the 1970s, net migration drove Oregon's population increase. During the 1980s, the economy was weak and the state experienced net out-migration during three years. During the 1990s, the tables have turned in favor of migration, which accounted for 70 percent of the state's 1990-8 population growth. Natural increase's contribution to growth has declined – not because the excess of births minus deaths has decreased – due to the relative increase of migration.

The reversal of net migration's effect has been most evident in a number of counties, particularly in several counties that experienced population losses in the 1980s. Of Oregon's twenty-four counties with

negative net migration during the 1980 to 1990 period, all but two – Grant and Sherman – experienced a turnaround in the 1990s and witnessed positive net migration.

Meanwhile, there are ten counties in Oregon that are experiencing natural decreases in the 1990s (there are more deaths than births). These counties would decline in absolute numbers if net in-migration did not offset natural decreases. Except for Sherman County, net in-migration has offset natural decreases in Oregon's counties.

Population Change, Natural Increase and Net Migration, 1960-61 to 1997-98

Methods for Population Estimates

We include all residents in cities, counties, and the state in the population estimates. All residents include people living in their own homes, rental homes or apartments, mobile homes, or in college dormitories, nursing homes, jails and prisons, and other group quarters. We consider college students to be residents of the place where they live while attending college. We count seasonal residents as living at the place that they consider to be their usual residence.

We have developed methods for Oregon's population estimates to be as accurate as possible. Toward this goal, we work closely with state, county, and city officials, requesting information from them and inviting their review of our methods and estimates.

For estimates for the state population, we rely on the observed registration of births and deaths for an estimate of natural increase (the excess of births minus deaths). For the second component of population, migration, we rely on Medicare data for an estimate of changes in the population aged 65 years older and from administrative records for changes for the population less than 65 years. We use information on school enrollments, voter registration, state tax returns, and non-farm payroll information for an estimate of net migration for Oregon for the population less than 65 years.

We base county population estimates on a method called ratio correlation. The ratio correlation method relates changes since the 1990 census to changes in state tax returns, school enrollments, automobile registration, births, and voter registration -- all for county populations. We track changes in each of these types of administrative data since the 1990 census to make an estimate of the current county populations. We also examine changes in the housing stock for counties as a check on the accuracy of the county estimates.

We determine city population estimates based on changes in the housing stock. City officials report each year on the changes in their city's housing stock (for single family units, multi-unit residents, and mobile homes) and the number of persons residing in group quarters. We also take into account any population changes that have been due to annexations. We separately estimate possible changes due to the number of people per housing unit and use this information to prepare the city's final population estimate.

We monitor city annexations throughout the year. We are informed about annexations by the office of the Secretary of State. When an annexation occurs, we contact city officials to find out the number of residential housing units and population, if any, involved in the annexation. If the annexation added people to the city's population, then we certify an updated city population on a quarterly basis, in a special report to the Secretary of State's office.
