Abstract (1/2)

- The resurgence of interest in **Kabbalistic diagrams** (Segol, Busi, Chajes) raises the question of **how diagrams function in religious symbolism**. This question can be approached via methods used in the graphical modeling of data. Specifically, **graph theory** lets one define a repertoire of candidate structures that can be applied not only to quantitative data, but also to symbols consisting of qualitative components.
- **A graph is a set of nodes and links between nodes**. What nodes and links are is unspecified in this definition. The Kabbalistic Ilan is – partially – a graph. **The Sefirot are its nodes**; the paths connecting the Sefirot are its links. The idea of a graph is actually not adequate to the Ilan, because in a graph nodes can be anywhere in space, while in the Ilan **arrangement in space is significant** and not arbitrary. However, graph theory can be supplemented with spatial considerations.

2

Polymorphism and Polysemy in Images of the Sefirot (Martin Zwick)

Abstract (2/2)

- What (an augmented) graph theory offers that is of special interest is a way to conceptualize the [structural polymorphism of a symbol](#), i.e., the various decompositions possible for the symbol viewed as a graph.
- Structural polymorphism correlates with [conceptual polysemy](#). A structural decomposition conveys a particular interpretation of the symbol, and to viewers of the symbol the variety of possible decompositions presents simultaneously a multiplicity of meanings.
- [This polymorphism and thus polysemy is what gives many symbols their richness and evocative power](#). This paper will apply the graph theory-based methodology of decomposition to the Kabbalistic images of the *Sefirot*.

3

Outline

1. [Introduction: scope, orientation, prior work, graph theory](#)
2. Scholem's Ilan; structural themes; 3-7-12 structures
3. Non 3-7-12 structures
4. Sequential *Sefirotic* orders
5. Ring composition; centrality; substructures
6. More substructures; fractals & networks
7. Summary

4

Polymorphism and Polysemy in Images of the Sefirot (Martin Zwick)

Scope (1/2)

- This talk is nearly all about [polymorphism](#); it only touches on [polysemy](#) – there is just too much polymorphism to present! Not considered here at all is [poly-performance](#).
- Poly-performance  Pragmatic
- Polysemy  Semantic
- Polymorphism  Syntactic

5

Scope (2/2)

- Focus here is on [Jewish Kabbalah](#), with only a few glances at Christian (and Occult / Western esoteric) Kabbalah
- This talk draws on the work of Marla Segol, Giulio Busi, other Kabbalah researchers, & [especially Yossi Chajes](#).
- This is only a [very preliminary](#) exploration.

6

Ilanot Project (Chajes)

<http://ilanot.haifa.ac.il/site>

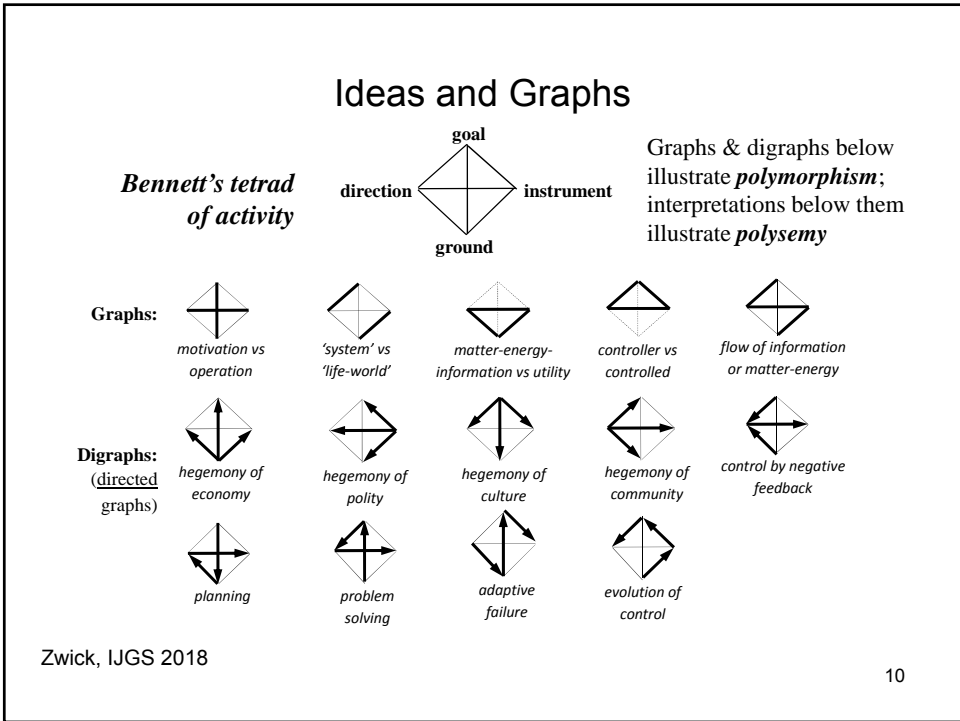

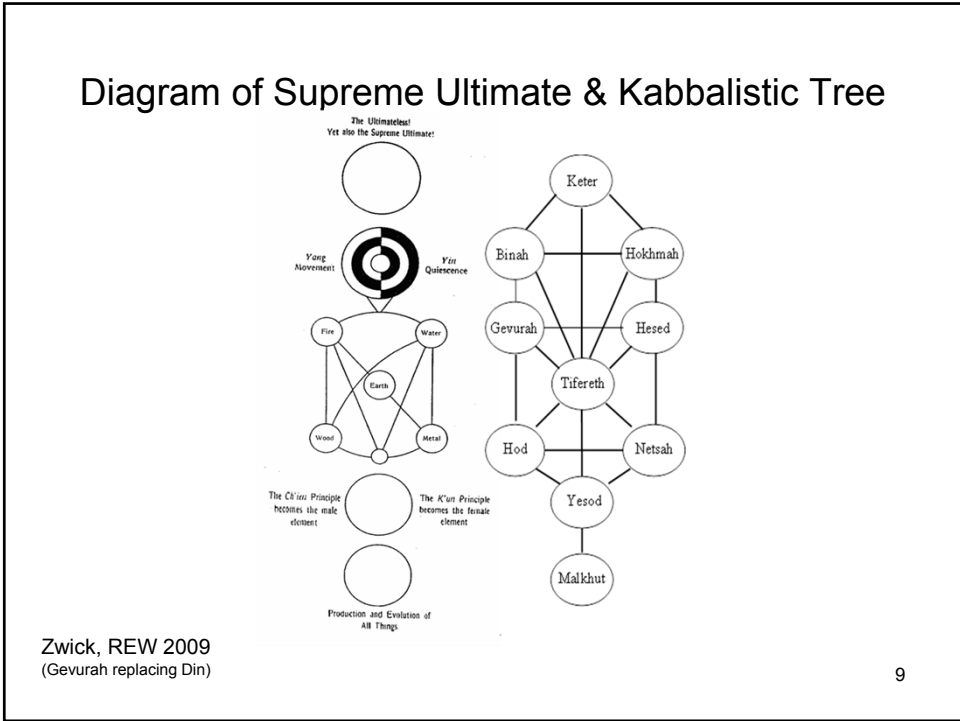

7

Orientation

- Focus here is **thematic** – on **structure** of Kabbalistic images, ignoring geography & especially chronology. So this talk will not address **canonization** that has occurred in Kabbalistic images which **counteracts polymorphism**.
- While Kabbalistic images are always embedded in a context of words, and also *include* letters and words, focus on images per se can enhance understanding of how images and words are complementary.
- “Contemplation of the linguistic structures mentioned by Scholem – words, names, and thoughts – is itself dependent on imaginative visualization of these very structures. Can we in any meaningful way distinguish the verbal and visual?” –Elliot Wolfson

8

Polymorphism and Polysemy in Images of the Sefirot (Martin Zwick)

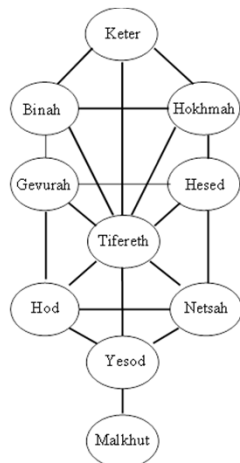

Outline

1. Introduction: scope, orientation, prior work, graph theory
2. [Scholem's Tree; structural themes; 3-7-12 structures](#)
3. Non 3-7-12 structures
4. Sequential *Sefirotic* orders
5. Ring composition; centrality; substructures
6. More substructures; fractals & networks
7. Summary

11

Scholem's canonical Ilan

STRUCTURAL THEMES

- **levels:** 7 levels
- **columns** (polarity): 3 columns, right & left mediated by center
- **centrality** of *Tiferet*
- **symmetry:** here & generally left-right, rarely top-bottom
- **number of links:** here 20 = 3 horizontal + 7 vertical + 10 diagonal (3-7-10); 22 is canonical (3-7-12). To my knowledge, no Ilan image has more than 22 links.

Scholem, p.44
(Gevurah replacing Din)

12

Polymorphism and Polysemy in Images of the Sefirot (Martin Zwick)

ADDITIONAL STRUCTURAL THEMES (1/2)

For images to be shown later

- **3-7-12 structure:** correlates with types of letters (*Sefer Yetzirah*: 3 “Mothers” (אשח), 7 “doubles” (בגדכפרת), 12 “ordinary.” Because of the prominence of the SY, 3-7-12 structures have a strong claim to being **canonical**.)
- **11th Sefirah:** *Da’at*
- **presence/absence of specific links**, e.g., links to *Malkhut* from *Netsah & Hod*
- **Sequential (sometimes concentric) order of all 10 Sefirot:** from *Keter* to *Malkhut*
- **circularity:** *Malkhut* linked back to *Keter*

13

ADDITIONAL STRUCTURAL THEMES (2/2)

For images to be shown later

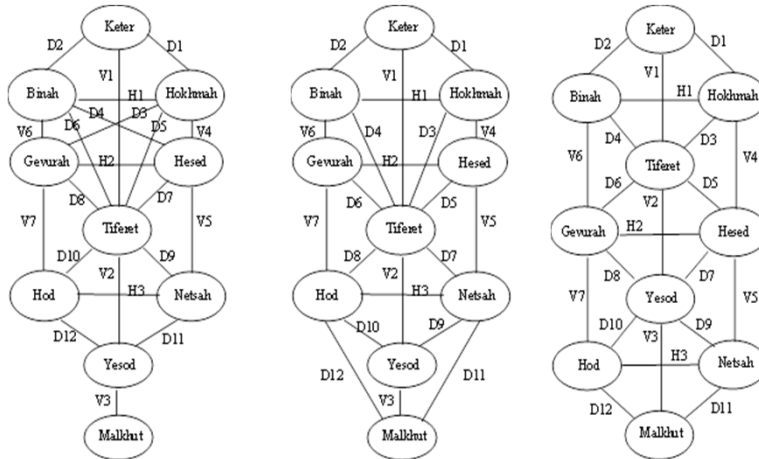

- **line arrangement of first 3 Sefirot:** *Keter, Hokhmah, Binah*
- **ring composition:** down the right column, return on the left (a different type of circularity)
- **substructures:** groupings of *Sefirot* (e.g., 3+7, three triads)
- **shifts** of the locations of *Sefirot* (e.g., in Gra diagram, *Malkhut*)
- **fractals, networks:** Trees inside *Sefirot*; trees in networks

Images will be named by author/translator, book, or library

14

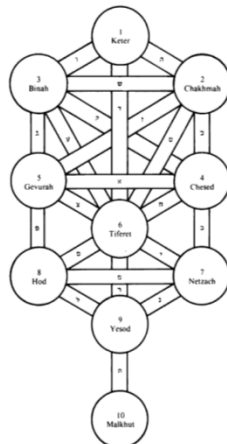

Polymorphism and Polysemy in Images of the Sefirot (Martin Zwick)

3-7-12 structures

Three versions: (a) left, (b) center, (c) right. Kaplan draws these alternatives. 15

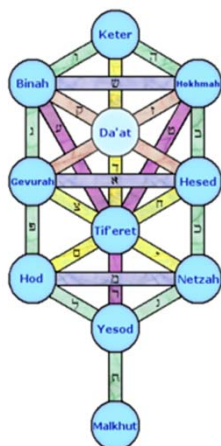

3-7-12a: Yitzhak Luria (Ari)

- 22 links, 3-7-12a structure
- Includes links of
 - Hokhmah-Gevurah
 - Binah-Hesed
- Omits links of
 - Netsah-Malkhut
 - Hod-Malkhut

Ari structure reproduced by Kaplan, p.29

3-7-12a: Adding Da'at to Lurianic Ilan

- 22 links, 3-7-12a structure
- Add Da'at
- Includes links of
 - *Hokhmah-Gevurah*
 - *Binah-Hesed*
- Omits links of
 - *Netsah-Malkhut*
 - *Hod-Malkhut*

Wikipedia, "Da'at"

5. Ring composition; centrality; substructures
6. More substructures; fractals & networks
7. [Summary](#)

57

Polymorphism & Polysemy (1/3)

Syntax	Semantics
hierarchical levels	gradations of transcendence vs immanence; links between God and World
columns , triads	reconciliation of opposites, of male and female principles
centrality of <i>Tiferet</i>	Supplements the fundamental of the top & the bottom with the fundamental of the central
symmetry	beauty of divine realm, harmony of upper & lower, left & right

58

Polymorphism and Polysemy in Images of the Sefirot (Martin Zwick)

Polymorphism & Polysemy (2/3)

Syntax	Semantics
number of links	integrates image & word by reference to letters of the alphabet
3-7-12 structure	correlates with three types of letters
11th <i>Sefirah</i> , <i>Da'at</i>	needed for triadic synthesis of <i>Hokhmah</i> & <i>Binah</i> , <u>but</u> "10 and not 9; 10 and not 11" (Sefer Yetsirah)
Sequential order of all <i>Sefirot</i>	Hierarchical order in divine realm; order of emergence of <i>Sefirot</i>
concentric order of all <i>Sefirot</i>	divine order like astronomical order; asserting " cosmogenic priority & primordial perfection of <i>Sefirot</i> " (Chajes)

59

Polymorphism & Polysemy (3/3)

Syntax	Semantics
circularity	immanent is rooted in transcendent: (SY: "their end is fixed in their beginning")
line arrangement of first 3 <i>Sefirot</i>	distinction between upper & lower realms of the <i>Sefirot</i>
ring composition	God creates so that the created can ascend ; we ascend so that we may descend
substructures	meaningful interactions are local
Shifts (up or lateral)	up =? , lateral = polarity alignment?
fractals	as above, so below; universality of wholeness ; interconnectedness of all; the infinite within the 10 <i>Sefirot</i>

60

Some Questions ^(1/2)

- Re 3-7-12 structures, what do *Netsah & Hod* links to *Malkhut* add; what does their absence omit?
- Re 3-7-12 structures, what do *Hokhmah-Gevurah* links and *Binah-Hesed* add; what does their absence omit?
- Is absence of a *Binah-Hesed* link compatible with the *lightening flash* order of the *Sefirot*?
- Does anything *define columns* aside from polarity? How are *Hokhmah:Binah = Hesed:Gevurah = Netsah:Hod*?
- Which features of the *Ilan* are (relatively) *invariant* despite the polymorphism & is this invariance *significant*?
- Are *nablas* (∇) syntheses & *deltas* (Δ) generative?

61

Some Questions ^(2/2)

- Does internal *fractalness* (*volvelles*) allow *non-local* (non-link) interactions between *Sefirot*?
- Is there any evidence for *triadic* or higher ordinality relations among *Sefirot*?
- Do syntactic & semantic diversity underlie pragmatic (*performative*) diversity?
- Is the *contemplation* of structural *polymorphism* a mystical exercise?
- Is the polymorphism of *Christian* or *occult/esoteric* Kabbalah as extensive as it is in Jewish Kabbalah?

62
