CHAPTER I

INTRODUCTION

This research study is an evaluation of a graduate social work training program funded by NIMH of the Department of Health, Education, and Welfare entitled "Teaching-Trainingship Grant in School Social Work." This grant provides training opportunities in a field placement at John Adams High School in Portland, Oregon, for Portland State University School of Social Work Masters degree candidates. Originally approved in June 1969, the grant became operational for the school year 1970-71.

In addition to faculty salaries, supplies, professional consultation, fees, etc. the grant provides trainee stipends for selected students participating in the program. Both first and second year students in the graduate program are eligible for field placement at John Adams High School where they spend two days per week as school social work trainees.

The unit is currently instructed by an MSW social worker who is a faculty member of the School of Social Work at Portland State University. The instructor provides a variety of training experiences for students including direct services to clients and families, supervision, consultation, program development, teaching and research.

The primary focus of this study is to evaluate the effectiveness of the training program at Adams High School. Secondarily, this study will attempt to answer three basic questions:
1. Can a graduate school social work field instruction program in public school social work on the elementary and secondary levels be evaluated?

2. Can an ongoing instrument be developed allowing for evaluation of program and individual instruction?

3. Can the study provide analytical data for the program director's evaluation of the effectiveness of his training?

This study was undertaken by the authors because of an interest in program evaluation as an integral function of professional social work practice. We feel agencies, particularly those financed through public funds are increasingly being pressured to not only quantify, but to qualify program effectiveness. Funding bodies now require evaluative research documenting direction and effectiveness of social programs.

Findings of this study should be of value not only to the funding source and the program director, but also to other students who in the future may wish to conduct similar studies in evaluation of graduate social work field instruction.

The following chapter discusses the background and development of John Adams High School and the educational climate that made possible the inclusion of this training program as a part of the learning experiences offered. Chapter III deals with the objectives of the training program. Chapter IV examines evaluative research. Chapter V develops the methodology of the research.
The charts and statistics used are examined in Chapter VI.

The data are presented and analyzed in Chapter VII. Summary, conclusions and recommendations are then set forth in the final chapter.
CHAPTER NOTES

CHAPTER II

AGENCY DESCRIPTION

John Adams High School opened September, 1969, with approximately 1000 students (grades 9-11). The student body is composed of one-quarter Black, and three-quarters White. Adams' co-educational student body is racially integrated.¹

In 1967, a team of students at the Harvard Graduate School of Education wrote a proposal for a clinical high school in which the instruction of students, pre-service and in-service teacher education, basic and applied research, and the development of curriculum would all take place. These doctoral candidates wrote into their proposal provisions for ultimate relations with a university and surrounding community. Then they set about to sell the proposal and themselves; Portland, Oregon bought the proposal and John Adams High School is the result.²

Three of the original authors became part of the administrative team that developed and helped John Adams become operational. One author remains as Director of Training and Research.³

The basic philosophy of Adams is substantially different than other secondary schools. John Parker reports this difference in Phi Delta Kappan:
The original Adams model was based on the analogy of the teaching hospital. This institution in the medical world combines patient care, training, and research in one setting. Our intent for the "clinical high school" was to design an organization which would effectively combine instruction of students with training and research.

The rationale for inclusion of sophisticated personnel training within a school rests squarely on one premise -- that the most effective preparation for any profession occurs when trainees carry out specific task, under expert supervision in the actual work setting.4

The school continues to operate within the framework of the original philosophy; however, the atmosphere of total student freedom has been somewhat modified. John Adams is basically like a traditional high school in employed personnel, teaching assignment and administrative functioning. However, one unique concept is that of the general education program5 whose aim is to provide students with a base of knowledge and a set of communication skills that will be useful to them now as well as when they enter college or the labor market. This general education concept is operationalized through several General Education teams that are responsible for instructing social science curriculum during a major part of the student's daily time block.

The other area that makes Adams unique is its emphasis on the research and training component. There is a full time research staff responsible for the ongoing evaluation concerning the impact of Adams' teaching philosophy and standards on its students and the community. As noted earlier, the training component is extremely important at Adams, and it is within this philosophical framework that the graduate social work NIMH grant and training program was included in the Adams
concept. In addition to social work trainees, the school also sponsors student teachers, Teacher Corps trainees, and other professional and paraprofessional personnel.

Within the Adams environment the graduate social work trainee works with teachers, counselors, administrators, full time school social workers, and other professional trainee personnel.
CHAPTER NOTES

3. Ibid., p. 514.

CHAPTER III

TRAINING PROGRAM OBJECTIVES

Robert Roy, unit field supervisor, has listed the following goal and objectives as the basis of the social work field experience at John Adams High School.

Goal

To provide graduate social work students a training experience in social work that meets the needs and interests of the individual student. This will be accomplished through "school social work" in elementary (1-8) and secondary educational settings.

Objectives

a. To provide training experiences in direct service, consultation, program development, supervision, teaching and research.

b. To provide instruction to graduate students through various methods which include individual and group conferences, tape recordings of group and individual contact with clients, process recordings, modeling field instructor, agency personnel, and other social work students at John Adams High School.

c. To acquaint students with other resources in the community and how to utilize them in their performance as a school social worker.
d. To help students gain a better awareness of their self and how this understanding affects their performance as a social worker.

e. To provide training experiences for students in working with minority groups.

f. To expose students to the vital areas of John Adams High School in an effort to determine the effectiveness of that area for the performance of a school social worker.

The expectation of Mr. Roy is that each student at least experience each objective even though the primary area of interest of the student may not lie within several of these particular objectives.

It is the aim of graduate level social work education that the student initially be exposed to several aspects and levels of practice.

The underlying assumption of the grant and program implies that there is a community need for trained school social workers. The community generally provides social work through juvenile courts and public welfare. However, because the educational institution plays such an important part in the psychosocial development of the child, it is imperative that social work trained professionals are available at the school to contend with school related problems as a part of the teacher-counselor-administrator team already functioning to maintain an educational environment conducive to maximum growth.

A variety of services are performed by school social workers. These include social casework, group work, consultation with school personnel, teaching, community organization, program development and referral services to community agencies. The school social worker is
also in a strategic position to help develop resources within the school which strengthen the abilities of the child to cope with personal and environmental demands.

From the foregoing material it becomes readily apparent that school social work is a specialized area within the profession, and as such requires training geared to the demands of the educational milieu. Statistical evidence will verify the need for trained school social workers.

The report of the developmental task force on Social Work Education and Manpower revealed that in fall of 1964 the public school population of the United States was in excess of 41 million children. Enrollment in public schools by 1970 will approach 45 million. On the basis of one school social worker to each 2,000 school population, by 1970 there will be a need of more than 20,000 social workers. At the present time there are less than 3,000 social workers attached to public schools, leaving a gap of at least 17,000.

The NIMH grant and training program is a recognition of this fact that there is an ever increasing demand for well-trained professionals in school social work.

CHAPTER IV

EVALUATIVE RESEARCH

I. DEFINITION OF EVALUATIVE RESEARCH

Evaluative research is viewed in terms of an object and a process. Evaluation as an object refers to judgements of social worth or value. If analyzed as a process it implies the degree to which an object is valued. Methodologically, if one is engaged in research of social value that can be measured one would be doing evaluative research.\(^1\) Evaluative research is also considered as a process which satisfies scientific criteria.\(^2\) It is also measuring the extent of success toward achieving program objectives.\(^3\)

Evaluative research is viewed as a means of providing guidelines for the practitioner who attempts to assess a program in reference to a particular objective or goal.\(^4\)

Edward Suchman believes:

Evaluative research is a specific form of applied research whose primary goal is not the discovery of knowledge but rather a testing of the application of knowledge.\(^5\)

Thus, the major emphasis of evaluative research is upon utility and factfinding concerning a specific planned program.

II. DESIGN FOR EVALUATIVE RESEARCH

For the purpose of this paper the selected design for evaluative research to be examined is the goal design. Evaluative
research might include a hypothesis, however, it must include a method of procedure for measuring variations in the attainment of program goals and objectives. Elizabeth Herzog, in Some Guidelines for Evaluative Research, outlines the following ideas. In the selection of a research design three factors should be considered. One, if the emphasis of the evaluation is specific and has measurable objectives the problem is considered appropriate for the utilization of the goal design.

Two, if the goals of a program are relatively clear, and the nature and availability of data are reliable, then the goal design is a reliable tool.

Three, as a final consideration, the goal design requires personal expertise and a high degree of competence of the researcher in his analysis of data.

After consideration of these criteria it was decided that the goal design is suitable for this research project. The program director specifically requested the examination of program goal and objectives, and the expertise of a research consultant was provided for the development and final analysis of the project.
CHAPTER NOTES

CHAPTER V

METHODOLOGY

I. POPULATION

The test population was comprised of nine graduate students from the School of Social Work, Portland State University, Portland, Oregon. Of these nine students four were female and five were male, four were second year students and five were first year students, and all were in the age range of 20-35 years. Racially the group consisted of two Blacks, one Filipino-Hawaiian, one Chicano, one Indian and three Whites. For the school year 1971-1972 these nine students were all that were assigned to Adams by the School of Social Work. Therefore, the test population, although limited, represented 100% of the social work trainees.

II. RESEARCH OBJECTIVES

This research project was undertaken in response to the program director's desire to more accurately assess the actualization of his goal and objectives as specified within the NIMH training grant. Mr. Roy listed a goal and several objectives as the basis of social work field experience at John Adams High School. These objectives were then presented in the form of a checklist questionnaire (refer to appendix number 1) that ask them to indicate (yes or no) if they felt the objectives were important to their social work field experience.
They were then asked to rank in order of importance those listed objectives marked "yes." A section was left open for the addition, by the students, of any objectives not listed by the program director. The rationale for this checking of objectives with students was that the consulting researcher felt it important to ascertain student agreement or disagreement with the objectives before the questionnaire could be developed. If the program director and students disagreed widely on program objectives there would have been no common ground from which to develop an evaluative research design. However, the checklist questionnaire reflected a wide area of agreement. The results of this test were then examined by the authors, program director and research consultant to arrive at the goal and objectives used on the final questionnaire.

III. DEVELOPMENT OF QUESTIONNAIRE

Out of the foregoing checklist questionnaire results and ensuing discussion, the following goal and objectives were selected for evaluation in the final questionnaire:

Goal

To provide graduate social work students a training experience in social work that meets the needs and interests of the individual student. This will be accomplished through "school social work" in elementary (1-8) and secondary educational settings.

Objectives

a. To provide training experiences in direct service, consul-
tation, program development, supervision, teaching and research.

b. To provide instruction to graduate students through various methods which include individual and group conferences, tape recordings of group and individual contact with clients, process recordings, modeling field instructor, agency personnel, and other social work students at John Adams High School.

c. To acquaint students with other resources in the community and how to utilize them in their performance as a school social worker.

d. To help students gain a better awareness of their self and how this understanding affects their performance as a social worker.

e. To provide training experiences for students in working with minority groups.

f. To expose students to the vital areas of John Adams High School in an effort to determine the effectiveness of that area for the performance of a school social worker.

The questionnaire was constructed on objective base so that responses were limited within the framework provided. Subjective responses were not solicited because objective data more readily lends itself to qualitative analysis.

The questionnaire is composed of six primary objectives. Within each objective are several items that are examined through the following process:
1. The student is asked if he was provided this experience through the first of three indicators.

2. In the second indicator, if the student replies yes, he is asked to quantify the response by indicating the frequency of this experience; an arbitrary form range scale response was used.

3. The third indicator qualifies the experience, using a five-point range scale to indicate the student's subjective evaluation of the benefit derived from the experience item.

Following each component of objective A are a series of supporting questions that allows the student to provide additional information regarding his interest, need and competency in that component area. (These supportive questions are only relevant to objective A.)

IV. ADMINISTERING THE QUESTIONNAIRE

Because of the length of the questionnaire it was decided to administer it in two parts, one a week over two consecutive weeks at the close of the 1971-1972 school year, the rationale being that reliability of test results declines when the testing period extends beyond approximately one-half hour.¹ This timing thus allowed each student a full year of field training during which he was exposed to the program goal and objectives he was being asked to evaluate.

For both weeks of testing the written instructions were attached to the questionnaire; verbal instructions were given to clarify any misunderstanding on the part of those being tested and the testers were available to answer any questions during the testing period.
A separate answer sheet was used in order to facilitate analysis of responses.
CHAPTER NOTES

1. Don Barr, research consultant.
CHAPTER VI

CHARTS AND STATISTICS

Because the test population (N) was limited to nine students any statistical significance is questionable. It was decided to limit the data analysis to percentages that represent frequency of responses to the particular question. These percentages are depicted in chart form in the body of the paper. These are original charts drawn by the authors to more functionally depict the complex data.
CHAPTER VII

DATA PRESENTATION

A. To provide training experiences in direct service, consultation, program development, supervision, teaching, and research.

* Total N possible = (9)
In the direct services component items one and two indicate that all students did have contact with children and families during their training period at John Adams High School, and in item one 88.88% of the students found the experience to be a rewarding one as represented by the 'beneficial' and 'extremely beneficial' categories. Item two reflects 100% approval of the experience with an N of 5, the third item designates a feeling among four students that they were not provided assignments working with clients in groups. Of those five experiencing group work, 100% felt it to be either 'beneficial' or 'extremely beneficial.' Seven out of nine students in item four felt they were provided assignments in diagnosis and treatment, and 100% of these seven felt these assignments to be 'beneficial' or 'extremely beneficial.' In item five eight students indicated they were provided experience working with other community resources, and again 100% felt the experience to be 'beneficial' or 'extremely beneficial.'

The percentages for the total direct services component represent a near consensus feeling among the students that the experiences provided by this component were worthwhile. The 'beneficial' category shows 65.01%, and the 'extremely beneficial' category shows 32.77%, with a neutral response of only 2.22%. Of the five items, however, only two have 100% affirmative responses; so while the overall feeling of the students is that the component was a rewarding experience, there were students who felt they were not provided every item within the direct services component.

The supporting questions show that of the nine students, four were primarily interested in direct services, five said that direct
direct services was a primary area of their need, and seven students felt more competent in direct services as a result of their experiences at John Adams High School.

DIRECT SERVICES COMPONENT: SUPPORTING QUESTIONS

STUDENTS

(4) INTEREST

(5) NEED

(7) COMPETENCE

AFFIRMATIVE RESPONSES
Item one of the consultation component indicates that 100% of the students were provided consultation experience working with teachers and other school personnel regarding clients, and of these students 88.89% found the experience to be 'beneficial' or 'extremely beneficial.' In the second item seven out of nine students felt they were provided experience working with personnel of other agencies regarding clients, and 100% of these people found the experience either 'beneficial' or 'extremely beneficial.' In the third item six of the nine students felt that in consultation they were provided experiences in instruction by the field instructor or other personnel provided by the field instructor in consultation. Of these six students, 66.67% found the experience
to be 'beneficial' while 16.67% felt it to be 'lacking benefit,' and
16.67% were neutral.

The percentages for the total component reflect that 85.20%
of the responding students found the consultation experience to be
either 'beneficial' or 'extremely beneficial,' while 5.56% felt the
experiences to be 'lacking benefit.' 9.26% felt the experiences to
be 'neutral.'

The supporting questions show that of the nine students two were
interested primarily in consultation. Four said that consultation
was a primary area of their need, and five students felt more competent
in consultation at the end of their training at Adams.

Σ = 40.00 80.00 80.00

Σ/2 = 20.00 40.00 40.00

For the two items composing the program development component, five out of nine students responded affirmatively to the questions "did you develop any program(s) to meet the needs of clients?", and "was any instruction provided by your field instructor... in program development?". In both items 80% of these students felt the experience to be either 'beneficial' or 'extremely beneficial,' and 20% found it to be 'lacking benefit.'

The percentages for the total component of program development indicate that 40% of the students responded in the 'beneficial' category, 40% in the 'extremely beneficial' category, and 20% in the 'lacking benefit' category.
The supporting questions show that of the nine students, four said that program development was both the primary area of their interest and their need, and five students felt they were more competent in consultation at the finish of their training at Adams.

In item one of the supervision component, only two students said they had any experiences supervising other agency personnel or social work students while at John Adams High School, and both of these students found the experience an 'extremely beneficial' one. Four students responded affirmatively to the question "did you receive any instruction by your field instructor or other personnel provided by your field instructor in supervision?", and 75% responded in the categories 'beneficial' or 'extremely beneficial,' while 25% responded in the 'neutral' category.

The overall component percentages reflect 87.50% in the 'beneficial' and 'extremely beneficial' categories, with 12.50% in the 'neutral' category.
The supporting questions show that of the nine students three said supervision was the primary area of their interest. Five students said supervision was a primary area of need, and four students felt more competent in supervision after their year of training.

\[ \sum = 140.00 \quad 707.07 \quad 689.09 \quad 63.89 \]

\[ \frac{\sum}{N} = 8.75 \quad 44.19 \quad 43.07 \quad 3.99 \]
To singularly analyze objective A the various category percentages of each component item were totaled and divided by the total number of items (16) to provide the mean analysis of the total objective. Of all the students that experienced each item 8.75% felt their experiences with objective A 'lacking benefit,' 3.99% of the students felt their experiences were 'neutral,' 44.19% of the students felt their experiences were 'beneficial,' and 43.07% of the students felt their experiences in objective A were 'extremely beneficial.'

The following bar graph is a summary depicting information presented in the preceding six component supporting questions bar graphs (pp. 25, 27, 29, 31, 33, 35). This information presented in total provides the reader a visible comparison of student response in 'interest,' 'need,' and 'competence' categories for the components of direct services, consultation, program development, supervision, teaching, and research that comprise objective A.
OBJECTIVE A: SUPPORTING QUESTIONS SUMMARY

B. To provide instruction to graduate students through various methods which include individual and group conferences, tape recordings of group and individual contact with clients, process recordings, modeling field instructor, agency personnel, and other social work students at John Adams High School.

OBJECTIVE B

</table>

This item was endorsed affirmatively by eight of the students, indicating they experienced this method of instruction. Of these eight students, 62.50% found the experience to be 'beneficial,' while 37.50% responded in the 'extremely beneficial' category.
Process recordings were felt to have been provided to five students. Both the categories 'of no benefit' and 'lacking benefit' reflected 20.00% each of the student response. The 'beneficial' category showed the remaining 60.00%.

When asked to respond to the question "were you provided instruction through modeling of field instructor, agency personnel and other graduate social work students at John Adams High School?", six students replied affirmatively. Of these students 66.67% responded in the 'beneficial' category and 33.33% in the 'extremely beneficial' category.
Looking at the total averages of the five items comprising objective B, the responses indicate that 7.50% students found the objective to be 'of no benefit,' 4.00% 'lacking benefit,' 59.02% 'beneficial,' and 30.28% 'extremely beneficial.'
C. To acquaint students with other resources in the community and how to utilize them in their performance as a school social worker.

Looking at the total averages of the five items comprising objective F, the responses indicated that 5.00% of the students found the objective to be 'of no benefit,' 10.00% 'lacking benefit, 32.50% 'beneficial,' 37.50% 'extremely beneficial,' and 15.00% 'neutral.'
Looking at the entire instrument comprised of objectives A-F the total average responses of the students are 2.56% 'of no benefit,' 5.24% 'lacking benefit,' 50.84% 'beneficial,' 37.99% 'extremely beneficial' and 3.58% 'neutral.'
CHAPTER VIII

SUMMARY AND CONCLUSIONS

This study was undertaken in an attempt to answer three basic questions: 1) Can a graduate school social work field instruction unit in public school social work on the elementary and secondary levels be evaluated? 2) If it can be evaluated, can an ongoing instrument be developed allowing for program and individual and student evaluation? 3) Can the study provide data for the program director's evaluation of the effectiveness of his training? The population sample of this study was too small for statistical inference, but in reference to the above goal number one we feel that we did subjectively evaluate the program, therefore concluding that the program can indeed be evaluated. In response to goal number two we feel the instrument can be used as an ongoing evaluation tool, as will be discussed in the next section. We conclude that the instrument does not provide statistical evidence of success or failure of the program goals and objectives but rather provides limited data allowing for subjective interpretation by the field instructor as prescribed in goal number three.

In closing we feel the following recommendations will be of some assistance to those individuals working to make use of this study or those wishing to continue the program evaluation in the future.

We feel that this research is a pioneer study as evidenced by the total lack of resources available through the research of the
literature. Both a manual and computer search was performed through the Retrieval-Dissemination Center of the Oregon Board of Education (ERIC). (See appendix number 2)

With the baseline data provided by this study there are several issues to be considered if one desires to interpret or continue the study.

1. The validity and results of the instrument can be tested by using the same questionnaire over a three-year period of time, thereby providing information regarding frequency and percentage of change within the operation of the Adams training program. Analysis of these changes and their direction document favorable or unfavorable trends within the program.

2. New students can refine the instrument to obtain more specific information derived from our study.

3. Even though certain portions of our instrument will remain valid, as the program changes various aspects of the instrument could or might have to be changed. Those portions of our study that remain intact in future instruments will provide comparative information that could show trend or percentage changes in the program.

4. We found the question dealing with 'the number of experiences for any particular educative item' not of particular use or importance for this evaluation so it was therefore eliminated.

5. This instrument is an attitude scale given at a specific time for a specific purpose. Interpretation of success or
failure of the program cannot be statistically founded; however, interpretation of success or failure can rest with the program director.

6. Finally, we feel this research can be of assistance in future summary progress reports issued to the funding agency. We also recommend this evaluation and any following be included in the grant funding proposals.
A SELECTED BIBLIOGRAPHY

APPENDIX NUMBER 1

PRETEST CHECKLIST QUESTIONNAIRE
I. Robert Roy, Unit Field Supervisor, has listed the following goal and objectives as the basis of the social work field experience at John Adams High School. Do you agree that these are pertinent (not necessarily practiced) to your field education?

A. Do you agree that the following objectives are important to your social work field education? (Check YES or NO).

**Goal:** To provide graduate social work students a training experience in social work that meets the needs and interests of the individual student. This will be accomplished through "school social work" in elementary (1-8) and secondary educational settings.

RESOURCE INFORMATION FOR QUALITY EDUCATION

This Material Was Prepared For
HOW TO USE AN ABSTRACT

Please read the definitions below and examine the format of the abstract before beginning work on your packet.

ED - NUMBER: This is a number that is assigned to each ERIC document abstracted and is used for identification and ordering documents and microfiche. It is referred to as the ED number. It is located at the upper left corner of each abstract.

ABSTRACT: An abstract is a factual, objective, abbreviated version of a complete document. The term document is used to describe any published materials such as research reports, dissertations, bibliographies or monographs. Most ERIC abstracts not only highlight the contents of a document, but also provide a succinct summary of the purposes, procedures and findings of the original document. Most ERIC documents are available on microfiche.

PUBLISHER: An alternative source to obtain the document if not available from EDRS - Eric Document Reproduction Service.

DESCRIPTORS: These are educational keywords assigned from the ERIC Thesaurus and are used as a basis for the computer logic which retrieves research information. Scanning these will offer synonyms for your future searching.

NOTES ON MICROFICHE

Microfiche (MF) of ERIC documents may be viewed at:

- CASEA (Center for the Advanced Study of Educational Administration), 1472 Kincaid Street, Eugene, Oregon 686-5174
- Northwest Regional Educational Laboratory, Portland, Oregon 224-3650
- Oregon State University Library, Corvallis, Oregon 754-3331
- Portland State University Library, Portland, Oregon 229-3684
- Retrieval-Dissemination Center, Salem, Oregon 378-3566

Microfiche may be checked out through your school librarian from:

- Oregon State Library, Capitol Mall, Salem, Oregon 378-4276
- Southern Oregon College Library, Ashland, Oregon 482-6445

Hard copy (HC) of ERIC documents may be obtained from the above sources (except the Retrieval-Dissemination Center), for approximately 10¢ per page or ordered directly from: ERIC Document Reproduction Service, LEASCO Information Products, Inc., P.O. Drawer O, Bethesda, Maryland 20014. Please indicate the ED Number of the document desired. HC costs are given on your abstracts.

Those documents marked (not available from EDRS) may be obtained through normal library channels or ordered directly from the publisher.

APPENDIX NUMBER 3

QUESTIONNAIRE
INTRODUCTION

The following questionnaire is an attempt to answer two basic questions:

1. Can a graduate school social work field instruction unit in public school social work on the elementary and secondary levels be evaluated?

2. If it can be evaluated, can an ongoing instrument be developed allowing for program and individual student evaluation?

Your name need not be signed to the questionnaire; your individual responses will be anonymous. Our only concern is with patterns projected by the combined responses of all participants.

The questionnaire is designed to study the functioning of the entire social work unit, rather than the performance of individuals within the unit.
Robert Roy, Unit Field Supervisor, has listed the following goal and objectives as the basis of the social work field experience at John Adams High School.

**Goal:** To provide graduate social work students a training experience in social work that meets the needs and interests of the individual student. This will be accomplished through "School Social Work" in elementary (1-8) and secondary educational settings.

**Objectives:**

a. To provide training experiences in direct service, consultation, program development, supervision, teaching, and research.

b. To provide instruction to graduate students through various methods; which include individual and group conferences; tape recordings of group and individual contact with clients; process recordings; modeling field instructor, agency personnel, and other social work students at John Adams High School.

c. To acquaint students with other resources in the community and how to utilize them in their performance as a school social worker.

d. To help students gain a better awareness of their self and how this understanding affects their performance as a social worker.

e. To provide training experiences for students in working with minority groups.

f. To expose students to the vital areas of John Adams High School in an effort to determine the effectiveness of that area for the performance of a school social worker.
GENERAL INSTRUCTIONS

1. All questions must be answered according to the specific instructions presented.

2. There are four different sections.

3. There is no time limit for completing the questionnaire so please read and answer each question carefully and thoughtfully.

4. If you have any questions while completing the questionnaire, raise your hand for assistance.

5. Please mark all your responses on the answer sheet provided. If you change an answer, please erase your previous response completely. It is important that only one response is given for each question.

6. The numbers on the questionnaire correspond to the same numbers on the answer sheet.
PART I: Section I

OBJECTIVE A: TO PROVIDE TRAINING EXPERIENCE IN DIRECT SERVICES, CONSULTATION, PROGRAM DEVELOPMENT, SUPERVISION, TEACHING, AND RESEARCH.

In direct services were you provided:

1. Assignments that provided service to children and families? YES NO
   (If your answer was NO go on to #4)

2. If your response was YES to the above, please mark the category representing the number of experiences you had for the total year: 0-3 4-7 8-11 12-or over
   a   b   c   d

3. If you responded to the above, how beneficial was this experience in furthering your social work education? of no lacking beneficial extremely neutral
   benefit benefit benefit benefit
   1  2  3  4  5

In direct services were you provided:

4. Assignments that provided social work treatment to children and families? YES NO
   (If your response was NO go on to #7)

5. If your response was YES to the above, please mark the category representing the number of experiences you had for the total year: 0-3 4-7 8-11 12-or over
   a   b   c   d

6. If you responded to the above, how beneficial was this experience in furthering your social work education? of no lacking beneficial extremely neutral
   benefit benefit benefit
   1  2  3  4  5
In direct services were you provided:

7. Assignments that provided work with clients in groups?  
   (If your response was NO go on to #10)
   YES   NO

8. If your response was YES to the above, please mark the category representing the number of experiences you had for the total year.................  0-3  4-7  8-11  12-or over
   a    b    c    d

9. If you responded to the above, how beneficial was this experience in furthering your social work education?
   of no benefit  lacking benefit  beneficial  extremely beneficial
   1  2  3  4  5

In direct services were you provided:

10. Assignments that provide experience in diagnosis and treatment?  
    (If your response was NO go on to #13)
    YES   NO

11. If your response was YES to the above, please mark the category representing the number of experiences you had for the total year.................  0-3  4-7  8-11  12-or over
    a    b    c    d

12. If you responded to the above, how beneficial was this experience in furthering your social work education?

Modeling of field instructor, agency personnel, and other graduate social work students at John Adams High School:

79. Were you provided this type of instruction? YES NO (If your response was NO, STOP)

80. If your response was YES to the above, please mark the category representing the number of experiences you had for the total year: 0-3 4-7 8-11 12-or over

81. If you responded to the above, how beneficial was this experience in furthering your social work education? of no benefit lacking benefit beneficial extremely beneficial neutral

THE END OF SECTION TWO

THE END OF PART I

THANK YOU.
INTRODUCTION

The following questionnaire is an attempt to answer two basic questions:

1. Can a graduate school social work field instruction unit in public school social work on the elementary and secondary levels be evaluated?

2. If it can be evaluated, can an ongoing instrument be developed allowing for program and individual student evaluation?

Your name need not be signed to the questionnaire; your individual responses will be anonymous. Our only concern is with patterns projected by the combined responses of all participants.

The questionnaire is designed to study the functioning of the entire social work unit, rather than the performance of individuals within the unit.
Robert Roy, Unit Field Supervisor, has listed the following goal and objectives as the basis of the social work field experience at John Adams High School.

**Goal:** To provide graduate social work students a training experience in social work that meets the needs and interests of the individual student. This will be accomplished through "School Social Work" in elementary (1-6) and secondary educational settings.

**Objectives:**

a. To provide training experiences in direct service, consultation, program development, supervision, teaching, and research.

b. To provide instruction to graduate students through various methods; which include individual and group conferences; tape recordings of group and individual contact with clients; process recordings; modeling field instructor, agency personnel, and other social work students at John Adams High School.

c. To acquaint students with other resources in the community and how to utilize them in their performance as a school social worker.

d. To help students gain a better awareness of their self and how this understanding affects their performance as a social worker.

e. To provide training experiences for students in working with minority groups.

f. To expose students to the vital areas of John Adams High School in an effort to determine the effectiveness of that area for the performance of a school social worker.
GENERAL INSTRUCTIONS

1. All questions must be answered according to the specific instructions presented.

2. There are four different sections.

3. There is no time limit for completing the questionnaire so please read and answer each question carefully and thoughtfully.

4. If you have any questions while completing the questionnaire, raise your hand for assistance.

5. Please mark all your responses on the answer sheet provided. If you change an answer, please erase your previous response completely. It is important that only one response is given for each question.

6. The numbers on the questionnaire correspond to the same numbers on the answer sheet.
OBJECTIVE C: TO ACQUAINT STUDENTS WITH OTHER RESOURCES IN THE COMMUNITY AND HOW TO UTILIZE THEM IN THEIR PERFORMANCE AS A SCHOOL SOCIAL WORKER.

Were you acquainted with community resources and how they are used through:

1. Formal presentations by other personnel within the agency? YES NO
   (If your answer was NO go on to #4)

2. If your response was YES to the above, please mark the category representing the number of experiences you have had for the total year:
   - 0-3
   - 4-7
   - 8-11
   - 12-or over
