

What do you think PSU should be doing on climate and climate justice?	Like this comment? Upvote it! (add 1 to existing number)	I am a/n...	Your email (optional)
Offer academic programs that teach students about the environmental crisis, and do so across as many disciplines as possible	1	Faculty member	(email in survey response list)
Support faculty financially and in other ways to be involved in campus and city-level climate research, planning, and engagement	2	Faculty member	(email in survey response list)
We should be involving students and staff in making buildings better, transportation better ,etc - getting rid of plastics, leading the way	3	Faculty member	(email in survey response list)
Reduce administrative roadblocks to creating shared teaching and physical spaces where inter-college collaborations can develop	1	Faculty member	(email in survey response list)
Create channels to policy makers and relevant state and federal agencies to share research outcomes	3	Faculty member	(email in survey response list)
Provide grant indirect cost reductions to incentivize submission of research grant applications to state and community partners that have high-impact in terms of disseminating results or policy implementation	1	Faculty member	(email in survey response list)
Form an interdisciplinary committee of faculty, student sustainability groups and community partner organizations teaching/conducting research related to/responding to the climate crisis	2	Faculty member	(email in survey response list)
Support faculty who teach and research on environmental themes to do so creatively and at a high level	1	Faculty member	(email in survey response list)
Encourage departments to create more environmental-themed curricula, including courses and certificates	1	Faculty member	(email in survey response list)
Start with a public lecture or conversation or debate series, involving scholars from PSU and other institutions	1	Faculty member	(email in survey response list)
Think big. This is not the time for posturing, but for creative, critical, and collaborative thinking and active to solve the problem facing everyone on the planet.	2	Faculty member	(email in survey response list)
Support sustainable food systems by working for farmworker rights!	2	Unknown	(email in survey response list)
Support local food system and phase out "Big Food"	1	Unknown	(email in survey response list)
Better community outreach	1	Unknown	(email in survey response list)
Breakdown silos at PSU and the community	4	Faculty member	(email in survey response list)
We need a "Climate Currents" publication at PSU that informs faculty, students, alumni, and community groups about what each is doing. This would add to the existing "Currently" magazine	1	Faculty member	(email in survey response list)
An electronic matchmaking service that would be public facing that community groups could use to find expertise at PSU. It could leverage the PDX scholar resource as well	3	Faculty member	(email in survey response list)

Open forum talks/workshops aimed at jointly education and learning from the local community on climate science topics. These education initiatives should consider best science communication practices to maximize their efficacy. Involve community in sustainability campaigns developed at PSU. Foster collaboration both for teaching and research across departments and colleges in climate change related topics.	2	Faculty member	(email in survey response list)
More opportunities for authentic discussions and collaborations across units. This work is not going to be possible without disrupting our siloes. Our institutional structures hinder true collaboration and interaction. It still happens, but despite the system, not because of the system!	3	Faculty member	(email in survey response list)
Active forums where faculty can engage each other with ideas about climate change so that physical and social sciences can engage in holistic solutions to the problems and challenges ahead	2	Faculty member	(email in survey response list)
Work with Facilities to enroll in all eligible incentives (eg Oregon Energy Trust) and find vendors to install upgrades. Dorms and the hotel, for example, could be excellent candidates for solar power and energy efficiency upgrade incentives, since they are CONSTANTLY using power.	4	Faculty member	(email in survey response list)
Address social justice issues	2	Unknown	
Keep the LSE [Leadership for Sustainability Education] program	2	Unknown	
The LGL [Learning Gardens Laboratory] and LSE [Leadership for Sustainability Education] programs are SO valuable. We need to support them!!	3	Unknown	
Perhaps we can offer some free training for members of the PSU community on the basics of climate change science so that those enthusiastic about outreach and education have a firm understanding of the current state of knowledge around the topic. This will make us much more effective at making a positive impact on this topic.	1	Faculty member	(email in survey response list)
We should... participate more with the Oregon Climate Change Research Institute...	1	Faculty member	(email in survey response list)
Investing MORE on sustainability programming, divesting from fossil fuel supporting industries	2	Unknown	
Take charge. Leadership is needed. Use CCAR [Center for Climate and Aerosol Research] if appropriate. Pool the climate program into a coherent force... I think a lot more can be achieved with the existing resources at PSU than is being done. The departments have divided the efforts to vary degrees, but perhaps now that impedence can be overcome	1	Faculty member	(email in survey response list)
Save food from campus events so it doesn't go to waste	3	Unknown	
Working with other universities and community groups to create virtual bridges to UNFCCC events like COP27. Giving local folks the chance to join observers	1	Unknown	
Providing additional funding to the SSC [Student Sustainability Center] and mini-grants for student-centered sustainability work	2	Unknown

Increased free/reduced transportation for students, faculty and staff who commute into Portland from further away	2	Unknown	
Campus e-bikes that provide energy to campus	1	Unknown	
LISTEN to and promote students to lead our collective future	2	Unknown	
Convene Metro-area roundtable or conference on Portland climate future	2	Faculty member	(email in survey response list)
Sponsor panels, lectures and seminars that help the broader community engage with and better understand climate change-related topics	1	Faculty member	(email in survey response list)
Engage alumni	1	Unknown	
Inviting scientists who work on the biology/natural science part of climate change to talk to people at CUPA so we can form teams that propose, and hopefully test, the effectiveness of policies that address the issues	2	Faculty member	(email in survey response list)
Funding the Learning Gardens Laboratory as a key university infrastructure (eg a fulltime Laboratory Manager). The potential of the LGL to be a site for interdisciplinary, community-engaged teaching and research is profound, but again, that work has felt marginalized for far too long. It is itime that the institution support the LGL as the valuable asset it is.	3	Faculty member	(email in survey response list)
