Population Growth in Oregon, 1990 to 2000

Oregon's population reached a total of 3,421,399 on April 1, 2000, according to the decennial census. It is a growth of 579,078 people, or 20 percent increase since the 1990 census, when the state had a population of 2,842,321.

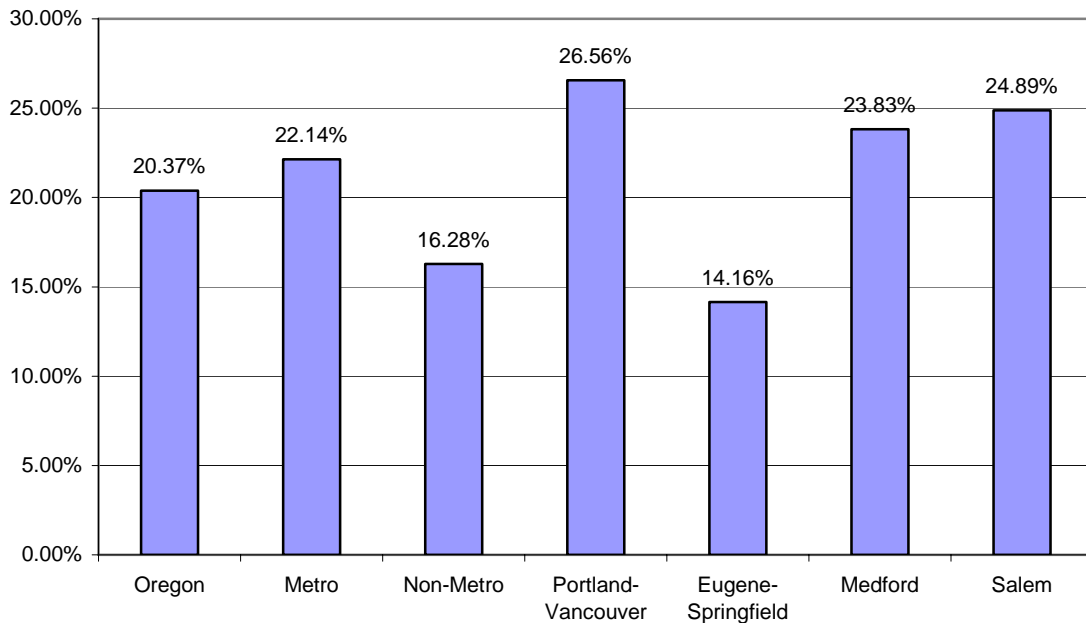

The population change between the two censuses reflects a two-fold story: the first is population growth, which consists of natural increase (births minus deaths) and net migration (people moving into the state minus people leaving the state). During the ten-year period, Oregon had a natural increase of 157,605, accounting for only about 27 percent of the total increase; net in-migration, on the other hand, contributed most of the remaining population growth. Second, the Census Bureau indicates that the 2000 census has a better coverage than the 1990 census. Therefore, part of the growth is not "growth" in a strict sense. Some people who were missed in the 1990 census were counted in the 2000 census. Since it is difficult to tell how much of the increase is due to the better coverage, the following discussion on population growth for different geographic levels refers to the absolute change during the past decade.

Metropolitan Growth

While many people both inside and outside Oregon retain the image of the state as a place of coastal beaches, mountain forests, and high desert plains, the state's population is mainly urban and has been increasingly so. According to the 2000 census, population living in Oregon's incorporated areas accounted for about 67 percent of the total population, which indicates a five-percentage point increase over the 1990 census. In fact, more than 2.5 million population live in metropolitan counties, which include Benton, Clackamas, Columbia, Jackson, Lane, Marion, Multnomah, Polk, Washington, and Yamhill.

The metropolitan areas have been growing faster than the state, with a growth rate of 22 percent for the last decade. Not all metropolitan areas, however, are growing at equal rates. Portland, Medford and Salem metropolitan areas have been growing faster than the state as a whole. The Eugene-Springfield metropolitan area has been growing at a slower rate than the state average.

Growth Rates for Oregon's Metropolitan Areas, 1990-2000

Nonmetropolitan counties also witnessed a population increase in the past ten years. The population grew about 16 percent since 1990, six percentage points short of their metropolitan counterparts.

According to the Office of Management and Budget in Washington, D.C., Corvallis became Oregon's fifth metropolitan statistical area as of June 30, 1999. Based on population growth in the 1990s, it is likely that Bend will shortly be designated as Oregon's newest metropolitan area, once 2000 census results are tabulated and reviewed. Bend will become Oregon's sixth metropolitan area and the state's only metropolitan area east of the Cascades.

County Growth

During the 1990s, Oregon counties experiencing the fastest growth rates are located along the I-5 corridor and in central Oregon. Among the 36 counties in the state, Deschutes is the fastest growing county with a growth rate of 54 percent from 1990 to 2000, followed by Morrow (44 percent), Washington (43 percent), Jefferson (39 percent) and Crook (36 percent). While 13 counties were growing faster than the state average, the remaining 23 experienced slower growth, with Sherman, Grant, Lake, Union and Coos being the five slowest growing counties.

In terms of the absolute number of growth, Washington County is the largest gainer, with a total increase of 133,788, followed by Multnomah (76,599) and Clackamas (59,541),

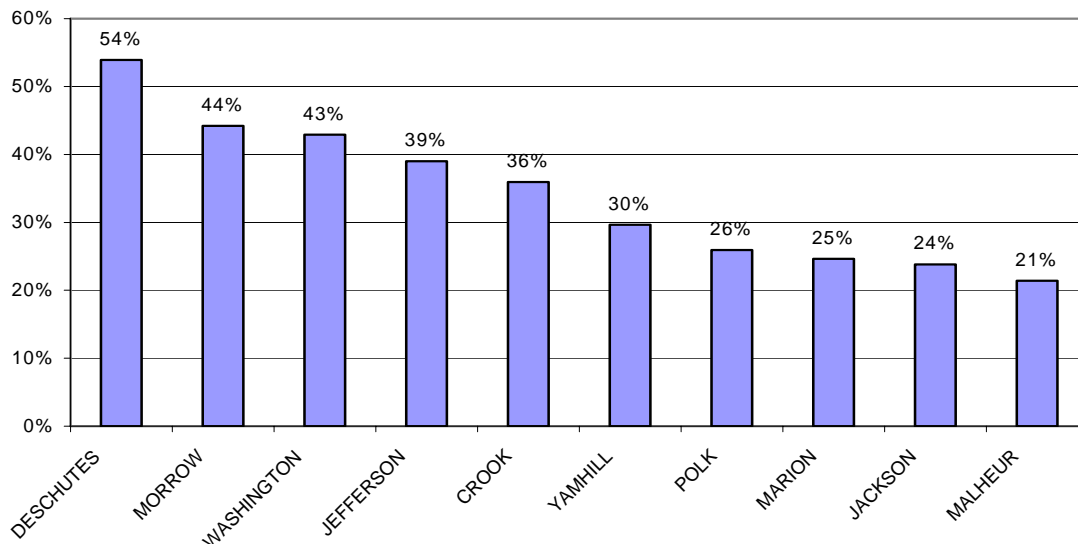

Marion (56,351), and Deschutes (40,409). Among the top ten counties which had the largest gain, Deschutes and Josephine are the only two non-metropolitan counties. The metropolitan county of Columbia falls behind as the 15th largest in growth.

City Growth

For many years, the localities outside the central cities of metropolitan areas were the fastest-growing localities, and most of them still have above average annual growth rates. A substantial number of these older localities, however, have now grown to a size that they have become major urban areas. With more economic development moving to these localities, residential growth has been moving out to further towns in metropolitan areas. This trend is especially evident in the metropolitan Portland area, where growth rates for Canby, Happy Valley, Oregon City, and Wilsonville in Clackamas County; Beaverton, Forest Grove, Hillsboro, Sherwood, Tigard, and Tualatin in Washington County; Fairview, Gresham, and Troutdale in Multnomah County; and Lafayette, McMinnville and Newberg in Yamhill County well outstrip those for Portland. Evidence of the trend is found in other Oregon metropolitan areas: Keizer, Central Point, and Florence are all examples of localities that are growing more rapidly than the central cities of their metropolitan areas.

Some cities in non-metropolitan areas also show considerable growth. For instance, Bend and

Oregon's 10 Fastest Growing Counties, 1990-2000

Redmond in Deschutes County, Irrigon and Boardman in Morrow County, are among the top 20 fastest growing cities in Oregon.

Unincorporated Areas Growth

While the incorporated areas experienced a growth rate of 29 percent in the ten-year period, the population of unincorporated areas grew from 1,080,325 in 1990 to 1,143,783 in 2000, a percentage increase of almost 6 percent. Among the 36 counties, thirty-one of them had positive

changes in their unincorporated areas, including five counties with growth rates higher than 20 percent. They are: Jefferson (36 percent), Crook (35 percent), Washington (28 percent), Morrow (26 percent) and Malheur (26 percent). Five counties lost population in their unincorporated areas during 1990-2000 period. Multnomah County declined by about 74 percent, followed by Benton (-15 percent), Gilliam (-6 percent), Sherman (-3 percent) and Union (-1 percent). Some of the population losses are due to annexations by cities within these counties.

Population Estimates for Oregon, July 1, 2000

This report presents the population estimates for Oregon and its counties and incorporated cities for July 1, 2000, based on the April 1, 2000 census information. The ten tables in this report show current 2000 population estimates as well as historical data.

- Table 1 presents the components of population change for the state of Oregon, from 1960 to 2000.
- Table 2 shows the population by area types and the population for specific metropolitan areas during April 1, 1990 to July 1, 2000.
- Table 3 shows the components of population change for Oregon's counties, from 1990 to 2000.
- Table 4 shows the population size for the state of Oregon and its counties and incorporated cities, from 1990 to 2000.
- Table 5 shows population information on Oregon's incorporated cities that are located in more than one county.
- Table 6 presents the rank of Oregon's incorporated cities by their July 1, 2000 population size.
- Table 7 offers an alphabetical listing of Oregon's incorporated cities with their estimate of population size on July 1, 2000 and the change between 1990-2000.
- Table 8 presents information on the population added to incorporated cities due to annexation during April 1, 1990 to July 1, 2000.
- Table 9 displays estimates for the population by age and sex for the state of Oregon and its counties for July 1, 2000.
- Table 10 shows estimates for the population by selected age groups (birth to 17 years of age, 18 to 64 years of age, and 65 years of age and older) for the state of Oregon and its counties for July 1, 2000.

State Requirements for Population Estimates

Oregon law (Oregon Regulatory Statutes 190.510 to 190.610) mandates the Population Research Center, Portland State University, acting on behalf of the State Board of Higher Education, to prepare annual population estimates for each county and incorporated city in the state of Oregon. The principal purpose of the population estimates is for the allocation of selected tax revenues to cities and counties.

The Population Research Center had its origin in 1956, when the state government organized a State Census Office in Portland. The purpose of the State Census Office was to oversee and certify special censuses that rapidly growing towns conducted in order to document their population figures. The State Census Office eventually expanded its role to include the certification of the population added by annexations and the preparation of annual population estimates for counties.

Administrative responsibilities for population estimates were transferred to Portland State University in 1965, when the unit changed its name to the present one. The Population Research Center is located within the College of Urban and Public Affairs.

Duties of the Population Center

In addition to preparing population estimates and projections, the Center houses the Oregon State Data Center, the lead agency in Oregon for contact and collaboration with the U.S. Bureau of the Census and for dissemination of census data and documents. This information includes current and past census data for Oregon as well as results from Census Bureau surveys.

The Population Center provides a research and teaching focus for the investigation of the causes and consequences of demographic change in current society. Typical research activities include enrollment forecasts for school districts, survey research on population issues, social and economic factors affecting demographic change, population distribution and migration, population geography, and demographic methods. Population staff regularly assist city, county, and state governments on examination of population issues.

Staff in the Population Center teach in the School of Urban Studies and Planning, College of Urban and Public Affairs. The School of Urban Studies and Planning offers a graduate certificate program in applied demography, an applied demography curriculum in the Master of Urban Studies degree program, and a graduate concentration within applied demography in the Ph.D. program.

Methods for Population Estimates

We include all residents in cities, counties, and the state in the population estimates. Residents include people living in their own homes, rental homes or apartments, mobile homes, or in college dormitories, nursing homes, jails and prisons, and other group quarters. We consider college students to be residents of the place where they live while attending college. We count seasonal residents as living at the place that they consider to be their usual residence.

We have developed methods for Oregon's population estimates to be as accurate as possible. Toward this goal, we work closely with state, county, and city officials, requesting information from them and inviting their review of our methods and estimates.

For estimates for the state population, we rely on the observed registration of births and deaths for an estimate of natural increase (the excess of births minus deaths). For the second component of population, migration, we rely on school enrollments data for an estimate of net migration for the population under 18 years, non-farm payroll information for the population aged 18 to 64, and Medicare data for the population aged 65 and older.

We base county population estimates on a method called ratio correlation. The ratio correlation method relates changes since the last census to changes in state tax returns, school enrollments, births, and voter registration -- all for county populations. We track changes in each of these types of administrative data since the last census to make an estimate of the current county populations. We also examine changes in the housing stock for counties as a check on the accuracy of the county estimates.

We determine city population estimates based on changes in the housing stock. City officials report each year on the changes in their city's housing stock (for single family units, multi-unit residents, and mobile homes) and the number of persons residing in group quarters. We also take into account any population changes that have been due to annexations. We separately estimate possible

changes due to the number of people per housing unit and use this information to prepare the city's final population estimate.

We monitor city annexations throughout the year. We are informed about annexations by the office of the Secretary of State. When an annexation occurs, we contact city officials to find out the number of residential housing units and population, if any, involved in the annexation. If the annexation added people to the city's population, then we certify an updated city population on a quarterly basis, in a special report to the Secretary of State's office.

Acknowledgement

This report was prepared under the general direction of Qian Cai, manager of the population estimates and projections unit of the Population Research Center. Professional consultation was provided by Barry Edmonston, director of the Population Research Center, and George Hough Jr., manager of the Oregon State Data Center of the Population Research Center. Sharon Ordaz provided help on report preparation and distribution.

* based on 1993 definition

Portland-Vancouver PMSA consists of Clackamas, Columbia, Multnomah, Washington, Yamhill and Clark Counties

Eugene-Springfield MSA consists of Lane County

Medford MSA consists of Jackson County

Salem PMSA consists of Marion and Polk Counties

Corvallis MSA consists of Benton County, and it became a metropolitan area in June 30, 1999
