Meeting Notes 2004-10-14

Joint Policy Advisory Committee on Transportation
AGENDA

600 NORTHEAST GRAND AVENUE PORTLAND, OREGON 97232-2736

MEETING: JOINT POLICY ADVISORY COMMITTEE ON TRANSPORTATION

DATE: Thursday, October 14, 2004

TIME: 7:15 A.M.

PLACE: Metro Regional Center, Council Chambers

7:15 Call to Order and Declaration of a Quorum Rod Park, Chair

7:15 Citizen communications to JPACT on non-agenda items Rod Park, Chair

7:20 Review of Minutes – APPROVAL REQUESTED Rod Park, Chair

7:25 DEQ Carbon Monoxide (CO) Plan and Oxygenated Fuels – APPROVAL OF COMMENTS REQUESTED Mark Turpel (Metro)

7:40 Narrowing the Priorities 2006-09 project candidates for public review and comment – APPROVAL REQUESTED Ted Leybold (Metro)

8:00 Review and Comment on Draft State Transportation Improvement Program - COMMENTS Matt Garrett and Robin McArthur (ODOT)

8:15 Draft Resolution No. 04-3498 For the Purpose of Endorsing Priorities for a Legislative Transportation Funding Package - DISCUSSION Andy Cotugno (Metro)

8:30 Highway 217 Corridor Study Update – INFORMATIONAL Bridget Wieghart (Metro)

8:40 Triennial review for federal certification of the Metro regional planning program - INFORMATIONAL Andy Cotugno (Metro)

8:50 MPO Summit II – INFORMATIONAL Rex Burkholder, Vice Chair

9:00 ADJOURN

* Material available electronically. Please call 503-797-1916 for a paper copy

** Material to be emailed at a later date.

# Material provided at meeting.

I. CALL TO ORDER AND DECLARATION OF A QUORUM

Chair Rod Park called the meeting to order and declared a quorum at 7:22 a.m.

II. CITIZEN COMMUNICATIONS TO JPACT ON NON-AGENDA ITEMS

There were no citizen communications on non-agenda items.

III. REVIEW OF MINUTES

ACTION TAKEN: Councilor Karl Rohde moved and Mr. Matthew Garrett seconded the motion to approve the August 12, 2004 meeting minutes as amended. The motion passed.

AMENDMENTS: Page 8, 2nd paragraph, 2nd line add the word “not”. Page 8, Item X, 1st paragraph delete “ended and their decision has been made” and replace with “opened and the proposal has been made”.

IV. STATE LEGISLATIVE CONCEPTS

Mr. Andy Cotugno presented the State Legislative Concepts (included as part of this meeting record).

Mr. Fred Hansen stated that it was important to start focusing on the benefits to the overall economy statewide and how the state needs to be able to step up in a broader context, i.e. transportation and not just the issues around the gas tax allocation or the federal allocations. He further stated that it was important that the discussion around the transportation needs does not become rural versus urban.
Councilor Karl Rohde concurred with the concept of keeping the transportation concepts simple and limiting the options. However there were a couple of funding options that he is in favor of, including bonding against the increase of federal money coming into the state as well as the idea of a vehicular growth fee.

Chair Rod Park stated that they the vehicular growth fee was discussed briefly and would be similar to an STC. He said it was worth exploring.

Mr. Andy Cotugno stated that the vehicular growth fee could be listed under road sources. He said that it was worth saying that any concepts listed is simply a range of possibilities and that further research would need to be completed.

Mr. Matthew Garrett stated that it was important to be more creative and innovative and to look at the list of potential fees that could generate the needed revenue. He said that the operation and maintenance issues needed to be addressed. Further, if the region is looking for an OTIA IV to assist with its urban needs then the region should articulate that. He directed the committee members to the second bullet regarding multi modal, he said that the discussion around multi modal has traction therefore it was important to encompass the issues into one. He said that transit would be part of the conversation. Therefore, it was important to continue to push and position the region to take advantage of the expiration of the LRT bonds. He said that the region should continue to push for us bus replacement at the current level of funding. Finally, he said that a transportation finance study including the participation of ODOT, AOC, LOC, was important and could set the state for a 2007 conversation.

Commissioner Jim Francesconi how the regional discussion about transportation funding and/or bond measures was proceeding.

Chair Rod Park stated that they have been having conversations with the Governor's office and so far had not been given a signal that a transportation discussion is occurring. He said that they are looking at a regional ballot measure in 2006 with off ramps to 2008 if things are not looking good.

Commissioner Bill Kennemer recommended having further discussions with Senators Metsger and Starr in order to obtain their support of the region's efforts.

Mr. Andy Cotugno stated that it was important that the legislature understands that the region would match state funds with regional funds. Further that the regional funds would be a follow-up conversation rather than a preconditioned request to the legislature.

Mr. Fred Hansen stated that Senator Bruce Starr seemed to have transportation fatigue after OTIA III. However, if the Governor takes the lead on a transportation measure then the ability to line up support around it is different.

ACTION TAKEN: Commissioner Bill Kennemer moved and Mr. Fred Hansen seconded the motion to send a letter from JPACT to the Governors office requesting a meeting to discuss the region's intent to pursue a regional funding measure. The motion passed.
V. STATE FREIGHT ROUTE COMMENT LETTER

Ms. Bridget Wieghart presented the State Freight Route Comment Letter (included as part of this meeting record.)

Mr. Matthew Garrett commented on the last issue regarding the request that the update references the three additions to the OHP freight system. He said that since the conversations surrounding the three projects are still fluid in nature he did not feel that it is the right time to add the projects to the OHP freight system until the project are further defined.

Ms. Bridget Wieghart replied that the three projects are noted as potential future additions. She explained that the OHP freight system is similar to the RTP in that it is for planning and identifies needed freight routes.

Mr. Fred Hansen stated that he was supportive of the letter as it is. However, he said that there is still one question that the region needed to address. He directed the committee members to the bottom of the first page and whether the region should designate freight routes or not. He said that Port of Portland would probably argue that it should be part of the State framework rather than regional. He said that the only trigger is that the local jurisdictions must adopt some form of a management plan prior to be able to make any improvements on a state highway that affect restrict freight. He said that it should be a regional issue rather than just a local jurisdictional issue and that the region need to be able to participate in order to ensure that the freight system is not being compromised by a local jurisdictional action.

Chair Rod Park stated that ODOT has policies in place that does not allow jurisdictions to force a freight route.

Mr. Matthew Garrett stated that statutory language from the last OTIA Bill 2041, says that local jurisdiction cannot diminish the capacity of freight movement.

Chair Rod Park asked whether there were provisions in place when there is a lack of consensus regarding freight routes.

Mr. Andy Cotugno stated that language "in conjunction with ODOT and the MPO" could be inserted after "the local jurisdiction should be required to prepare a management plan".

ACTION TAKEN: Mr. Fred Hansen moved and Susie Lahsene seconded motion to approve the letter as amended. The motion passed.

Ms. Bridget Wieghart stated that HDR has been selected as the firm that will coordinate the OTIA III Bridge program work. She said that there are a number bridges on I-5 South and I-84 that are scheduled for construction. She explained that there would be a need to bypass through truck movement to Highway 26 down on 97.
Mr. Matthew Garrett stated that the purpose of using HDR is to ensure that the ODOT is looking out to the horizon, securing corridors and potential interchanges in order to ensure that the state transportation system does not shut down.

Mr. Don Wagner suggested that ODOT and HDR communicate with WSDOT regarding upcoming Washington construction projects on their system in order to alleviate any potential freight route movement.

Ms. Susie Lahsene suggested communicating with the Trucking and Shipping Associations to ensure that they know the construction is occurring so that they can assure to make alternate plans.

VI. DRAFT STAFF RECOMMENDATIONS FOR NARROWING THE MTIP

Ted Leybold presented the Draft Staff Recommendations for Narrowing the MTIP (included as part of this meeting record).

Councilor Karl Rohde asked how much does the Sellwood application build upon the Sellwood Replacement Study that was completed about five years ago.

Commissioner Maria Rojo de Steffey stated that the application continues upon the previous study. She further stated that the Sellwood Bridge is important because it does carry freight in addition to carrying heavy commuter access. She said that the bridge is a very controversial project and will have a huge cost associated with it. She said that it was important to receive the full funding amount of the application request so that they can get started on the project.

Mr. Matthew Garrett concurred with Commissioner Rojo de Steffey and further stated that ODOT supports the full application of $3.6 million. He said that the previous study contains outdated information that needs to be updated in order to bring clarity to the conversation. He said that ODOT has allocated $1.5 million dollars towards the study effort. Further, there is a need for $4 million to do an environmental assessment and an additional $16 million for preliminary engineering and right of way purchases. He emphasized the importance of the region supporting this project and the application for the full $3.6 million, otherwise the $1.5 million could be in jeopardy if the OTC does not see the strong regional support. He strongly encouraged the committee members to revisit the recommendation.

Commissioner Bill Kennemer concurred with Matthew Garrett regarding the importance of moving the Sellwood Project along. He further said that although they do not know what the final funding amount would be for the Sellwood Bridge it is still a regionally significant project.

Mr. Fred Hansen asked how the Sellwood Bridge application helps the immediacy of the problem.

Mr. Matthew Garrett replied that the application would allow the project to continue to advance.

Mr. Andy Cotugno reminded the committee members that the Sellwood Bridge is able to utilize the HBRR funds and further stated that the HBRR program is larger than the STIP/CMAQ
program. He said that it was important that the MTIP funding did not become a Bridge funding program. He also asked the committee members to think about and determine what type of emphasis they want to place upon the STIP/CMAQ program.

Mr. Matthew Garrett expressed concern regarding the tenor surrounding the conversation specific to the Sellwood Bridge. He reemphasized the importance of strong regional support for the Sellwood Bridge in order to take advantage of the ODOT dollars the OTC is being requested to allocate to the project.

Councilor Rod Monroe recommended that the application for the Sellwood Bridge and the entire funding amount be moved above the 150% cut level.

Councilor Rex Burkholder reminded the committee members that there is a certain amount of the MTIP money that cannot be spent for bridge or road projects.

Ms. Susie Lahsene recommended moving the North Ledbetter extension application above the 150% cut list. She stated that other high cost projects above the cut line did not receive the same treatment as the North Ledbetter project. Further, she explained that since the OTIA process, the project has experienced an increase in cost. She also stated that the Port of Portland is not in a position financially to contribute as much to the project as first thought.

Commissioner Jim Francesconi stated that North Ledbetter was important for further development of Rivergate.

Mr. Matthew Garrett asked if the project met the policy guidelines and if so, then it should be a fully funded project.

Ms. Susie Lahsene replied that the project would be successful for using CMAQ funds because of the air quality benefits it would produce.

Mr. Fred Hansen expressed concern regarding the Willamette Shoreline Project and whether it would be eligible for funding from the I-205 project.

Chair Rod Park stated that it was important to have regional equity. However, there is a need to discuss how to treat STP funds. Commissioner Roy Rogers commented that he has supported bridges that have been regional in the past. However, he said that a discussion needed to occur to determine what defines regional versus local. He expressed concern that the planning category continues to rise while the construction categories continue to decline and finally whether there was a proper mix of funding.

Commissioner Roy Rogers presented a memo to JPACT (included as part of this meeting record.)

Mr. Fred Hansen commented that the next discussion surrounding the MTIP should be the debate around how to spend flexible dollars. He said that all flexible dollars should be used for projects
program. He said that it was important that the MTIP funding did not become a Bridge funding program. He also asked the committee members to think about and determine what type of emphasis they want to place upon the STIP/CMAQ program.

Mr. Matthew Garrett expressed concern regarding the tenor surrounding the conversation specific to the Sellwood Bridge. He reemphasized the importance of strong regional support for the Sellwood Bridge in order to take advantage of the ODOT dollars the OTC is being requested to allocate to the project.

Councilor Rod Monroe recommended that the application for the Sellwood Bridge and the entire funding amount be moved above the 150% cut level.

Councilor Rex Burkholder reminded the committee members that there is a certain amount of the MTIP money that cannot be spent for bridge or road projects.

Ms. Susie Lahsene recommended moving the North Ledbetter extension application above the 150% cut list. She stated that other high cost projects above the cut line did not receive the same treatment as the North Ledbetter project. Further, she explained that since the OTIA process, the project has experienced an increase in cost. She also stated that the Port of Portland is not in a position financially to contribute as much to the project as first thought.

Commissioner Jim Francesconi stated that North Ledbetter was important for further development of Rivergate.

Mr. Matthew Garrett asked if the project met the policy guidelines and if so, then it should be a fully funded project.

Ms. Susie Lahsene replied that the project would be successful for using CMAQ funds because of the air quality benefits it would produce.

Mr. Fred Hansen expressed concern regarding the Willamette Shoreline Project and whether it would be eligible for funding from the I-205 project.

Chair Rod Park stated that it was important to have regional equity. However, there is a need to discuss how to treat STP funds.

Commissioner Roy Rogers commented that he has supported bridges that have been regional in the past. However, he said that a discussion needed to occur to determine what defines regional versus local. He expressed concern that the planning category continues to rise while the construction categories continue to decline and finally whether there was a proper mix of funding.

Commissioner Roy Rogers presented a memo to JPACT (included as part of this meeting record.)

Mr. Fred Hansen commented that the next discussion surrounding the MTIP should be the debate around how to spend flexible dollars. He said that all flexible dollars should be used for projects
that are not eligible for gas tax proceeds. He also stated that it was important to set clear criteria and then allocate the MTIP funding accordingly.

Ms. Susie Lahsene concurred with Fred Hansen. She expressed concern that the proposed MTIP allocations were not following policy guidance and objectives previously set by JPACT.

Councilor Karl Rohde concurred with Fred Hansen regarding focusing flexible dollars on projects that are ineligible for other types of funding. He expressed his support for the Willamette Shoreline - Hwy 43 Transit PE: Portland South Waterfront to Lake Oswego project. He said that the project is 15 years in the making and is ready for an aggressive schedule to move forward. Further, he said that it is a critical element for the town center and failure to move forward would jeopardize private dollars.

Commissioner Jim Francesconi stated that the City of Portland had research their written records concern the Eastbank Trail/Springwater: SE 19th to SE Umatilla project and had not found any comments that would keep the project from applying for MTIP dollars. He said that it was the number one ranked project that can only use flexible dollars to fund.

Chair Rod Park stated that the MTIP discussion would be back at the next JPACT mailing and that is when further decisions need to be made regarding changes to the cut list.

Mr. Fred Hansen stated that he had received a call that Jenna Dorn would be in the Portland area, Wednesday, September 22, 2004 and would be willing to meet with JPACT members, possibly on Thursday, September 23, 2004.

Chair Rod Park stated that a notice would be sent out to JPACT members once the information was finalized.

VII. OCTOBER 14-15, 2004 MPO SUMMIT IN EUGENE

Councilor Rex Burkholder briefly discussed the upcoming October 14-15, 2004 MPO Summit in Eugene.

VIII. COLUMBIA RIVER CROSSING TASK FORCE

Rex Burkholder presented the I-5 Columbia River Crossing Task Force (included as part of this meeting record).

IX. ADJOURN

Chair Rod Park adjourned the meeting at 9:04 a.m.
that are not eligible for gas tax proceeds. He also stated that it was important to set clear criteria
and then allocate the MTIP funding accordingly.

Ms. Susie Lahsene concurred with Fred Hansen. She expressed concern that the proposed MTIP
allocations were not following policy guidance and objectives previously set by JPACT.

Councilor Karl Rohde concurred with Fred Hansen regarding focusing flexible dollars on
projects that are ineligible for other types of funding. He expressed his support for the
Willamette Shoreline - Hwy 43 Transit PE: Portland South Waterfront to Lake Oswego project.
He said that the project is 15 years in the making and is ready for an aggressive schedule to move
forward. Further, he said that it is a critical element for the town center and failure to move
forward would jeopardize private dollars.

Commissioner Jim Francesconi stated that the City of Portland had research their written records
concern the Eastbank Trail/Springwater: SE 19th to SE Umatilla project and had not found any
comments that would keep the project from applying for MTIP dollars. He said that it was the
number one ranked project that can only use flexible dollars to fund.

Wednesday, September 22, 2004 and would be willing to meet with JPACT members, possibly

Chair Rod Park stated that a notice would be sent out to JPACT members once the information
was finalized.

VII. OCTOBER 14-15, 2004 MPO SUMMIT IN EUGENE

Councilor Rex Burkholder briefly discussed the upcoming October 14-15, 2004 MPO Summit in
Eugene.

VIII. COLUMBIA RIVER CROSSING TASK FORCE

Rex Burkholder presented the I-5 Columbia River Crossing Task Force (included as part of this
meeting record).

IX. ADJOURN

Chair Rod Park adjourned the meeting at 9:04 a.m.
MEMORANDUM

TO: JPACT members, alternates and interested parties
FROM: Rod Park, Chairman
DATE: October 7, 2004
SUBJECT: Oxygenated fuels

JPACT has discussed oxygenated fuels several times in the past few months, although there has been no recommendation made.

Attached you will find a memo from staff providing a background for the oxygenated fuel issue and presenting several options.

Also attached are two draft letters that could be sent to the Department of Environmental Quality on behalf of JPACT concerning oxygenated fuels. I would like to use these draft letters as a basis for JPACT discussion and action.

Thank you for your interest in this matter and I look forward to discussion with you at JPACT on October 14.
MEMORANDUM

TO: Councilor Rod Park, Chair, JPACT
FROM: Andy Cotugno, Director
DATE: October 7, 2004
SUBJECT: Oxygenated Fuels

Request
Oxygenated fuels have been discussed several times at JPACT, but without a final conclusion or recommendation. DEQ's new Portland Area Carbon Monoxide Air Quality Maintenance Plan is proposing to discontinue oxygenated fuels and the public comment period ends October 25. Staff is seeking a conclusion as to how to proceed. We propose that this issue be discussed at the prep-JPACT meeting on October 5.

Background
- Oxygenated fuels (oxy fuels) were originally required for the metropolitan area in 1992 to reduce carbon monoxide (CO) emissions from motor vehicles. This requirement was continued in the 1996 Portland Area Carbon Monoxide (CO) Maintenance Plan written by the Oregon Department of Environmental Quality (DEQ), approved by the Oregon Environmental Quality Commission and affirmed by the US Environmental Protection Agency in 1997. In the intervening years, oxy fuel requirements were dropped in other parts of the state with the Portland area the only remaining location with an oxy fuel requirement.

- In advance of the release of the 2004 Portland Area CO Maintenance Plan, DEQ asked to coordinate with the region and solicited recommendations on several aspects of the Plan update, including industrial growth allowance allocation, transportation control measures (TCM) and emission budgets.

- The oxy fuel issue was discussed at JPACT and the Metro Council during consideration of a resolution concerning the upcoming 2004 CO Plan. At the JPACT meeting, a request was made to defer the oxy fuel discussion to a later date, separating the other CO Plan recommendations from the oxy fuel discussion. On June 17, 2004 Metro Council approved Resolution 04-3457, making recommendations about TCMs, emission budgets and industrial growth allowance allocation for the upcoming Portland CO Maintenance Plan. No recommendation about oxy fuels was included in the approved resolution.

- At the July 8 JPACT meeting, a draft resolution on oxy fuels (04-3475) was discussed. The resolution was conditional - if the oxy fuel requirement is continued, MTBE (methyl tertiary butyl ether, one method of oxygenating fuel) should be banned. JPACT member Fred Hansen suggested a different approach - urging a ban on MTBE regardless of oxy fuel policy and further recommending that studies of air toxics and greenhouse gases should be completed to determine whether the oxy fuel requirement should be continued. JPACT discussed this proposal, but did not take action.
- In September DEQ released a draft second Portland Area CO Maintenance Plan. The Plan includes a proposal to eliminate the oxy fuel requirement by October 31, 2005. (A portion of the DEQ materials are attached) Reasons include that the Portland area is well below CO standards, so oxy fuel is no longer needed to meet CO requirements. A public hearing on the Plan is scheduled on October 20 with comments due to DEQ by October 25.

Options
In order to bring closure to the topic discussed several times at JPACT, it is recommended that this item be included in the October 14 JPACT agenda. Several options are available to the region including:

- Take no further action. Local governments and individuals are free to give comments directly to DEQ. DEQ's and EQC's expertise and mandates make discussion of this issue more appropriate in this venue.

- Encourage more analysis. Urge DEQ to assess the results of oxy fuel on air toxics and greenhouse gases. Return to JPACT with an assessment of whether oxy fuels will significantly reduce air toxics or greenhouse gases and whether an oxy fuel requirement should be continued.

- Recommend that DEQ continue to initiate rule-making regarding the use of ethanol based oxy fuels in the metropolitan area because of it further reduces CO emissions, promotes energy independence, supports Oregon agriculture and waste reduction and may reduce air toxics and greenhouse gases.

I would be happy to answer any questions.

Thank you.
October 14, 2004

Ms. Stephanie Hallock, Director  
Department of Environmental Quality  
State of Oregon  
811 Southwest Sixth Avenue  
Portland, Oregon  
97204-1390  

RE: Portland Area Carbon Monoxide Maintenance Plan  

Dear Ms. Hallock  

Thank you for the opportunity to comment on the proposed Portland Area Carbon Monoxide Maintenance Plan (CO Plan). As you know, the Joint Policy Advisory Committee on Transportation Policy recommended approval of Metro Resolution No. 04-3457, containing recommendations for CO Plan elements including transportation control measures, motor vehicle emission rates, emission set asides for industrial sources and air quality subregions. The Metro Council subsequently approved this resolution's recommendations on June 17, 2004.

We are gratified that the DEQ has included the JPACT and Metro Council recommendations in your proposed CO Plan and recommend adoption of the CO Plan by the Environmental Quality Commission. We also appreciate your approach to coordination with our region and the professionalism, hard work and thoughtful efforts of your staff.

We look forward to continuing to work with you and DEQ staff to maintain clean air in our region.

Thank you.

Sincerely,

Rod Park, Chairman  
Joint Policy Advisory Committee on Transportation

RE: Oxygenated fuels and MTBE

Dear Ms. Hallock

We recognize that the DEQ has recommended discontinuing oxygenated fuels in the greater Portland metropolitan region as a method of reducing carbon monoxide. Carbon monoxide levels are now less than half the federal limit, and forecasts of on-road emission levels show further substantial declines in carbon monoxide. For these and other reasons, DEQ has recommended discontinuing the oxygenated fuel requirement.

We also recognize that one type of oxy fuel, ethanol, has, or could have, substantial benefit to our region. There is research that suggests that oxy fuels containing ethanol may reduce certain air toxics, such as benzene, that can pose a health threat to our residents. Oxy fuels containing ethanol are also reported to bring about significant reduction of greenhouse gases. There are other benefits to ethanol based oxy fuels including promoting energy independence, supporting Oregon agriculture and possibly supporting Oregon forestry and waste reduction in the future should new sources of biomass feedstock be perfected for mass production.

As we understand it, the other agent used to oxygenate fuels is methyl tertiary butyl ether (MTBE). Given MTBE's characteristics, including being a possible carcinogen, the strong chemical bond that it forms with water (making clean up very expensive) and the bad taste and odor that it emanates in even very small quantities, MTBE has been banned in both California and Washington. We would like to work with DEQ to request that the State Legislature ban MTBE in Oregon as well.

Accordingly, we recommend that DEQ initiate rulemaking regarding the use of ethanol based oxy fuels in the metropolitan area to reduce air toxics and greenhouse gases, promote energy independence, support Oregon agriculture and waste reduction.

Thank you for your consideration of these recommendations.

Sincerely,

Rod Park, Chairman
Joint Policy Advisory Committee on Transportation
JPACT has discussed oxygenated fuels several times in the past few months, although there has been no recommendation made.

Attached you will find a memo from staff providing a background for the oxygenated fuel issue and presenting several options.

RE: Portland Area Carbon Monoxide Maintenance Plan

Dear Ms. Hallock

Thank you for the opportunity to comment on the proposed Portland Area Carbon Monoxide Maintenance Plan (CO Plan). As you know, the Joint Policy Advisory Committee on Transportation Policy recommended approval of Metro Resolution No. 04-3457, containing recommendations for CO Plan elements including transportation control measures, motor vehicle emission rates, emission set asides for industrial sources and air quality subregions. The Metro Council subsequently approved this resolution's recommendations on June 17, 2004.

We are gratified that the DEQ has included the JPACT and Metro Council recommendations in your proposed CO Plan and recommend adoption of the CO Plan by the Environmental Quality Commission. We also appreciate your approach to coordination with our region and the professionalism, hard work and thoughtful efforts of your staff.

We look forward to continuing to work with you and DEQ staff to maintain clean air in our region.

Thank you.

Sincerely,

Rod Park, Chairman
Joint Policy Advisory Committee on Transportation

RE: Oxygenated fuels and MTBE

Dear Ms. Hallock

We recognize that the DEQ has recommended discontinuing oxygenated fuels in the greater Portland metropolitan region as a method of reducing carbon monoxide. Carbon monoxide levels are now less than half the federal limit, and forecasts of on-road emission levels show further substantial declines in carbon monoxide. For these and other reasons, DEQ has recommended discontinuing the oxygenated fuel requirement.

We also recognize that one type of oxy fuel, ethanol, has, or could have, substantial benefit to our region. There is research that suggests that oxy fuels containing ethanol may reduce certain air toxics, such as benzene, that can pose a health threat to our residents. Oxy fuels containing ethanol are also reported to bring about significant reduction of greenhouse gases. There are other benefits to ethanol based oxy fuels including promoting energy independence, supporting Oregon agriculture and possibly supporting Oregon forestry and waste reduction in the future should new sources of biomass feedstock be perfected for mass production.

As we understand it, the other agent used to oxygenate fuels is methyl tertiary butyl ether (MTBE). Given MTBE's characteristics, including being a possible carcinogen, the strong chemical bond that it forms with water (making clean up very expensive) and the bad taste and odor that it emanates in even very small quantities, MTBE has been banned in both California and Washington. We would like to work with DEQ to request that the State Legislature ban MTBE in Oregon as well.

Accordingly, we recommend that DEQ initiate rulemaking regarding the use of ethanol based oxy fuels in the metropolitan area to reduce air toxics and greenhouse gases, promote energy independence, support Oregon agriculture and waste reduction.

Thank you for your consideration of these recommendations.

Sincerely,

Rod Park, Chairman
Joint Policy Advisory Committee on Transportation

We believe these actions can also
Subject: Oxygenated Fuels

Dear Mr. Park:

My name is Brian B. Doherty and I represent the Western States Petroleum Association ("WSPA"), a non-profit trade organization representing a broad spectrum of companies in the petroleum industry in Oregon.

I offer the following comments with respect to the oxygenated fuels topic on your October 14, 2004, agenda. WSPA urges you to support the first letter to DEQ Director Stephanie Hallock entitled "Portland Area Carbon Monoxide Maintenance Plan," which recommends that the EQC adopt DEQ's CO Plan.

WSPA supports DEQ's position to eliminate the oxygenated fuel mandate in their carbon monoxide maintenance plan renewal. The carbon monoxide maintenance plan is an environmental success story. Its success is owed to catalytic converters, fuel injection, and fleet turnover—not the oxygenated fuel mandate. As the Oregonian stated in its September 7, 2004, editorial, "when a regulation has done its job, or it is no longer necessary, government should rescind it, not search for another justification. To do otherwise is to invite greater cynicism and more opposition to truly vital environmental regulations."

Moreover, the Governor's office and DEQ are actively participating in and reviewing draft documents from the Governor's Renewable Energy Task Force and from the Governor's Global Warming Advisory Group that extensively discuss ethanol and biodiesel production and use in motor vehicle fuels on a statewide basis. (Copies of the draft reports have been provided to Mark Turpel.)
Mr. Rod Park  
Chairman  

October 13, 2004

WSPA concurs with JPACT member, Fred Hanson, that the studies of greenhouse gas impacts and air toxics should be undertaken to determine whether biofuels should be a part of the equation in addressing the state's concerns. It is important that the state conduct a full and open discussion of its goals with respect to renewables, air toxics, greenhouse gases, and global warming and the best methods to address those issues. Our industry will be active participants in that process.

WSPA opposes unnecessary mandates, not ethanol. Our industry is the number one purchaser of ethanol in the U.S. We work closely with the ethanol industry in providing a quality product that operates appropriately with today's automobile engines. However, there are issues relating to the use of oxygenates in gasoline, particularly ethanol, that should be addressed before any decision to utilize a fuel blend is considered:

1. A new California Research Council (CRC) study shows permeation emissions (emissions through hoses) from fuels with ethanol are very significant.

2. Studies suggest it takes only slightly less than one BTU of energy from fossil fuel to make one BTU of energy from ethanol. (0.8 to 1.0 according to the most recent USDA estimates.)

3. Currently, there is no appreciable ethanol production in Oregon. An Oregon mandate would benefit only out-of-state and foreign country ethanol producers as has been the case for the past 10 years.

4. More than 50 percent of the ethanol used in the metro area the past few years has been from producers outside of the United States. This certainly does not support an energy independence argument for ethanol in Oregon.

5. The national energy bill contains a 5 billion gallon renewable fuels mandate. It narrowly failed passage last year and Congress plans to bring it forth again in the near future. If it passes, demand for ethanol and other renewable fuels will increase substantially, further impacting ethanol use in Oregon.

6. Ethanol demand is increasing dramatically as MTBE is phased out across the country. California's ethanol use is predicted by the California Energy Commission to increase by 1 billion gallons in 2004.

7. The use of 10 percent ethanol in gasoline produces approximately a 3 percent loss in fuel economy. Simply put, at $2 per gallon, this results in a loss of 6 cents per gallon.
8. The American Lung Association testified to Congress that it strongly opposes ethanol mandates because they lead to greater air pollution emissions.

In conclusion, we encourage Metro to support the Governor's Task Force and advisory group's studies on the best means of addressing green house gas and other air toxics issues so that a fully informed opinion can be made. To that end, we encourage JPACT to adopt the first letter to DEQ Director Stephanie Hallock.

Very truly yours,

[Signature]

Brian B. Doherty
September 23, 2004

Dear Members of the Oregon Environmental Quality Commission:

We urge the Oregon Department of Environmental Quality to continue the successful oxygenated fuels program in the Portland area. The program’s success, not only in reducing CO emissions from vehicles, but also in reducing emissions of harmful toxics and the greenhouse gas CO2, are commendable and directly contribute to the region’s overall health. In addition, the program provides the only effective current policy for substituting renewable fuel for petroleum in the transportation sector.

Multnomah County, along with the City of Portland and State of Oregon, has made the reduction of greenhouse gases a priority through the county’s Sustainability Initiative. As the Portland metropolitan region continues to grow it is crucial that we, as policy leaders, remain focused on the region’s livability, and essential to this effort is clean air. The oxygenated fuels program is a critical tool in assuring clean air.

When considering the many benefits enjoyed by the region of the oxygenated fuels program, we believe it is in the public’s best interest to continue the program.

Thank you for the opportunity to weigh in on this issue.

Sincerely,

Diane M. Linn

Memorandum

Date: October 14, 2004

To: JPACT

From: Stephanie Hallock, Director, and Annette Liebe, Acting Air Quality Administrator, DEQ

Subject: Portland Area CO Maintenance Plan Overview

- A public hearing is scheduled for 2:00 p.m., Oct. 20, 2004 at DEQ Headquarters, Room 3A, 811 SW Sixth in Portland.

- The Environmental Quality Commission (EQC) will hear an oxygenated fuel informational item on Oct. 22, 2004 at their meeting in Tillamook. The public will have an opportunity to comment to the EQC on the CO Plan proposal at that meeting.

- The EQC is scheduled to take final action on the plan at its December 9-10, 2004 meeting in Portland.

JPACT/Metro Involvement

JPACT and the Metro Council have endorsed much of the plan, including:

- New Motor Vehicle Emissions Budgets that accommodate growth through 2037.
- New Transportation Control Measures (TCMs) that integrate land use planning and transportation planning. It gives real teeth to the implementation of projects such as light rail that benefit air quality. TCMs include:
  o 1% annual increase in transit
  o 28 miles of bike paths
  o 9 miles of sidewalks
  o contingent TCMs: If Vehicle Miles Traveled (VMT) per capita rises 10%, commitments to light rail, commuter rail, Regional Travel Options and Transit Oriented Development become real TCMs. This approach captures the region’s commitment to these measures while avoiding administrative burdens.
- Eliminate Motor Vehicle Emissions Budgets for sub-regions (these have been unnecessary).
- Continue Industrial Growth Allowance

Issues

- The Clean Air Act requires that the Portland CO plan be updated eight years following redesignation to ensure continued compliance with air quality standards. DEQ committed to completing this update by December 31, 2004. This updated CO plan also updates the motor vehicle emissions budget to ensure that transportation projects do not jeopardize air quality. The updated emission budget in the draft plan uses the newest emissions model from EPA and the latest population and employment growth projections. The budget limits the amount of CO allowed from transportation projects approved through 2017.
- DEQ has negotiated an expedited review of the Portland CO Maintenance Plan by EPA, which will allow the updated emissions budgets to be approved by fall 2005, when it is needed to allow Metro to adopt the 2006-2009 Metropolitan Transportation Improvement Plan.
Program. EPA is legally allowed 18-24 months for SIP approval but has agreed to process the Portland CO plan within 7 months of submittal. If EPA approval is delayed, and a conformity determination cannot be made, new regionally significant transportation projects, regardless of funding source, can not move forward except for exempt projects such as TCMs. DEQ, Metro, ODOT, FHWA and EPA will work together to resolve issues as quickly as possible to avoid this situation.

Other features of the proposed CO plan include:
- Repeal of oxygenated fuel. This requirement has had decreasing effectiveness in reducing CO emissions from on-road vehicles: CO reductions = 20% in 1992, 6% in 2005 and 1.6% in 2020. Projections show that CO emissions would remain well below airshed capacity even without oxygenated fuel (see chart below). Ambient concentrations are projected to remain less than half the standard.
- Prepares for ending enhanced vehicle emissions test in future.

Other issues have been raised regarding use of ethanol as fuel, including:
- Greenhouse gas reduction
- Air toxics effects
- Renewable energy

Ethanol as fuel is being addressed in other forums:
- Department of Energy Renewable Energy Initiative
- Governor’s Global Warming Advisory Group
- National Energy Bill

A copy of the complete draft CO Maintenance Plan and supporting staff report is available upon request, or on the DEQ website, www.deq.state.or.us. If you have any questions, please contact Annette Liebe at (503) 229-6919.

![CO Emissions Chart](chart.png)
Portland Area Carbon Monoxide Maintenance Plan

Background
The Oregon Department of Environmental Quality (DEQ) is seeking comments on a proposed Portland Area Carbon Monoxide (CO) Maintenance Plan. The Clean Air Act requires the region to prepare this plan to demonstrate how the Portland area will stay below the federal air quality standard for CO until 2017. This rulemaking proposes to discontinue the wintertime oxygenated fuel requirement as of October 31, 2005, amend Motor Vehicle Emissions Budgets, make changes to current Transportation Control Measures (TCMs) and prepares for potential future changes in how DEQ tests emissions of 1981 through 1995 vehicles.

After the Environmental Quality Commission (EQC) takes action on the proposal, DEQ will submit this rulemaking to the U.S. Environmental Protection Agency (EPA) as a revision to the State Implementation Plan. DEQ has the statutory authority to address this issue under ORS 468.020. These rules implement JRS 468A.035.

Why are rule changes needed?
This rulemaking meets a Clean Air Act requirement to develop a plan by 2005 that will demonstrate how the Portland area will comply with the CO standards until 2017.

Proposed change to oxygenated fuel requirement
Today, vehicle emission controls are increasingly effective in reducing CO emissions and CO concentrations in the Portland area are less than half of the federal limit. The CO maintenance plan analysis shows that the Portland area will easily maintain these low CO levels without the need for oxygenated fuel. Therefore, the regulatory requirement to use oxygenated fuel is no longer necessary to ensure compliance with CO standards with a significant margin of safety. The CO plan proposes to eliminate the oxygenated fuel requirement effective October 31, 2005, in time for the 2005/2006 winter season. An overview of the history of oxygenated fuel requirement in Portland is shown in Attachment 1.

The CO maintenance plan also proposes to update the existing Motor Vehicle Emissions Budgets that are necessary to ensure that transportation projects do not jeopardize air quality. DEQ needs to update these budgets using new emission estimating techniques and the latest emissions forecast based on expected growth. These budgets limit the amount of CO allowed for transportation sources through 2017.

Proposed change to Transportation Control Measures
This proposal also updates existing Transportation Control Measures (TCMs). TCMs aim to reduce vehicle emissions by reducing automotive use. The plan includes three measures that were developed and approved by the Portland regional government, Metro. The measures increased transit service and improved facilities for bicyclists and pedestrians. The CO maintenance plan also includes contingent TCMs linked to increases in average vehicle miles traveled (VMT) per capita. These contingent TCMs reinforce the region's commitment to the Washington County Commuter Rail, the I-205 Light Rail and other projects that reduce motor vehicle use.

Proposed change to Vehicle Inspection Program
The proposed plan allows a minor change to the Vehicle Inspection Program. The new CO plan provides for replacement of the enhanced emissions test for 1981 through 1995 vehicles with the quicker and slightly less restrictive basic emissions test. This change is contingent upon a finding by DEQ that the enhanced test for these model years is not needed for reducing ozone in Portland. DEQ is evaluating phasing out the enhanced test because an increasing number of vehicles use the On Board Diagnostic (OBD) test, which applies to 1996 and newer vehicles. Currently, 1996 and newer vehicles comprise 52 percent of the fleet and this percentage increases each year.

Industrial sources; contingency plan
The proposed CO maintenance plan retains existing requirements for new and expanding major industrial sources under the New Source Review program. These requirements include Best Available Control Technology (BACT) emission controls. In addition, the plan retains the existing industrial growth allowance to facilitate economic opportunity for new and expanding industries by providing an alternative to the emission offset requirement.
Finally, the proposed CO maintenance plan includes a Contingency Plan as required by the Clean Air Act. In the unlikely event of a future violation of CO standards, this plan would require reinstatement of all requirements that applied before the area was redesignated to attainment. Those requirements include state-of-the-art emissions control for new and expanding major industry, the resumption of oxygenated fuel requirements, and (if the violation occurs downtown) the reinstatement of the downtown Portland parking lid.

History of the oxygenated fuel requirement and CO maintenance plan
Oxygenated fuel was originally required for the Portland area under the 1990 Clean Air Act amendments to reduce CO emissions. The oxygenated fuel requirement took effect in 1992 and applies only during the coldest months of the year—the beginning of November through the end of February. The Portland area first met the CO standard in 1991, largely as a result of federal motor vehicle emission standards. However, the oxygenated fuel requirement further reduced CO emissions, ensuring continued reduction in ambient CO levels.

In 1996, DEQ requested that the EPA redesignate the Portland area to attainment for CO. At that time, DEQ’s analysis showed that the oxygenated fuel requirement was no longer necessary to meet CO standards. DEQ proposed a range of oxygenated fuel options for public comment. After considering public comments, DEQ recommended that the Environmental Quality Commission (EQC) repeal the oxygenated fuel requirement after the winter of 1997-1998. However, due to stakeholder interest in the benefits of oxygenated fuel, the EQC directed the DEQ to retain the oxygenated fuel requirement and to reevaluate the status of Portland area CO levels in two years (1998).

DEQ’s 1998 analysis again showed that oxygenated fuel was not needed to maintain compliance with CO standards. However, there was strong stakeholder support for retaining oxygenated fuel to provide an added margin of safety. DEQ recommended continuing the oxygenated fuel program for an additional two years (through 2000), at which time the need for oxygenated fuel would again be reassessed. This assessment would take into account measured CO data reflecting the benefit of the new enhanced vehicle emissions test under the Vehicle Inspection Program. The assessment would also incorporate improvements to EPA’s model for estimating motor vehicle emissions. Due to delays in the release of EPA’s new motor vehicle emissions model, DEQ decided to incorporate the next evaluation of the oxygenated fuel program into 2004 CO plan.

Other aspects of oxygenated fuel
Today, oxygenated fuel lowers total CO emissions by about 5%, and may slightly reduce the relative toxicity of motor vehicle emissions. Ethanol in fuel decreases greenhouse gas emissions, although estimates of that benefit vary widely. In addition, ethanol is a renewable energy source and contributes to the nation’s energy independence. Ethanol is produced from corn and other grains, so its use as fuel strengthens some agricultural markets.

Who may be affected?
Eliminating the requirement for oxygenated fuel may affect the ethanol industry by reducing demand for its product. At the same time, this action could benefit the petroleum industry by removing the obligation to blend an oxygenating agent with fuel thereby allowing greater flexibility and less complex and less expensive fuel handling. Fuel suppliers may choose to continue to blend fuel with ethanol for other reasons (such as to boost octane) as market forces dictate. If fuel suppliers discontinue the use of ethanol in fuel, the general public will benefit by an approximate two percent increase in fuel economy. The potential costs and benefits of DEQ’s proposal are discussed further in Attachment B.

How was this proposal developed?
DEQ consulted with affected stakeholders as well as state, federal and local government transportation, energy and other affected agencies. Metro, the local transportation organization, formally approved the transportation control measures and the transportation emission budgets of the second Portland Area CO Maintenance Plan.

Public hearing
DEQ will hold a public hearing to receive oral and written comment on this proposal. All comments will be recorded and summarized for the EQC. Before the hearing begins, DEQ will hold an informational meeting to present background material on CO in the Portland area, describe the plan’s leading features and answer questions. The hearing will be held:

2 p.m.
Wednesday, Oct. 20, 2004,
DEQ Headquarters,
Conference Room 3A (3rd Flr.)
811 SW 6th Avenue, Portland

On October 22nd, DEQ will provide an informational briefing to the EQC on the CO...
plan and oxygenated fuel proposal. This briefing also provides the public an opportunity to comment to the EQC on DEQ’s proposal. This meeting will held in either Portland or Tillamook, Oregon.

The EQC is scheduled to consider the Portland CO plan for adoption at their December 9-10 meeting in Portland.

How to comment
Submit comments on the proposed rulemaking in writing via mail, fax or e-mail at any time prior to the comment deadline, 5 p.m., Oct. 25, 2004 to:
Dave Nordberg
Oregon DEQ, Air Quality Division,
811 SW 6th Avenue, Portland, OR 97204
Fax: 503-229-5675, or
E-mail: nordberg.dave@deq.state.or.us

For more information
Copies of documents used to develop this rulemaking proposal may be reviewed at DEQ • Air Quality Program office. Please contact Susan Carlson at (503) 229-5359 for times when the documents are available for inspection.

For more information on the rulemaking proposal, including the complete version of the Portland Area Carbon Monoxide Maintenance Plan and the supporting Emission Inventory, please contact Dave Nordberg at (503) 229-5519 or toll-free in Oregon at 1-800-452-4011. To view materials related to the new plan at the DEQ Web site go to:
http://www.deq.state.or.us/aq.htm and
http://www.deq.state.or.us/aq/Factsheets/04-Aq-002-OxyFuel.pdf

How will rules be adopted?
DEQ will prepare a response to all comments received during the public hearing and comment period and may modify the proposed rules. DEQ plans to make a recommendation to the EQC at their Dec. 9 through Dec. 10, meeting in Portland. DEQ will notify people of the time and place for final EQC action if they submit comments during the hearing or comment period or request to be on DEQ’s mailing list for this rulemaking.

Alternative formats/accommodations
Please notify DEQ of any special physical or language accommodations needed for the hearings as far in advance as possible. Alternative formats of this document can be made available by contacting the DEQ Office of Communications & Outreach, Portland, at (503) 229-5317.
Ambient carbon monoxide (CO) concentrations in the Portland area decreased dramatically over the last several decades. CO levels of more than twice the air quality standard in the early 1970s are less than half the standard today. CO concentrations for the last two decades in relation to the 9 ppm federal health standard are shown below:

Following is a general chronology of the CO reduction strategy and key milestones for the oxygenated fuel requirement in Portland:

1972  The Portland area exceeds the CO standard approximately 1 out of 3 days. Motor vehicles produce the overwhelming majority of CO emissions.

Ongoing  Federal standards for new vehicle emissions tighten repeatedly since the 1960s and produce the largest improvements in air quality. Lower federal emission standards for motor vehicles will continue to reduce emissions throughout the 1980s and 1990s.

1975  The Department of Environmental Quality (DEQ) begins a vehicle emissions testing program in the Portland area.

1975  Portland adopts the Downtown Parking and Circulation Policy (including the parking lid) to decrease CO concentrations by reducing downtown traffic.

1990  Despite years of steadily reducing CO concentrations, the Portland area still fails to meet CO standards and is designated as a CO nonattainment area under the Portland Area CO Maintenance Plan: September, 2004

Attachment 1, pg. 1
1990 Clean Air Act Amendments. The Clean Air Act Amendments require CO nonattainment areas to use oxygenated fuel during the coldest months.

1996 Marks five consecutive years in compliance with CO standards. DEQ develops the first Portland Area CO Maintenance Plan and applies to EPA for redesignation to attainment. DEQ evaluates the need to continue the oxygenated fuel program. Key points from DEQ's 1996 assessment include:

- Oxygenated fuel is no longer needed to maintain good air quality. The safety margin for compliance without oxygenated fuel is projected to be 11% in 1997, 28% in 1999 and 21% in 2007.
- The proposed CO maintenance plan published for public comment offers several options for the oxygenated fuel program.
- Approximately 2 out of 3 comments favor keeping oxygenated fuel requirements in place. Oxygenated fuel proponents include many local elected officials.
- DEQ reports to the Environmental Quality Commission (EQC) that oxygenated fuel is no longer needed as a CO reduction strategy and recommends that the oxygenated fuel requirement be repealed after the winter of 1997-1998. DEQ also proposed to conduct an evaluation of actual CO air quality data by March 1998, and based on that assessment, recommend to the EQC whether to maintain the repeal or reinstate the oxygenated fuel program.
- The EQC adopts the Portland CO plan and decides on the basis of public comment to continue the oxygenated fuel requirement. The EQC asks DEQ to reevaluate the need for oxygenated fuel after the winter of 1997-1998.

1997 EPA approves the Portland area CO plan and redesignates the area to attainment for CO.

1998 DEQ presents an update to the EQC on the need to continue the oxygenated fuel program (report requested by the EQC in 1996).

- DEQ reports that oxygenated fuel is not needed to maintain compliance with the CO standard but notes many elected officials support keeping the oxygenated fuel program.
- DEQ suggests further evaluation after the winter of 2000-2001 when the enhanced vehicle testing program is fully implemented, and after EPA’s finalizes a new computer model for estimating motor vehicle emissions. EPA’s new model will allow a more accurate evaluation of CO concentrations and the need for oxygenated fuel.
- The EQC concurs and asks DEQ to return with updated information when it becomes available.

2000 Oxygenated fuel is discontinued in Grants Pass.
2001 The release of EPA’s new Mobile6 emission factor model is delayed repeatedly. DEQ discontinues an oxygenated fuel advisory committee effort when decreased resources cause DEQ to reevaluate discretionary work. Reconsideration of oxygenated fuel is deferred until the CO maintenance plan is updated in 2004.

2001 Oxygenated fuel is discontinued in Klamath Falls.

2002 Oxygenated fuel is discontinued in Medford.

2004 DEQ develops the second CO maintenance plan. Emission projections demonstrate that CO levels in the Portland area would remain less than half the CO standard even if oxygenated fuel were eliminated. The oxygenated fuel requirement provides an approximate 5% reduction in total CO emissions. If oxygenated fuel is discontinued, wintertime CO levels will increase approximately 5% but still remain less than half the 9 ppm CO standard. Oxygenated fuel is no longer needed as a CO reduction strategy. DEQ intends to take public comment on the proposed CO maintenance plan, and oxygenated fuel proposal, from September 7th through October 25th. DEQ will hold a public hearing on the plan October 20th, and the EQC will hear information related to the oxygenated fuel requirement at their meeting on October 22nd. That meeting will be held in either Portland or Tillamook and will offer the public an opportunity to speak directly to the EQC. Adoption of the Portland CO maintenance plan is scheduled for consideration by the EQC during their December 9-10, 2004 meeting in Portland.

SUBJECT: Transportation Priorities proposed amendments

Following is the recommendation from the Transportation Policy Alternatives Committee on a first cut narrowing for public comment of candidate projects for Transportation Priorities funding. The materials include an explanation of the recommendation, a list of policy issues for further consideration and a candidate project list.

In order to ensure that all proposed amendments are given full and accurate consideration, please bring 40 copies of any proposed amendments in writing to the JPACT meeting.

Thank you for your help in this matter.
DATE: October 6, 2004

TO: JPACT, Metro Council and Interested Parties

FROM: Ted Leybold, MTIP Manager

SUBJECT: Transportation Priorities 2006-09 – TPAC Recommended First Cut List

Introduction

Following is the Transportation Policy Alternatives Committee (TPAC) recommended First Cut list of projects and programs for Joint Policy Advisory Committee on Transportation (JPACT) and Metro Council consideration and public comment for the Transportation Priorities 2006-09 program.

TPAC and JPACT reviewed a draft recommendation at their August 27th and September 9th meetings and provided comments, a summary of which are also included in this memorandum. Comment generally fell into one of three categories: technical or funding information that could affect the Metro staff recommendation, policy or qualitative issues or requests that may be taken up by JPACT and the Metro Council during either the first or final cut narrowing process, and policy issues that will be identified for consideration prior to the next allocation process.

New project technical and financial information that has changed the Metro staff recommendation to recommend projects for further consideration include: the Eastbank to Springwater trail connector project, preliminary engineering of the Highway 43 transit corridor, a portion of the Ledbetter extension freight project that represents the increase in project cost since its application for OTIA III funding, and the SE 172nd Avenue project. Metro staff did not recommend a requested change to remove the Tualatin Valley Highway corridor study funding from the further consideration list in exchange for further consideration of funding of preliminary engineering and right-of-way costs for the Ash Street extension project and the additional funding to the Beaverton-Hillsdale/Scholls Ferry/Oleson intersection improvement due to the policy nature of a local priority request.
Finally, some policy issues have been raised that may serve as a policy direction or rational for narrowing from the First Cut list to the Final Cut list or that need to be identified for future consideration prior to the next solicitation period. These issues are summarized in Exhibit A.

TPAC recommended two changes to the Metro staff recommendation. First was that JPACT and the Metro Council considers the addition of the Clackamas County Intelligent Transportation System (ITS) project application to the First Cut List. Clackamas County staff introduced letters from the ITS Subcommittee of TPAC and from the Oregon Department of Transportation Rail Safety Division in support of the project and indicated that the Rail Safety Division has verbally indicated that they may be interested in financially supporting the project. While program guidelines adopted by JPACT and the Council limit technical staff from recommending a project to the First Cut list of this projects relative technical score, given the circumstances outlined in the support letters, TPAC recommended JPACT and the Metro Council consider using their policy authority to add this project to the First Cut list and investigating the potential of the Rail Safety Division’s contribution to this project.

The Clackamas ITS project joins the Transit Safe Street Crossing project in the pedestrian mode category as projects not formally recommended to JPACT and the Council due to technical score constraints but highlighted for discussion and potential action to add those projects to the First Cut list.

Second, TPAC recommended the request by Washington County to remove the recommendation for further consideration of the Tualatin Valley Highway corridor study and to recommend further consideration of the preliminary engineering and right-of-way acquisition phases of the Ash Street extension in Tigard and additional funding for preliminary engineering of the Beaverton-Hillsdale/Scholls Ferry/Oleson intersection project. TPAC is interested in further discussion about the potential of the Ash Street extension to increase street connectivity and stimulate redevelopment in the Tigard town center and the potential to link a town center planning effort in Raleigh Hills associated with the preliminary engineering of the Beaverton-Hillsdale/Scholls Ferry/Oleson intersection project. Washington County expressed reservations about the potential to complete a corridor plan in the Tualatin Valley highway corridor given other highway corridor needs.

The attached Exhibit B is a summary list of the project and programs as recommended by TPAC.

Finally, TPAC recommended that Metro staff provide written information on how the TPAC recommendation responds to the program policy guidance. That information is provided immediately below the policy guidance summary in this memorandum.

Metro Council is scheduled to act on the First Cut list at its October 5th work session and JPACT is scheduled to act on October 14th.
Policy Guidance for the 2006-09 Transportation Priorities Program

JPACT and the Metro Council prior to solicitation of project applications adopted the following policy guidance:

The primary policy objective for the Transportation Priorities 2006-09 program is to leverage economic development in priority 2040 land-use areas through investments that support:

2040 Tier I and II mixed-use areas (central city, regional centers, town centers, main streets and station communities)

2040 Tier I and II industrial areas (regionally significant industrial areas and industrial areas), and

2040 Tier I and II mixed-use and industrial areas within UGB expansion areas with completed concept plans

Other policy objectives include:

- emphasize modes that do not have other sources of revenue
- complete gaps in modal systems
- develop a multi-modal transportation system with a strong emphasis on funding bicycle, boulevard, freight, green street demonstration, pedestrian, regional transportation options, transit oriented development and transit projects and programs
- meet the average annual requirements of the State Implementation Plan for air quality for the provision of pedestrian and bicycle facilities

Explanation of Metro Staff Project/Program Recommendations

Following are summaries of the projects and programs proposed for consideration of the First Cut List by project staff within each mode category.

Bike/Trail

- The top eight technically ranked projects were nominated for inclusion in the first cut list. The lowest two technically ranked projects were not viewed as mature in their development, connectivity and ridership as the projects recommended for further consideration.
The projects included will meet progress needed on air quality Transportation Control Measures for miles of bicycle projects and, in combination with the pedestrian category, for pedestrian improvements.

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the bicycle modal category implements the policy guidance by:

*Economic development in priority land use areas:* The Springwater Trailhead and MAX multi-use path projects are located in the Gresham regional center, the Jennifer Street project is located in a Clackamas County industrial area while the other projects are more systematic in nature providing connectivity on the regional bike system. The development of a regional bike system and bike access to 2040 priority land use areas contribute to the economic vitality of the region by increasing bike trips that do not require more land intensive and costly auto parking spaces in those areas where efficient use of land is most critical. The provision of a well-designed network of bicycle facilities also contributes to the overall attractiveness to both companies and a quality work force to locate in the region.

*Emphasize modes that do not have other sources of revenue:* Bicycle projects outside of vehicle capacity or reconstruction projects that are required to build bike facilities only have dedicated funding limited to a state program that allocates approximately $2.5 million per year or as one of several eligible project types that compete for statewide Transportation Enhancement grants of approximately $4 million per year. Additionally, one percent of state highway trust fund monies passed through to local jurisdictions must be spent on the construction or maintenance of bicycle or pedestrian facilities.

*Complete gaps in modal systems:* The bicycle projects recommended for further consideration all complete gaps in the existing bicycle network. While the Springwater Trailhead project does not strictly complete a gap in the provision of a bike trail or lane, it does provide needed user facilities on the trail system that do not exist today.

*Develop a multi-modal transportation system:* This is a modal emphasis category for the Transportation Priorities program.

*Meet the average annual requirements of the State air quality implementation plan:* The bicycle and trail projects recommended for further consideration would provide 8.65 miles of a required 5 miles of new bicycle facilities for the two-year funding period. This assumes the MAX multi-use path project in Gresham would be applied to meeting requirements for the provision of pedestrian facilities and is included in the calculation of that category.
Boulevard

- The top four technically ranked projects were nominated for further consideration.

- The East Baseline project is not recommended for further consideration because it was the lowest ranked project and Metro staff is interested in the City of Cornelius making further progress on implementation of Phase I of the Adair/Baseline Boulevard project prior to consideration of funding Phase II.

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the bicycle modal category implements the policy guidance by:

Economic development in priority land use areas: The recommended projects are a direct investment in priority 2040 mixed land use areas and support further economic development in those areas by providing the facilities and amenities necessary to support higher densities of development, a mix of land use types and higher percentage of trips by alternative modes and by enhancing land values in the vicinity of the project.

Emphasize modes that do not have other sources of revenue: While elements of Boulevard projects are eligible for different sources of transportation funding, they have no source of dedicated funding to strategically implement these types of improvements in priority 2040 land use areas.

Complete gaps in modal systems: The recommended projects add new or enhance existing pedestrian and some bike facilities to the regional network. The Rose Biggi project would construct a new collector level motor vehicle connection within a regional center to meet regional guidance on street connectivity.

Develop a multi-modal transportation system: This is a modal emphasis category for the Transportation Priorities program.

Meet the average annual requirements of the State air quality implementation plan: The Boulevard projects recommended for further consideration would provide .8 miles of a required 5 miles of new bicycle facilities and .1 mile of a required 1.5 miles of pedestrian facilities for the two-year funding period.

Large Bridge

- The Sellwood Bridge type, size and location study and preliminary environmental work is proposed for further consideration.
The recommendation for further consideration of this project is based on the potential for regional flexible funds to seed local and state project development funds that could then leverage a large allocation from federal and state Bridge Replacement funds to reconstruct the Sellwood Bridge. Metro staff is interested in further discussion with local and state partners concerning the scope and cost of project development work needed to leverage larger allocations of funding and a cost sharing arrangement for that development work.

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the large bridge modal category implements the policy guidance by:

Economic development in priority land use areas: supports economic development by serving a local freight route and the Tacoma main street and South Waterfront mixed use areas.

Emphasize modes that do not have other sources of revenue: Bridge projects receive dedicated sources of revenue from federal and state funding sources. Award of these funds is done on a competitive process and allocation of regional flexible funds would be intended to develop enough project detail to effectively compete for those sources of revenue.

Complete gaps in modal systems: policy objectives of and providing new pedestrian and bicycle facilities that do not exist on or could be added to the current bridge and that cannot be provided on any alternative route. The project would also reopen the bridge to freight and transit traffic that is currently rerouted to the Ross Island Bridge approximately 2.5 miles to the north.

Develop a multi-modal transportation system: This is not a modal emphasis category for the Transportation Priorities program.

Meet the average annual requirements of the State air quality implementation plan: As a replacement or reconstruction project, this project does not address this policy goal.

Green Streets

The top technically ranked green street demonstration projects for street and culvert retrofits are recommended for the first cut list. While these were the only candidate applicants in these categories, both are strong projects and worthy of further consideration.
• The Cully Boulevard project will provide improvements in a 2040 mixed-use main street located in a low-income and minority community and will provide technical data on water quantity/quality improvements associated with green street techniques.

• The Beaver Creek Culverts project will support recovery of endangered species, removing barriers associated with transportation facilities and will leverage a large local match and state restoration grant (70% of total project cost).

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the green streets modal category implements the policy guidance by:

_Economic development in priority land use areas:_ The Cully Street demonstration project supports the economic development of a mixed-use main street. As a demonstration project for innovative stormwater management techniques in the public right-of-way, the project has the potential to promote a less costly, environmentally sensible means of managing stormwater runoff region wide. The Beaver Creek culverts retrofit project support economic development by supporting the provision of wildlife within an urban area, increasing its attractiveness to companies and workforce to locate in the area.

_Emphazise modes that do not have other sources of revenue:_ There are no sources of dedicated revenue to support the demonstration of innovative stormwater management techniques in the public right-of-way. There are state grants available through the Oregon Water Enhancement Board to restore stream habitat, including retrofit or replacements of culverts. However, these grants require local match funds and are competitive relative to the needs and range of project eligibility.

_Complete gaps in modal systems:_ As a demonstration project category, Green Streets projects do not directly address this policy.

_Develop a multi-modal transportation system:_ This is a modal emphasis category for the Transportation Priorities program.

_Meet the average annual requirements of the State air quality implementation plan:_ As a demonstration project category, Green Streets projects do not directly address this policy.

**Freight**

• All or a portion of the top six technically ranked projects are recommended for further consideration by Metro staff in the freight category.
• The North Lombard slough bridge is the top technically ranked project and the primary access through the Rivergate industrial area. The large project cost and nature of the project is of a scope that Metro staff is recommending a regional participation rate at half the estimated project cost.

• The Ledbetter extension project is recommended for further consideration of funding the portion of the project application ($1.8 million) that represents the increase in cost of the project estimated from the Type, Size and Location study that was completed after submission of the funding application to the Oregon Transportation Investment Act (OTIA) funding process. Metro staff is not recommending further consideration of Transportation Priorities funding for the $1.2 million portion of the Ledbetter application that represents the local match previously committed by the Port for the OTIA III funding.
Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the freight modal category implements the policy guidance by:

*Economic development in priority land use areas:* The Lombard Slough over crossing, Sandy Boulevard and Tualatin-Sherwood ATMS project are located on regional freight road connectors and directly serve large, regionally significant industrial areas. The Kinsman Road project would create a new extension from an existing regional freight road connector and provide new access to developing industrial land in west Wilsonville. The Ledbetter extension project would provide grade-separated access over a rail spur from a large traded-sector employer and developing industrial land to the entrance of Terminal 6. The freight data collection infrastructure would provide data that would allow more accurate tracking and forecasting of truck movements in the region to better understand freight transportation needs.

*Emphasize modes that do not have other sources of revenue:* The six recommended freight projects are road capacity, reconstruction or operations projects. These projects are eligible for eligible to be funded through state trust fund and pass through revenues. The OTIA III process has also dedicated $100 million of statewide funding to these types of projects.

*Complete gaps in modal systems:* The Lombard slough over-crossing project would prevent the closure of freight traffic on the regional freight system. The Kinsman Road and Ledbetter projects would provide new connections to the motor vehicle system.

*Develop a multi-modal transportation system:* This is a modal emphasis category for the Transportation Priorities program.

*Meet the average annual requirements of the State air quality implementation plan:* As capacity, reconstruction or operational projects, this project category does not address this policy goal.

**Planning**

As no technical evaluation of planning applications is undertaken, recommendations for no further consideration are based on financial programming issues and/or proposed cost-sharing/redirection considerations.

- The Willamette Shoreline – Highway 43 Transit preliminary engineering phase was recommended for further consideration based on new information that the Willamette Shoreline consortium may have the capacity to advance the alternatives analysis portion of the application to the years 2005 and 2006. However, there are still technical issues that will need to be addressed prior to being able to program funding for
preliminary engineering should JPACT and the Metro Council elect to award funding this phase of the project.

- The Milwaukie LRT supplemental EIS is recommended for further consideration of regional flexible funds providing half the cost of the project study with direction to seek funding the other portion of the study from other regional partners.

- TPAC recommends that Oregon City seek to incorporate the scope of the I-205/Highway 213 interchange reconnaissance study into the upcoming I-205 corridor study to be led by ODOT.

- TPAC recommends that Clackamas County seek funding for the Fuller Road at I-205 TOD study through the I-205 light rail project development funds or through the regional TOD program.

- TPAC recommended removal of the Tualatin Valley highway corridor study be not recommended for further consideration as it is a lower local and state priority for corridor development relative to other corridors in the Washington County area. TPAC voted to add preliminary engineering and right-of-way acquisition for the Ash Street extension project with remaining Metro staff recommended funds from the Tualatin Valley highway corridor study added to the Beaverton Hillsdale/Scholls Ferry/Oleson intersection project.

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the planning category implements the policy guidance by:

Economic development in priority land use areas: The Milwaukie LRT and Willamette Shoreline planning studies support economic development in the Central City and Milwaukie and Lake Oswego town centers by potentially leading to major transit capital investments to improve access to those areas. The other planning studies support economic development ensuring the 2040 priority land use areas are adequately served by transportation services and that requirements are met to allow state and federal funding to be allocated to projects serving those areas.

Emphasize modes that do not have other sources of revenue: General planning transportation activities but not specific corridor planning activities are supported through limited federal planning revenues, though not enough to cover planning services provided to the region.

Complete gaps in modal systems: Planning activities identify and direct funding to projects that complete gaps in modal systems.
Develop a multi-modal transportation system: Planning activities identify and direct funding to projects that develop a multi-modal systems. This is an emphasis category for the Transportation Priorities program.

Meet the average annual requirements of the State air quality implementation plan: While used to develop, coordinate and report on the implementation of the annual requirements, planning does not construct new facilities to meet State air quality plan requirements.

Pedestrian

- The top four technically ranked projects are recommended for further consideration on the first cut list.

- Projects not recommended for further consideration had technical scores clearly separated from the top ranked projects and were generally located outside of mixed land use areas with adopted centers plans.

- The Transit Safe Street Crossings project is included for further discussion outside of the staff recommendation for further consideration of projects. While the project received a low technical score primarily due to locations outside of centers, it is in response to direction received at TPAC and JPACT on a previous TriMet application that was programmatic in nature to provide specific locations for consideration in the next funding cycle. Therefore, Metro staff is highlighting this project application for JPACT and Metro Council discussion.

- The ODOT Preservation Supplement request is included on the recommended list until further evaluation of the project is possible. This project application is a result of regional policy request to ODOT. The funding amount from regional flexible funds would provide cost sharing with ODOT Region 1 from funding proposed in the draft STIP outside of their preservation program to provide pedestrian improvements in conjunction with their preservation work.

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the pedestrian modal category implements the policy guidance by:

Economic development in priority land use areas: the pedestrian projects recommended contribute to the economic vitality of several mixed-use areas and an industrial area by providing access by users who would not require more land intensive and costly auto parking spaces.
Emphasize modes that do not have other sources of revenue: Pedestrian projects outside of vehicle capacity or reconstruction projects that are required to build bike facilities only have dedicated funding limited to a state program that allocates approximately $2.5 million per year or as one of several eligible project types that compete for statewide Transportation Enhancement grants of approximately $4 million per year. Additionally, one percent of state highway trust fund monies passed through to local jurisdictions must be spent on the construction or maintenance of bicycle or pedestrian facilities.

Complete gaps in modal systems: The pedestrian projects recommended for further consideration all complete gaps, either with new facilities or upgrading substandard facilities, in the existing pedestrian network.

Develop a multi-modal transportation system: This is a modal emphasis category for the Transportation Priorities program.

Meet the average annual requirements of the State air quality implementation plan: The pedestrian projects recommended for further consideration would provide 4.1 miles of a required 1.5 miles of new pedestrian facilities within mixed-use areas for the two-year funding period. This assumes the MAX multi-use path project in Gresham would be applied to meeting these requirements for the provision of pedestrian facilities.

Road Capacity

- The top five technically ranked road modernization projects are recommended for further consideration. Projects recommended for further consideration had technical scores that demonstrated a clear break from projects that were not recommended for further consideration to receive regional flexible funding.

- The Beaverton-Hillsdale/Scholls Ferry/Oleson Road intersection was recommended by Metro staff for further consideration at a regional flexible fund level of one third of the estimated project costs given the scope and location of the project on a state highway. TPAC approved a Washington County request to transfer an additional $311,000 from the Metro staff recommended Tualatin Valley Highway corridor study to this project.

- Associated with the street improvement work of the Beaverton-Hillsdale/Scholls Ferry/Oleson Road intersection, Metro staff is interested in a renewed effort to adopt a Town Center concept plan for this area.

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the planning category implements the policy guidance by:
Economic development in priority land use areas: These projects support economic development by increasing access to the areas served. The Boones Ferry project will establish the template for future improvements to that facility extending through the Lake Grove town center. The Beaverton-Hillsdale/Scholls Ferry/Oleson intersection project, if tied to the development of a Raleigh Hills town center planning effort, is of a scale and impact to provide significant redevelopment opportunities in that area. The Wood Village Boulevard project would provide new access and development opportunity in the Wood Village town center. The 172nd Avenue project would provide new access to a largely undeveloped Rock Creek portion of the recent urban growth boundary expansion area, although concept planning for the area has not yet been completed.

Emphasize modes that do not have other sources of revenue: Road capacity projects are supported through pass through state trust fund revenues to local jurisdictions, system development charges and some local taxes or improvement districts. However, some jurisdictions have maintenance needs that are larger than state pass-through revenues and which generally take priority over capacity projects.

Complete gaps in modal systems: Other than the Wood Village Boulevard project, which would complete a gap in the motor vehicle street system between Halsey and Arata Road, these projects expand existing motor vehicle connections. New connections to complete gaps in the pedestrian and bicycle system would be provided with these projects, however.

Develop a multi-modal transportation system: This is not a modal emphasis category for the Transportation Priorities program. However, all of these projects would provide new or upgrade substandard pedestrian and bicycle facilities on these roads (current Greenburg Road has existing sidewalks but no bike lanes).

Meet the average annual requirements of the State air quality implementation plan: These projects do not address this policy goal.

Road Reconstruction

- The top four ranked road reconstruction projects are recommended for further consideration.

- Projects recommended for further consideration demonstrated strong connections to the development of their mixed-use centers and were adding sidewalk, bicycle and/or transit elements that are currently missing from the existing facility.
In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the planning category implements the policy guidance by:

**Economic development in priority land use areas:** This category supports economic development by providing safe motor vehicle access and increasing bicycle and pedestrian access within and to mixed-use centers. The Naito Parkway project also provides new on-street parking to support store front mixed-use development on the northern section of that roadway. The 10th Avenue project in Cornelius provides adequate turning radii for truck turning movements to access industrial development north of the project.

**Emphasize modes that do not have other sources of revenue:** Road reconstruction projects are supported through pass through state trust fund revenues to local jurisdictions, system development charges and some local taxes or improvement districts. However, some jurisdictions have maintenance needs that are larger than state pass-through revenues and which generally take priority over reconstruction projects.

**Complete gaps in modal systems:** The recommended projects do not complete gaps in the existing motor vehicle system but provide new pedestrian and bicycle facilities, completing gaps in those modal systems.

**Develop a multi-modal transportation system:** This is not a modal emphasis category for the Transportation Priorities program. However, all of these projects would provide new or upgrade substandard pedestrian and bicycle facilities on these roads (current Greenburg Road has existing sidewalks but no bike lanes).

**Meet the average annual requirements of the State air quality implementation plan:** These projects do not address this policy goal.

**Regional Travel Options**

- The Regional Travel Options program is recommended for further consideration at the level of funding needed to implement the programs strategic plan.

- Further consideration of funding three Travel Smart programs similar to the Interstate Travel Smart program funding in the last funding cycle is also proposed for further consideration.

- The additional two Travel Smart programs is not recommended for further consideration due to questions about the capacity of the region to conduct that many programs in the funding cycle time frame.

**Response to Policy Guidance**
In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the planning category implements the policy guidance by:

**Economic development in priority land use areas**: supports economic development by supporting the vitality of mixed-use and industrial areas by providing access by users who do not require the provision of land intensive and more costly auto parking spaces.

**Emphasize modes that do not have other sources of revenue**: These programs are not supported by other sources of dedicated transportation revenues although they do leverage funding from private Transportation Management Associations and other grants.

**Complete gaps in modal systems**: The RTO program does not construct projects and therefore does not address this policy goal.

**Develop a multi-modal transportation system**: This is a policy emphasis category for the Transportation Priorities program. RTO projects contribute to the development of a multi-modal system by educating and providing incentives to reduce trips or use existing pedestrian, bicycle and public transit facilities.

**Meet the average annual requirements of the State air quality implementation plan**: While the RTO programs promote use of the facilities provided by the requirements, it does not specifically address this policy goal.

**Transit Oriented Development (TOD)**

- All four transit oriented development applications are recommended for further consideration.

**Response to Policy Guidance**

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the planning category implements the policy guidance by:

**Economic development in priority land use areas**: supports economic development by supporting the vitality of mixed-use by covering incremental costs not born by the current market to allow development of more dense mixed-use development where called for by regional and local plans. TOD projects contribute to the development of a multi-modal system by increasing the density of development in areas well served by alternative transportation facilities and with a mix of trip types within walking distances of the project.
Emphasize modes that do not have other sources of revenue: While urban renewal and other programs facilitate new development, transit oriented development projects are specifically designed to increase the efficiency of the region's investment in the transit system and is not supported by other sources funding.

Complete gaps in modal systems: The TOD program and projects do not address this policy goal.

Develop a multi-modal transportation system: This is a modal policy emphasis category for the Transportation Priorities program. TOD projects contribute to the development of a multi-modal system by increasing the density and design of development in areas well served by existing pedestrian, bicycle and public transit facilities. This increases the use of those facilities and makes them more cost-effective.

Meet the average annual requirements of the State air quality implementation plan: While the TOD programs promote use of the facilities provided by the requirements, it does not specifically address this policy goal.

Transit

- The existing commitments to rail transit projects in the region and the top three technically ranked transit projects are recommended for further consideration.

- Projects nominated for further consideration have demonstrated a direct link to the economic vitality of the mixed-use and industrial areas they served.

- TPAC approved a request by Washington County to transfer of $639,000 from the Metro staff recommended Tualatin Valley Highway corridor study to preliminary engineering and right-of-way acquisition of the Ash Street extension project.

Response to Policy Guidance

In addition to the technical score that reflects a quantitative measure of the policy guidance, the TPAC recommendation within the planning category implements the policy guidance by:

Economic development in priority land use areas: supports economic development by increasing the access and market share potential of mixed-use areas as well as providing access by employees to industrial areas.

Emphasize modes that do not have other sources of revenue: The existing rail commitments and the Eastside Streetcar fund applications are used to leverage large federal grants to construct those projects. Currently, TriMet general fund revenues are committed to transit service as a means of not having to cut bus service hours and to start new light rail service during the on-going recession. While this was a resource allocation
choice, on-street capital improvements for the Frequent Bus program now come solely from the Transportation Priorities program. The south Amtrak station improvements are not eligible for any other source of transportation revenues.

*Complete gaps in modal systems:* The rail commitments and Eastside Streetcar projects extend high frequency service to new areas consistent with the RTP and local Transportation System Plans, however, they do not strictly fill in gaps within the existing rail network. Frequent Bus improvements will allow new frequent bus service connecting gaps in the existing system.

*Develop a multi-modal transportation system:* This is a modal policy emphasis category for the Transportation Priorities program. Transit projects contribute to the development of a multi-modal system by providing higher efficiency transit service in the corridors served by those projects.

*Meet the average annual requirements of the State air quality implementation plan:* While the rail commitment and Frequent Bus program do not result directly in the provision of additional service hours as required by the air quality implementation plan, they do contribute to service efficiencies that can then be reallocated to providing additional transit service.
Comments received at JPACT
September 9th Briefing

1. In the Large Bridge category, Multnomah County and ODOT representatives indicated that they would be supporting the full application of $3.6 million remain on the first cut list. Matt Garrett stated potential positive developments federal legislation for bridge funding but that the region needed to show a commitment to the necessary development work to prepare to successfully obtain federal funds. He stated that a regional commitment to development funding is necessary to obtain additional state funding for development funds for the Sellwood Bridge.

2. In the Freight category, the Port of Portland representative indicated they would be supporting the addition of the Ledbetter extension to the first cut list. In addition to the comments summarized in the comments received at TPAC, it was noted that projects in the freight category most directly met the policy objective of the Transportation Priorities program of supporting economic development in priority 2040 land use areas.

3. In the Planning category, representatives of Clackamas County cities and TriMet indicated that the Willamette Shoreline – Highway 43 transit alternatives analysis and preliminary engineering studies could be achieved in a four-year period and that they would be seeking to advance funds awarded for alternatives analysis to 2005-06 to achieve this schedule.

4. In the Planning category, TriMet representative indicated that funding for the Fuller Road at I-205 TOD study might not be available through project funds.

5. In the Planning category, Washington County representative indicated a preference to transfer funds recommended for the Tualatin Valley Highway corridor plan to the requested funding for the Ash Street extension and supplemental funding to the recommended funding of the Beaverton-Hillsdale/Scholls Ferry/Oleson intersection project.

6. There was discussion concerning the desire for a more precise description of any recommendation to spend regional flexible funds on modes that primarily serve auto trips (i.e. economic development in a priority 2040 land use area, needed to leverage large sources of other funding, links to other projects, etc.). A related comment was a request to describe the link between all project recommendations and the program policy objectives.
Exhibit A

Policy Issues for Discussion
Options for Direction to Technical Staff for Narrowing to Final Cut List

To address existing policy on modal category emphasis:

1. Staff should not attempt to base recommendation on funding between modal categories on policy direction – look for natural breaks in technical scores and merit and let JPACT and the Metro Council adjust project recommendations between modal categories to address policy emphasis.

2. Recommend projects in road capacity, road reconstruction, or bridge projects only when there are compelling policy reasons. Those policy reasons could include existing program policies such as:
   - economic development
   - leverage of development in Tier I or II mixed-use and industrial areas,
   or additional policy direction such as:
   - the potential to leverage large sources of discretionary funding from other sources
   - the project provides new bike, pedestrian, transit or green street elements that would not otherwise be constructed without regional flexible funding

3. Recommend projects in the road capacity, road reconstruction and bridge modal categories that provide project development in preparation for competitive state or federal funding or a potential regional ballot measure.

Policy Issues for Consideration
Prior to release of Transportation Priorities 2008-2011 Solicitation

1. Under what circumstances should regional flexible funds be used for large road, bridge or transit capital projects? Given the limited amount of regional flexible funds relative to funding available for these other purposes, when is it of regional interest to use these funds for these purposes? JPACT and the Metro Council should identify policy direction on this issue. Possible policy elements could include no change to the existing policies to consideration of limitation to or stronger consideration of the following:

   a. Project demonstrates strong ties to Transportation Priorities policy objectives such as economic development of 2040 mixed-use or industrial area.
   b. Project provides missing bicycle, pedestrian or transit modes facilities on regional systems that will otherwise not be constructed independently.
   c. High technical score within modal category.
d. Project development or local match necessary to leverage large, discretionary construction funding.

e. Linked to other project(s) that also meets program objectives.

f. Incorporates Green Street and/or other environmentally beneficial components where feasible.

2. What project elements of road reconstruction projects should be eligible for regional flexible funds? Concern was expressed that these funds should not be used for reconstruction of the road base given the limited amount of regional flexible funds relative to funding available for road construction and maintenance. A possible alternative for cost sharing for these types of projects was suggested to make the incremental costs of adding missing bicycle, pedestrian, transit or other regional priority elements eligible for regional flexible funds but not other project costs. The counter argument for retaining full project cost eligibility for road reconstruction projects was based on their potential importance to implementing 2040 land use objectives in mixed-use or industrial areas.

**Subtotal:** $7,189

### QUALITATIVE FACTORS

- **Springwater Trail: Sellwood Gap (PER/ROW), Johnson Creek Bridge to SE Umatilla:** Completing 0.9 mile gap makes 19.2 miles of continuous off-street trail. Allows access between homes and jobs in Milwaukie, Happy Valley, Gresham and Portland. Project was among top four trail priorities developed by Metro's Green Ribbon Committee.
- **Marine Dr. Bike Lanes and Trail Gaps: NE 6th Ave. to NE 160th Ave.:** Completes a gap that is still incomplete after 20 years of constructing individual segments. Would improve access to Kelley Point Park, Smith and Bybee Lakes Wildlife area, Heron Lakes Golf Course, Portland International Raceway, East Delta Park, Broughton Beach, Blue Lake Park and Sandy River Delta Natural area. Serves concentration of Black population.
- **Springwater Trailhead: At Main City Park:** Trailhead will feed Springwater Trail in two directions and connects directly to Historic Downtown Gresham and the MAX light rail system. Identified in City and regional plans.
- **MAX Multi-use path: Cleveland Station to Ruby Junction:** Many people will benefit from Max Path, including residents of deaf and blind residential home adjacent to Cleveland Avenue light rail station. Max Path will connect with Gresham/Fairview trail in its first phase. Serves moderate concentration of low-income population and a concentration of Hispanic ethnicity population.
- **Trolley Trail: Arista to Glen Echo:** Trolley Trail project has been a collaborative planning effort among a number of organizations and has benefited from public support and input from citizens and business owners. Provides a functional link between the town centers of Milwaukie and Gladstone and offers connections to the regional bikeway system.
- **Rock Creek Trail: Orchard Park to NW Wilkins:** Strong community support and spending commitment by Hillsboro; completes upper section of regional trail; provides on-street access to Quatama light rail station; improves connectivity between two Town Center areas.
- **SE Jennifer Street: 106th to 122nd, On-street bike lanes and sidewalks:** Completion of Jennifer Street bike lanes provides access from Gladstone to SE 135th and to the Sunnyside area and the Clackamas industrial area; completes another mode of alternative transportation to and within the Clackamas industrial area.
- **Powerline Trail (North: Schuepbach Park to Bumwood Drive):** Improves livability for inner Beaverton residents; opportunity for transportation choices, recreation and exercise. Citizen trail advisory committees, local trails advocates, and Friends of Westside Trails are in support of the project.
- **Washington Sq. RC Trail: Hwy 217 to Fanno Creek Trail:** Washington Square Regional Center Plan adopted in 2000 and implemented in 2001. Connects existing Fanno Creek Trail System to the Washington Square Regional Center once a crossing of Hwy. 217 is constructed.
- **Powerline Trail (South): Barrows to Beav Bend Rd:** Powerline South provides access to Murray Scholls Town Center. Provides a good north/south connection for bicyclists in an area that is deficient in bicycle and pedestrian facilities.
**Transportation Priorities 2006-09**

This project significantly expands the regional freight model capabilities. This project update existing monitors. The project is very cost effective.

Project will cost effectively significantly improve current and future freight movement in Washington Co.

Project supports existing development. Technical analysis of this alternative has been adjusted because of modeling limitations (PCE). Serves concentration of Black population.

Project is essential for Rivergate. Technical analysis of this alternative has been adjusted because of modeling limitations (PCE). Serves concentration of Black population.

Technical analysis of this alternative has been adjusted because this alternative supports future development of industrial lands.

Project will be a catalysis for the eastern portion of the Columbia Corridor. This development phase represents a valuable investment in future development. Construction cost est. $4,028 M.

Serves concentration of low-income and of Hispanic populations.

</tbody>
</table>

**QUALITATIVE FACTORS**

- Serves concentrations of low-income and Hispanic populations.
- Based upon projected 2025 increase in delay on the road segments surrounding this intersection, project receives 0 out of 15 possible points for Cost Effectiveness measure. However, regional travel demand model does not account for projected delay reductions achieved through addition of intersection turn lanes and increased distance between intersections provided through this project. County staff analysis of 2020 turn volumes and delay indicates 75 hours of total delay reduction at Oleson Rd., intersections with B-H Hwy., and Scholls Ferry when proposed Phase 1 improvement is implemented.
- Regional travel demand model does not accurately forecast demand on some small new connectors such as Wood Village Blvd.
- Serves concentrations of low-income and Hispanic populations.
- Travel demand data varies depending on assumptions concerning surrounding street network - analysis results in range of cost-effectiveness score on reduction in vehicle delay from 0 to 5 points. The Rock Creek Industrial Study draft data shows the current V/C ratio for 172nd Avenue as 1.5, much higher than the model data for the year 2000 of 0.4. The study also indicates that the intersections of Sunnyside/172nd and 172nd/Amelung Creek/Highway 212 are currently operating at an unacceptable level of Service (LOS F) - funding is in place to reconstruct the 172nd/Amelung Creek/Highway 212 intersection. **QUALITATIVE FACTORS**

- Capital improvements located where investment in bus service frequency made to 15 minute or better headways.
- Several corridors serve low income areas.
- Indirect support of economic development in areas served.

- Project implementation will be tied to surrounding property development agreements that will address density, design, affordable housing and other right-of-way improvements that meet regional goals.
- Serves concentration of low-income population.

- Intra-city ridership not a true comparison to inter-city transit ridership on which technical score is calculated.
- Trip lengths are longer and are of statewide significance.
- Locating regional facility in regional center adjacent to major tourist destination.

- Project provides secondary access to commuter rail park-and-ride lot from single Main Street option.
- Increases street connectivity in Tigard town center.
- Priority project of new downtown business group.
DATE: October 14, 2004

TO: JPACT and Interested Parties

FROM: Rod Monroe: Metro Councilor

SUBJECT: SW Capitol Highway pedestrian project

I am proposing an amendment to the TPAC recommendation to add the SW Capitol Highway: Multnomah to Taylors Ferry pedestrian project as recommended for further consideration on the First Cut list during the public comment period. Funding is requested to develop project specifications that address the difficult drainage issues and right-of-way impacts to constructing bike lanes and sidewalks on this facility between Multnomah Village and the West Portland town center. Currently, pedestrians on this facility must negotiate intermittent dirt paths and bicycles must ride in motor-vehicle lanes as there is not even a paved shoulder for their use.

This project is the highest-ranking project not recommended for further consideration by TPAC within the pedestrian category. Its technical score is within one point of the next highest ranked project and two points of the fourth ranked project. I believe the clear technical break in scoring would include the Capitol Highway project.

Furthermore, the pedestrian category of projects had the greatest number of projects recommended to be cut from further consideration. Given the policy emphasis of this program, I believe the pedestrian category of projects should receive a greater emphasis than what has been recommended.

The Portland City Council approved the Capitol Highway Plan in 1996 and it remains the highest priority project for Southwest Neighborhoods, Inc, the coalition of 16 neighborhoods in Southwest Portland.

Thank you for your consideration.

Notice of comment meetings on transportation funding
Public comments will be taken on proposed regional and state transportation projects.

Metro's $60.5 million draft Metropolitan Transportation Improvement Program (called Transportation Priorities 2006-09) outlines proposed regional projects in the Portland metropolitan area.

ODOT's $1 billion draft Statewide Transportation Improvement Program identifies the highest-priority state transportation projects proposed for 2006-09.

If you can't attend a meeting, send comments by:

Mail: Metro Planning, 600 NE Grand Ave., Portland, OR 97232
E-mail: trans@metro.ors.us
Phone: (503) 797-1900 option 3
Fax: (503) 797-1911
Web: www.metro-region.org/mtip

All comments are due by 5 p.m. Monday, Dec. 6, 2004.

For a list of proposed transportation projects, call Metro at (503) 797-1839 or visit www.metro-region.org/mtip.

Comment meetings

PORTLAND
4 to 8 p.m. Monday, Oct. 25
To receive a time to comment, call (503) 797-1745 starting Oct. 20
Metro Regional Center
600 NE Grand Ave.

TriMet bus 76, 78 or 88
WHEREAS, an efficient and adequately funded transportation system is critical to ensuring a healthy economy and livable communities throughout the state of Oregon; and

WHEREAS, the Governor and the Oregon Legislature have effectively begun to address critical transportation needs with the passage of the Oregon Transportation Investment Acts; and

WHEREAS, the investments that have been made possible by OTIA I, II, and III will help Oregon respond to both population growth and important economic opportunities; and

WHEREAS, these acts have provided new transportation investment dollars for the Portland metropolitan region, both for new projects and for maintenance of the existing system; and

WHEREAS, the impact of these investments will have a positive impact on the regional economy; and

WHEREAS, Oregon still has the lowest transportation funding per capita and per mile among all western states; and

WHEREAS, connecting Oregon’s people and businesses with local, domestic and international markets is critical for a healthy economy; and

WHEREAS, Oregon’s population growth continues to outpace the nation, and freight volumes in Oregon are expected to double in the next twenty years; and

WHEREAS, the distribution and logistics employment sector accounts for over 11.5% of the jobs in the Portland Metropolitan Statistical Area, placing the region 3rd among all U.S. MSA’s; and

WHEREAS, funding for non-highway transportation projects is an appropriate and wise use of state funds; and

WHEREAS, the region has identified multiple project and funding needs for all modes of transportation through its Regional Transportation Plan, which has been adopted by Ordinance No.00-869A and Resolution No. 00-2968B; and

WHEREAS, the Regional Transportation Plan documents a need for $7.8 billion in multi-modal transportation improvements to ensure a vibrant economy and the efficient movement of freight, automobiles and transit; and

WHEREAS, approximately one-half of the needed transportation improvements called for in the Regional Transportation Plan remain unfunded; and

WHEREAS, there is also a funding shortfall to maintain and operate the existing city, county and state road system; and
WHEREAS, additional funding to meet these transportation needs will create thousands of jobs and help stimulate the economy of the region and the state; and

WHEREAS, without additional investment in Oregon’s transportation infrastructure, increasing congestion will cost Oregon businesses and motorists tens of millions of dollars each year; and

WHEREAS, it is in the interest of local governments inside Metro to jointly seek additional transportation funding from the 2005 Oregon Legislature; now, therefore

BE IT RESOLVED that the Metro Council and the Joint Policy Advisory Committee on Transportation (JPACT) endorse a state legislative funding proposal for a multi-modal transportation program as shown in Exhibit “A” including:

1. A funding package for road operations, maintenance and modernization.
2. A funding package for light rail, heavy rail, marine and aviation projects.
3. Continuation of funding through the ODOT budget for elderly and disabled transit service, bus replacement and transportation demand management.
4. Initiation of a comprehensive transportation economic impacts study.

ADOPTED by the Metro Council this ___________ day of _______________, 2004.

David Bragdon, Council President

Approved as to Form:

___________________________________________
Daniel B. Cooper, Metro Attorney
JPACT Multi-Modal Transportation Funding Concept

JPACT intends to seek support from the Governor and the Oregon Legislature for development of a multi-modal transportation finance legislative package, including:

1. Road Package:

   JPACT recommends the adoption of a state road finance package to fund operations and maintenance of the existing system as well as modernization of the road system to address congestion and foster business expansion and economic development. While there has been significant progress through the adoption of OTIA I, II and III, urgent needs remain unfunded. In particular, maintenance and operation of the existing city, county and state road systems have fallen behind, threatening the condition of the existing system. In addition, urban road investments are vital to support economic development and recovery and reduce the backlog of congestion.

   Even with the new revenues generated by OTIA I, II and III, Oregon still ranks lowest among western states in per capita and per mile transportation funding. Nationally, Oregon now ranks 46th in registration fees, 34th in title fees and 13th in gas taxes. In addition to considering these traditional funding sources, we support ODOT’s efforts to explore more creative options for meeting our outstanding Highway Fund needs. Such options might include bonding against increased federal funds, indexing the gas tax or instituting a title fee for vehicles added to the statewide fleet.

2. Non-Road Package:

   As all modes of transportation are critical in providing a healthy transportation network and a healthy economy, JPACT also recommends the adoption of a funding package to support non-Highway Fund modes of passenger and freight transportation improvements as well as additional investments in transit. While other states have aggressively invested in rail, marine, aviation and transit infrastructure, these modes have received relatively small investments here in Oregon in recent years.

   We are therefore encouraged that the Governor, under the banner of “Connect Oregon,” has recently asked the Oregon Transportation Commission to undertake an assessment of the state’s need for investment in its multi-modal transportation system. Because there are multiple projects in each of these modes that would significantly benefit the public and provide economic returns for the state and region, JPACT supports identification of rail, transit, marine and aviation projects that merit public investment. The region and the state have benefited significantly from past investments in light and heavy rail infrastructure, marine terminals, and airports. Additional funding for future projects that support a diverse, efficient and healthy transportation network, including the next leg of the Portland region’s light rail system, is essential in order to address both short-term and long-term economic and livability needs.
3. JPACT recommends continued funding within the ODOT budget for elderly and disabled transit service, bus replacement and transportation demand management.

4. JPACT recommends initiation of a study that can provide data about the statewide economic impacts of transportation investments. Transportation infrastructure is a key asset for our region, and we should be able to clearly and comprehensively state the benefits to the region and the state of all phases of project development and implementation. JPACT supports the pursuit of a study that will seek to capture this data and also look at the best and most efficient practices in modernizing, maintaining and preserving our transportation infrastructure.

October 5, 2004
October 13, 2004

Dear Oregon Congressional Delegation:

I am writing on behalf of the Joint Policy Advisory Committee on Transportation (JPACT) to request your assistance in ensuring that language that was under consideration in the House Appropriations Committee Report to the FY 2005 Transportation Appropriations Bill regarding FTA’s New Start process does not become part of the bill’s Conference Report. It is our understanding that the House Committee Report was stripped of the problematic language, but we are concerned that it could reappear when the Conference Committee takes up the bill.

Attached to this letter is an analysis that details the impacts that the House Report language could have on FTA’s evaluation of fixed guideway investments. This analysis concludes that the House Report would:

- Roll back improvements made to the New Starts rating procedures during TEA-21, in particular undercutting the importance of land use.
- Require an excessive amount of undue studies by FTA on “congestion relief,” unnecessarily diverting FTA’s resources from advancing projects.
- Create an inefficient project development process that is bound to raise project costs.
Accordingly, JPACT requests that you support the following:

- Seek language in the Conference Report supporting the continued use of the ‘land use’ rating as exists under the current FTA rating system.

- Reject proposals for additional study of how ‘congestion relief’ can be further emphasized in the ratings process; instead seek language in the Conference Report that FTA re-introduce highway-user benefits in the TSUB calculation.

- Reject proposals to modify project advancement criteria and funding ratios; instead seek Conference Report language acknowledging that the project rating process implemented under TEA-21 has improved the evaluation of fixed-guideway projects and further refinements should occur over time through FTA’s normal rule-making process.

While we may differ with the House Committee on specifics, JPACT recognizes that FTA’s fixed guideway evaluation and decision-making process for the New Starts has improved and further improvement may be needed. To date, the continuous improvement in the rigor of how New Start projects are rated has generally resulted in good projects being built. In addition, it is our experience that once a federal funding contract has been signed, there has not been a problem with cost overruns. In fact, projects in the Portland region have been completed ahead of schedule and under budget.

Any improvements to the rating system must be carefully thought through at a professional level so that projects that currently are close to a funding decision are not adversely and unnecessarily affected. In the Portland region, the Commuter Rail Project is now seeking a Full Funding Grant Agreement (FFGA), and the I-205/Mall LRT Project will be seeking Final Design approval shortly. The House Report language, if enforced, could delay these projects and add millions of dollars of cost, leaving the region with revenue shortfalls it may not be able to handle. The language would also hurt the Portland region’s streetcar plans, and many important projects in other regions.

The real problem with the New Starts rating process is that the program is over subscribed. The rigor of the rating process serves to slow down or down scale good projects because there is far more demand than there is funding. The preferable solution is to authorize a higher funding level for the program in the pending reauthorization of TEA-21.

Your assistance would, therefore, be greatly appreciated. Should you have any questions, please feel free to contact me.

Sincerely,

Rod Park, Chair
Joint Policy Advisory Committee on Transportation

Analysis of FY 2005 Transportation Appropriations House Report Language on FTA New Starts Process

1. House Report Language Undercuts the Importance of ‘Land Use’ in Rating Fixed Guideway Projects

The House Report concludes that the ‘land use’ rating causes an imbalance in the evaluation process and directs FTA:

“to perform a review of this ratings imbalance and report to the House and Senate Committees on Appropriations by December 10, 2004, on how this balance could be better reflected in FTA’s process. This report should include an analysis of every project in the new starts pipeline that compares a land use rating to their cost-effectiveness rating and the project’s overall rating.”

The House Report found FTA’s application of the “land use” rating to be “imbalanced” because:

“... even if a project has received a low cost-effectiveness rating, a high land use rating could result in a total project rating of medium. Therefore, FTA may be promoting projects where the cost-effectiveness does not support continuation of the project, yet possible development opportunities around the project may allow it to continue forward...”

This statement reflects a misunderstanding of FTA’s evaluation measures. FTA’s cost effectiveness’ measure is the ‘dollar cost of an hour of travel time savings’ (so called, “transportation system user benefit” (TSUB)). While this measure is titled ‘cost effectiveness,’ FTA acknowledges that it addresses only one benefit of transit, and not the full cost-benefit of a potential project. Accordingly, FTA’s overall project rating merges the TSUB-based “cost-effectiveness” rating with a “land use” rating to produce a comprehensive assessment of cost-benefit on which to base its project recommendations. Thus, the reality is precisely opposite of the House Committee’s assertion, FTA’s evaluation process could promote projects with poor cost-effectiveness if land use is not considered because the cost-effectiveness rating itself is defined is a very narrow manner.

Moreover, the success of any transportation project, whether it is light rail or a highway, depends on the land use patterns surrounding the project. For a transit investment, this is particularly important; supportive land uses are essential for maximizing ridership and ensuring that ridership forecasts are achieved. Given the House Report’s continuing concern with the reliability of ridership forecasts, the House Committee should be further emphasizing ‘land use,’ rather than seeking to de-emphasize it.
2. **House Report Requires Excessive and Undue Studies “Congestion Relief,” Diverting FTA Resources from Advancing Projects through the Pipeline**

The House Report directs FTA to emphasize ‘congestion relief’ as a ‘critical’ justification for building fixed guideway projects, rather than to consider the full-range of benefits of such projects as called for in TEA-21. The House Report directs FTA to “develop a new starts process that better emphasizes cost-effectiveness and congestion relief.” In addition, the House Report calls for a study on further emphasizing “congestion relief” in the evaluation:

> “The IG has recommended a joint evaluation ... by the Federal Highway Administration and the FTA, with the goal of understanding the extent to which transit provides highway congestion relief. ... the Committee directs FTA and FHWA to immediately begin this review and, beginning on October 1, 2004, FTA shall report to the House and Senate Committees on Appropriations by the first of every month on the progress. By June 1, 2005, FTA ... shall submit a final report to the House and Senate Committees on Appropriations showing how congestion relief could be implemented as an evaluation procedure and rating in the new starts process.”

Further, the House Report directs yet another FTA study:

> “to ensure that proper procedures are in place whereby FTA can distinguish the criteria which place the federal benefits (i.e. congestion relief) of a transit alternative above those of other projects. FTA shall report to the House and Senate Committees on Appropriations by June 1, 2005, on the implementation of this direction.”

These studies are in addition to the study of the ‘land use imbalance” discussed under the first bullet, and are part and parcel of the House Committee’s desire to de-emphasize ‘land use’ considerations.

The House Report fails to consider a simple solution to its desire for more consideration of ‘congestion relief,” one that fits within FTA’s New Start rating rules and procedures. FTA’s initial TSUB (i.e. cost per hour of travel time savings) measure considered the highway-user and transit-user travel time savings from a proposed fixed guideway investment. It subsequently dropped the highway-user benefits from the computation. Reintroducing these highway-user benefits into the TSUB calculation would reemphasize congestion relief benefits, and would do so in a way that does not undercut the ‘land use’ rating.

Not only are the House Report’s studies unnecessary, they would divert FTA’s attention from reviewing projects in the funding pipeline, causing delay and increased costs for these projects.
• Creates an inefficient project development process

The House Report includes directives aimed at revising how fixed guideway projects are evaluated and recommended; these directives are either unnecessary or create undue obstacles for projects as they progress through FTA’s process.

First, the Committee directs FTA to ensure that:

“...as projects progress through planning and development phases, forecasts reflect changes in scope and service levels and any other factors that materially impact ridership.”

FTA’s New Starts rating process already accounts for ridership changes during the Alternatives Analysis, Preliminary Engineering, and Final Design stages. Apparently, the House Committee seeks to extend this consideration into the post-Final Design period. Modifications to the project scope can occur during the post-Final Design period as a result of cost overruns, negotiations with FTA regarding the Full Funding Grant Agreement or due to other circumstances. A revised ridership evaluation in the post-Final Design period would have much greater detrimental impacts than a re-assessment at an earlier stage because construction, vehicle procurement and right-of-way contracts would be negotiated (or being negotiated) and the likely one-half to full year delay for redoing ridership and securing FTA’s review would grind these contracts to a halt; perhaps even causing the need for re-bidding. As a practical matter, to avoid promoting cost overruns and schedule delays the final FTA project rating must occur upon entry into Final Design, unless there are exceptional changes to project scope.

Second, the Committee seeks to establish a poorly thought-through criterion for advancing New Starts projects:

“FTA shall not approve the entry of any project into preliminary engineering if the project’s alternatives analysis does not clearly espouse the federal new starts criteria and standards, by showing that the project will attract and move more riders, at lower cost, than other transportation alternatives.”

While the House Report’s criterion may appear sensible, it actually shows why Congress, in TEA-21, replaced FTA’s use of a single, dominant criterion with a requirement for a more comprehensive analysis. The House Report seeks to advance projects that meet two factors: (a) highest ridership and (b) lowest cost (presumably per user). What if the highest ridership alternative is not the least expensive, or vice versa? What if the high
ridership or low cost alternatives have unacceptable environmental or social impacts (i.e. dividing low income neighborhoods, adverse land use impacts, etc)? What if a higher cost alternative attracts longer trips (and therefore better reduces miles of vehicle travel), or a lower ridership option has a better impact on traffic relief? The House Report language does not allow for these more comprehensive considerations. By being so narrowly defined, the strategy espoused by the House Report would advance the less cost-effective alternative in all of these instances.

Third, the House Report seeks to cut the Federal share of New Starts projects:

"The Committee reiterates ... that FTA should not sign any FFGAs that have a maximum federal share of higher than sixty percent.\) "The Committee agrees with the administration that statutory law should be changed to prohibit a federal share of no more than fifty percent."

The FTA process already is set-up to prevent projects with a Section 5309 funds share greater than 60 percent from advancing. It does so by automatically giving such projects a “Low” rating for its financial plan and requiring a minimum of a “Medium” rating to receive an overall rating of “Recommended.” The Portland region has been able to adjust its financial approach to projects by assuming a maximum of 60 percent federal funding. But, a change to a 50 percent maximum would severely setback the I-205/Mall LRT Project and other future regional projects.

Requested Action: Reject proposals to modify project advancement criteria and funding ratios. Instead, seek Conference Report language acknowledging that the project rating process implemented under TEA-21 has improved the evaluation of fixed guideway projects and further refinements should result over time through FTA's normal implementation process.
Voice your choice for Highway 217; open house Oct. 26

Metro is seeking comments on first phase alternatives for the Highway 217 Corridor Study. The Highway 217 Policy Advisory Committee will review the input before determining which alternatives should be considered during the study's second phase. The study is being conducted to consider possible changes to the Highway 217 Corridor to accommodate the population growth that has occurred in Washington County since 1990. The study includes a variety of changes to Highway 217, improvements to surface streets, increased transit service and investments in bike and pedestrian routes.

The study's roadway alternatives include:

- an option that would focus on increased transit service, improvements to surface streets and treatments to address the merge/weave problems on the highway
- an option that would add a lane in each direction to Highway 217
- an option that would add a lane in each direction to Highway 217 and address the highway's merge/weave problems
- an option that would add a carpool lane in each direction to Highway 217 and address the highway's merge/weave problems
- an option that would add a tolled express lane in each direction to Highway 217 and address the highway's merge/weave problems
- an option that would add a lane in each direction to Highway 217 and address the highway's merge/weave problems as well as provide a tolled express lane at entrance ramp signals.

You can review the findings and provide input in two ways:

Attend the Highway 217 Corridor Study open house

4 to 7:30 p.m. Tuesday, Oct. 26
St. Bartholomew's Episcopal Church
11265 SW Cabot St., Beaverton

Visit the virtual open house at www.hwy217.org

The virtual open house is a new and innovative opportunity to review and comment on the Highway 217 study findings on Metro's web site between Oct. 5 and Nov. 5. The web site includes a feedback form. Metro staff will be available to answer questions in real time during three sessions:

4 to 8 p.m. Monday, Oct. 18.
3 to 7 p.m. Thursday, Oct. 21
6 to 8 p.m. Sunday, Oct. 24
During the posted times, Metro staff will answer questions immediately. If you visit the virtual open house at other times, Metro staff will respond to your questions by the end of the next workday. As always, you can send e-mail to trans@metro.dst.or.us or call (503) 797-1757.

Billboard on Highway 217

In an effort to reach more people who use Highway 217 regardless of where they live or work, Metro has rented a billboard along Highway 217 during October. The billboard, located between Washington Square and 72nd Avenue, could be viewed by as many as 65,000 drivers daily. The billboard will feature the theme, “New ideas for 217,” and will direct people to www.hwv217.org, a shortcut to the virtual open house on Metro’s web site. The shortcut was created to be easy to remember for drivers passing the billboard at highway speeds.

The billboard and the virtual open house are a targeted strategy to reach more people who use Highway 217 but who may not be involved in local neighborhood or business associations or other planning processes. Metro will measure the billboard’s effectiveness by tracking the number of visits to www.hwv217.org and asking virtual open house participants how they found out about it.
Highway 217 Corridor Study

Like the entire region, Washington County has experienced unprecedented growth during the last 20 years – and the county is still growing. New residents and businesses create new demands – from moving freight to additional bus riders – on the transportation system.

Highway 217, the major north-south route for the county, operates near capacity during rush hour and can be especially congested when a minor accident occurs or even when it rains.

Because of growing demands on Highway 217, Metro, in partnership with the cities of Beaverton, Lake Oswego and Tigard; Washington County, the Oregon Department of Transportation and TriMet, is undertaking a study of the Highway 217 Corridor. The 18-month study, guided by a Policy Advisory Committee that includes business representatives, residents and elected officials, will consider improvements to make Highway 217 function more efficiently while minimizing impacts to surrounding communities.

Study goal
The goal of the study is to develop transportation strategies that can be implemented during the next 20 years to provide for efficient movement of goods and people along the corridor while supporting economically dynamic and attractive regional and town centers and respecting the livability of nearby communities.

The study will look at ways to:

- engage community members in discussions about possible improvements and develop widely supported projects that include financing and phasing plans
- support and enhance regional and town centers by improving bike, pedestrian, roadway and transit access to centers and connections across the highway
- enhance the function of Highway 217 as a major thoroughfare that serves key regional destinations
- promote the safety of all modes and develop alternatives that are cost effective
- support the pivotal role that Highway 217 plays in the economy of the region by enhancing the efficient movement of goods, services and people along the corridor
- minimize impacts to neighborhoods and the natural environment
- consider a range of lane-types, including carpool and peak hour priced lanes, and enhanced transit service.

The Policy Advisory Committee and technical staff will work together to develop criteria to measure how well each alternative achieves project goals.
Study organization
An advisory committee of technical staff from each of the jurisdictions will meet regularly to review technical documents, study options and designs and findings.

The Policy Advisory Committee will meet once a month throughout the study to review findings, make recommendations and advise staff on public outreach. The committee will also hear public comment and make final study recommendations to the Metro Council and local jurisdictions.

Get involved
As the study progresses, there will be many opportunities for you and other community members to get involved. Study staff will provide information and ask for feedback through workshops and open houses, meetings with neighborhood and civic organizations, public opinion research and one-on-one meetings. To join the mailing list for notices of future meetings and public comment opportunities, call Kristin Hull at (503) 797-1864 or send an e-mail to hull@metro.dst.or.us.

Policy Advisory Committee meetings are held from 4:30 to 6:30 p.m. on the third Wednesday of each month at the Beaverton City Library, 12375 SW Fifth St., and are open to the public. Visit Metro's web site at www.metro-region.org for meeting information.

Timeline
The study will be completed in two consecutive phases beginning in September 2003.

PHASE ONE
- Autumn 2003: Organize study and review value pricing technology
- Winter 2003-04: Develop and study initial alternatives
- Spring 2004: Evaluate and refine alternatives for Phase Two
- Summer 2004: Detailed study including design, environmental review and cost estimates
- Fall 2004: Refine alternatives and define phasing and finance plan

PHASE TWO
- Winter 2004: Survey and evaluation of Phase Two alternatives
- Fall 2004: Finalize Phase Two alternatives
- Winter 2004: Finalize Phase Two

PAC members
- Brian Moore - PAC Chair, Beaverton City Council
- Frank Angelo - Westside Economic Alliance, Transportation Committee chair
- Dan Abegg - Westside Transportation Alliance
- Steve Clark - Community Newspapers, Westside Economic Alliance
- Dominic Biggi - Beaverton Chamber of Commerce
- Beaverton Foods
- Nathalie Darcy - Garden Grove resident
- Rob Drake - mayor, Beaverton, member of Metro's Joint Policy Advisory Committee on Transportation
- Matthew Garrett - Beaverton resident
- Kent Haidon - citizen, representative of north of Highway 26
- S. Joan Hamrick - citizen, representative of south of Highway 26
- Van Hooper - South Tualatin Valley
- Carl Hosticka - Metro Council District 10
- James A. Johnson - member, board of Highway 26
- John Kaye - Tualatin
- George Martin - consultant, University of Oregon, Freight and Pipeline Advisory Committee chair
- Lynn Peterson - Lake Oswego City Council
- Jack Reardon - Washington Square
- Dick Schouten - Washington County Board of Commissioners
- Dennis Thomas - Beaverton School District

Phase One Highway 217 Corridor Study Options

The Highway 217 Policy Advisory Committee, a committee of community members, business representatives and elected officials, has approved a range of alternatives to be considered during the first phase of the Highway 217 Corridor Study. The first phase will include preliminary technical and environmental analysis of each option. In fall 2004, community members will be invited to review the analysis and help the committee select which options should be carried forward to the second phase.

Expected to recommend transportation improvements for the Highway 217 corridor in the spring 2005, the study is a cooperative effort by Metro, the cities of Beaverton, Lake Oswego and Tigard, Washington County, the Oregon Department of Transportation and TriMet.

Seven options have been selected for study. In addition to these options, the study will identify needed bike, pedestrian and local street connections in the corridor. These improvements will be considered in addition to the base case option.

Base case option

The base case option helps determine the benefits of each alternative by offering a base for comparison. It assumes construction of improvements that are adopted as part of the region's financially constrained transportation plan. The financially constrained plan includes road, transit, bike and pedestrian projects expected to be constructed in the next 20 years given current funding streams. Because these improvements are likely to be constructed, they are included as the base for each of the options that will be studied.

The base case option would include:

- additional northbound lane on Highway 217 from Canyon Road to US 26
- additional lanes on US 26 from the Sylvan interchange to Highway 217 (under construction)
- additional lanes on US 26 from Highway 217 to Murray Boulevard
- roadway improvements throughout the corridor planned by local jurisdictions
- transit service increases
- commuter rail service from Wilsonville to Beaverton during rush hour.

Four-lane plus transit and interchange improvements option

The four-lane option does not include new lanes on Highway 217 except a new northbound lane from Canyon Road to US 26 that has already been funded. This option attempts to meet transportation demand in the corridor by improving ramps, increasing transit service and constructing improvements to other streets that are in the region's preferred transportation plan. The region's preferred plan includes projects that are not expected to be constructed unless new funding sources are identified.

This option also would include building braided ramps or consolidating interchanges by connecting them with frontage roads. These solutions seek to address the merge and weave problem that has been identified by both technical analysis and community observation as a cause of accidents and slow traffic on Highway 217.

The four-lane plus option would include:

- four through lanes from Canyon Road to I-5 on Highway 217 (no additional through lanes)
- six through lanes north of Canyon Road to U.S. 26, as currently constructed or funded
- improvements to streets that cross or parallel Highway 217 that are included in the region's preferred transportation plan
- either braided ramps or consolidated interchanges at some locations on the highway
- additional bus service such as new light-rail feeder routes, new connections between centers and capital improvements to make bus service function better
- more frequent headways and longer hours of operation for commuter rail between Wilsonville and Beaverton.

Braided ramps separate traffic that is trying to exit from entering traffic by creating a bridge for traffic entering the freeway that does not descend to the freeway until it has crossed over traffic exiting the freeway. In this way, traffic engineers "braid" ramps with some traffic crossing over and some crossing under to prevent accidents and slowing traffic.
Another way to address merge/weave conflicts is consolidating interchanges and connecting them with frontage roads. This solution has been applied at Canyon Road and the Beaverton-Hillsdale Highway on Highway 217 where access to two streets has been combined into one interchange. Drivers entering Highway 217 going north from Beaverton-Hillsdale Highway use a frontage road to enter at the Canyon Road entrance. Frontage roads are less expensive to construct than braided ramps but require more right of way. They also remove local trips from the freeway by providing a parallel off-freeway connection between streets.

### SIX LANE OPTIONS

#### Six-lane option without interchange improvements

The six-lane option would include:

- six through lanes (three in each direction) on Highway 217 from US 26 to I-5
- existing on and off ramp system with auxiliary lanes
- improvements included in the base case option.

#### Six-lane plus option

The six-lane plus option would include:

- six lanes (three in each direction) on Highway 217 from US 26 to I-5
- braided ramps or consolidated interchanges
- improvements included in the base case option.

#### Carpool lane option

Carpool lanes, like those on I-5 between 405 and the Interstate Bridge, are lanes restricted to automobiles carrying two or more people and buses during rush hours. Carpool lanes are an incentive to carpool or take transit. A bypass lane on ramps for carpools could be constructed to further reduce delay for carpools. Carpool lanes are sometimes referred to as high-occupancy vehicle (HOV) lanes.

The carpool lane option would include:

- six lanes (three in each direction) on Highway 217 from US 26 to I-5
- one lane in each direction would be reserved for carpools during rush hours
- two express bus routes that would use the carpool lane to provide service between key corridor destinations
- braided ramps or consolidated interchanges
- improvements included in the base case option.

#### Rush-hour toll lane option

In other cities, a concept called rush-hour tolling, or value pricing, has been successfully implemented to give drivers another option to sitting in traffic and to help fund construction of new lanes. In this case, rush-hour tolling would include building a new lane on Highway 217 that drivers would pay a fee to use during the peak hours.

The toll would only be applied to the new lane and would be assessed electronically without requiring drivers to stop at a tollbooth. The toll would vary so that it would cost more to use the lane when the highway is most congested.

The rush-hour toll lane option would include:

- six lanes (three in each direction) on Highway 217 from US 26 and I-5
- one lane in each direction would be a rush-hour toll lane
- two express bus routes that would use the tolled lane to provide service between key corridor destinations
- braided ramps or consolidated interchanges
- improvements included in the base case option.

The rush-hour toll lane could include an extra lane on freeway ramps to allow those using the toll lane to bypass the queue at the ramp meter or a ramp that provides direct access to the toll lane.

#### Ramp meter bypass option

Another way to apply the rush-hour tolling concept would be to offer drivers a choice to wait at ramp meters as they do today or pay a toll to avoid waiting on the ramp. This option would include a new lane on the freeway that would be open to all traffic. Like rush-hour tolling, tolls would be assessed electronically without requiring drivers to stop at a tollbooth and would vary based on the level of congestion.

The ramp meter bypass option would include:

- six lanes (three in each direction) on Highway 217 from US 26 and I-5
- an extra tolled lane on entrance ramps
- two new express bus routes that would use the ramp meter bypass and provide service between key corridor destinations
- braided ramps or consolidated interchanges
- improvements included in the base case option.

#### NOT SELECTED FOR STUDY AT THIS TIME

##### Eight-lane option

The committee decided not to include an eight-lane option at this time because it would have significant environmental and neighborhood impacts and would cost about twice as much as a six-lane option. The committee will consider studying it in the second phase if projected traffic demand cannot be met with the other options.
Oregon Metropolitan Planning Organization
SUMMIT II

Activity Summary

Thursday, October 14th
Reception
6:00 – 8:30 PM
Courtyard Room of Marché Restaurant
5th Street Public Market

Friday, October 15th
MPO Summit II
9:00 AM – 3:00 PM
Bascom-Tykeson Room in the Eugene Public Library

After the Summit...

Friday, October 15th
7:30 PM – Ladysmith Black Mambazo
The Shedd – 868 High Street
Tickets & Information: 687-6526

8:00 PM – Flamenco Vivo-Carlota Santana
("new world" flamenco dancing)
Hult Center for the Performing Arts
Ticket Office: 682-5000

Saturday, October 16th
3:30 PM – Oregon vs. Arizona, Homecoming
Autzen Stadium
Ticket Office: 346-4461

Maps showing location of Marché Restaurant, Eugene Public Library and parking are on the back of this sheet
Oregon Metropolitan Planning Organization
Summit II
October 14-15, 2004

Hosted by:

Registration: To register for the summit, please complete this form and return with payment to: LCOG, c/o Ann Mortenson, LCOG, 99 E. Broadway, Suite 400, Eugene, OR 97401 or fax to (541) 682-4099. Please call Ann Mortenson, (541) 682-4373 for more registration information if needed. Deadline to register is October 4, 2004.

Hotel: A group rate is available at the Best Western – New Oregon Hotel, Eugene. The room rate is $62 plus tax. Please contact the hotel directly to make your reservations by October 4, 2004. The group rate will not be guaranteed after that date. See the attached lodging information sheet for more contact information.

Stuart Foster, Chairman  
Oregon Transportation Commission  
201 West Main St. Suite 4A  
Medford, OR 97501

Dear Chairman Foster:

The Oregon transportation system is critical to the state’s economy. Oregon initiated three major programs since 2002 to invest in our transportation infrastructure. The Oregon Transportation Investment Acts (OTIA) I, II, and III resulted in $2.96 billion in projects to improve and maintain roads and bridges throughout Oregon. While more funding is still needed for additional improvements, OTIA is helping the state’s economy and helping put Oregon businesses and citizens to work.

In addition to these substantial highway investments, we have recently put some state dollars toward improving other modes of transportation, including small investments of lottery dollars into rail and marine facilities around the state. But more needs to be done.

As you know, the funding available for highways is constitutionally dedicated to roads and bridges and cannot be used for other types of infrastructure investment. While this is a prudent restraint, these other transportation modes certainly provide vital connections for Oregon businesses, people and goods to get to national and international destinations.

Because we are successfully investing a great deal in our highway system, and will be for the next several years, now is the time to invest in other types of transportation infrastructure. Many other states, including our neighbors to the north and south, are investing heavily in these other modes of transportation. For example, in 2003, Washington put nearly $300 million in their rail system, and the year before, California put over $200 million toward their rail infrastructure. While I am pleased that we were able to invest $10 million into our short lines and for key industrial rail projects, we are not able to make the necessary improvements to aid shippers dependent on reliable rail service.
Making these key improvements to Oregon's rail, marine, air and transit systems will ensure that Oregon's transportation system is strong, diverse and efficient. It is time to invest in our ENTIRE transportation network. It is time to Connect Oregon. A multi-modal investment will save Oregon shippers money, create jobs and help the Oregon economy.

I am aware of many projects that have been proposed for better rail connections, more advantageous marine commerce, improved aviation infrastructure and transit facilities. I want to be very strategic, however, about which investments will bring the greatest return for Oregon taxpayers, and which investments are clearly ready to move forward soon.

Because I am so proud of the work the Oregon Transportation Commission has done, and because I trust your sound judgment and broad view of our transportation infrastructure, I am asking the Commission to assess what the state needs to do to Connect Oregon with all modes of the transportation system. Please begin a dialogue with the transportation stakeholders that represent our rail, marine, air and transit systems to look for solid and practical ideas and input about what investments are needed. I am looking for the best list of opportunities to create jobs, move people and move goods.

The reason I am asking the Oregon Transportation Commission to oversee this effort is because it is about transportation connections – how we move people and goods from one mode to another. I know that you will collaborate with the Oregon Economic and Community Development Department, the Department of Aviation and other state, local and private partners that have a stake in this effort.

This information will be critical as I formulate my budget for the next biennium. I also would like to have this information available for discussion as part of the Oregon Business Plan at the Business Summit in December. As you know, there is a great deal of enthusiasm in the business community about the bold investments we have made each of the last two sessions in our transportation infrastructure. I firmly believe that we can and will be able to use that enthusiasm to move us toward a partnership with legislators during the 2005 Session.

Thank you and all of the Commissioners again for your leadership and sound investment strategy that has put Oregon's economy back on the right track. I look forward to working with you in the coming months.

Sincerely,

THEODORE R. KULONGOSI
Governor
